(ii) For a full load rejection that will be taken back by the transporter, a copy of the original manifest that includes the rejecting facility's signature and date attesting to the rejection, the description of the rejection in the discrepancy block of the manifest, and the name, address, phone number, and Identification Number for the alternate facility or generator to whom the shipment shall be delivered. The transporter shall retain a copy of the manifest in accordance with R315-6-2.22, and give a copy of the manifest containing this information to the rejecting designated facility. If the original manifest is not used, then the transporter shall obtain a new manifest for the shipment and comply with R315-8-5.4(e)(1) through (6) or R315-7-12.3(e)(1) through (6).

2.22 RECORDKEEPING

(a) A transporter of hazardous waste shall keep a copy of the manifest signed by the generator, himself, and the next designated transporter of the owner or operator of the designated facility for a period of three years from the date the hazardous waste was accepted by the initial transporter.

(b) For shipments delivered to the designated facility by water (bulk shipment), each water (bulk shipment) transporter shall retain a copy of the shipping paper containing all the information required in R315-6-2.20(e)(2) for a period of three years from the date the hazardous waste was accepted by the initial transporter.

(c) For shipments of hazardous waste by rail within the United States:

(1) The initial rail transporter shall keep a copy of the manifest and shipping paper with all the information required in R315-6-2.20(f)(2) for a period of three years from the date the hazardous waste was accepted by the initial transporter; and

(2) The final rail transporter shall keep a copy of the signed manifest (or the shipping paper if signed by the designated facility in lieu of the manifest) for a period of three years from the date the hazardous waste was accepted by the initial transporter.

(d) A transporter who transports hazardous waste out of the United States shall keep a copy of the manifest indicating that the hazardous waste left the United States for a period of three years from the date the hazardous waste was accepted by the initial transporter.

(e) The periods of retention referred to in this section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the Director.

R315-6-10. Emergency Controls.

Transporters shall comply with R315-9 in the event of a discharge of hazardous waste.

R315-6-11. Compliance with Department of Transportation Regulations.

Transporters of hazardous waste shall comply with the following pertinent regulations of the U.S. Department of Transportation governing the transportation of hazardous materials for both interstate and intrastate shipments:

(a) 49 CFR 171, General Information Regulations and Definitions;

(b) 49 CFR 172, Hazardous Materials Table and Hazardous Material Communications Regulations;

(c) 49 CFR 173, Shippers - General Requirements for Shipments and Packaging;

(d) 49 CFR 174, Carriage by Rail;

(e) 49 CFR 175, Carriage by Aircraft;

- (f) 49 CFR 176, Carriage by Vessel;
- (g) 49 CFR 177, Carriage by Public Highway;
- (h) 49 CFR 178, Shipping Container Specification; and
- (i) 49 CFR 179, Specifications for Tank Cars.

KEY: hazardous waste

April 25, 2013

19-6-105

Notice of Continuation July 13, 2011

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-7. Interim Status Requirements for Hazardous Waste Treatment, Storage, and Disposal Facilities.

R315-7-8. General Interim Status Requirements.

8.1 PURPOSE, SCOPE, APPLICABILITY

(a) The purpose of R315-7 is to establish minimum State of Utah standards that define the acceptable management of hazardous waste during the period of interim status and until certification of final closure or, if the facility is subject to post-closure requirements, until post-closure responsibilities are fulfilled.

(b) Except as provided in R315-7-30, which incorporates by reference 40 CFR 265.1080(b), the standards of R315-7 and of R315-8-21, which incorporates by reference 40 CFR 264.552 through 264.554, apply to owners and operators of facilities that treat, store, or dispose of hazardous waste who have fully complied with the requirements of interim status under State or Federal requirements and R315-3-2.1 until either a permit is issued under R315-3 or until applicable R315-7 closure and post-closure responsibilities are fulfilled, and to those owners and operators of facilities in existence on November 19, 1980, who have failed to provide timely notification as required by Section 3010(a) of RCRA or failed to file part A of the permit application as required by R315-3-2.1(d) and (f). These standards apply to all treatment, storage, and disposal of hazardous waste at these facilities after the effective date of these rules, except as specifically provided otherwise in R315-7 or R315-2.

(c) The requirements of R315-7 do not apply to the following:

(1) The owner or operator of a POTW with respect to the treatment or storage of hazardous wastes which are delivered to the POTW;

(2) The owner or operator of a facility approved by the State of Utah to manage municipal or industrial solid waste, if the only hazardous waste the facility treats, stores, or disposes of is excluded from regulation under R315-7 by R315-2-5;

(3) The owner or operator of a facility managing recyclable materials described in 40 CFR 261.6(a)(2), (3), and (4), which is incorporated by reference in R315-2-6, except to the extent that they are referred to in R315-15 or R315-14-2, which incorporates by reference 40 CFR subpart D, R315-14-5, which incorporates by reference 40 CFR 266 subpart F, and R315-14-6, which incorporates by reference 40 CFR 266 subpart G;

(4) A generator accumulating hazardous waste on-site in compliance with R315-5-3.34, which incorporates by reference 40 CFR 262.34, except to the extent the requirements are included in R315-5-3.34, which incorporates by reference 40 CFR 262.34;

(5) A farmer disposing of waste pesticides from his own use in compliance with R315-5-7;

(6) The owner or operator of a totally enclosed treatment facility, as defined in R315-1;

(7) The owner or operator of an elementary neutralization unit or a wastewater treatment unit as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes, other than the D001 High TOC Subcategory defined in the Table of Treatment Standards for Hazardous Wastes in 40 CFR 268.40 as incorporated by reference at R315-13, or reactive (D003) waste, to remove the characteristic before land disposal, the owner/operator must comply with the requirements set out in R315-7-9.8(b);

(8) A transporter storing manifested shipments of hazardous waste in containers meeting the requirements of R315-5-3.30 at a transfer facility for a period of ten days or less;

(9)(i) Except as provided in R315-7-8(c)(9)(i), a person engaged in treatment or containment activities during immediate

response to any of the following situations:

(A) A discharge of a hazardous waste;

(B) An imminent and substantial threat of a discharge of a hazardous waste;

(C) A discharge of a material which, when discharged, becomes a hazardous waste.

(ii) An owner or operator of a facility otherwise regulated by this section shall comply with all applicable requirements of R315-7-10 and R315-7-11.

(iii) Any person who is covered by R315-7-8(c)(9)(i) and who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of R315-7 and of R315-3 for those activities.

(iv) In the case of an explosives or munitions emergency response, if a State or local official acting within the scope of his or her official responsibilities, or an explosives or munitions emergency response specialist, determines that immediate removal of the material or waste is necessary to protect human health or the environment, that official or specialist may authorize the removal of the material or waste by transporters who do not have EPA identification numbers and without the preparation of a manifest. In the case of emergencies involving military munitions, the responding military emergency response specialist's organizational unit shall retain records for three years identifying the dates of the response, the responsible persons responding, the type and description of material addressed, and its disposition.

(10) The addition of absorbent material to waste in a container, as defined in R315-1, or the addition of waste to the absorbent material in a container provided that these actions occur at the time waste is first placed in the containers; and R315-7-9.8(b), R315-7-16.2 and R315-7-16.3 are complied with;

(11) Universal waste handlers and universal waste transporters (as defined in R315-16-1.9) handling the wastes listed below. These handlers are subject to regulation under section R315-16, when handling the below listed universal wastes:

(i) Batteries as described in R315-16-1.2;

(ii) Pesticides as described in R315-16-1.3;

(iii) Mercury-containing equipment as described in R315-16-1.4; and

(iv) Mercury lamps as described in R315-16-1.5.

(d) Notwithstanding any other provisions of these rules enforcement actions may be brought pursuant to R315-2-14 or Section 19-6-115 Utah Solid and Hazardous Waste Act.

(e) The following hazardous wastes shall not be managed at facilities subject to regulation under R315-7.

(1) EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, or F027 unless:

(i) The wastewater treatment sludge is generated in a surface impoundment as part of the plant's wastewater treatment system;

(ii) The waste is stored in tanks or containers;

(iii) The waste is stored or treated in waste piles that meet the requirements of R315-8-12.1(c) as well as all other applicable requirements of R315-8-12;

(iv) The waste is burned in incinerators that are certified pursuant to the standard and procedures in R315-7-22.6; or

(v) The waste is burned in facilities that thermally treat the waste in a device other than an incinerator and that are certified pursuant to the standards and procedures in R315-7-23.7.

(f) The requirements of this rule apply to owners or operators of all facilities which treat, store, or dispose of hazardous waste referred to in R315-13, which incorporates by reference 40 CFR 268, and the R315-13 standards are considered material conditions or requirements of the R315-7 interim status standards.

R315-7-9. General Facility Standards.**9.1 APPLICABILITY**

The rules in this section apply to the owners and operators of all hazardous waste management facilities, except as provided otherwise in R315-7-8.1.

9.2 IDENTIFICATION NUMBER

Every facility owner or operator shall apply for an EPA identification number in accordance with Section 3010 of RCRA. Facility owners or operators who did not obtain an EPA Identification Number for their facilities through the notification process shall obtain one. Information on obtaining this number can be acquired by contacting the Utah Division of Waste Management and Radiation Control Management.

9.3 REQUIRED NOTICES

(a)(1) An owner or operator of a facility that has arranged to receive hazardous waste from a foreign source shall notify the Director in writing at least four weeks in advance of the expected date of arrival of these shipments at the facility. A notice of subsequent shipments of the same waste from the same foreign sources is not required.

(2) The owner or operator of a recovery facility that has arranged to receive hazardous waste subject to R315-5-15, which incorporates by reference 40 CFR 262, subpart H, shall provide a copy of the tracking document bearing all required signatures to the notifier, to the Division of Waste Management and Radiation Control, P.O. Box 144880, Salt Lake City, Utah, 84114-4880; Office of Enforcement and Compliance Assurance, Office of Compliance, Enforcement Planning, Targeting and Data Division (2222A), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; and to the competent authorities of all other concerned countries within three working days of receipt of the shipment. The original of the signed tracking document must be maintained at the facility for at least three years.

(b) Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the post-closure care period, the owner or operator shall notify the new owner or operator in writing of the requirements of R315-7 and R315-3. An owner's or operator's failure to notify the new owner or operator of the requirements of R315-7 in no way relieves the new owner or operator of his obligation to comply with all applicable requirements.

9.4 GENERAL WASTE ANALYSIS

The requirements of 40 CFR 265.13, 1996 ed., are adopted and incorporated by reference.

9.5 SECURITY

(a) A facility owner or operator shall prevent the unknowing entry, and minimize the possibility for the unauthorized entry, of persons or livestock onto the active portion of his facility; unless

(1) Physical contact with the waste, structures, or equipment within the active portion of the facility will not injure unknowing or unauthorized persons or livestock which may enter the active portion of a facility; and

(2) Disturbance of the waste or equipment by the unknowing or unauthorized entry of persons or livestock onto the active portion of a facility will not cause a violation of the requirements of R315-7.

(b) Unless exempt under R315-7-9.5(a)(1) and (a)(2), facilities shall have;

(1) A 24-hour surveillance system, e.g., television monitoring or surveillance by guards or facility personnel, which continuously monitors and controls entry onto the active portion of the facility; or

(2)(i) An artificial or natural barrier or both, e.g. a fence in good repair or a cliff, which completely surrounds the active portion of the facility; and

(ii) A means to control entry at all times through the gates or other entrances to the active portion of the facility, e.g., an

attendant, television monitors, locked entrance, or controlled roadway access to the facility.

The requirements of R315-7-9.5(b) are satisfied if the facility or plant within which the active portion is located itself has a surveillance system or a barrier and a means to control entry which complies with the requirements of R315-7-9.5(b)(1) and (2).

(c) Unless exempt under R315-7-9.5(a)(1) and (a)(2), a sign with the legend, "Danger -Unauthorized Personnel Keep Out", shall be posted at each entrance to the active portion of a facility and at other locations, in sufficient numbers to be seen from any approach to the active portion. The legend shall be written in English and any other language predominant in the area surrounding the facility and shall be legible from a distance of at least twenty-five feet. Existing signs with a legend other than "Danger - Unauthorized Personnel Keep Out" may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the active portion, and that entry onto the active portion is potentially dangerous.

Owners or operators are encouraged to also describe on the sign the type of hazard, e.g., hazardous waste, flammable wastes, etc., contained within the active portion of the facility. See R315-7-14.7(b) for discussion of security requirements at disposal facilities during the post-closure care period.

9.6 GENERAL INSPECTION REQUIREMENTS

(a) Facility owners or operators shall inspect their facilities for malfunctions and deterioration, operator errors, and discharges, which may be causing or may lead to (1) release of hazardous waste constituents to the environment or (2) a threat to human health. These inspections shall be conducted frequently enough to identify problems in time to correct them before they harm human health or the environment.

(b)(1) Facility owners or operators shall develop and follow a written schedule for inspecting monitoring equipment, safety and emergency equipment, security devices, and operating and structural equipment, e.g., dikes and sump pumps, that are important to preventing, detecting, or responding to environmental or human health hazards.

(2) The schedule shall be kept at the facility.

(3) The schedule shall identify the types of problems, e.g., malfunctions or deterioration, which are to be looked for during the inspection, e.g., inoperative sump pump, leaking fitting, eroding dike, etc.

(4) The frequency of inspection may vary for the items on the schedule. However, the frequency should be based on the rate of deterioration of the equipment and the probability of an environmental or human health incident if the deterioration, malfunction, or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas shall be inspected daily when in use. At a minimum, the inspection schedule shall include the items and frequencies called for in R315-7-16.5, R315-7-17, which incorporates by reference 40 CFR 265.190 - 265.201, R315-7-18.5, R315-7-19.12, R315-7-20.5, R315-7-21.12, R315-7-22.4, R315-7-23.4, R315-7-24.4, R315-7-26, which incorporates by reference 40 CFR 265.1033, R315-7-27, which incorporates by reference 40 CFR 265.1052, 265.1053, and 265.1058 and R315-7-30, which incorporates by reference 40 CFR 265.1084 through 265.1090.

(c) The owner or operator shall remedy any deterioration or malfunction of equipment or structures which the inspection reveals on a schedule which ensures that the problem does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, remedial action shall be taken immediately.

(d) The owner or operator shall keep records of inspections in an inspection log or summary. These records shall be retained for at least three years. At a minimum, these records shall include the date and time of the inspection, the

name of the inspector, a notation of the observations made, and the date and nature of any repairs made or remedial actions taken.

9.7 PERSONNEL TRAINING

(a)(1) Facility personnel shall successfully complete a program of classroom instruction or on-the-job training that teaches them to perform their duties in a way that ensures the facility's compliance with the requirements of R315-7, and that includes all the elements described in R315-7-9.7(d)(3).

(2) This program shall be directed by a person trained in hazardous waste management procedures, and shall include instruction supplementing the facility personnel's existing job knowledge, which teaches facility personnel hazardous waste management procedures, including contingency plan implementation, relevant to the positions in which they are employed.

(3) At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including, but not necessarily limited to, the following, where applicable:

(i) Procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment;

(ii) Key parameters for automatic waste feed cut-off systems;

(iii) Communications or alarm systems or both;

(iv) Response to fires or explosions;

(v) Response to groundwater contamination incidents; and

(vi) Shutdown of operations.

(b) Facility personnel shall successfully complete the program required in R315-7-9.7(a) within six months after the effective date of these rules or six months after the date of employment or assignment to a facility, or to a new position at a facility, whichever is later. Employees hired after the effective date of these rules shall not work in unsupervised positions until they have completed the training requirements of R315-7-9.7(a).

(c) Facility personnel shall take part in an annual review of their initial training in R315-7-9.7(a).

(d) Owners or operators of facilities shall maintain the following documents and records at their facilities and make them available to the Director or the Director's duly appointed representative upon request:

(1) The job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job;

(2) A written job description for each position listed under R315-7-9.7(d)(1). This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but shall include the requisite skill, education, or other qualifications and duties of facility personnel assigned to each position;

(3) A written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed under R315-7-9.7(d)(1); and

(4) Records that document that the training or job experience required under paragraphs R315-7-9.7(a), (b), and (c) has been given to, and completed by, facility personnel.

(e) Training records on current personnel shall be maintained until closure of the facility; training records on former employees shall be maintained for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

9.8 GENERAL REQUIREMENTS FOR IGNITABLE, REACTIVE, OR INCOMPATIBLE WASTES

(a) The owner or operator shall take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. This waste shall be separated and protected from sources of

ignition or reaction including but not limited to: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks, static, electrical, or mechanical, spontaneous ignition, e.g., from heat-producing chemical reactions, and radiant heat. While ignitable or reactive waste is being handled, the owner or operator shall confine smoking and open flames to specially designated locations. "No Smoking" signs shall be conspicuously placed wherever there is a hazard from ignitable or reactive waste.

(b) Where specifically required by R315-7, the treatment, storage, or disposal of ignitable or reactive waste and the mixture or commingling of incompatible wastes, or incompatible wastes and materials, shall be conducted so that it does not:

(1) Generate uncontrolled extreme heat or pressure, fire or explosion, or violent reaction;

(2) Produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health;

(3) Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosion;

(4) Damage the structural integrity of the device or facility containing the waste; or

(5) Through other like means threaten human health or the environment.

9.9 LOCATION STANDARDS

The placement of any hazardous waste in a salt dome, salt bed formation, underground mine or cave is prohibited, except for the Department of Energy Waste Isolation Pilot Project in New Mexico.

9.10 CONSTRUCTION QUALITY ASSURANCE PROGRAM

(a) CQA program. (1) A construction quality assurance, CQA, program is required for all surface impoundment, waste pile, and landfill units that are required to comply with R315-7-18.9(a), R315-7-19.9, and R315-7-21.10(a). The program shall ensure that the constructed unit meets or exceeds all design criteria and specifications in the permit. The program shall be developed and implemented under the direction of a CQA officer who is a registered professional engineer.

(2) The CQA program shall address the following physical components, where applicable:

(i) Foundations;

(ii) Dikes;

(iii) Low-permeability soil liners;

(iv) Geomembranes, flexible membrane liners;

(v) Leachate collection and removal systems and leak detection systems; and

(vi) Final cover systems.

(b) Written CQA plan. Before construction begins on a unit subject to the CQA program under R315-7-9.10(a), the owner or operator shall develop a written CQA plan. The plan shall identify steps that will be used to monitor and document the quality of materials and the condition and manner of their installation. The CQA plan shall include:

(1) Identification of applicable units, and a description of how they will be constructed.

(2) Identification of key personnel in the development and implementation of the CQA plan, and CQA officer qualifications.

(3) A description of inspection and sampling activities for all unit components identified in R315-7-9.10(a)(2), including observations and tests that will be used before, during, and after construction to ensure that the construction materials and the installed unit components meet the design specifications. The description shall cover: Sampling size and locations; frequency of testing; data evaluation procedures; acceptance and rejection criteria for construction materials; plans for implementing corrective measures; and data or other information to be recorded and retained in the operating record under R315-7-

12.4.

(c) Contents of program. (1) The CQA program shall include observations, inspections, tests, and measurements sufficient to ensure:

(i) Structural stability and integrity of all components of the unit identified in R315-7-9.10(a)(2);

(ii) Proper construction of all components of the liners, leachate collection and removal system, leak detection system, and final cover system, according to permit specifications and good engineering practices, and proper installation of all components, e.g., pipes, according to design specifications;

(iii) Conformity of all materials used with design and other material specifications under R315-8-11.2, R315-8-12.2, and R315-8-14.2.

(2) The CQA program shall include test fills for compacted soil liners, using the same compaction methods as in the full-scale unit, to ensure that the liners are constructed to meet the hydraulic conductivity requirements of R315-8-11.2(c)(1), R315-8-12.2(c)(1), and R315-8-14.2(c)(1) in the field. Compliance with the hydraulic conductivity requirements shall be verified by using in-situ testing on the constructed test fill. The test fill requirement is waived where data are sufficient to show that a constructed soil liner meets the hydraulic conductivity requirements of R315-8-11.2(c)(1), R315-8-12.2(c)(1), and R315-8-14.2(c)(1) in the field.

(d) Certification. The owner or operator of units subject to R315-7-9.10 shall submit to the Director by certified mail or hand delivery, at least 30 days prior to receiving waste, a certification signed by the CQA officer that the CQA plan has been successfully carried out and that the unit meets the requirements of R315-8-11.2(a), R315-8-12.2, or R315-8-14.2(a). The owner or operator may receive waste in the unit after 30 days from the Director's receipt of the CQA certification unless the Director determines in writing that the construction is not acceptable, or extends the review period for a maximum of 30 more days, or seeks additional information from the owner or operator during this period. Documentation supporting the CQA officer's certification shall be furnished to the Director upon request.

R315-7-10. Preparedness and Prevention.

10.1 APPLICABILITY

The rules in this section apply to the owners and operators of all hazardous waste management facilities, except as provided otherwise in R315-7-8.1.

10.2 MAINTENANCE AND OPERATION OF FACILITY

Facilities shall be maintained and operated to minimize the possibility of a fire, explosion or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

10.3 REQUIRED EQUIPMENT

All facilities shall be equipped with the following, unless there are no hazards posed by waste handled at the facility which could require a particular kind of equipment specified below:

(a) An internal communications or alarm system capable of providing immediate emergency instruction, voice or signal, to facility employees;

(b) A device capable of summoning external emergency assistance from law enforcement agencies, fire departments or state or local emergency response teams, such as a telephone, immediately available at the scene of operations, or a hand-held two way radio;

(c) Portable fire extinguishers, fire control equipment, including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals, discharge control equipment, and decontamination equipment; and

(d) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

10.4 TESTING AND MAINTENANCE OF EQUIPMENT

All facility communications or alarm systems, fire protection equipment, safety equipment, discharge control equipment, and decontamination equipment, where required, shall be tested and maintained as necessary to assure its proper operation in time of emergency.

10.5 ACCESS TO COMMUNICATIONS OR ALARM SYSTEM

(a) Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all employees involved in the operation shall have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless a device is not required under R315-7-10.3.

(b) If there is just one employee on the premises while the facility is operating, he shall have immediate access to a device capable of summoning external emergency assistance, such as a telephone, immediately available at the scene of operation, or a hand-held two-way radio, unless a device is not required under R315-7-10.3.

10.6 REQUIRED AISLE SPACE

The facility owner or operator shall maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, discharge control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

10.7 ARRANGEMENTS WITH LOCAL AUTHORITIES

(a) The owner or operator shall attempt to make the following arrangements, as appropriate for the type of waste handled at his facility and the potential need for the services of these organizations:

(1) Arrangements to familiarize law enforcement agencies, fire departments, and emergency response teams with the layout of the facility, properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to the roads inside the facility, and possible evacuation routes;

(2) Where more than one law enforcement agency and fire department might respond to an emergency, agreements designating primary emergency authority to a specific law enforcement agency and a specific fire department, and agreements with any others to provide support to the primary emergency authority;

(3) Agreements with state emergency response teams, emergency response contractors, and equipment suppliers; and

(4) Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.

(b) Where state or local authorities decline to enter into these arrangements, the owner or operator shall document the refusal in the operating record.

R315-7-11. Contingency Plan and Emergency Procedures.

11.1 APPLICABILITY

The rules in this section apply to the owners and operators of all hazardous waste management facilities, except as provided otherwise in R315-7-8.1.

11.2 PURPOSE AND IMPLEMENTATION OF CONTINGENCY PLAN

(a) Each owner or operator shall have a contingency plan for his facility designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden discharge of hazardous waste or hazardous waste constituents to air, soil, or surface water.

(b) The provisions of the plan shall be carried out

immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten the environment or human health.

11.3 CONTENT OF CONTINGENCY PLAN

(a) The contingency plan shall describe the actions facility personnel shall take to comply with R315-7-11.2 and R315-7-11.7 in response to fires, explosions, or any unplanned sudden or non-sudden discharge of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.

(b) If a facility owner or operator already has prepared a Spill Prevention, Control and Countermeasures (SPCC) Plan in accordance with 40 CFR 112, or some other emergency or contingency plan, he need only amend that plan to incorporate hazardous waste management provisions sufficient to comply with the requirements of R315-7.

(c) The plan shall describe arrangements agreed to by local law enforcement agencies, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services, in accordance with R315-7-10.7.

(d) The plan shall list names, addresses, phone numbers, office and home, of all persons qualified to act as facility emergency coordinator, see R315-7-11.6, and this list shall be kept up-to-date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will assume responsibility as alternates.

(e) The plan shall include a list of all emergency equipment at the facility, such as fire extinguishing systems, discharge control equipment, communications and alarm systems, internal and external, and decontamination equipment, where this equipment is required. This list shall be kept up-to-date. In addition, the plan shall include the location and physical description of each item on the list, and a brief outline of its capabilities.

(f) The plan shall include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes, in cases where the primary routes could be blocked by discharges of hazardous waste or fires.

11.4 COPIES OF CONTINGENCY PLAN

A copy of the contingency plan and all revisions to the plan shall be:

(a) Maintained at the facility;

(b) Made available to the Director or the Director's duly appointed representative upon request; and

(c) Submitted to all local law enforcement agencies, fire departments, hospitals, and state and local emergency response teams that may be called upon to provide emergency services.

11.5 AMENDMENT OF CONTINGENCY PLAN

The contingency plan shall be reviewed, and immediately amended, if necessary, under any of the following circumstances:

(a) Revisions to applicable regulations;

(b) Failure of the plan in an emergency;

(c) Changes in the facility design, construction, operation, maintenance, or other circumstances that materially increase the potential for discharges of hazardous waste or hazardous waste constituents, or change the response necessary in an emergency;

(d) Changes in the list of emergency coordinators; or

(e) Changes in the list of emergency equipment.

11.6 EMERGENCY COORDINATOR

At all times, there shall be at least one employee either on the facility premises or on call, i.e., available to respond to an emergency by reaching the facility within a short period of time, with the responsibility for coordinating all emergency response measures. This facility emergency coordinator shall be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location of

all records within the facility, and the facility layout. In addition, this person shall have the authority to commit the resources needed to carry out the contingency plan. The emergency coordinator's responsibilities are more fully spelled out in R315-7-11.7. Applicable responsibilities for the emergency coordinator vary depending on factors such as type and variety of waste(s) handled by the facility, and type and complexity of the facility.

11.7 EMERGENCY PROCEDURES

(a) Whenever there is an imminent or actual emergency situation, the emergency coordinator, or his designee when the emergency coordinator is on call, shall immediately:

(1) Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

(2) Notify appropriate state or local agencies with designated response roles whenever their assistance is needed.

(b) In the event of a discharge, fire, or explosion, the facility's emergency coordinator shall immediately identify the character, exact source, amount, and areal extent of any discharged materials. He may do this by observation or review of facility records or manifests, and, if necessary, by chemical analysis.

(c) Concurrently, the facility's emergency coordinator shall immediately assess possible hazards to the environment or human health that may result from the discharge, fire, or explosion. This assessment shall consider both direct and indirect effects of the discharge, fire, or explosion, e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-offs from water or chemical agents used to control fire and heat-induced explosions.

(d) If the emergency coordinator determines that the facility has had a discharge, fire, or explosion which could threaten human health or the environment, outside the facility, he shall report his findings as follows:

(1) If his assessment indicates that evacuation of local areas may be advisable, he shall immediately notify appropriate local authorities. He shall be available to assist appropriate officials in making the decision whether local areas should be evacuated; and

(2) He shall immediately notify both the Utah State Department of Environmental Quality as specified in R315-9 and the government officials designated as the on-scene coordinator for that geographical area, or the National Response Center, 800/424-8802. The report shall include:

(i) Name and telephone number of reporter;

(ii) Name and address of facility;

(iii) Time and type of incident, e.g., discharge, fire;

(iv) Name and quantity of material(s) involved, to the extent available;

(v) The extent of injuries, if any; and

(vi) The possible hazards to human health, or the environment, outside the facility.

(e) During an emergency, the facility's emergency coordinator shall take all reasonable measures necessary to ensure that fires, explosions, and discharges do not occur, recur, or spread to other hazardous waste at the facility. These measures shall include, where applicable, stopping processes and operations, collecting and containing discharged waste, and removing or isolating containers.

(f) If the facility stops operations in response to a discharge, fire, or explosion, the facility's emergency coordinator shall monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

(g) Immediately after an emergency, the facility's emergency coordinator shall provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a discharge, fire,

or explosion at the facility.

Unless the owner or operator can demonstrate, in accordance with R315-2-3(c) or (d), that the recovered material is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and shall manage it in accordance with all applicable requirements in R315-4, R315-5, R315-7, and R315-8.

(h) The facility's emergency coordinator shall ensure that, in the affected area(s) of the facility:

(1) No waste that may be incompatible with the discharged material is treated, stored, or disposed of until cleanup procedures are completed; and

(2) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

(i) The facility owner or operator shall notify the Director and other appropriate state and local authorities, that the facility is in compliance with R315-7-11.7(h) before operations are resumed in the affected area(s) of the facility.

(j) The facility owner or operator shall record in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, he shall submit a written report on the incident to the Director. The report shall include:

(1) Name, address, and telephone number of the owner or operator;

(2) Name, address, and telephone number of the facility;

(3) Date, time, and type of incident, e.g., fire, discharge;

(4) Name and quantity of material(s) involved;

(5) The extent of injuries, if any;

(6) An assessment of actual or potential hazards to the environment or human health, where this is applicable; and

(7) Estimated quantity and disposition of recovered material that resulted from the incident.

R315-7-12. Manifest System, Recordkeeping, and Reporting.

12.1 APPLICABILITY

The rules in R315-7-12 apply to owners and operators of both on-site and off-site facilities, except as provided otherwise in R315-7-8.1, R315-7-12.2, R315-7-12.3, and R315-7-12.7 do not apply to owners and operators of on-site facilities that do not receive any hazardous waste from off-site sources, nor to owners and operators of off-site facilities with respect to waste military munitions exempted from manifest requirements under 40 CFR 266.203(a).

12.2 USE OF MANIFEST SYSTEM

(a)(1) If a facility receives hazardous waste accompanied by a manifest, the owner, operator, or his agent, shall sign and date the manifest as indicated in R315-7-12.2(a)(2) to certify that the hazardous waste covered by the manifest was received, that the hazardous waste was received except as noted in the discrepancy space of the manifest, or that the hazardous waste was rejected as noted in the manifest discrepancy space.

(2) If a facility receives a hazardous waste shipment accompanied by a manifest, the owner, operator or his agent shall:

(i) Sign and date, by hand, each copy of the manifest;

(ii) Note any significant discrepancies in the manifest, as defined in R315-7-12.3, on each copy of the manifest;

(iii) Immediately give the transporter at least one copy of the manifest;

(iv) Within 30 days of delivery, send a copy of the manifest to the generator; and

(v) Retain at the facility a copy of each manifest for at least three years from the date of delivery.

(3) If a facility receives hazardous waste imported from a foreign source, the receiving facility shall mail a copy of the manifest to the following addresses within 30 days of delivery:

International Compliance Assurance Division, OFA/OECA (2254A), U.S. Environmental Protection Agency, Ariel Rios Building, 1200 Pennsylvania Avenue, NW., Washington DC 20460 and Utah Division of Waste Management and Radiation Control, P O Box 144880, Salt Lake City, Utah 84114-4880.

(b) If a facility receives, from a rail or water (bulk shipment) transporter, hazardous waste which is accompanied by a shipping paper containing all the information required on the manifest (excluding the EPA identification numbers, generator's certification, and signatures) the owner or operator, or his agent, shall:

(1) Sign and date each copy of the manifest or shipping paper, if the manifest has not been received, to certify that the hazardous waste covered by the manifest or shipping paper was received;

(2) Note any significant discrepancies, as defined in R315-7-12.3(a), in the manifest or shipping paper, if the manifest has not been received, on each copy of the manifest or shipping paper;

(3) Immediately give the rail or water, bulk shipment, transporter at least one copy of the manifest or shipping paper, if the manifest has not been received;

(4) Within 30 days after the delivery, send a copy of the signed and dated manifest or a signed and dated copy of the shipping paper (if the manifest has not been received within 30 days after delivery) to the generator; and

(5) Retain at the facility a copy of the manifest and shipping paper, if signed in lieu of the manifest at the time of delivery for at least three years from the date of delivery.

(c) Whenever a shipment of hazardous waste is initiated from a facility, the owner or operator of that facility shall comply with the requirements of R315-5.

The provisions of R315-5-9.1 are applicable to the on-site accumulation of hazardous wastes by generators and only apply to owners or operators who are shipping hazardous waste which they generated at that facility.

(d) Within three working days of the receipt of a shipment subject to R315-5-15, which incorporates by reference 40 CFR 262 subpart H, the owner or operator of the facility shall provide a copy of the tracking document bearing all required signatures to the notifier, to the Division of Waste Management and Radiation Control, P.O. Box 144880, Salt Lake City, Utah, 84114-4880; Office of Enforcement and Compliance Assurance, Office of Compliance, Enforcement Planning, Targeting and Data Division (2222A), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; and to competent authorities of all other concerned countries. The original copy of the tracking document shall be maintained at the facility for at least three years from the date of signature.

(e) A facility shall determine whether the consignment state for a shipment regulates any additional wastes (beyond those regulated Federally) as hazardous wastes under its state hazardous waste program. Facilities shall also determine whether the consignment state or generator state requires the facility to submit any copies of the manifest to these states.

12.3 MANIFEST DISCREPANCIES

(a) Manifest discrepancies are:

(1) Significant discrepancies as defined by R315-7-12.3(b) between the quantity or type of hazardous waste designated on the manifest or shipping paper, and the quantity and type of hazardous waste a facility actually receives;

(2) Rejected wastes, which may be a full or partial shipment of hazardous waste that the treatment, storage, or disposal facility cannot accept; or

(3) Container residues, which are residues that exceed the quantity limits for "empty" containers set forth in R315-2-7(b).

(b) Significant discrepancies in quantity are: For bulk waste, variations greater than ten percent in weight; for batch waste, any variation in piece count, such as a discrepancy of one

drum in a truckload. Significant differences in type are obvious differences which can be discovered by inspection or waste analysis, such as waste solvent substituted for waste acid, or toxic constituents not reported on the manifest or shipping paper.

(c) Upon discovering a significant discrepancies in quantity or type, the owner or operator shall attempt to reconcile the discrepancy with the waste generator or transporter, e.g., with telephone conversations. If the discrepancy is not resolved within 15 days of receipt of the waste, the owner or operator shall immediately submit to the Director a letter describing the discrepancy, and attempts to reconcile it, including a copy of the manifest or shipping paper at issue.

(d)(1) Upon rejecting waste or identifying a container residue that exceeds the quantity limits for "empty" containers set forth in R315-2-7(b), the facility shall consult with the generator prior to forwarding the waste to another facility that can manage the waste. If it is impossible to locate an alternative facility that can receive the waste, the facility may return the rejected waste or residue to the generator. The facility shall send the waste to the alternative facility or to the generator within 60 days of the rejection or the container residue identification.

(2) While the facility is making arrangements for forwarding rejected wastes or residues to another facility under R315-7-12.3, it must ensure that either the delivering transporter retains custody of the waste, or, the facility shall provide for secure, temporary custody of the waste, pending delivery of the waste to the first transporter designated on the manifest prepared under R315-7-12.3(e) or (f).

(e) Except as provided in R315-7-12.3(e)(7), for full or partial load rejections and residues that are to be sent off-site to an alternate facility, the facility is required to prepare a new manifest in accordance with R315-5-2.20(a) and the following instructions:

(1) Write the generator's U.S. EPA ID number in Item 1 of the new manifest. Write the generator's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the generator's site address, then write the generator's site address in the designated space for Item 5.

(2) Write the name of the alternate designated facility and the facility's U.S. EPA ID number in the designated facility block (Item 8) of the new manifest.

(3) Copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.

(4) Copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).

(5) Write the DOT description for the rejected load or the residue in Item 9 (U.S. DOT Description) of the new manifest and write the container types, quantity, and volume(s) of waste.

(6) Sign the Generator's/Offoror's Certification to certify, as the offeror of the shipment, that the waste has been properly packaged, marked, and labeled and is in proper condition for transportation and mail a signed copy of the manifest to the generator identified in Item 5 of the new manifest.

(7) For full load rejections that are made while the transporter remains present at the facility, the facility may forward the rejected shipment to the alternate facility by completing Item 18b of the original manifest and supplying the information on the next destination facility in the Alternate Facility space. The facility shall retain a copy of this manifest for its records, and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility shall use a new manifest and comply with R315-7-12.3(e)(1), (2), (3), (4), (5),

and (6).

(f) Except as provided in R315-7-12.3(f)(7), for rejected wastes and residues that shall be sent back to the generator, the facility is required to prepare a new manifest in accordance with R315-5-2.20(a) and the following instructions:

(1) Write the facility's U.S. EPA ID number in Item 1 of the new manifest. Write the facility's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the facility's site address, then write the facility's site address in the designated space for Item 5 of the new manifest.

(2) Write the name of the initial generator and the generator's U.S. EPA ID number in the designated facility block (Item 8) of the new manifest.

(3) Copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.

(4) Copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).

(5) Write the DOT description for the rejected load or the residue in Item 9 (U.S. DOT Description) of the new manifest and write the container types, quantity, and volume(s) of waste.

(6) Sign the Generator's/Offoror's Certification to certify, as offeror of the shipment, that the waste has been properly packaged, marked, and labeled and is in proper condition for transportation.

(7) For full load rejections that are made while the transporter remains at the facility, the facility may return the shipment to the generator with the original manifest by completing Item 18a and 18b of the manifest and supplying the generator's information in the Alternate Facility space. The facility shall retain a copy for its records and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility shall use a new manifest and comply with R315-7-12.3(f)(1), (2), (3), (4), (5), (6), and (8).

(8) For full or partial load rejections and container residues contained in non-empty containers that are returned to the generator, the facility must also comply with the exception reporting requirements in R315-5-4.42(a)(1).

(g) If a facility rejects a waste or identifies a container residue that exceeds the quantity limits for "empty" containers set for in R315-2-7(b) after it has signed, dated, and returned a copy of the manifest to the delivering transporter or to the generator, the facility shall amend its copy of the manifest to indicate the rejected wastes or residues in the discrepancy space of the amended manifest. The facility shall also copy the manifest tracking number from Item 4 of the new manifest to the Discrepancy space of the amended manifest, and shall re-sign and date the manifest to certify to the information as amended. The facility shall retain the amended manifest for at least three years from the date of amendment, and shall within 30 days, send a copy of the amended manifest to the transporter and generator that received copies prior to their being amended.

12.4 OPERATING RECORD

The requirements as found in 40 CFR 265.73, 1997 ed., as amended by 62 FR 64636, December 8, 1997, are adopted and incorporated by reference.

12.5 AVAILABILITY, RETENTION, AND DISPOSITION OF RECORDS

(a) All records, including plans, required under R315-7 shall be furnished upon written request, and made available at all reasonable times for inspection.

(b) The retention period for all records required under R315-7 is extended automatically during the course of any unresolved enforcement action regarding the facility or as requested by the Director.

(c) A copy of records of waste disposal locations required to be maintained under R315-7-12.4, which incorporates by reference 40 CFR 265.73, shall be turned over to the Director and the local land authority upon closure of the facility, see R315-7-14, which incorporates by reference 40 CFR 265.110 - 265.120.

12.6 BIENNIAL REPORT

Owners or operators of facilities that treat, store, or dispose of hazardous waste shall prepare and submit a single copy of a biennial report to the Director by March 1 of each even numbered year. The biennial report shall be submitted on EPA form 8700-13B. The biennial report shall cover facility activities during the previous calendar year and shall include the following information:

- (a) The EPA identification number, name, and address of the facility;
- (b) The calendar year covered by the report;
- (c) For off-site facilities, the EPA identification number of each hazardous waste generator from which a hazardous waste was received during the year; for imported shipments, the name and address of the foreign generator shall be given;
- (d) A description and the quantity of each hazardous waste received by the facility during the year. For off-site facilities, this information shall be listed by EPA identification number of each generator;
- (e) The method(s) of treatment, storage, or disposal for each hazardous waste;
- (f) Monitoring data, where required under R315-7-13.5(a)(2)(ii) and (iii) and (b)(2) where required;
- (g) The most recent closure cost estimate under R315-7-15, which incorporates by reference 40 CFR 265.140 - 265.150, and for disposal facilities, the most recent post-closure cost estimate under R315-7-15, which incorporates by reference 40 CFR 265.144;
- (h) For generators who treat, store, or dispose of hazardous waste on-site, a description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated;
- (i) For generators who treat, store, or dispose of hazardous waste on-site, a description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent the information is available for the years prior to 1984; and
- (j) The certification signed by the owner or operator of the facility or his authorized representative.

12.7 UNMANIFESTED WASTE REPORT

(a) If a facility accepts for treatment, storage, or disposal any hazardous waste from an off-site source without an accompanying manifest, or without an accompanying shipping paper as described in R315-6-2.20(e), and if the waste is not excluded from the manifest requirements of R315, then the owner or operator shall prepare and submit a single copy of a report to the Director within 15 days after receiving the waste. These reports shall be designated "Unmanifested Waste Report" and include the following information:

- (1) The EPA identification number, name, and address of the facility;
- (2) The date the facility received the waste;
- (3) The EPA identification number, name, and address of the generator and the transporter, if available;
- (4) A description and the quantity of each unmanifested hazardous waste the facility received;
- (5) The method of treatment, storage, or disposal for each hazardous waste;
- (6) The certification signed by the owner or operator of the facility or his authorized representative; and
- (7) A brief explanation of why the waste was unmanifested, if known.

12.8 ADDITIONAL REPORTS

In addition to the biennial and unmanifested waste

reporting requirements described in R315-7-12.6, and R315-7-12.7, a facility owner or operator shall also report to the Director:

- (a) Discharges, fires, and explosions as specified in R315-7-11.7(j);
- (b) Groundwater contamination and monitoring data as specified in R315-7-13.4 and R315-7-13.5;
- (c) Facility closure as specified in R315-7-14, which incorporates by reference 40 CFR 265.110 - 265.120;
- (d) Upon its request, all information as the Director may deem necessary to determine compliance with the requirements of R315-7;
- (e) As otherwise required by R315-7-26, which incorporates by reference 40 CFR 265.1030 - 265.1035, R315-7-27, which incorporate by reference 40 CFR 265.1050 - 265.1064 and R315-7-30, which incorporates by reference 40 CFR 265.1080 - 265.1091.

R315-7-13. Groundwater Monitoring.

13.1 APPLICABILITY

(a) The owner or operator of a surface impoundment, landfill, or land treatment facility which is used to manage hazardous waste shall implement a groundwater monitoring program capable of determining the facility's impact on the quality of groundwater in the uppermost aquifer underlying the facility, except as R315-7-8.1 and R315-7-13.1(c) provide otherwise.

(b) Except as R315-7-13.1(c) and (d) provide otherwise, the owner or operator shall install, operate, and maintain a groundwater monitoring system which meets the requirements of R315-7-13.2, and shall comply with R315-7-13.3 - R315-7-13.5. This groundwater monitoring program shall be carried out during the active life of the facility, and for disposal facilities, during the post-closure care period as well.

(c) All or part of the groundwater monitoring sampling and analysis requirements of this section may be waived if the owner or operator can demonstrate that there is a low potential for migration of hazardous waste or hazardous waste constituents from the facility via the uppermost aquifer to water supply wells, domestic, industrial, or agricultural, or to surface water. This demonstration shall be in writing, and shall be kept at the facility. This demonstration shall be certified by a qualified geologist or geotechnical engineer and shall establish the following:

(1) The potential for migration of hazardous waste or hazardous waste constituents from the facility to the uppermost aquifer, by an evaluation of:

- (i) A water balance of precipitation, evapotranspiration, run-off, and infiltration; and
 - (ii) Unsaturated zone characteristics, i.e., geologic materials, physical properties, and depth to groundwater; and
- (2) The potential for hazardous waste or hazardous waste constituents which enter the uppermost aquifer to migrate to a water supply well or surface water, by an evaluation of:
- (i) Saturated zone characteristics, i.e., geologic materials, physical properties, and rate of groundwater flow; and
 - (ii) The proximity of the facility to water supply wells or surface water.

(d) If an owner or operator assumes, or knows, that groundwater monitoring of indicator parameters in accordance with R315-7-13.2 and R315-7-13.3 would show statistically significant increases, or decreases in the case of pH, when evaluated under R315-7-13.4(b), he may install, operate, and maintain an alternate groundwater monitoring system, other than the one described in R315-7-13.2 and R315-7-13.3. If the owner or operator decides to use an alternate groundwater monitoring system he shall:

(1) Submit to the Director a specific plan, certified by a qualified geologist or geotechnical engineer, which satisfies the

requirements of R315-7-13.4(d)(3) for an alternate groundwater monitoring system;

(2) Initiate the determinations specified in R315-7-13.4(d)(4);

(3) Prepare and submit a written report in accordance with R315-7-13.4(d)(5);

(4) Continue to make the determinations specified in R315-7-13.4(d)(4) on a quarterly basis until final closure of the facility; and

(5) Comply with the recordkeeping and reporting requirements in R315-7-13.5(d).

(e) The groundwater monitoring requirements of this section may be waived with respect to any surface impoundment that (1) is used to neutralize wastes which are hazardous solely because they exhibit the corrosivity characteristics under R315-2-9 or are listed as hazardous wastes in R315-2-10 only for this reason, and (2) contains no other hazardous wastes, if the owner or operator can demonstrate that there is no potential for migration of hazardous wastes from the impoundment. The demonstration must be established, based upon consideration of the characteristics of the wastes and the impoundment, that the corrosive wastes will be neutralized to the extent that they no longer meet the corrosivity characteristic before they can migrate out of the impoundment. The demonstration must be in writing and must be certified by a qualified professional.

(f) The Director may replace all or part of the requirements of R315-7-13 applying to a regulated unit, as defined in R315-8-6, with alternative requirements developed for groundwater monitoring set out in an approved closure or post-closure plan or in an enforceable document, as defined in R315-3-1.1(e)(7), where the Director determines that:

(1) A regulated unit is situated among solid waste management units, or areas of concern, a release has occurred, and both the regulated unit and one or more solid waste management unit(s), or areas of concern, are likely to have contributed to the release; and

(2) It is not necessary to apply the requirements of R315-7-13 because the alternative requirements will protect human health and the environment. The alternative standards for the regulated unit must meet the requirements of R315-8-6.12(a).

13.2 GROUNDWATER MONITORING SYSTEM

(a) A groundwater monitoring system shall be capable of yielding groundwater samples for analysis and shall consist of:

(1) Monitoring wells, at least one, installed hydraulically upgradient, i.e., in the direction of increasing static head from the limit of the waste management area. Their number, locations, and depths shall be sufficient to yield groundwater samples that are:

(i) Representative of background groundwater quality in the uppermost aquifer near the facility; and

(ii) Not affected by the facility.

(2) Monitoring wells, at least three, installed hydraulically downgradient, i.e., in the direction of decreasing static head, at the limit of the waste management area. Their number, locations, and depths shall ensure that they immediately detect any statistically significant amounts of hazardous waste or hazardous waste constituents that migrate from the waste management area to the uppermost aquifer.

(3) The facility owner or operator may demonstrate that an alternate hydraulically downgradient monitoring well location will meet the criteria outlined below. The demonstration must be in writing and kept at the facility. The demonstration must be certified by a qualified ground-water scientist and establish that:

(i) An existing physical obstacle prevents monitoring well installation at the hydraulically downgradient limit of the waste management area; and

(ii) The selected alternate downgradient location is as close to the limit of the waste management area as practical; and

(iii) The location ensures detection that, given the alternate

location, is as early as possible of any statistically significant amounts of hazardous waste or hazardous waste constituents that migrate from the waste management area to the uppermost aquifer.

(iv) Lateral expansion, new, or replacement units are not eligible for an alternate downgradient location under this paragraph.

(b) Separate monitoring systems for each waste management component of the facility are not required provided that provisions for sampling upgradient and downgradient water quality will detect any discharge from the waste management area.

(1) In the case of a facility consisting of only one surface impoundment, landfill, or land treatment area, the waste management area is described by the waste boundary perimeter.

(2) In the case of a facility consisting of more than one surface impoundment, landfill, or land treatment area, the waste management area is described by an imaginary boundary line which circumscribes the several waste management components.

(c) All monitoring wells shall be cased in a manner that maintains the integrity of the monitoring well bore hole. This casing shall be screened or perforated, and packed with gravel or sand where necessary to enable sample collection at depths where appropriate aquifer flow zones exist. The annular space, i.e., the space between the bore hole and well casing above the sampling depth shall be sealed with a suitable material, e.g., cement grout or bentonite slurry, to prevent contamination of samples and the ground water.

13.3 SAMPLING AND ANALYSIS

(a) The owner or operator shall obtain and analyze samples from the installed groundwater monitoring system. The owner or operator shall develop and follow a groundwater sampling and analysis plan. He shall keep this plan at the facility. The plan shall include procedures and techniques for:

(1) Sample collection;

(2) Sample preservation and shipment;

(3) Analytical procedures; and

(4) Chain of custody control.

See "Procedures Manual for Groundwater Monitoring at Solid Waste Disposal Facilities," EPA-530/SW-611, August 1977 and "Methods for Chemical Analysis of Water and Wastes," EPA-600/4-79-020, March 1979 for discussions of sampling and analysis procedures.

(b) The owner or operator shall determine the concentration or value of the following parameters in groundwater samples in accordance with R315-7-13.3(c) and (d):

(1) Parameters characterizing the suitability of the groundwater as a drinking water supply, as specified in R315-50-3, which incorporates by reference 40 CFR 265, Appendix III.

(2) Parameters establishing groundwater quality:

(i) Chloride

(ii) Iron

(iii) Manganese

(iv) Phenols

(v) Sodium

(vi) Sulfate

These parameters are to be used as a basis for comparison in the event a groundwater quality assessment is required under R315-7-13.4(d).

(3) Parameters used as indicators of groundwater contamination:

(i) pH

(ii) Specific Conductance

(iii) Total Organic Carbon

(iv) Total Organic Halogen

(c)(1) For all monitoring wells, the owner or operator shall

establish initial background concentrations or values of all parameters specified in R315-7-13.3(b). He shall do this quarterly for one year.

(2) For each of the indicator parameters specified in R315-7-13.3(b)(3), at least four replicate measurements shall be obtained for each sample and the initial background arithmetic mean and variance shall be determined by pooling the replicate measurements for the respective parameter concentrations or values in samples obtained from upgradient wells during the first year.

(d) After the first year, all monitoring wells shall be sampled and the samples analyzed with the following frequencies:

(1) Samples collected to establish groundwater quality shall be obtained and analyzed for the parameters specified in R315-7-13.3(b)(2) at least annually.

(2) Samples collected to indicate groundwater contamination shall be obtained and analyzed for the parameters specified in R315-7-13.3(b)(3) at least semiannually.

(e) Elevation of the groundwater surface at each monitoring well shall be determined each time a sample is obtained.

13.4 PREPARATION, EVALUATION, AND RESPONSE

(a) The owner or operator shall prepare an outline of a groundwater quality assessment program. The outline shall describe a more comprehensive groundwater monitoring program, than that described in R315-7-13.2 and R315-7-13.3, capable of determining:

(1) Whether hazardous waste or hazardous waste constituents have entered the groundwater;

(2) The rate and extent of migration of hazardous waste or hazardous waste constituents in the groundwater; and

(3) The concentrations of hazardous waste or hazardous waste constituents in the groundwater.

(b) For each indicator parameter specified in R315-7-13.3(b)(3), the owner or operator shall calculate the arithmetic mean and variance, based on at least four replicate measurements on each sample, for each well monitored in accordance with R315-7-13.3(d)(2) and compare these results with its initial background arithmetic mean. The comparison shall consider individually each of the wells in the monitoring system, and shall use the Students t-test at the 0.01 level of significance, see R315-50-4, to determine statistically significant increases, and decreases, in the case of pH, over initial background.

(c)(1) If the comparisons for the upgradient wells made under R315-7-13.4(b) show a significant increase, or pH decrease, the owner or operator shall submit this information in accordance with R315-7-13.5(a)(2)(ii).

(2) If the comparisons for downgradient wells made under R315-7-13.4(b) show a significant increase, or pH decrease, the owner or operator shall then immediately obtain additional groundwater samples from those downgradient wells where a significant difference was detected, split the samples in two, and expeditiously obtain analyses of all additional samples to determine whether the significant difference was a result of laboratory error.

(d)(1) If the analyses performed under R315-7-13.4(c)(2) confirm the significant increase, or pH decrease, the owner or operator shall provide written notice to the Director--within seven days of the date of the confirmation--that the facility may be affecting groundwater quality.

(2) Within 15 days after the notification under R315-7-13.4(d)(1), the owner or operator shall develop and submit to the Director a specific plan, based on the outline required under R315-7-13.4(a) and certified by a qualified geologist or geotechnical engineer, for a groundwater quality assessment program at the facility.

(3) The plan to be submitted under R315-7-13.1(d)(1) or R315-7-13.4(d)(2) shall specify:

(i) The number, location, and depth of wells;

(ii) Sampling and analytical methods for those hazardous wastes or hazardous waste constituents in the facility;

(iii) Evaluation procedures, including any use of previously-gathered groundwater quality information; and

(iv) A schedule of implementation.

(4) The owner or operator shall implement the groundwater quality assessment plan which satisfies the requirements of R315-7-13.4(d)(3), and, at a minimum, determine:

(i) The rate and extent of migration of the hazardous waste or hazardous waste constituents in the groundwater; and

(ii) The concentrations of the hazardous waste or hazardous waste constituents in the groundwater.

(5) The owner or operator shall make his first determination under R315-7-13.4(d)(4) as soon as technically feasible, and, within 15 days after that determination submit to the Director a written report containing an assessment of the groundwater quality.

(6) If the owner or operator determines, based on the results of the first determination under R315-7-13.4(d)(4), that no hazardous waste or hazardous waste constituents from the facility have entered the groundwater, then he may reinstate the indicator evaluation program described in R315-7-13.3 and R315-7-13.4(b). If the owner or operator reinstates the indicator evaluation program, he shall so notify the Director in the report submitted under R315-7-13.4(d)(5).

(7) If the owner or operator determines, based on the first determination under R315-7-13.4(d)(4), that hazardous waste or hazardous waste constituents from the facility have entered the groundwater, then he:

(i) Must continue to make the determinations required under R315-7-13.4(d)(4) on a quarterly basis until final closure of the facility, if the groundwater quality assessment plan was implemented prior to final closure of the facility; or

(ii) May cease to make the determinations required under R315-7-13.4(d)(4), if the groundwater quality assessment plan was implemented during the post-closure care period.

(e) Notwithstanding any other provision of R315-7-13, any groundwater quality assessment to satisfy the requirements of R315-7-13.4(d)(4) which is initiated prior to final closure of the facility shall be completed and reported in accordance with R315-7-13.4(d)(5).

(f) Unless the groundwater is monitored to satisfy the requirements of R315-7-13.4(d)(4), at least annually the owner or operator shall evaluate the data on groundwater surface elevations obtained under R315-7-13.3(e) to determine whether the requirements under R315-7-13.2(a) for locating the monitoring wells continues to be satisfied. If the evaluation shows that R315-7-13.2(a) is no longer satisfied, the owner or operator shall immediately modify the number, location, or depth of the monitoring wells to bring the groundwater monitoring system into compliance with this requirement.

13.5 RECORDKEEPING AND REPORTING

(a) Unless the groundwater is monitored to satisfy the requirements of R315-7-13.4(d)(4), the owner or operator shall:

(1) Keep records of the analyses required in R315-7-13.3(c) and (d), the associated groundwater surface elevations required in R315-7-13.3(e), and the evaluations required in R315-7-13.4(b) throughout the active life of the facility, and, for disposal facilities, throughout the post-closure care period as well; and

(2) Report the following groundwater monitoring information to the Director:

(i) During the first year when initial background concentrations are being established for the facility: concentrations or values of the parameters listed in R315-7-

13.3(b)(1) for each groundwater monitoring well within 15 days after completing each quarterly analysis. The owner or operator shall separately identify for each monitoring well any parameters whose concentration or value has been found to exceed the maximum contaminant levels listed in 40 CFR 265, Appendix III.

(ii) Annually: concentrations or values of the parameters listed in R315-7-13.3(b)(3) for each groundwater monitoring well, along with the required evaluations for these parameters under R315-7-13.4(b). The owner or operator shall separately identify any significant differences from initial background found in the upgradient wells, in accordance with R315-7-13.4(c)(1). During the active life of the facility, this information shall be submitted no later than March 1 following each calendar year.

(iii) No later than March 1 following each calendar year: results of the evaluation of groundwater surface elevations under R315-7-13.4(f), and a description of the response to that evaluation, where applicable.

(b) If the groundwater is monitored to satisfy the requirements of R315-7-13.4(d)(4), the owner or operator shall:

(1) Keep records of the analyses and evaluations specified in the plan, which satisfies the requirements of R315-7-13.4(d)(3), throughout the active life of the facility, and, for disposal facilities, throughout the post-closure care period as well; and

(2) Annually, until final closure of the facility, submit to the Director a report containing the results of his groundwater quality assessment program which includes, but is not limited to, the calculated (or measured) rate of migration of hazardous waste or hazardous waste constituents in the groundwater during the reporting period. This report shall be submitted no later than March 1, following each calendar year.

R315-7-14. Closure and Post-Closure.

The requirements as found in 40 CFR 265 subpart G (265.110 - 265.121), 1998 ed., as amended by 63 FR 56710, October 22, 1998, are adopted and incorporated by reference with the following exceptions:

(a) Substitute "Director" for all references to "Administrator" or "Regional Administrator".

(b) Substitute the word "appointee" for "employee."

(c) Substitute "Director" for "Agency."

(d) Substitute 19-6 for references to RCRA.

R315-7-15. Financial Requirements.

The requirements as found in 40 CFR 265 subpart H (265.140 - 265.150), 1998 ed., as amended by 63 FR 56710, October 22, 1998, are adopted and incorporated by reference with the following exceptions:

(a) substitute "Director of the Division of Waste Management and Radiation Control " for all references to "Administrator" or "Regional Administrator."

(b) substitute "Director" for all references to "Agency" or "EPA".

(c) substitute "The Utah Solid and Hazardous Waste Act" for all references to "the Resource Conservation and Recovery Act" or "RCRA."

R315-7-16. Use and Management of Containers.

16.1 APPLICABILITY

The rules in this section apply to the owners or operators of all hazardous waste management facilities that store containers of hazardous waste, except as provided otherwise in R315-7-8.1.

16.2 CONDITION OF CONTAINERS

The container holding hazardous waste shall be in good condition and shall not leak. If a container is not in good condition, or if it begins to leak, the owner or operator shall

transfer the hazardous waste from the container to a storage container that is in good condition, or manage the waste in another fashion which complies with the requirements of R315-7.

16.3 COMPATIBILITY OF WASTE WITH CONTAINER

Owners or operators shall use containers made of or lined with materials which will not react with, and are otherwise compatible with, the waste to be stored, so that the ability of the container to contain the waste is not impaired.

16.4 MANAGEMENT OF CONTAINERS

(a) A container holding hazardous waste shall always be closed during storage, except when it is necessary to add or remove waste.

(b) A container holding hazardous waste shall not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Reuse of containers is also governed by the U.S. Department of Transportation regulations, including those set forth in 49 CFR 173.28.

16.5 INSPECTIONS

In addition to the inspections required by R315-7-9.6, the owner or operator shall inspect areas where containers are stored, at least weekly, looking for leaks and for deterioration caused by corrosion or other factors. See R315-7-16.2 for remedial action required if deterioration or leaks are detected.

16.6 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

Containers holding ignitable or reactive waste shall be located more than 15 meters, 50 feet, from the facility's property line.

See R315-7-9.8 for additional requirements.

16.7 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTE

(a) Incompatible wastes or incompatible wastes and materials, see 40 CFR 265, Appendix V for examples, shall not be placed in the same container, unless R315-79.8(b) is complied with.

(b) Hazardous waste shall not be placed in an unwashed container that previously held an incompatible waste or material, see 40 CFR 265, Appendix V for examples, unless R315-7-9.8(b) is complied with.

(c) A storage container holding a hazardous waste that is incompatible with any waste or other materials stored nearby in other containers, open tanks, piles, or surface impoundments shall be separated from the other materials or protected from them by means of a dike, berm, wall, or other device. The purpose of this is to prevent fires, explosions, gaseous emissions, leaching, or other discharge of hazardous wastes or hazardous constituents which could result from the mixing of incompatible materials.

16.8 AIR EMISSION STANDARDS

The owner or operator shall manage all hazardous waste placed in a container in accordance with the applicable requirements of R315-7-26, which incorporates by reference 40 CFR subpart AA, R315-7-27, which incorporates by reference 40 CFR subpart BB, and R315-7-30, which incorporates by reference 40 CFR subpart CC.

R315-7-17. Tanks.

The requirements as found in 40 CFR 265 subpart J, 265.190-265.202, 1996 ed., as amended by 61 FR 59931, November 25, 1996, are adopted and incorporated by reference with the following exceptions:

(a) Substitute "Director of the Division of Waste Management and Radiation Control " for all references to "Regional Administrator" found in 40 CFR 265 subpart J with the exception of 40 CFR 265.193(g) and (h)(5), which will replace "Regional Administrator" with "Director".

(b) Add, following January 12, 1988, in 40 CFR 265.191(a), "or by December 16, 1988, for non-HSWA existing tank systems."

(c) Replace 40 CFR 265.193(a)(2) to (4) with the following corresponding paragraphs:

(1) For all HSWA existing tank systems used to store or treat EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027, within two years after January 12, 1987, or within two years after December 16, 1988, for non-HSWA existing tank systems;

(2) For those HSWA existing tank systems of known and documented age, within two years after January 12, 1987, or within two years after December 16, 1988, for non-HSWA existing tank systems, or when the tank system has reached 15 years of age, whichever comes later;

(3) For those HSWA existing tank systems for which the age cannot be documented, within eight years of January 12, 1987, or within eight years of December 16, 1988, for non-HSWA existing tank systems; but if the age of the facility is greater than seven years, secondary containment must be provided by the time the facility reaches 15 years of age, or within two years of January 12, 1987, or within two years of December 16, 1988, for non-HSWA existing tank systems, whichever comes later; and

(d) Add, following the last January 12, 1987, in 40 CFR 265.193(a)(5), "or December 16, 1988, for non-HSWA tank systems."

R315-7-18. Surface Impoundments.

18.1 APPLICABILITY

The rules in this section apply to the owners and operators of facilities that use surface impoundments for the treatment, storage, or disposal of hazardous waste, except as provided otherwise in R315-7-8.1.

18.2 ACTION LEAKAGE RATE

(a) The owner or operator of surface impoundment units subject to R315-7-18.9(a) must submit a proposed action leakage rate to the Director when submitting the notice required under R315-7-18.9(b). Within 60 days of receipt of the notification, the Director will: Establish an action leakage rate, either as proposed by the owner or operator or modified using the criteria in this section; or extend the review period for up to 30 days. If no action is taken by the Director before the original 60 or extended 90 day review periods, the action leakage rate will be approved as proposed by the owner or operator.

(b) The Director shall approve an action leakage rate for surface impoundment units subject to R315-7-18.9(a). The action leakage rate is the maximum design flow rate that the leak detection system, LDS, can remove without the fluid head on the bottom liner exceeding one foot. The action leakage rate shall include an adequate safety margin to allow for uncertainties in the design, e.g., slope, hydraulic conductivity, thickness of drainage material, construction, operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions, e.g., the action leakage rate shall consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.

(c) To determine if the action leakage rate has been exceeded, the owner or operator shall convert the weekly or monthly flow rate from the monitoring data obtained under R315-7-18.5(b), to an average daily flow rate, gallons per acre per day, for each sump. Unless the Director approves a different calculation, the average daily flow rate for each sump shall be calculated weekly during the active life and closure period, and if the unit closes in accordance with R315-7-18.6, which incorporates by reference 40 CFR 265.228(a)(2), monthly during the post-closure care period when monthly monitoring is

required under R315-7-18.5(b).

18.3 CONTAINMENT SYSTEM

All earthen dikes shall have a protective cover, such as grass, shale, or rock, to minimize wind and water erosion and to preserve their structural integrity.

18.4 WASTE ANALYSIS AND TRIAL TESTS

In addition to the waste analyses required by R315-7-9.4, which incorporates by reference 40 CFR 265.13, whenever a surface impoundment is used to:

(1) Chemically treat a hazardous waste which is substantially different from waste previously treated in that impoundment; or

(2) Chemically treat hazardous waste with a substantially different process than any previously used in that impoundment; the owner or operator shall, before treating the different waste or using the different process:

(i) Conduct waste analyses and trial treatment tests, e.g., bench scale or pilot plant scale tests; or

(ii) Obtain written, documented information on similar treatment of similar waste under similar operating conditions; to show that this treatment will comply with R315-7-9.8(b).

The owner or operator shall record the results from each waste analysis and trial test in the operating record of the facility, see R315-7-12.4, which incorporates by reference 40 CFR 265.73.

18.5 MONITORING AND INSPECTIONS

(a) The owner or operator shall inspect:

(1) The freeboard level at least once each operating day to ensure compliance with R315-7-18.2, and

(2) The surface impoundment, including dikes and vegetation surrounding the dike, at least once a week to detect any leads, deterioration, or failures in the impoundment.

(b)(1) An owner or operator required to have a leak detection system under R315-7-18.9(a) shall record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

(2) After the final cover is installed, the amount of liquids removed from each leak detection system sump shall be recorded at least monthly. If the liquid level in the sump stays below the pump operating level for two consecutive months, the amount of liquids in the sumps shall be recorded at least quarterly. If the liquid level in the sump stays below the pump operating level for two consecutive quarters, the amount of liquids in the sumps shall be recorded at least semi-annually. If at any time during the post-closure care period the pump operating level is exceeded at units on quarterly or semi-annual recording schedules, the owner or operator shall return to monthly recording of amounts of liquids removed from each sump until the liquid level again stays below the pump operating level for two consecutive months.

(3) "Pump operating level" is a liquid level proposed by the owner or operator and approved by the Director based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump. The timing for submission and approval of the proposed "pump operating level" will be in accordance with R315-7-18.2(a).

The owner or operator shall remedy any deterioration or malfunction he finds.

18.6 CLOSURE AND POST-CLOSURE

The requirements as found in 40 CFR 265.228, 1992 ed., are adopted and incorporated by reference.

18.7 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

Ignitable or reactive waste shall not be placed in a surface impoundment, unless the waste and impoundment satisfy all applicable requirements of R315-13, which incorporates by reference 40 CFR 268, and:

(a) The waste is treated, rendered, or mixed before or immediately after placement in the impoundment so that:

(1) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) and (f); and

(2) R315-7-9.8(b) is complied with; or

(b)(1) The waste is managed in such a way that it is protected from any material or conditions which may cause it to ignite or react; and

(2) Maintain and monitor the leak detection system in accordance with R315-8-11.2(c)(2)(iv) and (3) and R315-7-18.5(b) and comply with all other applicable leak detection system requirements of R315-7;

(3) The owner or operator obtains a certification from a qualified chemist or engineer that, to the best of his knowledge and opinion, the design features or operating plans of the facility will prevent ignition or reaction; and

(4) The certification and the basis for it are maintained at the facility; or

(c) The surface impoundment is used solely for emergencies.

18.8 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

Incompatible wastes or incompatible wastes and materials, see 40 CFR 265, Appendix V for examples, shall not be placed in the same surface impoundment, unless they will not generate heat, fumes, fires, or explosive reactions that could damage the structural integrity of the impoundment, or otherwise threaten human health or the environment.

18.9 DESIGN REQUIREMENTS

(a) The owner or operator of each new surface impoundment unit on which construction commences after January 29, 1992, each lateral expansion of a surface impoundment unit on which construction commences after July 29, 1992, and each replacement of an existing surface impoundment unit that is to commence reuse after July 29, 1992 must install two or more liners and a leachate collection and removal system between such liners, and operate the leachate collection and removal system, in accordance with R315-7-18.9(c), unless exempted under R315-7-18.9(d), (e), or (f). "Construction commences" is as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, under "existing facility."

(b) The owner or operator of each unit referred to in paragraph (a) of this section shall notify the Director at least 60 days prior to receiving waste. The owner or operator of each facility submitting notice must file a part B application within six months of the receipt of the notice.

(c) The owner or operator of any replacement surface impoundment unit is exempt from R315-7-18.9(a) if:

(1) The existing unit was constructed in compliance with the design standards of Section 3004(o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and

(2) There is no reason to believe that the liner is not functioning as designed.

(d) The double liner requirement set forth in R315-7-18.9(a) may be waived by the Director for any monofill, if:

(1) The monofill contains only hazardous wastes from foundry furnace emission controls or metal casting molding sand, and these wastes do not contain constituents which would render the wastes hazardous for reasons other than the Toxicity Characteristic in R315-2-9(g) with EPA Hazardous Waste Numbers D004 through D017; and

(2)(i)(A) The monofill has at least one liner for which there is no evidence that the liner is leaking. For the purposes of this paragraph the term "liner" means a liner designed, constructed, installed, and operated to prevent hazardous waste from passing into the liner at any time during the active life of the facility, or a liner designed, constructed, installed, and operated to prevent hazardous waste from migrating beyond the liner to adjacent subsurface soil, groundwater, or surface water

at any time during the active life of the facility. In the case of any surface impoundment which has been exempted from the requirements of R315-7-18.9(a) on the basis of a liner designed, constructed, installed, and operated to prevent hazardous waste from passing beyond the liner, at the closure of the impoundment the owner or operator must remove or decontaminate all waste residues, all contaminated liner material, and contaminated soil to the extent practicable given the specific site conditions and the nature and extent of contamination. If all contaminated soil is not removed or decontaminated, the owner or operator of the impoundment must comply with appropriate post-closure requirements, including but not limited to groundwater monitoring and corrective action.

(B) The monofill is located more than one-quarter mile from an underground source of drinking water, as that term is defined in 40 CFR; 144.3; and

(C) The monofill is in compliance with applicable groundwater monitoring requirements for facilities with permits; or

(ii) The owner or operator demonstrates that the monofill is located, designed and operated so as to assure that there will be no migration of any hazardous constituent into groundwater or surface water at any future time.

(e) In the case of any unit in which the liner and leachate collection system has been installed pursuant to the requirements of R315-7-18.9(a) and in good faith compliance with R315-7-18.9(a) and with guidance documents governing liners and leachate collection systems under R315-7-18.9(a), no liner or leachate collection system which is different from that which was so installed pursuant to R315-7-18.9(a) will be required for the unit by the Director when issuing the first permit to the facility, except that the Director will not be precluded from requiring installation of a new liner when the Director has reason to believe that any liner installed pursuant to the requirements of R315-7-18.9(a) is leaking.

(f) A surface impoundment shall maintain enough freeboard to prevent overtopping of the dike by overfilling, wave action, or a storm. Except as provided in R315-7-18.2(b), there shall be at least 60 centimeters, two feet, of freeboard.

(g) A freeboard level less than 60 centimeters, two feet, shall be maintained if the owner or operator obtains certification by a qualified engineer that alternate design features or operating plans will, to the best of his knowledge and opinion, prevent overtopping of the dike. The certification, along with written identification of alternate design features or operating plans preventing overtopping, shall be maintained at the facility.

(h) Surface impoundments that are newly subject to R315-7-18 due to the promulgation of additional listings or characteristics for the identification of hazardous waste must be in compliance with R315-7-18.9(a), (c) and (d) not later than 48 months after the promulgation of the additional listing or characteristic. This compliance period shall not be cut short as the result of the promulgation of land disposal prohibitions under R315-13, which incorporates by Reference 40 CFR 268, or the granting of an extension to the effective date of a prohibition pursuant to 40 CFR 268.5, within this 48-month period.

18.10 RESPONSE ACTIONS

(a) The owner or operator of surface impoundment units subject to R315-7-18.9(a) shall submit a response action plan to the Director when submitting the proposed action leakage rate under R315-7-18.2. The response action plan shall set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan must describe the actions specified in R315-7-18.10(b).

(b) If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator shall:

(1) Notify the Director in writing of the exceedence within seven days of the determination;

(2) Submit a preliminary written assessment to the Director within 14 days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;

(3) Determine to the extent practicable the location, size, and cause of any leak;

(4) Determine whether waste receipt should cease or be curtailed, whether any waste should be removed from the unit for inspection, repairs, or controls, and whether or not the unit should be closed;

(5) Determine any other short-term and longer-term actions to be taken to mitigate or stop any leaks; and

(6) Within 30 days after the notification that the action leakage rate has been exceeded, submit to the Director the results of the analyses specified in R315-7-18.10(b)(3)-(5), the results of actions taken, and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator must submit to the Director a report summarizing the results of any remedial actions taken and actions planned.

(c) To make the leak and/or remediation determinations in R315-7-18.10(b)(3)-(5), the owner or operator shall:

(1)(i) Assess the source of liquids and amounts of liquids by source,

(ii) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and

(iii) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or

(2) Document why such assessments are not needed.

18.11 AIR EMISSION STANDARDS

The owner or operator shall manage all hazardous waste placed in a surface impoundment in accordance with the applicable requirements of R315-7-27, which incorporates by reference 40 CFR subpart BB, and R315-7-30, which incorporates by reference 40 CFR subpart CC.

R315-7-19. Waste Piles.

19.1 APPLICABILITY

The rules in this section apply to the owners and operators of facilities that treat or store hazardous waste in piles, except as provided otherwise in R315-7-8.1. Alternatively, a pile of hazardous waste may be managed as a landfill under R315-7-21.

19.2 PROTECTION FROM WIND

The owners or operators of a pile containing hazardous waste which could be subject to dispersal by wind shall cover or otherwise manage the pile so that the wind dispersal is controlled.

19.3 WASTE ANALYSIS

In addition to the waste analyses required by R315-7-9.4, owners or operators shall analyze a representative sample from each incoming shipment of waste before adding the waste to any existing pile, unless the only wastes the facility receives which are amenable to piling are compatible with each other, or the waste received is compatible with the waste in the pile to which it is to be added. The analysis conducted shall be capable of differentiating between the types of hazardous waste which are placed in piles, so that mixing of incompatible waste does not inadvertently occur. The analysis shall include a visual comparison of color and texture. The results of these analyses shall be placed in the operating record.

19.4 CONTAINMENT

If leachate or run-off from a pile is a hazardous waste, then either:

(a)(1) The pile shall be placed on an impermeable base that is compatible with the waste under the conditions of treatment

or storage;

(2) The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portion of the pile during peak discharge from at least a 25-year storm;

(3) The owner or operator shall design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm; and

(4) Collection and holding facilities, e.g., tanks or basins, associated with run-on and run-off control systems shall be emptied or otherwise managed expeditiously to maintain design capacity of the system; or

(b)(1) The pile shall be protected from precipitation and run-on by some other means; and

(2) No liquids or wastes containing free liquids may be placed in the pile.

19.5 SPECIAL REQUIREMENTS FOR IGNITABLE WASTE

Ignitable waste shall not be placed in a pile unless the waste and waste pile satisfy all applicable requirements of R315-13, which incorporates by reference 40 CFR 268, and:

(a) Addition of the waste to an existing pile results in the waste or mixture no longer meeting the definition of ignitable waste under R315-2-9(d), and complies with R315-7-9.8; or

(b) The waste is managed in such a way that it is protected from any material or conditions which may cause it to react.

19.6 REQUIREMENTS FOR REACTIVE WASTE

Reactive waste shall not be placed in a pile unless the waste and pile satisfy all applicable requirements of R315-13, which incorporates by reference 40 CFR 268, and:

(a) Addition of the waste to an existing pile results in the waste or mixture no longer meeting the definition of reactive waste under R315-2-9(f) and complies with R315-7-9.8; or

(b) The waste is managed in such a way that it is protected from any material or condition which may cause it to react.

19.7 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTE

(a) Incompatible waste, or incompatible wastes and materials, see 40 CFR 265, Appendix V for examples, shall not be placed in the same pile unless, R315-7-9.8(b) is complied with.

(b) A pile of hazardous waste that is incompatible with any waste or other material stored nearby in other containers, piles, open tanks, or surface impoundments shall be separated from the other materials, or protected from them by means of a dike, berm, wall, or other device. The purpose of this is to prevent gaseous emissions, fires, explosions, leaching or other discharge of hazardous waste or hazardous waste constituents which could result from the contact or mixing of incompatible wastes or materials.

(c) Hazardous waste shall not be piled on the same area where incompatible wastes or materials were previously piled, unless that area has been decontaminated sufficiently to ensure compliance with R315-7-9.8(b).

19.8 CLOSURE AND POST-CLOSURE CARE

(a) At closure, the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components, liners, etc., contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless R315-2-3(d) applies; or

(b) If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in R315-7-19.8(a), the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, he shall close the facility and perform post-closure care in accordance with the

closure and post-closure requirements that apply to landfills, R315-7-21.4.

19.9 DESIGN AND OPERATING REQUIREMENTS

The owner or operator of each new waste pile on which construction commences after January 29, 1992, each lateral expansion of a waste pile unit on which construction commences after July 29, 1992, and each such replacement of an existing waste pile unit that is to commence reuse after July 29, 1992 shall install two or more liners and a leachate collection and removal system above and between such liners, and operate the leachate collection and removal systems, in accordance with R315-8-12.2(c), unless exempted under R315-8-12.2(d), (e), or (f); and must comply with the procedures of R315-7-18.9(b). "Construction commences" is as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, under "existing facility".

19.10 ACTION LEAKAGE RATES

(a) The owner or operator of waste pile units subject to R315-7-19.9 shall submit a proposed action leakage rate to the Director when submitting the notice required under R315-7-19.9. Within 60 days of receipt of the notification, the Director will: Establish an action leakage rate, either as proposed by the owner or operator or modified using the criteria in this section; or extend the review period for up to 30 days. If no action is taken by the Director before the original 60 or extended 90 day review periods, the action leakage rate will be approved as proposed by the owner or operator.

(b) The Director shall approve an action leakage rate for surface impoundment units subject to R315-7-19.9. The action leakage rate is the maximum design flow rate that the leak detection system, LDS, can remove without the fluid head on the bottom liner exceeding one foot. The action leakage rate shall include an adequate safety margin to allow for uncertainties in the design, e.g., slope, hydraulic conductivity, thickness of drainage material, construction, operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions, e.g., the action leakage rate shall consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.

(c) To determine if the action leakage rate has been exceeded, the owner or operator shall convert the weekly flow rate from the monitoring data obtained under R315-7-19.12, to an average daily flow rate, gallons per acre per day, for each sump. Unless the Director approves a different calculation, the average daily flow rate for each sump shall be calculated weekly during the active life and closure period.

19.11 RESPONSE ACTIONS

(a) The owner or operator of waste pile units subject to R315-7-19.9 shall submit a response action plan to the Director when submitting the proposed action leakage rate under R315-7-19.10. The response action plan shall set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan shall describe the actions specified in R315-7-19.11(b).

(b) If the flow rate into the leak determination system exceeds the action leakage rate for any sump, the owner or operator shall:

(1) Notify the Director in writing of the exceedence within seven days of the determination;

(2) Submit a preliminary written assessment to the Director within 14 days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;

(3) Determine to the extent practicable the location, size, and cause of any leak;

(4) Determine whether waste receipts should cease or be curtailed, whether any waste should be removed from the unit

for inspection, repairs, or controls, and whether or not the unit should be closed;

(5) Determine any other short-term and longer-term actions to be taken to mitigate or stop any leaks; and

(6) Within 30 days after the notification that the action leakage rate has been exceeded, submit to the Director the results of the analyses specified in R315-7-19.11(b)(3)-(5), the results of actions taken, and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator shall submit to the Director a report summarizing the results of any remedial actions taken and actions planned.

(c) To make the leak and/or remediation determinations in R315-7-19.11(b)(3)-(5), the owner or operator shall:

(1)(i) Assess the source of liquids and amounts of liquids by source,

(ii) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and

(iii) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or

(2) Document why such assessments are not needed.

19.12 MONITORING AND INSPECTION

An owner or operator required to have a leak detection system under R315-7-19.9 shall record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

R315-7-20. Land Treatment.

20.1 APPLICABILITY

The rules in this section apply to owners and operators of hazardous waste land treatment facilities, except as provided otherwise in R315-7-8.1.

20.2 GENERAL OPERATING REQUIREMENTS

(a) Hazardous waste shall not be placed in or on a land treatment facility unless the waste can be made less hazardous or non-hazardous by degradation, transformation, or immobilization processes occurring in or on the soil.

(b) The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portions of the facility during peak discharge from at least a 25-year storm.

(c) The owner or operator shall design, construct, operate, and maintain a run-off management system capable of collecting and controlling a water volume at least equivalent to a 24-hour, 25-year storm.

(d) Collection and holding facilities, e.g., tanks or basins, associated with run-on and run-off control systems shall be emptied or otherwise managed expeditiously after storms to maintain design capacity of the system.

(e) If the treatment zone contains particulate matter which may be subject to wind dispersal, the owner or operator shall manage the unit to control wind dispersal.

20.3 WASTE ANALYSIS

In addition to the waste analyses required by R315-7-9.4, before placing a hazardous waste in or on a land treatment facility, the owner or operator shall:

(a) Determine the concentration in the waste of any substances which equal or exceed the maximum concentrations contained in Table 1 of 40 CFR 261.24, that cause a waste to exhibit the Toxicity Characteristic;

(b) For any waste listed in R315-2, determine the concentration of any substances which caused the waste to be listed as a hazardous waste; and

(c) If food chain crops are grown, determine the concentrations in the waste of each of the following constituents: arsenic, cadmium, lead, and mercury, unless the owner or operator has written documented data that show that

the constituent is not present;

R315-50-9, which incorporates by reference 40 CFR 261, Appendix VII, specifies the substances for which a waste is listed as a hazardous waste. As required by R315-7-9.4, the waste analysis plan shall include analyses needed to comply with R315-7-20.8 and R315-7-20.9. As required by R315-7-12.4, the owner or operator shall place the results from each waste analysis, or the documented information, in the operating record of the facility.

20.4 FOOD CHAIN CROPS

(a) An owner or operator of a hazardous waste land treatment facility on which food chain crops are being grown, or have been grown and will be grown in the future, shall notify the Director. The growth of food chain crops at a facility which has never before been used for this purpose is a significant change in process under R315-3. Owners or operators of these land treatment facilities who propose to grow food chain crops shall comply with R315-3.

(b)(1) Food chain crops shall not be grown on the treated area of a hazardous waste land treatment facility unless the owner or operator can demonstrate, based on field testing, that any arsenic, lead, mercury, or other constituents identified under R315-7-20.3(b):

(i) Will not be transferred to the food portion of the crop by plant uptake or direct contact, and will not otherwise be ingested by food chain animals, e.g., by grazing; or

(ii) Will not occur in greater concentrations in the crops grown on the land treatment facility than in the same crops grown on untreated soils under similar conditions in the same region.

(2) The information necessary to make the demonstration required by R315-7-20.4(b)(1) shall be kept at the facility and shall, at a minimum:

(i) Be based on tests for the specific waste and application rates being used at the facility; and

(ii) Include descriptions of crop and soil characteristics, sample selection criteria, sample size determination, analytical methods and statistical procedures.

(c) Food chain crops shall not be grown on a land treatment facility receiving waste that contains cadmium unless all requirements of R315-7-20.4(c)(1)(i) through (iii) or all requirements of R315-7-20.4(c)(2)(i) through (iv) are met.

(1)(i) The pH of the waste and soil mixture is 6.5 or greater at the time of each waste application, except for waste containing cadmium at concentration of 2. mg/kg, dry weight, or less.

(ii) The annual application of cadmium from waste does not exceed 0.5 kilograms per hectare (kg/ha) on land use for production of tobacco, leafy vegetables, or root crops grown for human consumption. For other food chain crops, the annual cadmium application rate does not exceed:

TABLE

Time Period	Annual Cd Application Rate (kg/ha)
Present to June 30, 1984	2.0
July 1, 1984 to December 31, 1986	1.25
Beginning January 1, 1987	0.5

(iii) The cumulative application of cadmium from waste does not exceed the levels in either paragraph (A) or (B) below:

(A)

TABLE

Soil cation exchange capacity (meq/100g)	MAXIMUM CUMULATIVE APPLICATION (kg/ha)	
	Background soil pH less than 6.5	Background soil pH greater
Less than 5	5	5
5-15	5	10
Greater than 15	5	20

than 6.5

Less than 5	5	5
5-15	5	10
Greater than 15	5	20

(B) For soils with a background pH of less than 6.5, the cumulative cadmium application rate does not exceed the levels below: Provided, that the pH of the waste and soil mixture is adjusted to and maintained at 6.5 or greater whenever food chain crops are grown.

TABLE

Soil cation exchange capacity (meq/100g)	Maximum cumulative application (kg/ha)
Less than 5	5
5 to 15	10
Greater than 15	20

(2)(i) The only food chain crop produced is animal feed.

(ii) The pH of the waste and soil mixture is 6.5 or greater at the time of waste application or at the time the crop is planted, whichever occurs later, and this pH level is maintained whenever food chain crops are grown.

(iii) There is a facility operating plan which demonstrates how the animal feed will be distributed to preclude ingestion by humans. The facility operating plan describes the measure to be taken to safeguard against possible health hazards from cadmium entering the food chain, which may result from alternative land uses.

(iv) Future property owners are notified by a stipulation in the land record or property deed which states that the property has received waste at high cadmium application rates and that food chain crops shall not be grown, except in compliance with R315-7-20.7(c)(2).

As required by R315-7-12.4, which incorporates by reference 40 CFR 265.73, if an owner or operator grows food chain crops on his land treatment facility, he shall place the information developed in this section in the operating record of the facility.

20.5 UNSATURATED ZONE, ZONE OF AERATION, MONITORING

(a) The owner or operator shall have in writing, and shall implement, an unsaturated zone monitoring plan which is designed to:

(1) Detect the vertical migration of hazardous waste and hazardous waste constituents under the active portion of the land treatment facility; and

(2) Provide information on the background concentrations of the hazardous waste and hazardous waste constituents in similar but untreated soils nearby; this background monitoring shall be conducted before or in conjunction with the monitoring required under R315-7-20.5(a)(1).

(b) The unsaturated zone monitoring plan shall include, at a minimum:

(1) Soil monitoring using soil cores; and

(2) Soil-pore water monitoring using devices such as lysimeters.

(c) To comply with R315-7-20.5(a)(1), the owner or operator shall demonstrate in his unsaturated zone monitoring plan that:

(1) The depth at which soil and soil-pore water samples are to be taken is below the depth to which the waste is incorporated into the soil;

(2) The number of soil and soil-pore water samples to be taken is based on the variability of:

(i) The hazardous waste constituents, as identified in R315-7-20.3(a) and (b), in the waste and in the soil; and

(ii) The soil type(s); and

(3) The frequency and timing of soil and soil-pore water sampling is based on the frequency, time, and rate of waste application, proximity to groundwater, and soil permeability.

(d) The owner or operator shall keep at the facility his unsaturated zone monitoring plan, and the rationale used in developing this plan.

(e) The owner or operator shall analyze the soil and soil-pore water samples for the hazardous waste constituents that were found in the waste during the waste analysis under R315-7-20.3(a) and (b).

All data and information developed by the owner or operator under this section shall be placed in the operating record of the facility.

20.6 RECORDKEEPING

The owner or operator of a land treatment facility shall keep records of the application dates, application rates, quantities, and location of each hazardous waste placed in the facility, in the operating record required in R315-7-12.4, which incorporates by reference 40 CFR 265.73.

20.7 CLOSURE AND POST-CLOSURE CARE

(a) In the closure and post-closure plan under R315-7-14, which incorporates by reference 40 CFR 265.110 - 265.120, the owner or operator shall address the following objectives and indicate how they will be achieved:

(1) Control of the migration of hazardous waste and hazardous waste constituents from the treated area into the groundwater;

(2) Control of the release of contaminated run-off from the facility into surface water;

(3) Control of the release of airborne particulate contaminants caused by wind erosion; and

(4) Compliance with R315-7-20.4 concerning the growth of food-chain crops.

(b) The owner or operator shall consider at least the following factors in addressing the closure and post-closure care objectives of R315-7-20.7(a):

(1) Type and amount of hazardous waste and hazardous waste constituents applied to the land treatment facility;

(2) The mobility and the expected rate of migration of the hazardous waste and hazardous waste constituents;

(3) Site location, topography, and surrounding land use, with respect to the potential effects of pollutant migration, e.g., proximity to groundwater, surface water and drinking water sources;

(4) Climate, including amount, frequency, and pH of precipitation;

(5) Geological and soil profiles and surface and subsurface hydrology of the site, and soil characteristics, including cation exchange capacity, total organic carbon, and pH;

(6) Unsaturated zone monitoring information obtained under R315-7-20.5; and

(7) Type, concentration, and depth of migration of hazardous waste constituents in the soil as compared to their background concentrations.

(c) The owner or operator shall consider at least the following methods in addressing the closure and post-closure care objectives of R315-7-20.7(a):

(1) Removal of contaminated soils;

(2) Placement of a final cover, considering:

(i) Functions of the cover, e.g., infiltration control, erosion and run-off control and wind erosion control; and

(ii) Characteristics of the cover, including material, final surface contours, thickness, porosity and permeability, slope, length of run of slope, and type of vegetation on the cover; and

(3) Monitoring of groundwater.

(d) In addition to the requirements of R315-7-14 which incorporates by reference 40 CFR 265.110 - 265.120, during the closure period the owner or operator of a land treatment facility shall:

(1) Continue unsaturated zone monitoring in a manner and frequency specified in the closure plan, except that soil pore liquid monitoring may be terminated 90 days after the last application of waste to the treatment zone;

(2) Maintain the run-on control system required under R315-7-20.2(b);

(3) Maintain the run-off management system required under R315-7-20.2(c); and

(4) Control wind dispersal of particulate matter which may be subject to wind dispersal.

(e) For the purpose of complying with R315-7-14, which incorporates by reference 40 CFR 265.110 - 265.120, when closure is completed the owner or operator may submit to the Director, certification both by the owner or operator and by an independent qualified soil scientist, in lieu of an independent registered professional engineer, that the facility has been closed in accordance with the specification in the approved closure plan.

(f) In addition to the requirement of R315-7-14, which incorporates by reference 40 CFR 265.110 - 265.120, during the post-closure care period the owner or operator of a land treatment unit shall:

(1) Continue soil-core monitoring by collecting and analyzing samples in a manner and frequency specified in the post-closure plan;

(2) Restrict access to the unit as appropriate for its post-closure use;

(3) Ensure that growth of food chain crops complies with R315-7-20.4; and

(4) Control wind dispersal of hazardous waste.

20.8 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

The owner or operator shall not apply ignitable or reactive waste to the treatment zone unless the waste and treatment zone meet all applicable requirements of R315-13, which incorporates by reference 40 CFR 268, and:

(a) The waste is immediately incorporated into the soil so that:

(1) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) and (f) and

(2) R315-7-9.8(b) is complied with; or

(b) That waste is managed in such a way that it is protected from any material or conditions which may cause it to ignite or react.

20.9 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

Incompatible wastes, or incompatible wastes and materials, see 40 CFR 265, Appendix V for examples, shall not be placed in the same land treatment area, unless R315-7-9.8(b) is complied with.

R315-7-21. Landfills.

21.1 APPLICABILITY

The rules in this section apply to owners and operators of facilities that dispose of hazardous waste in landfills, except as R315-7-8.1 provides otherwise. A waste pile used as a disposal facility is a landfill and is governed by this section.

21.2 DESIGN AND OPERATING REQUIREMENTS

(a) The owner or operator of each new landfill unit on which construction commences after January 29, 1992, each lateral expansion of a landfill unit on which construction commences after July 29, 1992, and each replacement of an existing landfill unit that is to commence reuse after July 29, 1992 must install two or more liners and a leachate collection and removal system above and between such liners, and operate the leachate collection and removal systems, in accordance with R315-8-14.2(d), (e), or (f). "Construction commences" is as defined in R315-1-1(b), which incorporates by reference 40

CFR 260.10, under "existing facility".

(b) The owner or operator of each unit referred to in R315-7-21.2(a) shall notify the Director at least 60 days prior to receiving waste. The owner or operator of each facility submitting notice shall file a part B application within six months of the receipt of the notice.

(c) The owner or operator of any replacement landfill unit is exempt from R315-7-21.2(a) if:

(1) The existing unit was constructed in compliance with the design standards of section 3004(o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and

(2) There is no reason to believe that the liner is not functioning as designed.

(d) The double liner requirement set forth in R315-7-21.2(a) may be waived by the Director for any monofill, if:

(1) The monofill contains only hazardous wastes from foundry furnace emission controls or metal casting molding sand, and the waste does not contain constituents which would render the wastes hazardous for reasons other than the Toxicity Characteristic in R315-2-9(g), with EPA Hazardous Waste Number D004 through D017; and

(2)(i)(A) The monofill has at least one liner for which there is no evidence that the liner is leaking;

(B) The monofill is located more than one-quarter mile from an underground source of drinking water, as that term is defined in 40 CFR 144.3; and

(C) The monofill is in compliance with applicable groundwater monitoring requirements for facilities with permits; or

(ii) The owner or operator demonstrates that the monofill is located, designed and operated so as to assure that there will be no migration of any hazardous constituents into groundwater or surface water at any future time.

(e) In the case of any unit in which the liner and leachate collection system has been installed pursuant to the requirements of R315-7-21.2(a) and in good faith compliance with R315-7-21.2(a) and with guidance documents governing liners and leachate collection systems under R315-7-21.2(a), no liner or leachate collection system which is different from that which was so installed pursuant to R315-7-21.2(a) will be required for the unit by the Director when issuing the first permit to the facility, except that the Director will not be precluded from requiring installation of a new liner when the Director has reason to believe that any liner installed pursuant to the requirements of R315-7-21.10(a) is leaking.

(f) The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portion of the landfill during peak discharge from at least a 25-year storm.

(g) The owner or operator shall design, construct, operate and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

(h) Collection and holding facilities, e.g., tanks or basins, associated with run-on and run-off control systems shall be emptied or otherwise managed expeditiously after storms to maintain design capacity of the system.

(i) The owner or operator of a landfill containing hazardous waste which is subject to dispersal by wind shall cover or otherwise manage the landfill so that wind dispersal of the hazardous waste is controlled.

As required by R315-7-9.4, which incorporates by reference 40 CFR 265.13, the waste analysis plan shall include analysis needed to comply with R315-7-21.5 and R315-7-21.6. As required by R315-7-12.4, which incorporates by reference 40 CFR 265.73, the owner or operator shall place the results of these analyses in the operating record.

21.3 SURVEYING AND RECORDKEEPING

The owner or operator of a landfill shall maintain the

following items in the operating record required in R315-7-12.4, which incorporates by reference 40 CFR 265.73:

(a) On a map, the exact location and dimension, including depth, of each cell with respect to permanently surveyed benchmarks; and

(b) The contents of each cell and the approximate location of each hazardous waste type within each cell.

21.4 CLOSURE AND POST-CLOSURE CARE

(a) At final closure of the landfill or upon closure of any cell, the owner or operator shall cover the landfill or cell with a final cover designed and constructed to:

(1) Provide long-term minimization of migration of liquids through the closed landfill;

(2) Function with minimum maintenance;

(3) Promote drainage and minimize erosion or abrasion of the cover;

(4) Accommodate settling and subsidence so that the cover's integrity is maintained; and

(5) Have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present.

(b) After final closure, the owner or operator shall comply with all post-closure requirements contained in R315-7-14, which incorporates by reference 40 CFR 265.110 - 265.120, including maintenance and monitoring throughout the post-closure care period. The owner or operator shall:

(1) Maintain the integrity and effectiveness of the final cover, including making repairs to the cover as necessary to correct the effects of settling, subsidence, erosion, or other events.

(2) Maintain and monitor the leak detection system in accordance with R315-8-14.2(c)(3)(iv) and (4) and R315-7-21.12(b), and comply with all other applicable leak detection system requirements of R315-7;

(3) Maintain and monitor the groundwater monitoring system and comply with all other applicable requirements of R315-7-13;

(4) Prevent run-on and run-off from eroding or otherwise damaging the final cover; and

(5) Protect and maintain surveyed benchmarks used in complying with R315-7-21.3.

21.5 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

(a) Except as provided in R315-7-21.5(b) and in 7.21.9, ignitable or reactive waste shall not be placed in a landfill, unless the waste and landfill meet all applicable requirements of R315-13, which incorporates by reference 40 CFR 268, and:

(1) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) and (f).

(2) Section R315-7-9.8 is complied with.

(b) Except for prohibited wastes which remain subject to treatment standards in R315-13, which incorporates by reference 40 CFR 268 subpart D, ignitable wastes in containers may be landfilled without meeting the requirements of R315-7-21.5(a), provided that the wastes are disposed of in a way that they are protected from any material or conditions which may cause them to ignite. At a minimum, ignitable wastes shall be disposed of in non-leaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; shall be covered daily with soil or other non-combustible material to minimize the potential for ignition of the wastes; and shall not be disposed of in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the waste.

21.6 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

Incompatible wastes, or incompatible wastes and materials,

see 40 CFR 265, Appendix V for examples, shall not be placed in the same landfill cell, unless R315-7-9.8(b) is complied with.

21.7 SPECIAL REQUIREMENTS FOR BULK AND CONTAINERIZED LIQUIDS

(a) Bulk or non-containerized liquid waste or waste containing free liquids may be placed in a landfill prior to May 8, 1985, only if;

(1) The landfill has a liner and leachate collection and removal system that meets the requirements of R315-8-14.2(a); or

(2) Before disposal, the liquid waste or waste containing free liquids is treated or stabilized chemically or physically, e.g., by mixing with a sorbent solid, so that free liquids are no longer present.

(b) Effective May 8, 1985, the placement of bulk or non-containerized liquid hazardous waste or hazardous waste containing free liquids, whether or not sorbents have been added, in any landfill is prohibited.

(c) Containers holding free liquids must not be placed in a landfill unless:

(1) All free-standing liquid

(i) has been removed by decanting, or other methods,

(ii) has been mixed with sorbent or solidified so that free-standing liquid is no longer observed; or

(iii) had been otherwise eliminated; or

(2) The container is very small, such as an ampule; or

(3) The container is designed to hold free liquids for use other than storage, such as a battery or capacitor; or

(4) The container is a lab pack as defined in R315-7-21.8 and is disposed of in accordance with R315-7-21.9.

(d) To demonstrate the absence or presence of free liquids in either a containerized or a bulk waste, the following test must be used: Method 9095, Paint Filter Liquids Test as described in "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods." EPA Publication No. SW-846, as incorporated by reference in 40 CFR 260.11, see R315-1-2.

(e) The date of compliance with R315-7-21.7(a) is November 19, 1981. The date for compliance with R315-7-21.7(c) is March 22, 1982.

(f) Sorbents used to treat free liquids to be disposed of in landfills must be nonbiodegradable. Nonbiodegradable sorbents are: materials listed or described in R315-7-21.7(f)(1); materials that pass one of the tests in R315-7-21.7(f)(2); or materials that are determined by EPA to be nonbiodegradable through the R315-2-16, which incorporates by reference 40 CFR 260.22, petition process.

(1) Nonbiodegradable sorbents.

(i) Inorganic minerals, other inorganic materials, and elemental carbon, e.g., aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite), vermiculites, zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; activated charcoal/activated carbon; or

(ii) High molecular weight synthetic polymers, e.g., polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene and tertiary butyl copolymers. This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

(iii) Mixtures of these nonbiodegradable materials.

(2) Tests for nonbiodegradable sorbents.

(i) The sorbent material is determined to be nonbiodegradable under ASTM Method G21-70 (1984a)-Standard Practice for Determining Resistance of Synthetic

Polymer Materials to Fungi; or

(ii) The sorbent material is determined to be nonbiodegradable under ASTM Method G22-76 (1984b)-Standard Practice for Determining Resistance of Plastics to Bacteria.

(iii) The sorbent material is determined to be nonbiodegradable under OECD test 301B, CO₂ Evolution, Modified Sturm Test.

(g) Effective November 8, 1985, the placement of any liquid which is not a hazardous waste in a landfill is prohibited unless the owner or operator of the landfill demonstrates to the Director that;

(1) The only reasonably available alternative to the placement in the landfill is placement in a landfill or unlined surface impoundment, whether or not permitted or operating under interim status, which contains, or may reasonably be anticipated to contain hazardous waste; and

(2) Placement in such owner or operator's landfill will not present a risk of contamination of any underground source of drinking water, as that term is defined in 40 CFR 144.3.

21.8 SPECIAL REQUIREMENTS FOR CONTAINERS

Unless they are very small, such as an ampule, containers must be either:

(a) At least 90 percent full when placed in the landfill; or

(b) Crushed, shredded, or similarly reduced in volume to the maximum practical extent before burial in the landfill.

21.9 DISPOSAL OF SMALL CONTAINERS OF HAZARDOUS WASTE IN OVERPACKED DRUMS, LAB PACKS

Small containers of hazardous waste in overpacked drums, lab packs may be placed in a landfill if the following requirements are met:

(a) Hazardous waste shall be packaged in non-leaking inside containers. The inside containers shall be of a design and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the waste held therein. Inside containers shall be tightly and securely sealed. The inside containers shall be of the size and type specified in the Department of Transportation (DOT) hazardous materials regulations, 49 CFR parts 173, 178, and 179, if those regulations specify particular inside container for the waste.

(b) The inside container shall be overpacked in an open head DOT specification metal shipping container, 49 CFR parts 178 and 179, of no more than 416-liter, 110 gallon, capacity and surrounded by, at a minimum, a sufficient quantity of sorbent material, determined to be nonbiodegradable in accordance with R315-7-21.7(f), to completely sorb all of the liquid contents of the inside containers. The metal outer container shall be full after it has been packed with inside containers and sorbent material.

(c) The sorbent material used shall not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers, in accordance with R315-7-9.8(b).

(d) Incompatible wastes, as defined in R315-1 shall not be placed in the same outside container.

(e) Reactive waste, other than cyanide or sulfide-bearing waste as defined in R315-2-9(f)(v) shall be treated or rendered non-reactive prior to packaging in accordance with R315-7-21.9(a) through (d). Cyanide and sulfide-bearing reactive waste may be packaged in accordance with R315-7-21.9(a) through (d) without first being treated or rendered non-reactive.

(f) Such disposal is in compliance with the requirements of R315-13, which incorporates by reference 40 CFR 268. Persons who incinerate lab packs according to the requirements in 40 CFR 268.42(c)(1) may use fiber drums in place of metal outer containers. The fiber drums must meet the DOT specifications in 49 CFR 173.12 and be overpacked according to the requirements in R315-7-21.9(b).

21.10 ACTION LEAKAGE RATE

(a) The owner or operator of landfill units subject to R315-7-21.2(a) shall submit a proposed action leakage rate to the Director when submitting the notice required under R315-7-21.2(b). Within 60 days of receipt of the notification, the Director will: Establish an action leakage rate, either as proposed by the owner or operator or modified using the criteria in this section; or extend the review period for up to 30 days. If no action is taken by the Director before the original 60 or extended 90 day review periods, the action leakage rate will be approved as proposed by the owner or operator.

(b) The Director shall approve an action leakage rate for surface impoundment units subject to R315-7-21.2(a). The action leakage rate is the maximum design flow rate that the leak detection system, LDS, can remove without the fluid head on the bottom liner exceeding one foot. The action leakage rate shall include an adequate safety margin to allow for uncertainties in the design, e.g., slope, hydraulic conductivity, thickness of drainage material, construction, operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions, e.g., the action leakage rate shall consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.

(c) To determine if the action leakage rate has been exceeded, the owner or operator shall convert the weekly or monthly flow rate from the monitoring data obtained under R315-7-21.12 to an average daily flow rate, gallons per acre per day, for each sump. Unless the Director approves a different calculation, the average daily flow rate for each sump shall be calculated weekly during the active life and closure period, and monthly during the post-closure care period when monthly monitoring is required under R315-7-21.12(b).

21.11 RESPONSE ACTIONS

(a) The owner or operator of landfill units subject to R315-7-21.2(a) shall submit a response action plan to the Director when submitting the proposed action leakage rate under R315-7-21.10. The response action plan shall set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan shall describe the actions specified in R315-7-21.11(b).

(b) If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator shall:

(1) Notify the Director in writing of the exceedence within seven days of the determination;

(2) Submit a preliminary written assessment to the Director within 14 days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;

(3) Determine to the extent practicable the location, size, and cause of any leak;

(4) Determine whether waste receipt should cease or be curtailed, whether any waste should be removed from the unit for inspection, repairs, or controls, and whether or not the unit should be closed;

(5) Determine any other short-term and longer-term actions to be taken to mitigate or stop any leaks; and

(6) Within 30 days after the notification that the action leakage rate has been exceeded, submit to the Director the results of the analyses specified in R315-7-21.11(b)(3)-(5), the results of actions taken, and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator shall submit to the Director a report summarizing the results of any remedial actions taken and actions planned.

(c) To make the leak and/or remediation determinations in R315-7-21.11(b)(3)-(5), the owner or operator shall:

(1)(i) Assess the source of liquids and amounts of liquids by source,

(ii) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and

(iii) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or

(2) Document why such assessments are not needed.

21.12 MONITORING AND INSPECTION

(a) An owner or operator required to have a leak detection system under R315-7-21.2(a) shall record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

(b) After the final cover is installed, the amount of liquids removed from each leak detection system sump shall be recorded at least monthly. If the liquid level in the sump stays below the pump operating level for two consecutive months, the amount of liquids in the sumps shall be recorded at least quarterly. If the liquid level in the sump stays below the pump operating level for two consecutive quarters, the amount of liquids in the sumps shall be recorded at least semi-annually. If at any time during the post-closure care period the pump operating level is exceeded at units on quarterly or semi-annual recording schedules, the owner or operator shall return to monthly recording of amounts of liquids removed from each sump until the liquid level again stays below the pump operating level for two consecutive months.

(c) "Pump operating level" is a liquid level proposed by the owner or operator and approved by the Director based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump. The timing for submission and approval of the proposed "pump operating level" will be in accordance with R315-7-21.10(a).

R315-7-22. Incinerators.**22.1 INCINERATORS APPLICABILITY**

(a) R315-7-22 applies to owners or operators of facilities that incinerate hazardous waste, except as R315-7-8.1 provides otherwise.

(b) Integration of the MACT standards.

(1) Except as provided by R315-7-22.1(b)(2) and (3), the standards of R315-7 no longer apply when an owner or operator demonstrates compliance with the maximum achievable control technology (MACT) requirements of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE, by conducting a comprehensive performance test and submitting to the Director a Notification of Compliance under R307-214-2, which incorporates by reference 40 CFR 63.1207(j) and 63.1210(d), documenting compliance with the requirements of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE.

(2) The following requirements continue to apply even where the owner or operator has demonstrated compliance with the MACT requirements of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE: R315-7-22.5 (closure) and the applicable requirements of R315-7-8 through R315-7-15, R315-7-27, and R315-7-30.

(3) R315-7-22.2 generally prohibiting burning of hazardous waste during startup and shutdown remains in effect if you elect to comply with R315-3-9(b)(1)(i) to minimize emissions of toxic compounds from startup and shutdown.

(c) Owners and operators of incinerators burning hazardous waste are exempt from all of the requirements of R315-7-22, except R315-7-22.5, Closure, provided that the owner or operator has documented, in writing, that the waste would not reasonably be expected to contain any of the hazardous constituents listed in R315-50-10, which incorporates by reference 40 CFR 261, Appendix VIII, and the

documentation is retained at the facility, if the waste to be burned is:

(1) Listed as a hazardous waste in R315-2-10 and R315-2-11, solely because it is ignitable, Hazard Code I, corrosive, Hazard Code C, or both; or

(2) Listed as a hazardous waste in R315-2-10 and R315-2-11, solely because it is reactive, Hazard Code R, for characteristics other than those listed in R315-2-9(b), and will not be burned when other hazardous wastes are present in the combustion zone; or

(3) A hazardous waste solely because it possesses the characteristic of ignitability, corrosivity, or both, as determined by the tests for characteristics of hazardous wastes under R315-2-9, or

(4) A hazardous waste solely because it possesses the reactivity characteristics described by R315-2-9(f)(i), (ii), (iii), (vi), (vii), or (viii), and will not be burned when other hazardous wastes are present in the combustion zone.

22.2 GENERAL OPERATING REQUIREMENTS

During start-up and shut-down of an incinerator, the owner or operator shall not feed hazardous waste unless the incinerator is at steady state, normal, conditions of operation, including steady state operating temperature and air flow.

22.3 WASTE ANALYSIS

In addition to the waste analyses required by R315-7-9.4, which incorporates by reference 40 CFR 265.13, the owner or operator shall sufficiently analyze any waste which he has not previously burned in his incinerator to enable him to establish steady state, normal, operating conditions, including waste and auxiliary fuel feed and air flow, and to determine the type of pollutants which might be emitted. At a minimum, the analysis shall determine:

(a) Heating value of the waste;

(b) Halogen content and sulfur content in the waste; and

(c) Concentrations in the waste of lead and mercury, unless the owner or operator has written, documented data that show that the element is not present.

As required by R315-7-12.4, which incorporates by reference 40 CFR 265.73, the owner or operator shall place the results from each waste analysis, or the documented information, in the operating record of the facility.

22.4 MONITORING AND INSPECTIONS

The owner or operator shall conduct, at a minimum, the following monitoring and inspections when incinerating hazardous waste:

(a) Existing instruments which relate to combustion and emission control shall be monitored at least every 15 minutes. Appropriate corrections to maintain steady state combustion conditions shall be made immediately either automatically or by the operator. Instruments which relate to combustion and emission control would normally include those measuring waste feed, auxiliary fuel feed, air flow, incinerator temperature, scrubber flow, scrubber pH, and relevant level controls.

(b) The complete incinerator and associated equipment, pumps, valves, conveyors, pipes, etc., shall be inspected at least daily for leaks, spills and fugitive emissions, and all emergency shutdown controls and system alarms shall be checked to assure proper operation.

22.5 CLOSURE

At closure, the owner or operator shall remove all hazardous waste and hazardous waste residues, including but not limited to ash, scrubber waters, and scrubber sludges from the incinerator. At closure, as throughout the operating period, unless the owner or operator can demonstrate, in accordance with R315-2-1, that any solid waste removed from his incinerator is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and shall manage it in accordance with all applicable requirements of these rules.

22.6 INTERIM STATUS INCINERATORS BURNING

PARTICULAR HAZARDOUS WASTES

(a) Owners or operators of incinerators subject to R315-7-22 may burn EPA Hazardous Wastes F020, F021, F022, F023, F026, or F027 if they receive a certification from the Director that they can meet the performance standards of R315-8-15 when they burn these wastes.

(b) The following standards and procedures will be used in determining whether to certify an incinerator:

(1) The owner or operator will submit an application to the Director containing applicable information in R315-3 demonstrating that the incinerator can meet the performance standards in R315-8-15 when they burn these wastes.

(2) The Director will issue a tentative decision as to whether the incinerator can meet the performance standards in R315-8-15. Notification of this tentative decision will be provided by newspaper advertisement and radio broadcast in the jurisdiction where the incinerator is located. The Director will accept comment on the tentative decision for 60 days. The Director also may hold a public hearing upon request or at their discretion.

(3) After the close of the public comment period, the Director will issue a decision whether or not to certify the incinerator.

R315-7-23. Thermal Treatment.

23.1 THERMAL TREATMENT

The rules in this section apply to owners or operators of facilities that thermally treat hazardous waste in devices other than enclosed devices using controlled flame combustion, except as R315-7-8.1 provides otherwise. Thermal treatment in enclosed devices using controlled flame combustion is subject to the requirements of R315-7-22 if the unit is an incinerator, and R315-14-7, which incorporates by reference 40 CFR 266, subpart H, if the unit is a boiler or an industrial furnace as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10.

23.2 GENERAL OPERATING REQUIREMENTS

Before adding hazardous waste, the owner or operator shall bring his thermal treatment process to steady state, normal, conditions of operation--including steady state operating temperature--using auxiliary fuel or other means, unless the process is a non-continuous, batch, thermal treatment process which requires a complete thermal cycle to treat a discrete quantity of hazardous waste.

23.3 WASTE ANALYSIS

In addition to the waste analyses required by R315-7-9.4, which incorporates by reference 40 CFR 265.13, the owner or operator shall sufficiently analyze any waste which he has not previously treated in his thermal treatment process to enable him to establish steady state, normal, or in other appropriate, for a non-continuous process, operating conditions, including waste and auxiliary fuel feed, and to determine the type of pollutants which might be emitted. At a minimum, the analysis shall determine:

(a) Heating value of the waste;

(b) Halogen content and sulfur content in the waste; and

(c) Concentrations in the waste of lead and mercury, unless the owner or operator has written, documented data that show that the element is not present. The owner or operator shall place the results from each waste analysis, or the documented information, in the operating record of the facility.

23.4 MONITORING AND INSPECTIONS

The owner or operator shall conduct, at a minimum, the following monitoring and inspections when thermally treating hazardous waste:

(a) Existing instruments which relate to temperature and emission control, if an emission control device is present, shall be monitored at least every 15 minutes. Appropriate corrections to maintain steady state or other appropriate thermal treatment

conditions shall be made immediately either automatically or by the operator. Instruments which relate to temperature and emission control would normally include those measuring waste feed, auxiliary fuel feed, treatment process temperature, and relevant process flow and level controls.

(b) The stack plume, emissions, where present, shall be observed visually at least hourly for normal appearance, color and opacity. The operator shall immediately make any indicated operating corrections necessary to return any visible emissions to their normal appearance.

(c) The complete thermal treatment process and associated equipment, pumps, valves, conveyor, pipes, etc., shall be inspected at least daily for leaks, spills, and fugitive emissions, and all emergency shutdown controls and system alarms shall be checked to assure proper operation.

23.5 CLOSURE

At closure, the owner or operator shall remove all hazardous waste and hazardous waste residues, including, but not limited to, ash from thermal treatment process or equipment.

At closure, as throughout the operating period, unless the owner or operator can demonstrate, in accordance with R315-2-1, that any solid waste removed from his thermal treatment process or equipment is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and shall manage it in accordance with all applicable requirements of these rules.

23.6 OPEN BURNING; WASTE EXPLOSIVES

Open burning of hazardous waste is prohibited except for the open burning and detonation of waste explosives. Waste explosives include waste which has the potential to detonate and bulk military propellants which cannot safely be disposed of through other modes of treatment. Detonation is an explosion in which chemical transformation passes through the material faster than the speed of sound, 0.33 kilometers/second at sea level. Owners or operators choosing to open burn or detonate waste explosives shall do so in accordance with the following table and in a manner that does not threaten human health or the environment:

TABLE

Pounds of Waste Explosives or Propellants	Minimum Distance from Open Burning or Detonation to the Property of Others
0 - 100	204 meters (670 feet)
101 - 1,000	380 meters (1,250 feet)
1,001 - 10,000	530 meters (1,730 feet)
10,001 - 30,000	690 meters (2,260 feet)

23.7 INTERIM STATUS THERMAL TREATMENT DEVICES BURNING PARTICULAR HAZARDOUS WASTE

(a) Owners or operators of thermal treatment devices subject to R315-23 may burn EPA Hazardous Wastes F020, F021, F022, F023, F026, or F027 if they receive a certification from the Director that they can meet the performance standards of R315-8-15 when they burn these wastes.

(b) The following standards and procedures will be used in determining whether to certify a thermal treatment unit:

(1) The owner or operator will submit an application to the Director containing the applicable information in R315-3 demonstrating that the thermal treatment unit can meet the performance standard in R315-8-15 when they burn these wastes.

(2) The Director will issue a tentative decision as to whether the thermal treatment unit can meet the performance standards in R315-8-15. Notification of this tentative decision will be provided by newspaper advertisement and radio broadcast in the jurisdiction where the thermal treatment device is located. The Director will accept comment on the tentative decision for 60 days. The Director also may hold a public hearing upon request or at their discretion.

(3) After the close of the public comment period, the Director will issue a decision whether or not to certify the thermal treatment unit.

R315-7-24. Chemical, Physical, and Biological Treatment.

24.1 APPLICABILITY

The rules in this section apply to owners and operators of facilities which treat hazardous wastes by chemical, physical, or biological methods in other than tanks, surface impoundments, and land treatment facilities, except as R315-7-8.1 provides otherwise. Chemical, physical, and biological treatment of hazardous waste in tanks, surface impoundments, and land treatment facilities shall be conducted in accordance with R315-7-17, which incorporates by reference 40 CFR 265.190 - 265.201, R315-7-18, and R315-7-20, respectively.

24.2 GENERAL OPERATING REQUIREMENTS

(a) Chemical, physical, or biological treatment of hazardous waste shall comply with R315-7-9.8(b).

(b) Hazardous wastes or treatment reagents shall not be placed in the treatment process or equipment if they could cause the treatment process to rupture, leak, corrode, or otherwise fail before the end of its intended life.

(c) Where hazardous waste is continuously fed into a treatment process or equipment, the process or equipment shall be equipped with a means to stop this inflow, e.g., a waste feed cut-off system or bypass system to a standby containment device. These systems are intended to be used in the event of a malfunction in the treatment process or equipment.

24.3 WASTE ANALYSIS AND TRIAL TESTS

(a) In addition to the waste analysis required by R315-7-9.4, which incorporates by reference 40 CFR 265.13, whenever:

(1) A hazardous waste which is substantially different from waste previously treated in a treatment process or equipment at the facility is to be treated in that process or equipment, or

(2) A substantially different process than any previously used at the facility is to be used to chemically treat hazardous waste;

The owner or operator shall, before treating the different waste or using the different process or equipment:

(i) Conduct waste analyses and trial treatment tests, e.g., bench scale or pilot plant scale tests; or

(ii) Obtain written, documented information on similar treatment of similar waste under similar operating conditions; to show that this proposed treatment will meet all applicable requirements of R315-7-24.2(a) and (b).

The owner or operator shall place the results from each waste analysis and trial test, or the documented information, in the operating record of the facility.

24.4 INSPECTIONS

The owner or operator of a treatment facility shall inspect, where present:

(a) Discharge control and safety equipment, e.g., waste feed cut-off systems, bypass systems, drainage systems, and pressure relief systems, at least once each operating day, to ensure that it is in good working order;

(b) Data gathered from monitoring equipment, e.g., pressure and temperature gauges, at least once each operating day, to ensure that the treatment process or equipment is being operated according to its design.

(c) The construction materials of the treatment process or equipment, at least weekly, to detect corrosion or leaking of fixtures or seams, and

(d) The construction materials of, and the area immediately surrounding, discharge confinement structures, e.g., dikes, at least weekly, to detect erosion or obvious signs of leakage, e.g., wet spots or dead vegetation.

24.5 CLOSURE

At closure, all hazardous waste and hazardous waste

residues shall be removed from treatment processes or equipment, discharge control equipment, and discharge confinement structures. At closure, as throughout the operating period, unless the owner or operator can demonstrate, in accordance with R315-2-1, that any solid waste removed from his treatment process or equipment is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and shall manage it in accordance with all applicable requirements of these rules.

24.6 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

(a) Ignitable or reactive waste shall not be placed in a treatment process or equipment unless:

(1) The waste is treated, rendered, or mixed before or immediately after placement in the treatment process or equipment so that:

(i) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) and (f), and

(ii) R315-7-9.8(b) is complied with; or

(2) The waste is treated in such a way that it is protected from any material or conditions which may cause the waste to ignite or react.

24.7 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

(a) Incompatible wastes, or incompatible wastes and materials, see 40 CFR 265, Appendix V for examples, shall not be placed in the same treatment process or equipment, unless R315-7-9.8(b) is complied with.

(b) Hazardous waste shall not be placed in unwashed treatment equipment which previously held an incompatible waste or material, unless R315-7-9.8(b) is complied with.

R315-7-25. Underground Injection.

25.1 APPLICABILITY

Except as R315-7-8.1 provides otherwise:

(a) The owner or operator of a facility which disposes of hazardous waste by underground injection is excluded from the requirements of R315-7-14, which incorporates by reference 40 CFR 265.110 - 265.120 and R315-7-15, which incorporates by reference 40 CFR 265.140 - 265.150.

(b) The requirements of this section apply to owners and operators of wells used to dispose of hazardous waste which are classified as Class I under 40 CFR 144.6(a) and which are classified as Class IV under 40 CFR 144.6(d).

R315-7-26. Air Emission Standards for Process Vents.

The requirements of 40 CFR subpart AA sections 265.1030 through 265.1035, 1997 ed., as amended by 62 FR 64636, December 8, 1997, are adopted and incorporated by reference with the following exception:

(1) substitute "Director" for all federal regulation references made to "Regional Administrator."

R315-7-27. Air Emission Standards for Equipment Leaks.

The requirements of 40 CFR subpart BB sections 265.1050 through 265.1064, 2004 ed., are adopted and incorporated by reference with the following exception:

(1) substitute "Director" for all federal regulation references made to "Regional Administrator."

R315-7-28. Drip Pads.

The requirements of 40 CFR subpart W sections 265.440 through 265.445, 1996 ed., are adopted and incorporated by reference with the following exception:

(1) substitute "Director" for all federal regulation references made to "Regional Administrator".

(2) Add, following December 6, 1990, in 40 CFR 264.570(a), "for all HSWA drip pads or January 31, 1992 for all

non-HSWA drip pads."

(3) Add, following December 24, 1992, in 40 CFR 570(a), "for all HSWA drip pads or July 30, 1993 for all non-HSWA drip pads."

R315-7-29. Containment Buildings.

The requirements of subpart DD sections 265.1100 through 265.1102, as found in 57 FR 37194, August 18, 1992, are adopted and incorporated by reference with the following exception:

(1) substitute "Director of the Division of Waste Management and Radiation Control" for all federal regulation references made to "Regional Administrator."

R315-7-30. Air Emission Standards for Tanks, Surface Impoundments, and Containers.

The requirements as found in 40 CFR subpart CC, sections 265.1080 through 265.1091, 1998 ed., as amended by 64 FR 3382, January 21, 1999, are adopted and incorporated by reference with the following exception:

(1) substitute "Director" for all federal regulation references made to "Regional Administrator."

KEY: hazardous waste

April 25, 2013

Notice of Continuation July 13, 2011

19-6-105

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-8. Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities.

R315-8-1. Purpose, Scope and Applicability.

(a) The purpose of R315-8 is to establish minimum State of Utah standards which define the acceptable management of hazardous waste.

(b) The standards in R315-8 apply to owners and operators of all facilities which treat, store, or dispose of hazardous waste, except as specifically provided otherwise in R315-8 or R315-2.

(c) The requirements of R315-8 apply to a person disposing of hazardous waste by means of underground injection subject to a permit issued under the Underground Injection Control (UIC) program approved or promulgated under the Safe Drinking Water Act only to the extent they are required by R315-3. R315-8 applies to the above-ground treatment or storage of hazardous waste before it is injected underground.

(d) The requirements of R315-8 apply to the owner or operator of a POTW which treats, stores, or disposes of hazardous waste only to the extent they are included in a RCRA permit by rule granted to such a person under R315-3.

(e) The requirements of R315-8 do not apply to:

(1) The owner or operator of a state approved facility managing municipal or industrial solid waste, if the only hazardous waste the facility treats, stores, or disposes of is excluded from regulation under R315-2-5, conditionally exempt small quantity generator exemption;

(2) A generator accumulating waste on-site in compliance with R315-5-3.34, which incorporates by reference 40 CFR 262.34;

(3) A farmer disposing of waste pesticides from his own use in compliance with R315-5-7;

(4) The owner or operator of a totally enclosed treatment facility. A totally enclosed treatment facility is a facility for the treatment of hazardous waste which is directly connected to an industrial production process and which is constructed and operated in a manner which prevents the release of any hazardous waste or any constituent thereof into the environment during treatment;

(5) A transporter storing manifested shipments of hazardous waste in containers meeting the requirements of R315-5-3.30 at a transfer facility for a period of ten days or less;

(6)(i) Except as provided in R315-8-1(e)(6)(ii), a person engaged in treatment or containment activities during immediate response to any of the following situations:

(A) A discharge of a hazardous waste;

(B) An imminent and substantial threat of a discharge of hazardous waste; and

(C) A discharge of a material which, when discharged, becomes a hazardous waste.

(ii) An owner or operator of a facility otherwise regulated by R315-8 shall comply with all applicable requirements of R315-8-3 and R315-8-4.

(iii) Any person who is covered by R315-8-1(e)(6)(i), and who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of R315-8 and R315-3 for those activities.

(iv) In the case of an explosives or munitions emergency response, if a State or local official acting within the scope of his or her official responsibilities, or an explosives or munitions emergency response specialist, determines that immediate removal of the material or waste is necessary to protect human health or the environment, that official or specialist may authorize the removal of the material or waste by transporters who do not have EPA identification numbers and without the preparation of a manifest. In the case of emergencies involving

military munitions, the responding military emergency response specialist's organizational unit shall retain records for three years identifying the dates of the response, the responsible persons responding, the type and description of material addressed, and its disposition.

(7) The owner or operator of an elementary neutralization unit or a wastewater treatment unit as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes, other than the D001 High TOC Subcategory defined in R315-13, which incorporates by reference 40 CFR 268.40, or reactive (D003) waste, to remove the characteristic before land disposal, the owner/operator shall comply with the requirements set out in R315-8-2.8(b);

(8) The addition of absorbent material to waste in a container, as defined in R315-1, or the addition of waste to absorbent material in a container, provided that these actions occur at the time waste is first placed in the container; and R315-8-2.8(b), R315-8-9.2, and R315-8-9.3 are complied with;

(9) The owner or operator of a facility managing recyclable materials described in R315-2-6, which incorporates by reference 40 CFR 261.6, except to the extent that they are referred to in R315-15 or R315-14-2, which incorporates by reference 40 CFR 266 subpart C, R315-14-5, which incorporates by reference 40 CFR 266 subpart F, R315-14-6, which incorporates by reference 40 CFR 266 subpart G, and R315-14-7, which incorporates by reference 40 CFR 266 subpart H; and

(10) Universal waste handlers and universal waste transporters (as defined in R315-16-1.9), handling the wastes listed below. These handlers are subject to regulation under R315-16, when handling the below listed universal wastes:

(i) Batteries as described in R315-16-1.2;

(ii) Pesticides as described in R315-16-1.3;

(iii) Mercury-containing equipment as described in R315-16-1.4; and

(iv) Mercury lamps as described in R315-16-1.5.

(f) The requirements of this rule apply to owners or operators of all facilities which treat, store, or dispose of hazardous waste referred to in R315-13, which incorporates by reference 40 CFR 268.

(g) The requirements of R315-8-2 through 8-4 and R315-8-6.12 do not apply to remediation waste management sites. (However, some remediation waste management sites may be a part of a facility that is subject to a traditional hazardous waste permit because the facility is also treating, storing or disposing of hazardous wastes that are not remediation wastes. In these cases, R315-8-2 through 8-4 and R315-8-6.12 do apply to the facility subject to the traditional hazardous waste permit). Instead of the requirements of R315-8-2 through 8-4, owners or operators of remediation waste management sites must:

(1) Obtain an EPA identification number by applying to the Division of Waste Management and Radiation Control using EPA Form 8700-12;

(2) Obtain a detailed chemical and physical analysis of a representative sample of the hazardous remediation waste to be managed at the site. At a minimum, the analysis must contain all of the information which must be known to treat, store, or dispose of the waste according to R315-13, which incorporates by reference 40 CFR 268, and R315-8, and must be kept accurate and up to date;

(3) Prevent people who are unaware of the danger from entering, and minimize the possibility for unauthorized people or livestock to enter onto the active portion of the remediation waste management site, unless the owner or operator can demonstrate to the Director that:

(i) Physical contact with the waste, structures, or equipment within the active portion of the remediation waste management site will not injure people or livestock who may

enter the active portion of the remediation waste management site; and

(ii) Disturbance of the waste or equipment by people or livestock who enter onto the active portion of the remediation waste management site, will not cause a violation of the requirements of R315-8;

(4) Inspect the remediation waste management site for malfunctions, deterioration, operator errors, and discharges that may be causing, or may lead to, a release of hazardous waste constituents to the environment, or a threat to human health. The owner or operator must conduct these inspections often enough to identify problems in time to correct them before they harm human health or the environment, and must remedy the problem before it leads to a human health or environmental hazard. Where a hazard is imminent or has already occurred, the owner/operator must take remedial action immediately;

(5) Provide personnel with classroom or on-the-job training on how to perform their duties in a way that ensures the remediation waste management site complies with the requirements of R315-8, and on how to respond effectively to emergencies;

(6) Take precautions to prevent accidental ignition or reaction of ignitable or reactive waste, and prevent threats to human health and the environment from ignitable, reactive and incompatible waste;

(7) For remediation waste management sites subject to regulation under R315-8-9 through 8-15, and R315-8-16, which incorporates by reference 40 CFR 264.600 - 603, the owner/operator must design, construct, operate, and maintain a unit within a 100-year floodplain to prevent washout of any hazardous waste by a 100-year flood, unless the owner/operator can meet the demonstration of R315-8-2.9(b);

(8) Not place any non-containerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground mine or cave;

(9) Develop and maintain a construction quality assurance program for all surface impoundments, waste piles and landfill units that are required to comply with R315-8-11.2(c) and (d), R315-8-12.2(c) and (d), and R315-8-14.2(c) and (d) at the remediation waste management site, according to the requirements of R315-8-2.10;

(10) Develop and maintain procedures to prevent accidents and a contingency and emergency plan to control accidents that occur. These procedures must address proper design, construction, maintenance, and operation of remediation waste management units at the site. The goal of the plan must be to minimize the possibility of, and the hazards from a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment. The plan must explain specifically how to treat, store, and dispose of the hazardous remediation waste in question, and must be implemented immediately whenever a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment;

(11) Designate at least one employee, either on the facility premises or on call (that is, available to respond to an emergency by reaching the facility quickly), to coordinate all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan;

(12) Develop, maintain and implement a plan to meet the requirements in R315-8-1(g)(2) through (g)(6) and R315-8-1(g)(9) through (g)(10); and

(13) Maintain records documenting compliance with R315-8-1(g)(1) through (g)(12).

1.1 RELATIONSHIP TO INTERIM STATUS STANDARDS

A facility owner or operator who has fully complied with the requirements for interim status--as defined in section 3005(e) of the Federal RCRA Act and regulations under R315-3-7.1 shall comply with the regulations specified in R315-7 in lieu of R315-8, until final administrative disposition of his permit application is made, except as provided under R315-8-21, which incorporates by reference 40 CFR 264.552 and 264.553.

R315-8-2. General Facility Standards.

2.1 APPLICABILITY

(a) The rules in this section apply to the owners or operators of all hazardous waste management facilities, except as provided otherwise in R315-8-1(e).

(b) R315-8-2.9(b) applies only to facilities subject to regulation under R315-8-9 through R315-8-15 and R315-8-16, which incorporates by reference 40 CFR 264.600 - 264.603.

2.2 IDENTIFICATION NUMBER

Every facility owner or operator shall obtain an EPA identification number by applying to the Director using EPA form 8700-12. Information on obtaining this number can be acquired by contacting the Utah Division of Waste Management and Radiation Control.

2.3 REQUIRED NOTICES

(a)(1) An owner or operator of a facility that has arranged to receive hazardous waste from a foreign source shall notify the Director in writing at least four weeks in advance of the expected date of arrival of these shipments at the facility. A notice of subsequent shipments of the same waste from the same foreign source is not required.

(2) The owner or operator of a recovery facility that has arranged to receive hazardous waste subject to R315-5-8, which incorporates by reference 40 CFR 262, subpart H, shall provide a copy of the tracking document bearing all required signatures to the notifier, to the Division of Waste Management and Radiation Control, P.O. Box 144880, Salt Lake City, Utah, 84114-4880; Office of Enforcement and Compliance Assurance, Office of Compliance, Enforcement Planning, Targeting and Data Division (2222A), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; and to the competent authorities of all other concerned countries within three working days of receipt of the shipment. The original of the signed tracking document shall be maintained at the facility for at least three years.

(b) An owner or operator of a facility that receives hazardous waste from off-site, except when the owner or operator is also the generator, shall inform the generator in writing that he has the appropriate permit(s) for, and will accept, the waste the generator is shipping. A copy of this written notice shall be retained by the owner or operator as part of the operating record of waste received.

(c) Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the post-closure care period, the owner or operator shall notify the new owner or operator in writing of the requirements of R315-8 and R315-3. An owner's or operator's failure to notify the new owner or operator of the requirements of R315-8 in no way relieves the new owner or operator of his obligation to comply with all applicable requirements.

2.4 GENERAL WASTE ANALYSIS

The requirements as found in 40 CFR 264.13, 1996 ed., are adopted and incorporated by reference.

2.5 SECURITY

(a) A facility owner or operator shall prevent the unknowing entry, and minimize the possibility for the

unauthorized entry, of persons or livestock onto the active portion of his facility, unless he can demonstrate to the Director that:

(1) Physical contact with the waste structures, or equipment within the active portion of the facility will not injure unknowing or unauthorized persons or livestock which may enter the active portion of a facility; and

(2) Disturbance of the waste or equipment, by the unknowing or unauthorized entry of persons or livestock onto the active portion of a facility, will not cause a violation of the requirements of R315-8-2.5.

An owner or operator who wishes to make the demonstration referred to above shall do so with the part B permit application.

(b) Unless the owner or operator has made a successful demonstration under R315-8-2.5(a)(1) and (a)(2), a facility shall have:

(1) A 24-hour surveillance system, e.g., television monitoring or surveillance by guards or facility personnel, which continuously monitors and controls entry onto the active portion of the facility; or

(2)(i) An artificial or natural barrier, e.g., a fence in good repair or a fence combined with a cliff, which completely surrounds the active portion of the facility; and

(ii) A means to control entry at all times, through gates or other entrances to the active portion of the facility, e.g., an attendant, television monitors, locked entrance, or controlled roadway access to the facility. The requirements of R315-8-2.5(b) are satisfied if the facility or plant within which the active portion is located itself has a surveillance system, or a barrier and a means to control entry, which complies with the requirements of R315-8-2.5(b)(1) or (2).

(c) Unless the owner or operator has made a successful demonstration under R315-8-2.5(a)(1) and (a)(2), a sign with the legend, "Danger - Unauthorized Personnel Keep Out", shall be posted at each entrance to the active portion of a facility, and at other locations, in sufficient numbers to be seen from any approach to the active portion. The legend shall be written in English and in any other language predominant in the area surrounding the facility and shall be legible from a distance of at least 25 feet. Existing signs with a legend other than "Danger - Unauthorized Personnel Keep Out" may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the active portion, and that entry onto the active portion is potentially dangerous. Owners or operators are encouraged to also describe in the sign the type of hazard, e.g., hazardous waste, flammable wastes, etc. contained within the active portion of the facility. See R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, for discussion of security requirements during the post-closure care period.

2.6 GENERAL INSPECTION REQUIREMENTS

(a) Facility owners or operators shall inspect their facilities for malfunctions and deterioration, operator errors, and discharges, which may be causing or may lead to release of hazardous waste constituents to the environment or pose a threat to human health. These inspections shall be conducted frequently enough to identify problems in time to take corrective action before they harm human health or the environment.

(b)(1) Facility owners or operators shall develop and follow a written schedule for inspecting monitoring equipment, safety and emergency equipment, security devices, and operating and structural equipment, such as dikes and sump pumps, that are important to preventing, detecting, or responding to environmental or human health hazards.

(2) The schedule shall be kept at the facility.

(3) The schedule shall identify the types of problems, e.g., malfunctions or deterioration, which are to be looked for during the inspection, for example, inoperative sump pump, leaking fitting, eroding dike, etc.

(4) The frequency of the inspection may vary for the items on the schedule. However, the frequency should be based on the rate of deterioration of the equipment and the probability of an environmental or human health incident if the deterioration, malfunction, or any operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, shall be inspected daily when they are in use. At a minimum, the inspection schedule shall include the items and frequencies called for in R315-8-9.5, R315-8-10, which incorporates by reference 40 CFR 264.190 - 264.199, R315-8-11.3, R315-8-12.3, R315-8-13.6, R315-8-14.3, R315-8-15.7, R315-8-16, which incorporates by reference 40 CFR 264.600 - 264.603, R315-8-17, which incorporates by reference 40 CFR 264.1030 - 264.1036, R315-8-18, which incorporates by reference 40 CFR 264.1050 - 264.1065, and R315-8-22, which incorporates by reference 40 CFR 264.1083 through 264.1089.

(c) The owner or operator shall make any repairs, or take other remedial action, on a time schedule which ensures that any deterioration or malfunction discovered does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, remedial action shall be taken immediately.

(d) The owner or operator shall keep records of inspections in an inspection log or summary. These records shall be retained for at least three years. At a minimum, these records shall include the date and time of the inspection, the name of the inspector, a notation of the observations made, and the date and nature of any repairs made or remedial actions taken.

2.7 PERSONNEL TRAINING

(a)(1) Facility personnel shall successfully complete a program of classroom instruction or on-the-job training that teaches them to perform their duties in a way that ensures the facility's compliance with the requirements of this section and that includes all the elements described in the document required under R315-8-2.7(d)(3).

(2) This program shall be directed by a person trained in hazardous waste management procedures, and shall include instruction which teaches facility personnel hazardous waste management procedures, including contingency plan implementation relevant to the position in which they are employed.

(3) At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including, but not necessarily limited to, the following, where applicable:

(i) Procedures for inspection, use, repair, and replacement of facility emergency and monitoring equipment;

(ii) Communications or alarm systems;

(iii) Key parameters for automatic waste feed cut-off systems;

(iv) Response to fires or explosions;

(v) Response to groundwater contamination incidents; and

(vi) Shutdown of operations.

(b) Facility personnel shall successfully complete the program required in R315-8-2.7(a) within six months after the effective date of these rules or six months after the date of employment or assignment to a facility, or to a new position at a facility, whichever is later. Employees hired after the effective date of these rules shall not work in unsupervised positions until they have completed the training requirements of R315-8-2.7(a).

(c) Facility personnel shall take part in an annual review of their initial training in both contingency procedures and the hazardous waste management procedures relevant to the positions in which they are employed.

(d) Owners or operators of facilities shall maintain the following documents and records and make them available upon

request:

(1) The job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job;

(2) A written job description for each position listed under R315-8-2.7(d)(1). This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but shall include the requisite skill, education, or other qualifications and duties of employees assigned to each position;

(3) A written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed under R315-8-2.7(d)(1);

(4) Records that document that the training or job experience required under R315-8-2.7(a), (b), and (c) has been given to, and completed by, facility personnel.

(e) Training records on current employees shall be maintained until closure of the facility; training records on former employees shall be retained for at least three years from the date the employee last worked at the facility. Employee training records may accompany personnel transferred within the same company.

2.8 GENERAL REQUIREMENTS FOR IGNITABLE, REACTIVE, OR INCOMPATIBLE WASTES

(a) The owner or operator shall take precautions to prevent accidental ignition or reaction of ignitable or reactive wastes. These waste shall be separated and protected from sources of ignition or reaction including but not limited to: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks, static, electrical, or mechanical, spontaneous ignition, e.g., from heat-producing chemical reactions, and radiant heat. While ignitable or reactive waste is being handled, the owner or operator shall confine smoking and open flame to specially designated locations. "No Smoking" signs shall be conspicuously placed wherever there is a hazard from ignitable or reactive waste.

(b) Where specifically required by other sections of R315-8, the owner or operator of a facility that treats, stores or disposes ignitable or reactive waste, or mixes incompatible waste or incompatible wastes and other materials, shall take precautions to prevent reactions which:

(1) Generate extreme heat or pressure, fire or explosion, or violent reactions;

(2) Produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health or the environment;

(3) Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;

(4) Damage the structural integrity of the device or facility;

(5) Through other like means threaten human health or the environment.

(c) When required to comply with R315-8-2.8, the owner or operator shall document that compliance. This documentation may be based on references to published scientific or engineering literature, data from trial tests, e.g., bench scale or pilot scale tests, waste analyses as specified in R315-8-2.4, which incorporates by reference 40 CFR 264.13, or the results of the treatment of similar wastes by similar treatment processes and under similar operating conditions.

2.9 LOCATION STANDARDS

(a) Seismic considerations.

(1) Portions of new facilities where treatment, storage, or disposal of hazardous waste will be conducted shall not be located within 61 meters (200 feet) of a fault which has had displacement in Holocene time. For definition of terms used in this section see R315-1. Procedures for demonstrating compliance with this standard in part B of the permit application are specified in R315-3 specifically in R315-3-2.5. Facilities which are located in political jurisdictions other than those listed

in R315-50-11 are assumed to be in compliance with this requirement.

(b) Floodplains.

(1) A facility located in a 100-year floodplain shall be designed, constructed, operated and maintained to prevent washout of any hazardous waste by a 100-year flood, unless the owner or operator can demonstrate to the Director's satisfaction that:

(i) Procedures are in effect which will cause the waste to be removed safely, before flood waters can reach the facility, to a location where the wastes will not be vulnerable to flood waters; or

(ii) For existing surface impoundments, waste piles, land treatment units, landfills, and miscellaneous units, no adverse effects on human health or the environment will result if washout occurs, considering:

(A) The volume and physical and chemical characteristics of the waste in the facility;

(B) The concentration of hazardous constituents that would potentially affect surface waters as a result of washout;

(C) The impact of such concentrations on the current or potential uses of and water quality standards established for the affected surface waters; and

(D) The impact of hazardous constituents on the sediments of affected surface waters or the soils of the 100-year floodplain that could result from washout. The location where wastes are moved shall be a facility which is either permitted by EPA or has a permit in accordance with R315-3.

(2) As used in R315-8-2.9(b)(1):

(i) "100-year floodplain" means any land area which is subject to a one percent or greater chance of flooding in any given year from any source;

(ii) "Washout" means the movement of hazardous waste from the active portion of the facility as a result of flooding;

(iii) "100-year flood" means a flood that has a one percent chance of being equalled or exceeded in any given year.

(c) Salt dome formations, salt bed formations, underground mines and caves.

The placement of any non-containerized or bulk liquid hazardous wastes in any salt dome formation, salt bed formation, underground mine or cave is prohibited, except for the Department of Energy Waste Isolation Pilot Project in New Mexico.

2.10 CONSTRUCTION QUALITY ASSURANCE PROGRAM

(a) CQA program. (1) A construction quality assurance (CQA) program is required for all surface impoundment, waste pile, and landfill units that are required to comply with R315-8-11.2(c) and (d), R315-8-12.2(c) and (d), and R315-8-14.2(c) and (d). The program shall ensure that the constructed unit meets or exceeds all design criteria and specifications in the permit. The program shall be developed and implemented under the direction of a CQA officer who is a registered professional engineer.

(2) The CQA program shall address the following physical components, where applicable:

(i) Foundations;

(ii) Dikes;

(iii) Low-permeability soil liners;

(iv) Geomembranes, flexible membrane liners;

(v) Leachate collection and removal systems and leak detection systems; and

(vi) Final cover systems.

(b) Written CQA plan. The owner or operator of units subject to the CQA program under R315-8-2.10(a) shall develop and implement a written CQA plan. The plan must identify steps that will be used to monitor and document the quality of materials and the condition and manner of their installation. The CQA plan shall include:

(1) Identification of applicable units, and a description of how they will be constructed.

(2) Identification of key personnel in the development and implementation of the CQA plan, and CQA officer qualifications.

(3) A description of inspection and sampling activities for all unit components identified in R315-8-2.10(a)(2), including observations and tests that will be used before, during, and after construction to ensure that the construction materials and the installed unit components meet the design specifications. The description shall cover: Sampling size and locations; frequency of testing; data evaluation procedures; acceptance and rejection criteria for construction materials; plans for implementing corrective measures; and data or other information to be recorded and retained in the operating record under R315-8-5.3.

(c) Contents of program. (1) The CQA program shall include observations, inspections, tests, and measurements sufficient to ensure:

(i) Structural stability and integrity of all components of the unit identified in R315-8-2.10(a)(2);

(ii) Proper construction of all components of the liners, leachate collection and removal system, leak detection system, and final cover system, according to permit specifications and good engineering practices, and proper installation of all components, e.g., pipes, according to design specifications;

(iii) Conformity of all materials used with design and other material specifications under R315-8-11.2, R315-8-12.2, and R315-8-14.2.

(2) The CQA program shall include test fills for compacted soil liners, using the same compaction methods as in the full scale unit, to ensure that the liners are constructed to meet the hydraulic conductivity requirements of R315-8-11.2(c)(1)(i)(B), R315-8-12.2(c)(1)(i)(B), and R315-8-14.2(c)(1)(i)(B) in the field. Compliance with the hydraulic conductivity requirements shall be verified by using in-situ testing on the constructed test fill. The Director may accept an alternative demonstration, in lieu of a test fill, where data are sufficient to show that a constructed soil liner will meet the hydraulic conductivity requirements of R315-8-11.2(c)(1)(i)(B), R315-8-12.2(c)(1)(i)(B), and R315-8-14.2(c)(1)(i)(B) in the field.

(d) Certification. Waste shall not be received in a unit subject to R315-8-2.10 until the owner or operator has submitted to the Director by certified mail or hand delivery a certification signed by the CQA officer that the approved CQA plan has been successfully carried out and that the unit meets the requirements of R315-8-11.2(c) or (d), R315-8-12.2(c) or (d), or R315-8-14.2(c) or (d); and the procedure in R315-3-3.1(I)(2)(ii) has been completed. Documentation supporting the CQA officer's certification shall be furnished to the Director upon request.

R315-8-3. Preparedness and Prevention.

3.1 APPLICABILITY

The regulations in this section apply to the owners or operators of all hazardous waste management facilities, except as provided otherwise in R315-8-1.

3.2 DESIGN AND OPERATION OF FACILITY

Facilities shall be designed, constructed, maintained, and operated to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden discharge of hazardous waste or hazardous waste constituents to air, soil, groundwater, or surface water which could threaten the environment or human health.

3.3 REQUIRED EQUIPMENT

All facilities shall be equipped with the following, unless it can be demonstrated to the Director that there are no hazards at the facility which could require a particular kind of equipment specified below:

(a) An internal communications or alarm system capable

of providing immediate emergency instruction, voice or signal, to facility employees;

(b) A device capable of summoning external emergency assistance from local law enforcement agencies, fire departments, or State or local emergency response teams, such as a telephone, immediately available at the scene of operations, or a hand-held two-way radio;

(c) Portable fire extinguishers, fire control equipment, including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals, discharge control equipment, and decontamination equipment; and

(d) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems. This demonstration shall be made with the part B permit application.

3.4 TESTING AND MAINTENANCE OF EQUIPMENT

All facility communications or alarm systems, fire protection equipment, safety equipment, discharge control equipment, and decontamination equipment, where required, shall be tested and maintained as necessary to assure its proper operation in time of emergency.

3.5 ACCESS TO COMMUNICATIONS OR ALARM SYSTEM

(a) Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all employees involved in the operation shall have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless the Director has ruled that this type of a device is not required under R315-8-3.3.

(b) If there is just one employee on the premises while the facility is operating, he shall have immediate access to a device capable of summoning external emergency assistance, such as a telephone, immediately available at the scene of operation, or a hand-held two-way radio, unless the Director has ruled that this type of a device is not required under R315-8-3.3.

3.6 REQUIRED AISLE SPACE

The facility owner or operator shall maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, discharge control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Director that aisle space is not needed for any of these purposes. This demonstration shall be made with the part B permit application.

3.7 ARRANGEMENTS WITH LOCAL AUTHORITIES

(a) The owner or operator shall attempt to make the following arrangements, as appropriate for the type of waste handled at his facility and the potential need for the services of these organizations:

(1) Arrangements to familiarize law enforcement agencies, fire departments, and emergency response teams with the layout of the facility, properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to and roads inside the facility, and possible evacuation routes;

(2) Where more than one law enforcement agency and fire department might respond to an emergency, agreements designating primary emergency authority to a specific law enforcement agency and a specific fire department, and agreements with any others to provide support to the primary emergency authority;

(3) Agreements with State emergency response teams, emergency response contractors, and equipment suppliers; and

(4) Arrangements to familiarize local hospitals with the properties of hazardous waste handled at the facility and the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.

(b) Where State or local authorities decline to enter into these arrangements, the owner or operator shall document the

refusal in the operating record.

R315-8-4. Contingency Plan and Emergency Procedures.

4.1 APPLICABILITY

The regulations in this section apply to the owners and operators of all hazardous waste management facilities, except as provided otherwise in R315-8-1(e).

4.2 PURPOSE AND IMPLEMENTATION OF CONTINGENCY PLAN

(a) Each owner or operator shall have a contingency plan for his facility. The contingency plan shall be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden discharge of hazardous waste or hazardous waste constituents to air, soil, groundwater, or surface water.

(b) The provisions of the plan shall be carried out immediately whenever there is a fire, explosion, or discharge of hazardous waste or hazardous waste constituents which could threaten the environment or human health.

4.3 CONTENT OF CONTINGENCY PLAN

(a) The plan shall describe the actions facility personnel shall take to comply with R315-8-4.2 and R315-8-4.7 in response to fires, explosions or any unplanned sudden or non-sudden discharge of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility. If a facility owner or operator already has prepared a Spill Prevention, Control and Countermeasures (SPCC) Plan in accordance with 40 CFR 112, or some other emergency or contingency plan, he need only amend that plan to incorporate hazardous waste management provisions sufficient to comply with the requirements of this section.

(b) The plan shall describe arrangements agreed to by local law enforcement agencies, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services pursuant to R315-8-3.7.

(c) The plan shall list names, addresses and phone numbers, office and home, of all persons qualified to act as facility emergency coordinator, see R315-8-4.6, and this list shall be kept up-to-date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they assume responsibility as alternates. For new facilities, this information shall be supplied to the Director before operations begin rather than at the time of submission of the plan.

(d) The plan shall include a list of all emergency equipment at the facility, such as fire extinguishing systems, discharge control equipment, communications and alarm systems, internal and external, and decontamination equipment, where this equipment is required. This list shall be kept up-to-date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities.

(e) The plan shall include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes, in cases where the primary routes could be blocked by discharges of hazardous waste or fires.

4.4 COPIES OF A CONTINGENCY PLAN

A copy of the contingency plan and all revisions to the plan shall be:

- (a) Maintained at the facility;
- (b) Made available upon request; and
- (c) Submitted to all local law enforcement agencies, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services.

The contingency plan shall be submitted to the Director with part B of the permit application under R315-3 and after modification or approval will become a condition of any permit

issued.

4.5 AMENDMENT OF CONTINGENCY PLAN

The contingency plan shall be reviewed, and immediately amended, if necessary, under any of the following circumstances:

- (a) Revisions to the facility permit;
- (b) Failure of the plan in an emergency;
- (c) Changes in the facility design, construction, operation, maintenance, or other circumstances that materially increase the potential for fires, explosions, or discharges of hazardous waste or hazardous waste constituents, or changes the response necessary in an emergency;
- (d) Changes in the list of emergency coordinators; or
- (e) Changes in the list of emergency equipment.

4.6 EMERGENCY COORDINATOR

At all times there shall be at least one employee either present on the facility premises or on call, i.e., available to respond to an emergency by reaching the facility within a short time period, with the responsibility for coordinating all emergency response measures. This facility emergency coordinator shall be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of manifests and all other records within the facility, and the facility layout. In addition, this person shall have the authority to commit the resources needed to carry out the contingency plan. The emergency coordinator's responsibilities are more fully spelled out in R315-8-4.7. Applicable responsibilities for the emergency coordinator vary, depending on factors such as type and variety of waste(s) handled by the facility, and type and complexity of the facility.

4.7 EMERGENCY PROCEDURES

(a) Whenever there is an imminent or actual emergency situation, the facility's emergency coordinator, or his designee when the emergency coordinator is on call, shall immediately:

- (1) Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and
- (2) Notify appropriate State or local agencies with designated response roles whenever their assistance is needed.

(b) In the event of a discharge, fire, or explosion, the facility's emergency coordinator shall immediately identify the character, exact source, amount, and areal extent of any discharged materials. He may do this by observation or review of facility records or manifests, and, if necessary, by chemical analysis.

(c) Concurrently, the facility's emergency coordinator shall assess possible hazards to the environment or human health that may result from the discharge, fire, or explosion. This assessment shall consider both direct and indirect effects of the discharge, fire, or explosion, e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-off or hazardous groundwater infiltration from water or chemical agents used to control fire and heat-induced explosions.

(d) The facility's emergency coordinator shall immediately report his assessment that the facility has had a discharge, fire, or explosion which could threaten human health, or the environment, outside the facility, as follows:

(1) If his assessment indicates that evacuation of local areas may be advisable, he shall immediately notify appropriate local authorities. He shall be available to assist appropriate officials in making the decision whether local areas should be evacuated; and

(2) He shall immediately notify both the Utah State Department of Environmental Quality as specified in R315-9 and the government official designated as the on-scene coordinator for that geographical area, in the applicable regional contingency plan, or the National Response Center (800/424-8802). The report shall include:

- (i) Name and telephone number of reporter;
- (ii) Name and address of facility;
- (iii) Time and type of incident, e.g., discharge, fire;
- (iv) Name and quantity of material(s) involved, to the extent available;
- (v) The extent of injuries, if any; and
- (vi) The possible hazards to human health, or the environment, outside the facility.

(e) During an emergency, the facility's emergency coordinator shall take all reasonable measures necessary to ensure that fires, explosions, and discharges do not occur, recur, or spread to other hazardous waste at the facility. These measures shall include, where applicable, stopping processes and operations, collecting and containing discharged waste, and removing or isolating containers.

(f) If the facility stops operations in response to a discharge, fire, or explosion, the facility's emergency coordinator shall monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

(g) Immediately after an emergency, the emergency coordinator shall provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a discharge, fire, or explosion at the facility. The recovered material shall be handled and managed as a hazardous waste unless it is analyzed and determined not to be, using the procedures specified in R315-2.

(h) The facility's emergency coordinator shall ensure that, in the affected area(s) of the facility:

(1) No waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and

(2) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

(i) The facility owner or operator shall notify the Director and other appropriate State and local authorities, that the facility is in compliance with R315-8-4.7(h) before operations are resumed in the affected area(s) of the facility.

(j) The facility owner or operator shall record in the operating record the time, date, and nature of any incident that requires implementing the contingency plan. Within 15 days after the incident, he shall submit a written report on the emergency to the Director. The report shall include:

(1) Name, address, and telephone number of the owner or operator;

(2) Name, address, and telephone number of the facility;

(3) Date, time, and type of incident, e.g., fire, discharge;

(4) Name and quantity of material(s) involved;

(5) The extent of injuries, if any;

(6) An assessment of actual or potential hazards to the environment or human health, where this is applicable; and

(7) Estimated quantity and disposition of recovered material that resulted from the incident.

R315-8-5. Manifest System, Recordkeeping, and Reporting.

5.1 APPLICABILITY

The rules in R315-8-5 apply to owners and operators of both on-site and off-site facilities, except as provided otherwise in R315-8-1. R315-8-5.2, R315-8-5.4, and R315-8-5.7 do not apply to owners and operators of on-site facilities that do not receive hazardous waste from off-site sources, nor to owners and operators of off-site facilities with respect to waste military munitions exempted from manifest requirements under 40 CFR 266.203(a). R315-8-5.3, which incorporates by reference 40 CFR 264.73(b) only applies to permittees who treat, store, or dispose of hazardous wastes on-site where such wastes were generated.

5.2 USE OF MANIFEST SYSTEM

(a)(1) If a facility receives hazardous waste accompanied by a manifest, the owner or operator, or his agent, shall sign and date the manifest as indicated in R315-8-5.2(a)(2) to certify that the hazardous waste covered by the manifest was received, that the hazardous waste was received except as noted in the discrepancy space of the manifest, or that the hazardous waste was rejected as noted in the manifest discrepancy space.

(2) If a facility receives a hazardous waste shipment accompanied by a manifest, the owner, operator or his agent shall:

(i) Sign and date, by hand, each copy of the manifest;

(ii) Note any discrepancies in the manifest, as defined in R315-8-5.4(a), on each copy of the manifest;

(iii) Immediately give the transporter at least one copy of the signed manifest;

(iv) Within 30 days of the delivery, send a copy of the manifest to the generator; and

(v) Retain at the facility a copy of each manifest for at least three years from the date of delivery.

(3) If a facility receives hazardous waste imported from a foreign source, the receiving facility shall mail a copy of the manifest to the following addresses within 30 days of delivery: International Compliance Assurance Division, OFA/OECA (2254A), U.S. Environmental Protection Agency, Ariel Rios Building, 1200 Pennsylvania Avenue, NW., Washington DC 20460 and Utah Division of Waste Management and Radiation Control, P O Box 144880, Salt Lake City, Utah 84114-4880.

(b) If a facility receives, from a rail or water (bulk shipment) transporter, hazardous waste which is accompanied by a shipping paper containing all the information required on the manifest (excluding the EPA identification numbers, generator's certification, and signatures), the owner or operator, or his agent, shall:

(1) Sign and date each copy of the manifest or shipping paper (if the manifest has not been received) to certify that the hazardous waste covered by the manifest or shipping paper was received;

(2) Note any significant discrepancies, as defined in R315-8-5.4(a), in the manifest or shipping paper (if the manifest has not been received) on each copy of the manifest or shipping paper.

Comment: The Agency does not intend that the owner or operator of a facility whose procedures under R315-8-2.4, which incorporates by reference 40 CFR 264.13(c), include waste analysis shall perform that analysis before signing the shipping paper and giving it to the transporter. R315-8-5.4(b), however, requires reporting an unreconciled discrepancy discovered during later analysis.

(3) Immediately give the rail or water (bulk shipment) transporter at least one copy of the manifest or shipping paper (if the manifest has not been received);

(4) Within 30 days after the delivery, send a copy of the signed and dated manifest or a signed and dated copy of the shipping paper (if the manifest has not been received within 30 days after delivery) to the generator; and

Comment: R315-5-2.23(c) requires the generator to send three copies of the manifest to the facility when hazardous waste is sent by rail or water (bulk shipment).

(5) Retain at the facility a copy of the manifest and shipping paper (if signed in lieu of the manifest at the time of delivery) for at least three years from the date of delivery.

(c) Whenever a shipment of hazardous waste is initiated from a facility, the owner or operator of that facility shall comply with the requirements of R315-5.

Comment: The provisions of R315-5-3.34, which incorporates by reference 40 CFR 262.34, are applicable to the on-site accumulation of hazardous wastes by generators. Therefore, the provisions of R315-5-3.34, which incorporates by reference 40 CFR 262.34, only apply to owners or operators

who are shipping hazardous waste which they generated at that facility.

(d) Within three working days of the receipt of a shipment subject to R315-5-8, which incorporates by reference 40 CFR 262, subpart H, the owner or operator of the facility shall provide a copy of the tracking document bearing all required signatures to the notifier, to the Office of Enforcement and Compliance Assurance, Office of Compliance, Enforcement Planning, Targeting and Data Division (2222A), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460, and to competent authorities of all other concerned countries. The original copy of the tracking document shall be maintained at the facility for at least three years from the date of signature.

(e) A facility shall determine whether the consignment state for a shipment regulates any additional wastes (beyond those regulated Federally) as hazardous wastes under its state hazardous waste program. Facilities shall also determine whether the consignment state or generator state requires the facility to submit any copies of the manifest to these states.

5.3 OPERATING RECORD

The requirements as found in 40 CFR 264.73, 2000 ed., are adopted and incorporated by reference.

5.4 MANIFEST DISCREPANCIES

(a) Manifest discrepancies are:

(1) Significant discrepancies (as defined by R315-8-5.4(b)) between the quantity or type of hazardous waste designated on the manifest or shipping paper, and the quantity and type of hazardous waste a facility actually receives;

(2) Rejected wastes, which may be a full or partial shipment of hazardous waste that the treatment, storage, or disposal facility cannot accept; or

(3) Container residues, which are residues that exceed the quantity limits for "empty" containers set forth in R315-2-7(b).

(b) Significant discrepancies in quantity are: for batch waste, any variation in piece count, such as a discrepancy of one drum in a truckload; for bulk waste, variations greater than 10 percent in weight. Significant discrepancies in type are obvious differences which can be discovered by inspection or waste analysis, such as waste solvent substituted for waste acid, or toxic constituents not reported on the manifest or shipping paper.

(c) Upon discovering a significant discrepancy, the owner or operator shall attempt to reconcile the discrepancy with the waste generator or transporter, e.g., with telephone conversations. If the discrepancy is not resolved within 15 days after receiving the waste, the owner or operator shall immediately submit to the Director a letter describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.

(d)(1) Upon rejecting waste or identifying a container residue that exceeds the quantity limits for "empty" containers set forth in R315-2-7(b), the facility shall consult with the generator prior to forwarding the waste to another facility that can manage the waste. If it is impossible to locate an alternative facility that can receive the waste, the facility may return the rejected waste or residue to the generator. The facility shall send the waste to the alternative facility or to the generator within 60 days of the rejection or the container residue identification.

(2) While the facility is making arrangements for forwarding rejected wastes or residues to another facility under R315-8-5.4, it must ensure that either the delivering transporter retains custody of the waste, or, the facility shall provide for secure, temporary custody of the waste, pending delivery of the waste to the first transporter designated on the manifest prepared under R315-8-5.4(e) or (f).

(e) Except as provided in R315-8-5.4(e)(7), for full or partial load rejections and residues that are to be sent off-site to an alternate facility, the facility is required to prepare a new

manifest in accordance with R315-5-2.20(a) and the following instructions:

(1) Write the generator's U.S. EPA ID number in Item 1 of the new manifest. Write the generator's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the generator's site address, then write the generator's site address in the designated space for Item 5.

(2) Write the name of the alternate designated facility and the facility's U.S. EPA ID number in the designated facility block (Item 8) of the new manifest.

(3) Copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.

(4) Copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).

(5) Write the DOT description for the rejected load or the residue in Item 9 (U.S. DOT Description) of the new manifest and write the container types, quantity, and volume(s) of waste.

(6) Sign the Generator's/Officer's Certification to certify, as the offeror of the shipment, that the waste has been properly packaged, marked, and labeled and is in proper condition for transportation and mail a signed copy of the manifest to the generator identified in Item 5 of the new manifest.

(7) For full load rejections that are made while the transporter remains present at the facility, the facility may forward the rejected shipment to the alternate facility by completing Item 18b of the original manifest and supplying the information on the next destination facility in the Alternate Facility space. The facility shall retain a copy of this manifest for its records, and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility shall use a new manifest and comply with R315-8-5.4(e)(1), (2), (3), (4), (5), and (6).

(f) Except as provided in R315-8-5.4(f)(7), for rejected wastes and residues that shall be sent back to the generator, the facility is required to prepare a new manifest in accordance with R315-5-2.20(a) and the following instructions:

(1) Write the facility's U.S. EPA ID number in Item 1 of the new manifest. Write the facility's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the facility's site address, then write the facility's site address in the designated space for Item 5 of the new manifest.

(2) Write the name of the initial generator and the generator's U.S. EPA ID number in the designated facility block (Item 8) of the new manifest.

(3) Copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.

(4) Copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).

(5) Write the DOT description for the rejected load or the residue in Item 9 (U.S. DOT Description) of the new manifest and write the container types, quantity, and volume(s) of waste.

(6) Sign the Generator's/Officer's Certification to certify, as offeror of the shipment, that the waste has been properly packaged, marked, and labeled and is in proper condition for transportation.

(7) For full load rejections that are made while the transporter remains at the facility, the facility may return the shipment to the generator with the original manifest by completing Item 18a and 18b of the manifest and supplying the generator's information in the Alternate Facility space. The

facility shall retain a copy for its records and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility shall use a new manifest and comply with R315-8-5.4(f)(1), (2), (3), (4), (5), (6), and (8).

(8) For full or partial load rejections and container residues contained in non-empty containers that are returned to the generator, the facility must also comply with the exception reporting requirements in R315-5-4.42(a)(1).

(g) If a facility rejects a waste or identifies a container residue that exceeds the quantity limits for "empty" containers set forth in R315-2-7(b) after it has signed, dated, and returned a copy of the manifest to the delivering transporter or to the generator, the facility shall amend its copy of the manifest to indicate the rejected wastes or residues in the discrepancy space of the amended manifest. The facility shall also copy the manifest tracking number from Item 4 of the new manifest to the Discrepancy space of the amended manifest, and shall re-sign and date the manifest to certify to the information as amended. The facility shall retain the amended manifest for at least three years from the date of amendment, and shall within 30 days, send a copy of the amended manifest to the transporter and generator that received copies prior to their being amended.

5.5 AVAILABILITY, RETENTION, AND DISPOSITION OF RECORDS

(a) Records of waste disposal locations and quantities required to be maintained under R315-8-5.3, which incorporates by reference 40 CFR 264.73(b)(2) shall be submitted to the Director and local land authority upon closure of the facility.

(b) The retention period for all records required under this section is extended automatically during the course of any unresolved enforcement action regarding the facility or as requested by the Director.

(c) All records, including plans, required under R315-8 shall be furnished upon request, and made available at all reasonable times for inspection.

5.6 BIENNIAL REPORT

Owners or operators of facilities that treat, store, or dispose of hazardous waste shall prepare and submit a single copy of a biennial report to the Director by March 1 of each even numbered year. The biennial report shall be submitted on EPA form 8700-13B. The biennial report shall cover facility activities during the previous calendar year and shall include the following information:

(a) The EPA identification number, name, and address of the facility;

(b) The calendar year covered by the report;

(c) For off-site facilities, the EPA identification number of each hazardous waste generator from which a hazardous waste was received during the year; for imported shipments, the name and address of the foreign generator shall be given in the report;

(d) A description and the quantity of each hazardous waste received by the facility during the year. For off-site facilities, this information shall be listed by EPA identification number of each generator;

(e) The method(s) of treatment, storage, or disposal for each hazardous waste; and

(f) The most recent closure cost estimate under R315-8-8, which incorporates by reference 40 CFR 264.140 - 264.151, and for disposal facilities, the most recent post-closure cost estimate under R315-8-8, which incorporates by reference 40 CFR 264.140 - 264.151; and

(g) For generators who treat, store, or dispose of hazardous waste on-site, a description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated;

(h) For generators who treat, store, or dispose of hazardous waste on-site, a description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent the information is

available for the years prior to 1984;

(i) The certification signed by the owner or operator of the facility or his authorized representative.

5.7 UNMANIFESTED WASTE REPORT

(a) If a facility accepts for treatment, storage, or disposal any hazardous waste from an off-site source without an accompanying manifest, or without an accompanying shipping paper as described in R315-6-2.20(e)(2), and if the waste is not excluded from the manifest requirement of R315, then the owner or operator shall prepare and submit a letter to the Director within 15 days of the receipt of the waste. The unmanifested waste report shall include the following information:

(1) The EPA identification number, name, and address of the facility;

(2) The date of receipt of the waste;

(3) The EPA identification number, name and address of the generator and the transporter, if available;

(4) A description and the quantity of each unmanifested hazardous waste the facility received;

(5) The method of treatment, storage, or disposal for each hazardous waste;

(6) The certification signed by the owner or operator of the facility or his authorized representative; and

(7) A brief explanation of why the waste was unmanifested, if known.

5.8 ADDITIONAL REPORTS

In addition to the biennial and unmanifested waste reporting requirements described in R315-8-5.6 and R315-8, a facility owner operator shall also report the following to the Director:

(a) Discharges, fires, and explosions as specified in R315-8-4.7(j);

(b) Upon its request, all information as the Director may deem necessary to determine compliance with the requirements of R315-8;

(c) Facility closure as specified in R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120; and

(d) As otherwise required in R315-8-6, R315-8-11, R315-8-12, R315-8-13, R315-8-14, R315-8-17, which incorporates by reference 40 CFR 264.1030 - 264.1036, R315-8-18, which incorporates by reference 40 CFR 264.1050 - 264.1065, and R315-8-22, which incorporates by reference 40 CFR 264.1080 - 264.1090.

R315-8-6. Groundwater Protection.

6.1 APPLICABILITY

(a)(1) Except as provided in R315-8-6.1(b), R315-8-6 applies to owners or operators of facilities that treat, store or dispose of hazardous waste. The owner or operator shall satisfy the requirements identified in R315-8-6.1(a)(2) for all wastes, or constituents thereof, contained in solid waste management units at the facility, regardless of the time at which waste was placed in the units.

(2) All solid waste management units shall comply with the requirements in R315-8-6.12. A surface impoundment, waste pile, and land treatment unit or landfill that receives hazardous waste after July 26, 1982, hereinafter referred to as a "regulated unit", shall comply with the requirements of R315-8-6.2 through R315-8-6.11 in lieu of R315-8-6.12 for purposes of detecting, characterizing and responding to releases to the uppermost aquifer. The financial responsibility requirements of R315-8-6.12 apply to regulated units.

(3) Groundwater monitoring shall be required at non-land disposal facilities as determined to be necessary and appropriate by the Director.

(b) The owner or operator's regulated unit or units are not subject to regulation for releases into the uppermost aquifer under R315-8-6 if:

(1) The owner or operator is exempted under R315-8-1(e) or

(2) He operates a unit which the Director finds:

(i) Is an engineered structure.

(ii) Does not receive or contain liquid waste or waste containing free liquid.

(iii) Is designed and operated to exclude liquid, precipitation, and other run-on and run-off.

(iv) Has both inner and outer layers of containment enclosing the waste.

(v) Has a leak detection system built into each containment layer.

(vi) The owner or operator will provide continuing operation and maintenance of these leak detection systems during the active life of the unit and the closure and post-closure care periods, and

(vii) To a reasonable degree of certainty, will not allow hazardous constituents to migrate beyond the outer containment layer prior to the end of the post-closure care period.

(3) The Director finds pursuant to R315-8-13.11(d) that the treatment zone of a land treatment unit that qualifies as a regulated unit does not contain levels of hazardous constituents that are above background levels of those constituents by an amount that is statistically significant, and if an unsaturated zone monitoring program meeting the requirements of R315-8-13.9 has not shown a statistically significant increase in hazardous constituents below the treatment zone during the operating life of the unit. An exemption under this paragraph can only relieve an owner or operator of responsibility to meet the requirements of this subpart during the post-closure care period; or

(4) The Director finds that there is no potential for migration of liquid from a regulated unit to the uppermost aquifer during the active life of the regulated unit, including the closure period and the post-closure care period specified under R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120. This demonstration shall be certified by a qualified geologist or geotechnical engineer. In order to provide an adequate margin of safety in the prediction of potential migration of liquid, the owner or operator shall base any predictions made under this paragraph on assumptions that maximize the rate of liquid migration.

(5) He designs and operates a waste pile in compliance with R315-8-12.1(c).

(c) The regulations under this section apply during the active life of the regulated unit, including the closure period. After closure of the regulated unit, the regulations in this section:

(1) Do not apply if the waste, waste residues, contaminated containment system components, and contaminated soils are removed or decontaminated at closure;

(2) Apply during the post-closure care period under R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, if the owner or operator is conducting a detection monitoring program under R315-8-6.9;

(3) Apply during the compliance period under R315-8-6.7 the owner is conducting a compliance monitoring program under R315-8-6.10 or a corrective action program under R315-8-6.11.

(d) Requirements in this section may apply to miscellaneous units when necessary to comply with R315-8-24, which incorporates by reference 40 CFR 264.601 - 264.603.

(e) The regulations of R315-8-6 apply to all owners and operators subject to the requirements of R315-3-1.1(e)(7), when the Director issues either a post-closure permit or an enforceable document, as defined in R315-3-1.1(e)(7), at the facility. When the Director issues an enforceable document, references in R315-8-6 to "in the permit" mean "in the enforceable document."

(f) The Director may replace all or part of the requirements

of R315-8-6.2 through R315-8-6.11 applying to a regulated unit with alternative requirements for groundwater monitoring and corrective action for releases to groundwater set out in the permit, or in an enforceable document, as defined in R315-3-1.1(e)(7) where the Director determines that:

(1) The regulated unit is situated among solid waste management units, or areas of concern, a release has occurred, and both the regulated unit and one or more solid waste management unit(s), or areas of concern, are likely to have contributed to the release; and

(2) It is not necessary to apply the groundwater monitoring and corrective action requirements of R315-8-6.2 through R315-8-6.11 because alternative requirements will protect human health and the environment.

6.2 REQUIRED PROGRAMS

(a) Owners and operators subject to this section shall conduct a monitoring and response program as follows:

(1) Whenever hazardous constituents under R315-8-6.4, from a regulated unit are detected at the compliance point under R315-8-6.6, the owner or operator shall institute a compliance monitoring program under R315-8-6.10. Detected is defined as statistically significant evidence of contamination as described in R315-8-6.9(f);

(2) Whenever the groundwater protection standard under R315-8-6.3, is exceeded, the owner or operator shall institute a corrective action program under R315-8-6.11. "Exceeded" is defined as statistically significant evidence of increased contamination as described in R315-8-6.10(d);

(3) Whenever hazardous constituents under R315-8-6.4, from a regulated unit exceed concentration limits under R315-8-6.5 in groundwater between the compliance point under R315-8-6.6 and the downgradient facility property boundary, the owner or operator shall institute a corrective action program under R315-8-6.11; or

(4) In all other cases, the owner or operator shall institute a detection monitoring program under R315-8-6.9.

(b) The Director will specify in the facility permit the specific elements of the monitoring and response program. The Director may include one or more of the programs identified in R315-8-6.2(a) in the facility permit as may be necessary to protect human health and the environment and will specify the circumstances under which each of the programs will be required. In deciding whether to require the owner or operator to be prepared to institute a particular program, the Director will consider the potential adverse effects on human health and the environment that might occur before final administrative action on a permit modification application to incorporate this type of a program could be taken.

6.3 GROUNDWATER PROTECTION STANDARD

The owner or operator shall comply with conditions specified in the facility permit that are designed to ensure that hazardous constituents under R315-8-6.4 that are detected in the groundwater from a regulated unit do not exceed the concentration limits under R315-8-6.5 in the uppermost aquifer underlying the waste management area beyond the point of compliance under R315-8-6.6 during the compliance period under R315-8-6.7. The Director will establish this groundwater protection standard in the facility permit when hazardous constituents have been detected in the groundwater.

6.4 HAZARDOUS CONSTITUENTS

(a) The Director will specify in the facility permit the hazardous constituents to which the groundwater protection standard of R315-8-6.3 applies. Hazardous constituents are constituents identified in R315-50-10, which incorporates by reference 40 CFR 261, Appendix VIII, that have been detected in groundwater in the uppermost aquifer underlying a regulated unit and that are reasonably expected to be in or derived from waste contained in a regulated unit, unless the Director has excluded them under paragraph 8.6.4(b).

(b) The Director will exclude an R315-50-10 constituent from the list of hazardous constituents specified in the facility permit if he finds that the constituent is not capable of posing a substantial present or potential hazard to human health or the environment. In deciding whether to grant an exemption, the Director will consider the following:

(1) Potential adverse effects on groundwater quality, considering:

(i) The physical and chemical characteristics of the waste in the regulated unit, including its potential for migration;

(ii) The hydrogeological characteristics of the facility and surrounding land;

(iii) The quantity of groundwater and the direction of groundwater flow;

(iv) The proximity and withdrawal rates of groundwater users;

(v) The current and future uses of groundwater in the area;

(vi) The existing quality of groundwater, including other sources of contamination and their cumulative impact on the groundwater quality;

(vii) The potential for health risks caused by human exposure to waste constituents;

(viii) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents;

(ix) The persistence and permanence of the potential adverse effects; and

(2) Potential adverse effects on hydraulically-connected surface water quality, considering:

(i) The volume and physical and chemical characteristics of the waste in the regulated unit;

(ii) The hydrogeological characteristics of the facility and surrounding land;

(iii) The quantity and quality of groundwater and the direction of groundwater flow;

(iv) The patterns of rainfall in the region;

(v) The proximity of the regulated unit to surface waters;

(vi) The current and future uses of surface waters in the area and any water quality standards established for those surface waters;

(vii) The existing quality of surface water, including other sources of contamination and the cumulative impact on surface water quality;

(viii) The potential for health risks caused by human exposure to waste constituents;

(ix) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents; and

(x) The persistence and permanence of the potential adverse effects.

(c) In making any determination under R315-8-6.4(b) about the use of groundwater in the area around the facility, the Director will consider any identification of underground sources of drinking water.

6.5 CONCENTRATION LIMITS

(a) The Director will specify in the facility permit concentration limits in the groundwater for hazardous constituents established under R315-8-6.4. The concentration of a hazardous constituent:

(1) Shall not exceed the background level of that constituent in the groundwater at the time that limit is specified in the permit; or

(2) For any of the constituents listed in Table 1, shall not exceed the respective value given in that Table if the background level of the constituent is below the value given in Table 1; or

CONSTITUENT	MAXIMUM CONCENTRATION(1)	
Arsenic	0.05	
Barium	1.0	
Cadmium	0.01	
Chromium	0.05	
Lead	0.05	
Mercury	0.002	
Selenium	0.01	
Silver	0.05	
Endrin	(1,2,3,4,10,10-hexachloro-1,7-epoxy-1,4,4a,5,6,7,8,9a-octahydro-1,4-endo,endo-5,8-dimethano naphthalene)	0.0002
Lindane	(1,2,3,4,5,6,-hexachlorocyclohexane, gamma isomer)	0.004
Methoxychlor	(1,1,1-Trichloro-2,2-bis (p-methoxyphenylethane)	0.1
Toxaphene	(C10H10Cl8, Technical chlorinated camphene, 67-69 percent chlorine)	0.005
2,4-D	(2,4-Dichlorophenoxyacetic acid)	0.1
2,4,5-TP Silvex	(2,4,5-Trichlorophenoxypropionic acid)	0.01

(1) Milligrams per liter

(3) Shall not exceed an alternate limit established by the Director under R315-8-6.5(b).

(b) The Director will establish an alternate concentration limit for a hazardous constituent if they find that the constituent will not pose a substantial present or potential hazard to human health or the environment as long as the alternate concentration limit is not exceeded. In establishing alternate concentration limits, the Director will consider the following factors:

(1) Potential adverse effects on groundwater quality, considering:

(i) The physical and chemical characteristics of the waste in the regulated unit, including its potential for migration;

(ii) The hydrogeological characteristics of the facility and surrounding land;

(iii) The quantity of groundwater and the direction of groundwater flow;

(iv) The proximity and withdrawal rates of groundwater users;

(v) The current and future uses of groundwater in the area;

(vi) The existing quality of groundwater, including other sources of contamination and their cumulative impact on the groundwater quality;

(vii) The potential for health risks caused by human exposure to waste constituents;

(viii) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents;

(ix) The persistence and permanence of the potential adverse effects; and

(2) Potential adverse effects on hydraulically connected surface water quality, considering:

(i) The volume and physical and chemical characteristics of the waste in the regulated unit;

(ii) The hydrogeological characteristics of the facility and surrounding land;

(iii) The quantity and quality of groundwater, and the

TABLE 1
Maximum Concentration of Constituents for Groundwater Protection

direction of groundwater flow;

- (iv) The patterns of rainfall in the region;
- (v) The proximity of the regulated unit to surface waters;
- (vi) The current and future uses of surface waters in the area and any water quality standards established for those surface waters;
- (vii) The existing quality of surface water, including other sources of contamination and the cumulative impact on surface water quality;
- (viii) The potential for health risks caused by human exposure to waste constituents;
- (ix) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents; and
- (x) The persistence and permanence of the potential adverse effects.

(c) In making any determination under R315-8-6.5(b) about the use of groundwater in the area around the facility the Director will consider any identification of underground sources of drinking water.

6.6 POINT OF COMPLIANCE

(a) The Director will specify in the facility permit the point of compliance at which the groundwater protection standard of R315-8-6.3 applies and at which monitoring shall be conducted. The point of compliance is a vertical surface located at the hydraulically downgradient limit of the waste management area that extends down into the uppermost aquifer underlying the regulated units.

(b) The waste management area is the limit projected in the horizontal plane of the area on which waste will be placed during the active life of a regulated unit.

(1) The waste management area includes horizontal space taken up by any liner, dike, or other barrier designed to contain waste in a regulated unit.

(2) If the facility contains more than one regulated unit, the waste management area is described by an imaginary line circumscribing the several regulated units.

6.7 COMPLIANCE PERIOD

(a) The Director will specify in the facility permit the compliance period during which the groundwater protection standard of R315-8-6.3 applies. The compliance period is the number of years equal to the active life of the waste management area, including any waste management activity prior to permit and the closure period.

(b) The compliance period begins when the owner or operator initiates a compliance monitoring program meeting the requirements of R315-8-6.9.

(c) If the owner or operator is engaged in a corrective action program at the end of the compliance period specified in R315-8-6.7(a), the compliance period is extended until the owner or operator can demonstrate that the groundwater protection standard of R315-8-6.3 has not been exceeded for a period of three consecutive years.

6.8 GENERAL GROUNDWATER MONITORING REQUIREMENTS

The owner or operator shall comply with the following requirements for any groundwater monitoring program developed to satisfy R315-8-6.9, R315-8-6.10, or R315-8-6.11:

(a) The groundwater monitoring system shall consist of a sufficient number of wells, installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer that:

(1) Represent the quality of background water that has not been affected by leakage from a regulated unit;

(i) A determination of background quality may include sampling of wells that are not hydraulically upgradient of the waste management area where:

(A) hydrogeologic conditions do not allow the owner or operator to determine what wells are hydraulically upgradient;

and

(B) Sampling at other wells will provide an indication of background groundwater quality that is representative or more representative than that provided by the upgradient wells;

(2) represent the quality of groundwater passing the point of compliance; and

(3) allow for the detection of contamination when hazardous waste or hazardous constituents have migrated from the waste management area to the uppermost aquifer.

(b) If a facility contains more than one regulated unit, separate groundwater monitoring systems are not required for each regulated unit provided that provisions for sampling the groundwater in the uppermost aquifer will enable detection and measurement at the compliance point of hazardous constituents from the regulated units that have entered the groundwater in the uppermost aquifer.

(c) All monitoring wells shall be cased in a manner that maintains the integrity of the monitoring well bore hole. This casing shall be screened or perforated and packed with gravel or sand, where necessary, to enable collection of groundwater samples. The annular space, i.e., the space between the bore hole and well casing, above the sampling depth shall be sealed to prevent contamination of samples and the groundwater.

(d) The groundwater monitoring program shall include consistent sampling and analysis procedures that are designed to ensure monitoring results that provide a reliable indication of groundwater quality below the waste management area. At a minimum the program shall include procedures and techniques for:

- (1) Sample collection;
- (2) Sample preservation and shipment;
- (3) Analytical procedures; and
- (4) Chain of custody control.

(e) The groundwater monitoring program shall include sampling and analytical methods that are appropriate for groundwater sampling and that accurately measure hazardous constituents in groundwater samples.

(f) The groundwater monitoring program shall include a determination of the groundwater surface elevation each time groundwater is sampled.

(g) In detection monitoring or where appropriate in compliance monitoring, data on each hazardous constituent specified in the permit will be collected from background wells and wells at the compliance point. The number and kinds of samples collected to establish background shall be appropriate for the form of statistical test employed, following generally accepted statistical principles. The sample size should be as large as necessary to ensure with reasonable confidence that a contaminant release to groundwater from a facility will be detected. The owner or operator will determine an appropriate sampling procedure and interval for each hazardous constituent listed in the facility permit which shall be specified in the unit permit upon approval by the Director. This sampling procedure should be:

(1) a sequence of at least four samples, taken at an interval that assures, to the greatest extent technically feasible, that an independent sample is obtained, by reference to the uppermost aquifer's effective porosity, hydraulic conductivity, and hydraulic gradient, and the fate and transport characteristics of the potential contaminants; or

(2) an alternate sampling procedure proposed by the owner or operator and approved by the Director.

(h) The owner or operator will specify one of the following statistical methods to be used in evaluating groundwater monitoring data for each hazardous constituent, upon approval by the Director, will be specified in the unit permit. The statistical test chosen shall be conducted separately for each hazardous constituent in each well. Where practical quantification limits, pql's, are used in any of the following

statistical procedures to comply with R315-8-6.8(i)(5), the pql shall be proposed by the owner or operator and approved by the Director. Use of any of the following statistical methods shall be protective of human health and the environment and shall comply with the performance standards outlined in R315-8-6.8(i).

(1) a parametric analysis of variance, ANOVA, followed by multiple comparisons procedures to identify statistical significant evidence of contamination. The method shall include estimation and testing of the contrasts between each compliance well's mean and the background mean levels for each constituent;

(2) an analysis of variance, ANOVA, based on ranks followed by multiple comparisons procedures to identify statistical significant evidence of contamination. The method shall include estimation and testing of the contrasts between compliance well's median and the background median levels for each constituent;

(3) a tolerance or prediction interval procedure in which an interval for each constituent is established from the distribution of the background data, and the level of each constituent in each compliance well is compared to the upper tolerance or prediction limit;

(4) a control chart approach that gives control limits for each constituent;

(5) another statistical test method submitted by the owner or operator and approved by the Director.

(i) Any statistical method chosen under R315-8-6.8(h) for specification in the unit permit shall comply with the following performance standards, as appropriate:

(1) The statistical method used to evaluate groundwater monitoring data shall be appropriate for the distribution of chemical parameters or hazardous constituents. If the distribution of the chemical parameters or hazardous constituents is shown by the owner or operator to be inappropriate for a normal theory test, then the data should be transformed or a distribution-free theory test should be used. If the distributions for the constituents differ, more than one statistical method may be needed.

(2) If an individual well comparison procedure is used to compare an individual compliance well constituent concentration with background constituent concentrations or a groundwater protection standard, the test shall be done at a Type I error level no less than 0.01 for each testing period. If a multiple comparisons procedure is used, the Type I experimentwise error rate for each testing period shall be no less than 0.05; however, the Type I error of no less than 0.01 for individual well comparisons shall be maintained. This performance standard does not apply to tolerance intervals, prediction intervals or control charts.

(3) If a control chart approach is used to evaluate groundwater monitoring data, the specific type of control chart and its associated parameter values shall be proposed by the owner or operator and approved by the Director if he finds it to be protective of human health and the environment.

(4) If a tolerance interval or a prediction interval is used to evaluate groundwater monitoring data, the levels of confidence and, for tolerance intervals, the percentage of the population that the interval shall contain, shall be proposed by the owner or operator and approved by the Director if he finds these parameters to be protective of human health and the environment. These parameters will be determined after considering the number of samples in the background data base, the data distribution, and the range of the concentration values for each constituent of concern.

(5) The statistical method shall account for data below the limit of detection with one or more statistical procedures that are protective of human health and the environment. Any practical quantification limit, pql, approved by the Director under R315-

8-6.8(h) that is used in the statistical method shall be the lowest concentration level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions that are available to the facility.

(6) If necessary, the statistical method shall include procedures to control or correct for seasonal and spatial variability as well as temporal correlation in the data.

(j) Groundwater monitoring data collected in accordance with R315-8-6.8(g) including actual levels of constituents shall be maintained in the facility operating record. The Director will specify in the permit when the data shall be submitted for review.

6.9 DETECTION MONITORING PROGRAM

An owner or operator required to establish a detection monitoring program under this section shall, at a minimum, discharge the following responsibilities:

(a) The owner or operator shall monitor for indicator parameters, e.g., specific conductance, pH, total organic carbon, or total organic halogen, waste constituents, or reaction products that provide a reliable indication of the presence of hazardous constituents in groundwater. The Director will specify the parameters or constituents to be monitored in the facility permit after considering the following factors:

(1) The types, quantities, and concentrations of constituents in wastes managed at the regulated unit;

(2) The mobility, stability, and persistence of waste constituents or their reaction products in the unsaturated zone beneath the waste management area;

(3) The detectability of indicator parameters, waste constituents, and reaction products in groundwater; and

(4) The concentrations or values and coefficients of variation of proposed monitoring parameters or constituents in the groundwater background.

(b) The owner or operator shall install a groundwater monitoring system at the compliance point as specified under R315-8-6.6. The groundwater monitoring system shall comply with R315-8-6.8(a)(2), (b), and (c).

(c) The owner or operator shall conduct a groundwater monitoring program for each chemical parameter and hazardous constituent specified in the permit pursuant to R315-8-6.9(a) in accordance with R315-8-6.9(g). The owner or operator shall maintain a record of groundwater analytical data as measured and in a form necessary for the determination of statistical significance under R315-8-6.8(h).

(d) The Director will specify the frequencies for collecting samples and conducting statistical tests to determine whether there is statistically significant evidence of contamination for any parameter or hazardous constituent specified in the permit under R315-8-6.9(a) in accordance with R315-8-6.8(g). A sequence of at least four samples from each well, background and compliance wells, shall be collected at least semiannually during detection monitoring.

(e) The owner or operator shall determine the groundwater flow rate and direction in the uppermost aquifer at least annually.

(f) The owner or operator shall determine whether there is statistically significant evidence of contamination for any chemical parameter of hazardous constituent specified in the permit pursuant to R315-8-6.9(a) at a frequency specified under R315-8-6.9(d).

(1) In determining whether statistically significant evidence of contamination exists, the owner or operator shall use the method specified in the permit under R315-8-6.8(h). This method shall compare data collected at the compliance point to the background groundwater quality data.

(2) The owner or operator shall determine whether there is statistically significant evidence of contamination at each monitoring well as the compliance point within a reasonable period of time after completion of sampling. The Director will

specify in the facility permit what period of time is reasonable, after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of groundwater samples.

(g) If the owner or operator determines pursuant to R315-8-6.9(f) that there is statistically significant evidence of contamination for chemical parameters of hazardous constituents specified pursuant to R315-8-6.9(a) at any monitoring well at the compliance point, he shall:

(1) notify the Director of this finding in writing within seven days. The notification shall indicate what chemical parameters or hazardous constituents have shown statistically significant evidence of contamination;

(2) immediately sample the groundwater in all monitoring wells and determine whether constituents in the list of R315-50-14, which incorporates by reference 40 CFR 264, Appendix IX, are present, and if so, in what concentration;

(3) for any R315-50-14, which incorporates by reference 40 CFR 264, Appendix IX, compounds found in the analysis pursuant to R315-8-6.9(g)(2), the owner or operator may resample within one month and repeat the analysis for these compounds detected. If the results for the second analysis confirm the initial results, then these constituents will form the basis for compliance monitoring. If the owner or operator does not resample for the compounds found pursuant to R315-8-6.9(g)(2), the hazardous constituents found during this initial R315-50-14, which incorporates by reference 40 CFR 264, Appendix IX, analysis will form the basis for compliance monitoring;

(4) within 90 days, submit to the Director an application for a permit modification to establish a compliance monitoring program meeting the requirements of R315-8-6.10. The application shall include the following information;

(i) an identification of the concentration of any R315-50-14, which incorporates by reference 40 CFR 264, Appendix IX, constituent detected in the groundwater at each monitoring well at the compliance point;

(ii) any proposed changes to the groundwater monitoring system at the facility necessary to meet the requirements of R315-8-6.10;

(iii) any proposed additions or changes to the monitoring frequency, sampling and analysis procedures or methods, or statistical methods used at the facility necessary to meet the requirements of R315-8-6.10;

(iv) for each hazardous constituent detected at the compliance point, a proposed concentration limit under R315-8-6.10(a)(1) or (2), or a notice of intent to seek an alternate concentration limit under R315-8-6.5(b); and

(5) within 180 days, submit to the Director:

(i) all data necessary to justify an alternate concentration limit sought under R315-8-6.5(b); and

(ii) an engineering feasibility plan for a corrective action program necessary to meet the requirement of R315-8-6.11, unless:

(A) all hazardous constituents identified under R315-8-6.9(g)(2) are listed in R315-8-6.5, Table 1 and their concentrations do not exceed their respective values given in that table; or

(B) the owner or operator has sought an alternate concentration limit under R315-8-6.5(b) for every hazardous constituent identified under R315-8-6.9(g)(2).

(6) If the owner or operator determines, pursuant to R315-8-6.9(f), that there is a statistically significant difference for chemical parameters or hazardous constituents specified pursuant to R315-8-6.9(a) at any monitoring well at the compliance point, he may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis, or statistical evaluation or natural variation in the groundwater.

The owner or operator may make a demonstration under R315-8-6.9(g)(6) in addition to, or in lieu of, submitting a permit modification application under R315-8-6.9(g)(4); however, the owner or operator is not relieved of the requirement to submit a permit modification application within the time specified in R315-8-6.9(g)(4) unless the demonstration made under R315-8-6.9(g)(6) successfully shows that a source other than the regulated unit caused the increase, or that the increase resulted from error in sampling, analysis, or evaluation. In making a demonstration under R315-8-6.9(g)(6), the owner or operator shall:

(i) notify the Director in writing within seven days of determining statistically significant evidence of contamination at the compliance point that he intends to make a demonstration under this paragraph;

(ii) within 90 days, submit a report to the Director which demonstrates that a source other than a regulated unit caused the contamination or that the contamination resulted from error in sampling, analysis, or evaluation;

(iii) within 90 days, submit to the Director an application for a permit modification to make any appropriate changes to the detection monitoring program facility; and

(iv) continue to monitor in accordance with the detection monitoring program established under R315-8-6.9.

(h) If the owner or operator determines that the detection monitoring program no longer satisfies the requirements of this section, he shall, within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

6.10 COMPLIANCE MONITORING PROGRAM

An owner or operator required to establish a compliance monitoring program under this section shall, at a minimum, discharge the following responsibilities:

(a) The owner or operator shall monitor the groundwater to determine whether regulated units are in compliance with the groundwater protection standard under R315-8-6.3. The Director will specify the groundwater protection standard in the facility permit including:

(1) A list of the hazardous constituents identified under R315-8-6.4;

(2) Concentration limits under R315-8-6.5 for each of those hazardous constituents;

(3) The compliance point under R315-8-6.6;

(4) The compliance period under R315-8-6.7.

(b) The owner or operator shall install a groundwater monitoring system at the compliance point as specified under R315-8-6.6. The groundwater monitoring system shall comply with R315-8-6.8(a)(2), (b) and (c).

(c) The Director will specify the sampling procedures and statistical methods appropriate for the constituents and the facility, consistent with R315-8-6.8(g) and (h).

(1) The owner or operator shall conduct a sampling program for each chemical parameter or hazardous waste constituent in accordance with R315-8-6.8(g).

(2) The owner or operator shall record groundwater analytical data as measured and in form necessary for the determination of statistical significance under R315-8-6.8(h) for the compliance period of the facility.

(d) The owner or operator shall determine whether there is statistically significant evidence of increased contamination for any chemical parameter or hazardous constituent specified in the permit, pursuant to R315-8-6.10(a), at a frequency specified under R315-8-6.10(f).

(1) In determining whether statistically significant evidence of increased contamination exists, the owner or operator shall use the method specified in the permit under R315-8-6.5. The method shall compare data collected at the compliance point to a concentration limit developed in accordance with R315-8-6.8(h).

(2) The owner or operator shall determine whether there is statistically significant evidence of increase contamination at each monitoring well at the compliance point within a reasonable time period after completion of sampling. The Director will specify that time period in the facility permit, after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of groundwater samples.

(e) The owner or operator shall determine the groundwater flow rate and direction in the uppermost aquifer at least annually.

(f) The Director will specify the frequencies for collecting samples and conducting statistical tests to determine statistically significant evidence of increased contamination in accordance with R315-8-6.8(g).

(g) The owner or operator shall analyze samples from all monitoring wells at the compliance point for all constituents contained in R315-50-14, which incorporates by reference 40 CFR, Appendix IX, at least annually to determine whether additional hazardous constituents are present in the uppermost aquifer and, if so, at what concentration, pursuant to procedures in R315-8-6.9(f). If the owner or operator finds R315-50-14, which incorporates by reference 40 CFR 264, Appendix IX, constituents in the groundwater that are not already identified in the permit as monitoring constituents, the owner or operator may resample within one month and repeat the R315-50-14, which incorporates by reference 40 CFR 264, Appendix IX, analysis. If the second analysis confirms the presence of new constituents, the owner or operator shall report the concentration of these additional constituents to the Director within seven days after the completion of the second analysis and add them to the monitoring list. If the owner or operator chooses not to resample, then he shall report the concentrations of these additional constituents to the Director within seven days after completion of the initial analysis and add them to the monitoring list.

(h) If the owner or operator determines pursuant to R315-8-6.10(d) that any concentration limits under R315-8-6.5 are being exceeded at any monitoring well at the point of compliance he shall:

(1) Notify the Director of this finding in writing within seven days. The notification shall indicate which concentration limits have been exceeded;

(2) Submit to the Director an application for a permit modification to establish a corrective action program meeting the requirements of R315-8-6.11, within 180 days, or within 90 days if an engineering feasibility study has been previously submitted to the Director under R315-8-6.9(h)(5). The application shall at a minimum include the following information:

(i) A detailed description of corrective actions that will achieve compliance with the groundwater protection standard specified in the permit under R315-8-6.10(a); and

(ii) A plan for a groundwater monitoring program that will demonstrate the effectiveness of the corrective action. The groundwater monitoring program may be based on a compliance monitoring program developed to meet the requirements of this section.

(i) If the owner or operator determines, pursuant to R315-8-6.10(d), that the groundwater concentration limits under R315-8-6.10 are being exceeded at any monitoring well at the point of compliance, he may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis, or statistical evaluation or natural variation in the groundwater. In making a demonstration under R315-8-6.10(i), the owner or operator shall:

(1) Notify the Director in writing within seven days that he intends to make a demonstration under R315-8-6.10(i);

(2) Within 90 days, submit a report to the Director which demonstrates that a source other than a regulated unit caused the standard to be exceeded or that the apparent noncompliance with the standards resulted from error in sampling, analysis, or evaluation;

(3) Within 90 days, submit to the Director an application for a permit modification to make any appropriate changes to the compliance monitoring program at the facility; and

(4) Continue to monitor in accord with the compliance monitoring program established under this section.

(j) If the owner or operator determines that the compliance monitoring program no longer satisfies the requirements of this section, he shall within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

6.11 CORRECTIVE ACTION PROGRAM

An owner or operator required to establish a corrective action program under this section shall, at a minimum, discharge the following responsibilities:

(a) The owner or operator shall take corrective action to ensure that regulated units are in compliance with the groundwater protection standard under R315-8-6.3. The Director will specify the groundwater protection standard in the facility permit, including:

(1) A list of hazardous constituents identified under R315-8-6.4;

(2) Concentration limits under R315-8-6.5 for each of those hazardous constituents;

(3) The compliance point under R315-8-6.6; and

(4) The compliance period under R315-8-6.7.

(b) The owner or operator shall implement a corrective action program that prevents hazardous constituents from exceeding their respective concentration limits at the compliance point by removing the hazardous waste constituents or treating them in place. The permit will specify the specific measures that will be taken.

(c) The owner or operator shall begin corrective action within a reasonable time period after the groundwater protection standard is exceeded. The Director will specify that time period in the facility permit. If a facility permit includes a corrective action program in addition to a compliance monitoring program, the permit will specify when the corrective action will begin and the requirement will operate in lieu of R315-8-6.10(i)(2).

(d) In conjunction with a corrective action program, the owner or operator shall establish and implement a groundwater monitoring program to demonstrate the effectiveness of the corrective action program. The monitoring program may be based on the requirements for a compliance monitoring program under R315-8-6.10 and shall be as effective as that program in determining compliance with the groundwater protection standard under R315-8-6.3 and in determining the success of a corrective action program under R315-8-6.11(e), where appropriate.

(e) In addition to the other requirements of this section, the owner or operator shall conduct a corrective action program to remove or treat in place any hazardous constituents under R315-8-6.4 that exceed concentration limits under R315-8-6.5 in groundwater:

(1) between the compliance point under R315-8-6.6 and the downgradient facility property boundary; and

(2) beyond the facility boundary, where necessary to protect human health and the environment, unless the owner or operator demonstrates to the satisfaction of the Director that, despite the owner's or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake the action. The owner or operator is not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where off-site access is denied. On-site measures to address the releases will be determined on a case-

by-case basis.

(3) Corrective action measures under R315-8-6.11(e) shall be initiated and completed within a reasonable period of time considering the extent of contamination.

(4) Corrective action measures under this paragraph may be terminated once the concentration of hazardous constituents under R315-8-6.4 is reduced to levels below their respective concentration limits under R315-8-6.5.

(f) The owner or operator shall continue corrective action measures during the compliance period to the extent necessary to ensure that the groundwater protection standard is not exceeded. If the owner or operator is conducting corrective action at the end of the compliance period, he shall continue that corrective action for as long as necessary to achieve compliance with the groundwater protection standard. The owner or operator may terminate corrective action measures taken beyond the period equal to the active life of the waste management area, including the closure period if he can demonstrate, based on data from the groundwater monitoring program under R315-8-6.11(d), that the groundwater protection standard of R315-8-6.3 has not been exceeded for a period of three consecutive years.

(g) The owner or operator shall report in writing to the Director on the effectiveness of the corrective action program. The owner or operator shall submit these reports semi-annually.

(h) If the owner or operator determines that the corrective action program no longer satisfies the requirements of this section, he shall within 90 days, submit an application for a permit modification to the program.

6.12 CORRECTIVE ACTION FOR SOLID WASTE MANAGEMENT UNITS

(a) The owner or operator of a facility seeking a permit for the treatment, storage or disposal of hazardous waste shall institute corrective action as necessary to protect human health and the environment for all releases of hazardous waste or constituents from any solid waste management unit at the facility, regardless of the time at which waste was placed in the unit.

(b) Corrective action will be specified in the permit in accordance with R315-8-6-12 and R315-8-21, which incorporates by reference 40 CFR 264.552 and 264.553. The permit will contain schedules of compliance for the corrective action, where such corrective action cannot be completed prior to issuance of the permit, and assurances of financial responsibility for completing the corrective action.

(c) The owner or operator shall implement corrective actions beyond the facility property boundary, where necessary to protect human health and the environment, unless the owner or operator demonstrates to the satisfaction of the Director that, despite the owner's or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake the actions. The owner or operator is not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where off-site access is denied. On-site measures to address the releases will be determined on a case-by-case basis. Assurances of financial responsibility for corrective action shall be provided.

(d) This does not apply to remediation waste management sites unless they are part of a facility subject to a permit for treating, storing, or disposing of hazardous wastes that are not remediation wastes.

R315-8-7. Closure and Post Closure.

The requirements as found in 40 CFR subpart G, 264.110 - 264.120, 1998 ed., as amended by 63 FR 56710, October 22, 1998, are incorporated by reference with the following exceptions:

(a) substitute "Director" for all references made to "Regional Administrator".

(b) substitute R315-3 for all general reference made to 40

CFR 124 and 270.

(c) substitute "The Utah Solid and Hazardous Waste Act" for all references made to the "Resource Conservation and Recovery Act" or "RCRA."

R315-8-8. Financial Requirements.

The requirements as found in 40 CFR subpart H, 264.140 - 264.151, 1998 ed., as amended by 63 FR 56710, October 22, 1998, are incorporated by reference with the following exceptions:

(a) substitute "Director" for all references to "Administrator" or "Regional Administrator".

(b) substitute " Director " for all references to "Agency" or "EPA."

(c) substitute "The Utah Solid and Hazardous Waste Act" for all references to the "Resource Conservation and Recovery Act" or "RCRA."

R315-8-9. Use and Management of Containers.

9.1 APPLICABILITY

The rules in this section apply to owners and operators of all hazardous waste facilities that store containers of hazardous waste, except as provided otherwise in R315-8-1.

Under R315-2-7 and R315-2-11, if a hazardous waste is emptied from a container the residue remaining in the container is not considered a hazardous waste if the container is "empty" as defined in R315-2-7. In that event, management of the container is exempt from the requirements of this section.

9.2 CONDITION OF CONTAINERS

If a container holding hazardous waste is not in good condition, e.g., severe rusting, apparent structural defects, or if it begins to leak, the owner or operator shall transfer the hazardous waste from this container to a container that is in good condition or manage the waste in some other way that complies with the requirements of this section.

9.3 COMPATIBILITY OF WASTE WITH CONTAINERS

The owner or operator shall use a container made of or lined with materials which will not react with, and are otherwise compatible with, the hazardous waste to be stored, so that the ability of the container to contain the waste is not impaired.

9.4 MANAGEMENT OF CONTAINERS

(a) A container holding hazardous waste shall always be closed during storage, except when it is necessary to add or remove waste.

(b) A container holding hazardous waste shall not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Reuse of containers in transportation is governed by U.S. Department of Transportation regulations including those set forth in 49 CFR 173.28.

9.5 INSPECTIONS

At least weekly, the owner or operator shall inspect areas where containers are stored, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors. See R315-8-2.6(c) and R315-8-9.2 for remedial action required if deterioration or leaks are detected.

9.6 CONTAINMENT

(a) Container storage areas shall have a containment system that is designed and operated in accordance with R315-8-9.6(b), except as otherwise provided by R315-8-9.6(c).

(b) A containment system shall be designed and operated as follows:

(1) A base shall underlay the containers which is free of cracks or gaps and is sufficiently impervious to contain leaks, spills, and accumulated precipitation until the collected material is detected and removed;

(2) The base shall be sloped or the containment system

shall be otherwise designed and operated to drain and remove liquids resulting from leaks, spills, or precipitation, unless the containers are elevated or are otherwise protected from contact with accumulated liquids;

(3) The containment system shall have sufficient capacity to contain 10% of the volume of containers or the volume of the largest container, whichever is greater. Containers that do not contain free liquids need not be considered in this determination;

(4) Run-on into the containment system shall be prevented unless the collection system has sufficient excess capacity in addition to that required in R315-8-9.6(b)(3) to contain any run-on which might enter the system; and

(5) Spilled or leaked waste and accumulated precipitation shall be removed from the sump or collection area in as timely a manner as is necessary to prevent overflow of the collection system.

If the collected material is a hazardous waste under R315-2, it shall be managed as a hazardous waste in accordance with all applicable requirements of these rules. If the collected material is discharged through a point source to waters of the United States, it is subject to the requirements of section 402 of the Clean Water Act, as amended.

(c) Storage areas that store containers holding only wastes that do not contain free liquids need not have a containment system defined by R315-8-9.6(b), except as provided by R315-8-9.6(d) or provided that:

(1) The storage area is sloped or is otherwise designed and operated to drain and remove liquid resulting from precipitation, or

(2) The containers are elevated or are otherwise protected from contact with accumulated liquid.

(d) Storage areas that store containers holding the wastes listed below that do not contain free liquids shall have a containment system defined by R315-8-9.6(b):

(1) F020, F021, F022, F023, F026, and F027.

9.7 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

Containers holding ignitable or reactive waste shall be located at least 15 meters, 50 feet, from the facility's property line. See R315-8-2.8(a) for additional requirements.

9.8 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

(a) Incompatible wastes, or incompatible wastes and materials, see 40 CFR 264, Appendix V for examples, shall not be placed in the same container, unless R315-8-2.8(b) is complied with.

(b) Hazardous waste shall not be placed in an unwashed container that previously held an incompatible waste or material. As required by R315-8-2.4, which incorporates by reference 40 CFR 264.13, the waste analysis plan shall include analyses needed to comply with R315-8-9.8(b). Also R315-8-2.8(c) requires waste analyses, trial tests or other documentation to assure compliance with R315-8-2.8(b). As required by R315-8-5.3, which incorporates by reference 40 CFR 264.73, the owner or operator shall place the results of each waste analysis and trial test, and any documented information, in the operating record of the facility.

(c) A storage container holding a hazardous waste that is incompatible with any waste or other materials stored nearby in other containers, piles, open tanks, or surface impoundments shall be separated from the other materials or protected from them by means of a dike, berm, wall, or other device. The purpose of this section is to prevent fires, explosions, gaseous emission, leaching, or other discharge of hazardous waste or hazardous waste constituents which could result from the mixing of incompatible wastes or materials if containers break or leak.

9.9 CLOSURE

At closure, all hazardous waste and hazardous waste residues shall be removed from the containment system. Remaining containers, liners, bases, and soil containing or contaminated with hazardous waste or hazardous waste residues shall be decontaminated or removed.

At closure, as throughout the operating period, unless the owner or operator can demonstrate in accordance with R315-2-3(d) that the solid waste removed from the containment system is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and shall manage it in accordance with all applicable requirements of these rules.

9.10 AIR EMISSION STANDARDS

The owner or operator shall manage all hazardous waste placed in a container in accordance with the applicable requirements of R315-8-17, which incorporates by reference 40 CFR subpart AA, R315-8-18, which incorporates by reference 40 CFR subpart BB, and R315-8-22, which incorporates by reference 40 CFR subpart CC.

R315-8-10. Tanks.

The requirements as found in 40 CFR 264, subpart J, 264.190 - 264.200, 1996 ed., as amended by 61 FR 59931, November 25, 1996, are adopted and incorporated by reference with the following exceptions:

(a) Substitute "Director" for all references to "Administrator" or "Regional Administrator" found in subpart J except paragraph 264.193(g) which should have "Regional Administrator" replaced by "Director".

(b) Add, following January 12, 1988, in 40 CFR 265.191(a), "or by December 16, 1988 for non-HSWA existing tank systems."

(c) Replace 40 CFR 265.193(a)(2) to (4) with the following corresponding paragraphs:

(1) For all HSWA existing tank systems used to store or treat EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027, within two years after January 12, 1987, or within two years after December 16, 1988 for non-HSWA existing tank systems;

(2) For those HSWA existing tank systems of known and documented age, within two years after January 12, 1987, or within two years after December 16, 1988 for non-HSWA existing tank systems, or when the tank system has reached 15 years of age, whichever comes later;

(3) For those HSWA existing tank systems for which the age cannot be documented, within eight years of January 12, 1987, or within eight years of December 16, 1988 for non-HSWA existing tank systems; but if the age of the facility is greater than seven years, secondary containment shall be provided by the time the facility reaches 15 years of age, or within two years of January 12, 1987, or within two years of December 16, 1988 for non-HSWA existing tank systems, whichever comes later; and

(d) Add, following the last January 12, 1987, in 40 CFR 265-193(a)(5), "or December 16, 1988 for non-HSWA tank systems."

R315-8-11. Surface Impoundments.

11.1 APPLICABILITY

The rules in this section apply to owners and operators of facilities that use surface impoundments to treat, store, or dispose of hazardous waste except as provided otherwise in R315-8-1.

11.2 DESIGN AND OPERATING REQUIREMENTS

(a) Any surface impoundment that is not covered by R315-8-11.2(f) or R315-7-18.9 shall have a liner for all portions of the impoundment, except for existing portions of such impoundments. The liner shall be designed, constructed, and installed to prevent any migration of wastes out of the impoundment to the adjacent subsurface soil or groundwater or

surface water at any time during the active life, including the closure period, of the impoundment. The liner may be constructed of materials that may allow wastes to migrate into the liner, but not into the adjacent subsurface soil or groundwater or surface water, during the active life of the facility, provided that the impoundment is closed in accordance with R315-8-11.5(a)(1). For impoundments that will be closed in accordance with R315-8-11.5(a)(2), the liner shall be constructed of materials that can prevent wastes from migrating into the liner during the active life of the facility. The liner shall be:

(1) Constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients, including static head and external hydrogeologic forces, physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation;

(2) Placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift; and

(3) Installed to cover all surrounding earth likely to be in contact with the waste or leachate.

(b) The owner or operator will be exempted from the requirements of R315-8-11.2(a) if the Director finds, based on a demonstration by the owner or operator, that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents, see R315-8-6.4, into the groundwater or surface water at any future time. In deciding whether to grant an exemption, the Director will consider:

(1) The nature and quantity of the wastes;

(2) The proposed alternate design and operation;

(3) The hydrogeologic setting of the facility, including the attenuative capacity and thickness of the liners and soils present between the impoundment and groundwater or surface water; and

(4) All other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to groundwater or surface water.

(c) The owner or operator of each new surface impoundment unit on which construction commences after January 29, 1992, each lateral expansion of a surface impoundment unit on which construction commences after July 29, 1992 and each replacement of an existing surface impoundment unit that is to commence reuse after July 29, 1992 shall install two or more liners and a leachate collection and removal system between such liners. "Construction commences" is as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, under "existing facility".

(1)(i) The liner system shall include:

(A) A top liner designed and constructed of materials, e.g., a geomembrane, to prevent the migration of hazardous constituents into such liner during the active life and post-closure care period; and

(B) A composite bottom liner, consisting of at least two components. The upper component shall be designed and constructed of materials, e.g., a geomembrane, to prevent the migration of hazardous constituents into this component during the active life and post-closure care period. The lower component shall be designed and constructed of materials to minimize the migration of hazardous constituents if a breach in the upper component were to occur. The lower component shall be constructed of at least three feet, 91 cm, of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} /cm/sec.

(ii) The liners shall comply with R315-8-11.2(a)(1)-(3).

(2) The leachate collection and removal system between the liners, and immediately above the bottom composite liner in

the case of multiple leachate collection and removal systems, is also a leak detection system. This leak detection system shall be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner likely to be exposed to waste or leachate during the active life and post-closure care period. The requirements for a leak detection system in this paragraph are satisfied by installation of a system that is, at a minimum:

(i) Constructed with a bottom slope of one percent or more;

(ii) Constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-1} /cm/sec or more and a thickness of 12 inches, 30.5 cm, or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-4} /m²sec or more;

(iii) Constructed of materials that are chemically resistant to the waste managed in the surface impoundment and the leachate expected to be generated, and of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes and any waste cover materials or equipment used at the surface impoundment;

(iv) Designed and operated to minimize clogging during the active life and post-closure care period; and

(v) Constructed with sumps and liquid removal methods, e.g., pumps, of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit shall have its own sump(s). The design of each sump and removal system shall provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed.

(3) The owner or operator shall collect and remove pumpable liquids in the sumps to minimize the head on the bottom liner.

(4) The owner or operator of a leak detection system that is not located completely above the seasonal high water table shall demonstrate that the operation of the leak detection system will not be adversely affected by the presence of ground water.

(d) The Director may approve alternative design or operating practices to those specified in R315-8-11.2(c) if the owner or operator demonstrates to the Director that such design and operating practices, together with location characteristics:

(1) Will prevent the migration of any hazardous constituent into the groundwater or surface water at least as effectively as the liners and leachate collection and removal system specified in R315-8-11.2(c); and

(2) Will allow detection of leaks of hazardous constituents through the top liner at least as effectively.

(e) The double liner requirement set forth in R315-8-11.2(f) may be waived by the Director for any monofill, if:

(1) The monofill contains only hazardous wastes from foundry furnace emission controls or metal casting molding sand, and the wastes do not contain constituents which would render the wastes hazardous for reasons other than the EP toxicity characteristics, and

(2)(i)(A) The monofill has at least one liner for which there is no evidence that the liner is leaking. For the purposes of this paragraph, the term "liner" means a liner designed, constructed, installed and operated to prevent hazardous waste from passing into the liner at any time during the active life of the facility, or a liner designed, constructed, installed, and operated to prevent hazardous waste from migrating beyond the liner to adjacent subsurface soil, groundwater, or surface water at any time during the active life of the facility. In the case of any surface impoundment which has been exempted from the requirements of R315-8-11.2(c) on the basis of a liner designed, constructed, installed, and operated to prevent hazardous waste from passing beyond the liner, at the closure of the impoundment, the owner or operator shall remove or decontaminate all waste residues, all contaminated liner

material, and contaminated soil to the extent practicable given the specific site conditions and the nature and extent of contamination. If all contaminated soil is not removed or decontaminated, the owner or operator of the impoundment will comply with appropriate post-closure requirements, including but not limited to groundwater monitoring and corrective action:

(B) The monofill is located more than one-quarter mile from an underground source of drinking water, as that term is defined in 40 CFR 144.3; and

(C) The monofill is in compliance with generally applicable groundwater monitoring requirements for facilities with a permit; or

(ii) The owner or operator demonstrates that the monofill is located, designed and operated so as to assure that there will be no migration of any hazardous constituent into groundwater or surface water at any future time.

(f) The owner or operator of any replacement surface impoundment unit is exempt from R315-8-11.2(c) if:

(1) The existing unit was constructed in compliance with the design standards of sections 3004 (o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and

(2) There is no reason to believe that the liner is not functioning as designed.

(g) A surface impoundment shall be designed, constructed, maintained, and operated to prevent overtopping resulting from normal or abnormal operations; overfilling; wind and wave action; rainfall; run-on; malfunctions of level controllers, alarms, and other equipment; and human error.

(h) A surface impoundment shall have dikes that are designed, constructed, and maintained with sufficient structural integrity to prevent massive failure to the dikes. In ensuring structural integrity, it shall not be presumed that the liner system will function without leakage during the active life of the unit.

(i) The Director will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

11.3 MONITORING AND INSPECTION

(a) During construction and installation, liners, except in the case of existing portions of surface impoundments exempt from R315-8-11.2(a), and cover systems, e.g., membranes, sheets, or coatings, shall be inspected for uniformity, damage, and imperfections (e.g., holes, cracks, thin spots, or foreign materials). Immediately after construction or installation:

(1) Synthetic liners and covers shall be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters; and

(2) Soil-based and admixed liners and covers shall be inspected for imperfections including lenses, cracks, channels, root holes, or other structural non-uniformities that may cause an increase in the permeability of the liner or cover.

(b) While a surface impoundment is in operation, it shall be inspected weekly and after storms to detect evidence of any of the following:

(1) Deterioration, malfunctions, or improper operation of overtopping control systems;

(2) Sudden drops in the level of the impoundment's contents; and

(3) Severe erosion or other signs of deterioration in dikes or other containment devices.

(c) Prior to the issuance of a permit and after any extended period of time, at least six months, during which the impoundment was not in service, the owner or operator shall obtain a certification from a qualified engineer that the impoundment's dike, including that portion of any dike which provides freeboard, has structural integrity. The certification shall establish, in particular, that the dike:

(1) Will withstand the stress of the pressure exerted by the types and amounts of wastes to be placed in the impoundment; and

(2) Will not fail due to scouring or piping, without dependence on any liner system included in the surface impoundment construction.

(d)(1) An owner or operator required to have a leak detection system under R315-8-11.2(c) or (d) shall record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

(2) After the final cover is installed, the amount of liquids removed from each leak detection system sump shall be recorded at least monthly. If the liquid level in the sump stays below the pump operating level for two consecutive months, the amount of liquids in the sumps shall be recorded at least quarterly. If the liquid level in the sump stays below the pump operating level for two consecutive quarters, the amount of liquids in the sumps shall be recorded at least semi-annually. If at any time during the post-closure care period the pump operating level is exceeded at units on quarterly or semi-annual recording schedules, the owner or operator shall return to monthly recording of amounts of liquids removed from each sump until the liquid level again stays below the pump operating level for two consecutive months.

(3) "Pump operating level" is a liquid level proposed by the owner or operator and approved by the Director based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump.

11.4 EMERGENCY REPAIRS; CONTINGENCY PLANS

(a) A surface impoundment shall be removed from service in accordance with R315-8-11.4(b) when:

(1) The level of liquids in the impoundment suddenly drops and the drop is not known to be caused by changes in the flows into or out of the impoundment; or

(2) The dike leaks.

(b) When a surface impoundment shall be removed from service as required by R315-8-11.4(a), the owner or operator shall:

(1) Immediately shut off the flow or stop the addition of wastes into the impoundment;

(2) Immediately contain any surface leakage which has occurred or is occurring;

(3) Immediately stop the leak;

(4) Take any necessary steps to stop or prevent catastrophic failure;

(5) If a leak cannot be stopped by any other means, empty the impoundment; and

(6) Notify the Director of the problem in writing within seven days after detecting the problem.

(c) As part of the contingency plan required in R315-8-4, the owner or operator shall specify a procedure for complying with the requirements of R315-8-11.4(b).

(d) No surface impoundment that has been removed from service in accordance with the requirements of this section may be restored to service unless the portion of the impoundment which was failing is repaired and the following steps are taken:

(1) If the impoundment was removed from service as the result of actual or imminent dike failure, the dike's structural integrity shall be recertified in accordance with R315-8-11.3(c).

(2) If the impoundment was removed from service as the result of a sudden drop in the liquid level, then:

(i) For any existing portion of the impoundment, a liner shall be installed in compliance with R315-8-11.2(a), and

(ii) For any other portion of the impoundment, the repaired liner system shall be certified by a qualified engineer as meeting the design specifications approved in the permit.

(e) A surface impoundment that has been removed from service in accordance with the requirements in this section and that is not being repaired shall be closed in accordance with the provisions of R315-8-11.5.

11.5 CLOSURE AND POST-CLOSURE CARE

(a) At closure, the owner or operator shall:

(1) Remove or decontaminate all waste residues, contaminated containment system components, liners, etc., contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous wastes unless R315-2-3(d) applies; or

(2)(i) Eliminate free liquids by removing liquid wastes or solidifying the remaining wastes and waste residues;

(ii) Stabilize remaining wastes to a bearing capacity sufficient to support final cover; and

(iii) Cover the surface impoundment with a final cover designed and constructed to:

(A) Provide long-term minimization of the migration of liquids through the closed impoundment;

(B) Function with minimum maintenance;

(C) Promote drainage and minimize erosion or abrasion of the final cover;

(D) Accommodate settling and subsidence so that the cover's integrity is maintained; and

(E) Have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present.

(b) If some waste residues or contaminated materials are left in place at final closure, the owner or operator shall comply with all post-closure requirements contained in R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, including maintenance and monitoring throughout the post-closure care period, specified in the permit under R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120. The owner or operator shall:

(1) Maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events;

(2) Maintain and monitor the leak detection system in accordance with R315-8-11.2(c)(2)(iv) and (3) and R315-8-11.3(d), and comply with all other applicable leak detection system requirements of this part;

(3) Maintain and monitor the groundwater monitoring system and comply with all other applicable requirements of R315-8-6; and

(4) Prevent run-on and run-off from eroding or otherwise damaging the final cover.

(c)(1) If an owner or operator plans to close a surface impoundment in accordance with R315-8-11.5(a)(1), and the impoundment does not comply with the liner requirements of R315-8-11.2(a) and is not exempt from them in accordance with R315-8-11.2(b), then:

(i) The closure plan for the impoundment under R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, shall include both a plan for complying with R315-8-11.5(a)(1) and a contingent plan for complying with R315-8-11.5(a)(2) in case not all contaminated subsoils can be practicably removed at closure; and

(ii) The owner or operator shall prepare a contingent post-closure plan under R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, for complying with R315-8-11.5(b) in case not all contaminated subsoils can be practicably removed at closure.

(2) The cost estimates calculated under R315-8-8, which incorporates by reference 40 CFR 264.140 - 264.151, for closure and post-closure care of an impoundment subject to this paragraph shall include the cost of complying with the contingent closure plan and the contingent post-closure plan, but are not required to include the cost of expected closure under R315-8-11.5(a)(1).

11.6 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

Ignitable or reactive waste shall not be placed in a surface impoundment unless the waste and impoundment satisfy all applicable requirements of R315-13, which incorporates by reference 40 CFR 268, R315-50-12, which incorporates by reference 40 CFR 268 Appendix I, and R315-50-13, which incorporates by reference 40 CFR 268 Appendix II, and:

(a) The waste is treated, rendered, or mixed before or immediately after placement in the impoundment so that:

(1) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) and (f), and

(2) R315-8-2.8(b) is complied with; or

(b) The waste is managed in a way that it is protected from any material or conditions which may cause it to ignite or react; or

(c) The surface impoundment is used solely for emergencies.

11.7 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

Incompatible wastes, or incompatible wastes and materials, see 40 CFR 264, Appendix V for examples, shall not be placed in the same surface impoundment, unless R315-8-2.8(b) is complied with.

11.8 SPECIAL REQUIREMENTS FOR HAZARDOUS WASTE F020, F021, F022, F023, F026, AND F027

(a) Hazardous Wastes F020, F021, F022, F023, F026, and F027 shall not be placed in a surface impoundment unless the owner or operator operates the surface impoundment in accordance with a management plan for these wastes that is approved by the Director pursuant to the standards set out in this paragraph, and in accord with all other applicable requirements of these rules. The factors to be considered are:

(1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

(2) The attenuative properties of underlying and surrounding soils or other materials;

(3) The mobilizing properties of other materials co-disposed with these wastes; and

(4) The effectiveness of additional treatment, design, or monitoring techniques.

(b) The Director may determine that additional design, operating, and monitoring requirements are necessary for surface impoundments managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to groundwater, surface water, or air so as to protect human health and the environment.

11.9 ACTION LEAKAGE RATE

(a) The Director shall approve an action leakage rate for surface impoundment units subject to R315-8-11.2(c) or (d). The action leakage rate is the maximum design flow rate that the leak detection system, LDS, can remove without the fluid head on the bottom liner exceeding one foot. The action leakage rate shall include an adequate safety margin to allow for uncertainties in the design, e.g., slope, hydraulic conductivity, thickness of drainage material, construction, operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions, e.g., the action leakage rate shall consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.

(b) To determine if the action leakage rate has been exceeded, the owner or operator shall convert the weekly or monthly flow rate from the monitoring data obtained under R315-8-11.3(d) to an average daily flow rate, gallons per acre per day, for each sump. Unless the Director approves a different calculation, the average daily flow rate for each sump shall be calculated weekly during the active life and closure period, and

if the unit is closed in accordance with R315-8-11.5(b), monthly during the post-closure care period when monthly monitoring is required under R315-8-11.3(d).

11.10 RESPONSE ACTIONS

(a) The owner or operator of surface impoundment units subject to R315-8-11.2(c) or (d) shall have an approved response action plan before receipt of waste. The response action plan shall set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan shall describe the actions specified in R315-8-11.10(b).

(b) If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator shall:

(1) Notify the Director in writing of the exceedance within seven days of the determination;

(2) Submit a preliminary written assessment to the Director within 14 days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;

(3) Determine to the extent practicable the location, size, and cause of any leak;

(4) Determine whether waste receipt should cease or be curtailed, whether any waste should be removed from the unit for inspection, repairs, or controls, and whether or not the unit should be closed;

(5) Determine any other short-term and longer-term actions to be taken to mitigate or stop any leaks; and

(6) Within 30 days after the notification that the action leakage rate has been exceeded, submit to the Director the results of the analyses specified in R315-8-11.10(b)(3)-(5), the results of actions taken, and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator shall submit to the Director a report summarizing the results of any remedial actions taken and actions planned.

(c) To make the leak and remediation determinations in R315-8-11.10(b)(3)-(5), the owner or operator shall:

(1)(i) Assess the source of liquids and amounts of liquids by source;

(ii) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and

(iii) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or

(2) Document why such assessments are not needed.

11.11 AIR EMISSION STANDARDS

The owner or operator shall manage all hazardous waste placed in a surface impoundment in accordance with the applicable requirements of R315-8-18, which incorporates by reference 40 CFR subpart BB, and R315-8-22, which incorporates by reference 40 CFR subpart CC.

R315-8-12. Waste Piles.

12.1 APPLICABILITY

(a) The rules in this section apply to owners and operators of facilities that store or treat hazardous waste in piles, except as provided otherwise in R315-8-1.

(b) The rules in this section do not apply to owners or operators of waste piles that are closed with wastes left in place. These waste piles are subject to the rules under R315-8-14, Landfills.

(c) The owner or operator of any waste pile that is inside or under a structure that provides protection from precipitation so that neither run-off nor leachate is generated is not subject to regulation under R315-8-12.2 or R315-8-6, provided that:

(1) Liquids or materials containing free liquids are not placed in the pile;

(2) The pile is protected from surface water run-on or groundwater run-on by the structure or in some other manner;

(3) The pile is designed and operated to control dispersal of the waste by wind, where necessary, by means other than wetting; and

(4) The pile will not generate leachate through decomposition or other reactions.

12.2 DESIGN AND OPERATING REQUIREMENTS

(a) A waste pile, except for an existing portion of a waste pile, shall have:

(1) A liner that is designed, constructed, and installed to prevent any migration of wastes out of the pile into the adjacent subsurface soil or groundwater or surface water at any time during the active life, including the closure period, of the waste pile. The liner may be constructed of materials that may allow waste to migrate into the liner itself, but not into the adjacent subsurface soil or groundwater or surface water, during the active life of the facility. The liner shall be:

(i) Constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients, including static head and external hydrogeologic forces, physical contact with waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation;

(ii) Placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift; and

(iii) Installed to cover all surrounding earth likely to be in contact with the waste or leachate; and

(2) A leachate collection and removal system immediately above the liner that is designed, constructed, maintained, and operated to collect and remove leachate from the pile. The Director will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed 30 cm, one foot. The leachate collection and removal system shall be:

(i) Constructed of materials that are:

(A) Chemically resistant to the waste managed in the pile and the leachate expected to be generated; and

(B) Of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and by any equipment used at the pile; and

(ii) Designed and operated to function without clogging through the scheduled closure of the waste pile.

(b) The owner or operator will be exempted from the requirements of R315-8-12.2(a) if the Director finds, based on a demonstration by the owner or operator, that alternate design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents, see R315-8-6.4, into the groundwater or surface water at any future time. In deciding whether to grant an exemption, the Director will consider:

(1) The nature and quantity of the wastes;

(2) The proposed alternate design and operation;

(3) The hydrogeologic setting of the facility, including attenuative capacity and thickness of the liners and soils present between the pile and groundwater or surface water; and

(4) All other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to groundwater or surface water.

(c) The owner or operator of each new waste pile unit on which construction commences after January 29, 1992, each lateral expansion of a waste pile unit on which construction commences after July 29, 1992, and each replacement of an existing waste pile unit that is to commence reuse after July 29, 1992 shall install two or more liners and a leachate collection and removal system above and between such liners. "Construction commences" is as defined in R315-1-1(b), which

incorporates by reference 40 CFR 260.10 under "existing facility".

(1)(i) The liner system shall include:

(A) A top liner designed and constructed of materials, e.g., a geomembrane, to prevent the migration of hazardous constituents into such liner during the active life and post-closure care period; and

(B) A composite bottom liner, consisting of at least two components. The upper component shall be designed and constructed of materials, e.g., a geomembrane, to prevent the migration of hazardous constituents into this component during the active life and post-closure care period. The lower component shall be designed and constructed of materials to minimize the migration of hazardous constituents if a breach in the upper component were to occur. The lower component shall be constructed of at least three feet, 91 cm, of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} cm/sec.

(ii) The liners shall comply with R315-8-12.2(a)(1)(i), (ii), and (iii).

(2) The leachate collection and removal system immediately above the top liner shall be designed, constructed, operated, and maintained to collect and remove leachate from the waste pile during the active life and post-closure care period. The Director will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed 30 cm, one foot. The leachate collection and removal system shall comply with R315-8-12.2(c)(3)(iii) and (iv).

(3) The leachate collection and removal system between the liners, and immediately above the bottom composite liner in the case of multiple leachate collection and removal systems, is also a leak detection system. This leak detection system shall be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner likely to be exposed to waste or leachate during the active life and post-closure care period. The requirements for a leak detection system in this paragraph are satisfied by installation of a system that is, at a minimum:

(i) Constructed with a bottom slope of one percent or more;

(ii) Constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-2} cm/sec or more and a thickness of 12 inches, 30.5 cm, or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} m²/sec or more;

(iii) Constructed of materials that are chemically resistant to the waste managed in the waste pile and the leachate expected to be generated, and of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and equipment used at the waste pile;

(iv) Designed and operated to minimize clogging during the active life and post-closure care period; and

(v) Constructed with sumps and liquid removal methods, e.g., pumps, of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit shall have its own sump(s). The design of each sump and removal system shall provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed.

(4) The owner or operator shall collect and remove pumpable liquids in the leak detection system sumps to minimize the head on the bottom liner.

(5) The owner or operator of a leak detection system that is not located completely above the seasonal high water table shall demonstrate that the operation of the leak detection system will not be adversely affected by the presence of groundwater.

(d) The Director may approve alternative design or operating practices to those specified in R315-8-12.2(c) if the

owner or operator demonstrates to the Director that such design and operating practices, together with location characteristics:

(1) Will prevent the migration of any hazardous constituent into the ground water or surface water at least as effectively as the liners and leachate collection and removal systems specified in R315-8-12.2(c); and

(2) Will allow detection of leaks of hazardous constituents through the top liner at least as effectively.

(e) R315-8-12.2(c) does not apply to monofills that are granted a waiver by the Director in accordance with R315-8-11.2(h).

(f) The owner or operator of any replacement waste pile unit is exempt from R315-8-12.2(c) if:

(1) The existing unit was constructed in compliance with the design standards of section 3004(o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and

(2) There is no reason to believe that the liner is not functioning as designed.

(g) The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the active portion of the pile during peak discharge from at least a 25-year storm.

(h) The owner or operator shall design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

(i) Collection and holding facilities, e.g., tanks or basins, associated with run-on and run-off control systems shall be emptied or otherwise managed expeditiously after storms to maintain design capacity of the system.

(j) If the pile contains any particulate matter which may be subject to wind dispersal, the owner or operator shall cover or otherwise manage the pile to control wind dispersal.

(k) The Director will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

12.3 MONITORING AND INSPECTION

(a) During construction or installation, liners, except in the case of existing portions of piles exempt from R315-8-12.2(a), and cover systems, e.g., membranes, sheets, or coatings, shall be inspected for uniformity, damage, and imperfections, e.g., holes, cracks, thin spots, or foreign materials. Immediately after construction or installation:

(1) Synthetic liners and covers shall be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters; and

(2) Soil-based and admixed liners and covers shall be inspected for imperfections including lenses, cracks, channels, root holes, or other structural non-uniformities that may cause an increase in the permeability of the liner or cover.

(b) While a waste pile is in operation, it shall be inspected weekly and after storms to detect evidence of any of the following:

(1) Deterioration, malfunctions, or improper operation of run-on and run-off control systems;

(2) Proper functioning of wind dispersal control systems, where present; and

(3) The presence of leachate in and proper functioning of leachate collection and removal systems, where present.

(c) An owner or operator required to have a leak detection system under R315-8-12.2(c) shall record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

12.4 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

Ignitable or reactive waste shall not be placed in a waste pile unless the waste and waste pile satisfy all applicable requirements of R315-13, which incorporates by reference 40 CFR 268, R315-50-12, which incorporates by reference 40 CFR

268 Appendix I, and R315-50-13, which incorporates by reference 40 CFR 268 Appendix II, and:

(a) The waste is treated, rendered, or mixed before or immediately after placement in the pile so that:

(1) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) or (f); and

(2) R315-8-2.8(b) is complied with; or

(b) The waste is managed in a way that it is protected from any material or condition which may cause it to ignite or react.

12.5 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

(a) Incompatible wastes, or incompatible wastes and materials shall not be placed in the same pile, unless R315-8-2.8(b) is complied with.

(b) A pile of hazardous waste that is incompatible with any waste or other material stored nearby in containers, other piles, open tanks, or surface impoundments shall be separated from the other materials, or protected from them by means of a dike, berm, wall, or other device.

(c) Hazardous waste shall not be piled on the same base where incompatible wastes or materials were previously piled, unless the base has been decontaminated sufficiently to ensure compliance with R315-8-2.8(b).

12.6 CLOSURE AND POST-CLOSURE CARE

(a) At closure, the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components, liners, etc., contaminated subsoils, and structures and equipment contaminated with waste and leachate, and manage them as hazardous waste unless R315-2-3(d) applies.

(b) If, after removing or decontaminating all residues and making all reasonable efforts to effect removal or decontamination of contaminated components, subsoils, structures, and equipment as required in R315-8-12.6(a), the owner or operator finds that not all contaminated subsoils can be practicably removed or decontaminated, he shall close the facility and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills, R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120.

(c)(1) The owner or operator of a waste pile that does not comply with the liner requirements of R315-8-12.2(a)(1), and is not exempt from them in accordance with R315-8-12.1(c) or R315-8-12.2(b) shall:

(i) Include in the closure plan for the pile under R315-8-7.3 both a plan for complying with R315-8-12.6(a) and a contingent plan for complying with R315-8-12.6(b) in case not all contaminated subsoils can be practicably removed at closure; and

(ii) Prepare a contingent post-closure plan under R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, for complying with R315-8-12.6(b) in case not all contaminated subsoils can be practicably removed at closure.

(2) The cost estimates calculated under R315-8-8, which incorporates by reference 40 CFR 264.140 - 264.151, for closure and post-closure care of a pile subject to this paragraph shall include the cost of complying with the contingent closure plan and the contingent post-closure plan, but are not required to include the cost of expected closure under R315-8-12.6(a).

12.7 SPECIAL REQUIREMENTS FOR HAZARDOUS WASTES F020, F021, F022, F023, F026, AND F027

(a) Hazardous Wastes F020, F021, F022, F023, F026 and F027 shall not be placed in waste piles that are not enclosed, as defined in R315-8-12.1(c), unless the owner or operator operates the waste pile in accordance with a management plan for these wastes that is approved by the Director pursuant to the standards set out in this paragraph, and in accord with all other applicable requirements of these rules. The factors to be

considered are:

(1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

(2) The attenuative properties of underlying and surrounding soils or other materials;

(3) The mobilizing properties of other materials co-disposed with these wastes; and

(4) The effectiveness of additional treatment, design, or monitoring techniques.

(b) The Director may determine that additional design, operating, and monitoring requirements are necessary for piles managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to groundwater, surface water, or air so as to protect human health and the environment.

12.8 ACTION LEAKAGE RATE

(a) The Director shall approve an action leakage rate for surface impoundment units subject to R315-8-12.2(c) or (d). The action leakage rate is the maximum design flow rate that the leak detection system, LDS, can remove without the fluid head on the bottom liner exceeding one foot. The action leakage rate shall include an adequate safety margin to allow for uncertainties in the design, e.g., slope, hydraulic conductivity, thickness of drainage material, construction, operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions, e.g., the action leakage rate shall consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.

(b) To determine if the action leakage rate has been exceeded, the owner or operator shall convert the weekly flow rate from the monitoring data obtained under R315-8-12.3(c), to an average daily flow rate, gallons per acre per day, for each sump. Unless the Director approves a different calculation, the average daily flow rate for each sump shall be calculated weekly during the active life and closure period.

12.9 RESPONSE ACTIONS

(a) The owner or operator of waste pile units subject to R315-8-12.2(c) or (d) shall have an approved response action plan before receipt of waste. The response action plan shall set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan shall describe the actions specified in R315-8-12.9(b).

(b) If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator shall:

(1) Notify the Director in writing of the exceedance within seven days of the determination;

(2) Submit a preliminary written assessment to the Director within 14 days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;

(3) Determine to the extent practicable the location, size, and cause of any leak;

(4) Determine whether waste receipt should cease or be curtailed, whether any waste should be removed from the unit for inspection, repairs, or controls, and whether or not the unit should be closed;

(5) Determine any other short-term and long-term actions to be taken to mitigate or stop any leaks; and

(6) Within 30 days after the notification that the action leakage rate has been exceeded, submit to the Director the results of the analyses specified in R315-8-12.9(b)(3), (4), and (5), the results of actions taken, and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator shall submit to the Director a report summarizing the results of any

remedial actions taken and actions planned.

(c) To make the leak and/or remediation determinations in R315-8-12.9(b)(3), (4), and (5), the owner or operator shall:

(1)(i) Assess the source of liquids and amounts of liquids by source;

(ii) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and

(iii) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or

(2) Document why such assessments are not needed.

R315-8-13. Land Treatment.

13.1 APPLICABILITY

The rules in this section apply to owners and operators of facilities that treat or dispose of hazardous waste in land treatment units, except as provided otherwise in R315-8-1.

13.2 TREATMENT PROGRAM

(a) An owner or operator subject to this section shall establish a land treatment program that is designed to ensure that hazardous constituents placed in or on the treatment zone are degraded, transformed, or immobilized within the treatment zone. The Director will specify in the facility permit the elements of the treatment program, including:

(1) The wastes that are capable of being treated at the unit based on demonstration under R315-8-13.3;

(2) Design measures and operating practices necessary to maximize the success of degradation, transformation, and immobilization processes in the treatment zone in accordance with R315-8-13.4(a); and

(3) Unsaturated zone monitoring provisions meeting the requirements of R315-8-13.6.

(b) The Director will specify in the facility permit the hazardous constituents that shall be degraded, transformed, or immobilized under this section. Hazardous constituents are constituents identified in R315-50-10, which incorporates by reference 40 CFR 261 Appendix VIII, that are reasonably expected to be in, or derived from, waste placed in or on the treatment zone.

(c) The Director will specify the vertical and horizontal dimensions of the treatment zone in the facility permit. The treatment zone is the portion of the unsaturated zone below and including the land surface in which the owner or operator intends to maintain the conditions necessary for effective degradation, transformation, or immobilization of hazardous constituents. The maximum depth of the treatment zone shall be:

(1) No more than 1.5 meters, five feet, from the initial soil surface; and

(2) More than 1 meter, three feet, above the seasonal high water table.

13.3 TREATMENT DEMONSTRATION

(a) For each waste that will be applied to the treatment zone, the owner or operator shall demonstrate, prior to application of the waste, that hazardous constituents in the waste can be completely degraded, transformed, or immobilized in the treatment zone.

(b) In making this demonstration, the owner or operator may use field tests, laboratory analyses, available data, or, in the case of existing units, operating data. If the owner or operator intends to conduct field tests or laboratory analyses in order to make the demonstration required under R315-8-13.3(a), he shall obtain a treatment or disposal permit under R315-3-6.4. The Director will specify in this plan the testing, analytical, design, and operating requirements, including the duration of the tests, the horizontal and vertical dimensions of the treatment zone, monitoring procedures, closure and clean-up activities necessary to meet the requirements in R315-8-13.3(c).

(c) Any field test or laboratory analysis conducted in order to make a demonstration under R315-8-13.3(a) shall:

(1) Accurately simulate the characteristics and operating conditions for the proposed land treatment unit including:

(i) The characteristics of the waste, including the presence of R315-50-10 constituents, which incorporates by reference 40 CFR 261, Appendix VIII;

(ii) The climate in the area;

(iii) The topography of the surrounding area;

(iv) The characteristics of the soil in the treatment zone, including depth; and

(v) The operating practices to be used at the unit.

(2) Be able to show that hazardous constituents in the waste to be tested will be completely degraded, transformed, or immobilized in the treatment zone of the proposed land treatment unit; and

(3) Be conducted in a manner that protects human health and the environment considering:

(i) The characteristics of the waste to be tested;

(ii) The operating and monitoring measures taken during the course of the test;

(iii) The duration of the test;

(iv) The volume of the waste used in the test;

(v) In the case of field tests, the potential for migration of hazardous constituents to groundwater or surface water.

13.4 DESIGN AND OPERATING REQUIREMENTS

The Director will specify in the facility permit how the owner or operator will design, construct, operate, and maintain the land treatment unit in compliance with this section.

(a) The owner or operator shall design, construct, operate, and maintain the unit to maximize the degradation, transformation, and immobilization of hazardous constituents in the treatment zone. The owner or operator shall design, construct, operate, and maintain the unit in accord with all design and operating conditions that were used in the treatment demonstration under R315-8-13.3. At a minimum, the Director will specify the following in the facility plan:

(1) The rate and method of waste application to the treatment zone;

(2) Measures to control soil pH;

(3) Measures to enhance microbial or chemical reactions, e.g., fertilization, tilling; and

(4) Measures to control the moisture content of the treatment zone.

(b) The owner or operator shall design, construct, operate, and maintain the treatment zone to minimize run-off of hazardous constituents during the active life of the land treatment unit.

(c) The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow onto the treatment zone during peak discharge from at least a 25-year storm.

(d) The owner or operator shall design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

(e) Collection and holding facilities, e.g., tanks or basins, associated with run-on and run-off control systems shall be emptied or otherwise managed expeditiously after storms to maintain the design capacity of the system.

(f) If the treatment zone contains particulate matter which may be subject to wind dispersal, the owner or operator shall manage the unit to control wind dispersal.

(g) The owner or operator shall inspect the unit weekly and after storms to detect evidence of:

(1) Deterioration, malfunctions, or improper operation of run-on and run-off control systems; and

(2) Improper functioning of wind dispersal control measures.

13.5 FOOD-CHAIN CROPS

The Director may allow the growth of food-chain crops in or on the treatment zone only if the owner or operator satisfies the conditions of this section. The Director will specify in the facility plan the specific food-chain crops which may be grown.

(a)(1) The owner or operator shall demonstrate that there is no substantial risk to human health caused by the growth of the crops in or on the treatment zone by demonstrating, prior to the planting of the crops, that hazardous constituents other than cadmium:

(i) Will not be transferred to the food or feed portions of the crop by plant uptake or direct contact, and will not otherwise be ingested by food-chain animals, e.g., by grazing; or

(ii) Will not occur in greater concentrations in or on the food or feed portions of crops grown on the treatment zone than in or on identical portions of the same crops grown on untreated soils under similar conditions in the same region.

(2) The owner or operator shall make the demonstration required under this paragraph prior to the planting of crops at the facility for all constituents identified in R315-50-10, which incorporates by reference 40 CFR 261 Appendix VIII, that are reasonably expected to be in, or derived from, waste placed in or on the treatment zone.

(3) In making a demonstration under this paragraph, the owner or operator may use field tests, greenhouse studies, available data, or, in the case of existing units, operating data, and shall:

(i) Base the demonstration on conditions similar to those present in the treatment zone, including soil characteristics, e.g., pH, cation exchange capacity, specific wastes, application rates, application methods, and crops to be grown; and

(ii) Describe the procedures used in conducting any tests, including the sample selection criteria, sample size, analytical methods, and statistical procedures.

(4) If the owner or operator intends to conduct field tests or greenhouse studies in order to make the demonstration required under this paragraph, he shall obtain a permit for conducting these activities.

(b) The owner or operator shall comply with the following conditions if cadmium is contained in wastes applied to the treatment zone:

(1)(i) The pH of the waste and soil mixture shall be 6.5 or greater at the time of each waste application, except for waste containing cadmium at concentrations of two mg/kg, dry weight, or less;

(ii) The annual application of cadmium from waste shall not exceed 0.5 kilograms per hectare, kg/ha, on land used for production of tobacco, leafy vegetables, or root crops grown for human consumption. For other food-chain crops, and annual cadmium application rate shall not exceed:

Time Period	Annual Cd Application Rate (kilograms per hectare)
Present to June 30, 1984	2.0
July 1, 1984 to December 31, 1986	1.25
Beginning January 1, 1987	0.5

(iii) The cumulative application of cadmium from waste shall not exceed five kg/ha if the waste and soil mixture has a pH less than 6.5; and

(iv) If the waste and soil mixture has a pH of 6.5 or greater or is maintained at a pH of 6.5 or greater during crop growth, the cumulative application of cadmium from waste shall not exceed: five kg/ha if soil cation exchange capacity (CEC) is less than five meq/100g; 10 kg/ha if soil CEC is 5-15 meq/100g; and 20 kg/ha if soil CEC is greater than 15 meq/100g; or

(2)(i) Animal feed shall be the only food-chain crop produced;

(ii) The pH of the waste and soil mixture shall be 6.5 or greater at the time of waste application or at the time the crop is planted, whichever occurs later, and this pH level shall be maintained whenever food-chain crops are grown;

(iii) There shall be an operating plan which demonstrates how the animal feed will be distributed to preclude ingestion by humans. The operating plan shall describe the measures to be taken to safeguard against possible health hazards from cadmium entering the food-chain, which may result from alternative land uses; and

(iv) Future property owners shall be notified by a stipulation in the land record or property deed which states that the property has received waste at high cadmium application rates and that food-chain crops shall not be grown except in compliance with R315-8-13.5(b)(2).

13.6 UNSATURATED ZONE MONITORING

An owner or operator subject to this section shall establish an unsaturated zone monitoring program to discharge the following responsibilities:

(a) The owner or operator shall monitor the soil and soil-pore liquid to determine whether hazardous constituents migrate out of the treatment zone.

(1) The Director will specify the hazardous constituents to be monitored in the facility plan. The hazardous constituents to be monitored are those specified under R315-8-13.2(b).

(2) The Director may require monitoring for principal hazardous constituents (PHCs) in lieu of the constituents specified under R315-8-13.2(b). PHCs are hazardous constituents contained in the wastes to be applied at the unit that are the most difficult to treat, considering the combined effects of degradation, transformation, and immobilization. The Director will establish PHCs if the Director finds, based on the waste analyses, treatment demonstrations, or other data, that effective degradation, transformation, or immobilization of the PHCs will assure treatment to at least equivalent levels for the other hazardous constituents in the waste.

(b) The owner or operator shall install an unsaturated zone monitoring system that includes soil monitoring using soil cores and soil-pore liquid monitoring using devices such as lysimeters. The unsaturated zone monitoring system shall consist of a sufficient number of sampling points at appropriate locations and depths to yield samples that:

(1) Represent the quality of background soil-pore liquid and the chemical make-up of soil that has not been affected by leakage from the treatment zone; and

(2) Indicate the quality of soil-pore liquid and the chemical make-up of the soil below the treatment zone.

(c) The owner or operator shall establish a background value for each hazardous constituent to be monitored under R315-8-13.6(a). The permit will specify the background values for each constituent or specify the procedures to be used to calculate the background values.

(1) Background soil values may be based on a one-time sampling at a background plot having characteristics similar to those of the treatment zone.

(2) Background soil-pore liquid values shall be based on at least quarterly sampling for one year at a background plot having characteristics similar to those of the treatment zone.

(3) The owner or operator shall express all background values in a form necessary for the determination of statistically significant increases under R315-8-13.6(f).

(4) In taking samples used in the determination of all background values, the owner or operator shall use an unsaturated zone monitoring system that complies with R315-8-13.6(b)(1).

(5) The owner or operator shall conduct soil monitoring and soil-pore liquid monitoring immediately below the treatment zone. The Director will specify the frequency and timing of soil and soil-pore liquid monitoring in the facility

permit after considering the frequency, timing, and rate of waste application, and the soil permeability. The owner or operator shall express the results of soil and soil-pore liquid monitoring in a form necessary for the determination of statistically significant increases under R315-8-13.6(f).

(e) The owner or operator shall use consistent sampling and analysis procedures that are designed to ensure sampling results that provide a reliable indication of soil-pore liquid quality and the chemical make-up of the soil below the treatment zone. At a minimum, the owner or operator shall implement procedures and techniques for:

- (1) Sample collection;
- (2) Sample preservation and shipment;
- (3) Analytical procedures; and
- (4) Chain of custody control.

(f) The owner or operator shall determine whether there is a statistically significant change over background values for any hazardous constituent to be monitored under R315-8-13.6(a) below the treatment zone each time he conducts soil monitoring and soil-pore liquid monitoring under R315-8-13.6(d).

(1) In determining whether a statistically significant increase has occurred, the owner or operator shall compare the value of each constituent, as determined under R315-8-13.6(d), to the background value for that constituent according to the statistical procedure specified in the facility plan under this paragraph.

(2) The owner or operator shall determine whether there has been a statistically significant increase below the treatment zone within a reasonable time period after completion of sampling. The Director will specify that time period in the facility plan after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of soil and soil-pore liquid samples.

(3) The owner or operator shall determine whether there is a statistically significant increase below the treatment zone using a statistical procedure that provides reasonable confidence that migration from the treatment zone will be identified. The Director will specify a statistical procedure in the facility plan that he finds:

(i) Is appropriate for the distribution of the data used to establish background values; and

(ii) Provides a reasonable balance between the probability of falsely identifying migration from the treatment zone and the probability of failing to identify real migration from the treatment zone.

(g) If the owner or operator determines, pursuant to R315-8-13.6(f), that there is a statistically significant increase of hazardous constituents below the treatment zone he shall:

(1) Notify the Director of this finding in writing within seven days. The notification shall indicate what constituents have shown statistically significant increases.

(2) Within 90 days, submit to the Director an application for permit modification to modify the operating practices at the facility in order to maximize the success of degradation, transformation, or immobilization processes in the treatment zone.

(h) If the owner or operator determines, pursuant to R315-8-13.6(f), that there is a statistically significant increase of hazardous constituents below the treatment zone, he may demonstrate that a source other than regulated units caused the increase or that the increase resulted from an error in sampling, analysis or evaluation. While the owner or operator may make a demonstration under this paragraph in addition to, or in lieu of, submitting a permit modification application under R315-8-13.6(g)(2), he is not relieved of the requirement to submit a plan modification application within the time specified in R315-8-13.6(g)(2) unless the demonstration made under this paragraph successfully shows that a source other than regulated units caused the increase or that the increase resulted from an error in

sampling, analysis, or evaluation. In making a demonstration under this paragraph, the owner or operator shall:

(1) Notify the Director or its duly authorized representative in writing within seven days of determining a statistically significant increase below the treatment zone that he intends to make a determination under this paragraph;

(2) Within 90 days, submit a report to the Director demonstrating that a source other than the regulated units caused the increase or that the increase resulted from error in sampling, analysis, or evaluation;

(3) Within 90 days, submit to the Director an application for a permit modification to make any appropriate changes to the unsaturated zone monitoring program at the facility; and

(4) Continue to monitor in accordance with the unsaturated zone monitoring program established under this section.

13.7 RECORDKEEPING

The owner or operator shall include hazardous waste application dates, rates, and amounts in the operating record required under R315-8-5.3, which incorporates by reference 40 CFR 264.73.

13.8 CLOSURE AND POST-CLOSURE CARE

(a) During the closure period the owner or operator shall:

(1) Continue all operations, including pH control, necessary to maximize degradation, transformation, or immobilization of hazardous constituents within the treatment zone as required under R315-8-13.4(a), except to the extent such measures are inconsistent with R315-8-13.8(a)(8);

(2) Continue all operations in the treatment zone to minimize run-off of hazardous constituents as required under R315-8-13.4(b);

(3) Maintain the run-on control system required under R315-8-13.4(c);

(4) Maintain the run-off management system required under R315-8-13.4(d);

(5) Control wind dispersal of hazardous waste if required under R315-8-13.4(f);

(6) Continue to comply with any prohibitions or conditions concerning growth of food-chain crops under R315-8-13.5;

(7) Continue unsaturated zone monitoring in compliance with R315-8-13.6 except that soil-pore liquid monitoring may be terminated 90 days after the last application of waste to the treatment zone; and

(8) Establish a vegetative cover on the portion of the facility being closed at a time that the cover will not substantially impede degradation, transformation, or immobilization of hazardous constituents in the treatment zone. The vegetative cover shall be capable of maintaining growth without extensive maintenance.

(b) For the purpose of complying with R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, when closure is completed the owner or operator may submit to the Director certification by an independent qualified soil scientist, in lieu of an independent registered professional engineer, that the facility has been closed in accordance with the specifications in the approved closure plan.

(c) During the post-closure care period the owner or operator shall:

(1) Continue all operations, including pH control necessary to enhance degradation and transformation and sustain immobilization of hazardous constituents in the treatment zone to the extent that these measures are consistent with other post-closure care activities;

(2) Maintain a vegetative cover over closed portions of the facility;

(3) Maintain the run-on control system required under R315-8-13.4(c);

(4) Maintain the run-off management system required

under R315-8-13.4(d);

(5) Control wind dispersal of hazardous waste if required under R315-8-13.4(f);

(6) Continue to comply with any prohibitions or conditions concerning growth of food-chain crops under R315-8-13.5; and

(7) Continue unsaturated zone monitoring in compliance with R315-8-13.6, except that soil-pore liquid monitoring may be terminated 90 days after the last application of waste to the treatment zone.

(d) The owner or operator is not subject to regulation under R315-8-13.8(a)(8) and (c) if the Director finds that the level of hazardous constituents in the treatment zone soil does not exceed the background value of those constituents by an amount that is statistically significant when using the test specified in R315-8-13.8(d)(3). The owner or operator may submit such a demonstration to the Director at any time during the closure or post-closure care periods. For the purposes of this paragraph:

(1) The owner or operator shall establish background soil values and determine whether there is a statistically significant increase over those values for all hazardous constituents specified in the facility plan under R315-8-13.2(b).

(i) Background soil values may be based on a one-time sampling of a background plot having characteristics similar to those of the treatment zone.

(ii) The owner or operator shall express background values and values for hazardous constituents in the treatment zone in a form necessary for the determination of statistically significant increases under R315-8-13.8(d)(3).

(2) In taking samples used in the determination of background and treatment zone values, the owner or operator shall take samples at a sufficient number of sampling points and at appropriate locations and depths to yield samples that represent the chemical make-up of soil that has not been affected by leakage from the treatment zone and the soil within the treatment zone, respectively.

(3) In determining whether a statistically significant increase has occurred, the owner or operator shall compare the value of each constituent in the treatment zone to the background value for that constituent using a statistical procedure that provides reasonable confidence that constituent presence in the treatment zone will be identified. The owner or operator shall use a statistical procedure that:

(i) Is appropriate for the distribution of the data used to establish background values; and

(ii) Provides a reasonable balance between the probability of falsely identifying hazardous constituent presence in the treatment zone and the probability of failing to identify real presence in the treatment zone.

(e) The owner or operator is not subject to regulation under section R315-8-6 if the Director finds that the owner or operator satisfies R315-8-13.8(d) and if unsaturated zone monitoring under R315-8-13.6 indicates that hazardous constituents have not migrated beyond the treatment zone during the active life of the land treatment unit.

13.9 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

The owner or operator shall not apply ignitable or reactive waste to the treatment zone unless the waste and the treatment zone meet all applicable requirements of R315-13, R315-50-12, and R315-50-13, which incorporate by reference 40 CFR 268, and:

(a) The waste is immediately incorporated into the soil so that:

(1) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) or (f); and

(2) Section R315-8-2.8(b) is complied with; or

(b) The waste is managed in a way that it is protected from any material or conditions which may cause it to ignite or react.

13.10 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

The owner or operator shall not place incompatible wastes, or incompatible wastes and materials, see 40 CFR 264, Appendix V for examples, in or on the same treatment zone, unless R315-8-2.8(b) is complied with.

13.11 SPECIAL REQUIREMENTS FOR HAZARDOUS WASTES F020, F021, F022, F023, F026, F027

(a) Hazardous Wastes F020, F021, F022, F023, F026, and F027 shall not be placed in a land treatment unit unless the owner or operator operates the facility in accordance with a management plan for these wastes that is approved by the Director pursuant to the standards set out in this paragraph, and in accord with all other applicable requirements of these rules. The factors to be considered are:

(1) The volume, physical, and chemical characteristics of the wastes including their potential to migrate through soil or to volatilize or escape into the atmosphere;

(2) The attenuative properties of underlying and surrounding soils or other materials;

(3) The mobilizing properties of other materials co-disposed with these wastes; and

(4) The effectiveness of additional treatment, design, or monitoring techniques.

(b) The Director may determine that additional design, operating, and monitoring requirements are necessary for land treatment facilities managing hazardous waste F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to groundwater, surface water, or air so as to protect human health and the environment.

R315-8-14. Landfills.

14.1 APPLICABILITY

The rules in this section apply to owners and operators of facilities that dispose of hazardous waste in landfills, except as R315-8-1 provides otherwise.

14.2 DESIGN AND OPERATING REQUIREMENTS

(a) Any landfill that is not covered by R315-8-14.2(c) or R315-7-21.2(a) shall have a liner system for all portions of the landfill, except for existing portions of the landfill. The liner system shall have:

(1) A liner that is designed, constructed, and installed to prevent any migration of wastes out of the landfill to the adjacent subsurface soil or groundwater or surface water at any time during the active life, including the closure period, of the landfill. The liner shall be constructed of material that prevents wastes from passing into the liner during the active life of the facility. The liner shall be:

(i) Constructed of materials that have appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients, including static head and external hydrogeologic forces, physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation;

(ii) Placed upon a foundation or base capable of providing support to the liner and resistance to pressure gradients above and below the liner to prevent failure of the liner due to settlement, compression, or uplift; and

(iii) Installed to cover all surrounding earth likely to be in contact with the waste or leachate; and

(2) A leachate collection and removal system immediately above the liner that is designed, constructed, maintained, and operated to collect and remove leachate from the landfill. The Director will specify design and operating conditions in the permit to ensure that the leachate depth at any point on the liner system, does not exceed 30 cm, one foot. The leachate collection and removal system shall be:

(i) Constructed of materials that are:

(A) Chemically resistant to the waste managed in the landfill and the leachate expected to be generated; and

(B) Of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and by any equipment used at the landfill; and

(ii) Designed and operated to function without clogging through the scheduled closure of the landfill.

(b) The owner or operator will be exempted from the requirements of R315-8-14.2(a) if the Director finds, based on a demonstration by the owner or operator, that alternative design and operating practices, together with location characteristics, will prevent the migration of any hazardous constituents, see R315-8-6.4, into the groundwater or surface water at any future time. In deciding whether to grant an exemption, the Director will consider:

(1) The nature and quantity of the wastes;

(2) The proposed alternate design and operation;

(3) The hydrogeologic setting of the facility, including the attenuative capacity and thickness of the liners and soils present between the landfill and groundwater or surface water; and

(4) All other factors which would influence the quality and mobility of the leachate produced and the potential for it to migrate to groundwater or surface water.

(c) The owner or operator of each new landfill unit on which construction commences after January 29, 1992, each lateral expansion of a landfill unit on which construction commences after July 29, 1992, and each replacement of an existing landfill unit that is to commence reuse after July 29, 1992 shall install two or more liners and a leachate collection and removal system above and between such liners. "Construction commences" is as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, under "existing facility."

(1)(i) The liner system shall include:

(A) A top liner designed and constructed of materials, e.g., a geomembrane, to prevent the migration of hazardous constituents into such liner during the active life and post-closure care period; and

(B) A composite bottom liner, consisting of at least two components. The upper component shall be designed and constructed of materials, e.g., a geomembrane, to prevent the migration of hazardous constituents into this component during the active life and post-closure care period. The lower component shall be designed and constructed of materials to minimize the migration of hazardous constituents if a breach in the upper component were to occur. The lower component shall be constructed of at least three feet, 91 cm, of compacted soil material with a hydraulic conductivity of no more than 1×10^{-7} cm/sec.

(ii) The liners shall comply with R315-8-14.2(a)(1)(i), (ii), and (iii).

(2) The leachate collection and removal system immediately above the top liner shall be designed, constructed, operated, and maintained to collect and remove leachate from the landfill during the active life and post-closure care period. The Director will specify design and operating conditions in the permit to ensure that the leachate depth over the liner does not exceed 30 cm, one foot. The leachate collection and removal system shall comply with R315-8-14.2(c)(3)(iii) and (iv).

(3) The leachate collection and removal system between the liners, and immediately above the bottom composite liner in the case of multiple leachate collection and removal systems, is also a leak detection system. This leak detection system shall be capable of detecting, collecting, and removing leaks of hazardous constituents at the earliest practicable time through all areas of the top liner likely to be exposed to waste or leachate during the active life and post-closure care period. The requirements for a leak detection system in this paragraph are

satisfied by installation of a system that is, at a minimum:

(i) Constructed with a bottom slope of one percent or more;

(ii) Constructed of granular drainage materials with a hydraulic conductivity of 1×10^{-2} cm/sec or more and a thickness of 12 inches, 30.5 cm, or more; or constructed of synthetic or geonet drainage materials with a transmissivity of 3×10^{-5} m²/sec or more;

(iii) Constructed of materials that are chemically resistant to the waste managed in the landfill and the leachate expected to be generated, and of sufficient strength and thickness to prevent collapse under the pressures exerted by overlying wastes, waste cover materials, and equipment used at the landfill;

(iv) Designed and operated to minimize clogging during the active life and post-closure care period; and

(v) Constructed with sumps and liquid removal methods, e.g., pumps, of sufficient size to collect and remove liquids from the sump and prevent liquids from backing up into the drainage layer. Each unit shall have its own sump(s). The design of each sump and removal system shall provide a method for measuring and recording the volume of liquids present in the sump and of liquids removed.

(4) The owner or operator shall collect and remove pumpable liquids in the leak detection system sumps to minimize the head on the bottom liner.

(5) The owner or operator of a leak detection system that is not located completely above the seasonal high water table shall demonstrate that the operation of the leak detection system will not be adversely affected by the presence of ground water.

(d) The Director may approve alternative design or operating practices to those specified in R315-8-14.2(c) if the owner or operator demonstrates to the Director that such design and operating practices, together with location characteristics:

(1) Will prevent the migration of any hazardous constituent into the ground water or surface water at least as effectively as the liners and leachate collection and removal systems specified in R315-8-14.2(c); and

(2) Will allow detection of leaks of hazardous constituents through the top liner at least as effectively.

(e) The double liner requirement set forth in R315-8-14.2(h) may be waived by the Director for any monofill, if:

(1) The monofill contains only hazardous wastes from foundry furnace emission controls or metal casting molding sand, and the wastes do not contain constituents which would render the wastes hazardous for reasons other than the Toxicity Characteristics in R315-2-9(g) and EPA Hazardous Waste Numbers D004 through D017; and

(2)(i)(A) The monofill has at least one liner for which there is no evidence that the liner is leaking:

(B) The monofill is located more than one-quarter mile from an underground source of drinking water, as that term is defined in 40 CFR 144.3; and

(C) The monofill is in compliance with generally applicable groundwater monitoring requirements for facilities with permit; or

(ii) The owner or operator demonstrates that the monofill is located, designed, and operated so as to assure that there will be no migration of any hazardous constituent into groundwater or surface water at any future time.

(f) The owner or operator of any replacement landfill unit is exempt from R315-8-14.2(c) if:

(1) The existing unit was constructed in compliance with the design standards of section 3004(o)(1)(A)(i) and (o)(5) of the Resource Conservation and Recovery Act; and

(2) There is no reason to believe that the liner is not functioning as designed.

(g) The owner or operator shall design, construct, operate, and maintain a run-on control system capable of preventing flow

onto the active portion of the landfill during peak discharge from at least a 25-year storm.

(h) The owner or operator shall design, construct, operate, and maintain a run-off management system to collect and control at least the water volume resulting from a 24-hour, 25-year storm.

(i) Collection and holding facilities, e.g., tanks or basins, associated with run-on and run-off control systems shall be emptied or otherwise managed expeditiously after storms to maintain design capacity of the system.

(j) If the landfill contains any particulate matter which may be subject to wind dispersal, the owner or operator shall cover or otherwise manage the landfill to control wind dispersal.

(k) The Director will specify in the permit all design and operating practices that are necessary to ensure that the requirements of this section are satisfied.

14.3 MONITORING AND INSPECTION

(a) During construction or installation, liners, except in the case of existing portions of landfills exempt from R315-8-14.2(a), and cover systems, e.g., membranes, sheets, or coatings, shall be inspected for uniformity, damage, and imperfections, e.g., holes, cracks, thin spots, or foreign materials. Immediately after construction or installation:

(1) Synthetic liners and covers shall be inspected to ensure tight seams and joints and the absence of tears, punctures, or blisters; and

(2) Soil-based and admixed liners and covers shall be inspected for imperfections including lenses, cracks, channels, root holes, or other structural non-uniformities that may cause an increase in the permeability of the liner or cover.

(b) While a landfill is in operation, it shall be inspected weekly and after storms to detect evidence of any of the following:

(1) Deterioration, malfunctions, or improper operation of run-on and run-off control systems;

(2) Proper functioning of wind dispersal control systems, where present; and

(3) The presence of leachate in and proper functioning of leachate collection and removal systems, where present.

(c)(1) An owner or operator required to have a leak detection system under R315-8-14.2(c) or (d) shall record the amount of liquids removed from each leak detection system sump at least once each week during the active life and closure period.

(2) After the final cover is installed, the amount of liquids removed from each leak detection system sump shall be recorded at least monthly. If the liquid level in the sump stays below the pump operating level for two consecutive months, the amount of liquids in the sumps shall be recorded at least quarterly. If the liquid level in the sump stays below the pump operating level for two consecutive quarters, the amount of liquids in the sumps shall be recorded at least semi-annually. If at any time during the post-closure care period the pump operating level is exceeded at units on quarterly or semi-annual recording schedules, the owner or operator shall return to monthly recording of amounts of liquids removed from each sump until the liquid level again stays below the pump operating level for two consecutive months.

(3) "Pump operating level" is a liquid level proposed by the owner or operator and approved by the Director based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump.

14.4 SURVEYING AND RECORDKEEPING

The owner or operator of a landfill shall maintain the following items in the operating record required under R315-8-5.3, which incorporates by reference 40 CFR 264.73:

(a) On a map, the exact location and dimensions, including depth, of each cell with respect to permanently surveyed bench marks; and

(b) The contents of each cell and the approximate location of each hazardous waste type within each cell.

14.5 CLOSURE AND POST-CLOSURE CARE

(a) At final closure of the landfill or upon closure of any cell, the owner or operator shall cover the landfill or cell with a final cover designed and constructed to:

(1) Provide long-term minimization of migration of liquids through the closed landfill;

(2) Function with minimum maintenance;

(3) Promote drainage and minimize erosion or abrasion of the cover;

(4) Accommodate settling and subsidence so that the cover's integrity is maintained; and

(5) Have a permeability less than or equal to the permeability of any bottom liner system or natural subsoils present.

(b) After final closure, the owner or operator shall comply with all post-closure requirements contained under R315-8-9.9 and R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120, including maintenance and monitoring throughout the post-closure care period, specified in the permit, under R315-8-7, which incorporates by reference 40 CFR 264.110 - 264.120. The owner or operator shall:

(1) Maintain the integrity and effectiveness of the final cover, including making repairs to the cap as necessary to correct the effects of settling, subsidence, erosion, or other events;

(2) Continue to operate the leachate collection and removal system until leachate is no longer detected;

(3) Maintain and monitor the leak detection system in accordance with R315-8-14.2(c)(3)(iv) and (4) and R315-8-14.3(c), and comply with all other applicable leak detection system requirements of R315-8;

(4) Maintain and monitor the groundwater monitoring system and comply with all other applicable requirements of these rules;

(5) Prevent run-on and run-off from eroding or otherwise damaging the final cover; and

(6) Protect and maintain surveyed bench marks used in complying with R315-8-14.4.

14.6 SPECIAL REQUIREMENTS FOR IGNITABLE OR REACTIVE WASTE

(a) Except as provided in R315-8-14.6(b), and in R315-8-14.10, ignitable or reactive waste shall not be placed in a landfill, unless the waste and landfill meet all applicable requirements of R315-13, R315-50-12, and R315-50-13, which incorporate by reference 40 CFR 268, and:

(1) The resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under R315-2-9(d) or (f); and

(2) R315-8-2.8(b) is complied with.

(b) Except for prohibited wastes which remain subject to treatment standards in R315-13, which incorporates by reference 40 CFR 268 subpart D, ignitable wastes in containers may be landfilled without meeting the requirements of R315-8-14.6(a), provided that the wastes are disposed of in a way that they are protected from any material or conditions which may cause them to ignite. At a minimum, ignitable wastes shall be disposed of in non-leaking containers which are carefully handled and placed so as to avoid heat, sparks, rupture, or any other condition that might cause ignition of the wastes; shall be covered daily with soil or other non-combustible material to minimize the potential for ignition of the wastes; and shall not be disposed of in cells that contain or will contain other wastes which may generate heat sufficient to cause ignition of the waste.

14.7 SPECIAL REQUIREMENTS FOR INCOMPATIBLE WASTES

Incompatible wastes, or incompatible wastes and materials

shall not be placed in the same landfill cell, unless R315-8-2.8(b) is complied with.

14.8 SPECIAL REQUIREMENTS FOR LIQUID WASTE

(a) Bulk or non-containerized liquid waste or waste containing free liquids may be placed in a landfill, prior to May 8, 1985, if:

(1) The landfill has a liner and leachate collection and removal system that meet the requirements of R315-8-14.2(a); or

(2) Before disposal, the liquid waste or waste containing free liquids is treated or stabilized, chemically or physically, e.g., by mixing with a sorbent solid, so that free liquids are no longer present.

(b) Effective May 8, 1985, the placement of bulk or non-containerized liquid hazardous waste or hazardous waste containing free liquids, whether or not sorbents have been added, in any landfill is prohibited.

(c) To demonstrate the absence or presence of free liquids in either a containerized or a bulk waste, the following test shall be used: Method 9095, Paint Filter Liquids Test, as described in "Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods." EPA Publication No. SW-846 as incorporated by reference in 40 CFR 260.11, see R315-1-2.

(d) Containers holding free liquids shall not be placed in a landfill unless:

(1) All free-standing liquid:

(i) Has been removed by decanting, or other methods;

(ii) Has been mixed with sorbent or solidified so that free-standing liquid is no longer observed; or

(iii) Has been otherwise eliminated; or

(2) The container is very small, such as an ampule; or

(3) The container is designed to hold free liquids for use other than storage, such as a battery or capacitor; or

(4) The container is a lab pack as defined in R315-8-14.10, and is disposed of in accordance with R315-8-14.10.

(e) Sorbents used to treat free liquids to be disposed of in landfills shall be nonbiodegradable. Nonbiodegradable sorbents are: materials listed or described in R315-8-14.8(e)(1); materials that pass one of the tests in R315-8-14.8(e)(2); or materials that are determined by EPA to be nonbiodegradable through the R315-2-16, which incorporates by reference 40 CFR 260.22, petition process.

(1) Nonbiodegradable sorbents.

(i) Inorganic minerals, other inorganic materials, and elemental carbon, e.g., aluminosilicates, clays, smectites, Fuller's earth, bentonite, calcium bentonite, montmorillonite, calcined montmorillonite, kaolinite, micas (illite), vermiculites, zeolites; calcium carbonate (organic free limestone); oxides/hydroxides, alumina, lime, silica (sand), diatomaceous earth; perlite (volcanic glass); expanded volcanic rock; volcanic ash; cement kiln dust; fly ash; rice hull ash; activated charcoal/activated carbon; or

(ii) High molecular weight synthetic polymers (e.g., polyethylene, high density polyethylene (HDPE), polypropylene, polystyrene, polyurethane, polyacrylate, polynorborene, polyisobutylene, ground synthetic rubber, cross-linked allylstyrene and tertiary butyl copolymers). This does not include polymers derived from biological material or polymers specifically designed to be degradable; or

(iii) Mixtures of these nonbiodegradable materials.

(2) Tests for nonbiodegradable sorbents.

(i) The sorbent material is determined to be nonbiodegradable under ASTM Method G21-70 (1984a)-Standard Practice for Determining Resistance of Synthetic Polymer Materials to Fungi; or

(ii) The sorbent material is determined to be nonbiodegradable under ASTM Method G22-76 (1984b)-Standard Practice for Determining Resistance of Plastics to Bacteria; or

(iii) The sorbent material is determined to be non-biodegradable under the Organization for Economic Cooperation and Development (OECD) test 301B, CO₂ Evolution, Modified Sturm Test.

(f) Effective November 8, 1985, the landfill placement of any liquid which is not a hazardous waste in a landfill is prohibited unless the owner or operator of the landfill demonstrates to the Director that:

(1) The only reasonably available alternative to the placement in the landfill is placement in a landfill or unlined surface impoundment, whether or not permitted or operating under interim status, which contains or may reasonably be anticipated to contain, hazardous waste; and

(2) Placement in the owner or operator's landfill will not present a risk of contamination of any underground source of drinking water, as that term is defined in 40 CFR 144.3.

14.9 SPECIAL REQUIREMENTS FOR CONTAINERS

Unless they are very small, such as an ampule, containers shall be either:

(a) At least 90 percent full when placed in the landfill; or

(b) Crushed, shredded, or similarly reduced in volume to the maximum practical extent before burial in the landfill.

14.10 DISPOSAL OF SMALL CONTAINERS OF HAZARDOUS WASTE IN OVERPACKED DRUMS, LAB PACKS

Small containers of hazardous waste in overpacked drums, lab packs, may be placed in a landfill if the following requirements are met:

(a) Hazardous waste shall be packaged in non-leaking inside containers. The inside containers shall be of a design and constructed of a material that will not react dangerously with, be decomposed by, or be ignited by the contained waste. Inside containers shall be tightly and securely sealed. The inside containers shall be of the size and type specified in the Department of Transportation (DOT) hazardous materials regulations, 49 CFR parts 173, 178, and 179, if those regulations specify a particular inside container for the waste.

(b) The inside containers shall be overpacked in an open head DOT - specification metal shipping container, 49 CFR parts 178 and 179, of no more than 416-liter, 110 gallon, capacity and surrounded by, at a minimum, a sufficient quantity of sorbent material, determined to be nonbiodegradable in accordance with R315-8-14.8(e), to completely sorb all of the liquid contents of the inside containers. The metal outer container shall be full after it has been packed with inside containers and sorbent material.

(c) The sorbent material used shall not be capable of reacting dangerously with, being decomposed by, or being ignited by the contents of the inside containers in accordance with R315-8-2.8(b).

(d) Incompatible wastes, as defined in R315-1 shall not be placed in the same outside container.

(e) Reactive wastes, other than cyanide or sulfide bearing wastes as defined in R315-2-9(f)(v) shall be treated or rendered non-reactive prior to packaging in accordance with R315-8-14.10(a) through (d). Cyanide and sulfide bearing reactive waste may be packed in accordance with R315-8-14.10(a) through (d) without first being treated or rendered non-reactive.

(f) The disposal is in compliance with the requirements of R315-13, R315-50-12, and R315-50-13, which incorporate by reference 40 CFR 268. Persons who incinerate lab packs according to the requirements in R315-13, which incorporates by reference 40 CFR 268.42(c)(1), may use fiber drums in place of metal outer containers. Such fiber drums shall meet the DOT specification in 49 CFR 173.12 and be overpacked according to the requirements in R315-8-14.10(b).

14.11 SPECIAL REQUIREMENTS FOR HAZARDOUS WASTES F020, F021, F022, F023, F026, AND F027

(a) Hazardous Wastes F020, F021, F022, F023, F026, and

F027 shall not be placed in a landfill unless the owner or operator operates the landfill in accord with a management plan for these wastes that is approved by the Director pursuant to the standards set out in this paragraph, and in accord with all other applicable requirements. The factors to be considered are:

- (1) The volume, physical and chemical characteristics of the wastes, including their potential to migrate through the soil or to volatilize or escape into the atmosphere;
- (2) The attenuative properties of underlying and surrounding soils or other materials;
- (3) The mobilizing properties of other materials co-disposed with these wastes; and
- (4) The effectiveness of additional treatment, design, or monitoring requirements.

(b) The Director may determine that additional design, operating and monitoring requirements are necessary for landfills managing hazardous wastes F020, F021, F022, F023, F026, and F027 in order to reduce the possibility of migration of these wastes to groundwater, surface water, or air so as to protect human health and the environment.

14.12 ACTION LEAKAGE RATE

(a) The Director shall approve an action leakage rate for surface impoundment units subject to R315-8-14.2(c) or (d). The action leakage rate is the maximum design flow rate that the leak detection system, LDS, can remove without the fluid head on the bottom liner exceeding one foot. The action leakage rate shall include an adequate safety margin to allow for uncertainties in the design, e.g., slope, hydraulic conductivity, thickness of drainage material, construction, operation, and location of the LDS, waste and leachate characteristics, likelihood and amounts of other sources of liquids in the LDS, and proposed response actions, e.g., the action leakage rate shall consider decreases in the flow capacity of the system over time resulting from siltation and clogging, rib layover and creep of synthetic components of the system, overburden pressures, etc.

(b) To determine if the action leakage rate has been exceeded, the owner or operator shall convert the weekly or monthly flow rate from the monitoring data obtained under R315-8-14.3(c), to an average daily flow rate, gallons per acre per day, for each sump. Unless the Director approves a different calculation, the average daily flow rate for each sump shall be calculated weekly during the active life and closure period, and monthly during the post-closure care period when monthly monitoring is required under R315-8-14.3(c).

14.13 RESPONSE ACTIONS

(a) The owner or operator of landfill units subject to R315-8-14.2(c) or (d) shall have an approved response action plan before receipt of waste. The response action plan shall set forth the actions to be taken if the action leakage rate has been exceeded. At a minimum, the response action plan shall describe the actions specified in R315-8-14.13(b).

(b) If the flow rate into the leak detection system exceeds the action leakage rate for any sump, the owner or operator shall:

- (1) Notify the Director in writing of the exceedence within seven days of the determination;
- (2) Submit a preliminary written assessment to the Director within 14 days of the determination, as to the amount of liquids, likely sources of liquids, possible location, size, and cause of any leaks, and short-term actions taken and planned;
- (3) Determine to the extent practicable the location, size, and cause of any leak;
- (4) Determine whether waste receipt should cease or be curtailed, whether any waste should be removed from the unit for inspection, repairs, or controls, and whether or not the unit should be closed;
- (5) Determine any other short-term and longer-term actions to be taken to mitigate or stop any leaks; and
- (6) Within 30 days after the notification that the action

leakage rate has been exceeded, submit to the Director the results of the analyses specified in R315-8-14.13(b)(3)-(5), the results of actions taken, and actions planned. Monthly thereafter, as long as the flow rate in the leak detection system exceeds the action leakage rate, the owner or operator shall submit to the Director a report summarizing the results of any remedial actions taken and actions planned.

(c) To make the leak and/or remediation determinations in R315-8-14.13(b)(3)-(5), the owner or operator shall:

- (1)(i) Assess the source of liquids and amounts of liquids by source;
- (ii) Conduct a fingerprint, hazardous constituent, or other analyses of the liquids in the leak detection system to identify the source of liquids and possible location of any leaks, and the hazard and mobility of the liquid; and
- (iii) Assess the seriousness of any leaks in terms of potential for escaping into the environment; or
- (2) Document why such assessments are not needed.

R315-8-15. Incinerators.

15.1 APPLICABILITY

(a) The rules in this section apply to owners or operators of facilities that incinerate hazardous waste, as defined in 40 CFR 260.10, except as R315-8-1 provides otherwise.

(b) Integration of the MACT standards.

(1) Except as provided by R315-8-15.1(b)(2), through R315-8-15.1(b)(5) the standards of R315-8 do not apply to a new hazardous waste incineration unit that becomes subject to RCRA permit requirements after October 12, 2005; or no longer apply when an owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the maximum achievable control technology (MACT) requirements of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE, by conducting a comprehensive performance test and submitting to the Director a Notification of Compliance under R307-214-2, which incorporates by reference 40 CFR 63.1207(j) and 63.1210(d), documenting compliance with the requirements of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE. Nevertheless, even after this demonstration of compliance with the MACT standards, hazardous waste permit conditions that were based on the standards of R315-8 will continue to be in effect until they are removed from the permit or the permit is terminated or revoked, unless the permit expressly provides otherwise.

(2) The MACT standards do not replace the closure requirements of R315-8-15.8 or the applicable requirements of R315-8-1 through R315-8-8, R315-8-18, which incorporates by reference 40 CFR 264 subpart BB, and R315-8-22, which incorporates by reference 40 CFR 264 subpart CC.

(3) The particulate matter standard of R315-8-15.4(b) remains in effect for incinerators that elect to comply with the alternative to the particulate matter standard of R307-214-2, which incorporates by reference 40 CFR 63.1206(b)(14) and 63.1219(e).

(4) The following requirements remain in effect for startup, shutdown, and malfunction events if you elect to comply with R315-3-9(a)(1)(i) to minimize emissions of toxic compounds from these events:

(i) R315-8-15.6(a) requiring that an incinerator operate in accordance with operating requirements specified in the permit; and

(ii) R315-8-15.6(c) requiring compliance with the emission standards and operating requirements during startup and shutdown if hazardous waste is in the combustion chamber, except for particular hazardous wastes.

(5) The particulate matter standard of R315-8-15.4(b) remains in effect for incinerators that elect to comply with the alternative to the articulate matter standard of R307-214-2(39), which incorporates by reference 40 CFR 63.1206(b)(14) and

63.1219(e).

(c) After consideration of the waste analysis included with part B of the permit application, the Director, in establishing the permit conditions, shall exempt the applicant from all requirements of this section except R315-8-15.2, Waste Analysis and R315-8-15.8, Closure,

(1) If the Director finds that the waste to be burned is:

(i) Listed as a hazardous waste in R315-2-10 or R315-2-11 solely because it is ignitable, Hazard Code I, corrosive Hazard Code C, or both; or

(ii) Listed as a hazardous waste in R315-2-10 or R315-2-11 solely because it is reactive, Hazard Code R, for characteristics other than those listed in R315-2-9(f)(1)(iv) and (v), and will not be burned when other hazardous wastes are present in the combustion zone; or

(iii) A hazardous waste solely because it possesses the characteristics of ignitability, corrosivity, or both, as determined by the test for characteristics of hazardous wastes under R315-2-9, or

(iv) A hazardous waste solely because it possesses any of the reactivity characteristics described by R315-2-9(f)(1)(i), (ii), (iii), (vi), (vii), and (viii) and will not be burned when other hazardous wastes are present in the combustion zone; and

(2) If the waste analysis shows that the waste contains none of the hazardous constituents listed in R315-50-10, which incorporates by reference 40 CFR 261 Appendix VIII, which could reasonably be expected to be in the waste.

(d) If the waste to be burned is one which is described by R315-8-15.1(c)(1)(i), (ii), (iii), or (iv) and contains insignificant concentrations of the hazardous constituents listed in R315-50-10, which incorporates by reference 40 CFR 261 Appendix VIII, then the Director may, in establishing permit conditions, exempt the applicant from all requirements of this section except R315-8-15.2, Waste analysis and R315-8-15.8, Closure, after consideration of the waste analysis included with part B of the permit application, unless the Director finds that the waste will pose a threat to human health and the environment when burned in an incinerator.

(e) The owner or operator of an incinerator may conduct trial burns subject only to the requirements of R315-3-6.3.

15.2 WASTE ANALYSIS

(a) As a portion of the trial burn plan required by R315-3-6.3 or with part B of the permit the owner or operator shall have included an analysis of the waste feed sufficient to provide all information required by R315-3-6.3(b) or R315-3-2.10. Owners or operators of new hazardous waste incinerators shall provide the information required by R315-3-6.3(c) or R315-3-2.10 to the greatest extent possible.

(b) Throughout normal operation the owner or operator shall conduct sufficient waste analysis to verify that waste feed to the incinerator is within the physical and chemical composition limits specified in his permit, R315-8-15.6.

15.3 PRINCIPAL ORGANIC HAZARDOUS CONSTITUENTS (POHCS)

(a) Principal Organic Hazardous Constituents (POHCs) in the waste feed shall be treated to the extent required by the performance standard of R315-8-15.4.

(b)(1) One or more POHCs will be specified in the facility's permit, from among these constituents listed in R315-50-10, which incorporates by reference 40 CFR 261 Appendix VIII, for each waste feed to be burned. This specification will be based on the degree of difficulty of incineration of the organic constituents in the waste and on their concentration or mass in the waste feed, considering the results of waste analyses and trial burns or alternative data submitted with part B of the permit. Organic constituents which represent the greatest degree of difficulty of incineration will be those most likely to be designated as POHCs. Constituents are more likely to be designated as POHCs if they are present in large quantities or

concentrations in the waste.

(2) Trial POHCs will be designated for performance of trial burns in accordance with the procedure specified R315-3-6.3 for obtaining trial burn permits.

15.4 PERFORMANCE STANDARDS

An incinerator burning hazardous waste shall be designed, constructed, and maintained so that, when operated in accordance with operating requirements specified under R315-8-15.6, it will meet the following performance standards:

(a)(1) An incinerator burning hazardous waste shall achieve a destruction and removal efficiency (DRE) of 99.99% for each principal organic hazardous constituent (POHC) designated, R315-8-15.3, in its permit for each waste feed. DRE is determined for each POHC from the following equation:

$$DRE = (W_{in} - W_{out}) / W_{in} \times 100\%$$

Where:

W_{in} = Mass feed rate of one principal organic hazardous constituent (POHC) in the waste stream feeding the incinerator, and

W_{out} = Mass emission rate of the same POHC present in exhaust emissions prior to release to the atmosphere.

(2) An incinerator burning hazardous waste and producing stack emissions of more than 1.8 kilograms per hour, 4 pounds per hour, of hydrogen chloride (HCl) shall control HCl emissions so that the rate of emission is no greater than the larger of either 1.8 kilograms per hour or one percent of the HCl in the stack gas prior to entering any pollution control equipment.

(b) An incinerator burning hazardous waste shall not emit particulate matter in excess of 180 milligrams per dry standard cubic meter, 0.08 grains per dry standard cubic foot, when corrected for the amount of oxygen in the stack gas according to the formula:

$$P_c = P_m \times 14 / (21 - Y)$$

When P_c is correct concentration of particulate matter, P_m is the measured concentration of particulate matter, and Y is the measured concentration of oxygen in the stack gas, using the Orsat method for oxygen analysis of dry flue gas, as presented in 40 CFR 60 Appendix A Method 3. This correction procedure is to be used by all hazardous waste incinerators except those operating under conditions of oxygen enrichment. For these facilities, the Director will select an appropriate correction procedure, to be specified in the facility permit.

(c) For purposes of permit enforcement, compliance with the operating requirements specified in the permit under R315-8-15.6 will be regarded as compliance with this section. However, evidence that compliance with those permit conditions is insufficient to ensure compliance with the performance requirements of this section may be "information" justifying modification, revocation, or reissuance of a permit under R315-3-4.2.

(d) An incinerator burning hazardous wastes F020, F021, F022, F023, F026, or F027 shall achieve a destruction and removal efficiency (DRE) of 99.9999% for each principal organic hazardous constituent (POHC) designated, under R315-8-15.3, in its permit. This performance shall be demonstrated on POHCs that are more difficult to incinerate than tetra-, penta-, and hexachlorodibenzo-p-dioxins and dibenzofurans. DRE is determined for each POHC from the equation in R315-8-15.4(a)(1). In addition, the owner or operator of the incinerator shall notify the Director of his intent to incinerate hazardous wastes F020, F021, F022, F023, F026, or F027.

15.5 HAZARDOUS WASTE INCINERATOR PERMITS

(a) The owner or operator of a hazardous waste incinerator may burn only wastes specified in his permit and only under operating conditions specified for those wastes under 8.15.6., except:

(1) In approved trial burns, R315-3-6.3, or

(2) Under exemptions created by R315-8-15.1.

(b) Other hazardous wastes may be burned after operating conditions have been specified in a new permit or a permit modification, as applicable. Operating requirements for new wastes may be based on either trial burn results or alternative data included with part B of a permit under R315-3-2.10.

(c) The permit for a new hazardous waste incinerator shall establish appropriate conditions for each of the applicable requirements of this section including but not limited to allowable waste feeds and operating conditions necessary to meet the requirements of R315-8-15.6, sufficient to comply with the following standards:

(1) For the period beginning with initial introduction of hazardous waste to the incinerator and ending with initiation of the trial burn, and only for the minimum time required to establish operating conditions required in R315-8-15.5(c)(2), not to exceed a duration of 720 hours operating time for treatment of hazardous waste, the operating requirements shall be those most likely to ensure compliance with the performance standards in R315-8-15.4 based on the Director's engineering judgement. The Director may extend the duration of this period once for up to 720 additional hours when good cause for the extension is demonstrated by the applicant;

(2) For the duration of the trial burn, the operating requirements shall be sufficient to demonstrate compliance with the performance standards of R315-8-15.4 and shall be in accordance with the approved trial burn plan;

(3) For the period immediately following completion of the trial burn, and only for the minimum period sufficient to allow sample analysis, data computation, and submission of the trial burn results by the applicant, and review of the trial burn results and modification of the facility permit by the Director, the operating requirements shall be those most likely to ensure compliance with the performance standards of R315-8-15.4 based on the Director's engineering judgement.

(4) For the remaining duration of the permit, the operating requirements shall be those demonstrated, in a trial burn or by alternative data specified in R315-3-2.10(c), as sufficient to ensure compliance with the performance standards of R315-8-15.4.

15.6 OPERATING REQUIREMENTS

(a) An incinerator shall be operated in accordance with operating requirements specified in the permit. These will be specified on a case-by-case basis as those demonstrated, in a trial burn or in alternative data as specified in R315-8-15.5(b), and included with part B of a facility's permit to be sufficient to comply with the performance standards of R315-8-15.4.

(b) Each set of operating requirements will specify the composition of the waste feed, including acceptable variations in the physical or chemical properties of the waste feed which will not affect compliance with the performance requirements of R315-8-15.4, to which the operating requirements apply. For each such waste feed, the permit will specify acceptable operating limits including the following conditions:

- (1) Carbon monoxide (CO) level in the stack exhaust gas;
- (2) Waste feed rate;
- (3) Combustion temperature;
- (4) An appropriate indicator of combustion gas velocity;
- (5) Allowable variations in incinerator system design or operating procedures; and

(6) Any other operating requirements as are necessary to ensure that the performance standards of R315-8-15.4 are met.

(c) During start-up and shut-down of an incinerator, hazardous waste, except wastes exempted in accordance with R315-8-15.1, shall not be fed into the incinerator unless the incinerator is operating within the conditions of operation, temperature, air feed rate, etc., specified in the permit.

(d) Fugitive emissions from the combustion zone shall be controlled by:

- (1) Keeping the combustion zone totally sealed against

fugitive emissions; or

(2) Maintaining a combustion zone pressure lower than atmospheric pressure; or

(3) An alternative means of control demonstrated, with part B of the permit to provide fugitive emissions control equivalent to maintenance of combustion zone pressure lower than atmospheric pressure.

(e) An incinerator shall be operated with a functioning system to automatically cut off waste feed to the incinerator when operating conditions deviate from limits established under R315-8-15.6(a).

(f) An incinerator shall cease operation when changes in waste feed, incinerator design, or operating conditions exceed limits designated in its permit.

15.7 MONITORING AND INSPECTIONS

(a) The owner or operator shall conduct, as a minimum, the following monitoring while incinerating hazardous waste:

(1) Combustion temperature, waste feed rate, and the indicator of combustion gas velocity specified in the facility permit shall be monitored on a continuous basis.

(2) Carbon monoxide (CO) shall be monitored on a continuous basis at a point in the incinerator downstream of the combustion zone and prior to release to the atmosphere.

(3) Upon request by the Director, sampling and analysis of the waste and exhaust emissions shall be conducted to verify that the operating requirements established in the permit achieve the performance standards of R315-8-15.4.

(b) The incinerator and associated equipment, pumps, valves, conveyors, pipes, etc., shall be subjected to thorough visual inspection, at least daily, for leaks, spills, fugitive emissions, and signs of tampering.

(c) The emergency waste feed cutoff system and associated alarms shall be tested at least weekly to verify operability, unless the applicant demonstrates to the Director that weekly inspections will unduly restrict or upset operations and that less frequent inspections will be adequate. At a minimum, operational testing shall be conducted at least monthly.

(d) This monitoring and inspection data shall be recorded and the records shall be placed in the operating record required by R315-8-5.3, which incorporates by reference 264.73.

15.8 CLOSURE

At closure the owner or operator shall remove all hazardous waste and hazardous waste residues, including, but not limited to, ash, scrubber waters, and scrubber sludges, from the incinerator site.

At closure, as throughout the operating period, unless the owner or operator can demonstrate, in accordance with R315-2-3(d), that the residue removed from the incinerator is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and shall manage it in accordance with applicable requirements. R315-4 - R315-9.

R315-8-16. Miscellaneous Units.

The requirements as found in 40 CFR 264, subpart X, which includes sections 264.600 through 264.603, 2000 ed., are adopted and incorporated by reference.

R315-8-17. Air Emission Standards for Process Vents.

The requirements as found in 40 CFR subpart AA sections 264.1030 through 264.1036, 1998 ed., as amended by 64 FR 3382, January 21, 1999, are adopted and incorporated by reference with the following exception:

- (1) substitute "Director" for all federal regulation references made to "Regional Administrator".

R315-8-18. Air Emission Standards for Equipment Leaks.

The requirements as found in 40 CFR subpart BB sections 264.1050 through 264.1065, 2004 ed., are adopted and incorporated by reference with the following exception:

(1) substitute "Director " for all federal regulation references made to "Regional Administrator."

R315-8-19. Drip Pads.

The requirements as found in 40 CFR subpart W sections 264.570 through 264.575, 1996 ed., are adopted and incorporated by reference with the following exception:

(1) substitute "Director" for all federal regulation references made to "Regional Administrator".

(2) Add, following December 6, 1990, in 40 CFR 264.570(a), "for all HSWA drip pads or July 30, 1993 for all non-HSWA drip pads."

(3) Add, following December 24, 1992, in 40 CFR 570(a), "for all HSWA drip pads or July 30, 1993 for all non-HSWA drip pads."

R315-8-20. Containment Buildings.

The requirements of subpart DD sections 264.1100 through 264.1110, as found in 57 FR 37194, August 18, 1992, are adopted and incorporated by reference with the following exception:

(1) substitute "Director" for all federal regulation references made to "Regional Administrator."

R315-8-21. Corrective Action for Solid Waste Management Units.

The requirements of 40 CFR 264, subpart S, which includes sections 264.550 through 264.555, 2010 ed., are adopted and incorporated by reference with the following exception:

substitute "Director" for all federal regulation references made to "Regional Administrator."

R315-8-22. Air Emission Standards for Tanks, Surface Impoundments, and Containers.

The requirements as found in 40 CFR subpart CC, sections 264.1080 through 264.1091, 1998 ed., as amended by 64 FR 3382, January 21, 1999, are adopted and incorporated by reference with the following exception:

(1) substitute "Director" for all federal regulation references made to "Regional Administrator."

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-9. Emergency Controls.****R315-9-1. Immediate Action.**

In the event of a spill of hazardous waste or material which, when spilled, becomes hazardous waste, the person responsible for the material at the time of the spill shall immediately:

(a) Take appropriate action to minimize the threat to human health and the environment.

(b) Notify the Utah State Department of Environmental Quality, 24-hour Answering Service, 801-536-4123 if the following spill quantities are exceeded:

(1) One kilogram of material listed in paragraph R315-2-10(e), which includes F999 and incorporates by reference 40 CFR 261.31, and which is an acute hazardous waste identified with a hazard code of (H), or in R315-2-11(e), which incorporates by reference 40 CFR 261.33(e). Notify for a spill of a lesser quantity if there is a potential threat to human health or the environment; or

(2) One hundred kilograms of hazardous waste or material which, when spilled, becomes hazardous waste, other than that listed in R315-2-11(e), which incorporates by reference 40 CFR 261.33(e). Notify for a spill of a lesser quantity if there is a potential threat to human health or the environment.

(c) Provide the following information when reporting the spill:

(1) Name, phone number, and address of person responsible for the spill.

(2) Name, title, and phone number of individual reporting.

(3) Time and date of spill.

(4) Location of spill - as specific as possible including nearest town, city, highway or waterway.

(5) Description contained on the manifest and the amount of material spilled.

(6) Cause of spill.

(7) Emergency action taken to minimize the threat to human health and the environment.

(d) An air, rail, highway, or water transporter who has discharged hazardous waste shall:

(1) Give notice, if required by 49 CFR 171.15 to the National Response Center, 800-424-8802 or 202-426-2675; and

(2) Report in writing as required by 49 CFR 171.16 to the Director, Office of Hazardous Materials Regulations, Materials Transportation Bureau, Department of Transportation, Washington, D.C. 20590.

(e) A water, bulk shipment, transporter who has discharged hazardous waste must give the same notice as required by 33 CFR 153.203 for oil and hazardous substances.

R315-9-2. Emergency Control Variance.

If a spill of hazardous waste requires immediate removal to protect human health or the environment, as determined by the Director, a variance may be granted by the Director to the manifest and recordkeeping requirements of these rules until the spilled material and any residue or contaminated soil, water or other material resulting from the spill no longer presents an immediate hazard to human health or the environment, as determined by the Director.

R315-9-3. Spill Clean-up.

The person responsible for the material at the time of the spill shall clean up all the spilled material and any residue or contaminated media or other material resulting from the spill or take action as may be required by the Director so that the spilled material, residue, or contaminated media no longer presents a hazard to human health or the environment as defined in R315-101. The cleanup or other required actions shall be at the expense of the person responsible for the spill. If the person responsible for the spill fails to take the required action, the

Department may take action and bill the responsible person.

R315-9-4. Reporting.

Within 15 days after any spill of hazardous waste or material which, when spilled, becomes hazardous waste, and is reported under R315-9-1(b), the person responsible for the material at the time of the spill shall submit to the Director a written report which contains the following information:

(a) The person's name, address, and telephone number;

(b) Date, time, location, and nature of the incident;

(c) Name and quantity of material(s) involved;

(d) The extent of injuries, if any;

(e) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and

(f) The estimated quantity and disposition of recovered material that resulted from the incident.

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-14. Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities.****R315-14-1. General Requirements.**

(a) Purpose, Scope, and Applicability.

(1) The purpose of R315-14 is to establish minimum State standards which define the acceptable management of certain hazardous wastes and the acceptable practices for certain kinds of hazardous waste management facilities.

(2) R315-14 applies, in lieu of the requirements of R315-8 or R315-7, to the owners and operators of eligible hazardous waste management facilities.

R315-14-2. Recyclable Materials Used in a Manner Constituting Disposal.

(a) The requirements regarding recyclable materials used in a manner constituting disposal of 40 CFR 266.20 to 266.23, inclusive, 2003 ed., are adopted and incorporated by reference.

R315-14-3. Reserved.

Reserved.

R315-14-4. Reserved.

Reserved.

R315-14-5. Recyclable Materials Utilized for Precious Metal Recovery.

The requirements regarding recyclable materials utilized for precious metal recovery of 40 CFR 266.70, 1996 ed., are adopted and incorporated by reference.

R315-14-6. Spent Lead-Acid Batteries Being Reclaimed.

The requirements regarding spent lead-acid batteries being reclaimed of 40 CFR 266.80, 1998 ed., as amended by 63 FR 71225, December 24, 1998, are adopted and incorporated by reference.

R315-14-7. Hazardous Waste Burned in Boilers and Industrial Furnaces.

The requirements as found in 40 CFR 266, Subpart H, 266.100 - 266.112, 2008 ed., are adopted and incorporated by reference.

R315-14-8. Military Munitions.

For purposes of 19-6-102(18)(a), a used or fired military munition is a solid waste, and, therefore, is potentially subject to corrective action authorities under 19-6-105(1)(d), 19-6-112, and RCRA 3008(h), or imminent and substantial endangerment authorities under 19-6-115 if the munition lands off-range and is not promptly rendered safe or retrieved or both. Any imminent and substantial threats associated with any remaining material shall be addressed. If remedial action is infeasible, the operator of the range shall maintain a record of the event for as long as any threat remains. The record shall include the type of munition and its location, to the extent the location is known.

KEY: hazardous waste

January 13, 2012

Notice of Continuation July 13, 2011

19-6-105

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-15. Standards for the Management of Used Oil.

R315-15-1. Applicability, Prohibitions, and Definitions.

1.1 APPLICABILITY

This section identifies those materials that are subject to regulation as used oil under R315-15. This section also identifies some materials that are not subject to regulation as used oil under R315-15, and indicates whether these materials may be a hazardous waste as defined under R315-2.

(a) Used oil. It is presumed that used oil is to be recycled unless a used oil handler disposes of used oil or sends used oil for disposal. Except as provided in R315-15-1.2, the requirements of R315-15 apply to used oil, and to materials identified in this section as being subject to regulation as used oil, whether or not the used oil or material exhibits any characteristics of hazardous waste identified in R315-2-9.

(b) Mixtures of used oil and hazardous waste.

(i) Listed hazardous waste.

(ii) Mixtures of used oil and hazardous waste which are listed in R315-2-10 are subject to regulation as hazardous waste under R315-2 rather than as used oil under R315-15.

(iii) Rebuttable presumption for used oil. Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in R315-2-10. A person may rebut this presumption by demonstrating that the used oil does not contain hazardous waste, for example, by using an analytical method from SW-846, Edition III, Update IV to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in R315-50-10, which incorporates by reference 40 CFR 261, Appendix VIII.

(A) The rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed, through a tolling arrangement as described in R315-15-2.5(c), to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner, or disposed.

(B) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units.

(2) Characteristic hazardous waste. A mixture of used oil and hazardous waste that solely exhibits one or more of the hazardous waste characteristics identified in R315-2-9 and a mixtures of used oil and hazardous waste that is listed in R315-2-10 solely because it exhibits one or more of the characteristics of hazardous waste identified in R315-2-9 are subject to:

(i) Except as provided in R315-15-1(b)(2)(iii), regulation as hazardous waste under R315-1 through R315-14, and R315-50 rather than as used oil under R315-15, if the resultant mixture exhibits any characteristics of hazardous waste identified in R315-2-9; or

(ii) Except as specified in R315-15-1.1(b)(2)(iii), regulation as used oil under R315-15, if the resultant mixture does not exhibit any characteristics of hazardous waste identified under R315-2-9.

(iii) Regulation as used oil under R315-15, if the mixture is of used oil and a waste which is hazardous solely because it exhibits the characteristic of ignitability, e.g., mineral spirits, provided that the mixture does not exhibit the characteristic of ignitability under R315-2-9(d).

(3) Conditionally exempt small quantity generator hazardous waste. Mixtures of used oil and conditionally exempt small quantity generator hazardous waste regulated under R315-2-5, which incorporates by reference 40 CFR 261.5, are subject to regulation as used oil under R315-15.

(c) Materials containing or otherwise contaminated with used oil.

(1) Except as provided in R315-15-1.1(c)(2) materials containing or otherwise contaminated with used oil from which the used oil has been properly drained or removed to the extent possible such that no visible signs of free-flowing oil remain in or on the material:

(i) Are not used oil and thus not subject to R315-15, and

(ii) If applicable, are subject to the hazardous waste regulations R315-1 through R315-14, R315-50, and R315-101 and 102.

(2) Materials containing or otherwise contaminated with used oil that are burned for energy recovery are subject to regulation as used oil under R315-15.

(3) Used oil drained or removed from materials containing or otherwise contaminated with used oil is subject to regulation as used oil under R315-15.

(d) Mixtures of used oil with products.

(1) Except as provided in (d)(2) mixtures of used oil and fuels or other fuel products are subject to regulation as used oil under R315-15.

(2) Mixtures of used oil and diesel fuel mixed on site by the generator of the used oil for use in the generator's own vehicles are not subject to R315-15 after the used oil and diesel fuel have been mixed. Prior to mixing, the used oil is subject to the requirements of R315-15-2.

(e) Materials derived from used oil.

(1) Materials that are reclaimed from used oil that are used beneficially and are not burned for energy recovery or used in a manner constituting disposal, e.g., re-refined lubricants, are:

(i) Not used oil and thus are not subject to R315-15, and

(ii) Not solid wastes and are thus not subject to the hazardous waste regulations of R315-1 through R315-14 and R315-50 as provided in R315-2-3(c)(2)(i).

(2) Materials produced from used oil that are burned for energy recovery, e.g., used oil fuels, are subject to regulation as used oil under R315-15.

(3) Except as provided in R315-15.1.1(e)(4), materials derived from used oil that are disposed of or used in a manner constituting disposal are:

(i) Not used oil and thus are not subject to R315-15, and

(ii) Are solid wastes and thus are subject to the hazardous waste regulations R315-1 through R315-14, and R315-50 if the materials are listed or identified as hazardous wastes.

(4) Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products are not subject to R315-15.

(f) Wastewater. Wastewater contaminated with de minimis quantities of used oil, the discharge of which is subject to regulation under either section 402 or section 307(b) of the Clean Water Act, including wastewaters at facilities that have eliminated the discharge of wastewater, are not subject to the requirements of Rule R315-15. For purposes of this paragraph only, "de minimis" quantities of used oils are defined as small spills, leaks, or drippings from pumps, machinery, pipes, and other similar equipment during normal operations or small amounts of oil lost to the wastewater treatment system during washing or draining operations. This exception does not apply if the used oil is discarded as a result of abnormal manufacturing operations resulting in substantial leaks, spills, or other releases, or to used oil recovered from wastewaters.

(g) Used oil introduced into crude oil pipelines or a petroleum refining facility.

(1) Used oil mixed with crude oil or natural gas liquids, e.g., in a production separator or crude oil stock tank, for insertion into a crude oil pipeline is exempt from the requirements of R315-15. The used oil is subject to the requirements of R315-15 prior to the mixing of used oil with crude oil or natural gas liquids.

(2) Mixtures of used oil and crude oil or natural gas liquids containing less than 1% used oil that are being stored or transported to a crude oil pipeline or petroleum refining facility for insertion into the refining process at a point prior to crude distillation or catalytic cracking are exempt from the requirements of R315-15.

(3) Used oil that is inserted into the petroleum refining facility process before crude distillation or catalytic cracking without prior mixing with crude oil is exempt from the requirements of R315-15, provided that the used oil constitutes less than 1% of the crude oil feed to any petroleum refining facility process unit at any given time. Prior to insertion into the petroleum refining facility process, the used oil is subject to the requirements of R315-15.

(4) Except as provided in R315-15-1.1 (g)(5), used oil that is introduced into a petroleum refining facility process after crude distillation or catalytic cracking is exempt from the requirements of R315-15 only if the used oil meets the specification of R315-15-1.2. Prior to insertion into the petroleum refining facility process, the used oil is subject to the requirements of R315-15.

(5) Used oil that is incidentally captured by a hydrocarbon recovery system or wastewater treatment system as part of routine process operations at a petroleum refining facility and inserted into the petroleum refining facility process is exempt from the requirements of R315-15. This exemption does not extend to used oil that is intentionally introduced into a hydrocarbon recovery system, e.g., by pouring collected used oil into the waste water treatment system.

(6) Tank bottoms from stock tanks containing exempt mixtures of used oil and crude oil or natural gas liquids are exempt from the requirements of R315-15.

(h) Used oil on vessels. Used oil produced on vessels from normal shipboard operations is not subject to Rule R315-15 until it is transported ashore.

(i) Used oil containing PCBs. In addition to the requirements of R315-15, marketers and burners of used oil who market used oil containing PCBs at concentrations greater than or equal to 2 ppm are subject to the requirements found in R315-15-18 and 40 CFR 761.20(e).

(j) Inspections. Any duly authorized employee of the Director, may, at any reasonable time and upon presentation of credentials, have access to and the right to copy any records relating to used oil, and inspect, audit, or sample. Any authorized employee obtaining samples shall give to the owner, operator or agent a receipt describing the sample obtained and, if requested, a portion of each sample of waste equal in volume or weight to the portion retained. The employee may also make record of the inspection by photographic, electronic, audio, video, or any other reasonable means.

(k) Violations, Orders, and Hearings. If the Director has reason to believe a person is in violation of any provision of R315-15, procedural requirements for compliance shall follow Utah Code Annotated 19-6-721 and Utah Administrative Code R305-7.

1.2 USED OIL SPECIFICATIONS

Used oil burned for energy recovery, and any fuel produced from used oil by processing, blending, or other treatment, is subject to regulation under R315-15 until:

- (a) It has been demonstrated not to exceed any allowable levels of the constituents and properties shown in Table 1;
- (b) The person making that claim complies with R315-15-7.3, R315-15-7.4, and R315-15-7.5(b); and
- (c) The used oil is delivered to a used oil burner.

Arsenic	5 ppm maximum
Cadmium	2 ppm maximum
Chromium	10 ppm maximum
Lead	100 ppm maximum
Flash point	100 degrees F minimum
Total halogens	4,000 ppm maximum(2)

(1) The allowable levels in Table 1 do not apply to mixtures of used oil and hazardous waste that continue to be regulated as hazardous waste. See R315-15-1.1(b).

(2) Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste under the rebuttable presumption described in R315-15-1.1(b)(1). Such used oil is subject to R315-14-7, rather than R315-15 when burned for energy recovery unless the presumption of mixing can be successfully rebutted.

Note: Applicable standards for the marketing and burning of used oil containing any quantifiable level (2 ppm) of PCBs are found in 40 CFR 761.20(e), 2013 edition, incorporated by reference, and R315-15-18. Prohibition of PCB oil dilution is described in 40 CFR 279.10 and 40 CFR 761.20(e).

1.3 PROHIBITIONS

Except as authorized by the Director, a person may not place, discard, or otherwise dispose of used oil in any of the following manners:

(a) Surface impoundment and waste piles. Used oil shall not be managed in surface impoundments or waste piles unless the units are subject to regulation under R315-7 or R315-8.

(b) Use as a dust suppressant, weed suppressant, or for road oiling. The use of used oil as a dust suppressant, weed suppressant, or for road oiling or other similar use is prohibited. Any disposal of used oil on the ground is prohibited under Utah Code Annotated 19-6-706(1)(a)(iii).

(c) A person may not mix or commingle used oil with the following substances, except as incidental to the normal course of processing, mechanical, or industrial operations:

(1) Solid waste that is to be disposed of in any solid waste treatment, storage, or disposal facility, except as authorized by the Director; or

(2) Any hazardous waste so the resulting mixture may not be recycled or used for other beneficial purpose as authorized under R315-15.

(d) Used oil shall not be disposed in a solid waste treatment, storage, or disposal facility, except for the disposal of hazardous used oil as authorized under R315-2.

(e) Used oil shall not be disposed in sewers, drainage systems, septic tanks, surface or ground waters, watercourses, or any body of water.

1.4 BURNING IN PARTICULAR UNITS

Burning in particular units. Off-specification used oil fuel may be burned for energy recovery only in the devices described in R315-15-6.2(a).

1.5 DISPOSAL OF DE MINIMIS USED OIL

(a) R315-15-1.3 does not apply to release of de minimis quantities of used oil identified under Utah Code Annotated 19-6-706(4)(a) except for the requirements of 19-6-706(i) and (ii).

(b) A person may dispose of an item or substance that contains de minimis amounts of oil in disposal facilities in accordance with Utah Code Annotated 19-6-706 (2) (a) if:

(1) To the extent that all oil has been reasonably removed from the item or substance; and

(2) No free flowing oil remains in the item or substance.

1.6 USED OIL FILTERS

(a) Disposal of Used Oil Filters. A person may dispose of a nonterne plated used oil filter as a non-hazardous solid waste when that filter is gravity hot-drained by one of the methods described in R315-15-1.6(b) and is not mixed with hazardous waste defined in R315-2.

(b) "Gravity hot-drained" means drained for not less than 12 hours near operating temperature but above 60 degrees Fahrenheit. A nonterne used oil filter is a container of used oil and is subject to R315-15 until it is gravity hot-drained by one of the following methods:

TABLE 1
USED OIL NOT EXCEEDING ANY ALLOWABLE LEVEL IS NOT SUBJECT TO R315-15-6 WHEN BURNED FOR ENERGY RECOVERY(1)

Constituent/property	Allowable level
----------------------	-----------------

- (1) puncturing the filter anti-drain back valve or the filter dome end and gravity hot-draining;
- (2) gravity hot-draining and crushing;
- (3) dismantling and gravity hot-draining; or
- (4) any other equivalent gravity hot-draining method authorized by the Director that will remove used oil from the filter at least as effectively as the methods listed in R315-15-1.6(b)(1) through (3).

1.7 DEFINITIONS

(a) Definitions of terms used in R315-15 are found in: R315-1.7(b) through (j); and R315-1-1.

(b) The term "de minimis quantities of used oil" defined in Utah Code Annotated 19-6-706(4)(b), and 19-6-708(3)(a) means small spills, leaks, or drippings from pumps, machinery, pipes, and other similar equipment during normal operations and does not apply to used oil discarded as a result of abnormal operations resulting in substantial leaks, spills, or other releases. Nor does it apply to accumulations of quantities of used oil that pose a potential threat to human health or the environment.

(c) "Financial responsibility" means the mechanism by which a person who has a financial obligation satisfies that obligation.

(d) "Used oil" means any oil, refined from crude oil or synthetic oil, that has been used and as a result of that use is contaminated by physical or chemical impurities. Used oil includes engine oil, transmission fluid, compressor oils, metalworking oils, hydraulic oil, brake fluid, oils used as buoyants, lubricating greases, electrical insulating, and dielectric oils.

(e) "Polychlorinated biphenyl (PCB)" means any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of substances which contains such substance.

(f) "On-specification used oil" means used oil that does not exceed levels of constituents and properties specified in R315-15-1.2.

(g) "Off-specification used oil" means used oil that exceeds levels of constituents and properties specified in R315-15-1.2.

(h) "Parts per million (ppm)" means a weight-per-weight ratio used to describe concentrations. Parts per million (ppm) is the number of units of mass of a contaminant per million units of total mass (e.g., micrograms per gram).

1.8 LABORATORY ANALYSES

Laboratory analyses used to satisfy the requirements of R315-15 shall be performed by a laboratory that holds a current Utah Certification for environmental laboratories issued by the Utah Department of Health, Laboratory Improvement under R444-14 Utah Administrative Code. The laboratory shall be certified for the method(s) and analyte(s) applied to generate the environmental data.

R315-15-2. Standards for Used Oil Generators.

2.1 APPLICABILITY

(a) General. Except as provided in paragraphs (a)(1) through (a)(4) of this section, R315-15-2 applies to all used oil generators. A used oil generator is any person, by site, whose act or process produces used oil or whose act first causes used oil to become subject to regulation.

(1) Household "do-it-yourselfer" used oil generators. Household "do-it-yourselfer" used oil generators are not subject to regulation under R315-15, except for the prohibitions of R315-15-1.3 and cleanup requirements of R315-15-9.

(2) Vessels. Vessels at sea or at port are not subject to R315-15-2. For purposes of R315-15-2, used oil produced on vessels from normal shipboard operations is considered to be generated at the time it is transported ashore. The owner or operator of the vessel and the person(s) removing or accepting used oil from the vessel are co-generators of the used oil and are

both responsible for managing the used oil in compliance with R315-15-2 once the used oil is transported ashore. The co-generators may decide among themselves which party will fulfill the requirements of R315-15-2.

(3) Diesel fuel. Mixtures of used oil and diesel fuel mixed by the generator of the used oil for use in the generator's own vehicles are not subject to R315-15 once the used oil and diesel fuel have been mixed. Prior to mixing, the used oil fuel is subject to the requirements of R315-15-2.

(4) Farmers. Farmers who generate an average of 25 gallons per month or less of used oil from vehicles or machinery used on the farm in a calendar year are not subject to the requirements of R315-15, except for the prohibitions of R315-15-1.3 and cleanup requirements of R315-15-9.

(b) Other applicable provisions. Used oil generators who conduct the following activities are subject to the requirements of other applicable provisions of R315-15 as indicated in R315-15.2.1(b)(1) through (5):

(1) Generators who transport used oil, except under the self-transport provisions of R315-15-2.5(a) and (b), shall also comply with R315-15-4.

(2)(i) Except as provided in R315-15-2.1(b)(2)(ii), generators who process or re-refine used oil must also comply with R315-15-5.

(ii) Generators who perform the following activities are not processors, provided that the used oil is generated onsite and is not being sent offsite to a burner of on- or off-specification used oil fuel.

(A) Filtering, cleaning, or otherwise reconditioning used oil before returning it for reuse by the generator;

(B) Separating used oil from wastewater generated onsite to make the wastewater acceptable for discharge or reuse in accordance with section 402 or section 307(b) of the Clean Water Act or other applicable Federal or state regulations governing the management or discharge of wastewater;

(C) Using oil mist collectors to remove small droplets of used oil from in-plant air to make plant air suitable for continued recirculation;

(D) Draining or otherwise removing used oil from materials containing or otherwise contaminated with used oil in order to remove excessive used oil to the extent possible in accordance with R315-15-1.1(c); or

(E) Filtering, separating or otherwise reconditioning used oil before burning it in a space heater in accordance with R315-15-2.4.

(3) Generators who burn off-specification used oil for energy recovery, shall also comply with R315-15-6.

(4) Generators who direct shipments of off-specification used oil from their facility to a used oil burner or first certify that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in R315-15-1.2 shall also comply with R315-15-7.

(5) Generators who dispose of used oil shall also comply with R315-15-8.

2.2 HAZARDOUS WASTE MIXING

(a) Mixtures of used oil and hazardous waste shall be managed in accordance with R315-15-1.1(b).

(b) The rebuttable presumption for used oil found in R315-15-1.1(b)(1)(ii) applies to used oil managed by generators. Under this rebuttable presumption, used oil containing greater than 1,000 ppm total halogens is presumed to be a hazardous waste and thus shall be managed as hazardous waste and not as used oil unless the presumption is rebutted. However, the rebuttable presumption does not apply to certain metalworking oil or fluids containing chlorinated paraffins, if they are processed through a tolling agreement to reclaim the metalworking oils or fluids, and certain used oils removed from refrigeration units described in R315-15-1.1(b)(1)(ii)(B).

2.3 USED OIL STORAGE

Used oil generators are subject to all applicable Spill Prevention, Control and Countermeasures, 40 CFR 112, in addition to the requirements of R315-15-2. Used oil generators are also subject to the standards and requirements of R311-200 through R311-209, Underground Storage Tanks, for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste. In addition, used oil generators are subject to the requirements of R315-15-2.

(a) Storage units. Used oil generators shall not store used oil in units other than tanks, containers, or units subject to regulation under R315-7 or R315-8.

(b) Condition of units. Containers and aboveground tanks used to store used oil at generator facilities shall be:

(1) In good condition, with no severe rusting, apparent structural defects or deterioration; and

(2) Not leaking.

(3) Tanks and containers for storage of used oil must be closed during storage except when adding or removing used oil.

(4) Tanks and containers storage areas shall be managed to prevent releases of used oil to the environment.

(c) Labels.

(1) Containers and aboveground tanks used to store used oil at generator facilities shall be labeled or marked clearly with the words "Used Oil".

(2) Fill pipes used to transfer used oil into underground storage tanks at generator facilities shall be labeled or marked clearly with the words "Used Oil."

(d) Response to releases. Upon detection of a release of used oil to the environment not subject to the requirements of Section R311-202-1, which incorporates by reference 40 CFR 280, Subpart F, a generator shall comply with Section R315-15-9.

2.4 ON-SITE BURNING

On-site burners shall comply with R315-15-6 and, if applicable, shall obtain an Air Quality permit.

(a) Generators may burn used oil in used oil-fired space heaters without a used oil permit provided that:

(1) The heater burns only used oil that the owner or operator generates;

(2) The heater is designed to have a maximum capacity of not more than 0.5 million Btu per hour;

(3) The combustion gases from the heater are vented to the outside ambient air;

(4) The generator has knowledge that the used oil has not been mixed with hazardous waste; and

(5) The used oil is being legitimately burned to utilize its energy content.

(b) Used Oil Collection Center(UOCC). If it is registered as a Used Oil Collection Center as authorized in R315-15-3, the UOCC may burn used oil in used oil fired space heaters without a used oil permit under the provision described in R315-15-2.4(a) provided that the used oil is received from household do-it-yourselfer generators or farmers described in R315-15-2.1(a)(4) or the used oil is received from other generators and has been certified to meet the used oil fuel specifications of R315-15-1.2 by a registered used oil marketer in accordance with R315-15-7.

2.5 OFF-SITE SHIPMENTS

Except as provided in R315-15-2.5(a) through (c), a generator shall ensure that its used oil is transported only by a transporter who has obtained a Utah used oil transporter permit and has a current used oil handler certificate issued by the Director and an EPA identification number.

(a) Self-transportation of small amounts to approved collection centers. A generators may transport, without an EPA identification number, a used oil transporter permit, or a current used oil handler certificate, used oil that is generated at the generator's site and used oil collected from household do-it-yourselfers to a used oil collection center provided that:

(1) The generator transports the used oil in a vehicle owned by the generator or owned by an employee of the generator;

(2) The generator transports no more than 55 gallons of used oil at any time; and

(3) The generator transports the used oil to a used oil collection center that is registered or permitted to manage used oil.

(b) Self-transportation of small amounts to aggregation points owned by the generator. A generator may transport, without an EPA identification number, a used oil transporter permit, or used oil handler certificate, used oil that is generated at the generator's site to an aggregation point provided that:

(1) The generator transports the used oil in a vehicle owned by the generator or owned by an employee of the generator;

(2) The generator transports no more than 55 gallons of used oil at any time; and

(3) The generator transports the used oil to an aggregation point that is owned, operated, or both by the same generator.

(c) Tolling arrangements. Used oil generators may arrange for used oil to be transported by a transporter without an EPA identification number, a used oil transporter permit, or a current used oil handler certificate if the used oil is reclaimed under a contractual agreement under which reclaimed oil is returned by the processor/re-refiner to the generator for use as a lubricant, cutting oil, or coolant. The contract, known as a "tolling arrangement," shall indicate:

(1) The type of used oil and the frequency of shipments;

(2) That the vehicle used to transport the used oil to the processing/re-refining facility and to deliver recycled used oil back to the generator is owned and operated by the used oil processor/re-refiner; and

(3) That reclaimed oil will be returned to the generator.

R315-15-3. Standards for Used Oil Collection Centers and Aggregation Points.

3.1 DO-IT-YOURSELFER USED OIL COLLECTION CENTERS TYPES A and B

(a) Applicability. R315-15-3.1 applies to owners or operators of Type A and B used oil collection centers:

(1) Type A used oil collection center. Type A and B is any site or facility that accepts/aggregates and stores used oil collected only from household do-it-yourselfers (DIYers) in quantities not exceeding five gallons per visit.

(2) Type B used oil collection center. Type B used oil collection center is any site or facility that accepts/aggregates and stores used oil collected from farmers as required by R315-15-2.1(a)(4) in quantities not exceeding 55 gallons per visit from farmers and not exceeding five gallons per visit from household do-it-yourselfers.

(b) Type A or B used oil collection center requirements. Owners or operators of Type A or B used oil collection centers shall:

(1) Comply with the generator standards in R315-15-2.

(2) Be registered with the Division of Waste Management and Radiation Control to manage used oil as a used oil collection center as required by R315-15-13.1; and

(3) Keep records of used oil collected by the collection center. This does not include used oil generated on site from maintenance and servicing operations. These records shall be kept for a minimum of three years and shall contain the following information:

(i) Name and address of generator or if unavailable, a written description of how the used oil was received;

(ii) Quantity of used oil received;

(iii) Date the used oil is received; and

(iv) Volume of used oil picked up by a permitted transporter and the transporter's name and EPA identification

number.

(4) A Type A or B used oil collection center shall not accept used oil from generators other than those specified in R315-15-3.1(1) and (2).

(c) Reimbursements. Type A or B used oil collection centers are classified as DIYer used oil collection centers and may be reimbursed as described in R315-15-14.

3.2 USED OIL COLLECTION CENTERS - TYPES C AND D

(a) Applicability. R315-15-3.2 applies to owners or operators of Type C and D used oil collection centers.

(1) Type C used oil collection center is any site or facility that accepts/aggregates and stores used oil collected from used oil generators regulated under R315-15-2 who bring used oil to the collection center in shipments of no more than 55 gallons under the provisions of R315-15-2.5(a). Type C used oil collection centers may also accept used oil from household do-it-yourselfers and farmers described in R315-15-2.1(a)(4).

(2) A Type D used oil collection center is any site or facility that only accepts/aggregates and stores used oil collected from used oil generators regulated under R315-15-2 who bring used oil to the collection center in shipments of no more than 55 gallons under the provisions of R315-15-2.5(a). Type D used oil collection centers do not qualify for reimbursement.

(b) Used oil collection center Type C and D requirements. Owners or operators of Types C and D used oil collection centers shall:

(1) Comply with the generator standards in R315-15-2;

(2) Be registered with the Division of Waste Management and Radiation Control to manage used oil; and

(3) Keep records of used oil received from off-site sources and transported from the collection center. This does not include used oil generated onsite from maintenance and servicing operations. These records shall be kept for a minimum of three years and shall contain the following information:

(i) Name and address of generator or, if unavailable, a written description of how the used oil was received;

(ii) Quantity of used oil received;

(iii) Date the used oil is received; and

(iv) Volumes of used oil collected by a permitted transporter and the transporter's name and federal EPA identification number.

(c) Reimbursements. Type C used oil collection centers may be reimbursed as described in R315-15-14 for household do-it-yourselfer and used oil generated by farmers as defined in R315-15-3.1. Other generator used oil does not meet the reimbursement criteria as do-it-yourselfer used oil and does not qualify for reimbursement.

3.3 USED OIL AGGREGATION POINTS OWNED BY THE GENERATOR

(a) Applicability. R315-15-3.3 applies to owners or operators of all used oil aggregation points. A used oil aggregation point is any site or facility that accepts, aggregates, or stores used oil collected only from other used oil generation sites owned or operated by the owner or operator of the aggregation point, from which used oil is transported to the aggregation point in shipments of 55 gallons or less under the provisions of R315-15-2.5(b). Used oil aggregation points may also accept used oil from household do-it-yourselfers as long as they register as do-it-yourselfer collection centers, as described in R315-15-13.1, and comply with do-it-yourselfer collection center standards in R315-15-3.1. Used oil aggregation points that accept used oil from other generators shall register as collection centers, as described in R315-15-13.2, and comply with collection center standards in R315-15-3.2.

(b) Used oil aggregation point requirements. Owners or operators of all used oil aggregation points shall comply with the generator standards in R315-15-2.

R315-15-4. Standards for Used Oil Transporter and Transfer Facilities.

4.1 APPLICABILITY

(a) General. R315-15-4 applies to all used oil transporters, except as provided in R315-15-4.1(a)(1) through (4). Persons who transport used oil, persons who collect used oil from more than one generator and transport the collected used oil, and owners and operators of used oil transfer facilities are used oil transporters. Except as provided by R315-15-13.4(f), used oil transporters or operators of used oil transfer facilities shall obtain a permit from the Director prior to accepting any used oil for transportation or transfer. The application for a permit shall include the information required by R315-15-13.4. Used oil transporters and operators of used oil transfer facilities shall obtain and maintain a used oil handler certificate in accordance with R315-15-13.8.

(1) R315-15-4 does not apply to on-site transportation.

(2) R315-15-4 does not apply to generators who transport shipments of used oil totaling 55 gallons or less from the generator to a used oil collection center as specified in Subsection R315-15-2.5(a).

(3) R315-15-4 does not apply to generators who transport shipments of used oil totaling 55 gallons or less from the generator to a used oil aggregation point owned or operated by the same generator as specified in R315-15-2.5(b).

(4) R315-15-4 does not apply to transportation of used oil from household do-it-yourselfers to a regulated used oil generator, collection center, aggregation point, processor/refiner, or burner subject to the requirements of R315-15. Except as provided in R315-15-4.1(a)(1) through (a)(3), R315-15-4 does, apply to transportation of collected household do-it-yourselfer used oil from regulated used oil generators, collection centers, aggregation points, or other facilities where household do-it-yourselfer used oil is collected.

(b) Imports and exports. Transporters are subject to the requirements of R315-15-4 from the time the used oil enters and until the time it exits Utah.

(c) Vehicles used to transport hazardous waste. Unless vehicles previously used to transport hazardous waste are emptied as described in R315-2-7 prior to transporting used oil, the used oil is considered to have been mixed with the hazardous waste and shall be managed as hazardous waste unless, under the provisions of R315-15-1.1(b), the hazardous waste/used oil mixture is determined not to be hazardous waste.

(d) Vehicles used to transport PCB-contaminated material. Unless vehicles previously used to transport PCB-contaminated material are decontaminated as described in 40 CFR 761 Subpart S, (2013 edition, incorporated by reference), prior to transporting used oil, the used oil is considered to have been mixed with PCB-contaminated material and shall be managed as PCB-contaminated material in accordance with R315-15-18 and 40 CFR 761.

(e) Tanks, containers, and piping that contained PCB-contaminated material. Unless tanks, containers, and piping that previously contained PCB-contaminated material are decontaminated as described in 40 CFR 761 Subpart S prior to transferring used oil, the used oil is considered to have been mixed with PCB-contaminated material in accordance with R315-15-18 and 40 CFR 761 Subpart S.

(f) Other applicable provisions. Used oil transporters who conduct the following activities are also subject to other applicable provisions of R315-15 as indicated in R315-15-4.1(f)(1) through (5):

(1) Transporters who generate used oil shall also comply with R315-15-2;

(2) Transporters who process or re-refine used oil, except as provided in R315-15-4.2, shall also comply with R315-15-5;

(3) Transporters who burn off-specification used oil for energy recovery shall also comply with R315-15-6;

(4) Transporters who direct shipments of off-specification used oil from their facility to a used oil burner or first claim that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in R315-15-1.2 shall also comply with R315-15-7; and

(5) Transporters who dispose of used oil shall also comply with R315-15-8.

4.2 RESTRICTIONS ON TRANSPORTERS WHO ARE NOT ALSO PROCESSORS OR RE-REFINERS

(a) Used oil transporters may consolidate or aggregate loads of used oil for purposes of transportation. However, except as provided in R315-15-4.2(b), used oil transporters may not process used oil unless they also comply with the requirements for processors/re-refiners in R315-15-5.

(b) Transporters may conduct incidental processing operations that occur in the normal course of used oil transportation, e.g., settling and water separation, but that are not designed to produce, or make more amenable for production of, used oil derived products unless they also comply with the processor/re-refiner requirements in R315-15-5.

(c) Transporters of used oil that is removed from oil-bearing electrical transformers and turbines and filtered by the transporter or at a transfer facility prior to being returned to its original use are not subject to the processor/re-refiner requirements in R315-15-5.

4.3 NOTIFICATION

(a) Identification numbers. Used oil transporters who have not previously complied with the notification requirements of RCRA section 3010 shall comply with these requirements and obtain an EPA identification number.

(b) Mechanics of notification. A used oil transporter who has not received an EPA identification number may obtain one by notifying the Director of his used oil activity by submitting either:

(1) A completed EPA Form 8700-12 or

(2) A letter to the Division requesting an EPA identification number. The letter shall include the following information:

(i) Transporter company name;

(ii) Owner of the transporter company;

(iii) Mailing address for the transporter;

(iv) Name and telephone number for the transporter point of contact;

(v) Type of transport activity, i.e., transport only, transport and transfer facility, transfer facility only;

(vi) Location of all transfer facilities at which used oil is stored; and

(vii) Name and telephone number for a contact at each transfer facility.

4.4 USED OIL TRANSPORTATION

(a) Deliveries. A used oil transporter shall deliver all used oil received to:

(1) Another used oil transporter, provided that the transporter has obtained an EPA identification number, transporter, permit number, and current used oil handler certificate issued by the Director;

(2) A used oil processing/re-refining facility that has obtained an EPA identification number, processing/refining permit, and current used oil handler certificate issued by the Director;

(3) An off-specification used oil burner facility that has obtained an EPA identification number, off-specification used oil burner permit, and current used oil handler certificate issued by the Director;

(4) A used oil transfer facility that has obtained an EPA identification number, transfer facility permit, and current used oil handler certificate issued by the Director; or

(5) An on-specification used oil burner facility.

(b) DOT Requirements. Used oil transporters shall

comply with all applicable requirements under the U.S. Department of Transportation regulations in 49 CFR 171 through 180. Persons transporting used oil that meets the definition of a hazardous material in 49 CFR 171.8 shall comply with all applicable regulations in 49 CFR 171 through 180.

(c) Used oil discharges. In the event of a used oil discharge, a transporter shall comply with R315-15-9.

(d) The words "Used Oil" shall be clearly visible, in letters at least two inches high, on all vehicles transporting bulk used oil.

4.5 REBUTTABLE PRESUMPTION FOR USED OIL

(a) To ensure that used oil is not a hazardous waste under the rebuttable presumption of R315-15-1.1(b)(1)(ii), the used oil transporter shall determine whether the total halogen content of used oil being transported or stored at a transfer facility is below 1,000 ppm.

(b) The transporter shall make this determination by:

(1) Testing the used oil; or

(2) Applying and documenting generator knowledge of the halogen content of the used oil in light of the materials or processes used.

(c) If the used oil contains greater than or equal to 1,000 ppm total halogens, it is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in R315-2-10. The owner or operator may rebut the presumption by demonstrating that the used oil does not contain hazardous waste, for example, by using an analytical method from SW-846, Edition III, update IV to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in R315-50-10.

(1) The rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed, through a tolling arrangement as described in R315-15-2.5(c), to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner, or disposed.

(2) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units if the CFCs are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units.

(d) Record retention. Records of analyses conducted or information used to comply with R315-15-4.5(a), (b), and (c) shall be maintained by the transporter for at least three years.

4.6 USED OIL STORAGE AT TRANSFER FACILITIES

Used oil transporters are subject to all applicable Spill Prevention, Control and Countermeasures, in accordance with 40 CFR 112, in addition to the requirements of R315-15-4. Used oil transporters are also subject to the standards of R311, which incorporates by reference 40 CFR 280, for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste, in addition to the requirements of R315-15-4.

(a) Applicability. R315-15-4 applies to used oil transfer facilities. Used oil transfer facilities are transportation-related facilities including loading docks, parking areas, storage areas, and other areas where shipments of used oil are held for more than 24 hours during the normal course of transportation and not longer than 35 days. Transfer facilities that store used oil for more than 35 days are subject to the processor/re-refiner requirements found in R315-15-5.

(b) Storage units. Owners or operators of used oil transfer facilities may not store used oil in units other than tanks, containers, or units subject to regulation under R315-7 or R315-8.

(c) Condition of units. Containers and aboveground tanks and tank systems, including their associated pipes and valves, used to store used oil at transfer facilities shall be:

(1) In good condition, with no severe rusting, apparent structural defects, or deterioration; and

(2) Not leaking.

(3) Tanks and containers for storage of used oil must be closed during storage except when adding or removing used oil.

(4) Tanks and container storage areas shall have a containment system that is designed and operated in accordance with R315-8-9.

(d) Secondary containment. Containers and aboveground tanks used to store used oil at transfer facilities, including their pipe connections and valves, shall be equipped with a secondary containment system.

(1) The secondary containment system shall consist of:

(i) Dikes, berms, or retaining walls; and

(ii) A floor. The floor shall cover the entire area within the dikes, berms, or retaining walls except areas where existing portions of existing aboveground tanks meet the ground.

(iii) An equivalent secondary containment system approved by the Director.

(2) The entire containment system, including walls and floors, shall be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water.

(3) The secondary system shall be of sufficient extent to prevent any used oil releases from tanks and containers in R315-15-4.6(b), from migrating out of the system to the soil, groundwater, or surface water.

(4) Water, used oil, or other liquids shall be removed from secondary containment, including sumps, within 24 hours of discovery.

(5) Used oil shall not be stored or allowed to accumulate in sumps and similar water containment structures at the facility. Any used oil in such sumps beyond a surface sheen shall be removed within 24 hours of discovery.

(6) Transporters loading to or from rail tanker cars shall also comply with secondary containment requirements of R315-15-4.10.

(e) Labels.

(1) Containers and aboveground tanks used to store used oil at transfer facilities shall be labeled or marked clearly with the words "Used Oil."

(2) Fill pipes used to transfer used oil into underground storage tanks at transfer facilities shall be labeled or marked clearly with the words "Used Oil."

(f) Response to releases. Upon detection of a release of used oil to the environment not subject to the requirements of R311-202-1, which incorporates by reference 40 CFR 280, Subpart F, the owner/operator of a transfer facility shall comply with R315-15-9.

4.7 TRACKING

(a) Acceptance. Used oil transporters and transfer facilities shall keep a written record of each used oil shipment accepted for transport. These records shall take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Written records for each shipment shall include:

(1) The name and address of the generator, transporter, transfer facility, burner, or processor/re-refiner who provided the used oil for transport;

(2) The EPA identification number, if applicable, of the generator, transporter, or processor/re-refiner who provided the used oil for transport;

(3) Documentation demonstrating the transporter has met the halogen determination requirements of R315-15-4.5 and, where applicable, the PCB testing requirements of R315-15-18;

(4) The quantity of used oil accepted;

(5) The date of acceptance; and

(6)(i) Except as provided in R315-15-4.7(a)(6)(ii), the signature, dated upon receipt of the used oil, of a representative of the generator, transporter, transfer facility, burner, or

processor/re-refiner who provided the used oil for transport.

(ii) Intermediate rail transporters are not required to sign the record of acceptance.

(b) Deliveries. Used oil transporters and transfer facilities shall keep a written record of each shipment of used oil that is delivered to another used oil transporter, a transfer facility, burner, processor/re-refiner, or disposal facility. Records of each delivery shall include:

(1) The name and address of the receiving facility or transporter;

(2) The EPA identification number of the receiving facility or transporter;

(3) The quantity of used oil delivered;

(4) The date of delivery; and

(5)(i) Except as provided in R315-15-4.7(a)(6)(ii), the signature, dated upon receipt of the used oil, of a representative of the receiving facility or transporter.

(ii) Intermediate rail transporters are not required to sign the record of delivery.

(c) Exports of used oil. Used oil transporters shall maintain the records described in R315-15-4.7(b)(1) through (b)(4) for each shipment of used oil exported outside of Utah.

(d) Record retention. The records described in R315-15-4.7(a), (b), and (c) shall be maintained for at least three years at a specified facility approved by the Director.

(e) Reporting. Used oil transporter and transfer facilities shall report annually by March 1 to the Director. The report shall be consistent with the requirements of R315-15-13.4(d).

4.8 MANAGEMENT OF RESIDUES

Transporters who generate residues from the storage or transport of used oil shall manage the residues as specified in R315-15-1.1(e).

4.9 ACCEPTANCE OF OFF-SITE USED OIL

Used oil transporters and transfer facilities accepting used oil from off-site shall ensure that the transporters delivering the used oil have obtained a current used oil transporter permit and an EPA identification number.

4.10 TRANSFER OF USED OIL TO OR FROM RAIL CARS

(a) Spill prevention. Facilities or transporters loading or unloading used oil from rail cars shall:

(1) Use spill pans beneath rail cars being loaded or unloaded with used oil. These spill pans shall be placed inside and outside of the track below the rail car loading port in such a way as to capture releases that might occur during the loading and unloading operations;

(2) Securely park used oil transportation trucks on a loading pad during the loading and unloading of used oil between those trucks and the rail tanker car. The loading pad shall be constructed of asphalt or concrete, or an equivalent system approved by the Director, and shall be sloped or bermed in such a way as to contain used oil spills;

(3) Be loaded and unloaded through a valve or port located on top of the rail car unless otherwise approved by the Director; and

(4) Transporter personnel shall actively monitor the transfer during the entire loading and unloading process.

(b) Storage at rail loading and unloading facilities. If, during the normal course of transportation, used oil remains at the loading and unloading facility for more than 24 hours but less than 35 days, the facility is subject to regulation as a used oil transfer facility as defined in R315-15-4.6 and is required to apply for a permit as a used oil transfer facility as defined in R315-15-13.4. A transfer facility that stores used oil for more than 35 days is subject to the processor/re-refiner requirements as defined in R315-15-5.

R315-15-5. Standards for Used Oil Processors and Re-Refiners.

5.1 APPLICABILITY

(a) The requirements of R315-15-5 apply to owners and operators of facilities that process used oil. Processing means chemical or physical operations designed to produce from used oil, or to make used oil more amenable for production of, fuel oils, lubricants, or other used oil-derived products. Processing includes: blending used oil with virgin petroleum products, blending used oils to meet the fuel specification, filtration, simple distillation, chemical or physical separation and re-refining. The requirements of R315-15-5 do not apply to:

(1) Transporters that conduct incidental processing operations that occur during the normal course of transportation as provided in R315-15-4.2; or

(2) Burners that conduct incidental processing operations that occur during the normal course of used oil management prior to burning as provided in R315-15-6.2(b).

(b) Other applicable provisions. Used oil processors/re-refiners who conduct the following activities are also subject to the requirements of other applicable provisions of R315-15 as indicated in R315-15-5.1(b)(1) through (b)(7).

(1) Processors/re-refiners who generate used oil shall also comply with R315-15-2.

(2) Processors/re-refiners who transport used oil shall also comply with R315-15-4.

(3) Processor/re-refiners who burn off-specification used oil for energy recovery shall also comply with R315-15-6 except where:

(i) The used oil is only burned in an on-site space heater that meets the requirements of R315-15-2.4; or

(ii) The used oil is only burned for purposes of processing used oil, which is considered burning incidentally to used oil processing.

(4) Processors/re-refiners who direct shipments of off-specification used oil from their facility to a used oil burner or first claim that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in R315-15-1.2 shall also comply with R315-15-7.

(5) Processors/re-refiners who dispose of used oil shall also comply with R315-15-8.

(6) Tanks, containers, and piping that contained hazardous waste. Unless tanks, containers, and piping that previously contained hazardous waste are emptied as described in R315-2-7 prior to storing or transferring used oil, the used oil is considered to have been mixed with the hazardous waste and shall be managed as hazardous waste unless, under the provisions of R315-15-1.1(b), the hazardous waste and used oil mixture is determined not to be hazardous waste.

(7) Tanks, containers, and piping that previously contained PCB-contaminated material. Unless tanks, containers, and piping that previously contained PCB-contaminated material are decontaminated as described in 40 CFR 761 Subpart S prior to storing or transferring of used oil, the used oil is considered to have been mixed with the PCB-contaminated material and shall be managed in accordance with R315-15-18 and 40 CFR 761 Subpart S, as applicable.

(c) Processors/re-refiners shall obtain a permit from the Director prior to processing or re-refining used oil. An application for a permit shall contain the information required by R315-15-13.5.

5.2 NOTIFICATION

(a) Identification numbers. Used oil processors/re-refiners who have not previously complied with the notification requirements of RCRA section 3010 shall comply with these requirements and obtain an EPA identification number.

(b) Mechanics of notification. A used oil processor or re-refiner who has not received an EPA identification number may obtain one by notifying the Director of their used oil activity by submitting either:

(1) A completed EPA Form 8700-12; or

(2) A letter to the Division requesting an EPA identification number. The letter shall include the following information:

(i) Processor or re-refiner company name;

(ii) Owner of the processor or re-refiner company;

(iii) Mailing address for the processor or re-refiner;

(iv) Name and telephone number for the processor or re-refiner point of contact;

(v) Type of used oil activity, i.e., process only, process and re-refine;

(vi) Location of the processor or re-refiner facility.

5.3 GENERAL FACILITY STANDARDS

(a) Preparedness and prevention. Owners and operators of used oil processor/re-refiner facilities shall comply with the following requirements:

(1) Maintenance and operation of facility. Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of used oil to air, soil, surface water, or groundwater that could threaten human health or the environment.

(2) Required equipment. All facilities shall be equipped with the following:

(i) An internal communications or alarm system capable of providing immediate emergency instruction, voice and signal, to facility personnel;

(ii) A device, such as a telephone, immediately available at the scene of operations, or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams;

(iii) Portable fire extinguishers, fire control equipment, including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals, spill control equipment, and decontamination equipment; and

(iv) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

(3) Testing and maintenance of equipment. All facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, shall be tested and maintained as necessary to assure its proper operation in time of emergency. Records of such testing and maintenance shall be kept for three years.

(4) Access to communications or alarm system.

(i) Whenever used oil is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation shall have immediate access to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required in R315-15-5.3(a)(2).

(ii) If there is ever just one employee on the premises while the facility is operating, the employee shall have immediate access to a device, such as a telephone, immediately available at the scene of operation, or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required in R315-15-5.3(a)(2).

(5) Required aisle space. The owner or operator shall maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

(6) Arrangements with local authorities.

(i) The owner or operator shall attempt to make the following arrangements, as appropriate for the type of used oil handled at the facility and the potential need for the services of these organizations:

(A) Arrangements to familiarize police, fire departments, and emergency response teams with the layout of the facility,

properties of used oil handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes;

(B) Where more than one police and fire department might respond to an emergency, agreements designating primary emergency authority to a specific police and a specific fire department, and agreements with any others to provide support to the primary emergency authority;

(C) Agreements with State emergency response teams, emergency response contractors, and equipment suppliers; and

(D) Arrangements to familiarize local hospitals with the properties of used oil handled at the facility and the types of injuries or illnesses that could result from fires, explosions, or releases at the facility.

(ii) Where State or local authorities decline to enter into such arrangements, the owner or operator shall document the refusal in the facility's operating record.

(b) Contingency plan and emergency procedures. Owners and operators of used oil processor and re-refiner facilities shall comply with the following requirements:

(1) Purpose and implementation of contingency plan.

(i) Each owner or operator shall have a contingency plan for the facility. The contingency plan shall be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of used oil to air, soil, groundwater, or surface water.

(ii) The provisions of the plan shall be carried out immediately whenever there is a fire, explosion, or release of used oil that could threaten human health or the environment.

(2) Content of contingency plan.

(i) The contingency plan shall describe the actions facility personnel shall take to comply with R315-15-5.3(b)(1) and (6) in response to fires, explosions, or any unplanned sudden or non-sudden release of used oil to air, soil, groundwater, or surface water at the facility.

(ii) If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan in accordance with 40 CFR 112 or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate used oil management provisions necessary to comply with the requirements of R315-15.

(iii) The plan shall describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services, in accordance with R315-15-5.3(a)(6).

(iv) The plan shall list names, addresses, and phone numbers, of all persons qualified to act as 24-hour emergency coordinator. This list shall be kept up to date. Where more than one person is listed, one shall be named as primary emergency coordinator and others shall be listed in the order in which they will assume responsibility as alternates. See also R315-15-5.3(b)(5).

(v) The plan shall include a list of all emergency equipment at the facility, such as fire extinguishing systems, spill control equipment, communications and alarm systems, internal and external, and decontamination equipment, where this equipment is required. This list shall be kept up to date. In addition, the plan shall include the location and a physical description of each item on the list, and a brief outline of its capabilities.

(vi) The plan shall include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This plan shall describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes, in cases where the primary routes could be blocked by releases of used oil or fires.

(3) Copies of contingency plan. A copy of the

contingency plan and all revisions to the plan shall be:

(i) Maintained at the facility; and

(ii) Submitted to all local police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services.

(4) Amendment of contingency plan. The contingency plan shall be reviewed, and immediately amended, if necessary, whenever:

(i) Applicable regulations are revised;

(ii) The plan fails in an emergency;

(iii) The facility changes its design, construction, operation, maintenance, or other circumstances in a way that materially increases the potential for fires, explosions, or releases of used oil, or changes the response necessary in an emergency;

(iv) The list of emergency coordinators changes; or

(v) The list of emergency equipment changes.

(5) Emergency coordinator. At all times, there shall be at least one employee either on the facility premises or on call, i.e., available to respond to an emergency by reaching the facility within a short period of time, with the responsibility for coordinating all emergency response measures. This emergency coordinator shall be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristic of used oil handled, the location of all records within the facility, and facility layout. In addition, this person shall have the authority to commit the resources needed to carry out the contingency plan.

(6) Emergency procedures.

(i) Whenever there is an imminent or actual emergency situation, the emergency coordinator, or the designee when the emergency coordinator is on call, shall immediately:

(A) Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and

(B) Notify appropriate State or local agencies with designated response roles if their help is needed.

(ii) Whenever there is a release, fire, or explosion, the emergency coordinator shall immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records of manifests and, if necessary, by chemical analysis.

(iii) Concurrently, the emergency coordinator shall assess possible hazards to human health and to the environment that may result from the release, fire, or explosion. This assessment shall consider both direct and indirect effects of the release, fire, or explosion, e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-offs from water or chemical agents used to control fire and heat-induced explosions.

(iv) If the emergency coordinator determines that the facility has had a release, fire, or explosion that could threaten human health, or the environment, outside the facility, the coordinator shall report the findings as follows:

(A) If the emergency coordinator assessment indicates that evacuation of local areas may be advisable, he shall immediately notify appropriate local authorities. The coordinator shall be available to help appropriate officials decide whether local areas should be evacuated; and

(B) The emergency coordinator shall implement the actions as required in Section R315-15-9.

(v) During an emergency, the emergency coordinator shall take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other used oil or hazardous waste at the facility. These measures shall include, where applicable, stopping processes and operation, collecting and containing released used oil, and removing or isolating containers.

(vi) If the facility stops operation in response to a fire,

explosion, or release, the emergency coordinator shall monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

(vii) Immediately after an emergency, the emergency coordinator shall provide for recycling, storing, or disposing of recovered used oil, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility.

(viii) The emergency coordinator shall ensure that, in the affected area(s) of the facility:

(A) No waste or used oil that may be incompatible with the released material is recycled, treated, stored, or disposed of until cleanup procedures are completed; and

(B) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

(C) The owner or operator shall notify the Director, and appropriate local authorities that the facility is in compliance with R315-15-5.3(b)(6)(viii)(A) and (B) before operations are resumed in the affected area(s) of the facility.

(ix) The owner or operator shall note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the owner or operator shall submit a written report on the incident to the Director. The report shall include:

(A) Name, address, and telephone number of the owner or operator;

(B) Name, address, and telephone number of the facility;

(C) Date, time, and type of incident, e.g., fire, explosion;

(D) Name and quantity of material(s) involved;

(E) The extent of injuries, if any;

(F) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and

(G) Estimated quantity and disposition of recovered material that resulted from the incident.

5.4 REBUTTABLE PRESUMPTION FOR USED OIL

(a) To ensure that used oil managed at a processing/re-refining facility is not hazardous waste under the rebuttable presumption of R315-15-1.1(b)(1)(ii), the owner or operator of a used oil processing/re-refining facility shall determine whether the total halogen content of used oil managed at the facility is above or below 1,000 ppm.

(b) The owner or operator shall make this determination by:

(1) Testing the used oil; or

(2) Applying and documenting generator knowledge of the halogen content of the used oil in light of the materials and processes used.

(c) If the used oil contains greater than or equal to 1,000 ppm total halogens, it is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in R315-2-10. The owner or operator may rebut the presumption by demonstrating that the used oil does not contain hazardous waste, for example, by using an analytical method from EPA SW-846, Edition III, Update IV to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in R315-50-10.

(1) The rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed, through a tolling agreement, to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner, or disposed.

(2) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units.

5.5 USED OIL MANAGEMENT

Used oil processor/re-refiners are subject to all applicable Spill Prevention, Control and Countermeasures, found in 40 CFR 112, in addition to the requirements of R315-15-5. Used oil processors/re-refiners are also subject to the standards and requirements found in R311-200 through R311-209, Underground Storage Tanks, for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste, in addition to the requirements of R315-15-5.

(a) Management units. Used oil processors/re-refiners may not store used oil in units other than tanks, containers, or units subject to regulation under R315-7 or R315-8.

(b) Condition of units. Containers and aboveground tanks including their associated pipes and valves used to store or process used oil at processing and re-refining facilities shall be:

(1) In good condition, with no severe rusting, apparent structural defects, or deterioration;

(2) Not leaking; and

(3) Closed during storage except when used oil is being added or removed.

(c) Secondary containment. Containers and aboveground tanks used to store or process used oil at processing and re-refining facilities including their pipe connections and valves shall be equipped with a secondary containment system.

(1) The secondary containment system shall consist of:

(i) Dikes, berms, or retaining walls; and

(ii) A floor. The floor shall cover the entire area within the dike, berm, or retaining wall, except areas where existing portions of aboveground tanks meet the ground; or

(iii) An equivalent secondary containment system approved by the Director.

(2) The entire containment system, including walls and floors, shall be sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water.

(3) The secondary containment system shall be of sufficient size and volume to prevent any used oil released from tanks and containers described in R315-15-5.5(a), from migrating out of the system to the soil, groundwater, or surface water.

(4) Water, used oil, or other liquids shall be removed from secondary containment within 24 hours of their discovery.

(5) Used oil shall not be stored or allowed to accumulate in sumps and similar water-containment structures at the facility. Any used oil in such sumps shall be removed within 24 hours of its discovery.

(d) Labels.

(1) Containers and aboveground tanks used to store or process used oil at processing and re-refining facilities shall be labeled or marked clearly with the words "Used Oil."

(2) Fill pipes used to transfer used oil into underground storage tanks at processing and re-refining facilities shall be labeled or marked clearly with the words "Used Oil."

(e) Response to releases. Upon detection of a release of used oil to the environment not subject to the requirements of R311-202-1, which incorporates by reference 40 CFR 280, Subpart F, an owner/operator shall comply with R315-15-9.

(f) Closure.

(1) Aboveground tanks. Owners and operators who store or process used oil in aboveground tanks shall comply with the following requirements:

(i) At closure of a tank system, the owner or operator shall remove or decontaminate used oil residues in tanks, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste, unless the materials are not hazardous waste under this chapter. Nonhazardous solid waste must be managed in accordance with R315-301-4.

(ii) If the owner or operator demonstrates that not all

contaminated soils can be practicably removed or decontaminated as required in R315-15-5.5(f)(1)(i), then the owner or operator shall close the tank system and perform post-closure care in accordance with the closure and post-closure care requirements that apply to hazardous waste landfills, R315-7-21.4.

(2) Containers. Owners and operators who store used oil in containers shall comply with the following requirements:

(i) At closure, containers holding used oils or residues of used oil shall be removed from the site;

(ii) The owner or operator shall remove or decontaminate used oil residues, contaminated containment system components, contaminated soils, and structures and equipment contaminated with used oil, and manage them as hazardous waste, unless the materials are not hazardous waste under R315-2.

5.6 ANALYSIS PLAN

Owners or operators of used oil processing/re-refining facilities shall develop and follow a written used oil analysis plan describing the procedures that will be used to comply with the analysis requirements of R315-15-5.4, R315-15-18, and, if applicable, the marketer requirements in R315-15-7.3. The owner or operator shall keep the plan at the facility.

(a) Rebuttable presumption for used oil in R315-15-5.4. The plan shall specify the following:

(1) Whether sample analyses documented generator knowledge of the halogen content of the used oil, or both, will be used to make this determination.

(2) If sample analyses are used to make this determination, the plan shall specify:

(i) The sampling method used to obtain representative samples to be analyzed. A representative sample may be obtained using either:

(A) One of the sampling methods in R315-50-6; or

(B) A method shown to be equivalent under R315-2-15;

(ii) The frequency of sampling to be performed, and whether the analysis will be performed onsite or offsite; and

(iii) The methods used to analyze used oil for the parameters specified in R315-15-5.4; and

(3) The type of information that will be used to determine the halogen content of the used oil.

(b) On-specification used oil fuel in R315-15-7.3. At a minimum, the plan shall specify the following if R315-15-7.3 is applicable:

(1) Whether sample analyses or other information will be used to make this determination;

(2) If sample analyses are used to make this determination:

(i) The sampling method used to obtain representative samples to be analyzed. A representative sample may be obtained using either:

(A) One of the sampling methods in R315-50-6, which incorporates by reference 40 CFR 261, Appendix I; or

(B) A method shown to be equivalent under R315-2-15;

(ii) Whether used oil will be sampled and analyzed prior to or after any processing/re-refining;

(iii) The frequency of sampling to be performed, and whether the analysis will be performed on-site or off-site; and

(iv) The methods used to analyze used oil for the parameters specified in R315-15-7.3.

(3) The type of information that will be used to make the on-specification used oil fuel determination.

5.7 TRACKING

(a) Acceptance. Used oil processors/re-refiners shall keep a written record of each used oil shipment accepted for processing/re-refining. These records shall take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Records for each shipment shall include the following information:

(1) The name and address of the transporter who delivered

the used oil to the processor/re-refiner;

(2) The name and address of the generator or processor/re-refiner from whom the used oil was sent for processing/re-refining;

(3) The EPA identification number of the transporter who delivered the used oil to the processor/re-refiner;

(4) The EPA identification number, if applicable, of the generator or processor/re-refiner from whom the used oil was sent for processing/re-refining;

(5) The quantity of used oil accepted;

(6) The date of acceptance; and

(7) Written documentation that the processor/re-refiner has met the rebuttable presumption requirements of R315-15-5.4 and the PCB testing requirements of R315-15-18.

(b) Delivery. Used oil processor/re-refiners shall keep a written record of each shipment of used oil that is shipped to a used oil burner, processor/re-refiner, or disposal facility. These records may take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Records for each shipment shall include the following information:

(1) The name and address of the transporter who delivers the used oil to the burner, processor/re-refiner, or disposal facility;

(2) The name and address of the burner, processor/re-refiner, or disposal facility that will receive the used oil;

(3) The EPA identification number of the transporter who delivers the used oil to the burner, processor/re-refiner, or disposal facility;

(4) The EPA identification number of the burner, processor/re-refiner, or disposal facility that will receive the used oil;

(5) The quantity of used oil shipped; and

(6) The date of shipment.

(c) Record retention. The records described in paragraphs (a) and (b) of this section shall be maintained for at least three years at the permitted facility or other location approved by the Director.

5.8 OPERATING RECORD AND REPORTING

(a) Operating record.

(1) The owner or operator of the processor/re-refiner facility shall keep a written operating record at the facility.

(2) The following information shall be recorded, as it becomes available, and maintained in the operating record until closure of the facility:

(i) Records and results of used oil analyses performed as described in the analysis plan required under R315-15-5.6;

(ii) Summary reports and details of all incidents that require implementation of the contingency plan as specified in R315-15-5.3(b); and

(iii) Records detailing the mass balance of wastewater entering and leaving the facility. This includes wastewater discharge records. This does not include water used in non-contact cooling processes.

(b) Reporting. A used oil processor/re-refiner shall report annually March 1 to the Director. The report shall be consistent with the requirements of R315-15-13.5(d).

5.9 OFF-SITE SHIPMENTS OF USED OIL

Used oil processors/re-refiners who initiate shipments of used oil offsite shall ship the used oil using a used oil transporter who has obtained an EPA identification number, a permit, and current used oil handler certificate issued by the Director.

5.10 ACCEPTANCE OF OFF-SITE USED OIL

Processors accepting used oil from off site shall ensure that transporters delivering used oil to their facility have obtained a current used oil transporter permit and an EPA identification number.

5.11 MANAGEMENT OF RESIDUES

Owners and operators who generate residues from the

storage, processing, or re-refining of used oil shall manage the residues as specified in R315-15-1.1(e).

R315-15-6. Standards for Used Oil Burners Who Burn Used Oil for Energy Recovery.

6.1 APPLICABILITY

(a) General. A used oil burner is a person who burns used oil for energy recovery. An on-specification used oil burner is a person who only burns used oil that meets the specifications of R315-15-1.2. Used oil that has not been determined to be on-specification used oil by a Utah-registered marketer shall be managed as off-specification used oil except as described R315-15-2.4. An off-specification used oil burner is a person who burns used oil not meeting the specifications found in R315-15-1.2 for energy recovery. Facilities burning used oil for energy recovery under the following conditions are subject to R315-15-6.1(a) and (b) and R315-15-6.2(b) and (c), but not other portions of R315-15-6:

(1) The used oil is burned by the generator in an on-site space heater under the provisions of R315-15-2.4;

(2) The used oil is burned by a processor/re-refiner for purposes of processing used oil, which is considered burning incidentally to used oil processing; or

(3) The used oil burned by the facility is obtained from a Utah-registered marketer who claims and has demonstrated that the used oil meets the used oil fuel specifications set forth in R315-15-1.2 and who delivers the used oil in the manner set forth in R315-15-7.5(b).

(b) Other applicable provisions. In addition to the requirements of R315-15-6.1(a), used oil burners who conduct the following activities are subject to the requirements of R315-15 as indicated below.

(1) Burners who generate used oil shall comply with R315-15-2;

(2) Burners who transport used oil shall comply with R315-15-4;

(3) Except as provided in R315-15-6.2(b)(2), burners who process or re-refine used oil shall comply with Section R315-15-5;

(4) Burners who direct shipments of off-specification used oil from their facility to an off-specification used oil burner or first claim that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in R315-15-1.2 shall comply with R315-15-7 and R315-15-13.7;

(5) Burners who dispose of used oil shall comply with R315-15-8; and

(6) Burners who collect used oil shall also comply with the collection center requirements in R315-15-3. Burners may only burn used oil collected from other generators if that used oil has been certified to be on-specification used oil by a Utah-registered used oil marketer in compliance with R315-15-7. Burners who collect and burn used oil that is not "do-it-yourselfer" or farmer-generated as described in R315-15-2.1(a)(1) and (4), shall obtain a used oil marketer registration before burning such oil and shall comply with the provisions of R315-15-7.

(7) Tanks, containers, and piping that previously contained listed hazardous waste. Unless tanks, containers, and piping that previously contained listed hazardous waste are decontaminated as described in R315-2-7 prior to storing used oil, the used oil is considered to have been mixed with the hazardous waste and shall be managed as hazardous waste unless, under the provisions of R315-15-1.1(b), the hazardous waste and used oil mixture is determined not to be hazardous waste.

(8) Tanks, containers, and piping that previously contained PCB-contaminated material. Unless tanks, containers, and piping that previously contained PCB-contaminated material are decontaminated as described in 40 CFR 761 Subpart S prior to

transfer of used oil, the used oil is considered to have been mixed with the PCB-contaminated material and shall be managed as PCB-contaminated material in accordance with R315-15-18.

(c) Off-specification used oil burner permit. Off-specification used oil burners shall obtain a permit from the Director prior to burning off-specification used oil unless exempted by R315-15-13.6(b)(5). An application for a permit shall contain the information required by R315-15-13.6(b). Off-specification used oil burners shall also obtain a used oil handler certificate in accordance with R315-15-13.8.

(d) Testing of used oil fuel for PCBs. Used oil to be burned for energy recovery is presumed to contain quantifiable levels, 2 ppm or greater, of PCBs unless a used oil marketer obtains laboratory analyses that the used oil fuel does not contain quantifiable levels of PCBs. The person who first claims that the used oil fuel does not contain a quantifiable level of PCBs shall obtain analyses or other information to support the claim, as described in R315-15-18.

6.2 RESTRICTIONS ON BURNING

(a) Off-specification used oil fuel may be burned for energy recovery in only the following devices:

(1) Industrial furnaces identified in R315-1-1(b), which incorporates by reference 40 CFR 260.10;

(2) Boilers, as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, that are identified as follows:

(i) Industrial boilers located on the site of a facility engaged in a manufacturing process where substances are transformed into new products, including the component parts of products, by mechanical or chemical processes;

(ii) Utility boilers used to produce electric power, steam, heated or cooled air, or other gases or fluids for sale;

(iii) Used oil-fired space heaters provided that the burner meets the provisions of R315-15-2.4; or

(3) Hazardous waste incinerators subject to regulation under R315-7-22 or R315-8-15.

(b)(1) With the exception of the aggregation activity described in R315-15-6.2(b)(2), used oil burners may not process used oil unless they also comply with R315-15-5.

(2) Off-specification used oil burners may aggregate off-specification used oil with virgin oil or on-specification used oil for purposes of burning, but may not aggregate for purposes of marketing on-specification used oil without also complying with the processor/re-refiner requirements in R315-15-5.

(c) Burning of hazardous waste. Used oil burners may only burn hazardous waste if they are permitted to do so by the Director.

6.3 NOTIFICATION FOR OFF-SPECIFICATION USED OIL BURNERS

(a) Identification numbers. Off-specification used oil burners who have not previously complied with the notification requirements of RCRA section 3010 shall comply with these requirements and obtain an EPA identification number.

(b) Mechanics of notification. An off-specification used oil burner who has not received an EPA identification number may obtain one by notifying the Director of their used oil activity by submitting either:

(1) A completed EPA Form 8700-12.; or

(2) A letter to the Director requesting an EPA identification number. The letter shall include the following information:

(i) Burner company name;

(ii) Owner of the burner company;

(iii) Mailing address for the burner;

(iv) Name and telephone number for the burner point of contact;

(v) Type of used oil activity; and

(vi) Location of the burner facility.

6.4 REBUTTABLE PRESUMPTION FOR USED OIL

(a) To ensure that used oil managed at a used oil burner facility is not hazardous waste under the rebuttable presumption of Subsection R315-15-1.1(b)(1)(ii), a used oil burner shall determine whether the total halogen content of used oil managed at the facility is above or below 1,000 ppm.

(b) The used oil burner shall determine if the used oil contains above or below 1,000 ppm total halogens by

(1) Testing the used oil;

(2) Applying documented generator knowledge of the halogen content of the used oil in light of the materials and processes used; or

(3) Using information provided by the processor/re-refiner, if the used oil has been received from a processor/re-refiner subject to regulation under R315-15-5.

(c) If the used oil contains greater than or equal to 1,000 ppm total halogens, it is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in R315-2-10. The owner or operator may rebut the presumption by demonstrating that the used oil does not contain hazardous waste, for example, by using an analytical method from SW-846, Edition III update IV, to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in R315-50-10, which incorporates by reference 40 CFR 261 Appendix VIII.

(1) The rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed through a tolling arrangement, as described in R315-15-2.5(c), to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner or disposed.

(2) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units.

(d) Record retention. Records of analyses conducted or information used to comply with R315-15-6.4(a), (b), and (c) shall be maintained at the burner facility or another facility approved by the Director for at least 3 years.

6.5 USED OIL STORAGE AT OFF-SPECIFICATION USED OIL BURNER FACILITIES

Off-specification used oil burners are subject to all applicable Spill Prevention, Control and Countermeasures, 40 CFR part 112, in addition to the requirements of R315-15-6. Used oil burners are also subject to the standards and requirements of R311-200 through R311-209, Underground Storage Tanks, for used oil stored in underground tanks whether or not the used oil exhibits any characteristics of hazardous waste, in addition to the requirements of R315-15-6.

(a) Storage units. Off-specification used oil burners may not store used oil in units other than tanks, containers or units subject to regulation under R315-7 and R315-8.

(b) Condition of units. Containers and aboveground tanks used to store oil at off-specification used oil burner facilities shall be:

(1) In good condition, with no severe rusting, apparent structural defects, or deterioration; and

(2) Not leaking.

(c) Secondary containment. Containers and aboveground tanks used to store off-specification used oil at burner facilities, including their pipe connections and valves, shall be equipped with a secondary containment system.

(1) The secondary containment system shall consist of:

(i) Dikes, berms, or retaining walls; and

(ii) A floor. The floor shall cover the entire area within the dike, berm, or retaining wall, except areas where existing portions of aboveground tanks meet the ground.

(iii) Other equivalent secondary containment approved by

the Director.

(2) The entire containment system, including walls and floor, shall be of sufficient extent and sufficiently impervious to used oil to prevent any used oil released into the containment system from migrating out of the system to the soil, groundwater, or surface water.

(3) Any accumulation of water, used oil, or other liquid shall be removed from secondary containment within 24 hours of discovery.

(4) Used oil shall not be stored or allowed to accumulate in sumps and similar water-containment structures at the facility. Any used oil in sumps and similar water-containment structures shall be removed within 24 hours of its discovery.

(d) Labels.

(1) Containers and aboveground tanks used to store off-specification used oil at burner facilities shall be labeled or marked clearly with the words "Used Oil."

(2) Fill pipes used to transfer off-specification used oil into underground storage tanks at burner facilities shall be labeled or marked clearly with the words "Used Oil."

(e) Response to releases. Upon detection of a release of used oil to the environment not subject to the requirements of R311-202-1, a burner shall comply with R315-15-9.

6.6 TRACKING FOR OFF-SPECIFICATION USED OIL FACILITIES

(a) Acceptance. Off-specification used oil burners shall keep a record of each off-specification used oil shipment accepted for burning. These records may take the form of a log, invoice, manifest, bill of lading, or other shipping documents. Records for each shipment shall include the following information:

(1) The name and address of the transporter who delivered the used oil to the burner;

(2) The name and address of the generator or processor/re-refiner from whom the used oil was sent to the burner;

(3) The EPA identification number of the transporter who delivered the used oil to the burner;

(4) The EPA identification number, if applicable, of the generator or processor/re-refiner from whom the used oil was sent to the burner;

(5) The quantity of used oil accepted;

(6) The date of acceptance; and

(7) Documentation demonstrating that the transporter has met the rebuttable presumption requirements of R315-15-6.4 and, where applicable, the PCB testing requirements of R315-15-18;

(b) Record retention. The records described in paragraph (a) of this section shall be maintained for at least three years.

6.7 NOTICES

(a) Certification. Before a burner accepts the first shipment of off-specification used oil fuel from a generator, transporter, or processor/re-refiner, the burner shall provide to the generator, transporter, or processor/re-refiner a one-time written and signed notice certifying that:

(1) The burner has notified the Director of the location and general description of the burner's used oil management activities; and

(2) The burner will burn the off-specification used oil only in an industrial furnace or boiler identified in R315-15-6.2(a).

(b) Certification retention. The certification described in R315-15-6.7(a) shall be maintained, at the permitted facility or other location approved by the Director, for three years from the date the burner last receives shipment of off-specification used oil from that generator, transporter, or processor/re-refiner.

6.8 MANAGEMENT OF RESIDUES AT OFF-SPECIFICATION USED OIL BURNER FACILITIES

Off-specification used oil burners who generate residues from the storage or burning of used oil shall manage the residues as specified in R315-15-1.1(e).

6.9 ACCEPTANCE OF OFF-SITE USED OIL

Off-specification used oil burners accepting used oil from off-site shall ensure that transporters delivering used oil to their facility have obtained a current used oil transporter permit and an EPA identification number.

R315-15-7. Standards for Used Oil Fuel Marketers.

7.1 APPLICABILITY

(a) Any person who conducts either of the following activities is a used oil fuel marketer and is subject to the requirements of R315-15-7 and R315-15-13.7:

(1) Directs a shipment of off-specification used oil from their facility to a used oil burner; or

(2) First determines and claims that used oil that is to be burned for energy recovery meets the used oil fuel specifications set forth in R315-15-1.2.

(b) The following persons are not used oil fuel marketers subject to R315-15-7:

(1) Used oil generators, and transporters who transport used oil received only from generators, unless the generator or transporter directs a shipment of off-specification used oil from their facility to a used oil burner. However, processors/re-refiners who burn some used oil fuel for purposes of processing are considered to be burning incidentally to processing. Thus, generators and transporters who direct shipments of off-specification used oil to processors/re-refiners who incidentally burn used oil are not marketers subject to R315-15-7;

(2) Persons who direct shipments of on-specification used oil and who are not the first person to claim the oil meets the used oil fuel specifications of R315-15-1.2.

(c) Any person subject to the requirements of R315-15-7 shall also comply with one of the following:

(1) R315-15-2 - Standards for Used Oil Generators;

(2) R315-15-4 - Standards for Used Oil Transporters and Transfer Facilities;

(3) R315-15-5 - Standards for Used Oil Processors and Re-refiners; or

(4) R315-15-6 - Standards for Used Oil Burners who Burn Off-Specification Used Oil for Energy Recovery.

(d) A person may not act as a used oil fuel marketer without receiving a registration number and a used oil handler certificate, both issued by the Director as required by R315-15-13.7 and R315-15-13.8.

7.2 PROHIBITIONS

A used oil fuel marketer may initiate a shipment of off-specification used oil only to a used oil burner who:

(a) Has an EPA identification number; and

(b) Burns the used oil in an industrial furnace or boiler identified in R315-15-6.2(a).

7.3 ON-SPECIFICATION USED OIL FUEL

(a) Analysis of used oil fuel. A used oil fuel marketer who is a used oil generator, transporter, transfer facility, processor/re-refiner, or burner may determine that used oil that is to be burned for energy recovery meets the fuel specifications of R315-15-1.2 and the PCB requirements of R315-15-18 by performing analyses or obtaining copies of analyses or other information approved by the Director documenting that the used oil fuel meets the specifications. Used oil is not considered to be on-specification until it has been certified as such by a registered used oil fuel marketer in accordance with the used oil fuel marketer's analysis plan, approved by the Director.

(b) Record retention. A generator, transporter, transfer facility, processor/re-refiner, or burner who first certifies that used oil that is to be burned for energy recovery meets the specifications for used oil fuel under R315-15-1.2 and the PCB requirements of R315-15-18 shall keep copies of analyses of the used oil, or other information used to make the determination, for three years.

7.4 NOTIFICATION

(a) Identification numbers. A used oil fuel marketer subject to the requirements of R315-15-7 who has not previously complied with the notification requirements of RCRA section 3010 shall comply with these requirements and obtain an EPA identification number.

(b) A marketer who has not received an EPA identification number may obtain one by notifying the Director of their used oil activity by submitting either:

(1) A completed EPA Form 8700-12; or

(2) A letter to the Director requesting an EPA identification number. The letter shall include the following information:

(i) Marketer company name;

(ii) Owner of the marketer;

(iii) Mailing address for the marketer;

(iv) Name and telephone number for the marketer point of contact; and

(v) Type of used oil activity, e.g., generator directing shipments of off-specification used oil to a burner.

7.5 TRACKING

(a) Off-specification used oil delivery. Any used oil marketer who directs a shipment of off-specification used oil to a burner shall keep a record of each shipment of used oil to a used oil burner. These records may take the form of a log, invoice, manifest, bill of lading or other shipping documents. Records for each shipment shall include the following information:

(1) The name and address of the transporter who delivers the used oil to the burner;

(2) The name and address of the burner who will receive the used oil;

(3) The EPA identification number of the transporter who delivers the used oil to the burner;

(4) The EPA identification number of the burner;

(5) The quantity of used oil shipped; and

(6) The date of shipment.

(b) On-specification used oil delivery. A generator, transporter, transfer facility, processor/re-refiner, or burner who first certifies that used oil that is to be burned for energy recovery meets the fuel specifications under R315-15-1.2 shall keep a record of each shipment of used oil to an on-specification used oil burner. Records for each shipment shall include the following information:

(1) The name and address of the facility receiving the shipment;

(2) The quantity of used oil fuel delivered;

(3) The date of shipment or delivery; and

(4) A cross-reference to the record of used oil analysis or other information used to make the determination that the oil meets the specifications required under R315-15-7.3(a) and the PCB requirements of R315-15-18.

(c) Record retention. The records described in R315-15-7.5(a) and (b) shall be maintained for at least three years.

7.6 NOTICES

(a) Certification. Before a used oil generator, transporter, transfer facility, or processor/re-refiner directs the first shipment of off-specification used oil fuel to a burner, he shall obtain a one-time written and signed notice from the burner certifying that:

(1) The burner has notified the Director stating the location and general description of used oil management activities; and

(2) The burner has obtained an EPA identification number and, if the off-specification used oil is burned in Utah, an off-specification used oil burner permit and current used oil handler certificate from the Director; and

(3) The burner will burn the off-specification used oil only in an industrial furnace or boiler identified in R315-15-6.2(a).

(b) Certification retention. The certification described in

R315-15-7.6(a) of this section shall be maintained for three years, at the permitted facility or other location approved by the Director, from the date the last shipment of off-specification used oil is shipped to the burner.

7.7 LABORATORY ANALYSES

Used oil marketers shall use a Utah-certified laboratory, as specified in R315-15-1.8, to satisfy the analytical requirements of R315-15-7.

R315-15-8. Standards for the Disposal of Used Oil.

8.1 APPLICABILITY

The requirements of R315-15-8 apply to all used oils that cannot be recycled and are therefore being disposed.

8.2 DISPOSAL

(a) Disposal of hazardous used oils. Used oils that are identified as a hazardous waste and that cannot be recycled in accordance with R315-15 shall be managed in accordance with the hazardous waste management requirements of R315-1 through R315-14, and R315-50.

(b) Disposal of nonhazardous used oils. Used oils that are not hazardous wastes and cannot be recycled under Rule R315-15 shall be disposed in a solid waste disposal facility meeting the applicable requirements of Rules R315-301 through R315-318.

8.3 USE AS A DUST SUPPRESSANT, WEED SUPPRESSANT, OR FOR ROAD OILING

The use of used oil as a dust suppressant, weed suppressant, or for road oiling or other similar use is prohibited.

R315-15-9. Emergency Controls.

9.1 IMMEDIATE ACTION

In the event of a release of used oil, the person responsible for the material at the time of the release shall immediately:

(a) Take appropriate action to minimize the threat to human health and the environment.

(1) Stop the release;

(2) Contain the release;

(3) Clean up and manage properly the released material as described in R315-15-9.3; and

(4) If necessary, repair or replace any leaking used oil tanks, containers, and ancillary equipment prior to returning them to service.

(b) Notify the Utah State Department of Environmental Quality, 24-hour Answering Service, 801-536-4123 for used oil releases exceeding 25 gallons, or smaller releases that pose a potential threat to human health or the environment. Small leaks and drips from vehicles are considered de minimis and are not subject to the release clean-up provisions of R315-15-9.

(c) Provide the following information when reporting the release:

(1) Name, phone number, and address of person responsible for the release.

(2) Name, title, and phone number of individual reporting.

(3) Time and date of release.

(4) Location of release--as specific as possible including nearest town, city, highway, or waterway.

(5) Description contained on the manifest and the amount of material released.

(6) Cause of release.

(7) Possible hazards to human health or the environment and emergency action taken to minimize that threat.

(8) The extent of injuries, if any.

(d) An air, rail, highway, or water transporter who has discharged used oil shall:

(1) Give notice, if required by 49 CFR 171.15 to the National Response Center, <http://nrc.uscg.mil/nrchp.html>, 800-424-8802 or 202-426-2675; and

(2) Report in writing as required by 49 CFR 171.16 to the Director, Office of Hazardous Materials Regulations, Materials

Transportation Bureau, Department of Transportation, Washington, D.C. 20590.

(e) A water, bulk shipment, transporter who has discharged used oil shall give the same notice as required by 33 CFR 153.203 for oil and hazardous substances.

9.2 EMERGENCY CONTROL VARIANCE

If a release of used oil requires immediate removal to protect human health or the environment, as determined by the Director, a variance to the used oil transporter permit and used oil handler certificate requirement and the US EPA identification number requirement for used oil transporters may be granted by the Director until the released material and any residue or contaminated soil, water, or other material resulting from the release no longer presents an immediate hazard to human health or the environment, as determined by the Director.

9.3 RELEASE CLEAN-UP

The person responsible for the material at the time of the release shall clean up all the released material and any residue or contaminated soil, water or other material resulting from the release or take action as may be required by the Director so that the released material, residue, or contaminated soil, water, or other material no longer presents a hazard to human health or the environment. The Director may require releases to be cleaned up to standards found in US EPA Regional Screening Levels. The cleanup or other required actions shall be at the expense of the person responsible for the release.

9.4 REPORTING

Within 15 days after any release of used oil that is reported under R315-15-9.1(b), the person responsible for the material at the time of the release shall submit to the Director a written report that contains the following information:

(a) The person's name, address, and telephone number;

(b) Date, time, location, and nature of the incident;

(c) Name and quantity of material(s) involved;

(d) The extent of injuries, if any;

(e) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and

(f) The estimated quantity and disposition of recovered material that resulted from the incident.

R315-15-10. Financial Requirements.

(a) Used oil activities. An owner or operator of an off-specification burner facility, transportation facility, processing/re-refining facility, or transfer facility, or a group of such facilities, is financially responsible for:

(1) cleanup and closure costs;

(2) general liabilities, including operation of motor vehicles, worker compensation and contractor liability; and

(3) environmental pollution legal liability for bodily injury or property damage to third parties resulting from sudden or non-sudden used oil releases.

(i)(A) The owner or operator of a permitted used oil facility or operation shall present evidence satisfactory to the Director of its ability to meet these financial requirements.

(B) The owner or operator shall present with its permit application the information the Director requires to demonstrate its general comprehensive liability coverage.

(C) The owner or operator shall use the financial mechanisms described in R315-15-12 to demonstrate its ability to meet the financial requirements of R315-15-10(a)(1) and (a)(3).

(ii) In approving the financial mechanisms used to satisfy the financial requirements, the Director will take into account existing financial mechanisms already in place by the facility if required by R315-7-15, R315-8-8, and R311-201-6. Additionally, the Director will consider other relevant factors in approving the financial mechanisms, such as the volumes of used oil handled and existing secondary containment.

(iii) Financial responsibility, environmental pollution legal liability and general liability coverage shall be provided to the Director as part of the permit application and approval process and shall be maintained until released by Director.

(iv) Changes in extent, type, or amount of the environmental pollution legal liability and financial responsibility shall be considered a permit modification requiring notification to and approval from the Director.

(b)(1) Environmental pollution legal liability coverage for third party damages at used oil facilities. Each used oil processor, re-refiner, transfer facility, and off-specification burner shall obtain and maintain environmental pollution liability coverage for bodily injury and property damage to third parties resulting from sudden and non-sudden accidental releases of used oil at its facility. This liability coverage shall be maintained for the duration of the permit or until released by the Director as provided for in R315-15-10.

(2) Changes in extent, type, or amount of the financial mechanism will be considered a permit modification requiring notification to and approval from the Director. The minimum amount of environmental pollution legal liability coverage using an assurance mechanism as specified in this section for third-party damages shall be:

(i) For operations where individual volumes of used oil are greater than 55 gallons, such as tanks, storage vessels, used oil processing equipment, and that are raised above grade-level sufficiently to allow for visual inspection of the underside for releases shall be required to obtain coverage in the amount of \$1 million per occurrence for sudden releases, with an annual aggregate coverage of \$2 million, exclusive of legal defense costs; and

(ii) For operations in whole or part that do not qualify under R315-15-10(b)(1), coverage shall be in the amount of \$1 million per occurrence for sudden releases, with an annual aggregate coverage of \$2 million, and \$3 million per occurrence for non-sudden releases, with an annual aggregate coverage of \$6 million, exclusive of legal defense costs;

(iii) For operations covered under R315-15-10(b)(2), the owner or operator may choose to use a combined liability coverage for sudden and non-sudden accidental releases in the amount of \$4 million per occurrence, with an annual aggregate coverage of \$8 million, exclusive of legal defense costs.

(c) Used oil transporter environmental pollution legal liability coverage for third party damages. Each used oil transporter shall obtain environmental pollution legal liability coverage for bodily injury and property damage to third parties covering sudden accidental releases of used oil from its vehicles and other equipment and containers used during transit, loading, and unloading in Utah, and shall maintain this coverage for the duration of the permit or until released by the Director as provided for R315-15-10. The minimum amount of the coverage for used oil transporters shall be \$1 million per occurrence for sudden releases, with an annual aggregate coverage of \$2 million, exclusive of legal defense costs. Changes in extent, type, or amount of the liability coverage shall be considered a permit modification requiring notification to and approval from the Director.

(d) An owner or operator responsible for cleanup and closure under R315-15-11 or environmental pollution legal liability for bodily injury and property damage to third parties under R315-15-10(b) and (c) shall demonstrate its ability to satisfy its responsibility to the Director through the use of an acceptable financial assurance mechanism indicated under R315-15-12.

(e) Used Oil Collection Centers. Except for DIYers, who are subject to Utah Code Annotated 19-6-718, an owner of a used oil collection center shall be subject to the same liability requirements as a permitted facility under R315-15-10(a) and (b) unless these requirements are waived by the Director. In

accordance with Utah Code Annotated 19-6-710, the Director may waive the requirement of proof of liability insurance or other means of financial responsibility that may be incurred in collecting or storing used oil if the following criteria are satisfied:

(1) The used oil storage tank or container is in good condition with no severe rusting, apparent structural defects or deterioration, and no visible leaks;

(2) There is adequate secondary containment for the tank or container that is impervious to used oil to prevent any used oil released into the secondary containment system from migrating out of the system;

(3) The storage tank or container is clearly labeled with the words "Used Oil";

(4) DIYer log entries are complete including the name and address of the generator, date and quantity of used oil received; and

(5) Oil sorbent material is readily available on site for immediate cleanup of spills.

(f) The Director shall waive an owner or operator from its existing financial responsibility mechanism as described in R315-15-10 when:

(1) The Director approves an alternative mechanism;

(2) The owner or operator has achieved cleanup and closure according to R315-15-11; or

(3) The Director determines that financial responsibility is no longer applicable under R315-15.

(g) State of Utah and Federal government used oil permittees are exempt from the requirements of R315-15-10.

R315-15-11. Cleanup and Closure.

11.1 The owner or operator of a used oil collection, aggregation, transfer, processing/re-refining, or off-specification used oil burning facility shall remove all used oil and used oil residues from the site of operation and return the site to a post-operational land use in a manner that:

(a) Minimizes the need for further maintenance;

(b) Controls, minimizes, or eliminates, to the extent necessary to protect human health and the environment, post-closure escape of used oil, used oil constituents, leachate, contaminated run-off, or used oil decomposition products to the ground or surface waters, or to the atmosphere; and

(c) Complies with the closure requirements of R315-15-11 or supplies evidence acceptable to the Director demonstrating a closure mechanism meeting the requirements of R315-7-15 and R315-8-8.

(d) The permittee shall be responsible for used oil, used oil contaminants, or used oil residual materials that have been discharged or migrate beyond the facility property boundary. The permittee is not relieved of all or any responsibility to cleanup, remedy or remediate a release that has discharged or migrated beyond the facility boundary where off-site access is denied. When off-site access is denied, the permittee shall demonstrate to the satisfaction of the Director that, despite the permittee's best efforts, the permittee was unable to obtain the necessary permission to undertake the actions to cleanup, remedy or remediate the discharge or migration. The responsibility for discharges or migration beyond the facility property boundary does not convey any property rights of any sort, or any exclusive privilege to the permittee.

11.2 CLEANUP AND CLOSURE PLAN

(a) Written plan.

(1) The owner or operator of a used oil transfer, off-specification burner, or processing/re-refining facility shall have a written cleanup and closure plan. The cleanup and closure plan shall be submitted to the Director for approval as part of the permit application.

(2) When physical or operational conditions at the facility change that result in a change in the nature or extent of cleanup

and closure or an increase in the estimated costs of cleanup and closure, the owner or operator shall submit a modified plan for review and approval by the Director.

(3) Changes in the amount or face value of a financial mechanism that are the result of the annual inflation update from the application of the implicit price deflator multiplier to a permit cleanup and closure plan cost estimate shall not require approval by the Director.

(4) The adjustment shall be made by recalculating the cleanup closure cost estimate in current dollars or by using an inflation factor derived from the most recent Implicit Price Deflator for Gross Domestic Product published by the U.S. Department of Commerce, Bureau of Economic Analysis in its Survey of Current Business as specified in 40 CFR 264.145(b)(1) and (2). The inflation factor is the incremental increase of the latest published annual Deflator to the Deflator for the previous year divided by the previous year Deflator. The first adjustment is made by multiplying the cleanup closure cost estimate by the inflation factor. The result is the adjusted cleanup closure cost estimate. Subsequent adjustments are made by multiplying the latest adjusted cleanup closure cost estimate by the latest inflation factor.

(b) Content of plan. The plan shall identify steps necessary to perform partial or final cleanup and closure of the facility at any point during its active life.

(1) The cleanup and closure plan shall be based on third-party, direct-estimated costs or on third-party costs using RS Means methods, applications, procedures, and use cost values applicable to the location of the facility and include, at least:

(i) A description of how each used oil management unit at the facility will be closed.

(ii) A description of how final cleanup and closure of the facility will be conducted. The description shall identify the maximum extent of the operations that will be cleaned, closed, or both during the active life of the facility.

(iii) The highest cost estimate of the maximum inventory of used oil to be stored onsite at any one time during the life of the facility and a detailed description of the methods to be used during partial cleanup and closure final cleanup and closure, or both, including, but not limited to, methods for removing, transporting, or disposing of all used oil, and identification of the off-site used oil facilities to be used, if applicable.

(iv) A detailed description of the steps needed to remove or decontaminate all used oil and used oil residues and contaminated containment system components, equipment, structures, and soils during partial or final cleanup and closure, including procedures for cleaning equipment and removing contaminated soils, methods for sampling and testing surrounding soils, and criteria for determining the extent of decontamination required to satisfy closure. This description shall address the management and disposal of all residues resulting from the decontamination activity, including, but not limited to, rinse waters, rags, personal protective equipment, small hand implements, vehicles, and mechanized equipment.

(v) A detailed description of other activities necessary during the cleanup and closure period to ensure that all partial closures shall satisfy the final cleanup and closure plan.

(vi) A cleanup and closure cost estimate and a mechanism for financial responsibility to cover the cost of cleanup and closure

(vii) State of Utah and Federal government used oil permittees are exempt from the requirements of R315-15-11(b)(1)(vi).

(2) The owner or operator shall update its cleanup and closure plan cost estimate and provide the updated estimate to the Director, in writing, within 60 days following a facility modification that causes an increase in the amount of the financial responsibility required under R315-15-10. Within 30 days of the Director's approval of a permit modification for the

cleanup and closure plan that would result in an increased cost estimate, the owner or operator shall provide to the Director:

(i) evidence that the financial assurance mechanism amount or value includes the cleanup and closure cost estimate increase; or

(ii) other mechanisms covering the increased closure plan cost estimate and a summary document indicating the multiple financial mechanisms, by mechanism name, account number, and the amounts to satisfy R315-15-10 and 11.

(c) The owner or operator shall update the cleanup and closure cost estimate to adjust for inflation and include the updated estimate in the permitted facility's annual report due by March 1st of each year, using either:

(1) the multiplier formed from the gross domestic product implicit price deflator ratio of the current calendar year to the past calendar year as published by the federal government Bureau of Economic Analysis; or

(2) new cleanup and closure cost estimate from the recalculation of the cleanup and closure plan costs to account for all changes in scope and nature of the facility or facilities, in current dollars.

11.3 TIME ALLOWED TO INITIATE CLOSURE

(a) The owner or operator shall initiate closure in accordance with the approved cleanup and closure plan and notify the Director that closure has been initiated:

(1) Within 90 days after the owner or operator receives the final volume of used oil; or

(2) Within 90 days after the Director revokes the facility's used oil permit.

(b) During the cleanup and closure period or at any other time, if the Director determines that the owner or operator has failed to comply with R315-15, the Director may, after 30 days following written notice to the owner or operator, draw upon the financial mechanism associated with the cleanup and closure plan for the facility or facilities covered by the financial responsibility requirements of R315-15-10.

11.4 CERTIFICATION OF CLOSURE

(a) Within 60 days of completion of cleanup and closure, the owner or operator of a permitted used oil facility shall submit to the Director, by registered mail, a certification that the used oil facility has been cleaned and closed in accordance with the specifications in the approved cleanup and closure plan. The certification shall be signed by the owner or operator and by an independent, Utah-registered professional engineer.

(b) The Director shall make the determination of whether cleanup and closure has been completed according to the cleanup and closure plan and R315-15.

R315-15-12. Financial Assurance.

12.1 DEFINITIONS

For the purposes of R315-15-12, the following definitions apply:

(a) "Existing used oil facility" means any used oil transfer facility, off-specification burner, or used oil processing/re-refining facility in operation on July 1, 1993 under a used oil operating permit issued by the Division of Oil, Gas and Mining and in effect on or before June 30, 1993. An existing used oil facility is also required to obtain a permit from the Director in accordance with R315-15-13.

(b) "New used oil facility" means any used oil transfer, off-specification burner, or used oil processing/re-refining facility that was not in operation as a used oil facility on July 1, 1993, and received an operating permit in accordance with R315-15-13 from the Director after July 1, 1993.

(c) "Financial assurance mechanism" means "reclamation surety" as used in Utah Code Annotated 19-6-709 and 19-6-710 of the Used Oil Management Act.

12.2 APPLICABILITY

(a) The owner or operator of an existing or new used oil

facility requiring a permit under R315-15-13 shall establish a financial assurance mechanism as evidence of financial responsibility under R315-15-10 sufficient to assure cleanup and closure of the facility in conformance with R315-15-11.1 with one or more of the financial assurance mechanisms of R315-15-12.3 prior to receiving a permit from the Director.

(b) Any increase in capacity to store or process used oil at a used oil facility permitted by the Director, above the storage or processing capacity identified in the permit application approved by the Director, shall require the owner or operator of the permitted used oil facility to increase the amount or face value of the financial assurance mechanism to meet the additional capacity. The additional amount or increase in face value of financial assurance mechanism shall be in place and effective before operation of the increased storage or processing capacity and shall meet the requirements of R315-15-12.3 and R315-15-12.4.

(c) DIYer used oil collection centers, generator used oil collection centers, and used oil aggregation points are not required to post a financial assurance mechanism, but are subject to the cleanup and closure requirements of R315-15-10 and R315-15-11 unless they have received a waiver in writing from the Director as identified in R315-15-10(e).

12.3 FINANCIAL ASSURANCE MECHANISMS

(a) Any financial assurance mechanism used to show financial responsibility under R315-15-10 and 11 for an existing or new used oil facility shall:

(1) be legally valid, binding, and enforceable under Utah and federal law;

(2) be approved by the Director;

(3) ensure that funds will be available in a timely fashion for:

(i) completing all cleanup and closure activities indicated in the closure plan of the permit approved by the Director; and

(ii) environmental pollution legal liability for third party damages for bodily injury and property damage resulting from a sudden or non-sudden accidental release of used oil from or arising from permitted operations; and

(4) require a written notice sent by certified mail to the Director 120 days prior to cancellation or termination of the financial mechanism.

(5) be updated each year to adjust for inflation, using either:

(i) the gross domestic product implicit price deflator ratio of the increase of the current calendar year to the past calendar year or

(ii) a new estimated cleanup and closure cost estimate recalculated to account for all changes in scope and nature of the permitted operation.

(b) The owner or operator of an existing or new used oil facility shall establish a financial assurance mechanism for cleanup and closure by one of the following mechanisms and shall submit a signed original or an original signed duplicate of the financial assurance mechanism to the Director for approval as part of the permit application:

(1) Trust Fund.

(i) The trustee shall be an entity that has the authority to act as a trustee and whose operations are regulated and examined by a federal or state agency.

(ii) A signed original or an original signed duplicate of the trust agreement and accompanied by a formal certification of acknowledgement shall be submitted to the Director.

(iii) For trust funds that are fully funded at the time of permit approval, an annual trust valuation shall be certified and submitted to the Director. The permittee shall provide evidence annually, upon the anniversary of the trust agreement, that the trust remains fully funded.

(iv) For trust funds not fully funded at the time of permit approval by the Director, incremental payments into the trust

fund shall be made annually by the owner or operator to fully fund the trust within five years of the Director's approval of the permit as follows:

(A) initial payment value shall be the initial cleanup and closure cost estimate value divided by the pay-in period, not to exceed five years, and

(B) next payment value shall be the difference of the approved current cleanup and closure cost estimate less the trust fund value, all divided by the remaining number of years in the pay-in period, and

(C) subsequent next payments shall be made into the trust fund annually on or before the anniversary date of the initial payment made into the trust fund and reported in accordance with the approved trust agreement, and

(D) no later than 30 days after the last incremental payment to fully fund the trust, the permittee shall provide proof to the Director that the trust fund has been fully funded according to the current permitted cleanup and closure cost estimate.

(E) The facility shall submit an annual valuation of the trust to the Director on or before the anniversary date of the trust.

(v) For a new used oil facility, the payment into the trust fund shall be made before the initial receipt of used oil.

(vi) The owner or operator, or other person authorized to conduct cleanup and closure activities may request reimbursement from the trustee for cleanup and closure completed when approved in writing by the Director.

(vii) The request for reimbursement may be granted by the trustee as follows:

(A) only if sufficient funds exist to cover the reimbursement request; and

(B) if justification and documentation of the cleanup and closure expenditures are submitted to and approved by the Director in writing prior to the trustee granting reimbursement.

(viii) The Director may cancel the incremental trust funding option at any time and require the permittee to provide either a fully funded trust or other cleanup and closure financial mechanism as provided in R315-15-12 under the following conditions:

(A) upon the insolvency of the permittee, or

(B) when a violation of R315-15-10, 11 or 12 has been determined.

(ix) The trust agreement shall follow the wording provided by the Director as identified in R315-15-17.2.

(2) Surety Bond Guaranteeing Payment.

(i) The bond shall be effective before the initial receipt of used oil.

(ii) The surety company issuing the bond shall, at a minimum, be among those listed as acceptable sureties on Federal bonds in Circular 570 of the U.S. Department of the Treasury and the owner or operator shall notify the Director that a copy of the bond has been placed in the operating record.

(iii) The penal sum of the bond shall be in an amount at least equal to the cleanup and closure cost estimate developed under R315-15-11.2.

(iv) Under the terms of the bond, the surety shall become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.

(v) The owner or operator shall establish a standby trust agreement at the time the bond is established.

(A) The standby trust agreement shall meet the requirements of R315-15-12.3(b)(1), except for R315-15-12.3(b)(1)(iii), (viii), and (ix) and the standby trust agreement shall follow the wording provided by the Director as identified in R315-15-17.14.

(B) Payment made under the terms of the bond shall be deposited by the surety directly into the standby trust agreement and payments from the standby trust fund shall be approved by

the trustee with the written concurrence of the Director.

(vi) The surety bond shall automatically be renewed on the expiration date unless cancelled by the surety company 120 days in advance by sending both the bond applicant and the Director a written cancellation notice by certified mail.

(vii) The bond applicant may terminate the bond for nonpayment of fee by providing written notice, by certified mail, to the Director 120 days prior to termination.

(viii) Any change to the form or content of the surety bond shall be submitted to the Director for approval and acceptance.

(ix) The surety bond shall follow the language provided by the Director found in R315-15-17.3.

(3) Letter of Credit

(i) The letter of credit shall be effective before the initial receipt of used oil

(ii) The financial institution issuing the letter of credit shall be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a state or federal agency.

(iii) The letter of credit shall be issued in an amount at least equal to the cleanup and closure cost estimate developed under R315-15-11.2.

(iv) The owner or operator shall establish a standby trust agreement at the time the letter of credit is established.

(A) The standby trust agreement shall meet the requirements of R315-15-12.3(b)(1), except for Subsections R315-15-12.3(b)(1)(iii), (viii), and (ix) and the standby trust agreement shall follow the language incorporated by reference in R315-15-17.14.

(B) Payment made under the terms of the letter of credit shall be deposited by the surety directly into the standby trust and payments from the standby trust fund shall be approved by the trustee with the written concurrence of the Director.

(vi) The letter of credit shall follow the wording provided by the Director as identified in R315-15-17.4.

(4) Insurance.

(i) The insurance shall be effective before the initial receipt of used oil.

(C) Insurance coverage period shall be the earliest date of permit issuance or a retroactive date established by the earliest period of coverage for any financial assurance mechanism.

(ii) At a minimum, the insurer shall be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states.

(iii) The insurance policy shall guarantee that funds will be available to perform the cleanup and closure activities approved by the Director.

(iv) The policy shall guarantee that the insurer will be responsible for the paying out of funds to the owner or operator or person authorized to conduct the cleanup and closure activities, as approved by the Director, up to an amount equal to the face amount of the policy. Payment of any funds by the insurer shall be made with the written concurrence of the Director.

(A) The Insurer shall establish a standby trust agreement for only the benefit of the Director when the Director notifies the Insurer that the Director is making a claim, as provided for in R315-15, for cleanup and closure of a permitted used oil transfer, processor, re-refiner, or off-specification burner facility.

(B) The Insurer shall place the face value of the applicable coverage in the trust within 30 days of establishing the standby trust agreement.

(C) The standby trust agreement shall meet the requirements of R315-15-12.3(b)(1), except for R315-15-12.3(b)(1)(iii), (iv), (v), (viii), and (xi), and the standby trust agreement shall follow the language provided by the Director incorporated by reference in R315-15-17.14.

(v) The insurance policy shall be issued for a face amount

at least equal to the cleanup and closure cost estimate developed under R315-15-11.2.

(vi) An owner or operator, or other person authorized by the Director, may receive reimbursements for cleanup and closure activities completed if:

(A) the value of the policy is sufficient to cover the reimbursement request; and

(B) justification and documentation of the cleanup and closure expenditures are submitted to and approved by the Director, prior to receiving reimbursement.

(vii) Each policy shall contain a provision allowing assignment of the policy to a successor owner or operator.

(viii) The insurance policy shall provide that the insurer may not cancel, terminate, or fail to renew the policy except for failure to pay the premium. If there is a failure to pay the premium, the insurer may cancel the policy by sending notice of cancellation by certified mail to the owner or operator and the Director 120 days in advance of cancellation. If the insurer cancels the policy, the owner or operator shall obtain an alternate financial assurance mechanism meeting the requirements for financial responsibility under R315-15-10 and of this subsection within 60 days of notice of cancellation of the policy.

(ix) The policy coverage amount for cleanup and closure is exclusive of legal and defense costs.

(x) Bankruptcy or insolvency of the Insured shall not relieve the Insurer of its obligations under the policy.

(xi) The Insurer as first-payer is liable for the payment of amounts within any deductible, retention, self-insured retention (SIR), or reserve applicable to the policy, with a right of reimbursement by the Insured for any such payment made by the Insurer. This provision does not apply with respect to that amount of any deductible, retention, self-insured retention, or reserve for which coverage is otherwise demonstrated as specified in R315-15-12.

(xii) Whenever requested by the Director, the Insurer agrees to furnish to the Director a signed duplicate original of the policy and all endorsements.

(xiii) Cancellation of the policy, whether by the Insurer, the Insured, a parent corporation providing insurance coverage for its subsidiary, or by a firm having an insurable interest in and obtaining liability insurance on behalf of the owner or operator of the used oil management facility, will be effective only upon written notice and only after the expiration of 120 days after a copy of such written notice is received by the Director for those facilities that are located in Utah.

(xiv) Any other termination of the policy will be effective only upon written notice and only after the expiration of 120 days after a copy of such written notice is received by the Director for those facilities that are located in Utah.

(xv) All policy provisions related to R315-15 shall be construed in accordance with the laws of the State of Utah. In the event of the failure of the Insurer to pay any amount claimed to be due hereunder, the Insurer and the Insured will submit to the jurisdiction of the appropriate court of the State of Utah, and will comply with all the requirements necessary to give such court jurisdiction. All matters arising hereunder, including questions related to the interpretation, performance and enforcement of this policy, shall be determined in accordance with the law and practice of the State of Utah (notwithstanding Utah conflicts of law rules).

(xvi) Endorsement(s) added to, or removed from the policy that have the effect of affecting the environmental pollution liability language, directly or indirectly, shall be approved in writing by the Director before said endorsement(s) become effective.

(xvii) Neither the Insurer nor the Insured shall contest the state of Utah's use of the drafting history of the insurance policy in a judicial interpretation of the policy or endorsement(s) to

said policy.

(xviii) The Insurer shall establish a standby trust fund for the benefit of the Director at the time the Director first makes a claim against the insurance policy.

(A) The standby trust fund shall meet the requirements of R315-15-12.3(b)(1), except for item R315-15-12.3(b)(1)(iii), (iv), (v), (viii), and (ix) and the standby trust agreement shall follow the wording found in R315-15-17.14.

(B) Payment made under the terms of the insurance policy shall be deposited by the Insurer as grantor directly into the standby trust fund and payments from the trust fund shall be approved by the trustee with the written concurrence of the Director.

(5) The owner or operator of an existing or new used oil facility may establish a financial assurance mechanism by a combination of the above mechanisms as approved by the Director.

(c) The owner or operator of an existing or new used oil facility or operation shall establish a financial assurance mechanism for bodily injury and property damage to third parties resulting from sudden and/or non-sudden accidental releases of used oil from a permitted used oil facility or operation as follows:

(1) An owner or operator that is a used oil processor, transfer facility, or off-specification burner, or a group of such facilities regulated under R315-15 shall demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden and/or non-sudden accidental release of used oil arising from operations or operations of the facility or group of facilities shall have and maintain liability coverage in the amount as specified in R315-15-10(b). This liability coverage shall be demonstrated by one or more of the financial mechanisms in R315-15-12.3(c)(3).

(2) An owner or operator that is a used oil transporter regulated under R315-15, must demonstrate financial responsibility for bodily injury and property damage to third-parties resulting from sudden release of used oil arising from transit, loading and unloading, to or from facilities within Utah. The owner or operator shall maintain liability coverage for sudden accidental occurrences in the amount specified in R315-15-10(c). This liability coverage shall be demonstrated by one or more of the financial mechanisms in R315-15-12.3(c)(3).

(3) The owner or operator shall demonstrate compliance with R315-15-10(b) or (c) by using one or more of the following financial assurance mechanisms:

(i) Insurance. The owner or operator shall follow the wording provided by the Director identified in R315-15-17.5 through R315-15-17.9, as may be applicable.

(ii) Trust. The owner or operator shall follow the wording provided by the Director identified in R315-15-17.12.

(iii) Surety Bond. The owner or operator shall follow the wording provided by the Director identified in R315-15-17.11.

(iv) Letter of Credit. The owner or operator shall follow the wording provided by the Director identified in R315-15-17.10.

(d) Adjustments by the Director. If the Director determines that the levels of financial responsibility required by R315-15-10(b) or (c), as applicable are not consistent with the degree and duration of risk associated with used oil operations or facilities, the Director may adjust the level of financial responsibility required under R315-15-10(b) or (c), as applicable, as may be necessary to protect human health and the environment. This adjusted level will be based on the Director's assessment of the degree and duration of risk associated with the used oil operations or facilities. In addition, if the Director determines that there is a significant risk to human health and the environment from non-sudden release of used oil resulting from the used oil operations or facilities, the Director may require that an owner or operator of the used oil facility or

operation comply with R315-15-10(b) and (c), as applicable. An owner or operator must furnish, within a reasonable time to the Director when requested in writing, any information the Director requests to determine whether cause exists for an adjustment to the financial responsibility under R315-15-10(b) or (c) with the used oil operations or facilities. Failure to provide the requested information as and when requested under this section may result in the Director revoking the owner's or operator's used oil permit(s). Any adjustment of the level or type of coverage for a facility that has a permit will be treated as a permit modification.

(e) When the owner or operator of a permitted used oil facility or operation believes that its responsibility for cleanup and closure or for environmental pollution liability as described in R315-15-10(d) has changed, it may submit a written request to the Director to modify its permit to reflect the changed responsibility.

(f) The Director may release the requirement for cleanup and closure financial assurance after the owner or operator has clean-closed the facility according to R315-15-11.

(g) The owner or operator of a permitted used oil facility or operation may request the Director to modify its permit to change its financial assurance mechanism or mechanisms as described in R315-15-12.

(h) The Director may modify the permit to change financial assurance mechanism or mechanisms after the owner or operator has established a replacement financial assurance mechanism or mechanisms acceptable to the Director.

(i) Incapacity of owners or operators, guarantor, or financial institution. An owner or operator of a permitted used oil facility or operation shall notify the Director by certified mail within ten days of the commencement of a bankruptcy proceeding naming the owner or operator as debtor.

(1) An owner or operator who fulfills the financial responsibility requirements by obtaining a trust fund, surety bond, letter of credit, or insurance policy will be considered to be without the required financial responsibility or liability coverage in the event of:

- (i) bankruptcy of the trustee or issuing institution; or
- (ii) a suspension or revocation of the authority of the trustee institution to act as trustee; or
- (iii) a suspension or revocation of the authority of the institution to issue a surety bond, a letter of credit, or an insurance policy.

(2) The owner or operator of a permitted used oil facility or operation must establish other financial responsibility or liability coverage within 60 days after such an event.

12.4 ANNUAL UPDATE OF CLOSURE COST ESTIMATE AND FINANCIAL ASSURANCE MECHANISM

(a) The financial responsibility information required by R315-15-10, 11, and 12 and submitted to the Director with the initial permit application for a used oil facility or operation, or information provided as part of subsequent modifications to the permit made thereafter, shall be updated annually.

(b) The following annual updated financial responsibility information for the previous calendar year shall be submitted to the Director by March 1 of each year for each permitted facility or operation:

(1) The cleanup and closure cost estimate shall be based on a third party performing cleanup and closure of the facility to a post-operational land use in accordance with R315-15-11.1.

(2) The financial assurance mechanism shall be adjusted to reflect the new cleanup and closure cost estimate.

(3) The type of financial assurance mechanism, its current face value, and corresponding financial institution's instrument control number shall be provided.

(4) The type of environmental pollution liability financial responsibility for third-party damage mechanism shall be provided, including:

- (i) policy number or other mechanism control number,
 - (ii) effective date of policy or other mechanism, and
 - (iii) coverage types and amounts.
- (5) The type of general liability insurance information shall be provided, including:
- (i) policy number,
 - (ii) date of policy, effective date of policy, retroactive date of coverage, if applicable, and
 - (iii) coverage types and amounts.
- (c) Other type of information deemed necessary to evaluate compliance with a permitted used oil facilities or operations and R315-15-10, 11, and 12, shall be provided upon request by the Director.

R315-15-13. Registration and Permitting of Used Oil Handlers.

13.1 DO-IT-YOURSELF USED OIL COLLECTION CENTERS TYPES A AND B

(a) Applicability. A person may not operate a do-it-yourselfer (DIYer) Type A or B used oil collection center without holding a registration number issued by the Director.

(b) General. The application for a registration number shall include the following information regarding the DIYer used oil collection center:

- (1) the name and address of the operator;
- (2) the location of the center;
- (3) the type of storage and secondary containment to be used;
- (4) the status of the business, zoning, or other licenses and permits if required by federal, state and local governmental entities;
- (5) a spill containment plan in the event of a release of used oil; and
- (6) proof of insurance or other means of financial responsibility for liabilities that may be incurred in collecting or storing used oil.

(c) Waiver of proof of insurance or other means of financial responsibility for liabilities that may be incurred in collecting or storing used oil. In accordance with Utah Annotated 19-6-710, the Director may waive the requirement of proof of liability insurance or other means of financial responsibility if the following criteria are satisfied:

- (1) The used oil storage tank or container is in good condition with no severe rusting, apparent structural defects or deterioration, and no visible leaks;
 - (2) There is adequate secondary containment for the tank or container that is impervious to used oil to prevent any used oil released into the secondary containment system from migrating out of the system to the soil, groundwater or surface water;
 - (3) The storage tank or container is clearly labeled with the words "Used Oil;"
 - (4) DIYer log entries are complete including the name and address of the generator, date and quantity of used oil received;
 - (5) EPA-approved test kits for total halogens are readily available and operators are trained to perform halogen tests on any used oil received that may have been mixed with hazardous waste; and
 - (6) Oil sorbent material is readily available on site for immediate clean-up of spills.
- (d) Changes in information. The owner or operator of the facility shall notify the Director in writing of any changes in the information submitted to apply for a registration number within 20 days of the change.

13.2 GENERATOR USED OIL COLLECTION CENTERS TYPES C AND D

(a) Applicability. A person may not operate a generator used oil collection center Type C or D without holding a registration number issued by the Director.

(b) General. The application for registration shall include the following information regarding the generator used oil collection center:

- (1) the name and address of the operator;
- (2) the location of the center;
- (3) whether the center will accept DIYer used oil;
- (4) the type of storage and secondary containment to be used;
- (5) the status of the business, zoning, or other licenses and permits if required by federal, state and local governmental entities;
- (6) a spill containment plan in the event of a release of used oil; and
- (7) proof of insurance or other means of financial responsibility for liabilities that may be incurred in collecting or storing used oil.

(c) Permit. Waiver of proof of insurance or other means of financial responsibility for liabilities that may be incurred in collecting or storing used oil. In accordance with Utah Code Annotated 19-6-710, the Director may waive the requirement of proof of liability insurance or other means of financial responsibility if the following criteria are satisfied:

- (1) The used oil storage tank or container is in good condition with no severe rusting, apparent structural defects or deterioration, and no visible leaks;
- (2) There is adequate secondary containment for the tank or container that is impervious to used oil to prevent any used oil released into the secondary containment system from migrating out of the system to the soil, groundwater or surface water;
- (3) The storage tank or container is clearly labeled with the words "Used Oil;"
- (4) DIYer log entries are complete including the name and address of the generator, date and quantity of used oil received;
- (5) EPA-approved test kits for total halogens are readily available and operators are trained to perform halogen tests on any used oil received that may have been mixed with hazardous waste; and
- (6) Oil sorbent material is readily available on site for immediate clean up of spills.

(d) Changes in information. The owner or operator of the facility shall notify the Director in writing of any changes in the information submitted to apply for a registration number within 20 days of the change.

13.3 USED OIL AGGREGATION POINTS

(a) Applicability. A person may operate a used oil aggregation point without holding a registration number issued by the Director if that aggregation point also accepts used oil from household do-it-yourselfers (DIYers) or other generators.

(b) If an aggregation point accepts used oil from household DIYers, it must register with the Director as a DIYer collection center and comply with the DIYer standards in Section R315-15-3.1.

(c) If an aggregation point accepts used oil from other generators it must register with the Director as a generator collection center and comply with the standards in R315-15-3.2.

13.4 USED OIL TRANSPORTERS AND USED OIL TRANSFER FACILITIES

(a) Applicability. Except as provided by R315-15-13.4(f), a person may not operate as a used oil transporter without holding a used oil transporter permit issued by the Director. A person shall not operate a used oil transfer facility without holding a used oil transfer facility permit specific to that facility, issued by the Director.

(b) General. The application for a permit shall include the following information:

- (1) The name and address of the operator;
- (2) The location of the transporter's base of operations and the location of any transfer facilities, if applicable;

- (3) Maps of all transfer facilities, if applicable;
- (4) The methods to be used for collecting, storing, and delivering used oil;
- (5) The methods to be used to determine if used oil received by the transporter or facility is on-specification or off-specification and how the transporter will comply with the rebuttable requirements of R315-15-4.5;
- (6) The type of containment and the volume, including type and number of storage vessels to be used and the number and type of transportation vehicles, if applicable;
- (7) The methods of disposing of any waste by-products;
- (8) The status of business, zoning, and other applicable licenses and permits if required by federal, state, and local government entities;
- (9) An emergency spill containment plan, including a list of spill containment equipment to be carried in vehicles used to transport used oil and spill containment equipment maintained at the used oil transfer facility, and how the transporter shall comply with the requirements of R315-15-9;
- (10) Proof of liability insurance or other means of financial responsibility for liabilities that may be incurred in collecting, transporting, or storing used oil;
- (11) Proof of form and amount of reclamation surety for any facility used in conjunction with transportation or storage of used oil;
- (12) A closure plan meeting the requirements of R315-15-11;
- (13) Proof of applicant's ownership of any property and facility used for storage of used oil or, if the property and facility is not owned by the applicant, the owners' written statement acknowledging the activities specified in the application;
- (14) For transfer facility permit applications, tank certification in accordance with R315-8-10 for used oil storage tanks at the transfer facility;
- (15) For transfer facility permit applications, a facility piping and instrument drawing certified by a Professional Engineer;
- (16) If rail transport is part of the application, a loading/off-loading plan for rail tanker cars used to transport used oil. This plan shall include detailed procedures to be followed to minimize the potential for releases and on-site accidents. At a minimum, the following items shall be addressed:
 - (i) Personal safety equipment;
 - (ii) Coordination with railroad to ensure exclusive rights to the loading track during the entire period of loading/offloading;
 - (iii) A minimum number and qualification of workers involved in the loading or off-loading operations;
 - (iv) Braking and blocking of rail car wheels;
 - (v) Procedures for Depressurizing tank car prior to opening manhole covers and outlet valves;
 - (vi) The sequence of valve openings and closings on any hosing or piping involved in the loading or off-loading process;
 - (vii) A description of how and where pipe and hose fitting will be attached, including a description of which rail car valves/openings will be used;
 - (viii) Use of catchment container to collect any used oil released from hoses, valves, and pipes during and following the loading/offloading operation;
 - (ix) Measures to insure ignition sources are not present;
 - (x) Procedures for cleanup of any spills that occur during the loading/offloading operations; and
 - (xi) Other site-specific requirements required by the Director to protect human health and the environment.
- (c) Permit fees. Registration and permitting fees are established under the terms and conditions of Utah Code Annotated 63J-1-504. A copy of the Division's Fee Schedule is

available upon request. Payment of appropriate fees is required prior to issuance of permit approvals and annual used oil handler certificates.

(d) Annual Reporting. Each transporter and transfer facility shall submit an annual report to the Director of its activities during the calendar year. The annual report shall be submitted to the Director no later than March 1, of the year following the reported activities. The Annual report shall either be submitted on a form provided by the Director or shall contain the following information:

- (1) the EPA identification number, name, and address of the transporter/transfer facility;
- (2) the calendar year covered by the report;
- (3) the total amount of used oil transported;
- (4) the itemized amounts and types of used oil transferred to permitted transporters and transfer facilities, used oil processors/re-refiners, off-specification used oil burners, and used oil fuel marketers; and

(5) the itemized amounts and types of used oil transferred inside and outside the state, indicating the state to which used oil is transferred, and the specific name, address and telephone number of the operations or facility to which used oil was transferred.

(e) Changes in information. The owner or operator of the facility shall notify the Director in writing of any changes in the information submitted to apply for a permit within 20 days of the change.

(f) Transporter and Transfer Facility Permit by rule. Notwithstanding any other provisions of R315-15-13.4, a used oil generator who self-transporters used oil generated by that generator at a non-contiguous operation to a central collection facility in the generator's own service vehicles in quantities exceeding 55 gallons shall be deemed to have an approved used oil transporter permit or used oil transfer facility permits, or both if the generator meets all applicable requirements of R315-15-13.4(f)(1) through (4).

(1) All used oil transporters or transfer facilities who qualify for a permit by rule shall submit a notification to the Director of their intent to operate under R315-15-13.4(f) and comply with the following conditions:

(i) The generator's facility is defined under the North American Industry Classification System (NAICS), published, in 2007, by the US Economic Classification Policy Committee, with a NAICS code of 21 (Mining), 23 (Construction), or 541360 (Geophysical Surveying and Mapping Services);

(ii) The generator self-transporters and delivers the used oil to facilities that the generator owns, operates, or both.

(iii) The generator notifies the Director with the information required by R315-15-13.4(b)(1) through (10); and

(iv) The generator complies with R315-15-4.3, R315-15-4.4(b) through (d), R315-15-4.6(b) through (f), R315-15-4.7(b) and (d), and R315-15-4.8.

(2) A generator who self-transporters used oil in accordance with R315-15-13.4(f)(1) and who burns all the collected used oil for energy recovery is deemed to be approved by rule to operate as a used oil transporter for that activity if the following additional conditions are met:

(i) The generator only burns the self-collected used oil for energy recovery at that generator's own central collection facility.

(ii) The generator registers as a used oil fuel marketer in accordance with R315-15-13.7 and complies with R315-15-7.

(3) A generator who self-transporters used oil in accordance with R315-15-13.4(f)(1) and only stores the used oil for subsequent collection by permitted used oil transporters is deemed to be approved by rule to operate as a used oil transporter and transfer facility for that activity if the following additional conditions are met:

- (i) The generator arranges for permitted used oil

transporters to collect the generator's used oil.

(ii) The self-transported used oil is not stored at the generator's facility longer than 35 days. If the self-transported used oil is stored longer than 35 days, the generator becomes a used oil processor in accordance with R315-15-4.6(a) and shall obtain a used oil processor permit in accordance with R315-15-13.5.

(4) A generator who self-transported used oil in accordance with R315-15-13.4(f)(1), and who both burns their collected used oil for energy recovery and arranges for permitted use oil transporters to collect that used oil, is deemed to be approved by rule to operate as a used oil transporter and transfer facility for that activity if the following additional conditions are met:

(i) The self-transported used oil burned for energy recovery is only burned at the generator's central collection facility;

(ii) The generator registers as a used oil fuel marketer in accordance with R315-15-13.7 and complies with R315-15-7; and

(iii) The generator arranges for permitted used oil transporters to collect the generator's used oil not burned on site.

(iv) The self-transported used oil is not stored at the generator's facility longer than 35 days. If the self-transported used oil is stored longer than 35 days, the generator becomes a used oil processor in accordance with R315-15-4.6(a) and shall obtain a used oil processor permit in accordance with R315-15-13.5.

(g) All used oil transporters and transfer facilities shall obtain and maintain a used oil handler certificates in accordance with R315-15-13.8.

13.5 USED OIL PROCESSORS/RE-REFINERS

(a) Applicability. A person may not operate as a used oil processing/re-refining facility without holding a permit issued by the Director.

(b) General. The application for a permit shall include the following information:

(1) The name and address of the operator;

(2) The location of the facility;

(3) A map of the facility;

(4) The grades of oil to be produced;

(5) The methods to be used to determine if used oil received by the transporter or facility is on-specification or off-specification;

(6) The type of containment and the volume, including type and number of storage vessels to be used and the number and type of transportation vehicles, if applicable;

(7) The methods of disposing of any waste by-products;

(8) The status of business, zoning, and other applicable licenses and permits if required by federal, state, and local government entities;

(9) An emergency spill containment plan, including a list of spill containment equipment to be maintained at the used oil processor facility;

(10) Proof of liability insurance or other means of financial responsibility for liabilities that may be incurred in processing or re-refining used oil;

(11) Proof of form and amount of reclamation surety for any facility used in conjunction with transportation or storage of used oil;

(12) Any other information the Director finds necessary to ensure the safe handling of used oil;

(13) A closure plan meeting the requirements of R315-15-11.

(14) A contingency plan meeting the requirements of R315-15-5.3(b);

(15) Proof of applicant's ownership of the property and facility or, if the property and facility is not owned by the applicant, the owner's written statement acknowledging the activities specified in the application;

(16) Tank certification in accordance with R315-8-10 for used oil storage tanks at the processor facility; and

(17) A facility piping and instrument drawing certified by a Professional Engineer.

(c) Permit fees. Registration and permitting fees are established under the terms and conditions of Department fee schedule 63J-1-504. A copy of the Division's Fee Schedule is available upon request. Payment of appropriate fees is required prior to issuance of permit approvals and annual used oil handler certificates.

(d) Annual Reporting. Each used oil processing or re-refining facility shall submit an annual report to the Director of its activities during the calendar year. The annual report shall be submitted to the Director no later than March 1 of the year following the reported activities. The annual report shall either be submitted on a form provided by the Director or shall contain the following information:

(1) the EPA identification number, name, and address of the processor/re-refiner facility;

(2) the calendar year covered by the report;

(3) the quantities of used oil accepted for processing/re-refining and the manner in which the used oil is processed/re-refined, including the specific processes employed;

(4) the average daily quantities of used oil processed at the beginning and end of the reporting period;

(5) an itemization of the total amounts of used oil processed or re-refined during the reporting period year specifying the type and amounts of products produced, i.e., lubricating oil, fuel oil, etc.; and

(6) the amounts of used oil prepared for reuse as a lubricating oil, as a fuel, and for other uses, specifying each type of use, the amounts of used oil consumed or used in the process of preparing used oil for reuse, specifying the amounts and types of waste by-products generated including waste, water, and the methods and specific locations utilized for disposal.

(e) Changes in information. The owner or operator of the facility shall notify the Director in writing of any changes in the information submitted to apply for a permit within 20 days of the change.

(f) Used oil processors and re-refiners shall obtain and maintain a current used oil handler certificate in accordance with R315-15-13.8.

13.6 USED OIL BURNERS

(a) On-specification used oil fuel burners. Facilities burning only on-specification used oil fuel are not required to register as used oil burners with the Director for the purpose of R315-15-13.6, if they hold a valid air quality operating order or are exempt under R315-15-2.4.

(b) Off-specification used oil fuel burners

(1) Applicability. The permitting requirements of this section apply to used oil burners who burn off-specification used oil for energy recovery except as specified in R315-15-6.1(a)(1) through (3). A person may not burn off-specification used oil fuel for energy recovery without holding a permit issued by the Director.

(2) Permit application. The application for a permit shall include the following information regarding the facility:

(i) The name and address of the operator;

(ii) The location of the facility;

(iii) The type of containment and type and capacity of storage;

(iv) The type of burner to be used;

(v) The methods of disposing of any waste by-products;

(vi) The status of business, zoning, and other applicable licenses and permits required by federal, state, and local governmental entities;

(vii) An emergency spill containment plan; including a list of spill containment equipment to be maintained at the used oil processor facility.

(viii) Proof of insurance or other means of financial responsibility for liabilities that may be incurred in storing and burning off-specification used oil fuels.

(ix) Proof of form and amount of reclamation surety for any facility receiving and burning off-specification used oil.

(x) A closure plan meeting the requirements of R315-15-11;

(xi) Proof of applicant's ownership of the property and facility or, if the property and facility is not owned by the applicant, the owner's written statement acknowledging the activities specified in the application;

(xii) Tank certification in accordance with R315-8-10 for used oil storage tanks at the processor facility; and

(xiii) A facility piping and instrument drawing certified by a Professional Engineer.

(3) Permit fees. Registration and permitting fees are established under the terms and conditions of Utah Code Annotated 63J-1-504. A copy of the Division's Fee Schedule is available upon request. Payment of appropriate fees is required prior to issuance of permit approvals and annual used oil handler certificates.

(4) Changes in information. The owner or operator of the facility shall notify the Director in writing of any changes in the information submitted during permit application within 20 days of the change.

(5) Permits by rule. Any facility permitted by rule is not required to obtain a permit as required by R315-15-13.6(b)(1), but may be required to follow operational practices, as determined by the Director, to minimize risk to human health or the environment. A permit by rule is conditional upon continued compliance with the requirements of R315-15-13.6(b), as determined by the Director. Notwithstanding any other provisions of R315-15-13.6, a hazardous waste incinerator facility that has been issued a final permit under R315-3-1, and that implements the requirements of R315-8-15, shall be deemed to have an approved off-specification used oil burner permit if that facility meets all of the following conditions:

(i) It burns off-specification used oil only in devices specified in R315-15-6.2(a);

(ii) It stores used oil in the manner described in R315-15-6.5;

(iii) It tracks off-specification used oil shipments as described in R315-15-6.6;

(iv) It complies with R315-15-6.3 and R315-15-6.7;

(v) It modifies its closure plan required under R315-8-7 (Closure and Post Closure), to include used oil storage and burning devices, taking into account any used oil activities at this facility;

(vi) It modifies its financial mechanism or mechanisms required under R315-8-8 (Financial Requirements), using a mechanism other than a corporate financial test/corporate written guarantee, to reflect the used oil activities at the facility; and

(vii) It submits to the Director the information required by R315-15-13.6(b)(2)(i) through (vi), and a one-time declaration that the facility intends to burn off-specification used oil.

(6) Annual Reporting. Each off-specification used oil burner, including those permitted by rule under R315-15-13.6(b)(5), shall submit an annual report to the Director of their activities during the calendar year. The annual report shall be submitted to the Director no later than March 1, of the year following the reported activities. The annual report shall either be submitted on a form provided by the Director or shall contain the following information:

(i) The EPA identification number, name, and address of the burner facility;

(ii) The calendar year covered by the report; and

(iii) The total amount of used oil burned.

(c) Off-specification used oil burners shall obtain and

maintain a current used oil handler certificate in accordance with R315-15-13.8.

13.7 USED OIL FUEL MARKETERS

(a) Applicability. A person may not act as a used oil fuel marketer, as defined in R315-15-7, without holding a registration number issued by the Director.

(b) General. The application for a registration number shall include the following information regarding the facility acting as a used oil fuel marketer:

(1) The name and address of the marketer.

(2) The location of any facilities used by the marketer to collect, transport, process, or store used oil subject to separate permits, or registrations under this section.

(3) The status of business, zoning, and other applicable licenses and permits required by federal, state, and local governmental entities, including registrations or permits required under this part to collect, process/re-refine, transport, or store used oil.

(4) Sampling and Analysis Plan. Marketers shall develop and follow a written analysis plan describing the procedures that will be used to comply with the analysis requirements of R315-15-15, including the applicable portions of R315-15-1.2, R315-15-5.4, R315-15-7.3, and R315-15-18. The owner or operator shall keep the plan at the facility. The plan shall address at a minimum the following:

(i) Specification used oil fuel. The analysis plan shall describe how the marketer will comply with R315-15-1.2, R315-15-5.6, and R315-15-7.3, as applicable.

(ii) Analytical methods. The plan shall specify the preparation and analytical methods for each parameter.

(iii) PCBs. The analysis plan shall describe how the marketer will comply with R315-15-18.

(iv) Generator knowledge. The plan shall describe the requirements for generator knowledge, if applicable.

(v) Sample Quality Control. The plan shall specify the quality control parameters and acceptance limits.

(vi) Rebuttable presumption for used oil. The analysis plan shall describe how the marketer will comply with R315-15-1.1(b)(ii) and R315-15-5.4, if applicable.

(vii) Sampling. The analysis plan shall describe the sampling protocol used to obtain representative samples, including:

(A) Sampling methods. The marketer shall use one of the sampling methods in R315-50-6, which incorporates by reference 40 CFR 261, Appendix I; or a method shown to be equivalent under R315-2-15.

(B) Sample frequency. The plan shall specify the frequency of sampling to be performed, and whether the analysis will be performed on site or off site.

(c) Registration fees. Registration and permitting fees are established under the terms and conditions of Utah Code Annotated 63J-1-504. A copy of the Division's Fee Schedule is available upon request. Payment of appropriate fees is required prior to issuance of registration numbers and annual used oil handler certificates.

(d) A person who acts as used oil fuel marketer shall annually obtain a used oil handler certificate in accordance with R315-15-13.8. A used oil fuel marketer shall not operate without a used oil handler certificate.

(e) Changes in information. The owner or operator of the facility shall notify the Director in writing of any changes in the information submitted to apply for a registration within 20 days of the change.

13.8 USED OIL HANDLER CERTIFICATES

(a) Applicability. As well as obtaining permits and registration described in R315-15-13.4 through 13.7, a person shall not act as a used oil transporter, operator of a transfer facility, processor/re-refiner, off-specification burner, or marketer without applying for, receiving, and maintaining a

current used oil handler certificate issued by the Director for each applicable activity. Each used oil permit and marketer registration described in R315-15-13.4 through 13.7 above requires a separate used oil handler certificate.

(b) General. Each application for a used oil handler certificate shall include the following information:

- (1) business name;
- (2) address to include:
 - (i) mailing address; and
 - (ii) site address if different from mailing address
- (3) telephone number
- (4) name of business owner;
- (5) name of business operator;
- (6) permit/registration number; and
- (7) type of permit/registration number (i.e., processor,

transporter, transfer facility, off-specification burner, or marketer).

(c) Changes in information. A used oil handler certificate holder shall notify the Director of any changes in the information provided in Subsection R315-15-13.8(b) within 20 days of implementation of the change.

(d) A used oil handler certificate will be issued to an applicant following the:

- (1) completion and approval of the application required by R315-15-13.8(a); and
- (2) payment of the fee required by the Annual Appropriations Act.

(e) A used oil handler certificate is not transferable and shall be valid January 1 through December 31 of the year issued. The certificate shall become void if the permit or registration associated with the used oil activity described in the certificate, in accordance with R315-15-13.8(b)(6) in the application, is revoked under R315-15-15.2 or if the Director, upon the written request of the permittee or registration holder, cancels the certificate.

(f) The certificate registration fee shall be paid prior to operation within any calendar year.

R315-15-14. DIYer Reimbursement.

14.1 DIYER USED OIL COLLECTION CENTER INCENTIVE PAYMENT APPLICABILITY

(a) The Director shall pay a quarterly recycling fee incentive to registered DIYer used oil collection centers and curbside programs approved by the Director for each gallon of used oil collected from DIYer used oil generators, and transported by a permitted used oil transporter to a permitted used oil processor/re-refiner, burner, registered marketer or burned in accordance with R315-15-2.4(b).

(b) All registered DIYer used oil collection centers can qualify for a recycling incentive payment of up to \$0.16 per gallon, subject to availability of funds and the priorities of Utah Code Annotated 19-6-720.

14.2 REIMBURSEMENT PROCEDURES

In order for DIYer collection centers to qualify for the recycling incentive payment they are required to comply with the following procedures.

(a) Submit a copy of all records and receipts of DIYer and farmer, as defined in R315-15-2.1(a)(4), used oil collected during the quarter for which the reimbursement is requested. These records shall be submitted within 30 days following the end of the calendar quarter in which the DIYer oil was collected and for which reimbursement is requested.

(b) Reimbursements will be issued by the Director within 30 days following the report filing period.

(c) Reports received later than 30 days after the end of the calendar quarter for which reimbursement is requested will be paid during the next quarterly reimbursement period.

(d) Any reimbursement requests outside the timeframe outlined in R315-15-14.2(a) will not be granted unless approved

by the Director.

R315-15-15. Issuance, Renewal, and Revocation of Permits and Registrations.

15.1 PUBLIC COMMENTS AND HEARING.

(a) The Director shall:

- (1) determine if the permit application or modification request is complete and meets all requirements of R315-15-13;
- (2) publish notice of the proposed permit in a newspaper of general circulation in the state and also in a newspaper of general circulation in the county in which the proposed permitted facility is located;

(3) provide a 15-day public comment period from the date of publication to allow the public time to submit written comments;

(4) consider submitted public comments received within the comment period; and

(5) send a written decision to the applicant and to persons submitting comments,

(b) The Director's decision under R315-15-15.1(a) may be appealed in accordance with Utah Administrative Code R305-7.

(c) Duration of Permits. Used oil permits shall be effective for a fixed term not to exceed ten years. Any Permittee holding a permit issued on or before January 1, 2005 who wants to continue operating shall submit an application for a new permit not later than 180 days after January 1, 2015. The term of a permit shall not be extended by modification to the permit.

(d) The conditions of an expired permit continue in force until the effective date of a new permit if:

(1) The permittee has submitted a timely application under R315-15-13, at least 180 days prior to the expiration date of the current permit. The permit application shall contain all the materials required by R315-15-13.

(2) The Director, through no fault of the permittee, does not issue a new permit with an effective date on or before the expiration date of the previous permit (for example, when issuance is impracticable due to time or resource constraints).

(e) Effect. Permits continued under this section remain fully effective and enforceable.

(f) Enforcement. When the permittee is not in compliance with the conditions of the expiring or expired permit, the Director may choose to do any or all of the following:

(1) Initiate enforcement action based upon the permit that has been continued;

(2) Issue a notice of intent to deny the new permit under R315-15-15.2. If the permit is denied, the owner or operator is required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit;

(3) Issue a new permit under R315-15-15.2 with appropriate conditions;

(4) Take other actions authorized by these rules

(g) Five-Year Review of Permit. Each used oil permit, including the costs of closure and post closure care issued under R315-15-13, shall be reviewed by the Director five years after the permit's issuance, or when the Director determines that a permit requires review and modification.

15.2 MODIFICATION AND REVOCATION OF PERMITS, REGISTRATIONS AND HANDLER CERTIFICATES.

(a) A permit may be considered for modification, renewal, or termination at the request of any interested person, including the permittee, or upon the Director's initiative as a result of new information or changes in statutes or rules. Requests for modification, reissuance, or termination shall be submitted in writing to the Director and shall contain facts or reasons supporting the request. The permit modification requests shall not be implemented until approval of the Director.

Violation of any permit or registration conditions or failure

to comply with any provisions of the applicable statutes and rules, shall be grounds for imposing statutory sanctions, including denial of an application for permit, registration, or used oil handler certificate.

(b) Request for agency action. The owner or operator of a facility may contest an order associated with modification, renewal, or termination in accordance with Utah Administrative Code R305-7.

R315-15-16. Grants.

16.1 STATUTORY AUTHORITY.

Utah Code Annotated 19-6-720 authorizes the Division of Waste Management and Radiation Control to award grants, as funds are available, for the following:

(a) Used oil collection centers; and

(b) Curbside used oil collection programs, including costs of retrofitting trucks, curbside containers, and other costs of collection programs.

16.2 ELIGIBILITY AND APPLICATION.

(a) The establishment of new or the enhancement of existing used oil collection centers or curbside collection programs that address the proper management of used lubricating oil may be eligible for grant assistance.

(b) A Used Oil Recycling Block Grant Package, published by the Director, shall be completed and submitted to the Director for consideration.

16.3 LIMITATIONS.

(a) The grantee must commit to perform the permitted used oil handling activity for a minimum of two years.

(b) If the two-year commitment is not fulfilled, the grantee may be required to repay all or a portion of the grant amount.

R315-15-17. Wording of Financial Assurance Mechanisms.

17.1 APPLICABILITY

R315-15-17 presents the standard wording forms to be used for the financial assurance mechanisms found in R315-15-12. The following forms are hereby incorporated by reference and are available at the Division of Waste Management and Radiation Control located at 195 North 1950 West, Salt Lake City, Utah, during normal business hours or on the Division's web site, <http://www.hazardouswaste.utah.gov/>.

(a) The Division requires that the forms described in R315-15-17.2 through R315-15-17.14 shall be used for all financial assurance filings and shall be signed in duplicate original documents. The wording of the forms shall be identical to the wording specified in R315-15-17.2 through R315-15-17.4.

(b) The Director may substitute new wording for the wording found in any of the financial assurance mechanism forms when such language changes are necessary to conform to applicable financial industry changes, when industry-wide consensus language changes are submitted to the Director.

17.2 TRUST AGREEMENTS

The trust agreement for a trust fund must be worded as found in the Trust Agreement Form approved by the Director.

17.3 SURETY BOND GUARANTEEING PAYMENT INTO A STANDBY TRUST AGREEMENT TRUST FUND

The surety bond guaranteeing payment into a standby trust agreement trust fund must be worded as found in the Surety Bond Guaranteeing Payment into a Standby Trust Agreement Trust Fund Form approved by the Director.

17.4 IRREVOCABLE STANDBY LETTER OF CREDIT WITH STANDBY TRUST AGREEMENT

The letter of credit must be worded as found in the Irrevocable Standby Letter of Credit with Standby Trust Agreement Form approved by the Director.

17.5 UTAH USED OIL POLLUTION LIABILITY INSURANCE ENDORSEMENT FOR CLEANUP AND CLOSURE

The insurance endorsement of cleanup and closure must be worded as found in the Utah Used Oil Pollution Liability Insurance Endorsement for Cleanup and Closure Form approved by the Director.

17.6 UTAH USED OIL TRANSPORTER POLLUTION LIABILITY ENDORSEMENT FOR SUDDEN OCCURRENCE

The used oil transporter pollution liability endorsement for sudden occurrence must be worded as found in the Utah Used Oil Transporter Pollution Liability Endorsement for Sudden Occurrence Form approved by the Director.

17.7 UTAH USED OIL POLLUTION LIABILITY ENDORSEMENT FOR SUDDEN OCCURRENCE

The used oil pollution liability endorsement for sudden occurrence for permitted facilities other than permitted transporters must be worded as found in the Utah Used Oil Pollution Liability Endorsement for Sudden Occurrence Form approved by the Director.

17.8 UTAH USED OIL POLLUTION LIABILITY ENDORSEMENT FOR NON-SUDDEN OCCURRENCE

The used oil pollution liability endorsement for non-sudden occurrence must be worded as found in the Utah Used Oil Pollution Liability Endorsement Non-Sudden Occurrence Form approved by the Director.

17.9 UTAH USED OIL POLLUTION LIABILITY ENDORSEMENT FOR COMBINED SUDDEN AND NON-SUDDEN OCCURRENCES

The used oil pollution liability endorsement combined for sudden and non-sudden occurrence must be worded as found in the Utah Used Oil Pollution Liability Endorsement for Combined Sudden and Non-Sudden Occurrences Form approved by the Director.

17.10 LETTER OF CREDIT FOR THIRD-PARTY DAMAGES FROM ENVIRONMENTAL POLLUTION LIABILITY WITH OPTIONAL STANDBY TRUST AGREEMENT TO BE USED BY TRANSFER/PROCESSOR/RE-REFINER/OFF-SPECIFICATION BURNER FACILITY

The letter of credit must be worded as found in the Letter of Credit for Third Party Damages from Environmental Pollution Liability with Optional Standby Trust Agreement to be used by Transfer/Processor/Re-refiner/Off-specification Burner Facility Form approved by the Director.

17.11 PAYMENT BOND FOR THIRD-PARTY DAMAGES FROM ENVIRONMENTAL POLLUTION LIABILITY TO BE USED BY TRANSFER/PROCESSOR/RE-REFINER/OFF-SPECIFICATION BURNER FACILITY

A surety bond must be worded as found in the Payment Bond for Third Party Damages from Environmental Pollution Liability to be used by Transfer/Processor/Re-refiner/Off-specification burner Facility Form approved by the Director.

17.12 TRUST AGREEMENT FOR THIRD-PARTY DAMAGES FROM ENVIRONMENTAL POLLUTION LIABILITY TO BE USED BY TRANSFER/PROCESSOR/RE-REFINER/OFF-SPECIFICATION BURNER FACILITY

A trust agreement must be worded as found in the Trust Agreement for Third Party Damages from Environmental Pollution Liability to be used by Transfer/Processor/Re-refiner/Off-specification Burner Facility Form approved by the Director.

17.13 STANDBY TRUST AGREEMENT ASSOCIATED WITH THIRD-PARTY DAMAGES FROM ENVIRONMENTAL POLLUTION LIABILITY REQUIRING A STANDBY TRUST AGREEMENT TO BE USED BY TRANSFER/PROCESSOR/RE-REFINER/OFF-SPECIFICATION BURNER FACILITY

A standby trust agreement must be worded as found in the Standby Trust Agreement Associated with Third Party Damages from Environmental Pollution Liability Requiring Standby Trust

Agreement to be used by Transfer/Processor/Re-refiner/Off-specification Burner Facility Form approved by the Director.

17.14 STANDBY TRUST AGREEMENT, OTHER THAN LIABILITY, FOR TRANSFER/PROCESSOR/RE-REFINER/OFF-SPECIFICATION BURNER FACILITY

The standby trust agreement for a trust fund must be worded as found in the Standby Trust Agreement, other than Liability for Transfer/Processor/Re-refiner/Off-specification Burner Facility Form approved by the Director.

R315-15-18. Polychlorinated Biphenyls (PCBs).

(a) Used oil containing polychlorinated biphenyl (PCB) concentrations of 50 ppm and above is subject to TSCA regulations in 40 CFR 761. Used oil containing PCB concentrations greater than or equal to 2 ppm but less than 50 ppm is subject to both R315-15 and 40 CFR 761.

(b) Used oil transporter PCB testing. Used oil transporters shall determine the PCB content of used oil being transported is less than 50 ppm prior to transferring the oil into the transporter's vehicles. The transporter shall make this determination as follows:

(1) Used dielectric oil. Dielectric oil used in transformers and other high voltage devices shall be certified to be less than 50 ppm prior to loading to the transporter's vehicle through laboratory testing following the procedures described in R315-15-18(d).

(2) Other used oils shall be certified to be less than 50 ppm prior to transfer through either:

(A) Laboratory testing following the procedures described in R315-15-18(d) below, or

(B) Written certification from the generator that the PCB content of the used oil is less than 50 ppm based on manufacturing specifications and process knowledge.

(c) Used oil marketer PCB testing. To ensure that used oil destined to be burned for energy recovery is not a regulated waste under the TSCA regulations, used oil fuel marketers shall determine whether the PCB content of used oil being burned for energy recovery is below 2 ppm. A marketer shall make this determination in a manner consistent with the used oil marketer's sampling and analysis plan.

(d) Laboratory testing for PCBs. Used oil testing for total PCBs shall include the following Aroclors: 1016, 1221, 1232, 1242, 1248, 1254, and 1260. If plasticizers (used in polyvinyl chloride plastic, neoprene, chlorinated rubbers, laminating adhesives, sealants and caulk and joint compounds etc.) are present, then the used oil shall also be analyzed for Aroclors 1262 and 1268. If other Aroclors are known or suspected to be present, then the used oil shall be analyzed for those additional Aroclors.

(e) The following Utah Certified Laboratory SW-846 methodologies shall be used for PCBs:

(1) Preparation method 3580A, clean up method 3665A, and analytical method 8082A.

(2) Individual Aroclors shall be reported with a reporting limit of 1 ppm or less.

(3) If the source of the PCBs is known to be an Aroclor, and the Aroclor is unlikely to be significantly altered in homologue composition such as weathering, Aroclors listed in R315-15-18(d) shall be reported. Analytical results from all 209 individual congeners or ten homologue groups shall be submitted for any sample that has an altered homologue composition such as weathering unless prior approval is obtained from the Director.

KEY: hazardous waste, used oil

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-16. Standards for Universal Waste Management.

R315-16-1.General.

1.1 SCOPE

(a) This rule establishes requirements for managing the following:

- (1) Batteries as described in section 1.2;
- (2) Pesticides as described in section 1.3;
- (3) Mercury-containing equipment as described in section 1.4; and
- (4) Mercury-containing lamps as described in section 1.5.

(b) This rule provides an alternative set of management standards in lieu of regulation under R315-1 through R315-101.

1.2 APPLICABILITY - BATTERIES

(a) Batteries covered under R315-16.

(1) The requirements of this rule apply to persons managing batteries, as described in section 1.9, except those listed in paragraph (b) of this section.

(2) Spent lead-acid batteries which are not managed under 40 CFR part 266, subpart G, as incorporated by reference at R315-14-6, are subject to management under this rule.

(b) Batteries not covered under R315-16. The requirements of this rule do not apply to persons managing the following batteries:

(1) Spent lead-acid batteries that are managed under R315-14-6.

(2) Batteries, as described in section 1.9, that are not yet wastes under R315-2, including those that do not meet the criteria for waste generation in paragraph (c) of this section.

(3) Batteries, as described in section 1.9, that are not hazardous waste. A battery is a hazardous waste if it exhibits one or more of the characteristics identified in R315-2-9.

(c) Generation of waste batteries.

(1) A used battery becomes a waste on the date it is discarded, e.g., when sent for reclamation.

(2) An unused battery becomes a waste on the date the handler decides to discard it.

1.3 APPLICABILITY - PESTICIDES

(a) Pesticides covered under R315-16. The requirements of this rule apply to persons managing pesticides, as described in section 1.9, meeting the following conditions, except those listed in paragraph (b) of this section:

(1) Recalled pesticides that are:

(i) Stocks of a suspended and canceled pesticide that are part of a voluntary or mandatory recall under FIFRA Section 19(b), including, but not limited to those owned by the registrant responsible for conducting the recall; or

(ii) Stocks of a suspended or canceled pesticide, or a pesticide that is not in compliance with FIFRA, that are part of a voluntary recall by the registrant.

(2) Stocks of other unused pesticide products that are collected and managed as part of a waste pesticide collection program.

(b) Pesticides not covered under R315-16. The requirements of this rule do not apply to persons managing the following pesticides:

(1) Recalled pesticides described in paragraph (a)(1) of this section, and unused pesticide products described in paragraph (a)(2) of this section, that are managed by farmers in compliance with R315-5-7. R315-5-7 addresses pesticides disposed of on the farmer's own farm in a manner consistent with the disposal instructions on the pesticide label, providing the container is triple rinsed in accordance with R315-2-7(b)(3);

(2) Pesticides not meeting the conditions set forth in paragraph (a) of this section. These pesticides must be managed in compliance with the hazardous waste regulations in R315-1 through R315-101;

(3) Pesticides that are not wastes under R315-2, including

those that do not meet the criteria for waste generation in paragraph (c) of this section or those that are not wastes as described in paragraph (d) of this section; and

(4) Pesticides that are not hazardous waste. A pesticide is a hazardous waste if it is listed in R315-2-10 or if it exhibits one or more of the characteristics identified in R315-2-9.

(c) When a pesticide becomes a waste.

(1) A recalled pesticide described in paragraph (a)(1) of this section becomes a waste on the first date on which both of the following conditions apply:

(i) The generator of the recalled pesticide agrees to participate in the recall; and

(ii) The person conducting the recall decides to discard, e.g., burn the pesticide for energy recovery.

(2) An unused pesticide product described in paragraph (a)(2) of this section becomes a waste on the date the generator decides to discard it.

(d) Pesticides that are not wastes. The following pesticides are not wastes:

(1) Recalled pesticides described in paragraph (a)(1) of this section, provided that the person conducting the recall:

(i) Has not made a decision to discard, e.g., burn for energy recovery, the pesticide. Until such a decision is made, the pesticide does not meet the definition of "solid waste" under R315-2-2; thus the pesticide is not a hazardous waste and is not subject to hazardous waste requirements, including R315-16. This pesticide remains subject to the requirements of FIFRA; or

(ii) Has made a decision to use a management option that, under R315-2-2, does not cause the pesticide to be a solid waste, i.e., the selected option is use, other than use constituting disposal, or reuse, other than burning for energy recovery or reclamation. Such a pesticide is not a solid waste and therefore is not a hazardous waste, and is not subject to the hazardous waste requirements including R315-16. This pesticide, including a recalled pesticide that is exported to a foreign destination for use or reuse, remains subject to the requirements of FIFRA.

(2) Unused pesticide products described in paragraph (a)(2) of this section, if the generator of the unused pesticide product has not decided to discard, them, e.g., burn for energy recovery. These pesticides remain subject to the requirements of FIFRA.

1.4 APPLICABILITY -- MERCURY-CONTAINING EQUIPMENT

(a) Mercury-containing equipment covered under R315-16. The requirements of this section apply to persons managing mercury-containing equipment, as described in section 1.9, except those listed in paragraph (b) of this section.

(b) Mercury-containing equipment not covered under R315-16. The requirements of this section do not apply to persons managing the following mercury-containing equipment:

(1) Mercury-containing equipment that are not yet wastes under R315-2. Paragraph (c) of this section describes when mercury-containing equipment become wastes.

(2) Mercury-containing equipment that are not hazardous waste. A Mercury-containing equipment is a hazardous waste if it exhibits one or more of the characteristics identified in R315-2-9.

(c) Generation of waste mercury-containing equipment.

(1) Used mercury-containing equipment becomes a waste on the date it is discarded, e.g., sent for reclamation.

(2) Used mercury-containing equipment becomes a waste on the date the handler decides to discard it.

1.5 APPLICABILITY - LAMPS

(a) Lamps covered under R315-16. The requirements of this section apply to persons managing lamps, as described in section 1.9, except those listed in paragraph (b) of this section.

(b) Lamps not covered under R315-16. The requirements of R315-16 do not apply to persons managing the following lamps:

(1) Lamps that are not yet wastes under R315-2 as provided in paragraph (c) of this section.

(2) Lamps, that are not hazardous waste. A lamp is a hazardous waste if it exhibits one or more of the characteristics identified in R315-2-9(a) and (d) - (g).

(c) Generation of waste lamps.

(1) A used lamp becomes a waste on the date it is discarded, e.g., sent for reclamation.

(2) An unused lamp becomes a waste on the date the handler decides to discard it.

1.8 APPLICABILITY - HOUSEHOLD AND CONDITIONALLY EXEMPT SMALL QUANTITY GENERATOR WASTE

(a) Persons managing the wastes listed below may, at their option, manage them under the requirements of this section:

(1) Household wastes that are exempt under R315-2-4 and are also of the same type as the universal wastes defined in section 1.9; or

(2) Conditionally exempt small quantity generator wastes that are exempt under R315-2-5 and are also of the same type as the universal wastes defined in section 1.9.

(b) Persons who commingle the wastes described in paragraphs (a)(1) and (a)(2) of this section together with universal waste regulated under this rule must manage the commingled waste under the requirements of this rule.

1.9 DEFINITIONS

(a) "Battery" means a device consisting of one or more electrically connected electrochemical cells which is designed to receive, store, and deliver electric energy. An electrochemical cell is a system consisting of an anode, cathode, and an electrolyte, plus such connections, electrical and mechanical, as may be needed to allow the cell to deliver or receive electrical energy. The term battery also includes an intact, unbroken battery from which the electrolyte has been removed.

(b) "Destination facility" means a facility that treats, disposes of, or recycles a particular category of universal waste, except those management activities described in sections 16-2.4(a) and (c) and sections 16-3.4(a) and (c). A facility at which a particular category of universal waste is only accumulated, is not a destination facility for purposes of managing that category of universal waste.

(c) "FIFRA" means the Federal Insecticide, Fungicide, and Rodenticide Act, 7 U.S.C. 136-136y.

(d) "Generator" means any person, by site, whose act or process produces hazardous waste identified or listed in R315-2 of this rule, or whose act first causes a hazardous waste to become subject to regulation.

(e) "Lamp," also referred to as "universal waste lamp" is defined as the bulb or tube portion of an electric lighting device. A lamp is specifically designed to produce radiant energy, most often in the ultraviolet, visible, and infra-red regions of the electromagnetic spectrum. Examples of common universal waste electric lamps include fluorescent, high intensity discharge, neon, mercury vapor, high pressure sodium, and metal halide lamps.

(f) "Large Quantity Handler of Universal Waste" means a universal waste handler, as defined in this section, who accumulates 5,000 kilograms or more total of universal waste, batteries, pesticides, lamps, or mercury-containing equipment, calculated collectively, at any time. This designation as a large quantity handler of universal waste is retained through the end of the calendar year in which 5,000 kilograms or more total of universal waste is accumulated.

(g) "Mercury-containing equipment" means a device or part of a device, including thermostats, but excluding batteries and lamps, that contains elemental mercury integral to its function.

(h) "On-site" means the same or geographically contiguous property which may be divided by public or private right-of-

way, provided that the entrance and exit between the properties is at a cross-roads intersection, and access is by crossing as opposed to going along the right of way. Non-contiguous properties owned by the same person but connected by a right-of-way which he controls and to which the public does not have access, are also considered on-site property.

(i) "Pesticide" means any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, or intended for use as a plant regulator, defoliant, or desiccant, other than any article that:

(1) Is a new animal drug under FFDCA section 201(w), or

(2) Is an animal drug that has been determined by regulation of the Secretary of Health and Human Services not to be a new animal drug, or

(3) Is an animal feed under FFDCA section 201(x) that bears or contains any substances described by paragraph (1) or (2) of this section.

(j) "Small Quantity Handler of Universal Waste" means a universal waste handler, as defined in this section, who does not accumulate 5,000 kilograms or more total of universal waste, batteries, pesticides, lamps, or mercury-containing equipment, calculated collectively, at any time.

(k) "Thermostat" means a temperature control device that contains metallic mercury in an ampule attached to a bimetal sensing element, and mercury-containing ampules that have been removed from these temperature control devices in compliance with the requirements of sections 16-2.4(c)(2) or 16-3.4(c)(2).

(l) "Universal Waste" means any of the following hazardous wastes that are subject to the universal waste requirements of R315-16:

(1) Batteries as described in section 16-1.2;

(2) Pesticides as described in section 16-1.3;

(3) Mercury-containing equipment as described in section 16-1.4; and

(4) Lamps as described in section 16-1.5.

(m) "Universal Waste Handler":

(1) Means:

(i) A generator, as defined in this section, of universal waste; or

(ii) The owner or operator of a facility, including all contiguous property, that receives universal waste from other universal waste handlers, accumulates universal waste, and sends universal waste to another universal waste handler, to a destination facility, or to a foreign destination.

(2) Does not mean:

(i) A person who treats, except under the provisions of sections 16-2.4(a) or (c), or 16-3.4(a) or (c), disposes of, or recycles universal waste; or

(ii) A person engaged in the off-site transportation of universal waste by air, rail, highway, or water, including a universal waste transfer facility.

(n) "Universal Waste Transfer Facility" means any transportation-related facility including loading docks, parking areas, storage areas and other similar areas where shipments of universal waste are held during the normal course of transportation for ten days or less.

(o) "Universal Waste Transporter" means a person engaged in the off-site transportation of universal waste by air, rail, highway, or water.

R315-16-2. Standards for Small Quantity Handlers of Universal Waste.

2.1 APPLICABILITY

This section applies to small quantity handlers of universal waste as defined in section 16-1.9.

2.2 PROHIBITIONS

A small quantity handler of universal waste is:

(a) Prohibited from disposing of universal waste; and

(b) Prohibited from diluting or treating universal waste, except by responding to releases as provided in section 16-2.8; or by managing specific wastes as provided in section 16-2.4.

2.3 NOTIFICATION

A small quantity handler of universal waste is not required to notify the Division of universal waste handling activities.

2.4 WASTE MANAGEMENT

(a) Universal waste batteries. A small quantity handler of universal waste must manage universal waste batteries in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

(1) A small quantity handler of universal waste must contain any universal waste battery that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions in a container. The container must be closed, structurally sound, compatible with the contents of the battery, and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

(2) A small quantity handler of universal waste may conduct the following activities as long as the casing of each individual battery cell is not breached and remains intact and closed, except that cells may be opened to remove electrolyte but must be immediately closed after removal:

(i) Sorting batteries by type;

(ii) Mixing battery types in one container;

(iii) Discharging batteries so as to remove the electric charge;

(iv) Regenerating used batteries;

(v) Disassembling batteries or battery packs into individual batteries or cells;

(vi) Removing batteries from consumer products; or

(vii) Removing electrolyte from batteries.

(3) A small quantity handler of universal waste who removes electrolyte from batteries, or who generates other solid waste, e.g., battery pack materials, discarded consumer products, as a result of the activities listed above, must determine whether the electrolyte or other solid waste exhibit a characteristic of hazardous waste identified in R315-2-9.

(i) If the electrolyte or other solid waste exhibits a characteristic of hazardous waste, it is subject to all applicable requirements of R315-1 through R315-101. The handler is considered the generator of the hazardous electrolyte or other waste and is subject to R315-5.

(ii) If the electrolyte or other solid waste is not hazardous, the handler may manage the waste in any way that is in compliance with applicable federal, state or local solid waste regulations.

(b) Universal waste pesticides. A small quantity handler of universal waste must manage universal waste pesticides in a way that prevents releases of any universal waste or component of a universal waste to the environment. The universal waste pesticides must be contained in one or more of the following:

(1) A container that remains closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions; or

(2) A container that does not meet the requirements of paragraph (b)(1) of this section, provided that the unacceptable container is overpacked in a container that does meet the requirements of paragraph (b)(1) of this section; or

(3) Except for 40 CFR 265.197(c), 265.200, and 265.201, a tank that meets the requirements of R315-7-17, which incorporates 40 CFR part 265, subpart J by reference; or

(4) A transport vehicle or vessel that is closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

(c) Mercury-containing equipment. A small quantity

handler of universal waste must manage universal waste mercury-containing equipment in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

(1) A small quantity handler of universal waste must place in a container any universal waste mercury-containing equipment with non-contained elemental mercury or that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions. The container must be closed, structurally sound, compatible with the contents of the device, must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions, and must be reasonably designed to prevent the escape of mercury into the environment by volatilization or any other means.

(2) A small quantity handler of universal waste may remove mercury-containing ampules from universal waste mercury-containing equipment provided the handler:

(i) Removes the ampules in a manner designed to prevent breakage of the ampules;

(ii) Removes ampules only over or in a containment device, e.g., tray or pan sufficient to collect and contain any mercury released from an ampule in case of breakage;

(iii) Ensures that a mercury clean-up system is readily available to immediately transfer any mercury resulting from spills or leaks from broken ampules, from the containment device to a container that meets the requirements of 40 CFR 262.34, as incorporated by reference at R315-5-3.34;

(iv) Immediately transfers any mercury resulting from spills or leaks from broken ampules from the containment device to a container that meets the requirements of 40 CFR 262.34, as incorporated by reference at R315-5-3.34;

(v) Ensures that the area in which ampules are removed is well ventilated and monitored to ensure compliance with applicable OSHA exposure levels for mercury;

(vi) Ensures that employees removing ampules are thoroughly familiar with proper waste mercury handling and emergency procedures, including transfer of mercury from containment devices to appropriate containers;

(vii) Stores removed ampules in closed, non-leaking containers that are in good condition;

(viii) Packs removed ampules in the container with packing materials adequate to prevent breakage during storage, handling, and transportation; and

(3) A small quantity handler of universal waste mercury-containing equipment that does not contain an ampule may remove the open original housing holding the mercury from universal waste mercury-containing equipment provided the handler:

(i) Immediately seals the original housing holding the mercury with an air-tight seal to prevent the release of any mercury to the environment; and

(ii) Follows all requirements for removing ampules and managing removed ampules under paragraph (c)(2) of this section; and

(4)(i) A small quantity handler of universal waste who removes mercury-containing ampules from mercury-containing equipment or seals mercury from mercury-containing equipment in its original housing must determine whether the following exhibit a characteristic of hazardous waste identified in 40 CFR part 261, subpart C:

(A) Mercury or clean-up residues resulting from spills or leaks and/or

(B) Other solid waste generated as a result of the removal of mercury-containing ampules or housings (e.g., the remaining mercury-containing device).

(ii) If the mercury, residues, and/or other solid waste exhibits a characteristic of hazardous waste, it must be managed in compliance with all applicable requirements of 40 CFR parts

260 through 272. The handler is considered the generator of the mercury, residues, and/or other waste and must manage it in compliance with 40 CFR part 262.

(iii) If the mercury, residues, and/or other solid waste is not hazardous, the handler may manage the waste in any way that is in compliance with applicable federal, state or local solid waste regulations.

(d) Lamps. A small quantity handler of universal waste must manage lamps in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

(1) A small quantity handler of universal waste must contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers and packages must remain closed and must lack evidence of leakage, spillage or damage that could cause leakage under reasonably foreseeable conditions.

(2) A small quantity handler of universal waste must immediately clean up and place in a container any lamp that is broken and must place in a container any lamp that shows evidence of breakage, leakage, or damage that could cause the release of mercury or other hazardous constituents to the environment. Containers must be closed, structurally sound, compatible with the contents of the lamps and must lack evidence of leakage, spillage or damage that could cause leakage or releases of mercury or other hazardous constituents to the environment under reasonably foreseeable conditions.

2.5 LABELING/MARKING

A small quantity handler of universal waste must label or mark the universal waste to identify the type of universal waste as specified below:

(a) Universal waste batteries, i.e., each battery, or a container in which the batteries are contained, must be labeled or marked clearly with the following phrase: "Universal Waste Battery" or "Universal Waste Batteries";

(b) A container, or multiple container package unit, tank, transport vehicle or vessel in which recalled universal waste pesticides as described in section 16-1.3(a)(1) are contained must be labeled or marked clearly with:

(1) The label that was on or accompanied the product as sold or distributed; and

(2) The words "Universal Waste Pesticide" or "Universal Waste Pesticides";

(c) A container, tank, or transport vehicle or vessel in which unused pesticide products as described in section 16-1.3(a)(2) are contained must be labeled or marked clearly with:

(1)(i) The label that was on the product when purchased, if still legible;

(ii) If using the labels described in paragraph (c)(1)(i) of this section is not feasible, the appropriate label as required under the Department of Transportation regulation 49 CFR part 172;

(iii) If using the labels described in paragraphs (c)(1)(i) and (ii) of this section is not feasible, another label prescribed or designated by the waste pesticide collection program administered or recognized by a state; and

(2) The words "Universal Waste-Pesticide" or "Universal Waste Pesticides."

(d)(1) Universal waste mercury-containing equipment (i.e., each device), or a container in which the equipment is contained, must be labeled or marked clearly with any of the following phrases: "Universal Waste-Mercury Containing Equipment," "Waste Mercury-Containing Equipment," or "Used Mercury-Containing Equipment."

(2) A universal waste mercury-containing thermostat or container containing only universal waste mercury-containing thermostats may be labeled or marked clearly with any of the following phrases: "Universal Waste-Mercury Thermostat(s),"

"Waste Mercury-Containing Thermostat(s)," or Used Mercury Thermostat(s)."

(e) Each lamp or a container or package in which such lamps are contained shall be labeled or marked clearly with one of the following phrases: "Universal Waste - Lamp(s)," or "Waste Lamp(s)," or "Used Lamp(s)."

2.6 ACCUMULATION TIME LIMITS

(a) A small quantity handler of universal waste may accumulate universal waste for no longer than one year from the date the universal waste is generated, or received from another handler, unless the requirements of paragraph (b) of this section are met.

(b) A small quantity handler of universal waste may accumulate universal waste for longer than one year from the date the universal waste is generated, or received from another handler, if such activity is solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal. However, the handler bears the burden of proving that such activity is solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal.

(c) A small quantity handler of universal waste who accumulates universal waste must be able to demonstrate the length of time that the universal waste has been accumulated from the date it becomes a waste or is received. The handler may make this demonstration by:

(1) Placing the universal waste in a container and marking or labeling the container with the earliest date that any universal waste in the container became a waste or was received;

(2) Marking or labeling each individual item of universal waste (e.g., each battery or thermostat) with the date it became a waste or was received;

(3) Maintaining an inventory system on-site that identifies the date each universal waste became a waste or was received;

(4) Maintaining an inventory system on-site that identifies the earliest date that any universal waste in a group of universal waste items or a group of containers of universal waste became a waste or was received;

(5) Placing the universal waste in a specific accumulation area and identifying the earliest date that any universal waste in the area became a waste or was received; or

(6) Any other method which clearly demonstrates the length of time that the universal waste has been accumulated from the date it becomes a waste or is received.

2.7 EMPLOYEE TRAINING

A small quantity handler of universal waste must inform all employees who handle or have responsibility for managing universal waste. The information must describe proper handling and emergency procedures appropriate to the type, or types of universal waste handled at the facility.

2.8 RESPONSE TO RELEASES

(a) A small quantity handler of universal waste must immediately contain all releases of universal wastes and other residues from universal wastes.

(b) A small quantity handler of universal waste must determine whether any material resulting from the release is hazardous waste, and if so, must manage the hazardous waste in compliance with all applicable requirements of R315-1 through R315-101. The handler is considered the generator of the material resulting from the release, and must manage it in compliance with R315-5.

2.9 OFF-SITE SHIPMENTS

(a) A small quantity handler of universal waste is prohibited from sending or taking universal waste to a place other than another universal waste handler, a destination facility, or a foreign destination.

(b) If a small quantity handler of universal waste self-transport universal waste off-site, the handler becomes a

universal waste transporter for those self-transportation activities and must comply with the transporter requirements of section 16-4 of this rule while transporting the universal waste.

(c) If a universal waste being offered for off-site transportation meets the definition of hazardous materials under 49 CFR parts 171 through 180, a small quantity handler of universal waste must package, label, mark and placard the shipment, and prepare the proper shipping papers in accordance with the applicable Department of Transportation regulations under 49 CFR parts 172 through 180;

(d) Prior to sending a shipment of universal waste to another universal waste handler, the originating handler must ensure that the receiving handler agrees to receive the shipment.

(e) If a small quantity handler of universal waste sends a shipment of universal waste to another handler or to a destination facility and the shipment is rejected by the receiving handler or destination facility, the originating handler must either:

(1) Receive the waste back when notified that the shipment has been rejected, or

(2) Agree with the receiving handler on a destination facility to which the shipment will be sent.

(f) A small quantity handler of universal waste may reject a shipment containing universal waste, or a portion of a shipment containing universal waste that he has received from another handler. If a handler rejects a shipment or a portion of a shipment, he must contact the originating handler to notify him of the rejection and to discuss reshipment of the load. The handler must:

(1) Send the shipment back to the originating handler, or

(2) If agreed to by both the originating and receiving handler, send the shipment to a destination facility.

(g) If a small quantity handler of universal waste receives a shipment containing hazardous waste that is not a universal waste, the handler must immediately notify the Division of Waste Management and Radiation Control of the illegal shipment, and provide the name, address, and phone number of the originating shipper. The Division will provide instructions for managing the hazardous waste.

(h) If a small quantity handler of universal waste receives a shipment of non-hazardous, non-universal waste, the handler may manage the waste in any way that is in compliance with applicable federal, state or local solid waste regulations.

2.10 TRACKING UNIVERSAL WASTE SHIPMENTS

A small quantity handler of universal waste is not required to keep records of shipments of universal waste.

2.11 EXPORTS

A small quantity handler of universal waste who sends universal waste to a foreign destination other than to those OECD countries specified in R315-5-5, which incorporates by reference 40 CFR 262.58(a)(1), in which case the handler is subject to the requirements of R315-5-8, which incorporates by reference 40 CFR 262 subpart H, must:

(a) Comply with the requirements applicable to a primary exporter in 40 CFR 262.53, 262.56(a)(1) through (4) and (6), 262.53(b), and 262.57, as incorporated by reference at R315-5-5;

(b) Export such universal waste only upon consent of the receiving country and in conformance with the EPA Acknowledgment of Consent as defined in 40 CFR part 262 subpart E, as incorporated by reference at R315-5-5; and

(c) Provide a copy of the EPA Acknowledgment of Consent for the shipment to the transporter transporting the shipment for export.

2.12 TESTING REQUIREMENTS

A determination of whether or not mercury-containing lamps are hazardous waste shall be performed by a Utah certified laboratory using the Toxicity Characteristic Leaching Procedure according to:

(a) R315-50-7, which incorporates the requirements of 40 CFR 261, Appendix II, 1993 ed.; and

(b) the Science Applications International Corporation report, "Analytical Results of Mercury in Fluorescent Lamps," section 6.0, "Summary Guidelines for the Extraction of Fluorescent Lamps," 1992, prepared for the U.S. Environmental Protection Agency, which is adopted and incorporated by reference.

R315-16-3. Standards for Large Quantity Handlers of Universal Waste.

3.1 APPLICABILITY

This section applies to large quantity handlers of universal waste as defined in section 16-1.9.

3.2 PROHIBITIONS

A large quantity handler of universal waste is:

- (a) Prohibited from disposing of universal waste; and
- (b) Prohibited from diluting or treating universal waste, except by responding to releases as provided in section 16-3.8; or by managing specific wastes as provided in section 16-3.4.

3.3 NOTIFICATION

(a)(1) Except as provided in paragraphs (a)(2) and (3) of this section, a large quantity handler of universal waste must have sent written notification of universal waste management to the Director, and received an EPA Identification Number, before meeting or exceeding the 5,000 kilogram storage limit.

(2) A large quantity handler of universal waste who has already notified the Division of his hazardous waste management activities and has received an EPA Identification Number is not required to renotify under this section.

(3) A large quantity handler of universal waste who manages recalled universal waste pesticides as described in section 16-1.3(a)(1) and who has sent notification to EPA as required by 40 CFR part 165 is not required to notify for those recalled universal waste pesticides under this section.

(b) This notification must include:

- (1) The universal waste handler's name and mailing address;
- (2) The name and business telephone number of the person at the universal waste handler's site who should be contacted regarding universal waste management activities;
- (3) The address or physical location of the universal waste management activities;
- (4) A list of all of the types of universal waste managed by the handler, (e.g., batteries, pesticides, mercury-containing equipment, lamps) and;
- (5) A statement indicating that the handler is accumulating more than 5,000 kilograms of universal waste at one time.

3.4 WASTE MANAGEMENT

(a) Universal waste batteries. A large quantity handler of universal waste must manage universal waste batteries in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

(1) A large quantity handler of universal waste must contain any universal waste battery that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions in a container. The container must be closed, structurally sound, compatible with the contents of the battery, and must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

(2) A large quantity handler of universal waste may conduct the following activities as long as the casing of each individual battery cell is not breached and remains intact and closed, except that cells may be opened to remove electrolyte but must be immediately closed after removal:

- (i) Sorting batteries by type;
- (ii) Mixing battery types in one container;
- (iii) Discharging batteries so as to remove the electric

charge;

- (iv) Regenerating used batteries;
- (v) Disassembling batteries or battery packs into individual batteries or cells;
- (vi) Removing batteries from consumer products; or
- (vii) Removing electrolyte from batteries.

(3) A large quantity handler of universal waste who removes electrolyte from batteries, or who generates other solid waste, e.g., battery pack materials, discarded consumer products as a result of the activities listed above, must determine whether the electrolyte or other solid waste, or both, exhibits a characteristic of hazardous waste identified in R315-2-9.

(i) If the electrolyte or other solid waste exhibits a characteristic of hazardous waste, it must be managed in compliance with all applicable requirements of R315-1 through R315-101. The handler is considered the generator of the hazardous electrolyte or other waste and is subject to R315-5.

(ii) If the electrolyte or other solid waste is not hazardous, the handler may manage the waste in any way that is in compliance with applicable federal, state or local solid waste regulations.

(b) Universal waste pesticides. A large quantity handler of universal waste must manage universal waste pesticides in a way that prevents releases of any universal waste or component of a universal waste to the environment. The universal waste pesticides must be contained in one or more of the following:

- (1) A container that remains closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions; or
- (2) A container that does not meet the requirements of paragraph (b)(1) of this section, provided that the unacceptable container is overpacked in a container that does meet the requirements of paragraph (b)(1) of this section; or
- (3) A tank that meets the requirements of R315-7-17, which incorporates by reference 40 CFR part 265 subpart J, excluding the requirements of 40 CFR 265.197(c), 265.200, and 265.201; or
- (4) A transport vehicle or vessel that is closed, structurally sound, compatible with the pesticide, and that lacks evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

(c) Mercury-containing equipment. A large quantity handler of universal waste must manage universal waste mercury-containing equipment in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

(1) A large quantity handler of universal waste must contain any universal waste mercury-containing equipment with non-contained elemental mercury or that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions in a container. The container must be closed, structurally sound, compatible with the contents of the device, must lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions, and must be reasonable designed to prevent the escape of mercury into the environment by volatilization or any other means.

(2) A large quantity handler of universal waste may remove mercury-containing ampules from universal waste mercury-containing equipment provided the handler:

- (i) Removes the ampules in a manner designed to prevent breakage of the ampules;
- (ii) Removes ampules only over or in a containment device, (e.g., tray or pan sufficient to contain any mercury released from an ampule in case of breakage);
- (iii) Ensures that a mercury clean-up system is readily available to immediately transfer any mercury resulting from spills or leaks from broken ampules, from the containment

device to a container that meets the requirements of R315-5-3.34;

(iv) Immediately transfers any mercury resulting from spills or leaks from broken ampules from the containment device to a container that meets the requirements of R315-5-3.34;

(v) Ensures that the area in which ampules are removed is well ventilated and monitored to ensure compliance with applicable OSHA exposure levels for mercury;

(vi) Ensures that employees removing ampules are thoroughly familiar with proper waste handling and emergency procedures, including transfer of mercury from containment devices to appropriate containers;

(vii) Stores removed ampules in closed, non-leaking containers that are in good condition;

(viii) Packs removed ampules in the container with packing materials adequate to prevent breakage during storage, handling, and transportation; and

(3) A large quantity handler of universal waste mercury-containing equipment that does not contain an ampule may remove the open original housing holding the mercury from universal waste mercury-containing equipment provided the handler:

(i) Immediately seals the original housing holding the mercury with an air-tight seal to prevent the release of any mercury to the environment; and

(ii) Follows all requirements for removing ampules and managing removed ampules under paragraph (c)(2) of this section; and

(4)(i) A large quantity handler of universal waste who removes mercury-containing ampules from mercury-containing equipment or seals mercury from mercury-containing equipment in its original housing must determine whether the following exhibit a characteristic of hazardous waste identified in 40 CFR part 261, subpart C:

(A) Mercury or clean-up residues resulting from spills or leaks and/or

(B) Other solid waste generated as a result of the removal of mercury-containing ampules or housings (e.g., the remaining mercury-containing device).

(ii) If the mercury, residues, and/or other solid waste exhibits a characteristic of hazardous waste, it must be managed in compliance with all applicable requirements of 40 CFR parts 260 through 272. The handler is considered the generator of the mercury, residues, and/or other waste and must manage it in compliance with 40 CFR part 262.

(iii) If the mercury, residues, and/or other solid waste is not hazardous, the handler may manage the waste in any way that is in compliance with applicable federal, state or local solid waste regulations.

(d) Lamps. A large quantity handler of universal waste shall manage lamps in a way that prevents releases of any universal waste or component of a universal waste to the environment, as follows:

(1) A large quantity handler of universal waste shall contain any lamp in containers or packages that are structurally sound, adequate to prevent breakage, and compatible with the contents of the lamps. Such containers and packages shall remain closed and shall lack evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions.

(2) A large quantity handler of universal waste shall immediately clean up and place in a container any lamp that is broken and shall place in a container any lamp that shows evidence of breakage, leakage, or damage that could cause the release of mercury or other hazardous constituents to the environment. Containers shall be closed, structurally sound, compatible with the contents of the lamps and shall lack evidence of leakage, spillage, or damage that could cause leakage or releases of mercury or other hazardous constituents

to the environment under reasonably foreseeable conditions.

3.5 LABELING/MARKING

A large quantity handler of universal waste must label or mark the universal waste to identify the type of universal waste as specified below:

(a) Universal waste batteries, i.e., each battery, or a container or tank in which the batteries are contained, must be labeled or marked clearly with the following phrase: "Universal Waste Battery" or "Universal Waste Batteries";

(b) A container, or multiple container package unit, tank, transport vehicle or vessel in which recalled universal waste pesticides as described in R315-16-1-3(a)(1) are contained must be labeled or marked clearly with:

(1) The label that was on or accompanied the product as sold or distributed; and

(2) The words "Universal Waste Pesticide" or "Universal Waste Pesticides";

(c) A container, tank, or transport vehicle or vessel in which unused pesticide products as described in R315-16-1-3(a)(2) are contained must be labeled or marked clearly with:

(1)(i) The label that was on the product when purchased, if still legible;

(ii) If using the labels described in paragraph (c)(1)(i) of this section is not feasible, the appropriate label as required under the Department of Transportation regulation 49 CFR part 172;

(iii) If using the labels described in paragraphs (c)(1)(i) and (1)(ii) of this section is not feasible, another label prescribed or designated by the pesticide collection program; and

(2) The words "Universal Waste Pesticide" or "Universal Waste Pesticides".

(d)(1) Mercury-containing equipment (i.e., each device), or a container in which the equipment is contained, must be labeled or marked clearly with any of the following phrases: "Universal Waste -- Mercury Containing Equipment," "Waste Mercury-Containing Equipment," or "Used Mercury-Containing Equipment."

(2) A universal waste mercury-containing thermostat or container containing only universal waste mercury-containing thermostats may be labeled or marked clearly with any of the following phrases: "Universal Waste -- Mercury Thermostat(s)," "Waste Mercury Thermostat(s)," or "Used Mercury Thermostat(s)."

(e) Each lamp or a container or package in which such lamps are contained shall be labeled or marked clearly with any one of the following phrases: "Universal Waste - Lamp(s)," or "Waste Lamp(s)," or "Used Lamp(s)."

3.6 ACCUMULATION TIME LIMITS

(a) A large quantity handler of universal waste may accumulate universal waste for no longer than one year from the date the universal waste is generated, or received from another handler, unless the requirements of paragraph (b) of this section are met.

(b) A large quantity handler of universal waste may accumulate universal waste for longer than one year from the date the universal waste is generated, or received from another handler, if such activity is solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal. However, the handler bears the burden of proving that such activity was solely for the purpose of accumulation of such quantities of universal waste as necessary to facilitate proper recovery, treatment, or disposal.

(c) A large quantity handler of universal waste must be able to demonstrate the length of time that the universal waste has been accumulated from the date it becomes a waste or is received. The handler may make this demonstration by:

(1) Placing the universal waste in a container and marking

or labeling the container with the earliest date that any universal waste in the container became a waste or was received;

(2) Marking or labeling the individual item of universal waste, e.g., each battery, lamp, or thermostat with the date it became a waste or was received;

(3) Maintaining an inventory system on-site that identifies the date the universal waste being accumulated became a waste or was received;

(4) Maintaining an inventory system on-site that identifies the earliest date that any universal waste in a group of universal waste items or a group of containers of universal waste became a waste or was received;

(5) Placing the universal waste in a specific accumulation area and identifying the earliest date that any universal waste in the area became a waste or was received; or

(6) Any other method which clearly demonstrates the length of time that the universal waste has been accumulated from the date it becomes a waste or is received.

3.7 EMPLOYEE TRAINING

A large quantity handler of universal waste must ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relative to their responsibilities during normal facility operations and emergencies.

3.8 RESPONSE TO RELEASES

(a) A large quantity handler of universal waste must immediately contain all releases of universal wastes and other residues from universal wastes.

(b) A large quantity handler of universal waste must determine whether any material resulting from the release is hazardous waste, and if so, must manage the hazardous waste in compliance with all applicable requirements of R315-1 through R315-101. The handler is considered the generator of the material resulting from the release, and is subject to R315-5.

3.9 OFF-SITE SHIPMENTS

(a) A large quantity handler of universal waste is prohibited from sending or taking universal waste to a place other than another universal waste handler, a destination facility, or a foreign destination.

(b) If a large quantity handler of universal waste self-transport universal waste off-site, the handler becomes a universal waste transporter for those self-transportation activities and must comply with the transporter requirements of section 16-4 while transporting the universal waste.

(c) If a universal waste being offered for off-site transportation meets the definition of hazardous materials under 49 CFR 171 through 180, a large quantity handler of universal waste must package, label, mark and placard the shipment, and prepare the proper shipping papers in accordance with the applicable Department of Transportation regulations under 49 CFR parts 172 through 180;

(d) Prior to sending a shipment of universal waste to another universal waste handler, the originating handler must ensure that the receiving handler agrees to receive the shipment.

(e) If a large quantity handler of universal waste sends a shipment of universal waste to another handler or to a destination facility and the shipment is rejected by the receiving handler or destination facility, the originating handler must either:

(1) Receive the waste back when notified that the shipment has been rejected, or

(2) Agree with the receiving handler on a destination facility to which the shipment will be sent.

(f) A large quantity handler of universal waste may reject a shipment containing universal waste, or a portion of a shipment containing universal waste that he has received from another handler. If a handler rejects a shipment or a portion of a shipment, he must contact the originating handler to notify him of the rejection and to discuss reshipment of the load. The

handler must:

(1) Send the shipment back to the originating handler, or

(2) If agreed to by both the originating and receiving handler, send the shipment to a destination facility.

(g) If a large quantity handler of universal waste receives a shipment containing hazardous waste that is not a universal waste, the handler must immediately notify the Division of the illegal shipment, and provide the name, address, and phone number of the originating shipper. The Division will provide instructions for managing the hazardous waste.

(h) If a large quantity handler of universal waste receives a shipment of non-hazardous, non-universal waste, the handler may manage the waste in any way that is in compliance with applicable federal, state or local solid waste regulations.

3.10 TRACKING UNIVERSAL WASTE SHIPMENTS

(a) Receipt of shipments. A large quantity handler of universal waste must keep a record of each shipment of universal waste received at the facility. The record may take the form of a log, invoice, manifest, bill of lading, or other shipping document. The record for each shipment of universal waste received must include the following information:

(1) The name and address of the originating universal waste handler or foreign shipper from whom the universal waste was sent;

(2) The quantity of each type of universal waste received, e.g., batteries, pesticides, lamps, or thermostats;

(3) The date of receipt of the shipment of universal waste.

(b) Shipments off-site. A large quantity handler of universal waste must keep a record of each shipment of universal waste sent from the handler to other facilities. The record may take the form of a log, invoice, manifest, bill of lading or other shipping document. The record for each shipment of universal waste sent must include the following information:

(1) The name and address of the universal waste handler, destination facility, or foreign destination to whom the universal waste was sent;

(2) The quantity of each type of universal waste sent, e.g., batteries, pesticides, thermostats, or lamps;

(3) The date the shipment of universal waste left the facility.

(c) Record retention.

(1) A large quantity handler of universal waste must retain the records described in paragraph (a) of this section for at least three years from the date of receipt of a shipment of universal waste.

(2) A large quantity handler of universal waste must retain the records described in paragraph (b) of this section for at least three years from the date a shipment of universal waste left the facility.

3.11 EXPORTS

A large quantity handler of universal waste who sends universal waste to a foreign destination other than to those OECD countries specified in R315-5-5, which incorporates by reference 40 CFR 262.58(a)(1), in which case the handler is subject to the requirements of R315-5-8, which incorporates by reference 40 CFR 262 subpart H, must:

(a) Comply with the requirements applicable to a primary exporter in R315-5-5;

(b) Export such universal waste only upon consent of the receiving country and in conformance with the EPA Acknowledgement of Consent as defined in subpart E of 40 CFR, part 262, as incorporated by reference at R315-5-5; and

(c) Provide a copy of the EPA Acknowledgement of Consent for the shipment to the transporter transporting the shipment for export.

3.12 TESTING REQUIREMENTS

A determination of whether or not mercury-containing lamps are hazardous waste shall be performed by a Utah

certified laboratory using the Toxicity Characteristic Leaching Procedure according to:

(a) R315-50-7, which incorporates the requirements of 40 CFR 261, Appendix II, 1993 ed.; and

(b) the Science Applications International Corporation report, "Analytical Results of Mercury in Fluorescent Lamps," section 6.0, "Summary Guidelines for the Extraction of Fluorescent Lamps," which is adopted and incorporated by reference.

R315-16-4. Standards for Universal Waste Transporters.

4.1 APPLICABILITY

This section applies to universal waste transporters, as defined in R315-16-1.9.

4.2 PROHIBITIONS

A universal waste transporter is:

- (a) Prohibited from disposing of universal waste; and
- (b) Prohibited from diluting or treating universal waste, except by responding to releases as provided in section 16-4.5.

4.3 WASTE MANAGEMENT

(a) A universal waste transporter must comply with all applicable U.S. Department of Transportation regulations in 49 CFR part 171 through 180 for transport of any universal waste that meets the definition of hazardous material in 49 CFR 171.8. For purposes of the Department of Transportation regulations, a material is considered a hazardous waste if it is subject to the Hazardous Waste Manifest Requirements of the U.S. Environmental Protection Agency specified in 40 CFR part 262. Because universal waste does not require a hazardous waste manifest, it is not considered hazardous waste under the Department of Transportation regulations.

(b) Some universal waste materials are regulated by the Department of Transportation as hazardous materials because they meet the criteria for one or more hazard classes specified in 49 CFR 173.2. As universal waste, shipments do not require a manifest under 40 CFR 262, they may not be described by the DOT proper shipping name "hazardous waste, (l) or (s), n.o.s.", nor may the hazardous material's proper shipping name be modified by adding the word "waste."

4.4 ACCUMULATION TIME LIMITS

(a) A universal waste transporter may only store the universal waste at a universal waste transfer facility for ten days or less.

(b) If a universal waste transporter stores universal waste for more than ten days, the transporter becomes a universal waste handler and must comply with the applicable requirements of sections 16-2 or 16-3 of this rule while storing the universal waste.

4.5 RESPONSE TO RELEASES

(a) A universal waste transporter must immediately contain all releases of universal wastes and other residues from universal wastes.

(b) A universal waste transporter must determine whether any material resulting from the release is hazardous waste, and if so, it is subject to all applicable requirements of R315-1 through R315-101. If the waste is determined to be a hazardous waste, the transporter is subject to R315-5.

4.6 OFF-SITE SHIPMENTS

(a) A universal waste transporter is prohibited from transporting the universal waste to a place other than a universal waste handler, a destination facility, or a foreign destination.

(b) If the universal waste being shipped off-site meets the Department of Transportation's definition of hazardous materials under 49 CFR 171.8, the shipment must be properly described on a shipping paper in accordance with the applicable Department of Transportation regulations under 49 CFR part 172.

4.7 EXPORTS

A universal waste transporter transporting a shipment of

universal waste to a foreign destination other than to those OECD countries specified in R315-5-5, which incorporates by reference 40 CFR 262.58(a)(1), in which case the transporter is subject to the requirements of R315-5-8, which incorporates by reference 40 CFR 262 subpart H, may not accept a shipment if the transporter knows the shipment does not conform to the EPA Acknowledgment of Consent. In addition the transporter must ensure that:

(a) A copy of the EPA Acknowledgment of Consent accompanies the shipment; and

(b) The shipment is delivered to the facility designated by the person initiating the shipment.

R315-16-5. Standards for Destination Facilities.

5.1 APPLICABILITY

(a) The owner or operator of a destination facility as defined in section 16-1.9 is subject to all applicable requirements of R315-3, R315-7, R315-8, R315-13, R315-14, and the notification requirement under section 3010 of RCRA.

(b) The owner or operator of a destination facility that recycles a particular universal waste without storing that universal waste before it is recycled must comply with 40 CFR 261.6(c)(2), as incorporated by reference at R315-2-6.

5.2 OFF-SITE SHIPMENTS

(a) The owner or operator of a destination facility is prohibited from sending or taking universal waste to a place other than a universal waste handler, another destination facility or foreign destination.

(b) The owner or operator of a destination facility may reject a shipment containing universal waste, or a portion of a shipment containing universal waste. If the owner or operator of the destination facility rejects a shipment or a portion of a shipment, he must contact the shipper to notify him of the rejection and to discuss reshipment of the load. The owner or operator of the destination facility must:

(1) Send the shipment back to the original shipper, or

(2) If agreed to by both the shipper and the owner or operator of the destination facility, send the shipment to another destination facility.

(c) If the a owner or operator of a destination facility receives a shipment containing hazardous waste that is not a universal waste, the owner or operator of the destination facility must immediately notify the appropriate regional EPA office of the illegal shipment, and provide the name, address, and phone number of the shipper. The Division will provide instructions for managing the hazardous waste.

(d) If the owner or operator of a destination facility receives a shipment of non-hazardous, non-universal waste, the owner or operator may manage the waste in any way that is in compliance with applicable federal or state solid waste regulations.

5.3 TRACKING UNIVERSAL WASTE SHIPMENTS.

(a) The owner or operator of a destination facility must keep a record of each shipment of universal waste received at the facility. The record may take the form of a log, invoice, manifest, bill of lading, or other shipping document. The record for each shipment of universal waste received must include the following information:

(1) The name and address of the universal waste handler, destination facility, or foreign shipper from whom the universal waste was sent;

(2) The quantity of each type of universal waste received, e.g., batteries, pesticides, thermostats, or lamps;

(3) The date of receipt of the shipment of universal waste.

(b) The owner or operator of a destination facility must retain the records described in paragraph (a) of this section for at least three years from the date of receipt of a shipment of universal waste.

R315-16-6. Import Requirements.

Persons managing universal waste that is imported from a foreign country into the United States are subject to the applicable requirements of this rule, immediately after the waste enters the United States, as indicated in paragraphs (a) through (c) of this section:

(a) A universal waste transporter is subject to the universal waste transporter requirements of section 16-4 of this rule.

(b) A universal waste handler is subject to the small or large quantity handler of universal waste requirements of sections 16-2 or 16-3, as applicable.

(c) An owner or operator of a destination facility is subject to the destination facility requirements of section 16-5 of this rule.

(d) Persons managing universal waste that is imported from an OECD country as specified in R315-5-5, which incorporates by reference 40 CFR 262,58(a)(1), are subject to paragraphs (a) through (c) of this section, in addition to the requirements of R315-5-8, which incorporates by reference 40 CFR 262, subpart H.

R315-16-7. Petitions to Include Other Wastes Under R315-16.**7.1 GENERAL**

(a) Any person seeking to add a hazardous waste or a category of hazardous waste to R315-16 may petition for a regulatory amendment under this section and R315-2.

(b) To be successful, the petitioner must demonstrate to the satisfaction of the Director that regulation under the universal waste regulations of R315-16 is: appropriate for the waste or category of waste; will improve management practices for the waste or category of waste; and will improve implementation of the hazardous waste program. The petition must include the information required by R315-2-17(b). The petition should also address as many of the factors listed in R315-16-7.2 as are appropriate for the waste or waste category addressed in the petition.

(c) The Director will evaluate petitions using the factors listed in R315-16-7.2. The Director will grant or deny a petition using the factors listed in section 16-7-2. The decision will be based on the weight of evidence showing that regulation under R315-16 is appropriate for the waste or category of waste, will improve management practices for the waste or category of waste, and will improve implementation of the hazardous waste program.

(d) The Director may request additional information needed to evaluate the merits of the petition.

7.2 FACTORS FOR PETITIONS TO INCLUDE OTHER WASTES UNDER R315-16

(a) The waste or category of waste, as generated by a wide variety of generators, is listed in R315-2-10, 2-11, and 2-26 (which incorporate by reference 40 CFR 261 Subpart D), and R315-2-24, or if not listed, a proportion of the waste stream exhibits one or more characteristics of hazardous waste identified in R315-2-9. When a characteristic waste is added to the universal waste regulations of R315-16 by using a generic name to identify the waste category, e.g., batteries, the definition of universal waste in section 16-1.9 will be amended to include only the hazardous waste portion of the waste category, e.g., hazardous waste batteries. Thus, only the portion of the waste stream that does exhibit one or more characteristics, i.e., is hazardous waste, is subject to the universal waste regulations of R315-16;

(b) The waste or category of waste is not exclusive to a specific industry or group of industries, is commonly generated by a wide variety of types of establishments, including, for example, households, retail and commercial businesses, office complexes, conditionally exempt small quantity generators, small businesses, government organizations, as well as large

industrial facilities;

(c) The waste or category of waste is generated by a large number of generators, e.g., more than 1,000 nationally, and is frequently generated in relatively small quantities by each generator;

(d) Systems to be used for collecting the waste or category of waste, including packaging, marking, and labeling practices, would ensure close stewardship of the waste;

(e) The risk posed by the waste or category of waste during accumulation and transport is relatively low compared to other hazardous wastes, and specific management standards proposed or referenced by the petitioner, e.g., waste management requirements appropriate to be added to R315-16, sections 2.4, 3.4, and 4.3; and applicable Department of Transportation requirements would be protective of human health and the environment during accumulation and transport;

(f) Regulation of the waste or category of waste under R315-16 will increase the likelihood that the waste will be diverted from non-hazardous waste management systems, e.g., the municipal waste stream, non-hazardous industrial or commercial waste stream, and municipal sewer or stormwater systems, to recycling, treatment, or disposal in compliance with Utah Code Annotated 19-6.

(g) Regulation of the waste or category of waste under R315-16 will improve implementation of and compliance with the hazardous waste regulatory program; and

(h) Such other factors as may be appropriate.

KEY: hazardous waste**April 25, 2013****19-6-105****Notice of Continuation November 18, 2014****19-6-106**

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-17. End of Life Automotive Mercury Switch Removal Standards.****R315-17-1. Purpose.**

(a) The purpose of this rule is to provide for the administration of the Mercury Switch Removal Act, Utah Code Annotated 19-6-1001, et seq.

(b) The Mercury Switch Removal Act and this Rule require the removal of mercury switches from vehicles that have reached the end of their useful life.

R315-17-2. Applicability.

This rule applies to:

- (a) manufacturers of vehicles sold in the State of Utah;
- (b) vehicles that may contain one or more mercury switches;
- (c) mercury switches; and
- (d) persons removing mercury switches from vehicles.

R315-17-3. Definitions.

Terms used in this rule are defined in Utah Code Annotated 19-6-1002.

R315-17-4. Mercury Switch Collection Plan.

(a) Manufacturers of any vehicle sold within the State of Utah shall submit a plan individually or in cooperation with other manufacturers to the Director for review and approval by January 15, 2007. This submission shall be accompanied by a filing fee as established by the legislature in the Department of Environmental Quality fee schedule. The Director shall bill the responsible party for review of plans submitted to meet the requirements of this Rule.

(b) The Director shall review and approve or disapprove the submitted plan based on the requirements outlined in R315-17-4(d). If the plan is not approved, the Director shall provide comments to the manufacturer within 60 days of submission of the plan. The manufacturer shall address all comments from the Director and submit an amended plan within 90 days after the Director provides comments on the unapproved plan.

(c) A manufacturer shall ensure that plan implementation occurs by July 1, 2007.

(d) The mercury switch collection plan shall include:

- (1) The make, model, and year of any vehicle, including current and anticipated future production models, sold by a manufacturer that may contain one or more mercury switches;
- (2) The description and location of each mercury switch for each make, model, and year of vehicle;
- (3) Procedures for the prompt reimbursement by a manufacturer of costs incurred by a person removing and collecting mercury switches without regard to the date on which the mercury switch is removed and collected;
- (4) Information addressing safe and environmentally sound methods for mercury switch removal and information about hazards related to mercury and the proper handling of mercury;
- (5) Methods for the storage and disposal of mercury switches, including packaging and shipping of mercury switches to an authorized recycling, storage, or disposal facility; and
- (6) Procedures for the transfer of information among persons involved with the plan to comply with reporting requirements.

(e) If a manufacturer does not know or is uncertain about whether or not a switch contains mercury, the plan shall presume that the switch contains mercury.

R315-17-5. Mercury Switch Removal Costs.

(a) Manufacturers shall implement procedures for the prompt reimbursement of costs incurred by a person removing and collecting mercury switches without regard to the date on

which the mercury switch is removed and collected.

(b) To ensure that the costs of removal and collection of mercury switches are not borne by any other person, the manufacturers of vehicles sold in the state shall pay:

- (1) A minimum of \$5 for each mercury switch removed by a person as partial compensation for the labor and other costs incurred in removing the mercury switch;
- (2) The cost of packaging necessary to store or transport mercury switches to recycling, storage, or disposal facilities;
- (3) The cost of shipping mercury switches to recycling, storage, or disposal facilities;
- (4) The cost of recycling, storage, or disposal of mercury switches;
- (5) The cost of the preparation and distribution of educational materials; and
- (6) The cost of maintaining all appropriate record keeping systems.

R315-17-6. Public Participation.

The Director shall also provide public notice, a public comment period, and public hearing(s) for each proposed Mercury Switch Collection Plan in accordance with R315-4-1.10 through R315-4-1.12 and R315-4-1.17.

R315-17-7. Plan Amendments.

The Director may require a manufacturer to modify the plan at any time upon finding that an approved plan as implemented has failed to meet the requirements of this rule.

R315-17-8. Reporting Requirements.

(a) Each manufacturer that is required to implement a mercury switch collection plan shall submit, either individually or in cooperation with other manufacturers, an annual report on the plan's implementation to the Director by October 1 of each year, beginning in 2008.

(b) The annual report shall include:

- (1) The number of mercury switches collected;
- (2) The number of mercury switches for which the manufacturer has provided reimbursement;
- (3) A description of the successes and failures of the plan;
- (4) A discussion of how the failures of the plan have been or will be corrected; and
- (5) A statement detailing the costs required to implement the plan.

R315-17-9. Penalties.

In accordance with 19-6-1006, a manufacturer who fails to submit, modify, or implement a plan according to R315 may be subject to a civil penalty of not more than \$1,000 per day per violation.

R315-17-10. Administrative Proceedings.

Administrative proceedings under the Mercury Switch Removal Act and this Rule shall be conducted in accordance with R315-12.

KEY: hazardous waste

April 25, 2013

Notice of Continuation July 13, 2011

19-6-106

19-6-108

19-6-105

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-101. Cleanup Action and Risk-Based Closure Standards.

R315-101-1. Purpose, Applicability.

(a) Purpose. R315-101 establishes information requirements to support risk-based cleanup and closure standards at sites for which remediation or removal of hazardous constituents to background levels will not be achieved. The procedures in this rule also provide for continued management of sites for which minimal risk-based standards cannot be met.

(b) Applicability.

(1) R315-101 is applicable to any responsible party involved in management of a site contaminated with hazardous waste or hazardous constituents. This rule does not apply to a site that has been or will be cleaned to background.

(2) In the event of a release of hazardous waste or material which, when released, becomes hazardous waste, these requirements apply if the responsible party fails to clean up all the released material and any residue or contaminated soil, water or other material resulting from the release as required by R315-9-3. If the level of risk present at the site is below 1×10^{-6} for carcinogens and a Hazard Index of less than or equal to one for non-carcinogens based on the risk assessment conducted in accordance with R315-101-5.2(b)(1) and the Director determines that ecological effects are insignificant based on the approved assessment conducted in accordance with R315-101-5.3(a)(8), the requirements of R315-9-3 shall be considered met.

(3) The owner or operator of a hazardous waste management facility or a facility subject to interim status requirements shall meet the requirements of R315-7-14 and R315-8-7 prior to implementation of any activities described in R315-101. The requirements of R315-3-1.1(e)(5) and (6) shall be met for a hazardous waste management unit if the level of risk present at the site is below 1×10^{-6} for carcinogens and a Hazard Index of less than or equal to one for non-carcinogens based on the risk assessment conducted in accordance with R315-101-5.2(b)(1) and the Director determines that ecological effects are insignificant based on the approved assessment conducted in accordance with R315-101-5.3(a)(8). If these risk exposure criteria are met, a request for a risk-based closure may be submitted to the Director for review.

(4) If the risk present at the site is greater than the exposure limit as defined in R315-101-1(b)(2) or (3) or the Director determines that ecological effects may be significant, then a risk-based closure will not be granted and appropriate management will be required and may include corrective action, post-closure care, monitoring, deed restrictions, and security of the site. For determinations of appropriate corrective action or management activities at a site, the following criteria shall be considered in order of importance:

(a) The impact or potential impact of the contamination on the human health;

(b) The impact or potential impact of the contamination on the environment;

(c) The technologies available for use in clean-up; and

(d) Economic considerations and cost-effectiveness of clean-up options.

R315-101-2. Stabilization.

The responsible party must immediately take appropriate action to stabilize the site either through source removal or source control. After the responsible party has attempted to complete the requirements of R315-9 and the Director determines that additional work is needed to stabilize the site, the Director will notify the responsible party that additional work is necessary and provide the responsible party with objectives to be addressed in developing a work plan to further stabilize the site. The work plan shall be submitted to the

Director for review and approval within fifteen days of receiving notification that additional work will be necessary to complete the emergency actions required by R315-9. Work plans shall be of a scope commensurate with the work to be performed and site-specific characteristics. This work plan shall include a description of the interim measure and how it will meet the criteria of source removal or source control. The implementation of the work plan shall be according to the schedule contained within the approved plan. All interim measures shall be at the expense of the party responsible for the site. If the party responsible for the site fails to take the measures required for stabilizing the site, the Director may request the Executive Director of the Department to take abatement and cost recovery actions as provided in Section 19-6-301, et seq., Utah Hazardous Substances Mitigation Act.

R315-101-3. Principle of Non-degradation.

When closing or managing a contaminated site, the responsible party shall not allow levels of contamination in groundwater, surface water, soils, and air to increase beyond the existing levels of contamination at a site when site management commences. The responsible party will demonstrate compliance with this policy by submitting appropriate monitoring data or other data as may be required by the Director. If at any time the level of contamination increases, the responsible party shall take immediate corrective action to prevent further degradation of any medium.

R315-101-4. Site Characterization.

The following information shall be collected to characterize the site, and define site boundaries and Area(s) of Contamination:

(a) A legal description of the site;

(b) Historical land use and ownership of the site;

(c) Topographical map(s) of sufficient detail, scale, and accuracy to depict and locate all past and current physical structures including all building(s) and waste activities at the site;

(d) Information and maps of sufficient detail, scale, and accuracy to describe regional, local, and site geology, surface water, and hydrogeological conditions;

(e) An inventory of all current and past wastestreams managed at the site, including process descriptions and suspected contamination source information;

(f) Background levels of suspected hazardous constituents based on the inventory as determined in R315-101-4(e) in media of concern, e.g. sediments, soil, groundwater, surface water, and air which are representative of the site; and

(g) Location and boundaries of all Area(s) of Contamination, including concentrations, types and extent of hazardous constituents. Media to be sampled may include sediments, soil, groundwater, surface water, and air, as applicable.

R315-101-5. Health Evaluation Criteria, Risk Assessment.

5.1 REQUIRED STUDY

(a) When conducting the risk assessment the responsible party will use all applicable site characterization data and shall consider the following parameters when conducting the risk assessment:

(1) Identification, concentration, and distribution of all suspected hazardous constituents identified in R315-101-4(e);

(2) All area(s) of contamination at the site;

(3) Fate of contaminants and pathways of contaminant transport; and

(4) Potentially exposed populations.

5.2 CHARACTERIZATION AND EVALUATION OF RISK

(a) The responsible party shall conduct a risk assessment

which includes the following:

(1) The concentration term "C" for each medium for each hazardous constituent identified in R315-101-5.1(a)(1);

(2) Evaluation of the fate of contaminants and of all pathways of contaminant transport identified in R315-101-5.1(a)(3);

(3) Exposure assessment identifying the RME for all exposure pathways, intakes, and identified constituents;

(4) Current toxicity information for carcinogenic and noncarcinogenic effects;

(5) Risk characterization identifying carcinogenic risk, individual and multiple substances, and noncarcinogenic hazardous index, individual and multiple substances;

(6) An ecological evaluation which provides for terrestrial and aquatic processes; and

(7) Current toxicity information for all the constituents and biological processes relevant to the ecological evaluation.

(b) The risk assessment shall be conducted using one or both of the standard exposure scenarios listed below, as needed to determine site management options:

(1) Residential. This exposure scenario includes ingestion of water (must include surface water and ground water regardless of water quality), ingestion of soil and dust, ingestion of contaminated and potentially contaminated food, inhalation of contaminants, dermal contact with chemicals in soil, and dermal contact with chemicals in water for a human being ages zero through 70 years old using the equations and default variable values found in the Risk Assessment Guidance for Superfund, Volume 1: Human Health Evaluation Manual Supplemental Guidance, "Standard Default Exposure Factors", Interim Final, OSWER Directive 9285.6-03, March 25, 1991 or most recent edition;

(2) Actual land use conditions or potential land use conditions based upon applicable zoning and future land use planning considerations, if potential land use conditions offer a more protective exposure scenario than actual land use conditions. This exposure scenario involves an assessment based on actual site conditions using standard default variable values. The potential land use exposure scenario should include a conceptual model including current site conditions, expected future conditions based upon site-specific physical and chemical information, and the assumption that contaminated media will not have undergone any remedial engineering.

5.3 DATA PRESENTATION

(a) A risk assessment report shall be submitted to the Director and must include at a minimum the following:

(1) An executive summary;

(2) An overview of the site and the areas of contamination;

(3) A site characterization report which includes:

(i) Maps of sufficient detail and accuracy to depict areas of contamination, topography, geology, and groundwater contours or potentiometric surface;

(ii) Site and regional geological and hydrological descriptions;

(iii) A detailed discussion of areas of contamination;

(iv) Background levels of hazardous constituents including details of statistical methods used to determine background; and

(v) Descriptions of releases of hazardous constituents and expected extent of migration from the area of contamination.

(4) Identification and concentration of hazardous constituents identified in R315-101-5.1(a)(1). A sampling and analysis plan shall be prepared and utilized for the collection of all data. This plan shall be developed using procedures and methods outlined in R315-50-6 and the most current version of "SW-846, Test Methods for Evaluating Solid Waste." It shall contain a summary outlining data quality objectives, completed analytical request forms for all analysis performed, dry weight equivalents, sampling location identification and justification, standard operating procedures used for data collection, all

statistical analysis performed, quality assurance and quality control plans (QA/QC plan) and QA/QC results, instrument calibration results, and analytical methods including constituent detection limits;

(5) Exposure assessment identifying exposure levels for all exposure pathways identified in R315-101-5.2(a)(3). If fate and transport models are used, the users manual, model theory, computer software for the model, installation verification data set for the model and parametric analysis of the input parameters must be provided upon request of the Director;

(6) Identification of toxicity information gathered for all identified hazardous constituents for carcinogenic, slope factors and weight-of-evidence classification, noncarcinogenic effects, chronic reference doses (RfDs) and critical effects associated with RfDs from, in order of preference, the Integrated Risk Information System (IRIS), Health Effects Assessment Summary Tables (HEAST), Agency for Toxic Substances and Disease Registry (ATSDR) toxicological profiles, Environmental Criteria and Assessment Office (ECAO), or other scientifically accepted listings. The source and date of the toxicological information must be identified and be acceptable to the Director;

(7) The risk characterization identifying carcinogenic risk, individual and multiple substances, noncarcinogenic hazardous index, individual and multiple substances, chronic hazard quotient, subchronic hazard quotient, uncertainties, and a tabulation of all risk characterization data presented in a format approved by the Director; and

(8) Unless justification is provided to the Director, and a waiver of this requirement is granted by the Director in writing, an ecological assessment of the site which contains at least the following:

(i) An inventory of the current biological community;

(ii) Estimates of ecological effects based on a subset of ecological endpoints;

(iii) The magnitude and variation of toxic effects; and

(iv) Identification of extent of effects, specifically from the presence of hazardous waste.

(b) If the risk assessment report does not contain all required information of sufficient quality and detail, the Director will notify the responsible party in writing of the deficiencies and require resubmittal of the report in a designated time frame.

(c) If the risk assessment report contains all required information of sufficient quality and detail, the Director will approve the risk assessment report in writing.

R315-101-6. Risk Management: Site Management Plan and Closure Equivalency.

(a) A site management plan which is supported by the findings in the approved risk assessment report shall be submitted to the Director within 60 days of approval of the risk assessment report. This plan may be submitted along with the risk assessment report and must include a schedule for implementation.

(b) The Director shall review and approve or disapprove of the conclusions of the proposed site management plan. If the Director finds that the site management plan is not adequate for protection of human health and the environment, the responsible party shall then submit a revised site management plan addressing the comments of the Director within an appropriate time frame as specified by the Director. The Director shall review and approve or reject the revised site management plan. Upon draft approval of the site management plan, the Director shall follow the requirements of R315-101-7 prior to issuance of final approval. The approved site management plan shall be implemented according to the approved schedule. If the Director rejects this revised site management plan, the revised plan will be considered deficient for the reasons specified by the

Director in a statement of disapproval.

(c)(1) The site management plan may contain a no further action option only if the level of risk present at the site is below 1×10^{-6} for carcinogens and a Hazard Index of "less than or equal to one" for non-carcinogens based on the approved assessment conducted in accordance with R315-101-5.2(b)(1) and the Director determines that ecological effects are insignificant based on the approved assessment conducted in accordance with R315-101-5.3(a)(8);

(2) The requirements of R315-3-1.1(e)(5) and (6) shall be deemed met for a hazardous waste management unit if the level of risk present at the site is below 1×10^{-6} for carcinogens and a Hazard Index of "less than or equal to one" for non-carcinogens based on the risk assessment conducted in accordance with R315-101-5.2(b)(1) and the Director determines that ecological effects are insignificant based on the approved assessment conducted in accordance with R315-101-5.3(a)(8). If this risk exposure criterion is met, a request for a risk-based closure may be submitted; or

(3) If the risk present at the site is greater than or equal to 1×10^{-6} for carcinogens or a Hazard Index of "greater than one" for non-carcinogens based upon the exposure assessment conducted in accordance with R315-101-5.2(b)(1), or the Director determines that ecological effects may be significant based on the approved assessment conducted in accordance with R315-101-5.3(a)(8), a risk-based closure will not be granted. The responsible party shall then submit a site management plan fulfilling the requirements of R315-101-6(d) or (e) as applicable.

(d) If the level of risk present at the site is less than 1×10^{-4} for carcinogens and a hazard index is "less than or equal to one" for the risk assessment conducted in accordance with R315-101-5.2(b)(2) but greater than or equal to 1×10^{-6} for carcinogens or a hazard index is greater than one for a risk assessment conducted in accordance with R315-101-5.2(b)(1) or the Director determines that ecological effects may be significant based on the approved assessment conducted in accordance with R315-101-5.3(a)(8), the site management plan may contain, but is not required to contain, procedures for corrective action. The site management plan shall contain appropriate management activities e.g., monitoring, deed notations, site security, or post-closure care, as determined on a case-by-case basis in accordance with criteria identified in R315-101-1(b)(4).

(e) The site management plan must contain procedures for corrective action if the level of risk present at the site is greater than or equal to 1×10^{-4} for carcinogens or a Hazard Index of "greater than one" for non-carcinogens based on the approved assessment conducted in accordance with R315-101-5.2(b)(2) or the Director concludes that corrective action is required to mitigate ecological effects based on the approved assessment conducted in accordance with R315-101-5.3(a)(8). For determination of appropriate corrective action the criteria identified in R315-101-1(b)(4) shall be considered.

(f) If hazardous constituents are present only in groundwater at the site, and if the hazardous constituents are listed in Table 1 of R315-8-6.5, the Maximum Concentration Levels listed in Table 1 can be presented in lieu of health risk estimates for those constituents. The RME for Table 1 constituents must be determined in accordance with approved site characterization methods listed in R315-101-4.

R315-101-7. Public Participation.

(a) The Director may provide for public participation in all phases of the cleanup action process, as defined in R315-101-4 through R315-101-6. As directed by the Director and based on the circumstances and level of public interest at the site, pertinent work plans shall describe how information will be made available to the public through, for example, fact sheets or information repositories and, where appropriate, contain

proposed time frames for public input through, for example, public meetings, hearings, or comment periods. The Director shall also provide public notice, a public comment period, and public hearing(s) for the site management plan in accordance with R315-4-1.10 through R315-4-1.12 and R315-4-1.17.

R315-101-8. Cleanup/Management Action.

(a) Upon approval of the site management plan by the Director, all remedial activities at the site shall proceed according to the schedule established in the approved site management plan using the method(s) described therein.

(b) Cleanup/Management Report. The Cleanup/Management Report shall detail remediation, treatment, and monitoring activities undertaken at the site by the responsible party as required by the approved site management plan. If the Cleanup/Management Report provides analytical data as evidence that levels of contamination at the site meet the requirements established in the site management plan for a risk-based closure or no further action as defined in R315-101-6(c)(2), the responsible party shall submit a certification of completion as outlined in R315-101-8(c), or request risk-based closure as outlined in R315-3-1.1(e)(6), whichever is applicable.

(c) Certification of Completion. Within 60 days of the completion of all activities documented in the Cleanup/Management Report, a Certification of Completion of Cleanup/Management Action shall be submitted to the Director by registered mail. The certification of completion shall state the site has been managed in accordance with the specifications in the approved Site Management Plan and shall be signed by the responsible party and by an independent Utah registered professional engineer.

(d) Oversight.

(1) The Director or his representatives shall have access to the site as described in R315-2-12 and at all times when activity pursuant to R315-101 is taking place. The Director or his representatives may take samples or make records of any visit to the site by photographic, electronic, videotape or any other reasonable means.

(2) The Director shall bill the responsible party for review of plans submitted to meet the requirements of this Rule.

(3) The responsible party shall notify the Director at least seven days prior to any sampling event or remediation activity.

KEY: hazardous waste

April 25, 2013

Notice of Continuation July 13, 2011

19-6-105

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-102. Penalty Policy.

R315-102-1. Purpose, Scope, and Applicability.

(a) Subsection 19-6-113(2) of the Utah Solid and Hazardous Waste Act provides that any person who violates any order, plan, rule, or other requirement issued or adopted under the Act is subject in a civil proceeding to a penalty of not more than \$13,000 per day for each day of violation. Subsection 19-6-721(1) of the Used Oil Management Act provide that any person who violates any order, plan, rule, or other requirement issued or adopted under the Acts is subject in a civil proceeding to a penalty of not more than \$10,000 per day for each day of violation. Subsection 19-6-104(1)(e) of the Utah Solid and Hazardous Waste Act allows the Director to settle or compromise administrative or civil actions initiated to compel compliance with the Act or rules adopted under the Act.

(b) The following criteria are to be used by the Director for determining amounts which (1) may be sought in settlement of enforcement actions, and which (2) may be accepted in settlement of enforcement actions.

(c) The procedures in R315-102 are intended solely for the guidance of the Director and are not intended, and cannot be relied upon, to create a cause of action against the State.

R315-102-2. Criterion 1: Factors.

The Director shall consider the following factors when calculating a settlement amount:

(a) Economic benefit of noncompliance. These are the costs a person may save by delaying or avoiding compliance with applicable laws or rules.

(b) Gravity of the violation. This component of the calculation shall be based on:

(1) the extent of deviation from the rules, and

(2) the potential for harm to human health and the environment, regardless of the extent of harm that actually occurred.

(c) The number of days of noncompliance.

(d) Good faith efforts to comply or lack of good faith.

This takes into account the openness in dealing with the violations, promptness in correction of the problems, and the degree of cooperation with the State to include accessibility to information and the amount of State effort necessary to bring the person into compliance.

(e) Degree of willfulness or negligence. Factors to be considered include how much control the violator had over the events constituting the violation, the foreseeability of the events constituting the violation, whether the violator took reasonable precautions to prevent the violation, and whether the violator knew, or should have known, of the hazards associated with the conduct or the legal requirements which were violated.

(f) History of compliance or noncompliance. The settlement amount may be adjusted upward in consideration of previous violations and the degree of recidivism. Likewise, the settlement amount may be adjusted downward when it is shown that the violator has a good compliance record.

(g) Ability to pay. The settlement amount may be adjusted downward based on a person's inability to pay. This should be distinguished from a person's unwillingness to pay. In cases of financial hardship, the Director may accept payment of the settlement under an installment plan, delayed payment schedule, reduced penalty amount, or any combination of these options.

(h) Other unique factors.

R315-102-3. Criterion 2: Calculation of Settlement Amounts.

(a) Violations are grouped into the following categories based on the gravity of the violation:

(1) Major potential for harm, major extent of deviation

from the requirement. For used oil, major potential for harm, major extent of deviation from the requirement: \$8,000 to \$10,000. For hazardous waste or constituents, or solid waste, major potential for harm, major deviation from the requirement: \$10,400 to \$13,000.

(i) The violation: poses, or may pose, a relatively high risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a relatively high adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste, or used oil programs.

(ii) The violator deviates from requirements of the regulation or statute to such an extent that most, or important aspects, of the requirements are not met, resulting in substantial noncompliance.

(2) Major potential for harm, moderate extent of deviation from the requirement. For used oil, major potential for harm, moderate deviation from the requirement: \$6,000 to \$8,000. For hazardous waste or constituents, or solid waste, major potential for harm, moderate deviation from the requirement: \$7,800 to \$10,400.

(i) The violation: poses, or may pose, a relatively high risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a relatively high adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste, or used oil programs.

(ii) The violator significantly deviates from the requirements of the regulation or statute but some of the requirements are implemented as intended.

(3) Major potential for harm, minor extent of deviation from the requirement. For used oil, major potential for harm, minor deviation from the requirement: \$4,400 to \$6,000. For hazardous waste or constituents, or solid waste, major potential for harm, minor deviation from the requirement: \$5,720 to \$7,800.

(i) The violation: poses, or may pose, a relatively high risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a relatively high adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste, or used oil programs.

(ii) The violator deviates somewhat from the regulatory or statutory requirements but most, or all important aspects, of the requirements are met.

(4) Moderate potential for harm, major extent of deviation. For used oil, moderate potential for harm, major deviation from the requirement: \$3,200 to \$4,400. For hazardous waste or constituents, or solid waste, moderate potential for harm, major deviation from the requirement: \$4,160 to \$5,720.

(i) The violation: poses, or may pose, a medium risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a medium adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste or used oil programs.

(ii) The violator deviates from requirements of the regulation or statute to such an extent that most, or important aspects, of the requirements are not met, resulting in substantial noncompliance.

(5) Moderate potential for harm, moderate extent of deviation from the requirement. For used oil, moderate potential for harm, moderate deviation from the requirement: \$2,000 to \$3,200. For hazardous waste or constituents, or solid waste, moderate potential for harm, moderate deviation from the requirement: \$2,600 to \$4,160.

(i) The violation: poses, or may pose, a medium risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has,

or may have, a medium adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste or used oil programs.

(ii) The violator significantly deviates from the requirements of the regulation or statute but some of the requirements are implemented as intended.

(6) Moderate potential for harm, minor extent of deviation from the requirement. For used oil, moderate potential for harm, minor deviation from the requirement: \$1,200 to \$2,000. For hazardous waste or constituents, or solid waste, moderate potential for harm, minor deviation from the requirement: \$1,560 to \$2,600.

(i) The violation: poses, or may pose, a medium risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a medium adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste or used oil programs.

(ii) The violator deviates somewhat from the regulatory or statutory requirements but most, or all important aspects, of the requirements are met.

(7) Minor potential for harm, major extent of deviation from the requirement. For used oil, minor potential for harm, major deviation for the requirement: \$600 to \$1,200. For hazardous waste or constituents, or solid waste, minor potential for harm, major deviation from the requirement: \$780 to \$1,560.

(i) The violation: poses, or may pose, a relatively low risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a small adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste, or used oil programs.

(ii) The violator deviates from requirements of the regulation or statute to such an extent that most, or important aspects, of the requirements are not met, resulting in substantial noncompliance.

(8) Minor potential for harm, moderate extent of deviation from the requirements. For used oil, minor potential for harm, moderate deviation from the requirement: \$200 to \$600. For hazardous waste or constituents, or solid waste, minor potential for harm, moderate deviation from the requirement: \$260 to \$780.

(i) The violation: poses, or may pose, a relatively low risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a small adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste, or used oil programs.

(ii) The violator significantly deviates from the requirements of the regulation or statute but some of the requirements are implemented as intended.

(9) Minor potential for harm, minor extent of deviation from the requirements. For used oil, minor potential for harm, minor deviation from the requirement: \$40 to \$200. For hazardous waste or constituents, or solid waste, minor potential for harm, minor deviation from the requirement: \$50 to \$260.

(i) The violation: poses, or may pose, a relatively low risk of exposure of humans or other environmental receptors to hazardous waste or constituents, solid waste, or used oil; or has, or may have, a small adverse effect on statutory or regulatory purposes or procedures for implementing the hazardous waste, solid waste, or used oil programs.

(ii) The violator deviates somewhat from the regulatory or statutory requirements but most, or all important aspects, of the requirements are met.

(b) The Director shall have the discretion to determine the appropriate amount within these ranges.

(c) If applicable, a multi-day component may be added to

the settlement amount determined in R315-102-3(b). The amount used in a multi-day calculation will typically range from 5% to 20%, with a minimum of \$40 per day for used oil, and with a minimum of \$50 per day for hazardous waste or constituents, or solid waste, of the amount determined in R315-102-3(b) for each day of violation up to 179 days following the first day of violation. However, discretion is retained to consider amounts (1) of up to \$10,000 per day of violation for used oil and up to \$13,000 per day of violation for hazardous waste or constituents, or solid waste and (2) for days of violation after the first 179 days following the first day of violation.

(d) The amount calculated above may be adjusted by taking into account the factors specified in R315-102-2(d) through (h).

(e) This amount will then be added to any economic benefit gained by the person as specified in R315-102-2(a).

(f) If applicable, partial credit may be given for an approved supplemental environmental project.

KEY: hazardous waste

Notice of Continuation November 18, 2014

19-6-105

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-301. Solid Waste Authority, Definitions, and General Requirements.****R315-301-1. Authority and Purpose.**

The Solid Waste Permitting and Management Rules are promulgated under the authority of the Solid and Hazardous Waste Act, Chapter 6 of Title 19, to protect human health, to prevent land, air and water pollution, and to conserve the state's natural, economic and energy resources by setting minimum performance standards for the proper management of solid wastes originating from residences, commercial, agricultural, and other sources.

R315-301-2. Definitions.

Terms used in Rules R315-301 through R315-320 are defined in Sections 19-1-103, 19-6-102, and 19-6-803. In addition, for the purpose of Rules R315-301 through 320, the following definitions apply.

(1) "Active area" means that portion of a facility where solid waste recycling, reuse, treatment, storage, or disposal operations are being conducted.

(2) "Airport" means a public-use airport open to the public without prior permission and without restrictions within the physical capacities of available facilities.

(3) "Aquifer" means a geological formation, group of formations, or portion of a formation that contains sufficiently saturated permeable material to yield useable quantities of ground water to wells or springs.

(4) "Areas susceptible to mass movement" means those areas of influence, characterized as having an active or substantial possibility of mass movement, where the movement of earth material at, beneath, or adjacent to the landfill unit, because of natural or human-induced events, results in the downslope transport of soil and rock material by means of gravitational influence. Areas of mass movement include landslides, avalanches, debris slides and flows, soil fluction, block sliding, and rock falls.

(5) "Asbestos waste" means friable asbestos, which is any material containing more than 1% asbestos as determined using the method specified in Appendix A, 40 CFR Part 763.1, 2001 ed., which is adopted and incorporated by reference, that when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

(6) "Background concentration" means the concentration of a contaminant in ground water upgradient or a lateral hydraulically equivalent point from a facility, practice, or activity, and which has not been affected by that facility, practice, or activity.

(7) "Class I Landfill" means a non-commercial landfill or a landfill that meets the definition found in Subsection 19-6-102(3)(a)(iii) and is permitted by the Director

(a) to receive for disposal:

(i) municipal solid waste;

(ii) any other nonhazardous solid waste, not otherwise limited by rule or solid waste permit; or

(iii) in conjunction with municipal solid waste or other nonhazardous solid waste, waste from a conditionally exempt small quantity generator of hazardous waste, as defined by Section R315-2-5; and

(b) does not meet the standards of Subsection R315-303-3(3)(e)(v).

(8) "Class II Landfill" means a non-commercial landfill or a landfill that is permitted by the Director

(a) to receive for disposal:

(i) municipal solid waste;

(ii) any other nonhazardous solid waste, not otherwise limited by rule or solid waste permit; or

(iii) in conjunction with municipal solid waste or other

nonhazardous solid waste, waste from a conditionally exempt small quantity generator of hazardous waste, as defined by Section R315-2-5.

(b) meets the standards of Subsection R315-303-3(3)(e)(v).

(9) "Class III Landfill" means a non-commercial landfill that is permitted by the Director to receive for disposal only industrial solid waste.

(10) "Class IV Landfill" means a non-commercial landfill that is permitted by the Director to receive for disposal only:

(a) construction/demolition waste;

(b) yard waste;

(c) inert waste;

(d) dead animals, as approved by the Director and upon meeting the requirements of Section R315-315-6;

(e) waste tires and materials derived from waste tires, upon meeting the requirements of Section 19-6-804 and Section R315-320-3; and

(f) petroleum-contaminated soils, upon meeting the requirements of Subsection R315-315-8(3).

(11) "Class V Landfill" means a commercial nonhazardous solid waste disposal facility, as defined by Subsection 19-6-102(3), that is permitted by the Director to receive for disposal:

(a) municipal solid waste;

(b) any other nonhazardous solid waste, not otherwise limited by rule or solid waste permit; and

(c) in conjunction with municipal solid waste or other nonhazardous solid waste, waste from a conditionally exempt small quantity generator of hazardous waste, as defined by Section R315-2-5.

(12) "Class VI Landfill" means a commercial nonhazardous solid waste landfill that is permitted by the Director to receive for disposal only:

(a) construction/demolition waste, excluding waste from a conditionally exempt small quantity generator of hazardous waste, as defined by Section R315-2-5;

(b) yard waste;

(c) inert waste;

(d) dead animals, as approved by the Director and upon meeting the requirements of Section R315-315-6;

(e) waste tires and materials derived from waste tires, upon meeting the requirements of Section 19-6-804 and Subsection R315-320-3(1) or (2); and

(f) petroleum-contaminated soils, upon meeting the requirements of Subsection R315-315-8(3).

(g) A Class VI Landfill may not receive for disposal:

(i) hazardous waste;

(ii) construction/demolition waste containing PCBs, except as allowed by Section R315-315-7;

(iii) garbage;

(iv) municipal solid waste; or

(v) industrial solid waste.

(h) The wastes received at a Class VI Landfill may be further limited by a solid waste permit.

(i) A Class VI Landfill may not change to a Class V Landfill except by meeting all requirements for a Class V Landfill including obtaining a new Class V Landfill permit and completing the requirements specified in Subsection R315-310-3(2).

(13) "Closed facility" means any facility that no longer receives solid waste and has completed an approved closure plan, and any landfill on which an approved final cover has been installed.

(14) "Commercial solid waste" means all types of solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding household waste and industrial wastes.

(15) "Composite liner" means a liner system consisting of two components: the upper component consisting of a synthetic

flexible membrane liner, and the lower component consisting of a layer of compacted soil. The composite liner must have the synthetic flexible membrane liner installed in direct and uniform contact with the compacted soil component and be constructed of specified materials and compaction to meet specified permeabilities.

(16) "Composting" means a method of solid waste management whereby the organic component of the waste stream is biologically decomposed under controlled aerobic conditions, at a temperature of 140 degrees Fahrenheit (60 degrees Celsius), or higher, for at least some part of each day of a consecutive seven day period, to a state in which the end product or compost can be handled, stored, or applied to the land without adversely affecting human health or the environment.

(17) "Construction/demolition waste" means solid waste from building materials, packaging, and rubble resulting from construction, remodeling, repair, abatement, rehabilitation, renovation, and demolition operations on pavements, houses, commercial buildings, and other structures, including waste from a conditionally exempt small quantity generator of hazardous waste, as defined by Section R315-2-5, that may be generated by these operations.

(a) Such waste may include:

- (i) concrete, bricks, and other masonry materials;
- (ii) soil and rock;
- (iii) waste asphalt;
- (iv) rebar contained in concrete; and
- (v) untreated wood, and tree stumps.

(b) Construction/demolition waste does not include:

- (i) friable asbestos;
- (ii) treated wood; or
- (iii) contaminated soils or tanks resulting from remediation or clean-up at any release or spill.

(18) "Contaminant" means any physical, chemical, biological, or radiological substance or matter in water or soil that is a result of human activity.

(19) "Displaced" or "displacement" means the relative movement of any two sides of a fault measured in any direction.

(20) "Drop box facility" means a facility used for the placement of a large detachable container or drop box for the collection of solid waste for transport to a solid waste disposal facility. The facility includes the area adjacent to the containers for necessary entrance, exit, unloading, and turn-around areas. Drop box facilities normally serve the general public with uncompacted loads and receive waste from off site. Drop box facilities do not include residential or commercial waste containers on the site of waste generation.

(21) "Energy recovery" means the recovery of energy in a useable form from incineration, burning, or any other means of using the heat of combustion of solid waste that involves high temperature (above 1200 degrees Fahrenheit) processing.

(22) "Existing facility" means any facility that has:

(a) a current valid solid waste permit or other valid approval issued under Rules R315-301 through 320 by the Director; and

(b) received final approval to accept waste as required by Subsection R315-301-5(1).

(23) "Expansion of a solid waste disposal facility" means any lateral expansion beyond the property boundaries outlined in the permit application for the current permit under which the facility is operating.

(24) "Facility" means all contiguous land, structures, other appurtenances, and improvements on the land used for treating, storing, or disposing of solid waste. A facility may consist of several treatment, storage, or disposal operational units, e.g., one or more incinerators, landfills, container storage areas, or combinations of these.

(25) "Floodplain" means the land that has been or may be

hereafter covered by flood water which has a 1% chance of occurring any given year. The flood is also referred to as the base flood or 100-year flood.

(26) "Free liquids" means liquids which readily separate from the solid portion of a waste under ambient temperature and pressure or as determined by EPA test method 9095 (Paint Filter Liquids Test) as provided in EPA Report SW-846 "Test Methods for Evaluating Solid Waste" as revised December (1996) which is adopted and incorporated by reference.

(27) "Garbage" means discarded animal and vegetable wastes resulting from the handling, preparation, cooking and consumption of food, and of such a character and proportion as to be capable of attracting or providing food for vectors. Garbage does not include sewage and sewage sludge.

(28) "Ground water" means subsurface water that is in the zone of saturation including perched ground water.

(29) "Ground water quality standard" means a standard for maximum allowable contamination in ground water as set by Section R315-308-4.

(30) "Hazardous waste" means hazardous waste as defined by Subsection 19-6-102(9) and Section R315-2-3.

(31) "Holocene fault" means a fracture or zone of fractures along which rocks on one side of the fracture have been displaced with respect to those on the other side, which has occurred in the most recent epoch of the Quaternary period extending from the end of the Pleistocene, approximately 11,000 years ago, to the present.

(32) "Household size" means a container for a material or product that is normally and reasonably associated with households or household activities. The containers are of a size and design to hold materials or products generally for immediate use and not for storage, five gallons or less in size.

(33) "Household waste" means any solid waste, including garbage, trash, and sanitary waste in septic tanks, derived from households including single and multiple residences, hotels, motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas.

(34) "Incineration" means a controlled thermal process by which solid wastes are physically or chemically altered to gas, liquid, or solid residues that are also regulated solid wastes. Incineration includes the thermal destruction of solid waste for energy recovery. Incineration does not include smelting operations where metals are reprocessed or the refining, processing, or burning of used oil for energy recovery as described in Rule R315-15.

(35) "Industrial solid waste" means any solid waste generated at a manufacturing or other industrial facility that is not a hazardous waste or that is a hazardous waste from a conditionally exempt small quantity generator of hazardous waste, as defined by Section R315-2-5, generated by an industrial facility. Industrial solid waste includes waste from the following industries or resulting from the following manufacturing processes and associated activities: electric power generation; fertilizer or agricultural chemical industries; food and related products or by-products industries; inorganic chemical industries; iron and steel manufacturing; leather and leather product industries; nonferrous metals manufacturing or foundry industries; organic chemical industries; plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic product industries; stone, glass, clay, and concrete product industries; textile manufacturing; transportation equipment manufacturing; and water treatment industries. This term does not include mining waste; oil and gas waste; or other waste excluded by Subsection 19-6-102(18)(b).

(36) "Industrial solid waste facility" means a facility that receives only industrial solid waste from on-site or off-site sources for disposal.

(37) "Inert waste" means noncombustible, nonhazardous solid wastes that retain their physical and chemical structure

under expected conditions of disposal, including wastes that exhibit resistance to biological or chemical change.

(38) "Landfill" means a disposal facility where solid waste is or has been placed in or on the land and that is not a land treatment facility or surface impoundment.

(39) "Land treatment, landfarming, or landspreading facility" means a facility or unit within a facility where solid waste is applied onto or incorporated into the soil surface for the purpose of biodegradation.

(40) "Lateral expansion of the solid waste disposal area" means:

(a) any horizontal expansion of the waste boundaries of an existing landfill cell, module, or unit;

(b) the construction of a new cell, module, or unit within the boundaries outlined in the permit application of the current permit under which the facility is operating; or

(c) any horizontal expansion not consistent with past normal operating practices.

(41) "Lateral hydraulically equivalent point" means a point located hydraulically equal to a facility and in the same ground water with similar geochemistry such that the ground water, at that point, has not been affected by the facility.

(42) "Leachate" means a liquid that has passed through or emerged from solid waste and that may contain soluble, suspended, miscible, or immiscible materials removed from such waste.

(43) "Lithified earth material" means all rock, including all naturally occurring and naturally formed aggregates or masses of minerals or small particles of older rock that formed by crystallization of magma or by induration of loose sediments. This term does not include human-made materials, such as fill, concrete and asphalt, or unconsolidated earth materials, soil, or regolith lying at or near the earth surface.

(44) "Lower explosive limit" means the lowest percentage by volume of a mixture of explosive gases that will propagate a flame in air at 25 degrees Celsius (77 degrees Fahrenheit) and atmospheric pressure.

(45) "Maximum horizontal acceleration in lithified earth material" means the maximum expected horizontal acceleration depicted on a seismic hazard map, with a 90% or greater probability that the acceleration will not be exceeded in 250 years, or the maximum expected horizontal acceleration based on site specific seismic risk assessment.

(46) "Municipal solid waste landfill" means a permitted nonhazardous solid waste landfill that may receive municipal solid waste for disposal.

(47) "Municipal solid waste" means household waste, nonhazardous commercial solid waste, and non-hazardous sludge.

(48) "New facility" means any facility that:

(a) has applied for a permit or other valid approval issued under Rules R315-301 through 320 by the Director;

(b) did not have a permit or other valid approval issued under Rules R315-301 through 320 at the time of the application; and

(c) has not received final approval to accept waste as required by Subsection R315-301-5(1).

(49) "Off site" means any site which is not on site.

(50) "On site" means the same or geographically contiguous property that may be divided by public or private right-of-way, provided that the entrance and exit between the properties is at a cross-roads intersection, and access is by crossing, as opposed to going along the right-of-way. Property separated by a private right-of-way, which the site owner or operator controls, and to which the public does not have access, is also considered on-site property.

(51) "Operator" means the person, as defined by Subsection 19-1-103(4), responsible for the overall operation of a facility.

(52) "Owner" means the person, as defined by Subsection 19-1-103(4), who has an ownership interest in a facility or part of a facility.

(53) "PCB" or "PCBs" means any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of materials which contain such substances.

(54) "Permeability" means the ease with which a porous material allows water and the solutes contained therein to flow through it. This is usually expressed in units of centimeters per second (cm/sec) and termed hydraulic conductivity. Soils and synthetic liners with a permeability for water of 1×10^{-7} cm/sec or less may be considered impermeable.

(55) "Permit" means the plan approval as required by Subsection 19-6-108(3)(a), or equivalent control document issued by the Director to implement the requirements of the Utah Solid and Hazardous Waste Act.

(56) "Pile" means any noncontainerized accumulation of solid waste that is used for treatment or storage.

(57) "Poor foundation conditions" means those areas where features exist which indicate that a natural or human-induced event may result in inadequate foundation support for the structural components of a landfill unit.

(58) "Putrescible waste" means solid waste which contains organic matter capable of being decomposed by microorganisms and of such a character and proportion as to be capable of attracting or providing food for vectors including birds and mammals.

(59) "Qualified ground water scientist" means a scientist or engineer who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in ground water hydrology and related fields as may be demonstrated by state registration, professional certification, or completion of accredited university programs that enable that individual to make sound professional judgements regarding ground water monitoring, contaminant fate and transport, and corrective action.

(60) "Recycling" means extracting valuable materials from the waste stream and transforming or remanufacturing them into usable materials that have a demonstrated or potential market.

(a) Recycling does not include processes that generate such volumes of material that no market exists for the material.

(b) Any part of the waste stream entering a recycling facility and subsequently returning to a waste stream or being otherwise disposed has the same regulatory designation as the original waste.

(c) Recycling includes the substitution of nonhazardous solid waste fuels for conventional fuels (such as coal, natural gas, and petroleum products) for the purpose of generating the heat necessary to manufacture a product.

(61) "Recyclable materials" means those solid wastes that can be recovered from or otherwise diverted from the waste stream for the purpose of recycling, such as metals, paper, glass, and plastics.

(62) "Run-off" means any rainwater, leachate, or other liquid that has contacted solid waste and drains over land from any part of a facility.

(63) "Run-on" means any rainwater, leachate, or other liquid that drains over land onto the active area of a facility.

(64) "Scavenging" means the unauthorized removal of solid waste from a facility.

(65) "Seismic impact zone" means an area with a 10% or greater probability that the maximum horizontal acceleration in lithified earth material, expressed as a percentage of the earth's gravitational pull, will exceed 0.10g in 250 years.

(66) "Septage" means a semisolid consisting of settled sewage solids combined with varying amounts of water and dissolved materials generated from septic tank systems.

(67) "Sharps" means any discarded or contaminated article

or instrument from a health facility that may cause puncture or cuts. Such waste may include needles, syringes, blades, needles with attached tubing, pipettes, pasteurs, broken glass, and blood vials.

(68) "Sludge" means any solid, semisolid, or liquid waste, including grit and screenings generated from a:

- (a) municipal, commercial, or industrial waste water treatment plant;
- (b) water supply treatment plant;
- (c) car wash facility;
- (d) air pollution control facility; or
- (e) any other such waste having similar characteristics.

(69) "Solid waste disposal facility" means a landfill, incinerator, or land treatment area.

(70) "Solid waste incinerator facility" means a facility at which solid waste is received from on-site or off-site sources and is subjected to the incineration process. An incinerator facility that incinerates solid waste for any reason, including energy recovery, volume reduction, or to render it non-infectious, is a solid waste incinerator facility and is subject to Rules R315-301 through 320.

(71) "Special waste" means discarded solid waste that may require special handling or other solid waste that may pose a threat to public safety, human health, or the environment.

- (a) Special waste may include:
 - (i) ash;
 - (ii) automobile bodies;
 - (iii) furniture and appliances;
 - (iv) infectious waste;
 - (v) waste tires;
 - (vi) dead animals;
 - (vii) asbestos;
 - (viii) waste exempt from the hazardous waste regulations under Section R315-2-4;
 - (ix) conditionally exempt small quantity generator hazardous waste as defined by Section R315-2-5;
 - (x) waste containing PCBs;
 - (xi) petroleum contaminated soils;
 - (xii) waste asphalt; and
 - (xiii) sludge.

(b) Special waste must be handled and disposed according to the requirements of Rule R315-315.

(72) "State" means the State of Utah.

(73) "Structural components" means liners, leachate collection systems, final covers, run-on or run-off systems, and any other component used in the construction and operation of a landfill that is necessary for the protection of human health and the environment.

(74) "Surface impoundment or impoundment" means a facility or part of a facility which is a natural topographic depression, human-made excavation, or diked area formed primarily of earthen materials, although it may be lined with synthetic materials, which is designed to hold an accumulation of liquid waste or waste containing free liquids, and which is not an injection well. Examples of surface impoundments are holding, storage, settling, and aeration pits, ponds, and lagoons.

(75) "Transfer station" means a permanent, fixed, supplemental collection and transportation facility that is staffed by a minimum of one employee of the owner or operator during hours of operation and is used by persons and route collection vehicles to deposit collected solid waste from off-site into a transfer vehicle for transport to a solid waste handling or disposal facility.

(76) "Transport vehicle" means a vehicle capable of hauling solid waste such as a truck, packer, or trailer that may be used by refuse haulers to transport solid waste from the point of generation to a transfer station or a disposal facility.

(77) "Treated wood" means any wood item that has been treated with the following or compounds containing the

following:

- (a) creosote or related compounds;
- (b) Arsenic;
- (c) Chromium; or
- (d) Copper.

(78) "Twenty-five year storm" means a 24-hour storm of such intensity that it has a 4% probability of being equaled or exceeded any given year. The storm could result in what is referred to as a 25-year flood.

(79) "Unit" or "Solid Waste Management Unit" means a distinct operational storage, treatment, or disposal area at a solid waste management facility that contains all features to render it capable of performing its intended function and of being closed as a separate entity.

(80) "Unit boundary" means a vertical surface located at the hydraulically downgradient limit of a landfill unit or other solid waste disposal facility unit which is required to monitor ground water. This vertical surface extends down into the ground water.

(81) "Unstable area" means a location that is susceptible to natural or human induced events or forces capable of impairing the integrity of some or all of the landfill structural components responsible for preventing releases from a facility. Unstable areas can include poor foundation conditions, areas susceptible to mass movements, and karst terrains.

(82) "Vadose zone" means the zone of aeration including soil and capillary water. The zone is bound above by the land surface and below by the water table.

(83) "Vector" means a living animal including insect or other arthropod which is capable of transmitting an infectious disease from one organism to another.

(84) "Washout" means the carrying away of solid waste by waters of a base or 100-year flood.

(85) "Waste tire storage facility" or "waste tire pile" means any site where more than 1,000 waste tires or 1,000 passenger tire equivalents are stored on the ground.

- (a) A waste tire storage facility includes:
 - (i) whole waste tires used as a fence;
 - (ii) whole waste tires used as a windbreak; and
 - (iii) waste tire generators where more than 1,000 waste tires are held.

(b) A waste tire storage facility does not include:

- (i) a site where waste tires are stored exclusively in buildings or in trailers;

(ii) if whole waste tires are stored for five or fewer days, the site of a registered tire recycler or a processor for a registered tire recycler;

(iii) a permitted solid waste disposal facility that stores whole tires in piles for not longer than one year;

(iv) a staging area where tires are temporarily placed on the ground, not stored, to accommodate activities such as sorting, assembling, or loading or unloading of trucks; or

(v) a site where waste tires or material derived from waste tires are stored for five or fewer days and are used for ballast to maintain covers on agricultural materials or to maintain covers at a construction site or are to be recycled or applied to a beneficial use.

(c) Tires attached to a vehicle are not considered waste tires until they are removed from the vehicle.

(86) "Wetlands" means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and under normal conditions do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

(87) "Yard waste" means vegetative matter resulting from landscaping, land maintenance, and land clearing operations including grass clippings, prunings, and other discarded material generated from yards, gardens, parks, and similar types of

facilities. Yard waste does not include garbage, paper, plastic, processed wood, sludge, septage, or manure.

R315-301-3. Owner Responsibilities for Solid Waste.

The owner, operator or occupant of any premises or business establishment shall be responsible for the management and disposal of all solid waste generated or accumulated by the owner, operator, or occupant of the property in compliance with the Utah Solid Waste Permitting and Management Rules and the Utah Solid and Hazardous Waste Act.

R315-301-4. Prohibition of Illegal Disposal or Incineration of Solid Waste.

(1) No person shall incinerate, burn, or otherwise dispose of any solid waste in any place except at a facility which is in compliance with the requirements of Rules R315-301 through 320 and other applicable rules.

(2) When any solid waste is disposed in a manner not in compliance with the requirements of Rules R315-301 through 320, or other applicable rules, the property owner of the disposal site or the person responsible for the illegal disposal or both:

(a) shall remove the solid waste from the illegal disposal site to a permitted solid waste disposal facility and, if necessary, shall remediate the site; or

(b) shall apply for a permit from the Director and shall meet all of the following:

(i) submit the required permit application in the time frame specified by the Director and respond promptly to all requests for information from the Director related to the permit application;

(ii) shall immediately meet all of the operational monitoring and waste handling criteria of Rules R315-301 through 320; and

(iii) shall follow the requirements of Rule R315-301-4(2)(a) if a permit is not granted.

(3) Any person disposing of solid waste in a manner not in compliance with the requirements of Rules R315-301 through 320, or other applicable rules, may be subject to enforcement action in addition to meeting the requirements of Rule R315-301-4(2).

(4) When deposition or disposal of the following materials does not cause a hazard to human health or the environment or cause a public nuisance, the requirements of Rules R315-301 through 320 do not apply to:

(a) inert waste used as fill material;

(b) the disposal of mine tailings and overburden;

(c) the disposal of vegetative material generated as a result of land clearing; or

(d) the disposal of vegetative agricultural waste.

R315-301-5. Permit Required.

(1) No solid waste disposal facility shall be established, operated, maintained, or expanded until the owner or operator of such facility has obtained a permit from the Director and has received a letter of approval from the Director to accept waste.

(2) The owner or operator of a solid waste disposal facility shall operate the facility in accordance with the conditions of the permit and otherwise follow the permit.

(3) In areas where no public or duly licensed disposal service is available, the on-site disposal, by burial, of on-site generated nonhazardous solid waste from a single family farm or a single family ranch does not require a permit.

R315-301-6. Protection of Human Health and the Environment.

(1) The management of solid waste shall not present a threat to human health or the environment.

(2) Any contamination of the ground water, surface water, air, or soil that results from the management of solid waste

which presents a threat to human health or the environment shall be remediated through appropriate corrective action.

40 CFR 258

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-302. Solid Waste Facility Location Standards, General Facility Requirements, and Closure Requirements.****R315-302-1. Location Standards for Disposal Facilities.**

(1) Applicability.

(a) These standards apply to each new solid waste disposal facility and any existing solid waste disposal facility seeking facility expansion, including:

- (i) Class I, II, and V Landfills;
- (ii) Class III Landfills as specified in Rule R315-304;
- (iii) Class IV and VI Landfills as specified in Rule R315-305;

- (iv) piles that are to be closed as landfills; and
- (v) Incinerators as specified in Rule R315-306.

(b) These standards, except for Subsection R315-302-1(2)(f) or unless otherwise noted, do not apply to:

- (i) an existing facility;
- (ii) a transfer station or a drop box facility;
- (iii) a pile used for storage;
- (iv) composting or utilization of sludge or other solid waste on land; or
- (v) a hazardous waste disposal sites regulated by Rules R315-1 through R315-50 and Rule R315-101.

(2) Location Standards. Each applicable solid waste facility shall be subject to the following location standards.

(a) Land Use Compatibility. No new facility shall be located within:

- (i) one thousand feet of a:
 - (A) national, state, county, or city park, monument, or recreation area;
 - (B) designated wilderness or wilderness study area;
 - (C) wild and scenic river area; or
 - (D) stream, lake, or reservoir;
- (ii) ecologically and scientifically significant natural areas, including wildlife management areas and habitat for threatened or endangered species as designated pursuant to the Endangered Species Act of 1982;
- (iii) farmland classified or evaluated as "prime," "unique," or of "statewide importance" by the U.S. Department of Agriculture Soil Conservation Service under the Prime Farmland Protection Act;
- (iv) one-fourth mile of:

(A) existing permanent dwellings, residential areas, and other incompatible structures such as schools or churches unless otherwise allowed by local zoning or ordinance; and

(B) historic structures or properties listed or eligible to be listed in the State or National Register of Historic Places;

(v) ten thousand feet of any airport runway end used by turbojet aircraft or within 5,000 feet of any airport runway end used by only piston-type aircraft unless the owner or operator demonstrates that the facility design and operation will not increase the likelihood of bird/aircraft collisions. Every new and existing disposal facility is subject to this requirement. If a new landfill or a lateral expansion of an existing landfill is located within six miles of an airport runway end, the owner or operator must notify the affected airport and the Federal Aviation Administration; or

(vi) areas with respect to archeological sites that would violate Section 9-8-404.

(b) Geology.

(i) No new facility or lateral expansion of an existing facility shall be located in a subsidence area, a dam failure flood area, above an underground mine, above a salt dome, above a salt bed, or on or adjacent to geologic features which could compromise the structural integrity of the facility.

(ii) Holocene Fault Areas. A new facility or a lateral expansions of an existing facility shall not be located within 200 feet of a Holocene fault unless the owner or operator

demonstrates to the Director that an alternative setback distance of less than 200 feet will prevent damage to the structural integrity of the unit and will be protective of human health and the environment.

(iii) Seismic Impact Zones. A new facility or a lateral expansion of an existing facility shall not be located in seismic impact zones unless the owner or operator demonstrates to the satisfaction of the Director that all containment structures, including liners, leachate collection systems, and surface water control systems, are designed to resist the maximum horizontal acceleration in lithified earth material for the site.

(iv) Unstable Areas. The owner or operator of an existing facility, a lateral expansion of an existing facility, or a new facility located in an unstable area must demonstrate to the satisfaction of the Director that engineering measures have been incorporated into the facility design to ensure that the integrity of the structural components of the facility will not be disrupted. The owner or operator must consider the following factors when determining whether an area is unstable:

(A) on-site or local soil conditions that may result in significant differential settling;

(B) on-site or local geologic or geomorphologic features; and

(C) on-site or local human-made features or events, both surface and subsurface.

(c) Surface Water.

(i) No new facility or lateral expansion of an existing facility shall be located on any public land that is being used by a public water system for water shed control for municipal drinking water purposes.

(ii) Floodplains. No new or existing facility shall be located in a floodplain unless the owner or operator demonstrates to the Director that the unit will not restrict the flow of the 100-year flood, reduce the temporary water storage capacity of the floodplain, or result in a washout of solid waste so as to pose a hazard to human health or the environment.

(d) Wetlands. No new facility or lateral expansion of an existing facility shall be located in wetlands unless the owner or operator demonstrates to the Director that:

(i) where applicable under section 404 of the Clean Water Act or applicable State wetlands laws, the presumption that a practicable alternative to the proposed landfill is available which does not involve wetlands is clearly rebutted;

(ii) the unit will not violate any applicable state water quality standard or section 307 of the Clean Water Act;

(iii) the unit will not jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of a critical habitat protected under the Endangered Species Act of 1973;

(iv) the unit will not cause or contribute to significant degradation of wetlands. The owner or operator must demonstrate the integrity of the unit and its ability to protect ecological resources by addressing the following factors:

(A) erosion, stability, and migration potential of native wetland soils, muds, and deposits used to support the unit;

(B) erosion, stability, and migration potential of dredged and fill materials used to support the unit;

(C) the volume and chemical nature of the waste managed in the unit;

(D) impacts on fish, wildlife, and other aquatic resources and their habitat from release of the solid waste;

(E) the potential effects of catastrophic release of waste to the wetland and the resulting impacts on the environment; and

(F) any additional factors, as necessary, to demonstrate that ecological resources in the wetland are sufficiently protected;

(v) to the extent required under section 404 of the Clean Water Act or applicable state wetlands laws, steps have been taken to attempt to achieve no net loss of wetlands, as defined

by acreage and function, by first avoiding impacts to wetlands to the maximum extent practicable as required by Subsection R315-302-1(2)(d)(i), then minimizing unavoidable impacts to the maximum extent practicable, and finally offsetting remaining unavoidable wetland impacts through all appropriate and practicable compensatory mitigation actions (e.g., restoration of existing degraded wetlands or creation of man-made wetlands); and

(vi) sufficient information is available to make a reasonable determination with respect to these demonstrations.

(e) Ground Water.

(i) No new facility or lateral expansion of an existing facility shall be located at a site:

(A) where the bottom of the lowest liner is less than five feet above the historical high level of ground water; or

(B) for a landfill that is not required to install a liner, the lowest level of waste must be at least ten feet above the historical high level of ground water.

(C) If the aquifer beneath a landfill contains ground water which has a Total Dissolved Solids (TDS) of 10,000 mg/l or greater and the landfill is constructed with a composite liner, the bottom of the lowest liner may be less than five feet above the historical high level of the ground water.

(ii) No new facility shall be located over a sole source aquifer as designated in 40 CFR 149.

(iii) No new facility shall be located over groundwater classed as IB under Section R317-6-3.3.

(iv) Unless all units of the proposed facility are constructed with a composite liner or other equivalent design approved by the Director:

(A) a new facility located above any aquifer containing ground water which has a TDS content below 1,000 mg/l which does not exceed applicable ground water quality standards for any contaminant is permitted only where the depth to ground water is greater than 100 feet; or

(B) a new facility located above any aquifer containing ground water which has a TDS content between 1,000 and 3,000 mg/l and does not exceed applicable ground water quality standards for any contaminant is permitted only where the depth to ground water is 50 feet or greater.

(C) The applicant for the proposed facility will make the demonstration of ground water quality necessary to determine the appropriate aquifer classification.

(v) No new facility shall be located in designated drinking water source protection areas or, if no source protection area is designated, within a distance to existing drinking water wells or springs for public water supplies of 250 days ground water travel time. This requirement does not include on-site operation wells. The applicant for the proposed facility will make the demonstration, acceptable to the Director, of hydraulic conductivity and other information necessary to determine the 250 days ground water travel distance.

(vi) Ground Water Alternative.

(A) Subject to the ground water performance standard stated in Subsection R315-303-2(1), if a solid waste disposal facility is to be located over an area where the ground water has a TDS of 10,000 mg/l or greater, or where there is an extreme depth to ground water, or where there is a natural impermeable barrier above the ground water, or where there is no ground water, the Director may approve, on a site specific basis, an alternative ground water monitoring system at the facility or may waive the ground water monitoring requirement. If ground water monitoring is waived the owner or operator shall make the demonstration stated in Subsection R315-308-1(3).

(B) A facility that has a ground water monitoring alternative approved under Subsection R315-302-1(2)(e)(vi) is subject to the ground water quality standards specified in Subsection R315-303-2(1) and the approved alternative shall be revoked by the Director if the operation of the facility impacts

ground water.

(f) Historic preservation survey requirement.

(i) Each new facility or expansion of an existing facility shall:

(A) have a notice of concurrence issued by the state historic preservation officer as provided for in Subsection 9-8-404(3)(a)(i); or

(B) show that the state historic preservation officer did not respond within 30 days to the submittal, to the officer, of an evaluation; or

(C) have received a joint analysis conducted as required by Subsection 9-8-404(2).

(ii) Each existing facility shall, for all areas of the site that have not been disturbed:

(A) have a notice of concurrence issued by the state historic preservation officer as provided for in Subsection 9-8-404(3)(a)(i); or

(B) show that the state historic preservation officer did not respond within 30 days to the submittal, to the officer, of an evaluation; or

(C) have received a joint analysis conducted as required by Subsection 9-8-404(2).

(3) Exemptions. Exemptions from the location standards with respect to airports, floodplains, wetlands, fault areas, seismic impact zones, and unstable areas cannot be granted. Exemptions from other location standards of Section R315-302-1 may be granted by the Director on a site specific basis if it is determined that the exemption will cause no adverse impacts to human health or the environment.

(a) No exemption may be granted without application to the Director.

(b) If an exemption is granted, a facility may be required to have a more stringent design, construction, monitoring program, or operational practice to protect human health or the environment.

(c) All applications for exemptions shall meet the conditions of Section R315-311-3 pertaining to public notice and comment period.

R315-302-2. General Facility Requirements.

(1) Applicability.

(a) Each new and existing solid waste facility for which a permit is required by Section R315-310-1, shall meet the applicable requirements of Section R315-302-2 or portions of Section R315-302-2 as required by Rules R315-304, R315-305, R315-306, R315-307, R315-312, R315-313, or R315-314.

(b) Any facility which stores waste in piles that is subject to the requirements of Rule R315-314 shall meet the applicable requirements of Section R315-302-2.

(c) Any recycling facility or composting facility subject to the standards of Rule R315-312 shall submit a plan of operation, to the Director, that demonstrates compliance with the applicable standards of Section R315-302-2 and Rule R315-312.

(i) The submitted plan of operation shall be reviewed to determine compliance with the applicable standards of Section R315-302-2 and Rule R315-312.

(ii) Prior to the acceptance of waste or recyclable material or beginning operations at the facility, the owner or operator of a recycling or composting facility must receive notice from the Director that the plan of operation meets the applicable standards of Section R315-302-2 and Rule R315-312.

(d) Any transfer station subject to the standards of Rule R315-313 shall submit a plan of operation to the Director that demonstrates compliance with the applicable standards of Section R315-302-2 and Rule R315-313.

(i) The submitted plan of operation shall be reviewed to determine compliance with the applicable standards of Section R315-302-2 and Rule R315-313.

(ii) Prior to the acceptance of waste or beginning operations at the facility, the owner or operator of a transfer station facility must receive notice from the Director that the plan of operation meets the applicable standards of Section R315-302-2 and Rule R315-313.

(e) The requirements of Section R315-302-2 apply to industrial solid waste facilities as specified in Rule R315-304.

(f) A solid waste incinerator facility that meets the quantity limitation of Subsection R315-306-3(1)(b) shall meet the reporting requirements of Subsection R315-302-2(4).

(2) Plan of Operation. Each owner or operator shall develop, keep on file, and abide by a plan of operation approved by the Director. The plan shall describe the facility's operation and shall convey to site operating personnel the concept of operation intended by the designer. The plan of operation shall be available for inspection at the request of the Director or his authorized representative. The facility must be operated in accordance with the plan. Each plan of operation shall include:

(a) an intended schedule of construction. Facility permits will be reviewed by the Director no later than 18 months after the permit is issued and periodically thereafter, to determine if the schedule of construction is reasonably being followed. Failure to comply with the schedule of construction may result in revocation of the permit;

(b) a description of on-site solid waste handling procedures during the active life of the facility;

(c) a schedule for conducting inspections and monitoring for the facility;

(d) contingency plans in the event of a fire or explosion;

(e) corrective action programs to be initiated if ground water is contaminated;

(f) contingency plans for other releases, e.g. release of explosive gases or failure of run-off containment system;

(g) a plan to control fugitive dust generated from roads, construction, general operations, and covering the waste;

(h) a plan to control wind-blown litter that includes equipment and methods to contain litter, including a schedule and methods to collect scattered litter in a timely manner;

(i) a description of maintenance of installed equipment including leachate and gas collection systems, and ground water monitoring systems;

(j) procedures for excluding the receipt of prohibited hazardous waste or prohibited waste containing PCBs;

(k) procedures for controlling disease vectors;

(l) a plan for an alternative waste handling or disposal system during periods when the solid waste facility is not able to dispose of solid waste, including procedures to be followed in case of equipment breakdown;

(m) closure and post-closure care plans;

(n) cost estimates and financial assurance as required by Subsection R315-309-2(3);

(o) a landfill operations training plan for site operators; and

(p) other information pertaining to the plan of operation as required by the Director.

(3) Recordkeeping. Each owner or operator shall maintain and keep, on-site or at a location approved by the Director, the following permanent records:

(a) a daily operating record, to be completed at the end of each day of operation, that shall contain:

(i) the weights, in tons, or volumes, in cubic yards, of solid waste received each day, number of vehicles entering, and if available, the type of wastes received each day;

(ii) deviations from the approved plan of operation;

(iii) training and notification procedures;

(iv) results of ground water and gas monitoring that may be required; and

(v) an inspection log or summary; and

(b) other records to include:

(i) documentation of any demonstration made with respect to any location standard or exemption;

(ii) any design documentation for the placement or recirculation of leachate or gas condensate into the landfill as allowed by Subsection R315-303-3(2)(b);

(iii) closure and post-closure care plans as required by Subsections R315-302-3(4) and (7);

(iv) cost estimates and financial assurance documentation as required by Subsection R315-309-2(3);

(v) any information demonstrating compliance with Class II Landfill requirements if applicable; and

(vi) other information pertaining to operation, maintenance, monitoring, or inspections as may be required by the Director.

(4) Reporting.

(a) Each owner or operator of any facility, including a facility performing post-closure care, shall prepare an annual report and place the report in the facility's operating record. The owner or operator of the facility shall submit a copy of the annual report to the Director by March 1 of each year for the most recent calendar year or fiscal year of facility operation.

(b) The annual report shall cover facility activities during the previous year and must include, at a minimum, the following information:

(i) name and address of the facility;

(ii) calendar year covered by the report;

(iii) annual quantity, in tons, of solid waste received;

(iv) the annual update of the required financial assurances mechanism pursuant to Subsection R315-309-2(2);

(v) results of ground water monitoring and gas monitoring; and

(vi) training programs or procedures completed.

(c) Since the amount of waste received must be reported in tons, the following conversion factors shall be used for waste received that is not weighted on scales.

(i) Municipal solid waste:

(A) Uncompacted - 0.15 tons per cubic yard; and

(B) Compacted (delivered in a compaction vehicle) - 0.30 tons per cubic yard.

(ii) Construction/demolition waste - 0.50 tons per cubic yard.

(iii) Municipal incinerator ash - 0.75 tons per cubic yard.

(iv) Other ash - 1.10 tons per cubic yard.

(v) Waste delivered by a resident in a pickup truck or a single axle trailer - 0.25 tons per vehicle.

(vi) Industrial waste - a reasonable conversion factor, based on site specific data, developed by the owner or operator of the facility.

(d) If an owner or operator of a municipal landfill or a construction/demolition landfill has documented conversion factors that are based on facility specific data, these conversion factors may be used to report the amounts of waste when approved by the Director.

(5) Inspections.

(a) The owner or operator shall inspect the facility to prevent malfunctions and deterioration, operator errors, and discharges which may cause or lead to the release of wastes to the environment or to a threat to human health. The owner or operator must conduct these inspections with sufficient frequency, no less than quarterly, to identify problems in time to correct them before they harm human health or the environment. The owner or operator shall keep an inspection log or summary including at least the date and time of inspection, the printed name and handwritten signature of the inspector, a notation of observations made, and the date and nature of any repairs or corrective action. The log or summary must be kept at the facility or other convenient location if permanent office facilities are not on-site, for at least three years from the date of inspection. Inspection records shall be

available to the Director or his authorized representative upon request.

(b) The Director or any duly authorized officer, employee, or representative of the Director may, at any reasonable time and upon presentation of appropriate credentials, enter any solid waste facility and inspect the property, records, monitoring systems, activities and practices, or solid waste being handled for the purpose of ascertaining compliance with Rules R315-301 through 320 and the approved plan of operation for the facility.

(i) The inspector may conduct monitoring or testing, or collect samples for testing, to verify the accuracy of information submitted by the owner or operator or to ensure that the owner or operator is in compliance. The owner or operator may request split samples and analysis parameters on any samples collected by the inspector.

(ii) The inspector may use photographic equipment, video camera, electronic recording device, or any other reasonable means to record information during any inspection.

(iii) The results of any inspection shall be furnished promptly to the owner or operator of the facility.

(6) Recording with the County Recorder.

Not later than 60 days after certification of closure, the owner or operator of a solid waste disposal facility shall:

(a) submit plats and a statement of fact concerning the location of any disposal site to the county recorder to be recorded as part of the record of title; and

(b) submit proof of record of title filing to the Director.

R315-302-3. General Closure and Post Closure Requirements.

(1) Applicability.

(a) The owner or operator of any solid waste disposal facility that requires a permit shall meet the applicable standards of Section R315-302-3 and shall provide financial assurance for closure and post-closure care costs that meets the requirements of Rule R315-309.

(b) The requirements of Subsections (2), (3), and (4) of this section apply to any solid waste management facility as defined by Subsection 19-6-502(12). The requirements of Subsections (5), (6), and (7) of this section apply to:

(i) Class I, II, IV, V, and VI Landfills;

(ii) Class III Landfills as specified in Rule R315-304; and

(iii) any landtreatment disposal facility.

(2) Closure Performance Standard. Each owner or operator shall close its facility or unit in a manner that:

(a) minimizes the need for further maintenance;

(b) minimizes or eliminates threats to human health and the environment from post-closure escape of solid waste constituents, leachate, landfill gases, contaminated run-off or waste decomposition products to the ground, ground water, surface water, or the atmosphere; and

(c) prepares the facility or unit for the post-closure period.

(3) Closure Plan and Amendment.

(a) Closure may include covering, grading, seeding, landscaping, contouring, and screening. For a transfer station or a drop box facility, closure includes waste removal and decontamination of the site, including soil analysis, ground water analysis, or other procedures as required by the Director.

(b) Each owner or operator shall develop, keep on file and abide by a plan of closure required by Subsection R315-302-2(2)(m) which, when approved by the Director, will become part of the permit.

(c) The closure plan shall project time intervals at which sequential partial closure, if applicable, is to be implemented and identify closure cost estimates and projected fund withdrawal intervals for the associated closure costs from the approved financial assurance instrument required by Rule R315-309.

(d) The closure plan may be amended if conditions and

circumstances justify such amendment. If it is determined that amendment of a facility closure plan is required, the Director may direct facility closure activities, in part or whole, to cease until the closure plan amendment has been reviewed and approved by the Director.

(e) Each owner and operator shall close the facility or unit in accordance with the approved closure plan and all approved amendments.

(4) Closure Procedures.

(a) Each owner and operator shall notify the Director of the intent to implement the closure plan in whole or part, 60 days prior to the projected final receipt of waste at the unit or facility unless otherwise specified in the approved closure plan.

(b) The owner or operator shall commence implementation of the closure plan, in part or whole, within 30 days after receipt of the final volume of waste, or for landfills, when the final elevation is attained in part or all of the facility cell or unit as identified in the approved facility closure plan unless otherwise specified in the approved closure plan. Closure activities shall be completed within 180 days from their starting time. Extensions of the closure period may be granted by the Director if justification for the extension is documented by the owner or operator.

(c) When an owner or operator completes closure of a solid waste management unit or facility closure is completed, he shall, within 90 days or as required by the Director, submit to the Director:

(i) facility or unit closure plans, except for Class IIIB, IVb, and VI Landfills, signed by a professional engineer registered in the state of Utah, and modified as necessary to represent as-built changes to final closure construction as approved in the closure plan; and

(ii) certification by the owner or operator, and, except for Class IIIB, IVb, and VI Landfills, a professional engineer registered in the state of Utah, that the site or unit has been closed in accordance with the approved closure plan.

(5) Post-Closure Performance Standard. Each owner or operator shall provide post-closure activities for continued facility maintenance and monitoring of gases, land, and water for 30 years or as long as the Director determines is necessary for the facility or unit to become stabilized and to protect human health and the environment.

(6) Post-Closure Plan and Amendment.

(a) For any disposal facility, except an energy recovery or incinerator facility, post-closure care may include:

(i) ground water and surface water monitoring;

(ii) leachate collection and treatment;

(iii) gas monitoring;

(iv) maintenance of the facility, the facility structures that remain after closure, and monitoring systems for their intended use as required by the approved permit;

(v) a description of the planned use of the property; and

(vi) any other activity required by the Director to protect human health and the environment for a period of 30 years or a period established by the Director.

(b) Each owner or operator shall develop, keep on file, and abide by a post-closure plan as required by Subsection R315-302-2(2)(m) and as approved by the Director as part of the permit. The post-closure plan shall address facility or unit maintenance and monitoring activities until the site becomes stabilized (i.e., little or no settlement, gas production or leachate generation) and monitoring and maintenance activities can be safely discontinued.

(c) The post-closure plan shall project time intervals at which post-closure activities are to be implemented and identify post-closure cost estimates and projected fund withdrawal intervals from the selected financial assurance instrument, where applicable, for the associated post-closure costs.

(d) The post-closure plan may be amended if conditions

and circumstances justify such amendment. If it is determined that amendment of a facility or unit post-closure plan is required, the Director may direct facility post-closure activities, in part or whole, to cease until the post-closure plan amendment has been reviewed and approved.

(7) Post-Closure Procedures.

(a) Each owner or operator shall commence post-closure activities after closure activities have been completed. The Director may direct that post-closure activities cease until the owner or operator receives a notice from the Director to proceed with post-closure activities.

(b) When post-closure activities are complete, as determined by the Director, the owner or operator shall submit a certification to the Director, signed by the owner or operator, and, except for Class IIIb, IVb, and VI Landfills, a professional engineer registered in the state of Utah stating why post-closure activities are no longer necessary (i.e., little or no settlement, gas production, or leachate generation).

(c) If the Director finds that post-closure monitoring has established that the facility or unit is stabilized (i.e., little or no settlement, gas production, or leachate generation) the Director may authorize the owner or operator to discontinue any portion or all of the post-closure maintenance and monitoring activities.

40 CFR 258

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-303. Landfilling Standards.

R315-303-1. Applicability.

The standards of Rule R315-303 apply to:

- (1) Class I, II, and V Landfills;
- (2) Class III Landfills as specified in Rule R315-304; and
- (3) Class IV, and VI Landfills as specified in Rule R315-305.

R315-303-2. Standards for Performance.

(1) Ground Water. An owner or operator of a disposal facility shall not contaminate the ground water underlying the facility beyond the ground water quality standard set in Section R315-308-4 or, for constituents not set in Section R315-308-4, as established by the Director based on health risk standards.

(2) Air Quality and Explosive Gas Emissions.

(a) An owner or operator of a disposal facility shall not allow concentrations of explosive gases generated by the facility to exceed:

- (i) twenty-five percent of the lower explosive limit for explosive gases in facility structures, excluding gas control or recovery system components; and
- (ii) the lower explosive limit for explosive gases at the property boundary or beyond.

(b) An owner or operator of a disposal facility shall not cause a violation of any ambient air quality standard at the property boundary or emission standard from any emission of landfill gases, combustion or any other emission associated with the facility.

(3) Surface Waters. An owner or operator of a disposal facility:

(a) shall not cause a violation of any Utah Pollution Discharge Elimination System permit or standard from discharges of surface run-off, leachate or any liquid associated with the facility; and

(b) shall be in compliance under the Clean Water Act for any discharge as well as in compliance with any area-wide or state-wide plan under Section 208 or 319 of the Clean Water Act.

R315-303-3. Standards for Design.

(1) Minimizing Liquids. An owner or operator of a landfill shall minimize liquids admitted to active areas by:

(a) covering according to Subsection R315-303-4(4);

(b) prohibiting the disposal of containerized liquids larger than household size, noncontainerized liquids, sludge containing free liquids, or any waste containing free liquids in containers larger than household size;

(c) designing the landfill to prevent run-on of all surface waters resulting from a maximum flow of a 25-year storm into the active area of the landfill; and

(d) designing the landfill to collect and treat the run-off of surface waters and other liquids resulting from a 25-year storm from the active area of the landfill.

(e) If the owner or operator of a landfill has received a storm water permit as issued by the Utah Division of Water Quality and is meeting the requirements of the permit, the landfill may be exempt, upon approval of the Director, from the run-on and run-off control requirements of Subsections R315-303-3(1)(c) and (d).

(2) Leachate Collection Systems.

(a) An owner or operator of a landfill required to install liners shall:

(i) install a leachate collection system sized according to water balance calculations or using other accepted engineering methods, either of which shall be approved by the Director;

(ii) install a leachate collection system so as to prevent no more than one foot depth of leachate developing at any point in

the bottom of the landfill unit; and

(iii) install a leachate treatment system or a pretreatment system, if necessary, in the case of discharge to a municipal water treatment plant.

(b) The returning of leachate to the landfill or the recirculation of leachate in the landfill may be done only in landfills that have a composite liner system or an approved equivalent liner system.

(3) Liner Designs. An owner or operator of a landfill shall use liners of one of the following designs:

(a) Standard Design. The design shall have a composite liner system consisting of two liners and the associated liner protection layers and a drainage system for leachate collection:

(i) an upper liner made of synthetic material with a thickness of at least 60 mils; and

(ii) a lower liner of at least two feet thickness of recompacted clay or other soil material with a permeability of no more than 1×10^{-7} cm/sec having the bottom liner sloped no less than 2% and the side liners sloped no more than 33%, except where construction and operational integrity can be demonstrated at steeper slopes, with the synthetic liner installed in direct and uniform contact with the compacted soil component; or

(b) Equivalent Design.

(i) The Director may approve an alternative liner design, on a site specific basis, if it can be documented that, under the conditions of location and hydrogeology, the equivalent design will minimize the migration of solid waste constituents or leachate into the ground or surface water at least as effectively as the liner design required in Subsection R315-303-3(3)(a).

(ii) When approving an equivalent liner design, the Director shall consider the following factors:

(A) the hydrogeologic characteristics of the facility and surrounding land;

(B) the climatic factors of the area; and

(C) the volume and physical and chemical characteristics of the leachate; or

(c) Alternative Design.

(i) The owner or operator may use, as approved by the Director, an alternative design.

(ii) The owner or operator must demonstrate that the ground water quality protection standard of Subsection R315-303-2(1) can be met. The demonstration must be approved by the Director, and must be based upon:

(A) the hydrogeologic characteristics of the facility and the surrounding land;

(B) the climatic factors of the area;

(C) the volume and physical and chemical characteristics of the leachate;

(D) predictions of contaminate fate and transport in the subsurface that maximize contaminant migration and consider impacts on human health and the environment; and

(E) predictions of leachate flow from the base of the waste to the uppermost aquifer; or

(d) Stringent Design. When conditions of location, hydrogeology, or waste stream justify, the Director may require that the liner of a landfill be constructed to meet standards more stringent than the liner designs of Subsection R315-303-3(3)(a).

(e) Small Landfill Design.

(i) The small landfill design applies only to a Class II Landfill.

(ii) Each new Class II Landfill and any existing Class II Landfill seeking facility expansion shall meet the location standards of Section R315-302-1.

(iii) Each new and existing Class II Landfill shall meet the performance standards of Section R315-303-2.

(iv) A Class II Landfill, which meets the requirements of Subsection R315-303-3(3)(e)(v), is exempt from the liner, leachate collection system, and ground water monitoring

requirements of Rule R315-303.

(v) A Class II Landfill will be approved only if:

(A) there is no evidence of existing ground water contamination;

(B) the landfill serves a community that has no practicable waste management alternative as determined by the Director;

(C) the landfill is located in an area which receives less than 25 inches of annual precipitation;

(D) the landfill receives, on a yearly average, no more than 20 tons of waste per day, or if a tonnage cannot be determined, serves a population of no more than 8,900; and

(E) the landfill meets all the requirements in Rules R315-301 through 320 applicable to Class II landfills.

(vi) A Class II Landfill may lose the exemptions of the small landfill design if at any time the landfill receives more than 20 tons of solid waste per day, based on an annual average, or has caused ground water contamination.

(4) Closure. At closure, an owner or operator of a Class I, II, IIIa, IVa, and V Landfill shall use one of the following designs for the final cover.

(a) Standard Design. The standard design of the final cover shall consist of two layers:

(i) a layer to minimize infiltration, consisting of at least 18 inches of compacted soil, or equivalent, with a permeability of 1×10^{-5} cm/sec or less, or equivalent, shall be placed upon the final lifts;

(A) in no case shall the cover of the final lifts be more permeable than the bottom liner system or natural subsoils present in the unit; and

(B) the grade of surface slopes shall not be less than 2%, nor the grade of side slopes more than 33%, except where construction integrity and the integrity of erosion control can be demonstrated at steeper slopes; and

(ii) a layer to minimize erosion, consisting of:

(A) at least 6 inches of soil capable of sustaining vegetative growth placed over the compacted soil cover and seeded with grass, other shallow rooted vegetation or other native vegetation; or

(B) other suitable material, approved by the Director.

(b) Requirements for any Earthen Final Cover at a Landfill.

(i) Markers or other benchmarks shall be installed in any final earthen cover to indicate the thickness of the final cover. These markers shall be observed during each quarterly inspection and the earthen cover shall be raised to the appropriate thickness as necessary.

(ii) Erosion channels deeper than 10% of the total cover thickness shall be repaired as soon as possible following their discovery.

(c) Alternative Final Cover Design. The Director may approve an alternative final cover design, on a site specific basis, if it can be documented that:

(i) the alternative final cover achieves an equivalent reduction in infiltration as achieved by the standard design in Subsection R315-303-3(4)(a)(i); and

(ii) the alternative final cover provides equivalent protection from wind and water erosion as achieved by the standard design in Subsection R315-303-3(4)(a)(ii).

(d) The expected performance of an alternative final cover design shall be documented by the use of an appropriate mathematical model.

(i) The input for the modeling shall include the climatic conditions at the specific landfill site and the soil types that will make up the final cover.

(ii) The model shall:

(A) be run to show the expected performance of the final cover at normal precipitation for a period of time until stability has been reached; and

(B) shall be run to show the expected performance of the

final cover during the five wettest years on record at the site or the nearest weather station.

(e) The Director shall use the following criteria as part of the basis for determining if an alternative final cover will be approved:

(i) If the landfill has a liner design that does not use a synthetic material such as HDPE, the model will compare the infiltration through the standard cover as required in Subsection R315-303-3(4)(a) and shall show that the alternative cover performs as well as the standard cover; or

(ii) If the landfill has a liner composed in part of a synthetic material such as HDPE, the model must show an infiltration rate of no greater than 3 millimeters of water per year during any year of the model run.

(f) If a landfill has been constructed using an approved alternative landfill design, the Director may require, on a site-specific basis, the landfill closure design to be more stringent than the standard design specified in Subsection R315-303-3(4)(a) to protect human health or the environment.

(g) In no case shall any modification be made to the final cover, as placed and approved at closure by the Director, unless that modification:

(i) is a necessary repair of the approved final cover;

(ii) maintains or improves the effectiveness of the final cover; and

(iii) is approved by the Director.

(5) Gas Control.

(a) An owner or operator shall design each landfill so that explosive gases are monitored quarterly.

(b) If the concentration of these gases ever exceed the standard set in Subsection R315-303-2(2)(a), the owner or operator must:

(i) immediately take all necessary steps to ensure protection of human health and, within 24 hours or the next business day, notify the Director;

(ii) within seven days of detection, place in the operating record the explosive gas levels detected and a description of the steps taken to protect human health; and

(iii) within 60 days of detection, implement a remediation plan, that has been approved by the Director, for the explosive gas release, place a copy of the plan in the operating record, and notify the Director that the plan has been implemented.

(c) Collection and handling of explosive gases shall not be required if it can be shown that the explosive gases will not support combustion.

(d) The Director may, on a site specific basis, waive the requirement of monitoring explosive gases at a Class II Landfill. The waiver may be granted after:

(i) considering the characteristics of the landfill and the waste stream accepted;

(ii) taking into account climatic and hydrogeologic conditions of the site; and

(iii) completing a public comment period as specified by Section R315-311-3.

(iv) The Director may revoke any waiver from the requirement of monitoring explosive gases if the lack of monitoring explosive gases at the landfill presents a threat to human health or the environment.

(v) The requirement to monitor explosive gases inside buildings at a landfill may not be waived.

(e) A landfill that accepts no municipal waste, or other waste with potential to generate methane during decomposition, is exempt from the gas monitoring requirement of Subsection R315-303-3(5)(a).

(6) Design Drawings.

(a) Design drawings and as built drawings of any engineered structure, including landfill liners, leachate collection systems, run-on/run-off control systems, final covers, ground water monitoring systems, and gas collection systems,

shall be signed and sealed by a professional engineer registered in the State of Utah.

(b) As built drawings shall be submitted to the Director on or before 90 days following the completion of the engineered structure at the landfill.

(7) Other Requirements. An owner or operator shall design each landfill to provide for:

(a) fencing at the property or unit boundary or the use of other artificial or natural barriers to impede entry by the public and large animals. A lockable gate shall be required at the entry to the landfill;

(b) monitoring ground water according to Rule R315-308 using a design approved by the Director. The Director may also require monitoring of:

(i) surface waters, including run-off;

(ii) leachate; and

(iii) subsurface landfill gas movement and ambient air;

(c) weighing or estimating the tonnage of all incoming waste and recording the tonnage in the facility's operation record;

(d) erecting a sign at the facility entrance that identifies at least the name of the facility, the hours during which the facility is open for public use, unacceptable materials, and an emergency telephone number. Other pertinent information may also be included;

(e) adequate fire protection to control any fires that may occur at the facility. This may be accomplished by on-site equipment or by arrangement made with the nearest fire department;

(f) preventing potential harborage in buildings, facilities, and active areas of rat and other vectors, such as insects, birds, and burrowing animals;

(g) minimizing the size of the unloading area and working face as much as possible, consistent with good traffic patterns and safe operation;

(h) approach and exit roads of all-weather construction, with traffic separation and traffic control on-site and at the site entrance; and

(i) communication, such as telephone or radio, between employees working at the landfill and management offices on-site and off-site to handle emergencies.

R315-303-4. Standards for Maintenance and Operation.

(1) Plan of Operation. An owner or operator of a landfill shall maintain and operate the facility to conform to the approved plan of operation.

(2) Operating Details. An owner or operator of a landfill shall operate the facility to:

(a) control fugitive dust generated from roads, construction, general operations, and covering the waste;

(b) allow no open burning;

(c) collect scattered litter as necessary to avoid a fire hazard or an aesthetic nuisance;

(d) prohibit scavenging;

(e) conduct reclamation of facility property in an orderly sanitary manner and in a way that does not interfere with the disposal site operation;

(f) ensure that landfill personnel, trained in landfill operations, are on site when the site is open to the public;

(i) at least one person on site for landfills that receive, on an average annual basis, less than 15,000 tons per year; and

(ii) at least two persons on site, with one person at the active face, for each landfill that receives, on an average annual basis, more than 15,000 tons per year.

(g) control insects, rodents, and other vectors; and

(h) ensure that reserve operational equipment will be available to maintain and meet these standards.

(3) Boundary Posts. An owner or operator of a landfill shall clearly mark the active area boundaries authorized in the

permit by placing permanent posts or by using an equivalent method clearly visible for inspection purposes.

(4) Daily and Intermediate Cover.

(a) An owner or operator of a landfill shall, at the close of each day of operation, completely cover the waste with at least six inches of soil or an alternative daily cover as allowed in Subsections R315-303-4(4)(b) through (e).

(b) The following are approved for use as alternative daily covers:

(i) non-hazardous contaminated soil; and

(ii) subject to the conditions contained in Subsection R315-303-4(4)(c):

(A) tarps;

(B) plastic sheets, when designed for landfill cover use;

(C) foam products, when designed for landfill cover use;

(D) products created from cement kiln dust, when designed for landfill cover use;

(E) incinerator ash;

(F) non-hazardous auto shredder residue not otherwise regulated by 40 CFR Part 761;

(G) chipped waste tires; and

(H) spray-on materials, when designed for landfill cover use.

(c) The use of an approved alternative daily cover is subject to the following conditions:

(i) the alternative daily cover may not present a threat to human health or the environment; and

(ii) the alternative daily cover may be used only on a schedule as established by the facility owner or operator and recorded in the facility operating record.

(iii) The facility owner or operator shall establish the schedule for use of the approved alternative cover based on the alternative cover's performance in controlling vectors, fires, odors, blowing, and scavenging. The schedule shall the following requirements:

(A) any schedule established by the facility owner or operator must provide for the placing of six inches of soil cover at least once per week;

(B) no approved alternative daily cover may be used on the day preceding a day the landfill will be closed;

(C) No alternative daily cover may be used on an area of the landfill that will not be covered with waste or an intermediate cover, as required in Subsection R315-303-4(4)(g), within two days; and

(D) The Director may require the use of six inches of soil cover upon finding that use of an alternative cover is not controlling vectors, fires, odors, blowing liter or scavenging.

(iv) The landfill operating record must clearly document the days when an alternative cover was used and the days when soil cover was used.

(v) The Director may revoke the use of any alternative daily cover at any landfill facility if any condition of Subsection R315-303-4(4)(c) is not met or if the alternative daily cover is determined to present a threat to human health or the environment.

(d) Materials not listed in Subsection R315-303-4(4)(b) may be used as alternative daily cover on an infrequent basis when the material meets the requirements of Subsection R315-303-4(4)(c) and the use is documented in the facility operating record.

(e) Materials not listed in Subsection R315-303-4(4)(b) which a facility owner or operator wants to use on an ongoing basis must be approved by the Director. Director approval is based on the material meeting the requirements of Subsection R315-303-4(4)(c).

(f) The Director may, on a site specific basis, waive the requirement for daily cover of the waste at a landfill that accepts no municipal waste if the owner or operator demonstrates that an alternative schedule for covering the waste does not present

a threat to human health or the environment. The demonstration from the owner or operator of the landfill must include at least the following:

- (i) certification that the landfill accepts no municipal waste;
- (ii) a detailed list of the waste types accepted by the landfill;
- (iii) the alternative schedule on which the waste will be covered; and

(iv) any other operational practices that may reduce the threat to human health or the environment if an alternative schedule for covering the waste is followed.

(v) In granting any waiver from the daily cover requirement, the Director may place conditions on the owner or operator of the landfill as to the frequency of covering, depth of the cover, or type of material used as cover that will minimize the threat to human health or the environment.

(vi) The Director may revoke any waiver from the daily cover requirement if any condition is not met or if the alternative schedule for covering the waste presents a threat to human health or the environment.

(g) If an area of the working face of a landfill that accepts municipal waste will not receive waste for a period longer than 30 days, the owner or operator shall cover the area with a minimum of 12 inches of soil as an intermediate cover or an alternative intermediate cover as approved by the Director.

(i) No alternative intermediate cover will be approved by the Director without application from the owner or operator.

(ii) Approval for an alternative intermediate cover may be granted after:

(A) considering the design of the landfill, waste stream accepted, and waste handling practices; and

(B) taking into account climatic, hydrogeologic, and soil conditions of the site.

(iii) In granting approval for an alternative intermediate cover, the Director may place conditions on the owner or operator of the landfill as to the depth or type of material used and maintenance of the integrity of the cover that will minimize the threat to human health or the environment.

(iv) The Director may revoke the approval of an alternative intermediate cover if any condition is not met or if the use of the alternative intermediate cover is determined to present a threat to human health or the environment.

(5) Monitoring Systems. An owner or operator of a landfill shall maintain the monitoring systems required in Subsection R315-303-3(7)(b).

(6) Recycling Required.

(a) An owner or operator of a landfill at which the general public delivers household solid waste shall provide containers in which the general public may place recyclable materials for which a market exists. The containers shall be placed at a location convenient to the public and shall be accessible to the public during normal hours of facility operation.

(b) An owner or operator may demonstrate alternative means to providing an opportunity for the general public to recycle household solid waste.

(7) Disposal of Hazardous Waste and Waste Containing PCBs.

(a) An owner or operator of a solid waste disposal facility shall not knowingly dispose, treat, store, or otherwise handle hazardous waste or waste containing PCBs except under the following conditions:

(i) hazardous waste:

(A) the waste meets the conditions specified in Subsections R315-2-4; or

(B) the waste meets the conditions specified in 40 CFR 261.5 (1996) as incorporated by reference in Section R315-2-5; or

(ii) waste containing PCB's:

(A) the facility meets the requirements specified in Subsection R315-315-7(3)(a); or

(B) the waste meets the requirements specified in Subsections R315-315-7(2) or (3)(b).

(b) An owner or operator of a solid waste disposal facility shall include and implement, as part of the plan of operation, a plan that will inspect loads or take other steps, as approved by the Director, that will prevent the disposal of prohibited hazardous waste and prohibited waste containing PCBs, including:

(i) inspection frequency and inspection of loads suspected of containing prohibited hazardous waste or prohibited waste containing PCBs;

(ii) inspection in a designated area or at a designated point in the disposal process;

(iii) a training program for the facility employees in identification of prohibited hazardous waste and prohibited waste containing PCBs; and

(iv) maintaining written records of all inspections, signed by the inspector.

(c) If the receipt of prohibited hazardous waste or prohibited waste containing PCBs is discovered, the owner or operator of the facility shall:

(i) notify the Director, the hauler, and the generator within 24 hours;

(ii) restrict the inspection area from public access and from facility personnel; and

(iii) assure proper cleanup, transport, and disposal of the waste.

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-304. Industrial Solid Waste Landfill Requirements.****R315-304-1. Applicability.**

(1) The requirements of Rule R315-304 apply to each Class III Landfill as specified.

(2) The requirements of Rule R315-304 do not apply to the following materials managed at an industrial facility:

(a) fly ash waste, bottom ash waste, slag waste, or flue gas emission control dust generated primarily from the combustion of coal or other fossil fuels;

(b) wastes from the extraction, beneficiation, and processing of ores and minerals;

(c) electric arc furnace slag, open hearth furnace slag, and other slags generated during carbon steel production; and

(d) cement kiln dust.

R315-304-2. Industrial Landfill Standards for Performance.

Each Class III Landfill shall meet the landfill standards for performance as specified in Section R315-303-2.

R315-304-3. Definitions.

Terms used in Rule R315-304 are defined in Section R315-301-2. In addition, for the purpose of Rule R315-304, the following definitions apply.

(1) "Class IIIa Landfill" means a landfill as defined by Subsection R315-301-2(9) that may accept:

(a) any nonhazardous industrial waste;

(b) waste that is exempt from hazardous waste regulations under Section R315-2-4; or

(c) conditionally exempt small quantity generator hazardous waste as defined by Section R315-2-5.

(2) "Class IIIb Landfill" means a landfill as defined by Subsection R315-301-2(9) that may accept any nonhazardous industrial solid waste except:

(a) waste that is exempt from hazardous waste regulations under Section R315-2-4, excluding Subsections R315-2-4(b)(3), (4), (5), (7), and (14), unless approved by the Director; or

(b) conditionally exempt small quantity generator hazardous waste as defined by Section R315-2-5.

R315-304-4. Industrial Landfill Location Standards.

(1) Class IIIa Landfills.

(a) A new Class IIIa Landfill shall meet the location standards of Subsection R315-302-1(2).

(b) A new Class IIIa Landfill that is proposed on the site of generation of the industrial solid waste or a lateral expansion of an existing Class IIIa Landfill, shall meet the location standards of Subsections R315-302-1(2)(b), (c), (d), and (e) with respect to geology, surface water, wetlands, and ground water.

(c) An existing Class IIIa Landfill shall not be subject to the location standards of Subsection R315-302-1(2).

(d) An exemption from any location standard of Subsection R315-302-1(2), except the standards for floodplains and wetlands, may be granted by the Director on a site specific basis if it is determined that the exemption will cause no adverse impacts to human health or the environment.

(i) No exemption may be granted without application to the Director.

(ii) If an exemption is granted, the landfill may be required to have more stringent design, construction, monitoring program, or operational practice to protect human health or the environment.

(2) Class IIIb Landfills.

(a) A new Class IIIb landfill or a lateral expansion of an existing Class IIIb Landfill shall be subject to the following location standards:

(i) the standards with respect to floodplains as specified in

Subsection R315-302-1(2)(c)(ii);

(ii) the standards with respect to wetlands as specified in Subsection R315-302-1(2)(d);

(iii) the standards with respect to ground water as specified in Subsection R315-302-1(2)(e)(i)(B); and

(iv) the requirements of Subsection R315-302-1(2)(f).

(b) For a lateral expansion of an existing Class IIIb Landfill, an exemption from any location standard of Subsection R315-304-4(2)(a) may be granted by the Director on a site specific basis if it is determined that the exemption will cause no adverse impacts to human health or the environment.

(i) No exemption may be granted without application to the Director.

(ii) If an exemption is granted, the landfill may be required to have more stringent design, construction, monitoring, or operation than the minimum described in Rule R315-304 to protect human health or the environment.

(c) An existing Class IIIb Landfill shall not be subject to the location standards of Subsection R315-304-4(2)(a).

R315-304-5. Industrial Landfill Requirements.

(1) Each Class III Landfill shall meet the following applicable requirements, as determined by the Director:

(a) the plan of operation requirements of Subsections R315-302-2(2)(a), (b), (c), (d), (g), (i), (j), (k), (l), (m), (n), and (o);

(b) the recordkeeping requirements of Subsections R315-302-2(3)(a), (b)(i), (iii), (iv), and (vi);

(c) the reporting requirements of Subsection R315-302-2(4); and

(d) the inspection requirements of Subsection R315-302-2(5).

(2) Each Class III Landfill shall meet the applicable general requirements for closure and post-closure care of Subsections R315-302-2(6); R315-302-3(2); (3); (4)(a), and (b); (5); (6)(a)(iv) through (vi), (6)(b), and (c); and (7)(a) as determined by the Director.

(a) Each Class IIIa Landfill shall meet the closure requirements of Subsection R315-303-3(4).

(b) Each Class IIIb Landfill shall meet the closure requirements of Subsection R315-305-5(5)(b).

(c) If a Class III Landfill is already subject to the closure and post-closure requirements of another Federal or state agency which are as stringent as specified in Subsections R315-304-5(2)(a) or (b), the landfill may be exempt, upon approval of the Director, from the closure requirements of Subsections R315-304-5(2)(a) or (b).

(3) Standards for Design.

(a) The owner or operator of a Class III Landfill shall design the landfill to minimize the acceptance of liquids and control storm water run-on/run-off as specified in Subsections R315-303-3(1)(b), (c), and (d).

(b) The owner or operator of a Class III Landfill shall design the landfill to meet the requirements of Subsections R315-303-3(7)(a), (c), (e), (f), (g), (h), and (i) as determined by the Director.

(4) Ground Water Monitoring.

(a) The owner or operator of a Class IIIa Landfill shall monitor the ground water beneath the landfill as specified in Rule R315-308.

(b) Subject to the performance standard of Subsection R315-303-2(1), if the owner or operator of a Class IIIa Landfill is monitoring the ground water beneath the landfill and otherwise meeting the requirements of a discharge permit as issued by the Utah Division of Water Quality, the landfill may be exempt, upon approval of the Director, from the ground water monitoring requirements of Rule R315-308.

(c) A Class IIIb Landfill is exempt from the ground water monitoring requirements of Rule R315-308.

(5) Standards for Operation.

(a) Each Class IIIa Landfill shall meet the standards of Section R315-303-4 except:

(i) for the requirements of Subsections R315-303-4(2)(f) and R315-303-4(6); and

(ii) may be exempt from the daily cover requirements of Subsection R315-303-4(4) upon the demonstration that an alternate schedule for the covering of waste at the landfill will not present a threat to human health or the environment.

(b) Each Class IIIb Landfill shall meet the requirements for operation in Subsections R315-305-4(7) and R315-305-5(2) through (4) as determined by the Director.

(6) Financial Assurance.

(a) The owner or operator of each Class III Landfill shall establish financial assurance as required by Rule R315-309.

(b) If the owner or operator of a Class III Landfill has financial assurance, in effect and active, that covers the costs of closure and post-closure care of the landfill as required by another Federal or state agency which is as stringent as the requirements of Rule R315-309, the landfill may be exempt, upon approval of the Director, from the financial assurance requirements of Rule R315-309.

(7) Permit Requirements.

Each Class III Landfill shall apply for and obtain a permit to operate by meeting the applicable requirements of Rule R315-310.

19-6-105

Notice of Continuation February 13, 2013

19-6-108

40 CFR 257

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-305. Class IV and VI Landfill Requirements.

R315-305-1. Applicability.

(1) These standards apply to each facility that landfills only:

(a) construction/demolition waste, inert waste, yard waste, dead animals;

(b) upon meeting the requirements of Section 19-6-804 and Subsections R315-320-3(1) or (2), waste tires and material derived from waste tires; or

(c) upon meeting the requirements of R315-315-8(3), petroleum contaminated soils.

(2) Inert waste used as road building material and fill material are excluded from the requirements of Rule R315-305.

R315-305-2. Class IV and VI Landfill Standards for Performance.

Each Class IV and VI Landfill shall meet the landfill standards for performance as specified in Section R315-303-2.

R315-305-3. Definitions.

Terms used in Rule R315-305 are defined in Section R315-301-2. In addition, for the purpose of Rule R315-305, the following definitions apply.

(1) "Class IVa Landfill" means a Class IV Landfill that receives, based on an annual average, over 20 tons of waste per day and may receive, as a component of construction/demolition waste, waste from a conditionally exempt small quantity generator of hazardous waste, as defined by Section R315-2-5.

(2) "Class IVb Landfill" means a Class IV Landfill that receives, based on an annual average, 20 tons, or less, of waste per day or demonstrates that no waste from a conditionally exempt small quantity generator of hazardous waste is accepted.

R315-305-4. General Requirements.

(1) Location Standards.

(a) A new Class IVa Landfill shall meet the location standards of Subsection R315-302-1(2).

(b) A new Class IVb or VI Landfill or the expansion of an existing Class IVb or VI Landfill shall be subject to the following location standards:

(i) the standards with respect to floodplains as specified in Subsection R315-302-1(2)(c)(ii);

(ii) the standards with respect to wetlands as specified in Subsection R315-302-1(2)(d);

(iii) the standards with respect to ground water as specified in Subsection R315-302-1(2)(e)(i)(B);

(iv) the standards with respect to geology as specified in Subsections R315-302-1(2)(b)(i) and (iv);

(v) if the permit application for a new Class IVb, or VI Landfill requests approval to accept dead animals for disposal, the application shall document that the landfill also meets the land use compatibility requirements of Subsections R315-302-1(2)(a)(i), (ii), (iv), and (v); and

(vi) The requirements of Subsection R315-302-1(2)(f).

(c) Exemptions from the location standards of Subsection R315-305-4(1)(b)(i), (ii), (iii), (iv), and (v) may be granted by the Director for a new Class IVb or VI Landfill, on a site specific bases, if it is determined that the exemption will cause no adverse impact to human health or the environment.

(i) No exemption may be granted without application to the Director.

(ii) If an exemption is granted, the landfill may be required to meet more stringent design, construction, monitoring, or operation requirements than the minimum described in Rule R315-305 to protect human health or the environment.

(d) An existing Class IVa, IVb, or VI Landfill:

(i) shall not be subject to the location standards of

Subsections R315-305-4(1)(a) or R315-305-4(1)(b)(i), (ii), (iii), or (iv); but

(ii) if the current permit of an existing Class IVa, IVb, or VI Landfill does not allow the acceptance of dead animals and the owner or operator requests approval to accept dead animals for disposal, the request to the Director shall document that the landfill also meets the land use compatibility requirements of Subsections R315-302-1(2)(a)(i), (ii), (iv), and (v).

(2) An owner or operator of a Class IV or VI Landfill shall obtain a permit, as set forth in Rule R315-310.

(3) An owner or operator of a Class IV or VI Landfill shall design and operate the landfill to:

(a) prevent the run-on of all surface waters resulting from a maximum flow of a 25-year storm into the active area of the landfill; and

(b) collect and treat, if necessary, the run-off of surface waters and other liquids resulting from a 25-year storm from the active area of the landfill.

(4) An owner or operator of a Class IVa Landfill shall monitor the ground water beneath the landfill as specified in Rule R315-308.

(5) An owner or operator of a Class IV or VI Landfill shall erect a sign at the facility entrance as specified in Subsection R315-303-3(7)(d).

(6) An owner or operator of a Class IV or VI Landfill shall maintain the applicable records as specified in Subsection R315-302-2(3).

(7) An owner or operator of a Class IV or VI Landfill shall meet the requirements of Subsection R315-302-2(6) and make the required recording with the county recorder.

R315-305-5. Requirements for Operation.

(1) The owner or operator of a Class IV or VI Landfill shall not accept any other form of waste except the wastes specified in Subsection R315-305-1(1).

(2) The owner or operator of a Class IV or VI Landfill shall prevent the disposal of unauthorized waste by ensuring that at least one person is on site during hours of operation and shall prevent unauthorized disposal during off-hours by controlling entry, i.e., lockable gate or barrier, when the facility is not open.

(3) The owner or operator of a Class IV or VI Landfill shall:

(a) minimize the size of the working face as required by Subsection R315-303-3(7)(g);

(b) employ measures to prevent emission of fugitive dusts, when weather conditions or climate indicate that transport of dust off-site is liable to create a nuisance;

(c) meet the requirements of Subsection R315-303-3(1)(a) and (b) to minimize liquids admitted to the landfill;

(d) collect scattered litter as necessary to avoid a fire hazard or an aesthetic nuisance; and

(e) prohibit scavenging.

(4) The owner or operator of a Class IV or VI Landfill shall cover timbers, wood, and other combustible waste with a minimum of six inches of soil, or equivalent, as needed to avoid a fire hazard.

(5) The owner or operator of a Class IV or VI Landfill shall meet the applicable general requirements of closure and post-closure care of Section R315-302-3 as determined by the Director.

(a) The owner or operator of a Class IVa Landfill shall meet the specific closure requirements of Subsection R315-303-3(4).

(b) The owner or operator of a Class IVb or VI Landfill shall close the facility by:

(i) leveling the waste to the extent practicable;

(ii) covering the waste with a minimum of two feet of soil, including six inches of topsoil;

(iii) contouring the cover as specified in Subsection R315-303-3(4)(a)(i)(B); and

(iv) seeding the cover with grass, other shallow rooted vegetation, or other native vegetation or covering in another manner approved by the Director to minimize erosion.

(v) The Director may approve an alternative final cover design for a Class IVb or VI Landfill if it is documented that the alternative final cover provides equivalent protection from infiltration and erosion as the cover specified in Subsection R315-305-5(5)(b).

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-306. Incinerator Standards.

R315-306-1. Applicability.

(1) These standards apply to any incinerator facility as specified in Subsections R315-306-2(1) and R315-306-3(1).

(2) These standards do not apply to:

- (a) an incineration facility which is required to obtain a state or federal hazardous waste plan approval;
- (b) a facility burning only untreated woodwaste;
- (c) the flaring of gases recovered at a landfill; or
- (d) a facility that incinerates or cremates exclusively human or animal remains.

R315-306-2. Requirements for Large Incinerators.

(1) These standards apply to any incinerator facility designed to incinerate more than ten tons of solid waste per day.

(2) A new incinerator facility shall be subject to the location standards of Section R315-302-1 with the exception of the following Subsections: R315-302-1(2)(a)(iv) and (v), R315-302-1(2)(e), and R315-302-1(3).

(3) Each owner or operator of an incinerator facility shall comply with Section R315-302-2. The submitted plan of operation shall also address alternative storage, or disposal plans for all breakdowns that would result in overfilling the storage facility.

(4) The submitted plan of operation shall also contain a written waste identification plan which shall include identification of the specific waste streams to be handled by the facility, generator waste analysis requirements and procedures, waste verification procedures at the facility, generator certification of wastes shipped as being non-hazardous, and record keeping procedures, including a detailed operating record.

(5) Each incinerator facility shall be surrounded by a fence, trees, shrubbery, or natural features so as to control access and be screened from the view of immediately adjacent neighbors, unless the tipping floor is fully enclosed by a building. Each site shall also have an adequate buffer zone of at least 50 feet from the operating area to the nearest property line in areas zoned residential to minimize noise and dust nuisances.

(6) Solid waste shall be stored temporarily in storage compartments, containers or areas specifically designed to store wastes. Storage of wastes other than in specifically designed compartments, containers or areas is prohibited. Equipment and space shall be provided in the storage and charging areas, and elsewhere as needed, to allow periodic cleaning as may be required to maintain the plant in a sanitary and clean condition.

(7) A composite sample of the ash and residues from each incinerator facility shall be taken according to a sampling plan approved by the Director.

(a) The sample shall be analyzed by the U.S. EPA Test Method 1311 as provided in 40 CFR Part 261, Appendix II, 2000 ed., Toxic Characteristics Leaching Procedure (TCLP) to determine if it is hazardous.

(b) If the ash and residues are found to be nonhazardous, they shall be disposed at a permitted landfill or recycled.

(c) If the ash and residues are found to be hazardous, they shall be disposed in a permitted hazardous waste disposal site.

(8) Each incinerator must be located, designed, constructed and operated in a manner to comply with appropriate state and local air pollution control authority emission and operating requirements.

(9) An incinerator must collect and treat all run-off from the active areas of the site that may result from a 25-year storm event, and divert all run-on for the maximum flow of a 25-year storm around the site.

(10) All-weather roads shall be provided from the public

highways or roads, to and within the disposal site and shall be designed and maintained to prevent traffic congestion hazards, dust, and noise pollution.

(11) Access to the incinerator site shall be controlled by means of a complete perimeter fence or other features and gates which shall be locked when an attendant is not at the gate to prevent unauthorized entry of persons or livestock to the facility.

(12) The plan of operation shall include a training program for new employees and annual review training for all employees to ensure safe handling of waste and proper operation of the equipment.

(13) Each owner or operator shall post signs at the facility which indicate the name, hours of operation, necessary safety precautions, types of wastes that are prohibited, and any other pertinent information.

(14) Each owner or operator of an incinerator facility shall be required to provide recycling facilities in a manner equivalent to those specified for landfills in Subsection R315-303-4(6).

(15) Each owner or operator of an incinerator facility shall implement a plan to inspect loads or take other steps, as approved by the Director, to prevent the disposal of prohibited hazardous waste or prohibited waste containing PCB's in a manner equivalent to those specified for landfills in Subsection R315-303-4(7).

(16) Each owner or operator shall close its incinerator by removing all ash, solid waste, and other residues to a permitted facility.

(17) Each owner or operator of an incinerator facility shall provide financial assurance to cover the costs for closure of the facility that meets the requirements of Rule R315-309.

R315-306-3. Requirements for Small Incinerators.

(1) Applicability.

(a) These requirements apply to any incinerator designed to incinerate ten tons, or less, of solid waste per day and incinerator facilities that incinerate solid waste only from on-site sources.

(b) If an incinerator processes 250 pounds, or less, of solid waste per week, the requirements of Section R315-306-3 do not apply and a permit from the Director is not required but the facility may be regulated by other local, state, or federal requirements.

(2) Requirements.

(a) Each owner and operator of an incinerator facility shall submit a plan of operation to the Director that meets the requirements of Section R315-302-2.

(b) The submitted plan of operation shall also address:

(i) alternative storage, or disposal plans for all breakdowns that would result in overfilling the storage areas;

(ii) identification of the specific waste streams to be handled by the facility;

(iii) generator waste analysis requirements and procedures;

(iv) waste verification procedures at the facility;

(v) generator certification of wastes shipped as being nonhazardous; and

(vi) recordkeeping procedures, including a detailed operating record.

(c) Solid waste shall be stored temporarily only in storage compartments, containers, or areas specifically designed to store wastes.

(i) Storage of wastes other than in specifically designed compartments, containers or areas is prohibited.

(ii) Equipment and space shall be provided in the storage and charging areas, and elsewhere as needed, to allow periodic cleaning as necessary to maintain the plant in a sanitary and clean condition.

(d) Incinerator ash and residues from any incinerator shall be sampled, analyzed, and disposed as specified in Subsection

R315-306-2(7).

(e) The owner or operator of the incinerator shall prevent the disposal of prohibited hazardous waste or prohibited waste containing PCB's as specified in Subsection R315-306-2(15).

(f) The incinerator must be designed, constructed and operated in a manner to comply with appropriate state and local air pollution control authority emission and operating requirements.

(g) The plan of operation shall include a training program for new employees and annual review training for all applicable employees to ensure safe handling of waste and proper operation of the equipment.

(h) The owner or operator of the incinerator shall close the facility by removing all solid waste, ash, and other residues to a permitted solid waste disposal facility.

(i) The owner or operator of the incinerator facility shall provide financial assurance to cover the costs for closure of the facility that meets the requirements of Rule R315-309.

19-6-105

19-6-108

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-307. Landtreatment Disposal Standards.****R315-307-1. Applicability.**

(1) These standards apply to any facility that engages in the landtreatment, landfarming, or landspreading disposal of solid waste.

(2) These standards do not apply to:

(a) a facility that uses sewage sludge, woodwaste or other primarily organic sludge in recycling operations as specified in Section R315-312-4;

(b) agricultural solid wastes resulting from the operation of a farm, including farm animal manure and agricultural residues;

(c) inert waste[or demolition waste; or

(d) industrial solid waste facilities.

(3) The landtreatment of domestic sewage sludge and septage is exempt from the requirements of Rule R315-307 but is regulated under the applicable requirements of Rule R317-8 and 40 CFR 503 by the Utah Division of Water Quality.

(4) The owner or operator of a landtreatment disposal facility shall meet the standards for performance specified in Subsection R315-303-2.

(5) The owner or operator of a landtreatment disposal facility shall meet the location standards of Section R315-302-1.

R315-307-2. Standards for Design.

(1) The owner or operator of a landtreatment disposal facility shall design the facility to provide interim waste storage areas that meet the requirements for piles, as specified in Rule R315-314.

(2) The facility shall have systems to collect and treat all run-off from a 25 year storm, and divert all run-on for the maximum flow of a 25 year storm around the active area.

(3) The facility shall be designed to avoid standing water anywhere on the active area.

(4) The facility shall be designed to avoid slopes and other features that will lead to soil and waste erosion, unless contour plowing or other measures are taken to avoid erosion.

(5) The owner or operator shall monitor ground water according to Rule R315-308.

(6) The owner or operator shall control access to the facility by fencing or other means and erect a sign as specified in Subsection R315-303-3(6)(d).

R315-307-3. Standards for Maintenance and Operation.

The owner or operator of a landtreatment disposal facility shall maintain and operate the facility to:

(1) avoid the disposal of garbage or infectious waste;

(2) avoid applying wastes at rates greater than ten times agronomic rates using the proposed cover crop, or depths greater than would allow for disking the soil by tracked vehicles;

(3) provide disking of soils during the growing season and after each application of waste to maintain aerobic soil conditions, minimize odors and lessen run-off;

(4) avoid applying waste to any active area having standing water;

(5) conform to the approved plan of operation and all other applicable requirements of Section R315-302-2;

(6) provide for a written contract between landowners, waste generators, waste haulers, and waste operators requiring compliance with rules as a condition of the contract; and

(7) avoid food-chain crops during the active life of the facility and until demonstrated to be safe, after closure, according to the closure and post-closure plans filed with the plan of operation. Specific approval in writing from the Director is required for any landspreading disposal facility that is used to raise food-chain crops after closure.

R315-307-4. Standards for Closure.

(1) The owner or operator of a landtreatment disposal facility shall:

(a) close in a manner to comply with Section R315-302-3; and

(b) meet the financial assurance requirements of Rule R315-309.

(3) Upon closure of a landtreatment disposal facility, the owner or operator shall record with the county recorder as part of the record of title the fact that the property has been used as a landtreatment disposal facility pursuant to Subsection R315-302-2(6).

Notice of Continuation February 13, 2013

19-6-104

19-6-105

19-6-108

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-308. Ground Water Monitoring Requirements.

R315-308-1. Applicability.

(1) Each existing landfill, pile, or land treatment disposal facility that is required to perform ground water monitoring shall comply with the ground water monitoring requirements according to the compliance schedule as established by the Director during the permitting or the permit renewal process.

(2) Prior to the acceptance of waste, each new landfill, pile, or land treatment disposal facility that is required to perform ground water monitoring shall have:

(a) a site specific ground water monitoring plan approved by the Director; and

(b) the ground water monitoring system complete and operational.

(3) Ground water monitoring requirements may be waived by the Director if the owner or operator of a solid waste disposal facility can demonstrate that there is no potential for migration of hazardous constituents from the facility to the ground water during the active life of the facility and the post-closure care period. This demonstration must be certified by a qualified ground-water scientist and approved by the Director, and must be based upon:

(a) site-specific field collected measurements, sampling, and analysis of physical, chemical, and biological processes affecting contaminant fate and transport; and

(b) contaminant fate and transport predictions that maximize contaminant migration and consider impacts on human health and the environment.

(4) Once a ground water monitoring system and program has been established at a disposal facility, ground water monitoring shall continue to be conducted throughout the active life, closure, and post-closure care periods as specified by the Director.

(5) A facility that has a ground water monitoring alternative approved under Subsection R315-302-1(2)(e)(vi) is subject to the standards specified in Subsection R315-303-2(1) and the approved alternative shall be revoked by the Director if the operation of the facility impacts groundwater.

R315-308-2. Ground Water Monitoring Requirements.

(1) Each facility owner or operator that is required to conduct ground water monitoring shall formulate a ground water monitoring plan that addresses the requirements of Section R315-308-2.

(2) The ground water monitoring system must consist of at least one background or upgradient well and two downgradient wells, installed at appropriate locations and depths to yield ground water samples from the uppermost aquifer and all hydraulically connected aquifers below the facility, cell, or unit. The downgradient wells shall be designated as the point of compliance and must be installed at the closest practicable distance hydraulically down gradient from the unit boundary not to exceed 150 meters (500 feet) and must also be on the property of the owner or operator:

(a) the upgradient well must represent the quality of background water that has not been affected by leakage from the active area; and

(b) the downgradient wells must represent the quality of ground water passing the point of compliance. Additional wells may be required by the Director in complicated hydrogeological settings or to define the extent of contamination detected.

(3) All monitoring wells must be cased in a manner that maintains the integrity of the monitoring well bore hole. This casing must allow collection of representative ground water samples. Wells must be constructed in such a manner as to prevent contamination of the samples, the sampled strata, and between aquifers and water-bearing strata. All monitoring wells

and all other devices and equipment used in the monitoring program must be operated and maintained so that they perform to design specifications throughout the life of the monitoring program.

(4) The ground water monitoring program must include at a minimum, procedures and techniques for:

(a) well construction and completion;

(b) decontamination of drilling and sampling equipment;

(c) sample collection;

(d) sample preservation and shipment;

(e) analytical procedures and quality assurance;

(f) chain of custody control or sample tracking, as approved by the Director; and

(g) procedures to ensure employee health and safety during well installation and monitoring.

(5) Each facility shall utilize a laboratory, that is certified by the state for the test methods used, to complete tests, using methods with appropriate detection levels, on samples for the following:

(a) during the first year of facility operation after wells are installed or an alternative schedule as approved by the Director, a minimum of eight independent samples from the upgradient and four independent samples from each downgradient well for all parameters listed in Section R315-308-4 to establish background concentrations;

(b) after background levels have been established, a minimum of one sample, semiannually, from each well, background and downgradient, for all parameters listed in Section R315-308-4 as a detection monitoring program;

(i) In the detection monitoring program, the owner or operator must determine ground water quality at each monitoring well on a semiannual basis during the life of an active area, including the closure period, and the post-closure care period.

(ii) The owner or operator must express the ground water quality at each monitoring well in a form appropriate for the determination of statistically significant changes;

(c) field-measured pH, water temperature, and water conductivity must accompany each sample collected;

(d) analysis for the heavy metals and the organic constituents from Section R315-308-4 shall be completed on unfiltered samples; and

(e) the Director may specify additional or fewer constituents depending upon the nature of the ground water or the waste on a site specific basis considering:

(i) the types, quantities, and concentrations of constituents in wastes managed at the landfill;

(ii) the mobility, stability, and persistence of waste constituents or their reaction products in the unsaturated zone beneath the landfill;

(iii) the detectability of indicator parameters, waste constituents, and reaction products in the ground water; and

(iv) the background concentration or values and coefficients of variation of monitoring parameters or constituents in the ground water.

(f) The following information shall be placed in the facility's operating record and a copy submitted to the Director as the ground water monitoring results to be included in the annual report required by Subsection R315-302-2(4):

(i) a report on the procedures, including the quality control/quality assurance, followed during the collection of the ground water samples;

(ii) the results of the field measured parameters required by Subsections R315-308-2(5)(c) and R315-308-2(7);

(iii) a report of the chain of custody and quality control/quality assurance procedures of the laboratory;

(iv) the results of the laboratory analysis of the constituents specified in Section R315-308-4 or an alternative list of constituents approved by the Director;

(A) the results of the laboratory analysis shall list the constituents by name and CAS number; and

(B) a list of the detection limits and the test methods used; and

(v) the statistical analysis of the results of the ground water monitoring as required by Subsection R315-308-2(8).

(vi) The results of the ground water monitoring may be submitted in electronic format.

(6) After background constituent levels have been established, a ground water quality protection standard shall be set by the Director which shall become part of the ground water monitoring plan. The ground water quality protection standard will be set as follows.

(a) For constituents with background levels below the standards listed in Section R315-308-4 or as listed in Section R315-308-5, which presents the ground water protection standards that are available for the constituents listed as Appendix II in 40 CFR 258, the ground water quality standards of Sections R315-308-4 and R315-308-5 shall be the ground water quality protection standard.

(b) If a constituent is detected and a background level is established but the ground water quality standard for the constituent is not included in Section R315-308-4 or Section R315-308-5 the ground water quality protection standard for that constituent shall be set according to health risk standards.

(c) If a constituent is detected and a background level is established and the established background level is higher than the value listed in Section R315-308-4, R315-308-5 or the level established according to Subsection R315-308-2(6)(b), the ground water quality protection standard shall be the background concentration.

(7) The ground water monitoring program must include a determination of the ground water surface elevation each time ground water is sampled.

(8) The owner or operator shall use a statistical method for determining whether a significant change has occurred as compared to background. The Director will approve such a method as part of the ground water monitoring plan. Possible statistical methods include:

(a) a parametric analysis of variance (ANOVA) followed by multiple comparisons procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance well's mean and the background mean levels for each constituent;

(b) an analysis of variance (ANOVA) based on ranks followed by multiple comparisons procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance well's median and the background median levels for each constituent;

(c) a tolerance or prediction interval procedure in which an interval for each constituent is established from the distribution of the background data, and the level of each constituent in each compliance well is compared to the upper tolerance or prediction limit;

(d) a control chart approach that gives control limits for each constituent; or

(e) another statistical test method approved by the Director.

(9) For both detection monitoring, as described in Subsection R315-308-2(5), and assessment monitoring, as described in Subsection R315-308-2(12), the Director may specify additional or fewer sampling and analysis events, no less than annually, depending upon the nature of the ground water or the waste on a site-specific basis considering:

(a) lithology of the aquifer and unsaturated zone;

(b) hydraulic conductivity of the aquifer and unsaturated zone;

(c) ground water flow rates;

(d) minimum distance between upgradient edge of the landfill unit and downgradient monitoring well screen (minimum distance of travel); and

(e) resource value of the aquifer.

(10) The owner or operator must determine and report the ground water flow rate and direction in the upper most aquifer each time the ground water is sampled.

(11) If the owner or operator determines that there is a statistically significant increase over background in any parameter or constituent at any monitoring well at the compliance point, the owner or operator must:

(a) within 14 days of the completion of the statistical analysis of the sample results and within 30 days of the receipt of the sample results, enter the information in the operating record and notify the Director of this finding in writing. The notification must indicate what parameters or constituents have shown statistically significant changes; and

(b) immediately resample the ground water in all monitoring wells, both background and downgradient, or in a subset of wells specified by the Director, and determine:

(i) the concentration of all constituents listed in Section R315-308-4, including additional constituents that may have been identified in the approved ground water monitoring plan;

(ii) if there is a statistically significant increase over background of any parameter or constituent in any monitoring well at the compliance point; and

(iii) notify the Director in writing within seven days of the completion of the statistical analysis of the sample results.

(c) The owner or operator may demonstrate that a source other than the solid waste disposal facility caused the contamination or that the statistically significant change resulted from error in sampling, analysis, statistical evaluation, or natural variation in ground water quality. A report documenting this demonstration must be certified by a qualified ground-water scientist and approved by the Director and entered in the operating record. If a successful demonstration is made and documented, the owner or operator may continue monitoring as specified in Subsection R315-308-2(5)(b).

(12) If, after 90 days, a successful demonstration as stipulated in Subsection R315-308-2(11)(c) is not made, the owner or operator must initiate the assessment monitoring program required as follows:

(a) within 14 days of the determination that a successful demonstration is not made, take one sample from each downgradient well and analyze for all constituents listed as Appendix II in 40 CFR Part 258, 2001 ed., which is adopted and incorporated by reference.

(b) for any constituent detected from Appendix II, 40 CFR Part 258, in the downgradient wells a minimum of four independent samples from the upgradient and four independent samples from each downgradient well must be collected, analyzed, and statistically evaluated to establish background concentration levels for the constituents; and

(c) within 14 days of the completion of the statistical analysis of the sample results and within 30 days of the receipt of the sample results, place a notice in the operation record and notify the Director in writing identifying the Appendix II, 40 CFR Part 258, constituents and their concentrations that have been detected as well as background levels. The Director shall establish a ground water quality protection standard pursuant to Subsection R315-308-2(6) for any Appendix II, 40 CFR Part 258, constituent detected in the downgradient wells.

(d) The owner or operator shall thereafter resample:

(i) at a minimum, all downgradient wells on a quarterly basis for all constituents in Section R315-308-4, or the alternative list that may have been approved as part of the permit, and for those constituents detected from Appendix II, 40 CFR Part 258;

(ii) the downgradient wells on an annual basis for all constituents in Appendix II, 40 CFR Part 258; and

(iii) statistically analyze the results of all ground water monitoring samples.

(e) The Director may specify additional or fewer constituents depending upon the nature of the ground water or the waste on a site specific basis considering:

(i) the types, quantities, and concentrations of constituents in wastes managed at the landfill;

(ii) the mobility, stability, and persistence of waste constituents or their reaction products in the unsaturated zone beneath the landfill;

(iii) the detectability of indicator parameters, waste constituents, and reaction products in the ground water; and

(iv) the background concentration or values and coefficients of variation of monitoring parameters or constituents in the ground water.

(f) If after two consecutive sampling events, the concentrations of all constituents being analyzed in Subsection R315-308-2(12)(d)(i) are shown to be at or below established background values, the owner or operator must notify the Director of this finding and may, upon the approval of the Director, return to the monitoring schedule and constituents as specified in Subsection R315-308-2(5)(b).

(13) If one or more constituents from Section R315-308-4 or the approved alternative list, or from those detected from Appendix II, 40 CFR Part 258, are detected at statistically significant levels above the ground water quality protection standard as established pursuant to Subsection R315-308-2(6) in any sampling event, the owner or operator must:

(a) within 14 days of the receipt of this finding, place a notice in the operating record identifying the constituents and concentrations that have exceeded the ground water quality standard. Within the same time period, the owner or operator must also notify the Director and all appropriate local governmental and local health officials that the ground water quality standard has been exceeded;

(b) characterize the nature and extent of the release by installing additional monitoring wells as necessary;

(c) install at least one additional monitoring well at the facility boundary in the direction of contaminant migration and sample this well and analyze the sample for the constituents in Section R315-308-4 or the approved alternative list and the detected constituents from Appendix II, 40 CFR Part 258; and

(d) notify all persons who own the land or reside on the land that directly overlies any part of the plume of contamination if contaminants have migrated off-site as indicated by sampling of wells in accordance with Subsections R315-308-2(13)(b) and (13)(c).

(e) The owner or operator may demonstrate that a source other than the solid waste disposal facility caused the contamination or that the statistically significant change resulted from error in sampling, analysis, statistical evaluation, or natural variation in ground water quality. A report documenting this demonstration must be certified by a qualified ground-water scientist and approved by the Director and entered in the operating record. If a successful demonstration is made, documented and approved, the owner or operator may continue monitoring as specified in Subsection R315-308-2(12)(d) or Subsection R315-308-2(12)(e) when applicable.

R315-308-3. Corrective Action Program.

(1) If, within 90 days, a successful demonstration as stated in Subsection R315-308-2(13)(e) is not made, the owner or operator must:

(a) continue to monitor as required in Subsection R315-308-2(12)(d).

(b) take any interim measures as required by the Director or as necessary to ensure the protection of human health and the

environment; and

(c) assess possible corrective action measures for the current conditions and circumstances of the disposal facility, addressing at least the following:

(i) the performance, reliability, ease of implementation, and potential impacts of appropriate potential remedies, including safety impacts, cross-media impacts, and control exposure to any residual contamination;

(ii) time required to begin and complete the remedy;

(iii) the costs of remedy implementation;

(iv) public health or environmental requirements that may substantially affect implementation of the remedy; and

(v) prior to the selection of a remedy, discuss the results of the corrective measures assessment in a public meeting with interested and affected parties.

(d) Based on the results of the corrective measures assessment conducted and the comments received in the public meeting, the owner or operator must select a remedy which shall be submitted to the Director.

(i) The corrective action remedy must:

(A) be protective of human health and the environment;

(B) use permanent solutions that are within the capability of best available technology;

(C) attain the established ground water quality standard;

(D) control the sources of release so as to reduce or eliminate, to the maximum extent practicable, further releases of contaminants into the environment that may pose a threat to human health or the environment; and

(E) be approved by the Director.

(ii) Within 14 days after the selection of the remedy the owner or operator must:

(A) amend the corrective action program required by Subsection R315-302-2(2)(e) if necessary and send a report to the Director for approval describing the selected remedy and amendments, along with a schedule of implementation and estimated time of completion; and

(B) put in place the financial assurance mechanism as required by Rule R315-309 for corrective action and notify the Director of the financial assurance mechanism and its effective date.

(2) Upon approval of the selected corrective action remedy, the Director will notify the owner or operator of such approval and will require that the corrective action plan proceed according to the approved schedule.

(a) The Director may also require facility closure if the ground water quality standard is exceeded and, in addition, may revoke any permit and require reapplication.

(b) The Director or the owner or operator may determine, based on information developed after implementation of the corrective action plan, that compliance with the requirements of Subsection R315-308-3(1)(d)(i) of this section are not being achieved through the remedy selected. In such a case, the owner or operator must implement other methods or techniques, upon approval by the Director, that could practicably achieve compliance with the requirements.

(c) Upon completion of the remedy, the owner or operator shall notify the Director. The notification shall contain certification signed by the owner or operator and a qualified ground-water scientist that the concentration of contaminant constituents have been reduced to levels below the specified limits of the ground water quality standard for a period of three years or an alternative length of time specified by the Director. Upon approval of the Director the owner or operator shall:

(i) terminate corrective action measures;

(ii) continue detection monitoring as required in Subsection R315-308-2(5)(b); and

(iii) be released from the requirements of financial assurance for corrective action.

R315-308-4. Constituents for Detection Monitoring.

The table lists the constituents for detection monitoring as specified by Subsection R315-308-2(5), the CAS number for the constituents, and the ground water quality standard for the constituents for any facility that is required to monitor ground water under Rule R315-308.

TABLE Constituents for Detection Monitoring		
	CAS	Ground Water Protection Standard (mg/l)
Inorganic Constituents		
Ammonia (as N)	7664-41-7

KEY: solid waste management, waste disposal
April 25, 2013 **19-6-105**
Notice of Continuation February 13, 2013 **40 CFR 258**

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-309. Financial Assurance.

R315-309-1. Applicability.

(1) The owner or operator of any solid waste disposal facility requiring a permit shall establish financial assurance sufficient to assure adequate closure, post-closure care, and corrective action, if required, of the facility by compliance with one or more financial assurance mechanisms acceptable to and approved by the Director.

(2) Financial assurance is not required for a solid waste disposal facility that is owned or operated by the State of Utah or the Federal government.

(3) Existing Facilities.

(a) An existing facility shall have the financial assurance mechanism in place and effective according to the compliance schedule as established for the facility by the Director.

(b) In the case of corrective action, the financial assurance mechanism shall be in place and effective no later than 120 days after the corrective action remedy has been selected.

(4) A new facility or an existing facility seeking lateral expansion shall have the financial assurance mechanism in place and effective before the initial receipt of waste at the facility or the lateral expansion.

R315-309-2. General Requirements.

(1) A financial assurance plan, including the assurance mechanism proposed for use, shall be submitted:

(a) for new facilities, upon initial permit application; and

(b) for existing facilities, to meet the effective dates specified in Subsection R315-309-1(3).

(2) The financial assurance shall be updated each year as part of the annual report required by Subsection R315-302-2(4) to adjust for inflation or facility modification that would affect closure or post-closure care costs. The annual update of the financial assurance shall be reviewed and must be approved by the Director prior to implementation.

(3) Financial assurance cost estimates shall be based on a third party performing closure or post-closure care.

(a) The closure cost estimate shall be based on the most expensive cost to close the largest area of the disposal facility ever requiring a final cover at any time during the active life in accordance with the closure plan and at a minimum must contain the following elements if applicable:

(i) the cost of obtaining, moving, and placing the cover material;

(ii) the cost of final grading of the cover material;

(iii) the cost of moving and placing topsoil on the final cover;

(iv) the cost of fertilizing, seeding, and mulching or other approved method; and

(v) the cost of removing any stored items or materials, buildings, equipment, or other items or materials not needed at the closed facility.

(b) The post-closure care cost estimate shall be based on the most expensive cost of completing the post-closure care reasonably expected during the post-closure care period and must contain the following elements:

(i) ground water monitoring, if required, including number of monitor wells, parameters to be monitored, frequency of sampling, and cost per sampling;

(ii) leachate monitoring and treatment if necessary;

(iii) gas monitoring and control if required; and

(iv) cover stabilization which will include an estimate of the area and cost for expected annual work to repair residual settlement, control erosion, or reseed.

(4) Any facility for which financial assurance is required for post-closure care must have a financial assurance mechanism, which will cover the costs of post-closure care, in

effect and active until the Director determines that the post-closure care is complete.

(5) Financial assurance for corrective action shall be required only in cases of known releases of contaminants from a facility and shall be a current cost estimate for corrective action based on the most expensive cost of a third party performing the corrective action that may be required.

R315-309-3. General Requirements for Financial Assurance Mechanisms.

(1) Any financial assurance mechanism in place for a solid waste facility:

(a) must be legally valid, binding, and enforceable under Utah and Federal law;

(b) must ensure that funds will be available in a timely fashion when needed; and

(c) any financial assurance mechanism that guarantees payment rather than performance, but does not allow the Director to approve partial payments to a third party, shall establish a standby trust at the time the financial assurance mechanism is established.

(i) In the case of a financial assurance mechanism for which the establishment of a standby trust is required, the standby trust fund shall meet the requirements of Subsections R315-309-4(1), (2), and (4).

(ii) Payments from the financial assurance mechanism shall be deposited directly into the standby trust fund and payments from the standby trust fund must be approved by the Director and the trustee.

(2) The owner or operator of a solid waste facility that is required to provide financial assurance:

(a) shall submit the required documentation of the financial assurance mechanism to the Director;

(b) prior to the financial assurance mechanism becoming effective and active for a solid waste facility, the mechanism must be approved by the Director; and

(c) Financial assurance mechanism documents submitted to the Director shall be signed originals or signed duplicate originals.

(3) The owner or operator of a solid waste facility may establish financial assurance by any mechanism that meets the requirements of Subsection R315-309-1(1) as approved by the Director.

(4) The owner or operator of a solid waste facility may establish financial assurance by a combination of mechanisms that together meet the requirements of Subsection R315-309-1(1) as approved by the Director. Except for the conditions specified in Subsection R315-309-8(6)(c), financial assurance mechanisms guaranteeing performance, rather than payment, may not be combined with other instruments.

R315-309-4. Trust Fund.

(1) The owner or operator of a solid waste facility may establish a trust fund and appoint a trustee as a financial assurance mechanism. The trust fund and trustee must be with an entity that has the authority to establish trust funds and act as a trustee and whose operations are regulated and examined by a Federal or state agency.

(2) The owner or operator shall submit a signed original of the trust agreement to the Director for approval and shall place a signed original of the trust agreement in the operating record of the solid waste disposal facility.

(3) Payments into the trust fund must be made annually by the owner or operator according to the following schedule:

(a) for a trust fund for closure and post-closure care, annual payments that will ensure the availability of sufficient funds within the permit term or the remaining life of the facility, whichever is shorter for the cost estimates required in Subsection R315-309-2(3). The initial payment into the trust

fund must be made, for a new facility or a lateral expansion of an existing facility, before the initial receipt of waste and for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3)(a); or

(b) for a trust fund for corrective action, annual payments that will ensure the availability of sufficient funds within one-half of the estimated length in years of the corrective action program for the cost estimate required by Subsection R315-309-2(5). Payments shall be determined as follows:

(i) The first payment shall be at least equal to one-half of the current cost estimate for the corrective action divided by one-half the estimated length of the corrective action program. The initial payment into the trust fund shall be made in accordance with the schedule specified in Subsection R315-309-1(3)(b).

(ii) The amount of subsequent payments must be determined by the following formula: $\text{Next Payment} = (\text{RB} - \text{CV})/Y$ where RB is the most recent estimate of the required trust fund balance for corrective action (i.e., the total cost that will be incurred during the second half of the corrective action period), CV is the current value of the trust fund, and Y is the number of years remaining in the pay-in period.

(4) The owner or operator, or other person authorized to conduct closure, post-closure, or corrective action may request reimbursement from the trustee for closure, post-closure, or corrective action costs.

(a) Prior to the release of funds by the trustee, the request for reimbursement must be approved by the Director. The Director shall act upon the reimbursement request within 30 days of receiving the request.

(b) After receiving approval from the Director, the request for reimbursement may be granted by the trustee only if sufficient funds are remaining to cover the remaining costs and if justification and documentation of the costs is placed in the operating record.

(c) The owner or operator shall notify the Director that documentation for the reimbursement has been placed in the operating record and that the reimbursement has been received.

R315-309-5. Surety Bond Guaranteeing Payment or Performance.

(1) The owner or operator of a solid waste facility may provide a surety bond for a financial assurance mechanism. The bond must be effective, for a new facility or a lateral expansion of an existing facility, before the initial receipt of waste or, for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3).

(2) The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on Federal bonds in Circular 570 of the U.S. Department of the Treasury and the owner or operator must notify the Director that a copy of the bond has been placed in the operating record.

(3) The penal sum of the bond must be in an amount at least equal to the closure, post-closure, or corrective action cost estimates of Subsection R315-309-2(3) or Subsection R315-309-2(5), whichever is applicable.

(4) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.

(a) In the case of a payment bond, the surety shall pay the costs of closure and post-closure care if the owner or operator fails to complete closure and post-closure care activities.

(b) In the case of a performance bond, the surety shall perform closure and post-closure care on behalf of the owner or operator if the owner or operator fails to complete closure and post-closure care activities.

(5) The surety bond guaranteeing payment or performance shall contain provisions preventing cancellation except under the following conditions:

(a) if the surety sends notice of cancellation by certified mail to the owner or operator and the Director 120 days in advance of the cancellation date; or

(b) if an alternative financial assurance mechanism has been obtained by the owner or operator.

R315-309-6. Insurance.

(1) The owner or operator of a solid waste facility may provide insurance as a financial assurance mechanism. The insurance must be effective, for a new facility or a lateral expansion of an existing facility, before the initial receipt of waste or, for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3).

(2) At a minimum, the insurer must be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states, and the owner or operator must notify the Director that a copy of the insurance policy has been placed in the operating record.

(3) The insurance policy must guarantee that funds will be available to close the facility or unit and provide post-closure care or provide corrective action, if applicable. The policy must also guarantee that the insurer will be responsible for paying out funds, as directed in writing by the Director, to the owner or operator or other person authorized to conduct closure, post-closure, or corrective action, if applicable, up to an amount equal to the face amount of the policy.

(4) The insurance policy must be issued for a face amount at least equal to the closure, post-closure, or corrective action cost estimates required by Subsection R315-309-2(3) or Subsection R315-309-2(5), whichever is applicable.

(5) An owner or operator, or other authorized person may receive reimbursements for closure, post-closure, or corrective action, if applicable, if the remaining value of the policy is sufficient to cover the remaining costs of the work required and if justification and documentation of the cost is placed in the operating record. The owner or operator must notify the Director that the documentation and justification for the reimbursement has been placed in the operating record and that the reimbursement has been received.

(6) Each policy must contain a provision allowing assignment of the policy to a successor owner or operator.

(7) The insurance policy must provide that the insurer may not cancel, terminate, or fail to renew the policy except for failure to pay the premium. If there is a failure to pay the premium, the insurer may cancel the policy by sending notice of cancellation by certified mail to the owner or operator and the Director 120 days in advance of cancellation. If the insurer cancels the policy, the owner or operator must obtain alternate financial assurance.

(8) The insurer shall certify through the use of an insurance endorsement specified by the Director that the policy issued provides insurance covering closure costs, post-closure costs, or corrective action costs.

R315-309-7. Letter of Credit.

(1) The owner or operator of a solid waste facility may provide a letter of credit as a financial assurance mechanism. The letter of credit must be irrevocable and issued for a period of at least one year in the amount at least equal to the current cost estimate as required by Subsection R315-309-2(3) for closure and post-closure care or the cost estimate as required by Subsection R315-309-2(5) for corrective action, if necessary.

(2) The institution issuing the letter of credit must be an entity which has the authority to issue a letter of credit and whose operations are regulated and examined by a Federal or state agency.

(3) The letter of credit must be effective for closure and post-closure care:

(a) for a new facility or a lateral expansion of an existing

facility, before the initial receipt of waste;

(b) for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3)(a); and

(c) for corrective action, in accordance with the schedule specified in Subsection R315-309-1(3)(b).

(4) The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless the issuing institution has elected not to extend the letter of credit by sending notice by certified mail to the owner or operator and the Director 120 days in advance of the expiration.

(5) If the letter of credit is not extended by the issuing institution, the owner or operator shall obtain alternate financial assurance which will become effective on or before the expiration date.

R315-309-8. Local Government Financial Test.

(1) The terms used in Section R315-309-8 are defined as follows.

(a) "Total revenues" means the revenues from all taxes and fees but does not include the proceeds from borrowing or asset sales, excluding revenue form funds managed by local government on behalf of a specific third party.

(b) "Total expenditures" means all expenditures excluding capital outlays and debt repayments.

(c) "Cash plus marketable securities" means all the cash plus marketable securities held by the local government on the last day of a fiscal year, excluding cash and marketable securities designated to satisfy past obligations such as pensions.

(d) "Debt service" means the amount of principal and interest due on a loan in a given time period, typically the current year.

(2) A local government owner or operator of a solid waste facility may demonstrate financial assurance up to the current cost estimate as required by Subsection R315-309-2(3) for closure and post-closure care and the cost estimate as required by Subsection R315-309-2(5) for corrective action, if required, or up to the amount specified in Subsection R315-309-8(6), which ever is less, by meeting the following requirements.

(a) If the local government has outstanding, rated general obligation bonds that are not secured by insurance, a letter of credit, or other collateral or other guarantee, it must have a current rating of Aaa, Aa, A, or Baa, as issued by Moody's or AAA, AA, A, or BBB, as issued by Standard and Poor's on such general obligation bonds.

(b) If the local government has no outstanding general obligation bonds, the local government shall satisfy each of the following financial ratios based on the local government's most recent audited annual financial statement:

(i) a ratio of cash plus marketable securities to total expenditures greater than or equal to 0.05; and

(ii) a ratio of annual debt service to total expenditures less than or equal to 0.20.

(c) The local government must prepare its financial statements in conformity with Generally Accepted Accounting Principles for governments and have its financial statements audited by an independent certified public accountant.

(d) The local government must place a reference to the closure and post-closure care costs assured through the financial test into the next comprehensive annual financial report and in every subsequent comprehensive annual financial report during the time in which closure and post-closure care costs are assured through the financial test. A reference to corrective action costs must be placed in the comprehensive annual financial report not later than 120 days after the corrective action remedy has been selected. The reference to the closure and post-closure care costs shall contain:

(i) the nature and source of the closure and post-closure care requirements;

(ii) the reported liability at the balance sheet date;

(iii) the estimated total closure and post-closure care costs remaining to be recognized;

(iv) the percentage of landfill capacity used to date; and

(v) the estimated landfill life in years.

(3) A local government is not eligible to assure closure, post-closure care, or corrective action costs at its solid waste disposal facility through the financial test if it:

(a) is currently in default on any outstanding general obligation bonds, or

(b) has any outstanding general obligation bonds rated lower than Baa as issued by Moody's or BBB as issued by Standard and Poor's; or

(c) has operated at a deficit equal to 5%, or more, of the total annual revenue in each of the past two fiscal years; or

(d) receives an adverse opinion, disclaimer of opinion, or other qualified opinion from the independent certified public accountant, or appropriate state agency auditing its financial statement. The Director may evaluate qualified opinions on a case-by-case basis and allow use of the financial test in cases where the Director deems the qualification insufficient to warrant disallowance of use of the test.

(4) The local government owner or operator must submit the following items to the Director for approval and place a copy of these items in the operating record of the facility:

(a) a letter signed by the local government's chief financial officer that:

(i) lists all current cost estimates covered by a financial test; and

(ii) provides evidence and certifies that the local government meets the requirements of Subsections R315-309-8(2) and R315-309-8(6);

(b) the local government's independently audited year-end financial statements for the latest fiscal year including the unqualified opinion of the auditor, who must be an independent certified public accountant;

(c) a report to the local government from the local government's independent certified public accountant stating the procedures performed and the findings relative to:

(i) the requirements of Subsections R315-309-8(2)(c) and R315-309-8(3)(c) and (d); and

(ii) the financial ratios required by Subsection R315-309-8(2)(b), if applicable; and

(d) a copy of the comprehensive annual financial report used to comply with Subsection R315-309-8(2)(d).

(e) The items required by Subsection R315-309-8(4) are to be submitted to the Director and copies placed in the facility's operating record as follows:

(i) in the case of closure and post-closure care, for a new facility or a lateral expansion of an existing facility, before the initial receipt of waste;

(ii) in the case of closure and post-closure care, for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3)(a); and

(iii) in the case of corrective action, in accordance with the schedule specified in Subsection R315-309-1(3)(b).

(5) A local government must satisfy the requirements of the financial test at the close of each fiscal year.

(a) The items required in Subsection R315-309-8(4) shall be submitted as part of the facility's annual report required by Subsection R315-302-2(4).

(b) If the local government no longer meets the requirements of the local government financial test it shall, within 210 days following the close of the local government's fiscal year:

(i) obtain alternative financial assurance that meets the requirements of R315-309-1(1); and

(ii) submit documentation of the alternative financial assurance to the Director and place copies of the documentation

in the facility's operating record.

(c) The Director, based on a reasonable belief that the local government may no longer meet the requirements of the local government financial test, may require additional reports of financial condition from the local government at any time. If the Director finds that the local government no longer meets the requirements of the local government financial test, the local government shall be required to provide alternative financial assurance on a schedule established by the Director.

(6) The portion of the closure, post-closure, and corrective action costs for which a local government owner or operator may assume under the local government financial test is determined as follows:

(a) If the local government does not assure other environmental obligations through a financial test, it may assure closure, post-closure, and corrective action costs that equal up to 43% of the local government's total annual revenue.

(b) If the local government assures any other environmental obligation through a financial test, it must add those costs to the closure, post-closure, and corrective action costs it seeks to assure by local government financial test. The total that may be assured must not exceed 43% of the local government's total annual revenue.

(c) The local government shall obtain an alternate financial assurance mechanism for those costs that exceed 43% of the local government's total annual revenue.

(7) Local Government Guarantee.

(a) An owner or operator of a solid waste facility may demonstrate financial assurance for closure, post-closure, and corrective action by obtaining a written guarantee provided by a local government. The local government providing the guarantee shall meet the requirements of the local government financial test in Section R315-309-8 and shall comply with the terms of the written guarantee as specified in Subsections R315-309-8(7)(b) and (c).

(b) The guarantee must be effective for closure and post-closure care:

(i) for a new facility or a lateral expansion of an existing facility, before the initial receipt of waste;

(ii) for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3)(a); and

(iii) for corrective action, in accordance with the schedule specified in Subsection R315-309-1(3)(b).

(c) The guarantee shall provide that if the owner or operator fails to perform closure, post-closure care, or corrective action of a facility covered by the guarantee, the guarantor will:

(i) perform, or pay a third party to perform, closure, post-closure, or corrective action as required; or

(ii) establish a fully funded trust fund as specified in Section R315-309-4 in the name of the owner or operator.

(d) The guarantee will remain in force unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the Director. Cancellation may not occur until 120 days after the date the notice is received by the Director.

(e) If the guarantee is canceled, the owner or operator shall, within 90 days following the receipt of the cancellation notice:

(i) obtain alternate financial assurance that meets the requirements of Subsection R315-309-1(1);

(ii) submit documentation of the alternate financial assurance to the Director; and

(iii) place copies of the documentation of the alternate financial assurance in the facility's operating record.

(iv) If the owner or operator fails to provide alternate financial assurance within the 90 day period, the guarantor must provide the alternate financial assurance within 120 days following the guarantor's notice of cancellation, submit documentation of the alternate financial assurance to the Director for review and approval, and place copies of the

documentation in the facility's operating record.

R315-309-9. Corporate Financial Test.

(1) The terms used specifically in Section R315-309-9 are defined as follows.

(a) "Assets" means all existing and probable future economic benefits obtained or controlled by a particular entity.

(b) "Current assets" means cash or other assets or resources commonly identified as those which are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

(c) "Current liabilities" means obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities.

(d) "Current plugging and abandonment cost estimate" means the most recent of the estimates prepared in accordance with 40 CFR 144.62(a), (b), and (c) (2001) which is adopted and incorporated by reference.

(e) "Independently audited" means an audit performed by and independent certified public accountant in accordance with generally accepted auditing standards.

(f) "Liabilities" means probable future sacrifices of economic benefits arising from present obligations to transfer assets or provide services to other entities in the future as a result of past transactions or events.

(g) "Net working capital" means current assets minus current liabilities.

(h) "Net worth" means total assets minus total liabilities and is equivalent to owner's equity.

(i) "Tangible net worth" means the tangible assets that remain after deducting liabilities; such assets would not include intangibles such as goodwill and rights to patents or royalties.

(2) A corporate owner or operator of a solid waste facility may demonstrate financial assurance up to the current cost estimate as required by Subsection R315-309-2(3) for closure and post-closure care and the cost estimate required by Subsection R315-309-2(5) for corrective action, if required, by meeting the following requirements.

(a) The owner or operator must satisfy one of the following three conditions:

(i) a current rating for its senior unsubordinated debt of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A, or Baa as issued by Moody's; or

(ii) a ratio of less than 1.5 comparing total liabilities to net worth;

(iii) a ratio of greater than 0.10 comparing the sum of net income plus depreciation, depletion and amortization, minus \$10 million, to total liabilities.

(b) The tangible net worth of the owner or operator must be greater than:

(i) the sum of the current closure, post-closure care, and corrective action cost estimates and any other environmental obligation, including guarantees, covered by a financial test plus \$10 million except as provided in Subsection R315-309-9(2)(b)(ii);

(ii) \$10 million in net worth plus the amount of any guarantees that have not been recognized as liabilities on the financial statements provided all of the current closure, post-closure care, and corrective action costs and any other environmental obligations covered by a financial test are recognized as liabilities on the owner's or operator's audited financial statements, and subject to the approval of the Director.

(c) The owner or operator must have assets located in the United States amounting to at least the sum of current closure, post-closure care, corrective action cost estimates and any other environmental obligations covered by a financial test.

(3) The owner or operator must place the following items into the facility's operating record and submit a copy of these

items to the Director for approval:

(a) a letter signed by the owner's or operator's chief financial officer that:

(i) lists all current cost estimates for closure, post-closure care, corrective action, and any other environmental obligations covered by a financial test; and

(ii) provides evidence demonstrating that the firm meets the conditions of Subsection R315-309-9(2)(a)(i), or (a)(ii), or (a)(iii) and Subsections R315-309-9(2)(b) and (c); and

(b) a copy of the independent certified public accountant's unqualified opinion of the owner's or operator's financial statements for the latest completed fiscal year.

(i) To be eligible to use the financial test, the owner's or operator's financial statements must receive an unqualified opinion from the independent certified public accountant.

(ii) The Director may evaluate qualified opinions on a case-by-case basis and allow use of the financial test where the Director deems the matters which form the basis for the qualification are insufficient to warrant disallowance of the test.

(c) If the chief financial officer's letter providing evidence of financial assurance includes financial data showing that the owner or operator satisfies Subsection R315-309-9(2)(a)(i) or (ii) that are different from data in the audited financial statements or data filed with the Securities and Exchange Commission, then a special report from the owner's or operator's independent certified public accountant is required. The special report shall:

(i) be based upon an agreed upon procedures engagement in accordance with professional auditing standards;

(ii) describe the procedures performed in comparing the data in the chief financial officer's letter derived from the independently audited, year-end financial statements;

(iii) describe the findings of that comparison; and

(iv) explain the reasons for any differences.

(d) If the chief financial officer's letter provides a demonstration that the firm has assured environmental obligations as provided in Subsection R315-309-9(2)(b)(ii), then the letter shall include a report from the independent certified public accountant that:

(i) verifies that all of the environmental obligations covered by a financial test have been recognized as liabilities on the audited financial statements;

(ii) explains how these obligations have been measured and reported; and

(iii) certifies that the tangible net worth of the firm is at least \$10 million plus the amount of all guarantees provided.

(e) The items required by Subsection R315-309-9(3) are to be submitted to the Director and copies placed in the facility's operating record as follows:

(i) in the case of closure and post-closure care, for a new facility or a lateral expansion of an existing facility, before the initial receipt of waste;

(ii) in the case of closure and post-closure care, for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3)(a); and

(iii) in the case of corrective action, in accordance with the schedule specified in Subsection R315-309-1(3)(b).

(4) A firm must satisfy the requirements of the financial test at the close of each fiscal year by submitting the items required in Subsection R315-309-9(3) as part of the facility's annual report required by Subsection R315-302-2(4).

(5) If the firm no longer meets the requirements of the corporate financial test it shall, within 120 days following the close of the firm's fiscal year:

(a) obtain alternative financial assurance that meets the requirements of R315-309-1(1); and

(b) submit documentation of the alternative financial assurance to the Director and place copies of the documentation in the facility's operating record.

(c) The Director, based on a reasonable belief that the firm may no longer meet the requirements of the corporate financial test, may require additional reports of financial condition from the firm at any time. If the Director finds that the firm no longer meets the requirements of the corporate financial test, firm shall be required to provide alternative financial assurance on a schedule established by the Director.

(6) Corporate Guarantee.

(a) A corporate owner or operator of a solid waste facility may demonstrate financial assurance for closure, post-closure care, and corrective action by obtaining a written guarantee provided by a corporation.

(i) The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a substantial business relationship with the owner or operator.

(ii) The firm shall meet the requirements of the corporate financial test in Section R315-309-9 and shall comply with the terms of the written guarantee as specified in Subsections R315-309-3(6)(b) and (c).

(A) A certified copy of the guarantee along with copies of the letter from the guarantor's chief financial officer and accountant's opinions must be submitted to the Director and placed in the facility's operating record.

(B) If the guarantor's parent corporation is also the parent corporation of the owner or operator, the letter from the guarantor's chief financial officer must describe the value received in consideration of the guarantee.

(C) If the guarantor is a firm with a substantial business relationship with the owner or operator, the letter from the chief financial officer must describe this substantial business relationship and the value received in consideration of the guarantee.

(b) The guarantee must be effective for closure and post-closure care:

(i) for a new facility or a lateral expansion of an existing facility, before the initial receipt of waste;

(ii) for an existing facility, in accordance with the effective dates specified in Subsection R315-309-1(3)(a); and

(iii) for corrective action, in accordance with the schedule specified in Subsection R315-309-1(3)(b).

(c) The guarantee shall provide that if the owner or operator fails to perform closure, post-closure care, or corrective action of a facility covered by the guarantee, the guarantor will:

(i) perform, or pay a third party to perform, closure, post-closure, or corrective action as required; or

(ii) establish a fully funded trust fund as specified in Section R315-309-4 in the name of the owner or operator.

(d) The guarantee will remain in force unless the guarantor sends notice of cancellation by certified mail to the owner or operator and to the Director. Cancellation may not occur until 120 days after the date the notice is received by the Director.

(e) If the guarantee is canceled, the owner or operator shall, within 90 days following the receipt of the cancellation notice:

(i) obtain alternate financial assurance that meets the requirements of Subsection R315-309-1(1);

(ii) submit documentation of the alternate financial assurance to the Director; and

(iii) place copies of the documentation of the alternate financial assurance in the facility's operating record.

(iv) If the owner or operator fails to provide alternate financial assurance within the 90 day period, the guarantor must provide the alternate financial assurance within 120 days following the guarantor's notice of cancellation, submit documentation of the alternate financial assurance to the Director for review and approval, and place copies of the documentation in the facility's operating record.

(f) If a corporate guarantor no longer meets the requirements of the corporate financial test as specified in Section R315-309-9:

(i) the owner or operator must, within 90 days, obtain alternate financial assurance; and

(ii) submit documentation of the alternate financial assurance to the Director and place copies of this documentation in the facility's operating record.

(iii) If the owner or operator fails to provide alternate financial assurance within the 90-day period, the guarantor must provide that alternate assurance within the next 30 days.

R315-309-10. Discounting.

(1) The Director may allow discounting of closure, post-closure care, or corrective action costs up to the rate of return for essentially risk free investments, net inflation.

(2) Discounting may be allowed under the following conditions:

(a) the Director determines that cost estimates are complete and accurate and the owner or operator has submitted a statement from a professional engineer registered in the state of Utah so stating;

(b) the Director finds the facility in compliance with all applicable Utah Solid Waste Permitting and Management Rules and in compliance with all conditions of the facility's permit issued under the rules;

(c) the Director determines that the closure date is certain and the owner or operator certifies that there are no foreseeable factors that will change the estimate of the facility life; and

(d) discounted cost estimates must be adjusted annually to reflect inflation and years of remaining facility life.

R315-309-11. Termination of Financial Assurance.

The owner or operator of a solid waste facility may terminate or cancel an active financial assurance mechanism under the following conditions:

(1) if the owner or operator establishes alternate financial assurance as approved by the Director; or

(2) if the owner or operator is released from the financial assurance requirements by the Director after meeting the conditions and requirements of Subsections R315-302-3(7)(b) and (c) or Subsection R315-308-3(2)(c), whichever is applicable.

KEY: solid waste management, waste disposal

April 25, 2013

19-6-105

Notice of Continuation February 13, 2013

40 CFR 258

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-310. Permit Requirements for Solid Waste Facilities.

R315-310-1. Applicability.

(1) The following solid waste facilities require a permit:

(a) New and existing Class I, II, III, IV, V, and VI Landfills;

(b) Class I, II, III, IV, V, and VI Landfills that have closed but have not met the requirements of Subsection R315-302-3(7);

(c) incinerator facilities that are regulated by Rule R315-306;

(d) land treatment disposal facilities that are regulated by Rule R315-307; and

(d) waste tire storage facilities.

(2) Permits are not required for corrective actions at solid waste facilities performed by the state or in conjunction with the United States Environmental Protection Agency or in conjunction with actions to implement the Comprehensive Environmental Response Compensation and Liability Act of 1980 (CERCLA), or corrective actions taken by others to comply with a state or federal cleanup order.

(3) The requirements of Rule R315-310 apply to each existing and new solid waste facility, for which a permit is required.

(a) The Director may incorporate a compliance schedule for each existing facility to ensure that the owner or operator, or both, of each existing facility meet the requirements of Rule R315-310.

(b) The owner or operator, or both, where the owner and operator are not the same person, of each new facility or expansion at an existing solid waste facility, for which a permit is required, shall:

(i) apply for a permit according to the requirements of Rule R315-310;

(ii) not begin the construction or the expansion of the solid waste facility until a permit has been granted; and

(iii) not accept waste at the solid waste facility prior to receiving the approval required by Subsection R315-301-5(1).

(4) A landfill may not change from its current class, or subclass, to any other class, or subclass, of landfill except by meeting all requirements for the desired class, or subclass, to include obtaining a new permit from the Director for the desired class, or subclass, of landfill.

R315-310-2. Procedures for Permits.

(1) Prospective applicants may request the Director to schedule a pre-application conference to discuss the proposed solid waste facility and application contents before the application is filed.

(2) Any owner or operator who intends to operate a facility subject to the permit requirements must apply for a permit with the Director. Two copies of the application, signed by the owner or operator and received by the Director are required before permit review can begin.

(3) Applications for a permit must be completed in the format prescribed by the Director.

(4) An application for a permit, all reports required by a permit, and other information requested by the Director shall be signed as follows:

(a) for a corporation: by a principal executive officer of at least the level of vice-president;

(b) for a partnership or sole proprietorship: by a general partner or the proprietor;

(c) for a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official; or

(d) by a duly authorized representative of the person above, as appropriate.

(i) A person is a duly authorized representative only if the

authorization is made in writing, to the Director, by a person described in Subsections R315-310-2(4)(a), (b), or (c), as appropriate.

(ii) The authorization may specify either a named individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of facility manager, director, superintendent, or other position of equivalent responsibility.

(iii) If an authorization is no longer accurate and needs to be changed because a different individual or position has responsibility for the overall operation of the facility, a new authorization that meets the requirements of Subsections R315-310-2(4)(d)(i) and (ii) shall be submitted to the Director prior to or together with any report, information, or application to be signed by the authorized representative.

(5) Filing Fee and Permit Review Fee.

(a) A filing fee, as required by the Annual Appropriations Act, shall accompany the filing of an application for a permit. The review of the application will not begin until the filing fee is received.

(b) A review fee, as established by the Annual Appropriations Act, shall be charged at an hourly rate for the review of an application. The review fee shall be billed quarterly and shall be due and payable quarterly.

(6) All contents and materials submitted as a permit application shall become part of the approved permit and shall be part of the operating record of the solid waste disposal facility.

(7) The owner or operator, or both, of a facility shall apply for renewal of the facility's permit every ten years.

R315-310-3. General Contents of a Permit Application for a New Facility or a Facility Seeking Expansion.

(1) Each permit application for a new facility or a facility seeking expansion shall contain the following:

(a) the name and address of the applicant, property owner, and responsible party for the site operation;

(b) a general description of the facility accompanied by facility plans and drawings and, except for Class IIIb, IVb, and Class VI Landfills and waste tire storage facilities, unless required by the Director, the facility plans and drawings shall be signed and sealed by a professional engineer registered in the State of Utah;

(c) a legal description and proof of ownership, lease agreement, or other mechanism approved by the Director of the proposed site, latitude and longitude map coordinates of the facility's front gate, and maps of the proposed facility site including land use and zoning of the surrounding area;

(d) the types of waste to be handled at the facility and area served by the facility;

(e) the plan of operation required by Subsection R315-302-2(2);

(f) the form used to record weights or volumes of wastes received required by Subsection R315-302-2(3)(a)(i);

(g) an inspection schedule and inspection log required by Subsection R315-302-2(5)(a);

(h) the closure and post-closure plans required by Section R315-302-3;

(i) documentation to show that any waste water treatment facility, such as a run-off or a leachate treatment system, is being reviewed or has been reviewed by the Division of Water Quality;

(j) a proposed financial assurance plan that meets the requirements of Rule R315-309; and

(k) A historical and archeological identification efforts, which may include an archeological survey conducted by a person holding a valid license to conduct surveys issued under R694-1.

(2) Public Participation Requirements.

- (a) Each permit application shall provide:
 - (i) the name and address of all owners of property within 1,000 feet of the proposed solid waste facility; and
 - (ii) documentation that a notice of intent to apply for a permit for a solid waste facility has been sent to all property owners identified in Subsection R315-310-3(3)(a)(i).
 - (iii) the Director with the name of the local government with jurisdiction over the site and the mailing address of that local government office.
- (b) The Director shall send a letter to each person identified in Subsection R315-310-3(3)(a)(i) and (iii) requesting that they reply, in writing, if they desire their name to be placed on an interested party list to receive further public information concerning the proposed facility.
- (3) Special Requirements for a Commercial Solid Waste Disposal Facility.
 - (a) The permit application for a commercial nonhazardous solid waste disposal facility shall contain the information required by Subsections 19-6-108(9) and (10).
 - (b) Subsequent to the issuance of a solid waste permit by the Director, a commercial nonhazardous solid waste disposal facility shall meet the requirements of Subsection 19-6-108(3)(c) and provide documentation to the Director that the solid waste disposal facility is approved by the local government, the Legislature, and the governor.
 - (c) Construction of the solid waste disposal facility may not begin until the requirements of Subsections R315-310-3(2)(b) are met and approval to begin construction has been granted by the Director.
 - (d) Commercial solid waste disposal facilities solely under contract with a local government within the state to dispose of nonhazardous solid waste generated within the boundaries of the local government are not subject to Subsections R315-310-3(2)(a), (b), and (c).

R315-310-4. Contents of a Permit Application for a New or Expanded Class I, II, III, IV, V, and VI Landfill Facility as Specified.

- (1) Each application for a new or expanded landfill shall contain the information required by Section R315-310-3.
- (2) Each application shall also contain:
 - (a) the following maps shall be included in a permit application for a Class I, II, III, IV, V, and VI Landfill:
 - (i) topographic map of the landfill unit drawn to a scale of 200 feet to the inch containing five foot contour intervals where the relief exceeds 20 feet and two foot contour intervals where the relief is less than 20 feet, showing the boundaries of the landfill unit, ground water monitoring wells, landfill gas monitoring points, and borrow and fill areas; and
 - (ii) the most recent full size U.S. Geological Survey topographic map, 7-1/2 minute series, if printed, or other recent topographic survey of equivalent detail of the area, showing the waste facility boundary, the property boundary, surface drainage channels, existing utilities, and structures within one-fourth mile of the facility site, and the direction of the prevailing winds.
 - (b) a permit application for a Class I, II, IIIa, IVa, and V Landfill shall contain a geohydrological assessment of the facility that addresses:
 - (i) local and regional geology and hydrology, including faults, unstable slopes and subsidence areas on site;
 - (ii) evaluation of bedrock and soil types and properties, including permeability rates;
 - (iii) depths to ground water or aquifers;
 - (iv) direction and flow rate of ground water;
 - (v) quantity, location, and construction of any private and public wells on the site and within 2,000 feet of the facility boundary;
 - (vi) tabulation of all water rights for ground water and surface water on the site and within 2,000 feet of the facility

- boundary;
 - (vii) identification and description of all surface waters on the site and within one mile of the facility boundary;
 - (viii) background ground and surface water quality assessment and identification of impacts of the existing facility upon ground and surface waters from landfill leachate discharges;
 - (ix) calculation of a site water balance; and
 - (x) conceptual design of a ground water and surface water monitoring system, including proposed installation methods for these devices and where applicable, a vadose zone monitoring plan;
- (c) a permit application for a Class I, II, IIIa, IVa, and V Landfill shall contain an engineering report, plans, specifications, and calculations that address:
 - (i) how the facility will meet the location standards pursuant to Section R315-302-1 including documentation of any demonstration made with respect to any location standard;
 - (ii) the basis for calculating the facility's life;
 - (iii) cell design to include liner design, cover design, fill methods, elevation of final cover and bottom liner, and equipment requirements and availability;
 - (iv) identification of borrow sources for daily and final cover, and for soil liners;
 - (v) interim and final leachate collection, treatment, and disposal;
 - (vi) ground water monitoring plan that meets the requirements of Rule R315-308;
 - (vii) landfill gas monitoring and control that meets the requirements of Subsection R315-303-3(5);
 - (viii) design and location of run-on and run-off control systems;
 - (ix) closure and post-closure design, construction, maintenance, and land use; and
 - (x) quality control and quality assurance for the construction of any engineered structure or feature, excluding buildings at landfills, at the solid waste disposal facility and for any applicable activity such as ground water monitoring.
- (d) a permit application for a Class I, II, III, IV, V, and VI Landfill shall contain a closure plan to address:
 - (i) closure schedule;
 - (ii) capacity of the solid waste disposal facility in volume and tonnage;
 - (iii) final inspection by regulatory agencies; and
 - (iv) identification of closure costs including cost calculations and the funding mechanism.
- (e) a permit application for a Class I, II, III, IV, V, and VI Landfill shall contain a post-closure plan to address, as appropriate for the specific landfill:
 - (i) site monitoring of:
 - (A) landfill gas on a quarterly basis until the conditions of either Subsection R315-302-3(7)(b) or Subsection R315-302-3(7)(c) are met;
 - (B) ground water on a semiannual basis, or other schedule as determined by the Director, until the conditions of either Subsection R315-302-3(7)(b) or Subsection R315-302-3(7)(c) are met; and
 - (C) surface water, if required, on the schedule specified by the Director and until the Director determines that the monitoring of surface water may be discontinued;
 - (ii) inspections of the landfill by the owner or operator:
 - (A) for landfills that are required to monitor landfill gas, and Class II Landfills, on a quarterly basis; and
 - (B) for other landfills that are not required to monitor landfill gas, on a semiannual basis;
 - (iii) maintenance activities to maintain cover and run-on and run-off systems;
 - (iv) identification of post-closure costs including cost calculations and the funding mechanism;

(v) changes to record of title as specified by Subsection R315-302-2(6); and

(vi) list the name, address, and telephone number of the person or office to contact about the facility during the post-closure period.

R315-310-5. Contents of a Permit Application for a New or Expanding Class III, IV, or VI Landfill.

(1) Each application for a permit for a new Class III, IV, or VI landfill or for a permit to expand an existing Class III, IV, or VI Landfill shall contain the information required in Section R315-310-3.

(2) Each application shall also contain an engineering report, plans, specifications, and calculations that address:

(a) the information and maps required by Subsections R315-310-4(2)(a)(i) and (ii);

(b) the design and location of the run-on and run-off control systems;

(c) the information required by Subsections R315-310-4(2)(d) and (e);

(d) the area to be served by the facility; and

(e) how the facility will meet the requirements of Rule R315-304, for a Class III Landfill, or Rule R315-305, for a Class IV or VI Landfill.

(3) Each application for a Class IIIa or Class IVa Landfill permit shall also contain the applicable information required in Subsections R315-310-4(2)(b) and (c).

R315-310-6. Contents of a Permit Application for a New or Expanding Landtreatment Disposal Facility.

(1) Each application for a landtreatment disposal facility permit shall contain the information required in Section R315-310-3.

(2) Each application for a permit shall also contain:

(a) a geohydrological assessment of the facility site that addresses all of the factors of Subsection R315-310-4(2)(b);

(b) engineering report, plans, specifications, and calculations that address:

(i) how the proposed facility will meet the location standards pursuant to Section R315-302-1;

(ii) how the proposed facility will meet the standards of Rule R315-307;

(iii) the basis for calculating the facility's life;

(iv) waste analyses and methods to periodically sample and analyze solid waste;

(v) design of interim waste storage facilities;

(vi) design of run-on and run-off control systems;

(vii) a contour map of the active area showing contours to the nearest foot;

(viii) a ground water and surface water monitoring program; and

(ix) access barriers such as fences, gate, and warning signs.

(c) a plan of operation that in addition to the requirements of Section R315-302-2 addresses:

(i) operation and maintenance of run-on and run-off control systems;

(ii) methods of taking ground water samples and for maintaining ground water monitoring systems; and

(iii) methods of applying wastes to meet the requirements of Section R315-307-3.

(d) closure plan to address:

(i) closure schedule;

(ii) capacity of site in volume and tonnage; and

(iii) final inspection by regulatory agencies.

(e) post-closure plan to address:

(i) estimated time period for post-closure activities;

(ii) site monitoring of ground water;

(iii) changes in record of title;

(iv) maintenance activities to maintain cover and run-off

system;

(v) plans for food-chain crops, if any, being grown on the active areas, after closure; and

(vi) identification of final closure costs including cost calculations and the funding mechanism.

R315-310-7. Contents of a Permit Application for a New or Expanding Incinerator Facility.

(1) Each application for a new or expanding incinerator facility permit shall contain the information required in Section R315-310-3.

(2) Each application for a permit shall also contain:

(a) engineering report, plans, specifications, and calculations that address:

(i) the design of the storage and handling facilities on-site for incoming waste as well as fly ash, bottom ash, and any other wastes produced by air or water pollution controls; and

(ii) the design of the incinerator or thermal treater, including charging or feeding systems, combustion air systems, combustion or reaction chambers, including heat recovery systems, ash handling systems, and air pollution and water pollution control systems. Instrumentation and monitoring systems design shall also be included.

(b) an operational plan that, in addition to the requirements of Section R315-302-2, addresses:

(i) cleaning of storage areas as required by Subsection R315-306-2(5);

(ii) alternative storage plans for breakdowns as required in Subsection R315-306-2(3);

(iii) inspections to insure compliance with state and local air pollution laws and to comply with Subsection R315-302-2(5)(a). The inspection log or summary must be submitted with the application;

(iv) how and where the fly ash, bottom ash, and other solid waste will be disposed; and

(v) a program for excluding the receipt of hazardous waste equivalent to requirements specified in Subsection R315-303-4(7).

(c) documentation to show that air pollution and water pollution control systems are being reviewed or have been reviewed by the Division of Air Quality and the Division of Water Quality.

(d) a closure plan to address:

(i) closure schedule;

(ii) closure costs and a financial assurance mechanism to cover the closure costs;

(iii) methods of closure and methods of removing wastes, equipment, and location of final disposal; and

(iv) final inspection by regulator agencies.

R315-310-8. Contents of a Permit Application for a New or Expanding Waste Tire Storage Facility.

Each application for a waste tire storage facility permit shall contain the information required in Subsections R315-310-3(1)(a), (b), (c), (f), (g), (h), (k), R315-310-3(2) and Subsection R315-314-3(3).

R315-310-9. Contents of an Application for a Permit Renewal.

The owner or operator, or both, where the owner and operator are not the same person, of each existing facility who intend to have the facility continue to operate, shall apply for a renewal of the permit by submitting the applicable information and application specified in Sections R315-310-3, -4, -5, -6, -7, or -8, as appropriate. Applicable information, that was submitted to the Director as part of a previous permit application, may be copied and included in the permit renewal application so that all required information is contained in one document. The information submitted shall reflect the current

operation, monitoring, closure, post-closure, and all other aspects of the facility as currently established at the time of the renewal application submittal.

R315-310-10. Contents of an Application for a Permit for a Facility in Post-Closure Care.

The application for a Post-Closure Care permit shall contain the applicable information required in Section R315-310-3 and documentation as to how the facility will meet the requirements of Section R315-302-3(5) and (6).

R315-310-11. Permit Transfer.

(1) A permit may not be transferred without approval from the Director, nor shall a permit be transferred from one property to another.

(2) The new owner or operator shall submit to the Director:

(a) A revised permit application no later than 60 days prior to the scheduled change and

(b) A written agreement containing a specific date for transfer of permit responsibility between the current and new permittees.

(3) The new permittee shall:

(a) assume permit requirements and all financial responsibility;

(b) provide adequate documentation that the permittee has or shall have ownership or control of the facility for which the transfer of permit has been requested;

(c) demonstrate adequate knowledge and ability to operate the facility in accordance with the permit conditions; and

(d) demonstrate adequate financial assurance as required in the permit and R315-309 for the operation of the facility.

(4) When a transfer of ownership or operational control occurs, the old owner or operator shall comply with the requirements of Rule R315-309 until the new owner or operator has demonstrated that it is complying with the requirements of that rule.

(5) An application for permit transfer may be denied if the Director finds that the applicant has:

(a) knowingly misrepresented a material fact in the application;

(b) refused or failed to disclose any information requested by the Director;

(c) exhibited a history of willful disregard of any state or federal environmental law; or

(d) had any permit revoked or permanently suspended for cause under any state or federal environmental law.

KEY: solid waste management, waste disposal

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-311. Permit Approval For Solid Waste Disposal, Waste Tire Storage, Energy Recovery, And Incinerator Facilities.****R315-311-1. General Requirements.**

(1) Upon submittal of the complete information required by Rule R315-310, as determined by the Director, a draft permit or permit denial will be prepared and the owner or operator of the new or existing facility will be notified in writing by the Director.

(a) After meeting the requirements of the public comment period and public hearing as stipulated in Section R315-311-3, the owner or operator may be issued a permit which will include appropriate conditions and limitations on operation and types of waste to be accepted at the facility.

(b) Construction shall not begin prior to the receipt of the permit.

(c) An application that has been initiated by an owner or operator but for which the Director has not received a response to questions about the application for more than one year shall be canceled.

(2) Solid waste disposal facility plan approval and permit issuance will depend upon:

(a) the adequacy of the facility in meeting the location standards in Section R315-302-1;

(b) the hydrology and geology of the area; and

(c) the adequacy of the plan of operation, facility design, and monitoring programs in meeting the requirements of the applicable rules.

(3) A permit can be granted for up to ten years by the Director, except as allowed in Subsection R315-311-1(5).

(4) The owner or operator, or both, when the owner and the operator are not the same person, of each solid waste facility shall:

(a) apply for a permit renewal, as required by Section R315-310-10, 180 days prior to the expiration date of the current permit if the permit holder intends to continue operations after the current permit expires; and

(b) for facilities for which financial assurance is required by R315-309-1, submit, for review and approval by the Director on a schedule of no less than every five years, a complete update of the financial assurance required in Rule R315-309 which shall contain:

(i) a calculation of the current costs of closure as required by Subsection R315-309-2(3); and

(ii) a calculation that is not based on a closure cost which has been obtained by applying an inflation factor to past cost estimates.

(5) A permit for a facility in post-closure care:

(i) may be issued for the life of the post-closure care period; and

(ii) the holder of the post-closure care permit shall comply with Subsection R315-311-1(4)(b).

R315-311-2. Permit Modification, Renewal, or Termination.

(1) A permit may be considered for modification, renewal, or termination at the request of any interested person, including the permittee, or upon the Director's initiative as a result of new information or changes in statutes or rules. Requests for modification, reissuance, or termination shall be submitted in writing to the Director and shall contain facts or reasons supporting the request. Requests for permit modification, renewal, or termination shall become effective only upon approval by the Director.

(a) Minor modifications of a permit or plan of operation shall not be subject to the 30 day public comment period as required by Section R315-311-3. A permit modification shall be considered minor if:

(i) typographical errors are corrected;

(ii) the name, address, or phone number of persons or agencies identified in the permit are changed;

(iii) administrative or informational changes are made;

(iv) procedures for maintaining the operating record are changed or the location where the operating record is kept is changed;

(v) changes are made to provide for more frequent monitoring, reporting, sampling, or maintenance;

(vi) a compliance date extension request is made for a new date not to exceed 120 days after the date specified in the approved permit;

(vii) changes are made in the expiration date of the permit to allow an earlier permit termination;

(viii) changes are made in the closure schedule for a unit, in the final closure schedule for the facility, or the closure period is extended;

(ix) the Director determines, in the case of a permit transfer application, that no change in the permit other than the change in the name of the owner or operator is necessary;

(x) equipment is upgraded or replaced with functionally equivalent components;

(xi) changes are made in sampling or analysis methods, procedures, or schedules;

(xii) changes are made in the construction or ground water monitoring quality control/quality assurance plans which will better certify that the specifications for construction, closure, sampling, or analysis will be met;

(xiii) changes are made in the facility plan of operation which conform to guidance or rules approved by the Board or provide more efficient waste handling or more effective waste screening;

(xiv) an existing monitoring well is replaced with a new well without changing the location;

(xv) changes are made in the design or depth of a monitoring well that provides more effective monitoring;

(xvi) changes are made in the statistical method used to statistically analyze the ground water quality data; or

(xvii) Changes are made in any permit condition that are more restrictive or provide more protection to health or the environment.

(b) The Director may subject any minor modification request to the 30-day public comment period if justified by conditions and circumstances.

(c) A permit modification that does not meet the requirements of Subsection R315-311-2(1)(a) for a minor modification shall be a major modification.

(d) If the Director determines that major modifications to a permit or plan of operation are justified, a new operational plan incorporating the approved modifications shall be prepared. The modifications shall be subject to the public comment period as specified in Section R315-311-3.

(2) An application for permit renewal shall consist of the information required by Section R315-310-9. Upon receipt of the application, the Director will review the application and will notify the applicant as to what information or change of operational practice is required of the applicant, if any, to receive a permit renewal. The current permit shall remain in effect until issuance or denial of a new permit. Each permit renewal shall be subject to the public comment requirements of Section R315-311-3.

(3) The Director shall notify, in writing, the owner or operator of any facility of intent to terminate a permit. A permit may be terminated for:

(a) noncompliance with any condition of the permit;

(b) noncompliance with any applicable rule;

(c) failure in the application or during the approval or renewal process to disclose fully all relevant facts;

(d) misrepresentation by the owner or operator of any

relevant facts at any time; or

(e) a determination that the solid waste activity or facility endangers human health or the environment.

(4) The owner or operator of a facility may appeal any action

associated with modification, renewal, or termination in accordance with Section R315-317-3, Title 63G Chapter 4, and Rule R315-12.

R315-311-3. Public Comment Period.

(1) The draft permit, permit renewal, or major modification of a permit, for each solid waste facility that requires a permit, shall be subject to a 30-day public comment period.

(2) A public hearing may be held if a request for public hearing is submitted to the Director in writing:

(a) by a local government, a state agency, ten interested persons, or an interested association having not fewer than ten members; and

(b) the request is received by the Director not more than 15 days after the publication of the public notice.

(3) After due consideration of all comments received, final determination on draft permits or major modification of permits will be made available by public notice.

KEY: solid waste management, waste disposal

19-6-105

19-6-108

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-312. Recycling and Composting Facility Standards.****R315-312-1. Applicability.**

(1) The standards of Rule R315-312 apply to any facility engaged in recycling or utilization of solid waste on the land including:

- (a) composting;
- (b) utilization of organic sludge, other than domestic sewage sludge and septage, and untreated woodwaste on land for beneficial use; and
- (c) accumulation of wastes in piles for recycling or utilization.

(2) These standards do not apply to:

(a) animal feeding operations, including dairies, that compost exclusively manure and vegetative material and meet the composting standards of a Comprehensive Nutrient Management Plan;

(b) other composting operations in which waste from on-site is composted and the finished compost is used on-site; or

(c) hazardous waste.

(3) These standards do not apply to any facility that recycles or utilizes solid wastes solely in containers, tanks, vessels, or in any enclosed building, including buy-back recycling centers.

(4) The composting of domestic sewage sludge, on the site of its generation, is exempt from the requirements of Rule R315-312 but is regulated under the applicable requirements of Rule R317-8 and 40 CFR 503 by the Utah Division of Water Quality.

R315-312-2. Recycling and Composting Requirements.

(1) Any recycling or composting facility shall meet the requirements of Section R315-302-2, and shall submit a general plan of operation and such other information as requested by the Director prior to the commencement of any recycling operation.

(2) Each applicable recycling or composting facility shall submit a certification that the facility has, during the past year, operated according to the submitted plan of operation to the Director by March 1 of each year.

(3) Any facility storing materials in outdoor piles for the purpose of recycling shall be considered to be disposing of solid waste if:

(a) at least 50% of the material on hand at the beginning of a year at the facility has not been shown to have been recycled by the end of that year and any material has been on-site more than two years unless a longer period is approved by the Director; or

(b) ground water or surface water, air, or land contamination has occurred or is likely to occur under current conditions of storage.

(c) Upon a determination by the Director or his authorized representative that the limits of Subsection R315-312-2(3)(a) or (b) have been exceeded, the Director may require a permit application and issuance of a permit as a solid waste disposal facility.

(4) Any recycling or composting facility may be required to provide financial assurance for clean-up and closure of the site as determined by the Director.

(5) Tires stored in piles for the purpose of recycling at a tire recycling facility shall be subject to the requirements of Section R315-314-3.

R315-312-3. Composting Requirements.

(1) No new composting facility shall be located in the following areas:

- (a) wetlands, watercourses, or floodplains; or
- (b) within 500 feet of any permanent residence, school, hospital, institution, office building, restaurant, or church.

(2) Each new compost facility shall meet the requirements

of Subsection R315-302-1(2)(f)

(3) Each owner or operator of a composting facility, in addition to the operational plan required in Subsection R315-312-2(1), shall develop, keep on file, and abide by a plan that addresses:

(a) detailed plans and specifications for the entire composting facility including manufacturer's performance data for equipment;

(b) methods of measuring, grinding or shredding, mixing, and proportioning input materials;

(c) a description and location of temperature and other types of monitoring equipment and the frequency of monitoring;

(d) a description of any additive material, including its origin, quantity, quality, and frequency of use;

(e) special precautions or procedures for operation during wind, heavy rain, snow, and freezing conditions;

(f) estimated composting time duration, which is the time period from initiation of the composting process to completion;

(g) for windrow systems, the windrow construction, including width, length, and height;

(h) the method of aeration, including turning frequency or mechanical aeration equipment and aeration capacity; and

(i) a description of the ultimate use for the finished compost, the method for removal from the site, and a plan for the disposal of the finished compost that can not be used in the expected manner due to poor quality or change in market conditions.

(4) Composting Facility Operation Requirements.

(a) Operational records must be maintained during the life of the facility and during the post-closure care period, which include, at a minimum, temperature data and quantity and types of material processed.

(b) All waste materials collected for the purpose of processing must be processed within two years or as provided in the plan of operation.

(c) All materials not destined for processing must be properly disposed.

(d) Turning frequency of the compost must be sufficient to maintain aerobic conditions and to produce a compost product in the desired time frame.

(e) During the composting process, the compost must:

(i) maintain a temperature between 104 and 149 degrees Fahrenheit (40 and 65 degrees Celsius) for a period of not less than five days; and

(ii) reach a temperature of not less than 131 degrees F (55 degrees C) for a consecutive period of not less than four hours during the five day period.

(f) The following wastes may not be accepted for composting:

(i) asbestos waste;

(ii) Hazardous waste;

(iii) waste containing PCBs; or

(iv) treated wood.

(g) Any composting facility utilizing municipal solid waste, municipal sewage treatment sludge, water treatment sludge, or septage shall require the generator to characterize the material and certify that any material used is nonhazardous, contains no PCB's, and contains no treated wood.

(h) If the composting operation will be utilizing domestic sewage sludge, septage, or municipal solid waste:

(i) compost piles or windrows shall be placed upon a surface such as sealed concrete, asphalt, clay, or an artificial liner underlying the pile or windrow, to prevent contamination of subsurface soil, ground water, or both and to allow collection of run-off and leachate. The liner shall be of sufficient thickness and strength to withstand stresses imposed by compost handling vehicles and the compost itself;

(ii) run-off systems shall be designed, installed and maintained to control and collect the run-off from a 25-year

storm event;

(iii) the collected leachate shall be treated in a manner approved by the Director; and

(iv) run-on prevention systems shall be designed, constructed, and maintained to divert the maximum flow from a 25-year storm event.

(i) If the Director determines that a composting operation, which composts materials other than domestic sewage sludge, septage, or municipal solid waste, is likely to produce a leachate that in combination with the hydrologic, geologic, and climatic factors of the site will present a threat to human health or the environment, the Director may require the owner or operator of the composting facility to meet the requirements specified in Subsection R315-312-3(4)(h).

(j) The finished compost must contain no sharp inorganic objects and must be sufficiently stable that it can be stored or applied to land without creating a nuisance, environmental threat, or a hazard to health.

(5) Composting Facility Closure and Post-closure Requirements.

(a) Within 30 days of closure, a composting facility shall:

(i) remove all piles, windrows, and any other compost material on the composting facility's property;

(ii) remove or revegetate compacted compost material that may be left on the land;

(iii) drain ponds or leachate collection system if any, back-fill, and assure removed contents are properly disposed;

(iv) cover if necessary; and

(v) record with the county recorder as part of the record of title, a plat and statement of fact that the property has been used as a composting facility.

(b) The post-closure care and monitoring shall be for five years and shall consist of:

(i) the maintenance of any monitoring equipment and sampling and testing schedules as required by the Director; and

(ii) inspection and maintenance of any cover material.

R315-312-4. Requirements for Use on Land of Sewage Sludge, Woodwaste, and Other Organic Sludge.

(1) Any facility using domestic sewage sludge or septage on land is exempt from the requirements of Section R315-312-4 when the facility has a permit or other approval under the applicable requirements of Rule R317-8 and 40 CFR 503 issued by the Utah Division of Water Quality.

(2) Any facility using organic sludge, other than domestic sewage sludge or septage, or untreated woodwaste on land shall comply with the recycling standards of Section R315-312-2.

(3) Only agricultural or silvicultural sites where organic sludge or untreated woodwaste is demonstrated to have soil conditioning or fertilizer value shall be acceptable for use under this subsection, provided that the sludge or woodwaste is applied as a soil conditioner or fertilizer in accordance with accepted agricultural and silvicultural practice.

(4) A facility using organic sludge or untreated woodwaste on the land in a manner not consistent with the requirements of Section R315-312-4 must meet the standards of Rule R315-307.

KEY: solid waste management, waste disposal

19-6-105

Notice of Continuation February 13, 2013

19-6-108

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-313. Transfer Stations and Drop Box Facilities.****R315-313-1. Applicability.**

Any transfer station or drop box facility receiving solid waste from off-site shall meet the requirements of Rule R315-313.

R315-313-2. Transfer Station Standards.

(1) Each transfer station shall meet the requirements of Subsection R315-302-1(2)(f).

(2) Each transfer station shall meet the requirements of Section R315-302-2 and shall submit a plan of operation and such other information as requested by the Director for approval prior to construction and operation.

(3) Each transfer station shall submit, to the Director, by March 1 of each year, a report that meets the applicable requirements of Subsection R315-302-2(4) and a certification that the facility has, during the past year, operated according to the submitted plan of operation.

(4) Each transfer station shall be designed, constructed, and operated to:

(a) be surrounded by a fence, trees, shrubbery, or natural features so as to control access and to screen the station from the view of immediately adjacent neighbors, unless the tipping floor is fully enclosed by a building;

(b) be sturdy and constructed of easily cleanable materials;

(c) be free of potential rat harborage, and provide effective means to control rodents, insects, birds, and other vermin;

(d) be adequately screened to prevent blowing of litter and to provide effective means to control litter;

(e) provide protection of the tipping floor from wind, rain, or snow;

(f) have an adequate buffer zone around the active area to minimize noise and dust nuisances, and a buffer zone of 50 feet from the active area to the nearest property line in areas zoned residential;

(g) provide pollution control measures to protect surface and ground waters by the construction of:

(i) a run-off collection and treatment system, if required, must be designed and operated to collect and treat a 25-year storm and equipment cleaning and washdown water; and

(ii) a run-on prevention system to divert a 25-year storm event;

(h) provide all-weather access in all vehicular areas;

(i) provide pollution control measures to protect air quality including a prohibition against all burning and the development of odor and dust control plans to be made part of the plan of operation;

(j) prohibit scavenging;

(k) provide attendants on-site during hours of operation;

(l) have a sign that identifies the facility and shows at least the name of the site, hours during which the site is open for public use, materials not accepted at the facility, and other necessary information posted at the site entrance;

(m) prevent the acceptance of prohibited waste by meeting the requirements of Subsection R315-303-4(7);

(n) have communication capabilities, if available in the facility area, to immediately summon fire, police, or emergency service personnel in the event of an emergency; and

(o) remove all wastes at final closure from the facility to another permitted facility.

R315-313-3. Drop Box Facility Standards.

(1) Each drop box facility shall be constructed of durable watertight materials with a lid or screen on top that prevents both the loss of materials during transport and access by rats and other vermin.

(2) Each drop box facility shall be located in an easily

identifiable place accessible by all-weather roads.

(3) Each drop box facility shall be designed and serviced as often as necessary to ensure adequate storage capacity at all times. Storage of solid waste outside the drop boxes is prohibited.

(4) Each drop box facility shall have a sign at the entrance that complies with Subsection R315-313-2(2)(l).

(5) The owner or operator of each drop box facility shall remove all remaining wastes at final closure, to a permitted facility and remove the drop box.

KEY: solid waste management

April 25, 2013

Notice of Continuation February 13, 2013

19-6-104

19-6-105

19-6-108

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-314. Facility Standards for Piles Used for Storage and Treatment.

R315-314-1. Applicability.

(1) The requirements of Rule R315-314 apply to the following:

(a) a pile of solid waste containing garbage that has been in place for more than seven days;

(b) a pile of solid waste which does not contain garbage that has been in place for more than 90 days;

(c) a pile of material derived from waste tires where more than 1,000 passenger tire equivalents are stored at one site; and

(d) a pile of whole waste tires where more than 1,000 tires are stored at one site.

(2) The requirements of Rule R315-314 do not apply to the following:

(a) solid waste stored or treated in piles prior to recycling including compost piles and wood waste;

(b) solid waste stored in fully enclosed buildings, provided that no liquids or sludge containing free liquids are added to the waste;

(c) a pile of inert waste, as defined by Subsection R315-301-2(36); and

(d) a pile of whole waste tires located at a permitted waste disposal facility that is stored for not longer than one year.

(3) A site where crumb rubber, an ultimate product derived from waste tires, or waste tires that have been reduced to materials for beneficial use are stored for not longer than one year may receive a waiver of the requirements of Rule R315-314 from the Director on a site specific basis.

(a) No waiver of the requirements of Rule R315-314 will be granted by the Director without application from the owner or operator of the storage site.

(b) In granting a waiver of the requirements of Rule R315-314, the Director may place conditions on the owner or operator of the storage site as to the sizes of piles, distance between piles, or other operational practices that will minimize fire danger or a risk to human health or the environment.

(c) The Director may revoke a waiver of the Requirements of Rule R315-314 if the Director finds that:

(i) any condition of the waiver is not met; or

(ii) the operation of the storage site presents a fire danger or a threat to human health or the environment.

R315-314-2. General Requirements.

(1) Each owner and operator shall:

(a) comply with the applicable requirements of Section R315-302-2; and

(b) remove all solid waste from the pile at closure to another permitted facility.

(2) Requirements for Solid Waste Likely to Produce Leachate.

(a) Waste piles shall be placed upon a surface such as sealed concrete, asphalt, clay, or an artificial liner underlying the pile to prevent subsurface soil and potential ground water contamination and to allow collection of run-off and leachate. The liner shall be designed of sufficient thickness and strength to withstand stresses imposed by pile handling vehicles and the pile itself.

(b) A run-off collection and treatment system shall be designed, installed and maintained to collect and treat a 25-year storm event.

(c) Waste piles having a capacity of greater than 10,000 cubic yards shall have either:

(i) a ground water monitoring system that complies with Rule R315-308; or

(ii) a leachate detection, collection and treatment system.

(iii) For purposes of this subsection, capacity refers to the

total capacity of all leachate-generating piles at one facility, e.g., two, 5,000 cubic yard piles will subject the facility to the requirements of this subsection.

(d) A run-on prevention system shall be designed and maintained to divert the maximum flow from a 25-year storm event.

(e) The Director may require that the entire base or liner shall be inspected for wear and integrity and repaired or replaced by removing stored wastes or otherwise providing inspection access to the base or liner; the request shall be in writing and cite the reasons including valid ground water monitoring or leachate detection data leading to request such an inspection, repair or replacement.

(3) The length of time that solid waste may be stored in piles shall not exceed 1 year unless the Director determines that the solid waste may be stored in piles for a longer time period without becoming a threat to human health or the environment.

(4) The Director or an authorized representative may enter and inspect a site where waste is stored in piles as specified in Subsection R315-302-2(5)(b).

R315-314-3. Requirements for a Waste Tire Storage Facility.

(1) The definitions of Section R315-320-2 are applicable to the requirements for a waste tire storage facility.

(2) No waste tire storage facility may be established, maintained, or expanded until the owner or operator of the waste tire storage facility has obtained a permit from the Director. The owner or operator of the waste tire storage facility shall operate the facility in accordance with the conditions of the permit and otherwise follow the permit.

(3) The owner or operator of a waste tire storage facility shall:

(a) submit the following for approval by the Director:

(i) the information required in Subsections R315-310-8;

(ii) a plan of operation as required by Subsection R315-302-2(2);

(iii) a plot plan of the storage site showing:

(A) the arrangement and size of the tire piles on the site;

(B) the width of the fire lanes and the type and location of the fire control equipment; and

(C) the location of any on-site buildings and the type of fencing to surround the site;

(iv) a financial assurance plan including the date that the financial assurance mechanism becomes effective; and

(v) a vector control plan;

(b) accumulate tires only in designated areas;

(c) control access to the storage site by fencing;

(d) limit individual tire piles to a maximum of 5,000 square feet of continuous area in size at the base of the pile;

(e) limit the individual tire piles to 50,000 cubic feet in volume or 10 feet in height;

(f) insure that piles be at least 10 feet from any property line or any building and not exceed 6 feet in height when within 20 feet of any property line or building;

(g) provide for a 40 foot fire lane between tire piles that contains no flammable or combustible material or vegetation;

(h) effect a vector control program, if necessary, to minimize mosquito breeding and the harborage of other vectors such as rats or other animals;

(i) provide on-site fire control equipment that is maintained in good working order;

(j) display an emergency procedures plan and inspection approval by the local fire department and require all employees to be familiar with the plan;

(k) establish financial assurance for clean-up and closure of the site;

(l) in the amount of \$150 per ton of tires stored at the site; and

(ii) in the form of a trust fund, letter of credit, or other mechanism as approved by the Director;

(l) maintain a record of the number of:

(i) tires received at the site;

(ii) tires shipped from the site

(iii) piles of tires at the site; and

(iv) tires in each pile; and

(m) meet the applicable reporting requirements of Subsection R315-302-2(4).

(4) Whole Tires Stored in a Tire Fence.

(a) Whole Tires stored in a tire fence are exempt from Subsections R315-314-3(3)(e), (f), and (g) but must:

(i) obtain a permit from the Director as required by Subsection R315-314-3(2);

(ii) receive approval for establishing, maintaining, or expanding the tire fence from the local government and the local fire department and submit documentation of these approvals to the Director; and

(iii) maintain the fence no more than one tire wide and eight feet high.

(b) An owner of a tire fence may receive a waiver from the requirements of Subsection R315-314-3(4)(a)(i) if the Director receives written notice from the owner of the tire fence on or before November 15, 1999 that documents and certifies that:

(i) the tire fence was in existence prior to October 15, 1999; and

(ii) no tires have been added to the fence after October 14, 1999.

(5) Each tire recycler, as defined by Subsection 19-6-803(19), that stores tires in piles prior to recycling shall comply with the following requirements:

(a) if the tire recycler documents that the waste tires are stored for five or fewer days, the tire recycler shall:

(i) meet the requirements of Subsections R315-314-3(3)(b) through (g); or

(ii) obtain a waiver from the requirements of Subsections R315-314-3(3)(b) through (g) from the local fire department; or

(b) if the tire recycler does not document that the waste tires are stored for five or fewer days, the tire recycler shall be considered a waste tire storage facility and shall:

(i) meet the requirements of Subsections R315-314-3(2) and (3); and

(ii) the amount of financial assurance required by Subsection R315-314-3(3)(l) shall be \$150 per ton of tires held as the average inventory during the preceding year of operation.

KEY: solid waste management, waste disposal

April 25, 2013

19-6-104

Notice of Continuation February 13, 2013

19-6-105

19-6-108

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-315. Special Waste Requirements.

R315-315-1. General Requirements.

(1) If special wastes are accepted at the facility, proper provisions shall be made for handling and disposal. These provisions may include, where required and approved by the Director, a separate area for disposal of the wastes, designated by appropriate signs.

(2) Sections R315-315-2 through 9 are applicable to all solid waste facilities regulated by Rules R315-301 through 320.

R315-315-2. Asbestos Waste.

(1) Regulated asbestos-containing material to be disposed of shall be handled, transported, and disposed in a manner that will not permit the release of asbestos fibers into the air and must otherwise comply with Code of Federal Regulations, Title 40, Part 61, Section 154.

(2) No transporter or disposal facility shall accept regulated asbestos-containing material unless the waste has been adequately wetted and containerized.

(a) Regulated asbestos-containing material is adequately wetted when its moisture content prevents fiber release.

(b) Regulated asbestos-containing material is properly containerized when it is placed in double plastic bags of 6-mil or thicker, sealed in such a way to be leak-proof and air-tight, and the amount of void space or air in the bags is minimized. Regulated asbestos-containing material slurries must be packaged in leak-proof and air-tight rigid containers if such slurries are too heavy for the plastic bag containers. Upon submittal of a request, including documentation demonstrating safety, the Director may authorize other proper methods of containment which may include double bagging, plastic-lined cardboard containers, plastic-lined metal containers, or the use of vacuum trucks for the transport of slurry.

(c) All containers holding regulated asbestos-containing material shall be labeled with the name of the waste generator, the location where the waste was generated, and tagged with a warning label indicating that the containers hold regulated asbestos-containing material.

(3) The following standards apply to the disposal of Regulated Asbestos-Containing Material;

(a) upon entering the disposal site, the transporter of the regulated asbestos-containing material shall notify the landfill operator that the load contains regulated asbestos-containing material by presenting the waste shipment record. The landfill operator will verify quantities received, sign off on the waste shipment record, and send a copy of the waste shipment record to the generator within 30 days;

(b) upon receipt of the regulated asbestos-containing material, the landfill operator shall inspect the loads to verify that the regulated asbestos-containing material is properly contained in leak-proof containers and labeled appropriately. The operator shall notify the local health department and the Director if the operator believes that the regulated asbestos-containing material is in a condition that may cause fiber release during disposal. If the wastes are not properly containerized, and the landfill operator accepts the load, the operator shall thoroughly soak the regulated asbestos-containing material with a water spray prior to unloading, rinse out the truck, and immediately cover the regulated asbestos-containing material with material which prevents fiber release prior to compacting the regulated asbestos-containing material in the landfill.

(c) During deposition and covering of the regulated asbestos-containing material, the operator:

(i) may prepare a separate trench or separate area of the landfill to receive only regulated asbestos-containing material, or may dispose of the regulated asbestos-containing material at the working face of the landfill;

(ii) shall place the regulated asbestos-containing material containers into the trench, separate area, or at the bottom of the landfill working face with sufficient care to avoid breaking the containers;

(iii) within 18 hours or at the end of the operating day, shall completely cover the containerized regulated asbestos-containing material with sufficient care to avoid breaking the containers with a minimum of six inches of material containing no regulated asbestos-containing material. If the regulated asbestos-containing material is improperly containerized, it must be completely covered immediately with six inches of material containing no regulated asbestos-containing material; and

(iv) shall not compact regulated asbestos-containing material until completely covered with a minimum of six inches of material containing no regulated asbestos-containing material.

(d) The operator shall provide barriers adequate to control public access. At a minimum, the operator shall:

(i) limit access to the regulated asbestos-containing material management site to no more than two entrances by gates that can be locked when left unattended and by fencing adequate to restrict access by the general public; and

(ii) place warning signs at the entrances and at intervals no greater than 330 feet along the perimeter of the sections where regulated asbestos-containing material is deposited that comply with the requirements of 40 CFR 61.154(b); and

(e) close the separate trenches, if constructed, according to the requirements of Subsection R315-303-3(4) with the required signs in place.

R315-315-3. Ash.

(1) Ash Management.

(a) Ash may be recycled.

(b) If ash is disposed, the preferred method is in a permitted ash monofill, but ash may be disposed in a permitted Class I, II, III, or V landfill.

(2) Ash shall be transported in a manner to prevent leakage or the release of fugitive dust.

(3) Ash shall be handled and disposed at the landfill in a manner to prevent fugitive dust emissions.

R315-315-4. Bulky Waste.

Bulky waste such as automobile bodies, furniture, and appliances shall be crushed and then pushed onto the working face near the bottom of the cell, but not in an area that will compromise the integrity of the liner system, or into a separate disposal area.

R315-315-5. Sludge Requirements.

(1) Sludges, if they contain no free liquids, may be placed in the landfill working face and covered with other solid waste or other suitable cover material.

(2) Disposal of any type of sludge in a landfill must meet the requirements of Subsection R315-303-3(1).

R315-315-6. Dead Animals.

(1) Dead animals shall be managed and disposed in a manner that minimizes odors and the attraction, harborage, or propagation of insects, rodents, birds, or other animals.

(2) Dead animals may be disposed at the active working face of a permitted landfill or in a separate trench, at a permitted facility, specifically prepared to receive dead animals.

(a) If dead animals are disposed at the active working face of a permitted landfill, the carcasses shall be immediately covered with a minimum of two feet of soil other material.

(b) If dead animals are disposed in a separate trench, at a permitted facility, the carcasses shall be completely covered with a minimum of six inches of earth at the end of the working day the carcasses are received.

R315-315-7. PCB Containing Waste.

(1) Any facility that disposes of nonhazardous waste, hazardous waste, or radioactive waste containing PCBs is regulated by Rules R315-301 through 320.

(2) The following wastes containing PCBs may be disposed in a permitted Class I, II, III, IV, V, or VI Landfill; permitted incinerator; permitted energy recovery facility; or a facility permitted by rule under Rule R315-318:

(a) waste, as specified by 40 CFR 761.61, containing PCBs at concentrations less than 50 ppm;

(b) PCB household waste as defined by 40 CFR 761.3 ; and

(c) small quantities, 10 or fewer, of intact, non-leaking, small PCB capacitors, including capacitors from fluorescent lights x-ray machines, and other machines and test equipment.

(3) Waste containing PCBs at concentrations of 50 ppm or higher are prohibited from disposal in a landfill, incinerator, or energy recovery facility that is regulated by Rules R315-301 through 320, except:

(a) the following facilities may receive waste containing PCBs at concentrations of 50 ppm or higher for treatment or disposal:

(i) a facility permitted prior to July 15, 1993 under 40 CFR 761.70, .75 or .77; or

(ii) a facility permitted after July 15, 1993 under 40 CFR 761.70, .71, .72, .75, or .77 and approved by the Director under Rules R315-301 through 320; or

(b) a Class I or V landfill that has a liner and ground water monitoring or an incinerator that meets the requirements of Subsection R315-315-7(a)(i) or (ii) and when approved by the Director, may dispose of the following PCB wastes:

(i) PCB bulk products regulated by 40 CFR 761.62(b);

(ii) drained PCB contaminated equipment as defined by 40 CFR 761.3;

(iii) drained PCB articles, including drained PCB transformers, as defined by 40 CFR 761.3;

(iv) non-liquid cleaning materials remediation wastes containing PCB's regulated by 40 CFR 761.61(a)(5)(v)(A);

(v) PCB containing manufactured products regulated by 40 CFR 761.62(b)(1)(i) and (ii); or

(vi) non-liquid PCB containing waste, initially generated as a non-liquid waste, generated as a result of research and development regulated by 40 CFR 761.64(b)(2).

(c) If a unit of a permitted landfill is approved to receive PCB containing wastes under Subsection R315-315-7(3)(b), the owner or operator of the landfill:

(i) shall modify the approved Ground Water Monitoring Plan to include the testing of the ground water samples for PCB containing constituents at appropriate detection levels; and

(ii) shall test the leachate generated at the unit of the landfill for PCB's.

R315-315-8. Petroleum Contaminated Soils.

(1) Terms used in Section R315-315-8 are defined in Section R315-301-2. For the purpose of Section R315-315-8 and in addition to the definitions in Section R315-301-2, the following definition applies: "Petroleum contaminated soils" means soils that have been contaminated with either diesel or gasoline or both.

(2) Petroleum contaminated soils that are not a hazardous waste may be accepted for disposal at a:

(a) Class I Landfill;

(b) Class II Landfill;

(c) Class III Landfill; or

(d) Class V Landfill.

(3) Petroleum contaminated soils containing the following constituents at or below the following levels and are otherwise not a hazardous waste, may be accepted for disposal at a Class IV or VI Landfill:

(a) Benzene, 0.03 mg/kg;

(b) Ethylbenzene, 13 mg/kg;

(c) Toluene, 12 mg/kg; and

(d) Xylenes, 200 mg/kg.

R315-315-9. Waste Asphalt.

(1) The preferred management of waste asphalt is recycling. Recycling of waste asphalt occurs when it is used:

(a) as a feedstock in the manufacture of new hot or cold mix asphalt;

(b) as underlayment in road construction;

(c) as subgrade in road construction when the asphalt is above the historical high level of ground water;

(d) under parking lots when the asphalt is above the historical high level of ground water; or

(e) as road shoulder when the use meets engineering requirements.

(2) If waste asphalt is disposed, it shall be disposed in a permitted landfill.

KEY: solid waste management, waste disposal

April 25, 2013

Notice of Continuation February 13, 2013

19-6-105

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-316. Infectious Waste Requirements.****R315-316-1. Applicability.**

- (1) The standards of Rule R315-316 apply to:
 - (a) any health facility that generates more than 200 pounds, per month, of infectious waste;
 - (b) any transporter that collects and transports more than 200 pounds of infectious waste in any one load; and
 - (c) a facility storing more than 200 pounds of infectious waste, or a facility treating or disposing of infectious waste.
- (2) The standards of Rule R315-316 do not apply to
 - (a) any health facility that generates 200 pounds, or less, of infectious waste per month;
 - (b) any transporter that:
 - (i) collects and transports 200 pounds or less of infectious waste from all generators in any one load; or
 - (ii) collects infectious waste only from facilities that generate 200 pounds or less of infectious waste per week; and
 - (c) infectious waste generated by a household.

R315-316-2. General Operational Requirements.

- (1) Every owner and operator of a health facility or a transporter of infectious waste, regulated by Rule R315-316, that generates, transports, stores, treats, or disposes of infectious waste must prepare and maintain on file a management plan for the waste that identifies the:
 - (a) type and estimated quantity of waste generated or handled;
 - (b) segregation, packaging, and labeling procedures;
 - (c) collection, storage, and transportation procedures;
 - (d) treatment or disposal methods that will be used; and
 - (e) the person responsible for the management of the infectious waste.
- (2) Infectious waste consisting of recognizable human anatomical remains including human fetal remains shall be disposed by incineration or interment in a location appropriate for human remains.
- (3) For the purposes of Rule R315-316 "sharps" means any object that may be contaminated with a pathogen and that is capable of cutting or penetrating skin or a packaging material.

R315-316-3. Storage and Containment Requirements.

- (1) Infectious waste shall be contained in a manner and location which affords protection from animal intrusion, does not provide a breeding place or a food source for insects or rodents, and minimizes exposure to the public.
- (2) Unless all waste is considered infectious and labeled as such, infectious waste shall be segregated by separate containment from other waste during storage.
- (3) Except for sharps, infectious waste shall be contained in plastic bags or inside rigid containers. The bags shall be securely tied and the containers shall be securely sealed to prevent leakage or expulsion of solid or liquid wastes during storage or handling.
- (4) Sharps shall be contained for storage, transportation, treatment, and disposal in leak-proof, rigid, puncture-resistant containers which are taped closed or tightly lidded to preclude loss of contents.
- (5) All infectious waste containers should be red or orange and shall be clearly identified with the international biohazard sign and one of the following labels: "INFECTIOUS WASTE", "BIOMEDICAL WASTE", or "BIOHAZARD".
- (6) If other waste is placed in the same container as infectious waste, then the generator must package, label, and mark the container and its entire contents as infectious waste.
- (7) A rigid infectious waste container may be reused for infectious or non-infectious waste if it is thoroughly washed and decontaminated each time it is emptied or if the surfaces of the

container have been completely protected from contamination by disposable, unpunctured, or undamaged liners, bags, or other devices that are removed with the infectious waste, the surface of the liner has not been damaged or punctured.

(8) Storage and containment areas shall: protect infectious waste from the elements; be ventilated to the outside atmosphere; be accessible only to authorized persons; and be marked with prominent warning signs on, or adjacent to, the exterior doors or gates. The warning signs shall contain the international biohazard sign and shall state: "CAUTION -- INFECTIOUS WASTE STORAGE AREA -- UNAUTHORIZED PERSONS KEEP OUT" and must be easily read during daylight from a distance of 25 feet.

(9) If infectious waste is stored longer than seven days, the infectious waste shall be stored at or below a temperature of 40 degrees Fahrenheit (5 degrees Celsius).

(10) Under no conditions may infectious waste be stored for longer than 60 days.

(11) Compactors, grinders, or similar devices shall not be used to reduce the volume of infectious waste unless the device is contained sufficiently to prevent contamination of the surrounding area.

R315-316-4. Infectious Waste Transportation Requirements.

- (1) Infectious waste shall not be transported in the same vehicle with other waste unless the infectious waste is contained in a separate, fully enclosed leak-proof container within the vehicle or unless all of the waste is to be treated as infectious waste in accordance with Rule R315-316.
- (2) Persons manually loading or unloading containers of infectious waste onto or from transport vehicles shall:
 - (a) be trained in the proper use of protective equipment;
 - (b) have available and easily accessible at all times puncture resistant gloves and shoes, shatterproof glasses, and coveralls; and
 - (c) shall have face shields and respirators available.
- (3) Protective gear that becomes soiled with infectious waste shall be decontaminated or disposed as infectious waste.
- (3) Surfaces of transport vehicles that have contacted spilled or leaked infectious waste shall be decontaminated by procedures approved by the Director.
- (4) Vehicles transporting infectious waste shall meet all warning requirements of the Department of Transportation related to infectious, biohazardous or biomedical waste.
- (5) Each truck, trailer, or semitrailer, or container used for transporting infectious waste shall be designed and constructed, and its contents limited, so that under conditions normally incident to transportation, there shall be no releases of infectious waste to the environment.
- (6) Any truck, trailer, semitrailer, or container used for transporting infectious waste shall be free from leaks, and all discharge openings shall be securely closed during transportation.
- (7) No person shall transport infectious waste into the state for treatment, storage, or disposal unless the waste is packaged, contained, labeled and transported in the manner required by this section.
- (8) All transporter vehicles shall carry a spill containment and cleanup kit and the transport workers shall be trained in spill containment and cleanup procedures.

R315-316-5. Infectious Waste Treatment and Disposal Requirements.

- (1) Infectious waste shall be treated or disposed as soon as possible and shall be treated or disposed at a facility with a permit or other form of approval allowing the facility to treat or dispose infectious waste.
- (2)(a) All material that has been rendered non-infectious

through an approved treatment method may be handled as non-infectious solid waste, provided it is not otherwise a hazardous waste or a radioactive waste excluded from disposal in a solid waste facility by Rules R315-301 through 320.

(b) Except for incineration and steam sterilization, no treatment method may be used to render materials non-infectious without receiving prior approval from the Director.

(3) Infectious waste may be incinerated in an incinerator provided the incinerator is permitted or approved under Rules R315-301 through 320.

(4) Infectious waste may be sterilized by heating in a steam sterilizer to render the waste non-infectious.

(a) The operator shall have available, and shall certify in writing that he understands, written operating procedures for each steam sterilizer, including time, temperature, pressure, type of waste, type of container, closure of container, pattern of loading, water content, and maximum load quantity.

(b) Infectious waste shall be subjected to sufficient temperature, pressure and time to inactivate *Bacillus stearothermophilus* spores in the center of the waste load at a 6 Log₁₀ reduction or greater.

(c) Unless a steam sterilizer is equipped to continuously monitor and record temperature and pressure during the entire length of each sterilization cycle, each package of infectious waste to be sterilized shall have a temperature-sensitive tape or equivalent test material, such as chemical indicators, attached that will indicate if the sterilization temperature and pressure have been reached. Waste shall not be considered sterilized if the tape or equivalent indicator fails to indicate that a temperature of at least 250 degrees Fahrenheit (121 degrees Celsius) was reached and a pressure of at least 15 psi was maintained during the process.

(d) Each sterilization unit shall be evaluated for effectiveness with spores of *B. stearothermophilus* at least once each 40 hours of operation or each week, whichever is less frequent.

(e) A written log for each load shall be maintained for each sterilization unit which shall contain at a minimum:

(i) the time of day and the date of each load and the operator's name;

(ii) the amount and type of infectious waste placed in the sterilizer; and

(iii) the temperature, pressure, and duration of treatment.

(5)(a) Alternative treatment methods may be approved on a site-specific basis when the Director finds the proposed alternative treatment method renders the material non-infectious.

(b) The determination shall be based on the results of laboratory tests, submitted by the person proposing the use of the treatment method, meeting the following requirements:

(i) the laboratory tests shall be conducted:

(A) by qualified laboratory personnel;

(B) using recognized microbial techniques;

(C) on samples that have been inoculated with the test organisms, then subjected to the proposed treatment method and processed in an identical way to the treatment process being proposed for approval; and

(ii) the results of the tests must document that the proposed treatment method inactivates:

(A) vegetative bacteria - *Staphylococcus aureus* (ATCC 6538) or *Pseudomonas aeruginosa* (ATCC 15442) at a 6 Log₁₀ reduction or greater (a 99.9999% reduction or greater of the organism population);

(B) fungi - *Candida albicans* (ATCC 18804), *Penicillium chrysogenum* (ATCC 24791), or *Aspergillus niger* at a 6 Log₁₀ reduction or greater;

(C) viruses - Polio 2, Polio 3, or MS-2 Bacteriophage (ATCC15597-B1) at a 6 Log₁₀ reduction or greater;

(D) parasites - *Cryptosporidium* spp. oocysts or *Giardia* spp. cysts at a 6 Log₁₀ reduction or greater;

(E) mycobacteria - *Mycobacterium terrae* or *Mycobacterium phlei* at a 6 Log₁₀ reduction or greater; and

(B) Bacterial spores - *Bacillus stearothermophilus* spores (ATCC 7953) or *Bacillus subtilis* spores (ATCC 19659) at a 4 Log₁₀ reduction or greater (a 99.99% reduction or greater of the organism population).

(iii) The Director shall review the submitted materials and reply in writing within 30 days of the receipt of the treatment studies.

(6) Infectious waste may be discharged to a sewage treatment system that provides secondary treatment of waste but only if the waste is liquid or semi-solid and if approved by the operator of the sewage treatment system.

(7) Infectious waste may be disposed in a permitted Class I, II, or V Landfill. Upon entering the landfill, the transporter of infectious waste shall notify the landfill operator that the load contains infectious waste. The landfill operator shall abide by the following procedures in the disposition and covering of infectious waste:

(a) place the infectious waste containers in the working face with sufficient care to avoid breaking them;

(b) completely cover the infectious waste immediately with a minimum of 12 inches of earth or waste material containing no infectious waste; and

(c) not compact the infectious waste until completely covered with 12 inches of earth or waste material containing no infectious waste.

KEY: solid waste management, waste disposal

April 25, 2013

Notice of Continuation February 13, 2013

19-6-105

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-317. Other Processes, Variances, Violations, and Petition for Rule Change.****R315-317-1. Other Processes, Methods, and Equipment.**

Processes, methods, and equipment other than those specifically addressed in Rules R315-301 through 320 will be considered on an individual basis by the Director upon submission of evidence of adequacy to meet the minimum standards of performance to protect human health and the environment as required in Section R315-303-2.

R315-317-2. Variances.

(1) Variances will be granted in accordance with Section R315-2-13.

R315-317-3. Violations, Orders, and Hearings.

(1) Whenever the Director or his duly appointed representative determines that any person is in violation of any applicable approved solid waste operation plan or permit or the requirements of Rules R315-301 through 320, the Director may cause written notice of violation to be served upon the alleged violators. The notice shall specify the provisions of the plan, permit, or rules alleged to have been violated and the facts alleged to constitute the violation. The Director may issue an order that necessary corrective action be taken within a reasonable time or may request the attorney general or the county attorney in the county in which the violation takes place to bring a civil action for injunctive relief and enforcement of the permit requirements or the requirements of Rules R315-301 through 320.

(2) Any order issued pursuant to Subsection R315-317-3(1) shall become final unless, within 30 days after the order is issued, the person to whom the order is addressed challenges the order as provided in 19-1-301 and the Utah Administrative Procedures Act, Title 63G, Chapter 4 and shall be governed by UAC R305-7.

R315-317-4. Petition for Rule Change.

(1) The requirements of Section R315-317-4 shall apply to a petition for:

- (a) making a new rule;
- (b) amending, repealing, or repealing and reenacting and existing rule;
- (c) amending a proposed rule;
- (d) allowing a proposed rule or change in proposed rule to lapse; or
- (e) any combination of the above.

(2) Petition Procedure and Form.

(a) The petition shall be addressed and delivered to the Director.

(b) The petition shall follow the requirements of Sections R15-2-3 through 5.

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-318. Permit by Rule.****R315-318-1. General Requirements.**

(1) Any facility that disposes of solid waste, including an incinerator, may be permitted by rule upon application to the Director if the Director determines the facility is regulated by Federal or state agencies which have regulations or rules as stringent as, or more stringent than, Rules R315-301 through R315-320.

(2) No permit by rule may be granted to a facility that began receiving waste after July 15, 1993 without application to the Director.

(3) Any facility permitted by rule is not required to obtain a permit as required by Subsection R315-301-5(1) and Subsection R315-310-1(1) but may be required to follow operational practices, as determined by the Director, to minimize risk to human health or the environment.

(4) In no case may a facility operating under a permit by rule approved by the Director conduct disposal operations that are in violation of the Utah Solid and Hazardous Waste Act or Rules R315-301 through R315-320.

R315-318-2. Facilities Permitted by Rule.

(1) The following facilities that began receiving waste prior to July 15, 1993 are permitted by rule:

(a) solid waste disposal and incineration facilities which are required to operate under the conditions of a state or Federal hazardous waste permit or plan approval;

(b) disposal operations or activities which are required to operate under the conditions of a Utah Division of Oil, Gas, and Mining permit or plan approval;

(c) non-commercial underground injection facilities regulated by the Utah Division of Water Quality; and

(d) disposal operations or activities which accept only radioactive waste and are required to operate under the conditions of a Division permit or plan approval.

(2) An underground storage tank, as defined by 40 CFR 280.12 and Subsection R311-200-1(43), that by meeting the requirements specified in 40 CFR 280.71(b) and Section R311-204-3, is closed in place, may be permitted by rule after meeting the following conditions:

(a) the owner of the underground storage tank shall notify the Director of the in place closure; and

(b) the owner of the underground storage tank shall provide documentation to the Director that the requirements of Subsection R315-302-2(6) have been met.

KEY: solid waste management, waste disposal**April 25, 2013****Notice of Continuation February 13, 2013****19-6-104****19-6-105****19-6-108**

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-320. Waste Tire Transporter and Recycler Requirements.****R315-320-1. Authority, Purpose, and Inspection.**

(1) The waste tire transporter and recycler requirements are promulgated under the authority of the Waste Tire Recycling Act, Title 19, Chapter 6, and the Solid and Hazardous Waste Act Title 19, Chapter 6, to protect human health; to prevent land, air and water pollution; to conserve the state's natural, economic, and energy resources; and to promote recycling of waste tires.

(2) Except for Subsections R315-320-4(7) and R315-320-5(7), which apply to the application fees for the registration of a waste tire transporter and a waste tire recycler throughout the state, Rule R315-320 does not supersede any ordinance or regulation adopted by the governing body of a political subdivision or local health department if the ordinance or regulation is at least as stringent as Rule R315-320, nor does Rule R315-320 relieve a tire transporter or recycler from the requirement to meet all applicable local ordinances or regulations.

(3) The Director or an authorized representative may enter and inspect the site of a waste tire transporter or a waste tire recycler as specified in Subsection R315-302-2(5)(b).

R315-320-2. Definitions.

Terms used in Rule R315-320 are defined in Sections R315-301-2 and 19-6-803. In addition, for the purpose of Rule R315-320, the following definitions apply:

(1) "Demonstrated market" or "market" means the legal transfer of ownership of material derived from waste tires between a willing seller and a willing buyer meeting the following conditions:

(a) total control of the material derived from waste tires is transferred from the seller to the buyer;

(b) the transfer of ownership and control is an "arms length transaction" between a seller and a buyer who have no other business relationship or responsibility to each other;

(c) the transaction is done under contract which is documented and verified by orders, invoices, and payments; and

(d) the transaction is at a price dictated by current economic conditions.

(e) the possibility or potential of sale does not constitute a demonstrated market.

(2) "Waste tire generator" means a person, an individual, or an entity that may cause waste tires to enter the waste stream. A waste tire generator may include:

(a) a tire dealer, a car dealer, a trucking company, an owner or operator of an auto salvage yard, or other person, individual, or entity that removes or replaces tires on a vehicle; or

(b) a tire dealer, a car dealer, a trucking company, an owner or operator of an auto salvage yard, a waste tire transporter, a waste tire recycler, a waste tire processor, a waste tire storage facility, or a disposal facility that receives waste tires from a person, an individual, or an entity.

R315-320-3. Landfilling of Waste Tires and Material Derived from Waste Tires.

(1) Disposal of waste tires or material derived from waste tires is prohibited except as allowed by Subsection R315-320-3(2) or (3).

(2) Landfilling of Whole Tires. A landfill may not receive whole waste tires for disposal except as follows:

(a) waste tires delivered to a landfill no more than four whole tires at one time by an individual, including a waste tire transporter; or

(b) waste tires from devices moved exclusively by human power; or

(c) waste tires with a rim diameter greater than 24.5 inches.

(3) Landfilling of Material Derived from Waste Tires.

(a) A landfill, which has a permit issued by the Director, may receive material derived from waste tires for disposal.

(b) Except for the beneficial use of material derived from waste tires at a landfill, material derived from waste tires shall be disposed in a separate landfill cell that is designed and constructed, as approved by the Director, to keep the material in a clean and accessible condition so that it can reasonably be retrieved from the cell for future recycling.

(4) Reimbursement for Landfilling Shredded Tires.

(a) The owner or operator of a permitted landfill may apply for reimbursement for landfilling shredded tires as specified in Subsection R315-320-6(1).

(b) To receive the reimbursement, the owner or operator of the landfill must meet the following conditions:

(i) the waste tires shall be shredded;

(ii) the shredded tires shall be stored in a segregated cell or other landfill facility that ensures the shredded tires are in a clean and accessible condition so that they can be reasonably retrieved and recycled at a future time; and

(iii) the design and operation of the landfill cell or other landfill facility has been reviewed and approved by the Director prior to the acceptance of shredded tires.

(5) Violation of Subsection R315-320-3(1), (2), or (3) is subject to enforcement proceedings and a civil penalty as specified in Subsection 19-6-804(4).

R315-320-4. Waste Tire Transporter Requirements.

(1) Each waste tire transporter who transports waste tires within the state of Utah must apply for, receive and maintain a current waste tire transporter registration certificate from the Director.

(2) Each applicant for registration as a waste tire transporter shall complete a waste tire transporter application form provided by the Director and provide the following information:

(a) business name;

(b) address to include:

(i) mailing address; and

(ii) site address if different from mailing address;

(c) telephone number;

(d) list of vehicles used including the following:

(i) description of vehicle;

(ii) license number of vehicle;

(iii) vehicle identification number; and

(iv) name of registered owner;

(e) name of business owner;

(f) name of business operator;

(g) list of sites to which waste tires are to be transported;

(h) liability insurance information as follows:

(i) name of company issuing policy;

(ii) amount of liability insurance coverage; and

(iii) term of policy.

(i) meet the requirements of R315-320-4(3)(b) and (c).

(3) A waste tire transporter shall:

(a) demonstrate financial responsibility for bodily injury and property damage, including bodily injury and property damage to third parties caused by sudden or nonsudden accidental occurrences arising from transporting waste tires. The waste tire transporter shall have and maintain liability coverage for sudden or nonsudden accidental occurrences in the amount of \$300,000;

(b) for the initial application for a waste tire transporter registration or for any subsequent application for registration at a site not previously registered, demonstrate to the Director that all local government requirements for a waste tire transporter have been met, including obtaining all necessary permits or

approvals where required; and

(c) demonstrate to the Director that the waste tires transported by the transporter are taken to a registered waste tire recycler or that the waste tires are placed in a permitted waste tire storage facility that is in full compliance with the requirements of Rule R315-314. Filing of a complete report as required in Subsection R315-320-4(9) shall constitute compliance with this requirement.

(4) A waste tire transporter shall notify the Director of:

(a) any change in liability insurance coverage within 5 working days of the change; and

(b) any other change in the information provided in Subsection R315-320-4(2) within 20 days of the change.

(5) A registration certificate will be issued to an applicant following the:

(a) completion of the application required by Subsection R315-320-4(2);

(b) presentation of proof of liability coverage as required by Subsection R315-320-4(3); and

(c) payment of the fee as established by the Annual Appropriations Act.

(6) A waste tire transporter registration certificate is not transferable and shall be issued for the term of one year.

(7) If a waste tire transporter is required to be registered by a local government or a local health department:

(a) the waste tire transporter may be assessed an annual registration fee by the local government or the local health department not to exceed the following schedule:

(i) for one through five trucks, \$50; and

(ii) \$10 for each additional truck;

(b) the Director shall issue a non-transferable registration certificate upon the applicant meeting the requirements of Subsections R315-320-4(2) and (3) and shall not require the payment of the fee specified in Subsection R315-320-4(5)(c), if the fee allowed in Subsection R315-320-4(7)(a) is paid; and

(c) the registration certificate shall be valid for one year.

(8) Waste tire transporters storing tires in piles must meet the requirements of Rule R315-314.

(9) Reporting Requirements.

(a) Each waste tire transporter shall submit a quarterly activity report to the Director. The activity report shall be submitted on or before the 30th of the month following the end of each quarter.

(b) The activity report shall contain the following information:

(i) the number of waste tires collected at each waste tire generator, including the name, address, and telephone number of the waste tire generator;

(ii) the number of tires shall be listed by the type of tire based on the following:

(A) passenger/light truck tires or tires with a rim diameter of 19.5 inches or less;

(B) truck tires or tires ranging in size from 7.50x20 to 12R24.5; and

(C) other tires such as farm tractor, earth mover, motorcycle, golf cart, ATV, etc.

(iii) the number or tons of waste tires shipped to each waste tire recycler or processor for a waste tire recycler, including the name, address, and telephone number of each recycler or processor;

(iv) the number of tires shipped as used tires to be resold;

(v) the number of waste tires placed in a permitted waste tire storage facility; and

(vi) the number of tires disposed in a permitted landfill, or put to other legal use.

(c) The activity report may be submitted in electronic format.

(10) Revocation of Registration.

(a) The registration of a waste tire transporter may be

revoked upon the Director finding that:

(i) the activities of the waste tire transporter that are regulated under Section R315-320-4 have been or are being conducted in a way that endangers human health or the environment;

(ii) the waste tire transporter has made a material misstatement of fact in applying for or obtaining a registration as a waste tire transporter or in the quarterly activity report required by Subsection R315-320-4(9);

(iii) the waste tire transporter has provided a recycler with a material misstatement of fact which the recycler subsequently used as documentation in a request for partial reimbursement under Section 19-6-813;

(iv) the waste tire transporter has violated any provision of the Waste Tire Recycling Act, Title 19 Chapter 6, or any order, approval, or rule issued or adopted under the Act;

(v) the waste tire transporter failed to meet or no longer meets the requirements of Section R315-320-4;

(vi) the waste tire transporter has been convicted under Subsection 19-6-822; or

(vii) the waste tire transporter has had the registration from a local government or a local health department revoked.

(b) Registration will not be revoked for submittal of incomplete information required for registration or a reimbursement request if the error was not a material misstatement.

(c) For purposes of Subsection R315-320-4(10)(a), the statements, actions, or failure to act of a waste tire transporter shall include the statements, actions, or failure to act of any officer, director, agent or employee of the waste tire transporter.

(d) The administrative procedures set forth in Rule R315-12 shall govern revocation of registration.

R315-320-5. Waste Tire Recycler Requirements.

(1) Each waste tire recycler requesting the reimbursement allowed by Subsection 19-6-809(1), must apply for, receive, and maintain a current waste tire recycler registration certificate from the Director.

(2) Each applicant for registration as a waste tire recycler shall complete a waste tire recycler application form provided by the Director and provide the following information:

(a) business name;

(b) address to include:

(i) mailing address; and

(ii) site address if different from mailing address;

(c) telephone number;

(d) owner name;

(e) operator name;

(f) description of the recycling process;

(g) proof that the recycling process described in Subsection R315-320-5(2)(f) :

(i) is being conducted at the site; or

(ii) for the initial application for a recycler registration, that the recycler has the equipment in place and the ability to conduct the process at the site;

(h) estimated number of tires to be recycled each year;

(i) liability insurance information as follows:

(i) name of company issuing policy;

(ii) proof of the amount of liability insurance coverage; and

(iii) term of policy; and

(j) meet the requirements of Subsection R315-320-5(3)(b).

(3) A waste tire recycler shall:

(a) demonstrate financial responsibility for bodily injury and property damage, including bodily injury and property damage to third parties caused by sudden or nonsudden accidental occurrences arising from storing and recycling waste tires. The waste tire recycler shall have and maintain liability coverage for sudden or nonsudden accidental occurrences in the amount of \$300,000; and

(b) for the initial application for a recycler registration or for any subsequent application for registration at a site not previously registered, demonstrate to the Director that all local requirements for a waste tire recycler have been met, including obtaining all necessary permits or approvals where required.

(4) A waste tire recycler shall notify the Director of:

(a) any change in liability insurance coverage within 5 working days of the change; and

(b) any other change in the information provided in Subsection R315-320-5(2) within 20 days of the change.

(5) A registration certificate will be issued to an applicant following the:

(a) completion of the application required by Subsection R315-320-5(2);

(b) presentation of proof of liability coverage as required by Subsection R315-320-5(3); and

(c) payment of the fee as established by the Annual Appropriations Act.

(6) A waste tire recycler registration certificate is not transferable and shall be issued for a term of one year.

(7) If a waste tire recycler is required to be registered by a local government or a local health department:

(a) the waste tire recycler may be assessed an annual registration fee by the local government or local health department according to the following schedule:

(i) if up to 200 tons of waste tires are recycled per day, the fee shall not exceed \$300;

(ii) if 201 to 700 tons of waste tires are recycled per day, the fee shall not exceed \$400; or

(iii) if over 700 tons of waste tires are recycled per day, the fee shall not exceed \$500.

(b) The Director shall issue a non-transferable registration certificate upon the applicant meeting the requirements of Subsections R315-320-5(2) and (3) and shall not require the payment of the fee specified in Subsection R315-320-5(5)(c), if the fee allowed by Subsection R315-320-5(7)(a) is paid.

(c) The registration certificate shall be valid for one year.

(8) Waste tire recyclers must meet the requirements of Rule R315-314 for waste tires stored in piles.

(9) Revocation of Registration.

(a) The registration of a waste tire recycler may be revoked upon the Director finding that:

(i) the activities of the waste tire recycler that are regulated under Section R315-320-5 have been or are being conducted in a way that endangers human health or the environment;

(ii) the waste tire recycler has made a material misstatement of fact in applying for or obtaining a registration as a waste tire recycler;

(iii) the waste tire recycler has made a material misstatement of fact in applying for partial reimbursement under Section 19-6-813;

(iv) the waste tire recycler has violated any provision of the Waste Tire Recycling Act, Title 19 Chapter 6, or any order, approval, or rule issued or adopted under the Act;

(v) the waste tire recycler has failed to meet or no longer meets the requirements of Subsection R315-320-5(1);

(vi) the waste tire recycler has been convicted under Subsection 19-6-822; or

(vii) the waste tire recycler has had the registration from a local government or a local health department revoked.

(b) Registration will not be revoked for submittal of incomplete information required for registration or a reimbursement request if the error was not a material misstatement.

(c) For purposes of Subsection R315-320-5(9)(a), the statements, action, or failure to act of a waste tire recycler shall include the statements, actions, or failure to act of any officer, director, agent, or employee of the waste tire recycler.

(d) The administrative procedures set forth in Rule R315-

12 shall govern revocation of registration.

R315-320-6. Reimbursement for Recycling Waste Tires.

(1) No partial reimbursement request submitted by a waste tire recycler for the first time, or the first time a specific recycling process or a beneficial use activity is used, shall be approved by a local health department under Section 19-6-813 until the local health department has received from the Director a written certification that the Director has determined the processing of the waste tires is recycling or a beneficial use. If the reimbursement request contains sufficient information, the Director shall make the recycling or beneficial use determination and notify the local health department in writing within 15 days of receiving the request for determination.

(2) No partial reimbursement may be requested or paid for waste tires that were generated in Utah and recycled at an out-of-state location except as allowed by Subsection 19-6-809(1)(a)(ii)(C) or (D).

(3) In addition to any other penalty imposed by law, any person who knowingly or intentionally provides false information required by Section R315-320-5 or Section R315-320-6 shall be ineligible to receive any reimbursement and shall return to the Division of Finance any reimbursement previously received that was obtained through the use of false information.

R315-320-7. Reimbursement for the Removal of an Abandoned Tire Pile or a Tire Pile at a Landfill Owned by a Governmental Entity.

(1) A county or municipality applying for payment for removal of an abandoned tire pile or a tire pile at a county or municipal owned landfill shall meet the requirements of Section 19-6-811.

(2) Determination of Reasonability of a Bid.

(a) The following items shall be submitted to the Director when requesting a determination of reasonability of a bid as specified in Subsections 19-6-811(3) and (4):

(i) a copy of the bid;

(ii) a letter from the local health department stating that the tire pile is abandoned or that the tire pile is at a landfill owned or operated by a governmental entity; and

(iii) a written statement from the county or municipality that the bidding was conducted according to the legal requirements for competitive bidding.

(b) The Director will review the submitted documentation in accordance with Subsection 19-6-811(4) and will inform the county or municipality if the bid is reasonable.

(c) A determination of reasonability of the bid will be made and the county or municipality notified within 30 days of receipt of the request by the Director.

(d) A bid determined to be unreasonable shall not be deemed eligible for reimbursement.

(3) If the Director determines that the bid to remove waste tires from an abandoned waste tire pile or from a waste tire pile at a landfill owned or operated by a governmental entity is reasonable and that there are sufficient monies in the trust fund to pay the expected reimbursements for the transportation, recycling, or beneficial use under Section 19-6-809 during the next quarter, the Director may authorize a maximum reimbursement of:

(a) 100% of a waste tire transporter's or recycler's costs allowed under Subsection 19-6-811(2) to remove the waste tires from the waste tire pile and deliver the waste tires to a recycler if no waste tires have been added to the waste tire pile after June 30, 2001; or

(b) 60% of a waste tire transporter's or recycler's costs allowed under Subsection 19-6-811(2) to remove the waste tires from the waste tire pile and deliver the waste tires to a recycler if waste tires have been added to the waste tire pile after June 30, 2001.

KEY: solid waste management, waste disposal

April 25, 2013

19-6-105

Notice of Continuation February 13, 2013

19-6-819

R317. Environmental Quality, Water Quality.**R317-4. Onsite Wastewater Systems.****R317-4-1. Authority, Purpose, Scope, and Administrative Requirements.**

1.1 Authorization.

These rules are administered by the division authorized by Title 19 Chapter 5.

1.2. Purpose.

The purpose of this rule is to protect the public health and environment from potential adverse effects from onsite wastewater disposal within the boundaries of Utah.

1.3. Scope.

This rule shall apply to onsite wastewater systems.

1.4. Jurisdiction.

Local health departments have jurisdiction to administer this rule. Nothing contained in this rule shall be construed to prevent local health departments from:

A. adopting stricter requirements than those contained herein;

B. issuing an operating permit, with a term not exceeding five years, with an inspection showing a satisfactory performance of the permitted system by the department's staff before renewal;

C. taking necessary steps for ground water quality protection:

1. through adoption of a ground water quality protection management policy based on a ground water management study; or

2. by an onsite wastewater systems management planning policy and land use planning through the county's agency;

D. prohibiting any alternative system within its jurisdiction;

E. assessing fees for administration of this rule;

F. requiring the onsite systems within its jurisdiction be placed under an umbrella of a:

1. responsible management entity overseen by the local health department;

2. contract service provider overseen by the local health department; or

3. management district body politic created by the county for the purpose of operation, maintenance, repairs and monitoring of alternative or all onsite wastewater systems;

G. requiring conventional and alternative systems to be serviced; and

H. receiving a request for a variance, conducting a review, and granting either an approval or denial.

1.5. Alternative System Administration.

Local health departments shall administer an alternative systems program.

A. The local board of health may restrict its administration of these systems by notifying the division that it is exempt from this requirement by:

1. adopting a resolution or regulation; or

2. presenting an ordinance.

B. An alternative systems program shall:

1. advise the owner of the:

a. type of alternative system;

b. information concerning risk of failure;

c. level of maintenance required;

d. financial liability for repair, modification or replacement of a failed system; and

e. periodic monitoring requirements;

2. ensure that a Notice of the existence of the alternative system is recorded in the chain of title for that property;

3. provide oversight of installed alternative systems;

4. inspect all installed alternative systems at frequency specified in this rule, through:

a. the department's staff;

b. contracted service providers;

c. responsible management entities;

d. a management district body politic created by the county for the purpose of managing onsite wastewater systems; or

e. any combination of the above options;

5. maintain records of all installed alternative systems, failures, modifications, repairs and all inspections, recording the condition of the system at the time of inspection, such as overflow, surfacing, ponding, and nuisance;

6. submit an annual report to the division on or before September 1 for the previous state of Utah fiscal year's activities showing:

a. the type and number of alternative systems approved, installed, modified, repaired, failed, and inspected;

b. a summary of enforcement actions taken, pending and resolved; and

c. a summary of performance of water quality data collected;

7. require all alternative systems to be inspected and serviced as detailed in Section R317-4-13 Table 7 and Section R317-4-11.

1.6. Variance Administration Authority.

The Water Quality Board delegates the authority to grant or deny variances to the design requirements provided for in this rule to the local health departments. The board may amend, suspend, or rescind this delegation of authority to a local health department if it is determined that the local health department is not accepting or conducting reviews as described in Section R317-4-12.

A. The local health department having jurisdiction shall accept applications for variance requests on lots that are deemed not feasible for permitting an onsite wastewater system. Upon completion of a review, the local health department will grant or deny a variance to this rule as outlined in Section R317-4-12. The local health department also will submit an annual report of completed variance determinations to the division.

B. If a local health department fails to evaluate variance requests according to Section R317-4-12, the director shall notify the local health department. The director on behalf of the board may thereafter amend, suspend, or rescind the delegation of variance authority to the local health department. The variance authority would then revert to the division, and requests will be reviewed as follows.

1. The director may appoint a variance advisory committee to consider variance requests and make recommendations to the director. Any such advisory committee shall include at least one representative from a local health department. The director may refer any variance request to the variance advisory committee.

2. Upon review of the recommendation submitted by the variance advisory committee, the director shall render a written determination of the requested variance. If no committee was appointed by the director, the director shall render a written determination. Written determinations must be given within 180 days of the receipt of a complete and technically adequate variance request.

3. The director's final written determination will be forwarded to the local health department that has jurisdiction. The local health department is not required to approve or deny an operating or construction permit based on the director's determination of a variance request.

R317-4-2. Definitions.

"Absorption area" means the entire area used for the subsurface treatment and dispersion of effluent by an absorption system.

"Absorption bed" means an absorption system consisting of large excavated areas utilizing drain media or chambers.

"Absorption system" means a covered system constructed to receive and to disperse effluent, from gravity or a pump, in

such a manner that the effluent is effectively filtered and retained below the ground surface.

"Absorption trench" means an absorption system consisting of a series of narrow excavated trenches utilizing drain media, chambers, or bundled synthetic aggregate units.

"Alternative onsite wastewater system" means an onsite wastewater system that is not a conventional onsite wastewater system.

"At-grade system" means an alternative onsite wastewater system where the bottom of the absorption system is placed at or below the elevation of the existing site grade, and the top of the distribution pipe is above the elevation of existing site grade, and the absorption system is contained within fill that extends above that grade.

"Barrier material" means an effective, pervious material such as an acceptable synthetic filter fabric, or a two-inch layer of compacted straw.

"Bedrock" means the rock, usually solid, that underlies soil or other unconsolidated, superficial material.

"Bedroom" means any portion of a dwelling that is so designed as to furnish the minimum isolation necessary for use as a sleeping area. It may include a den, study, sewing room, or sleeping loft. Unfinished basements shall be counted as a minimum of one additional bedroom.

"Board" means the Utah Water Quality Board.

"Body politic" means the state or its agencies or any political subdivision of the state to include a county, city, town, improvement district, taxing district or other governmental subdivision or public corporation of the state.

"Building sewer" means the pipe that carries wastewater from the building to a public sewer, an onsite wastewater system or other point of dispersal. It is synonymous with "house sewer".

"Bundled synthetic aggregate trench" means an absorption trench utilizing bundled synthetic aggregate units.

"Bundled synthetic aggregate unit" means a cylindrically shaped manufactured unit of synthetic aggregate enclosed in polyolefin netting, which may contain a perforated pipe.

"Chamber" means an open bottom, chambered structure of an approved material and design.

"Chambered trench" means an absorption trench utilizing chambers.

"Cleanout" means a device designed to provide access for removal of deposited or accumulated materials, generally from a pipe.

"Closed loop distribution" means a distribution method where the absorption system layout has the inlet and outlet ends of each lateral connected creating a complete and continuous pathway for effluent flow.

"Coarse drain media" means drain media ranging from 3/4 to 12 inches in diameter.

"Condominium" means the ownership of a single unit in a multi-unit project together with an undivided interest in common, in the common areas and facilities of the property.

"Connecting trench" means an absorption trench that is used to connect other absorption trenches, is less than 20 feet in length, and may be used to calculate total required absorption area.

"Construction permit" means the permit that authorizes an onsite wastewater system to be installed according to an approved design. An additional construction permit may also authorize activities associated with the repair or alteration of a malfunctioning or failing system.

"Conventional onsite wastewater system" means an onsite wastewater system typically consisting of a building sewer, a septic tank, and an absorption system utilizing absorption trenches, absorption beds, deep wall trenches, or seepage pits.

"Cover" means soils used to overlay the absorption area that is free of large stones 10 inches diameter or larger, frozen clumps of earth, masonry, stumps, or waste construction

material, or other materials that could damage the system.

"Curtain drain" means any ground water interceptor or drainage system that is backfilled with gravel or other suitable material and is intended to interrupt or divert the course of shallow ground water or surface water away from the onsite wastewater system.

"Designer" means a person who fulfills the requirements of Rule R317-11.

"Deep wall trench" means an absorption system consisting of deep excavated trenches utilizing coarse drain media, with a minimum sidewall absorption depth of 24 inches of suitable soil formation below the distribution pipe.

"Director" means the director of the Division of Water Quality or, for purposes of groundwater quality at a facility licensed by and under the Division of Radiation Control, the director of the Division of Radiation Control.

"Distribution box" means a watertight structure that receives effluent and distributes it concurrently, in essentially equal portions, into two or more pipes leading to an absorption system.

"Distribution pipe" means an approved pipe, solid or perforated, used in the dispersion of effluent in an absorption system.

"Diversion valve" means a watertight structure that receives effluent through one inlet and distributes it to two or more outlets, only one of which is used at a time.

"Division" means the Utah Division of Water Quality.

"Domestic wastewater" means a combination of the liquid or water-carried wastes from residences, business buildings, institutions, and other establishments with installed plumbing facilities, excluding non-domestic wastewater. It is synonymous with the term "sewage".

"Drain media" means media used in an absorption system. It shall consist of stone, crushed stone, or gravel, ranging from 3/4 to 2-1/2 inches in diameter. It shall be free from fines, dust, sand or organic material and shall be durable and inert so that it will maintain its integrity, will not collapse or disintegrate with time. The maximum fines in the media shall be 2% by weight passing through a US Standard #10 mesh or 2 millimeter sieve. It shall be protected by a barrier material.

"Drainage system" means all the piping within public or private premises that conveys sewage or other liquid wastes to a legal point of treatment and dispersal, but does not include the mains of a public sewer system or a public sewage treatment or disposal plant.

"Drop box" means a watertight structure that receives septic tank effluent and distributes it into one or more distribution pipes, and into an overflow leading to another drop box and absorption system located at a lower elevation.

"Dry wash" means the dry bed of an ephemeral stream that flows only after heavy rains and is often found at the bottom of a canyon.

"Dwelling" means any structure, building, or any portion thereof that is used, intended, or designed to be occupied for human living purposes including houses, mobile homes, hotels, motels, and apartments.

"Effluent" means the liquid discharge from any treatment unit including a septic tank.

"Effluent pump" means a pump used to lift effluent.

"Effluent sewer" means solid pipe that carries effluent to the absorption system.

"Ejector pump" means a device to elevate or pump sewage to a septic tank, public sewer, or other means of disposal.

"Ephemeral stream" means a stream that flows for a small period of time, a week or less, after a precipitation event.

"Excessively permeable soil" means soils having an excessively high permeability, such as cobbles or gravels with little fines and large voids, and having a percolation rate faster than 1 minute per inch.

"Experimental onsite wastewater system" means an onsite wastewater treatment and absorption system that is still in experimental use and requires further testing in order to provide sufficient information to determine its acceptance.

"Filter fabric" means a synthetic, non-degradable woven or spun-bonded sheet material that has adequate tensile strength to prevent ripping during installation and backfilling, adequate permeability to allow free passage of water and gases; and adequate particle retention to prevent downward migration of soil particles into the absorption system. The minimum physical properties for the fabric shall be 4.0 ounces per square yard or equivalent.

"Ground water" means that portion of subsurface water that is in the zone of soil saturation.

"Ground water table" means the surface of a body of unconfined ground water in which the pressure is equal to that of the atmosphere.

"Ground water table, perched" means unconfined ground water separated from an underlying body of ground water by an unsaturated zone. It is underlain by a restrictive strata or impervious layer. Perched ground water may be either permanent, where recharge is frequent enough to maintain a saturated zone above the perching bed, or temporary, where intermittent recharge is not great or frequent enough to prevent the perched water from disappearing from time to time as a result of drainage over the edge of or through the perching bed.

"Gulch" means a small rocky ravine or a narrow gorge, especially one with an ephemeral stream running through it.

"Gully" means a channel or small valley, especially one carved out by persistent heavy rainfall or an ephemeral stream.

"Impervious strata" means a layer that prevents water or root penetration. In addition, it shall be defined as unsuitable soils or soils having a percolation rate slower than 60 minutes per inch for conventional systems.

"Installer" means a qualified person with an appropriate contractor's license and knowledgeable in the installation or repair of an onsite wastewater system or its components.

"Intermittent stream" means a stream that flows for a period longer than an ephemeral stream on a seasonal basis or after a precipitation event.

"Invert" means the lowest portion of the internal cross section of a pipe or fitting.

"Lateral" means a length of distribution pipe or chambered trenches in the absorption system.

"Local health department" means a county or multi-county local health department established under Title 26A.

"Lot" means a portion of a subdivision, or any other parcel of land intended as a unit for transfer of ownership or for development or both and may not include any part of the right-of-way of a street or road.

"Malfunctioning or failing system" means an onsite wastewater system that is not functioning in compliance with the requirements of this regulation and may include:

- A. absorption systems that seep or flow to the surface of the ground or into waters of the state;
- B. systems that overflow from any of their components;
- C. systems that, due to failure to operate in accordance with their designed operation, cause backflow into any portion of a building drainage system;
- D. systems discharging effluent that does not comply with applicable effluent discharge standards;
- E. leaking septic tanks; or
- F. noncompliance with standards stipulated on or by the construction permit, operating permit, or both.

"Maximum ground water table" means the highest elevation that the top of the "ground water table" or "ground water table, perched" is expected to reach for any reason over the full operating life of the onsite wastewater system at that site.

"May" means discretionary, permissive, or allowed.

"Mound system" means an alternative onsite wastewater system where the bottom of the absorption system is placed above the elevation of the original site, and the absorption system is contained in a mounded fill body above that grade.

"Non-closed loop distribution" means a distribution method where the absorption system layout has lateral ends that are not connected.

"Non-domestic effluent" means the liquid discharge from any treatment unit including a septic tank that has a BOD5 equal or greater than 250 mg/L; or TSS equal to or greater than 145 mg/L; or fats, oils, and grease equal to or greater than 25 mg/L.

"Non-domestic wastewater" means process wastewater originating from the manufacture of specific products. Such wastewater is usually more concentrated, more variable in content and rate, and requires more extensive or different treatment than domestic wastewater.

"Non-public water source" means a culinary water source that is not defined as a public water source.

"Non-residential" means a building that produces domestic wastewater, and is not a single family dwelling.

"Onsite wastewater system" means an underground wastewater dispersal system that is designed for a capacity of 5,000 gallons per day or less, and is not designed to serve multiple dwelling units that are owned by separate owners except condominiums. It usually consists of a building sewer, a septic tank and an absorption system.

"Operating permit" means the permit that authorizes the operation and maintenance of an onsite wastewater system or wastewater holding tank. It may have a fee component that requires periodic renewal.

"Packed bed media system" means an alternative onsite wastewater system that uses natural or synthetic media to treat wastewater. Biological treatment is facilitated via microbial growth on the surface of the media. The system may include a pump tank, a recirculation tank, or both.

"Percolation rate" means the time expressed in minutes per inch required for water to seep into saturated soil at a constant rate during a percolation test.

"Percolation test" means the method used to measure the permeability of the soil by measuring the percolation rate as described in these rules. This is sometimes referred to as a "perc test".

"Permeability" means the rate at which a soil transmits water when saturated.

"Person" means an individual, trust, firm, estate, company, corporation, partnership, association, state, state or federal agency or entity, municipality, commission, or political subdivision of a state as defined in Section 19-1-103.

"Pollution" means any man-made or man-induced alteration of the chemical, physical, biological, or radiological integrity of any waters of the state, unless the alteration is necessary for public health and safety as defined in Section 19-5-102.

"Pressure distribution" means a method designed to uniformly distribute effluent under pressure within an absorption system.

"Public health hazard" means, for the purpose of this rule, a condition whereby there are sufficient types and amounts of biological, chemical, or physical agents relating to water or sewage that are likely to cause human illness, disorders or disability. These may include pathogenic viruses and bacteria, parasites, toxic chemicals and radioactive isotopes. A malfunctioning onsite wastewater system constitutes a public health hazard.

"Public water source" means a culinary water source, either publicly or privately owned, providing water for human consumption and other domestic uses, as defined in Title R309.

"Pump tank" means a watertight receptacle equipped with

a pump and placed after a septic tank or other treatment component.

"Pump vault" means a device installed in a septic or pump tank that houses a pump and screens effluent with 1/8 inch openings or smaller before it enters the pump.

"Recirculation tank" means the tank that receives, stores, and recycles partially treated effluent and recycles that effluent back through the treatment process or to the absorption area.

"Regulatory authority" means either the Utah Division of Water Quality or the local health department having jurisdiction.

"Replacement area" means sufficient land with suitable soil, excluding streets, roads, easements and permanent structures that complies with the setback requirements of these rules, and is intended for the 100% replacement of absorption systems.

"Rotary tilling" means a tillage operation. Working land by plowing and harrowing in order to make land ready for cultivation, or employing power driven rotary motion of the tillage tool to loosen, shatter and mix soil.

"Sand lined trench system" means an alternative onsite wastewater system consisting of a series of narrow excavated trenches utilizing sand media and pressure distribution.

"Sand media" means sand fill meeting the ASTM C33/C33M - 11A Standard Specification for Concrete Aggregates.

"Saprolite" means weathered material underlying the soil that grades from soft thoroughly decomposed rock to rock that has been weathered sufficiently so that it can be broken in the hands, cut with a knife or easily dug with a backhoe and is devoid of expansive clay. It has rock structure instead of soil structure and does not include hard bedrock or hard fractured bedrock.

"Scarification" means loosening and breaking up of soil compaction in a manner that prevents smearing and maintains soil structure.

"Scum" means a mass of sewage solids, which is buoyed up by entrained gas, grease, or other substances, floating on the surface of wastes in a septic tank.

"Seepage pit" means an absorption system consisting of one or more deep excavated pits, either hollow-lined or filled, utilizing coarse drain media, with a minimum sidewall absorption depth of 48 inches of suitable soil formation below the distribution pipe.

"Septage" means the semi-liquid material that is pumped out of a septic or pump tank, generally consisting of the sludge, liquid, and scum layer.

"Septic tank" means a watertight receptacle that receives the discharge of a drainage system or part thereof, designed and constructed so as to retain solids, digest organic matter through a period of detention and allow the liquids to discharge into the soil outside of the tank through an absorption system.

"Sequential distribution" means a distribution method in which effluent does not pass through an absorption area before it enters the succeeding areas through a distribution box or relief line allowing for portions of the absorption area to be isolated.

"Serial distribution" means a distribution method in which effluent passes through an absorption area before entering the succeeding areas through a distribution box or relief line creating a single uninterrupted flow path.

"Shall" means a mandatory requirement.

"Should" means recommended or preferred and is intended to mean a desirable standard.

"Single-family dwelling" means a building designed to be used as a home by the owner or lessee of such building.

"Sludge" means the accumulation of solids that have settled in a septic tank or a wastewater holding tank.

"Slope" means the ratio of the rise divided by the run between two points, typically described as a percentage (rise divided by run multiplied by 100).

"Soil exploration pit" means an open pit dug to permit examination of the soil to evaluate its suitability for absorption systems. This is also referred to as a "test pit".

"Soil log" means a detailed description of soil characteristics and properties.

"Soil structure" means the way in which the individual particles, sand, silt, and clay, are arranged into larger distinct aggregates called peds. The main types of soil structure are granular, platy, blocky, prismatic, and columnar. Soil may not have a visible structure because it is either single grain or massive.

"Soil texture" means the percent of sand, silt, and clay in a soil mixture. Field methods for judging the texture of a soil are found in Section R317-4-14 Appendix C.

"Standard trench" means an absorption trench utilizing drain media into which effluent is discharged through specially designed distribution pipes.

"Suitable soil" means undisturbed soil that through textural and structural analysis or percolation rate meets the requirements for placement of an absorption system.

"Test pit" see "soil exploration pit".

"Unapproved system" means any onsite wastewater system that is deemed by the regulatory authority to be any:

A. installation without the required regulatory oversight, permits, or inspections;

B. repairs to an existing system without the required regulatory oversight, permits, or inspections; or

C. alteration to an existing system without the required regulatory oversight, permits, or inspections.

"USDA system of classification" means the system of classifying soil texture used by the United States Department of Agriculture.

"Waste" means dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal, and agricultural waste discharged into water as defined in Section 19-5-102.

"Wastewater" means sewage, industrial waste or other liquid substances that might cause pollution of waters of the state. Intercepted ground water that is uncontaminated by wastes is not included.

"Wastewater holding tank" means a watertight receptacle designed to receive and store wastewater to facilitate treatment at another location.

"Waters of the state":

A. means all streams, lakes, ponds, marshes, watercourses, waterways, wells, springs, irrigation systems, drainage systems, and all other bodies or accumulations of water, surface and underground, natural or artificial, public or private, that are contained within, flow through, or border upon this state or any portion of the state; and

B. does not include bodies of water confined to and retained within the limits of private property, and that do not develop into or constitute a nuisance, or public health hazard, or a menace to fish or wildlife.

"Wind-blown sand" means sand that is formed by the weathering and erosion of sandstone typically found in sand-dune or sand-sheet deposits and is capable of producing sand and dust storms when disturbed.

R317-4-3. General Standards, Prohibitions, Requirements, and Enforcement.

3.1. Failure to Comply With Rules.

Any person failing to comply with this rule shall be subject to enforcement action as specified in Sections 19-5-115 and 26A-1-123.

3.2. Feasibility.

Onsite wastewater systems are not feasible in some areas

and situations. If property characteristics indicate conditions that may fail in any way to meet the requirements specified herein, the use of onsite wastewater systems shall be prohibited.

3.3. Onsite Wastewater System Required.

The drainage system of each dwelling, building or premises covered herein shall receive all wastewater, including bathroom, kitchen, and laundry wastes, and shall have a connection to a public sewer except when such sewer is not available or practicable for use, in which case connection shall be made:

A. to an onsite wastewater system found to be adequate and constructed in accordance with this rule; or

B. to any other type of wastewater system acceptable under Rules R317-1, R317-3, R317-5, R317-401, or R317-560.

3.4. Flows Prohibited From Entering Onsite Wastewater Systems.

No ground water drainage, drainage from roofs, roads, yards, or other similar sources shall discharge into any portion of an onsite wastewater system, but shall be disposed of so they will in no way affect the system. Non-domestic wastes such as chemicals, paints, or other substances that are detrimental to the proper functioning of an onsite wastewater system may not be disposed of in such systems.

3.5. Increased Flows Prohibited.

A person may not connect or expand the use of a single-family dwelling or nonresidential facility connected to an existing onsite wastewater system if the projected wastewater flows would be greater than the original design flow. When the design flow is exceeded, expansion may occur if the onsite wastewater system is modified, permitted, and approved by the regulatory authority for the increased flow.

3.6. Material Standards.

All materials used in onsite wastewater systems shall comply with the standards in this rule.

3.7. Property Lines Crossed.

Systems, including replacement areas, shall be located on the same lot as the building served unless, when approved by the regulatory authority, a perpetual utility easement and right-of-way is established on an adjacent or nearby lot for the construction, operation, and continued maintenance, repair, alteration, inspection, relocation, and replacement of an onsite wastewater system, including all rights to ingress and egress necessary or convenient for the full or complete use, occupation, and enjoyment of the granted easement. The easement shall be large enough to accommodate the proposed onsite wastewater system and replacement area. The easement shall meet the setbacks specified in Section R317-4-13 Table 2.

3.8. Initial Absorption Area and Replacement Area.

A. All properties that utilize onsite wastewater systems shall be required to have a replacement area.

B. The absorption area, including installed system and replacement area, may not be subject to activity that is likely to adversely affect the soil or the functioning of the system. This may include vehicular traffic, covering the area with asphalt, concrete, or structures, filling, cutting or other soil modifications.

3.9. Operation and Maintenance.

Owners of onsite wastewater systems shall operate, maintain, and service their systems according to the standards of this rule.

3.10. No Discharge to Surface Waters or Ground Surface.

Effluent from any onsite wastewater system may not be discharged to surface waters or upon the surface of the ground. Wastewater may not be discharged into any abandoned or unused well, or into any crevice, sinkhole, or similar opening, either natural or artificial.

3.11. Repair of a Malfunctioning or Unapproved System.

Upon determination by the regulatory authority that a malfunctioning or unapproved onsite wastewater system creates or contributes to any dangerous or unsanitary condition that may

involve a public health hazard, or noncompliance with this rule, the regulatory authority shall order the owner to take the necessary action to cause the condition to be corrected, eliminated or otherwise come into compliance.

A. For malfunctioning systems, the local health department shall require and order:

1. all necessary steps, such as maintenance, servicing, repairs, and replacement of system components to correct the malfunctioning system, to meet all rule requirements to the extent possible and may not create any new risk to the environment or public health;

2. effluent quality testing as required by Subsection R317-4-11.4;

3. evaluation of the system design including non-approved changes to the system, the wastewater flow, and biological and chemical loading to the system;

4. additional tests or samples to troubleshoot the system malfunction.

B. The regulatory authority may require fees for additional inspections, reviews, and testing.

3.12. Procedure for Wastewater System Abandonment.

A. When a dwelling served by an onsite wastewater system is connected to a public sewer, the septic tank shall be abandoned and shall be disconnected from and bypassed with the building sewer unless otherwise approved by the regulatory authority.

B. Whenever the use of an onsite wastewater system has been abandoned or discontinued, the owner of the real property on which such wastewater system is located shall render it safe by having the septic tank, any other tanks, hollow seepage pit, or cesspool wastes pumped out or otherwise disposed of in an approved manner. Within 30 days the tanks shall be:

1. crushed in place and the void filled;

2. completely filled with earth, sand, or gravel; or

3. removed.

C. The regulatory authority may require oversight, permit, or inspection of the abandonment process.

3.13. Septage Management.

A person shall only dispose of septage, or sewage contaminated materials in a location or manner in accordance with the regulations of the division and the local health department having jurisdiction.

3.14. Multiple Dwelling Units.

Multiple dwelling units under individual ownership, except condominiums, may not be served by a single onsite wastewater system except where that system is under the sponsorship of a body politic. Plans and specifications for such systems shall be submitted to and approved by the division. Issuance of a construction permit by the board shall constitute approval of plans and authorization for construction. Before the permit is issued, the division shall review plans with the local health department having jurisdiction over the proposed onsite wastewater system.

R317-4-4. Feasibility Determination.

4.1. General Criteria for Determining Onsite Wastewater System Feasibility.

The regulatory authority shall determine the feasibility of using an onsite wastewater system. The regulatory authority will review required information for any existing or proposed lot to determine onsite wastewater system feasibility. The required information shall be prepared at the owner's expense by, or under the supervision of, a qualified person approved by the regulatory authority.

A. General Information.

The required information shall include:

1. the county recorder's plat and parcel ID and situs address if available;

2. name and address of the property owner and person

requesting feasibility; and

3. the location, type, and depth of all existing and proposed non-public water supply sources within 200 feet of the proposed onsite wastewater systems, and of all existing or proposed public water supply sources within 1,500 feet of the proposed onsite wastewater systems.

a. If the lot is located in aquifer recharge areas or areas of other particular geologic concern, the regulatory authority may require such additional information relative to ground water movement, or possible subsurface wastewater flow.

b. If the proposed onsite wastewater system is located within any drinking water source protection zone two, this zone shall be shown.

4. The location and distance to nearest sewer, owner of sewer, whether property is located within service boundary, and size of sewer.

5. Statement of proposed use if other than a single-family dwelling.

B. Soil and Site Evaluation.

1. Soil Exploration Pit and Percolation Test.

a. A minimum of one soil exploration pit shall be excavated to allow the evaluation of the soil. The soil exploration pit shall be constructed and soil log recorded as detailed in Section R317-4-14 Appendix C.

b. The regulatory authority shall have the option of requiring a percolation test in addition to the soil exploration pit.

c. The regulatory authority:

i. shall require additional soil exploration pits, percolation tests, or both where flows are greater than 1,000 gallons per day; and

ii. may require additional pits, tests, or both where:

- (1) soil structure varies;
- (2) limiting geologic conditions are encountered; or
- (3) the regulatory authority deems it necessary.

d. The percolation test shall be conducted as detailed in Section R317-4-14 Appendix D.

e. Soil exploration pits and percolation tests shall be conducted as closely as possible to the proposed absorption system site. The regulatory authority shall have the option of inspecting the open soil exploration pits and monitoring the percolation test procedure. All soil logs and percolation test results shall be submitted to the regulatory authority.

f. When there is a substantial discrepancy between the percolation rate and the soil classification, it shall be resolved through additional soil exploration pits, percolation tests, or both.

g. Absorption system feasibility shall be based on Section R317-4-13 Table 5 or 6.

2. Wind-Blown Sand.

The extremely fine grained wind-blown sand found in some parts of Utah shall be deemed not feasible for absorption systems. This does not apply to lots that have received final local health department approval prior to the effective date of this rule.

a. Percolation test results in wind-blown sand will generally be rapid, but experience has shown that this soil has a tendency to become sealed with minute organic particles within a short period of time. For lots that have received final local health department approval prior to the effective date of this rule, systems may be constructed in such material provided it is found to be within the required range of percolation rates specified in these rules, and provided further that the required area shall be calculated on the assumption of minimum acceptable percolation rate of 60 minutes per inch for standard trenches, deep wall trenches, and seepage pits, and 40 minutes per inch for absorption beds.

3. Suitable Soil Depth.

For conventional systems, effective suitable soil depth shall

extend at least 48 inches or more below the bottom of the dispersal system to bedrock formations, impervious strata, or excessively permeable soil. Some alternative onsite wastewater systems may have other requirements.

4. Ground Water Requirements.

The elevation of the anticipated maximum ground water table shall meet the separation requirements of the anticipated absorption systems. Local health departments and other local government entities may impose stricter separation requirements between absorption systems and the maximum ground water table when deemed necessary. Building lots recorded or having received final local health department approval prior to May 21, 1984 shall be subject to the ground water table separation requirements of the then Part IV of the Code of Waste Disposal Regulations dated June 21, 1967, that states "high ground water elevation shall be at least 1 foot below the bottom of absorption systems and at least 4 feet below finished grade". Notwithstanding this grandfather provision for recorded or other approved lots, the depth to ground water requirements are applicable if compelling or countervailing public health interests would necessitate application of the more stringent requirements of this regulation.

a. Maximum Ground Water.

Maximum ground water table shall be determined where the anticipated maximum ground water table, including irrigation induced water table, might be expected to rise closer than 48 inches to the elevation of the bottom of the onsite wastewater system. Maximum ground water table shall be determined where alternative onsite wastewater systems may be considered based on groundwater elevations. The maximum ground water table shall be determined by the following.

i. Regular monitoring of the ground water table, or ground water table, perched, in an observation well for a period of one year, or for the period of the maximum groundwater table.

(1) Previous ground water records and climatological or other information may be consulted for each site proposed for an onsite wastewater system and may be used to adjust the observed maximum ground water table elevation.

ii. Direct visual observation of the maximum ground water table in a soil exploration pit for:

(1) evidence of crystals of salt left by the maximum ground water table; or

(2) chemically reduced iron in the soil, reflected by redoxmorphic features, i.e. a mottled coloring.

(3) Previous ground water records and climatological or other information may be consulted for each site proposed for an onsite wastewater system and may be used to adjust the observed maximum ground water table elevation in determining the anticipated maximum ground water table elevation.

iii. In cases where the anticipated maximum ground water table is expected to rise to closer than 34 inches from the original ground surface and an alternative or experimental onsite wastewater system would be considered, previous ground water records and climatological or other information shall be used to adjust the observed maximum ground water table in determining the anticipated maximum ground water table.

b. Curtain Drains.

A curtain drain or other effective ground water interceptor may be allowed as an attempt to lower the groundwater table to meet the requirements of this rule. The regulatory authority shall require that the effectiveness of such devices in lowering the ground water table be demonstrated during the season of maximum ground water table.

4. Ground Slope.

Absorption systems may not be placed on slopes where the addition of fluids is judged to create an unstable slope.

a. Absorption systems may be placed on slopes between 0% and 25%, inclusive.

b. Absorption systems may be placed on slopes greater

than 25% but not exceeding 35% if:

- i. all other requirements of this rule can be met;
- ii. effluent from the proposed system will not contaminate ground water or surface water, and will not surface or move off site before it is adequately treated to protect public health and the environment;
- iii. no slope will fail, and there will be no other landslide or structural failure if the system is constructed and operated adequately, even if all properties in the vicinity are developed with onsite wastewater systems; and
- iv. a report is submitted by a professional engineer or professional geologist that is licensed to practice in Utah. The report shall be imprinted with the engineer's or geologist's registration seal and signature and shall include the following.

(1) Predictions and supporting information of ground water transport from the proposed system and of expected areas of ground water mounding.

(2) A slope stability analysis that shall include information about the geology of the site and surrounding area, soil exploration and testing, and the effects of adding effluent.

(3) The cumulative effect on slope stability of added effluent if all properties in the vicinity were developed with onsite wastewater systems.

c. Absorption systems may not be placed on slopes greater than 35%.

5. Other Factors Affecting Onsite Wastewater System Feasibility.

a. The locations of all rivers, streams, creeks, dry or ephemeral washes, lakes, canals, marshes, subsurface drains, natural storm water drains, lagoons, artificial impoundments, either existing or proposed, that will affect building sites, shall be provided.

b. Areas proposed for onsite wastewater systems shall comply with the setbacks in Section R317-4-13 Table 2.

c. If any part of a property lies within or abuts a flood plain area, the flood plain shall be shown within a contour line and shall be clearly labeled on the plan with the words "flood plain area".

6. Unsuitable.

Where soil and other site conditions are clearly unsuitable for the placement of an onsite wastewater system, there is no need for conducting soil exploration pits or percolation tests.

C. Lot Size.

One of the following two methods shall be used for determining minimum lot size. Determination of minimum lot size by the regulatory authority would not preempt local governments from establishing larger minimum lot sizes.

1. Method 1.

The local health department having jurisdiction may determine minimum lot size. Under this method, local health departments may elect to involve other affected governmental entities and the division in making joint lot size determinations. The division will develop technical information, training programs, and provide engineering and geohydrologic assistance in making lot size determinations that will be available to local health departments upon their request. Individuals or developers requesting lot size determinations under this method will be required to submit to the local health department, at their own expense, a report that accurately takes into account at least the following factors:

- a. soil type and depth;
- b. area drainage, lot drainage, and potential for flooding;
- c. protection of surface and ground waters;
- d. setbacks from property lines, water supplies, etc.;
- e. source of culinary water;
- f. topography, geology, hydrology and ground cover;
- g. availability of public sewers;
- h. activity or land use, present and anticipated;
- i. growth patterns;

j. individual and accumulated gross effects on water quality;

k. reserve areas for additional subsurface dispersal;

l. anticipated wastewater volume;

m. climatic conditions;

n. installation plans for wastewater system; and

o. area to be utilized by dwelling and other structures.

2. Method 2.

a. Whenever local health departments do not establish minimum lot sizes for single-family dwellings that will be served by onsite wastewater systems, the requirements of Section R317-4-13 Tables 1.1 and 1.2 shall be met.

b. For non-residential facilities, one-half of the buildable area of the lot must be available for the absorption system and replacement area.

i. The area required for the absorption system and replacement area may be adjusted during the permitting process.

4.2. Subdivision Onsite Wastewater System Feasibility Determination.

A. In addition to information in Subsection R317-4-4.1, the following information must be provided on a plat map:

1. the proposed street and lot layout with all lots consecutively numbered;

2. size and dimensions of each lot, with the minimum required area sufficient to permit the safe and effective use of an onsite wastewater system, including a replacement area for the absorption system;

3. location of all water lines;

4. location of any easements; and

5. areas proposed for wastewater dispersal, including replacement area.

B. Surface drainage systems shall be included on the plan, as naturally occurring, and as altered by roadways or any drainage, grading or improvement, installed or proposed by the developer. The details of the system shall show the surface drainage structures, whether ditches, pipes, or culverts, will in no way affect onsite wastewater systems on the property.

C. Each proposed lot shall have at least one soil exploration pit, percolation test, or both.

1. The regulatory authority may allow fewer tests based on the uniformity of prevailing soil and ground water characteristics and available percolation or soil log test data.

2. If soil conditions and surface topography indicate, a greater number of soil exploration pits or percolation tests may be required by the regulatory authority.

3. The location of all soil exploration pits and percolation test holes shall be clearly identified on the subdivision final plat and identified by a key number or letter designation.

4. The results of such soil tests, including stratified depths of soils and final percolation rates for each lot shall be recorded on or with the final plat.

5. Soil exploration pits and percolation tests shall be conducted as closely as possible to the dispersal system sites on the lots or parcels.

D. Whenever available, information from published soil studies of the area of the proposed subdivision shall be submitted for review.

E. If soil or site conditions exist in or near the project so as to complicate design and location of an onsite wastewater system, a detailed system layout shall be provided for those lots presenting the greatest design difficulty by meeting rules in Section R317-4-5.

4.3. Statement of Feasibility.

After review of all information, plans, and proposals, the regulatory authority shall make a written determination of feasibility stating the results of the review or the need for additional information.

A. An affirmative statement of feasibility for a subdivision does not imply that it will be possible to install onsite

wastewater systems on all of the proposed lots, but shall mean that such onsite wastewater systems may be installed on the majority of the proposed lots in accordance with minimum state requirements and any conditions that may be imposed.

B. The regulatory authority shall establish the expiration, if any, of the statement of feasibility.

R317-4-5. Plan Review and Permitting.

5.1. Plan Review and Permitting.

A. Designer Certification.

All plans and specifications shall be prepared by an individual certified in accordance with Rule R317-11.

B. Domestic Wastewater.

Plans and specifications for the construction, alteration, extension, or change of use of onsite wastewater systems that receive domestic wastewater shall be submitted to the regulatory authority.

C. Non-Domestic Wastewater.

Plans and specifications for the construction, alteration, extension, or change of use of onsite wastewater systems that receive non-domestic wastewater shall be submitted to and approved by the local health department having jurisdiction and the division.

D. Construction Permit Required.

The regulatory authority shall review said plans and specifications as to their adequacy of design for the intended purpose, and shall, if necessary, require such changes as are required by these rules. When the reviewing regulatory authority is satisfied that plans and specifications are adequate for the conditions under which a system is to be installed and used, a construction permit shall be issued to the individual making the submittal.

1. Construction may not commence until the construction permit has been issued by the regulatory authority.

E. Information Required.

Plans submitted for review shall be drawn to scale, 1" = 10', 20' or 30', or other scale as approved by the regulatory authority. Plans shall be prepared in such a manner that the contractor can read and follow them in order to install the system properly. Depending on the individual site and circumstances, or as determined by the regulatory authority, some or all of the following information may be required.

1. Applicant Information.

a. The name, current address, and telephone number of the applicant.

b. Complete address, legal description of the property, or both to be served by this onsite wastewater system.

2. Onsite Wastewater System Site Plan.

a. Submittal date of plan.

b. North arrow.

c. Lot size and dimensions.

d. Legal description of property.

e. Ground surface contours, preferably at 2 foot intervals, of both the original and proposed final grades of the property, or relative elevations using an established bench mark.

f. Location and explanation of type of dwelling or structure to be served by an onsite wastewater system.

i. Maximum number of bedrooms, including statement of whether a finished or unfinished basement will be provided, or if other than a single family dwelling, the number of occupants expected and the estimated gallons of wastewater generated per day.

g. Location and dimensions of paved and unpaved driveways, roadways and parking areas.

h. Location and dimensions of the essential components of the wastewater system including the replacement area for the absorption system.

i. Location of all soil exploration pits and all percolation test holes.

j. Location of building sewer and water service line to serve the building.

k. Location of easements or drainage right-of-ways affecting the property.

l. Location of all intermittent or year-round streams, ditches, watercourses, ponds, subsurface drains, etc. within 100 feet of proposed onsite wastewater system.

m. The location, type, and depth of all existing and proposed non-public water supply sources within 200 feet of onsite wastewater systems, and of all existing or proposed public water supply sources within 1500 feet of onsite wastewater systems and associated source protection zones.

n. Distance to nearest public water main and size of main.

o. Distance to nearest public sewer, size of sewer, and whether accessible by gravity.

3. Statement with Site Plan.

Statement indicating the source of culinary water supply, whether a well, spring, non-public or public system, its location and distances from all onsite wastewater systems within 200 feet.

4. Site Assessment and Soil Evaluation.

Soil Logs, Percolation Test Certificates, or both.

a. Statement with supporting evidence indicating the maximum anticipated ground water table and the flooding potential for onsite wastewater system sites.

5. Relative Elevations.

Show relative elevations of the following, using an established bench mark.

a. Building drain outlet.

b. The inlet and outlet inverts of any septic tanks.

c. Septic tank access cover, including height and diameter of riser, if used.

d. Pump tank inlet, if used, including height and diameter of riser.

e. The outlet invert of the distribution box, if provided, and the ends or corners of each distribution pipe lateral in the absorption system.

f. The final ground surface over the absorption system.

6. System Design.

Details for said site, plans, and specifications are listed in Section R317-4-6.

a. Schedule or grade, material, diameter, and minimum slope of building sewer and effluent sewer.

b. Septic tank and pump tank capacity, design, cross sections, etc., materials, and dimensions. If tank is commercially manufactured, state the name and address of manufacturer.

c. Absorption system details, including the following:

i. details of drop boxes or distribution boxes, if provided;

ii. schedule or grade, material, and diameter of distribution pipes;

iii. length, slope, and spacing of each absorption system component;

iv. maximum slope across ground surface of absorption system area;

v. distance of absorption system from trees, cut banks, fills, or subsurface drains; and

vi. cross section of absorption system showing the:

(1) depth and width of absorption system excavation;

(2) depth of distribution pipe;

(3) depth of filter material;

(4) barrier material, i.e. synthetic filter fabric, straw, etc., used to separate filter material from cover; and

(5) depth of cover.

d. Pump, if provided, details as referenced in Section R317-4-14 Appendix B.

e. If an alternative system is designed, include all pertinent information to allow plan review and permitting for compliance with this rule.

F. Plans Submitted.

1. All applicants requesting plan approval for an onsite wastewater system shall submit a sufficient number of copies of the above required information to enable the regulatory authority to retain one copy as a permanent record.

2. Applications may be rejected if proper information is not submitted.

R317-4-6. Design Requirements.

6.1. System Location.

A. Onsite wastewater systems are not suitable in some areas and situations. Location and installation of each system shall be such that with reasonable maintenance, it will function in a sanitary manner and will not create a nuisance, public health hazard, or endanger the quality of any waters of the state.

B. In determining a suitable location for the system, due consideration shall be given to such factors as:

1. the minimum setbacks in Section R317-4-13 Table 2;
2. size and shape of the lot;
3. slope of natural and final grade;
4. location of existing and future water supplies;
5. depth of ground water and bedrock;
6. soil characteristics and depth;
7. potential flooding or storm catchment;
8. possible expansion of the system; and
9. future connection to a public sewer system.

6.2. Minimum Setback Distances.

All systems, including the replacement area, shall conform to the minimum setback distances in Section R317-4-13 Table 2.

6.3. Maximum Ground Slope.

All absorption systems, including the replacement area, shall conform to the ground slope requirements in Section R317-4-4.

6.4. Estimates of Wastewater Quantity.

A. Single Family Dwellings.

A minimum of 300 gallons per day, 1 or 2 bedroom, and 150 gallons per day for each additional bedroom shall be used.

B. Non-Residential Facilities.

The quantity of wastewater shall be determined accurately, preferably by actual measurement. Metered water supply figures for similar installations can usually be relied upon, providing the non-disposable consumption, if any, is subtracted. Where this data is not available, the minimum design flow figures in Section R317-4-13 Table 3 shall be used to make estimates of flow.

C. Design Capacity.

In no event shall the anticipated maximum daily wastewater flow exceed the capacity for which a system is designed.

6.5. Non-Domestic Effluent.

Effluent shall be treated to levels at or below the defined parameters of non-domestic effluent before being discharged into an absorption system.

6.6. Building Sewer.

A. The building sewer shall have a minimum inside diameter of 4 inches and shall comply with the minimum standards in Section R317-4-13 Table 4.

1. If the sewer leaving the house is three inches, the building sewer may be three inches.

B. Building sewers shall be laid on a uniform minimum slope of not less than 1/4 inch per foot or 2.08% slope.

C. The building sewer shall have a minimum of one cleanout and cleanouts every 100 feet.

1. A cleanout is also required for each aggregate horizontal change in direction exceeding 135 degrees.

2. Ninety degree ells are not recommended.

D. Building sewers shall be separated from water service pipes in separate trenches, and by at least 10 feet horizontally, except that they may be placed in the same trench when all of

the following conditions are met.

1. The bottom of the water service pipe, at all points, shall be at least 18 inches above the top of the building sewer.

2. The water service pipe shall be placed on a solid shelf excavated at one side of the common trench with a minimum clear horizontal distance of at least 18 inches from the sewer or drain line.

3. The number of joints in the water service pipe should be kept to a minimum, and the materials and joints of both the sewer and water service pipes shall be of strength and durability to prevent leakage under adverse conditions.

4. If the water service pipe crosses the building sewer, it shall be at least 18 inches above the latter within 10 feet of the crossing. Joints in water service pipes should be located at least 10 feet from such crossings.

E. Building sewer placed under driveways or other areas subjected to heavy loads shall receive special design considerations to ensure against crushing or disruption of alignment.

6.7. Septic Tank.

All septic tanks shall meet the requirements of Section R317-4-14 Appendix A and be approved by the division. Septic tanks shall be constructed of sound, durable, watertight materials that are not subject to excessive corrosion, frost damage, or decay. They shall be designed to be watertight, and to withstand all expected physical forces.

A. Liquid capacity.

1. A septic tank that serves a non-residential facility shall have a liquid capacity of at least 1-1/2 times the designed daily wastewater flow. In all cases the capacity shall be at least 1,000 gallons.

2. The capacity of a septic tank that serves a single family dwelling shall be based on the number of bedrooms that can be anticipated in the dwelling served, including the unfinished space available for conversion as additional bedrooms. Unfinished basements shall be counted as a minimum of one additional bedroom.

a. The minimum liquid capacity of the tank shall be 1,000 gallons for up to three bedroom homes.

b. The minimum liquid capacity of the tank shall be 1,250 gallons for four bedroom homes.

c. Two hundred fifty gallons per bedroom shall be added to the liquid capacity of the tank for each additional bedroom over four bedrooms.

3. The regulatory authority may require a larger capacity than specified in this subsection as needed for unique or unusual circumstances.

B. Tanks in Series.

1. No tank in the series shall be smaller than 1,000 gallons.

2. The capacity of the first tank shall be at least two-thirds of the required total septic tank volume. If compartmented tanks are used, the compartment of the first tank shall have this two-thirds capacity.

3. The connecting pipes between each successive tank shall meet the slope requirements of the building sewer and shall be unrestricted except for the inlet to the first tank and the outlet for the last tank.

C. Maximum Number of Tanks or Compartments.

The maximum number of tanks and compartments in series may not exceed three.

D. Inlets and Outlets.

Inlet or outlet devices shall conform to the following:

1. Approved tanks with offset inlets may be used where they are warranted by constraints on septic tank location.

2. Multiple outlets from septic tanks shall be prohibited unless preauthorized by the regulatory authority.

3. A gas deflector may be added at the outlet of the tank to prevent solids from entering the outlet pipe of the tank.

E. Effluent Screens.

All septic tanks may have an effluent screen installed at the outlet of the terminal tank. The screen shall prevent the passage of solid particles larger than a nominal 1/8 inch diameter sphere. The screen shall be easily removable for routine servicing by installing a riser to the ground surface, with an approved cover. Effluent screens are required for non-domestic wastewater systems, unless screening is achieved by some other means acceptable to the regulatory authority.

F. Access to Tank Interior.

Adequate access to the tank shall be provided to facilitate inspection, pumping, servicing, and maintenance, and shall have no structure or other obstruction placed over it and shall conform to all of the following requirements.

1. Riser Heights.

Watertight risers are required, extending to within 6 inches of the surface of the ground when soil covering the septic tank is greater than 6 inches. Preferably, the riser should be brought up to the final grade to encourage periodic servicing and maintenance.

a. If a septic tank is located under paving or concrete, risers shall be extended up through the paving or concrete.

b. If non-domestic wastewater is generated, risers shall be extended to the final grade.

2. Riser Diameter.

The inside diameter of the riser shall be a minimum of 20 inches.

3. Riser Covers.

Riser covers shall be designed and constructed in such a manner that:

- a. they cannot pass through the access openings;
- b. when closed will be child-proof;
- c. will prevent entrance of surface water, dirt, or other foreign materials; and
- d. seal odorous gases in the tank.

4. Riser Construction.

The risers shall be constructed of durable, structurally sound materials that are approved by the regulatory authority and designed to withstand expected physical loads and corrosive forces.

5. Multiple Risers Required.

When the tank capacity exceeds 3,000 gallons, a minimum of two access risers shall be installed.

G. Other Requirements.

Tank installation shall conform to all of the following requirements.

1. Ground Water.

a. Septic tanks located in high groundwater areas shall be designed with the appropriate weighted or anti-buoyancy device to prevent flotation in accordance with the manufacturer's recommendations.

b. The building sewer inlet of the tank may not be installed at an elevation lower than the highest anticipated groundwater elevation.

i. If the tank serves a mound or packed bed alternative system and has an electronic control panel capable of detecting water intrusion, the building sewer inlet of the tank may be installed below the maximum anticipated groundwater elevation.

(1) Any component below the anticipated maximum ground water elevation shall be water tightness tested.

2. Depth of Septic Tank.

The minimum depth of cover over the septic tank shall be at least 6 inches and a maximum of 48 inches at final grading. For unusual situations, the regulatory authority may allow deeper burial provided the following conditions are met.

a. The tank shall be approved by the division for the proposed depth and burial cover load.

b. Risers shall:

i. be installed over the access openings of the inlet and

outlet baffles or sanitary tees; and

ii. conform to Subsection R317-4-6.7.F, except risers shall be at least 24 inches in diameter.

6.8. Grease Interceptor Tanks.

A grease interceptor tank or automatic grease removal device may be required by the regulatory authority to receive the drainage from fixtures and equipment with grease-laden waste. It shall be sized according to the current Plumbing Code.

A. Accessibility and Installation.

Tanks installed in the ground shall conform to Subsection R317-4-6.7.F for accessibility and installation, except risers are required and shall be brought to the surface of the ground. All interior compartments shall be accessible for inspecting, servicing, and pumping.

6.9. Pump and Recirculation Tanks.

A. Tanks shall be constructed of sound, durable, watertight materials that are not subject to excessive corrosion, frost damage, or decay. They shall be designed to be watertight, and to withstand all expected physical forces.

B. Pump tank volume shall have a liquid capacity adequate for the minimum operating volume that includes the dead space, dosing volume, and surge capacity, and shall have the emergency operation capacity of:

1. storage capacity for the system design daily wastewater flow;
2. at least two independent power sources with appropriate wiring installed; or
3. other design considerations approved by the regulatory authority that do not increase public health risks in the event of pump failure.

C. Accessibility and Installation.

Tanks shall conform to Subsection R317-4-6.7.F for accessibility and installation, except risers are required and shall be brought to the surface of the ground. All interior compartments shall be accessible for inspecting, servicing, and pumping.

D. Outlets of septic tanks upstream of pump tanks shall be fitted with an effluent screen, unless a pump vault is used in a pump tank.

6.10. Pump Vaults.

Pump vaults may be used when approved by the regulatory authority.

A. The vault shall be constructed of durable material and resistant to corrosion.

B. The vault shall have an easily accessible screen with 1/8 inch openings or smaller.

C. All components of the vault shall be accessible from the surface.

D. When a pump vault is used in a septic tank:

1. The tank size shall be increased by the larger of the following:
 - a. two hundred fifty gallons; or
 - b. ten percent of the required capacity of the tank.
2. At least two independent power sources with appropriate wiring, or other design considerations approved by the regulatory authority that do not increase public health risks, shall be installed.
3. The maximum drawdown within the tank shall be no more than 3 inches per dose.

6.11. Pumps.

See Section R317-4-14 Appendix B for details.

6.12. Sampling Ports.

When a system is required to have effluent sampling or receives non-domestic wastewater, the system shall include a sampling port at an area approved by the regulatory authority capable of sampling effluent prior to the absorption system.

6.13. Effluent Sewer.

A. The effluent sewer shall have a minimum inside diameter of 4 inches and shall comply with the minimum

standards in Section R317-4-13 Table 4.

B. The effluent sewer shall extend at least 5 feet beyond the septic tank before entering the absorption system.

C. Effluent sewers shall be laid on a uniform minimum slope of not less than 1/4 inch per foot or 2.08% slope. When it is impractical, due to structural features or the arrangement of any building, to obtain a slope of 1/4 inch per foot, a sewer pipe of 4 inches in diameter or larger may have a slope of not less than 1/8 inch per foot or 1.04% slope when approved by the regulatory authority.

D. The effluent sewer lines shall have cleanouts at least every 100 feet.

E. Effluent sewer placed under driveways or other areas subjected to heavy loads shall receive special design considerations to ensure against crushing or disruption of alignment.

6.14. Absorption Systems.

A. System Types.

1. Absorption Trenches.

- a. Standard Trenches.
- b. Chambered Trenches.
- c. Bundled Synthetic Aggregate Trenches.
2. Absorption Beds.
3. Deep Wall Trenches.
4. Seepage Pits.

B. General Requirements.

1. Replacement Area for Absorption Systems.

Adequate and suitable land shall be reserved and kept free of permanent structures, traffic, or adverse soil modification for 100% replacement of each absorption system. If approved by the regulatory authority, the area between standard trenches or deep wall trenches may be regarded as replacement area.

a. In lieu of a replacement area, two complete absorption systems shall be installed with a diversion valve. The valve shall be accessible from the final grade. The valve should be switched at least annually.

2. Protection of Absorption Systems.

The site of the initial and replacement absorption system may not be covered by asphalt, concrete, or structures, or be subject to vehicular traffic, or other activity that would adversely affect the soil, such as construction material storage, soils storage, etc. This protection applies before and after construction of the onsite wastewater system.

3. Sizing Criteria for Absorption Systems.

Absorption systems shall be sized based on Section R317-4-13 Table 5 or 6.

4. Design Criteria for Absorption Systems.

Many different designs may be used in laying out absorption systems, the choice depending on the size and shape of the available areas, the capacity required, and the topography of the dispersal area.

a. Horizontal Setbacks.

Absorption systems shall comply with the setbacks in Section R317-4-13 Table 2.

b. Sloping Ground.

Absorption systems placed in 10% or greater sloping ground shall be designed so that there is a minimum of 10 feet of undisturbed earth measured horizontally from the bottom of the distribution line to the ground surface. This requirement does not apply to drip irrigation.

c. Undisturbed Natural Earth.

That portion of absorption systems below the top of distribution pipes shall be in undisturbed natural earth.

d. Tolerance.

All piping, chambers, and the bottoms of absorption system excavations shall be designed level.

e. Distribution Pipe.

Distribution pipe for gravity-flow absorption systems shall be 4 inches in diameter and shall comply with the minimum

standards in Section R317-4-13 Table 4.

i. The pipe shall be penetrated by at least two rows of round holes, each 1/2 inch in diameter, and located at approximately 6 inch intervals. The perforations should be located at about the five o'clock and seven o'clock positions on the pipe.

ii. The open ends of the pipes shall be capped.

f. Absorption System Laterals.

Absorption system laterals should be designed to receive proportional flows of wastewater.

g. Drain Media Protection.

Drain media shall be covered with a barrier material before being covered with earth backfill.

h. Prohibitions.

i. In gravity-flow absorption systems with multiple distribution lines, the effluent sewer may not be in direct line with any one of the distribution pipes, except where drop boxes or distribution boxes are used.

ii. Any section of distribution pipe laid with non-perforated pipe may not be considered in determining the required absorption area.

iii. Perforated distribution pipe may not be placed under driveways or other areas subjected to heavy loads.

i. Exceptions.

Deep wall trenches and filled seepage pits may be allowed beneath unpaved driveways on a case-by-case basis by the regulatory authority, if the top of the distribution pipe is at least 3 feet below the final ground surface.

C. Effluent Distribution Devices.

1. Distribution Boxes.

Distribution boxes may be used on level or nearly level ground. They shall be watertight and constructed of durable, corrosion resistant material. They shall be designed to accommodate the inlet pipe and the necessary distribution lines.

a. The outlet inverts of the distribution box shall be not less than 1 inch below the inlet invert.

b. Distribution boxes shall have risers brought to final grade.

2. Drop Boxes.

Drop boxes shall be watertight and constructed of durable, corrosion resistant material and may be used to distribute effluent within the absorption system and shall meet the following requirements:

a. Drop boxes shall be designed to accommodate the inlet pipe, an outlet pipe leading to the next drop box, except for the last drop box, and one or two distribution pipes leading to the absorption system.

b. The inlet pipe to the drop box shall be at least 1 inch higher than the outlet pipe leading to the next drop box.

c. The invert of the distribution pipes shall be 1 through 6 inches below the outlet invert. If there is more than one distribution pipe, their inverts shall be at exactly the same elevation.

d. Drop boxes shall have risers brought to final grade.

3. Effluent Pump to Absorption System.

a. If a pump is used to lift effluent to an absorption system, the pump tank or pump vault shall meet the requirements of Subsection R317-4-6.9 or R317-4-6.10 and the pump and controls shall meet the requirements of Section R317-4-14 Appendix B.

b. Pumping to an absorption system may not warrant any reductions to the absorption area.

4. Other Devices.

Tees, wyes, ells, or other distributing devices may be used as needed to permit proportional flow to the branches of the absorption system. A clean out or other means of access from the surface shall be provided for these devices.

D. Effluent Distribution Methods.

1. Closed Loop.

In locations where the slope of the ground over the absorption system area is relatively flat, the trenches should be interconnected to produce a closed loop system and the trenches shall be installed at the same elevations.

2. Non-Closed Loop.

If a non-closed loop design is used, effluent shall be proportionally distributed to each lateral.

3. Serial or Sequential.

Serial or sequential distribution may be used in absorption systems designed for sloping areas, or where absorption system elevations are not equal.

a. Serial trenches shall be connected with a drop box or watertight overflow line in such a manner that a trench will be filled before the effluent flows to the next lower trench.

b. The overflow line shall be a 4-inch solid pipe with direct connections to the distribution pipes. It should be laid in a trench excavated to the exact depth required. Care must be exercised to ensure a block of undisturbed earth remains between trenches. Backfill should be carefully tamped.

4. Pressure Distribution.

a. General Requirements.

i. Conformance to Applicable Requirements.

All requirements stated elsewhere in this rule for design, setbacks, construction and installation details, performance, repairs, and abandonment shall apply.

ii. Design Criteria.

All systems that use this method shall be designed by a person certified at Level 3 in accordance with Rule R317-11.

(1) The designer shall submit details of all system components with the necessary calculations.

(2) The designer shall provide to the local health department and to the owner operation and maintenance instructions that include the minimum inspection levels in Section R317-4-13 Table 7 for the system.

iii. Record in the Chain of Title.

When a system utilizing pressure distribution exists on a property, notice of the existence of that system shall be recorded in the chain of title for that property.

b. Design.

i. Pressure distribution may be permitted on any site meeting the requirements for an onsite wastewater system if conditions in this rule can be met.

ii. Pressure distribution should be considered when:

(1) effluent pumps are used;

(2) the flow from the dwelling or structure exceeds 3,000 gallons per day;

(3) soils are a Type 1 or have a percolation rate faster than five minutes per inch; or

(4) soils are a Type 5 or have a percolation rate slower than 60 minutes per inch.

iii. The Utah Guidance for Performance, Application, Design, Operation and Maintenance: Pressure Distribution Systems document shall be used for design requirements, along with the following:

(1) Dosing pumps, controls and alarms shall comply with Section R317-4-14 Appendix B.

(2) Pressure distribution piping.

(a) All pressure transport, manifold, lateral piping, and fittings shall meet PVC Schedule 40 standards or equivalent.

(b) The ends of lateral piping shall be constructed with sweep elbows or an equivalent method to bring the end of the pipe to final grade. The ends of the pipe shall be provided with threaded plugs, caps, or other devices acceptable to the regulatory authority to allow for access and flushing of the lateral.

E. Design of Absorption Systems.

i. An absorption system shall be designed to approximately follow the ground surface contours so that variation in excavation depth will be minimized. The excavations could be

installed at different elevations, but the bottom of each individual excavation shall be level throughout its length.

ii. Absorption systems should be constructed as shallow as is possible to promote treatment and evapotranspiration.

iii. Observation ports may be placed to observe the infiltrative surfaces of the trenches or beds.

1. Absorption Trenches.

a. Absorption trenches shall conform to the following:

i. The minimum required effective absorption area shall be calculated using Section R317-4-13 Table 5 or 6.

ii. The effective absorption area of absorption trenches shall be calculated as the total bottom area of the excavated trench system in square feet.

iii. Minimum number of absorption trenches: 2.

iv. Maximum length of absorption trenches, not including connecting trenches: 150 feet.

v. Minimum spacing of absorption trenches from wall to wall: 7 feet.

vi. Minimum width of absorption trench excavations: 24 inches.

vii. Maximum width of absorption trench excavations: 36 inches.

viii. Minimum depth of absorption trench excavations below original, natural grade: 10 inches.

ix. Minimum depth of soil cover over the absorption trenches: 6 inches.

x. Minimum separation from the bottom of the absorption trenches to:

(1) the anticipated maximum ground water table: 24 inches; and

(2) unsuitable soil or bedrock formations: 48 inches.

b. Standard Trenches.

Standard trenches shall conform to the following:

i. Top of distribution pipe may not be installed above original, natural grade.

ii. The distribution pipe shall be centered in the absorption trench and placed the entire length of the trench.

iii. Drain media shall extend the full width and length of the trenches to a depth of at least: 12 inches.

iv. Minimum depth of drain media under the distribution pipe: 6 inches.

v. Minimum depth of drain media over the distribution pipe: 2 inches.

vi. Minimum depth of cover over the barrier material: 6 inches.

c. Chambered Trenches.

Chambered trenches shall conform to the following:

i. All chambers shall meet International Association of Plumbing and Mechanical Officials (IAPMO) Standard PS 63-2005, which is hereby incorporated into this rule by reference.

ii. The minimum required effective absorption area of chambered trenches shall be calculated:

(1) for Type A Chambers as: 36 inches; and

(2) for Type B Chambers as: 24 inches;

(3) using Section R317-4-13 Table 5 or 6 and may be reduced by: 30%.

iii. The chambered trenches shall be designed and installed in conformance with manufacturer recommendations, as modified by these rules.

iv. Type A Chambers.

(1) Minimum width of chambers: 30 inches.

(2) Maximum width of trench excavations: 36 inches.

v. Type B Chambers.

(1) Minimum width of chambers: 22 inches.

(2) Maximum width of trench excavations: 24 inches.

vi. Minimum elevation of the inlet pipe invert from the bottom of the chamber: 6 inches.

vii. All chambers shall have a splash plate under the inlet pipe or another design feature to avoid unnecessary channeling

into the trench bottom.

viii. Inlet and outlet effluent sewer pipes shall enter and exit the chamber endplates.

ix. Minimum depth of cover over the chambers: 12 inches.

The depth of cover may be reduced to no less than 6 inches, if approved by the regulatory authority, considering the protection of absorption systems as required in Subsection R317-4-6.14.B.2, and other activities, as determined by the authority.

d. Bundled Synthetic Aggregate Trenches.

Bundled synthetic aggregate trenches shall conform to the following.

i. All synthetic aggregate bundles shall meet IAPMO Standards for the General, Testing and Marking and Identification of the guide criteria for Bundled Expanded Polystyrene Synthetic Aggregate Units.

ii. The effective absorption area of bundled synthetic aggregate trenches shall be calculated as the total bundle length times the total bundle width in square feet.

iii. The bundled synthetic aggregate trenches shall be designed and installed in conformance with manufacturer recommendations, as modified by these rules.

iv. Only 12-inch diameter bundles are approved in this rule.

(1) For bundles with perforated pipe the minimum depth of synthetic aggregate under pipe: 6 inches.

v. Width of trenches.

(1) When designed for a 3 foot wide trench, three bundles are laid parallel to each other with the middle bundle containing perforated pipe.

(2) When designed for a 2 foot wide trench, two bundles are placed on the bottom, with one bundle containing perforated pipe.

vi. Minimum depth of cover over the bundles: 12 inches.

The depth of cover may be reduced to no less than 6 inches, if approved by the regulatory authority, considering the protection of absorption systems as required in Subsection R317-4-6.14.B.2, and other activities, as determined by the authority.

2. Absorption Beds.

Absorption beds shall conform to the requirements applicable to absorption trenches, except for the following.

a. The minimum required effective absorption area shall be calculated using Section R317-4-13 Table 5 or 6.

b. The effective absorption area of absorption beds shall be considered as the total bottom area of the excavated bed system in square feet.

c. Absorption beds may be built over naturally existing soil types per Section R317-4-13 Table 5 or 6.

d. The bottom of the entire absorption bed shall be level.

e. The distribution pipes or chambers shall be interconnected to produce a closed loop distribution system.

f. Minimum number of laterals in an absorption bed: 2.

g. Maximum length of laterals in an absorption bed: 150 feet.

h. Maximum distance between laterals: 6 feet.

i. Minimum distance between laterals and sidewalls: 1 foot.

j. Maximum distance between laterals and sidewalls: 3 feet.

k. Minimum distance between absorption beds: 7 feet.

l. Minimum depth of an absorption bed excavation from original, natural grade: 10 inches.

m. Absorption beds with drain media:

i. Minimum depth of drain media under distribution pipe: 6 inches.

ii. Minimum depth of drain media over distribution pipe: 2 inches.

iii. Minimum depth of cover over the barrier material: 6

inches.

n. Absorption beds with chambers:

i. Chambers shall be installed with sides touching, no separation allowed.

ii. All chambers shall be connected in a closed loop distribution system.

iii. The outlet side of the chamber runs shall be connected through the bottom port of the end plates.

iv. No absorption area reduction factor shall be given for using chambers in absorption beds.

v. Minimum depth of cover over the chambers: 12 inches.

3. Deep Wall Trenches.

Deep wall trenches shall conform to the following:

a. The minimum required effective absorption area shall be calculated using Section R317-4-13 Table 5 or 6.

b. The effective absorption area of deep wall trenches shall be calculated using the total trench vertical sidewall area below the distribution pipe. The bottom area and any highly restrictive or impervious strata or bedrock formations may not be considered in determining the effective sidewall absorption area.

c. If percolation tests are used, they shall be conducted in accordance with Section R317-4-14 Appendix D and in the most restrictive soil horizon.

d. Maximum length of trenches: 150 feet.

i. Does not include connecting trenches.

e. Minimum spacing of trenches from wall to wall: 12 feet,

or three times the depth of the media under the distribution pipe, whichever is the larger distance.

f. Vertical depth of trenches.

i. Minimum effective sidewalls: 2 feet.

ii. Maximum effective sidewalls: 10 feet.

iii. Calculate using only suitable soil formation.

g. Minimum width of trench excavations: 24 inches.

h. Minimum separation from the bottom of deep wall trench to:

i. the anticipated maximum ground water table: 48 inches;

ii. unsuitable soil or bedrock formations: 48 inches.

i. Drain media shall cover the coarse drain media to permit leveling of the distribution pipe and shall extend the full width and length of the trenches.

i. Minimum depth of drain media: 12 inches.

ii. Minimum depth of drain media under the distribution pipe: 6 inches.

iii. Minimum depth of drain media over the distribution pipe: 2 inches.

j. Minimum depth of cover over the barrier material: 6 inches.

k. The distribution pipe shall be centered in the trench and placed the entire length of the trench.

l. Setback to property lines: 10 feet.

4. Seepage Pits.

Seepage pits shall be considered as modified deep wall trenches and shall conform to the requirements applicable to deep wall trenches, except for the following:

a. The effective absorption area of seepage pits shall be calculated using the total pit vertical sidewall area below the distribution pipe. The bottom area and any highly restrictive or impervious strata or bedrock formations may not be considered in determining the effective sidewall absorption area.

b. Minimum diameter of pits: 3 feet.

c. Vertical depth of pits.

i. Minimum effective sidewalls: 4 feet.

ii. Maximum effective sidewalls: 10 feet.

iii. Calculate using only suitable soil formation.

d. Filled Seepage Pits.

i. In pits filled with coarse drain media, the perforated distribution pipe shall run across each pit. A layer of drain media shall be used for leveling the distribution pipe.

ii. The entire pit shall be completely filled with coarse drain media to at least the top of any permeable soil formation to be calculated as effective sidewall absorption area.

e. Hollow-Lined Seepage Pits.

i. For hollow-lined pits, the inlet pipe shall extend horizontally at least 1 foot into the pit.

ii. The annular space between the lining and excavation wall shall be filled with crushed rock or gravel ranging from 3/4 through 6 inches in diameter and free of fines, sand, clay or organic material. The maximum fines in the gravel shall be 2% by weight passing through a US Standard #10 mesh or 2.0 millimeter sieve.

iii. Minimum width of annular space between lining and sidewall: 12 inches.

iv. Minimum thickness of reinforced perforated concrete liner: 2-1/2 inches.

v. Minimum thickness of reinforced concrete top: 6 inches.

vi. Minimum depth of drain media in pit bottom: 6 inches.

vii. Minimum depth of cover over seepage pit top: 6 inches.

viii. A reinforced concrete top shall be provided.

(1) When the cover over the seepage pit top exceeds 6 inches, risers shall conform to Subsection R317-4-6.7.F for accessibility.

6.15. Alternative Systems.

A. System Types.

1. At-Grade.

2. Mounds.

3. Packed Bed Media.

a. Intermittent Sand Filters.

b. Recirculating Sand Filters.

c. Recirculating Gravel Filters.

d. Textile Filters.

e. Peat Filters.

4. Sand Lined Trenches.

B. General Requirements.

1. Conformance to Applicable Requirements.

All requirements stated elsewhere in this rule for design, setbacks, construction and installation details, performance, repairs and abandonment shall apply unless stated differently for a given alternative system.

2. Sizing Criteria for Alternative Systems.

Absorption area shall be sized based on Section R317-4-13 Table 5 or 6 except as specified in this section.

3. Design Criteria for Alternative Systems.

All alternative systems shall be designed by a person certified at Level 3 in accordance with Rule R317-11.

a. The designer shall submit details of all system components with the necessary calculations.

b. The designer shall provide to the local health department and to the owner operation and maintenance instructions that include the minimum inspection levels in Section R317-4-13 Table 7 for the system.

4. Record in the Chain of Title.

When an alternative system exists on a property, notice of the existence of that system shall be recorded in the chain of title for that property.

C. Design of Alternative Systems.

1. At-Grade Systems.

Absorption trenches and absorption beds may be used in at-grade systems. At-grade systems shall conform to the requirements applicable to absorption trenches and absorption beds, except for the following:

a. Horizontal setbacks in Section R317-4-13 Table 2 are measured from edge of trench sidewall, except at property lines, where the toe of the final cover shall be 5 feet or greater in separation distance to a property line.

b. Minimum number of observation ports provided within

absorption area: 2.

i. The ports shall be installed to the depth of the trench or bed.

c. Depth of absorption excavations below natural grade: 0-10 inches.

d. Minimum cover over the absorption area: 6 inches.

e. Maximum slope of natural ground surface: 4%.

f. The maximum side slope for above ground fill shall be four horizontal to one vertical: 25% slope.

g. Where final contours are above the natural ground surface, the cover shall extend from the center of the wastewater system at the same general top elevation for a minimum of 10 feet in all directions beyond the limits of the absorption area perimeter, before beginning the side slope.

2. Mound Systems.

Mound systems shall conform to the following:

a. The design shall generally be based on the Wisconsin Mound Soil Absorption System: Siting, Design and Construction Manual, January 2000 published by the University of Wisconsin-Madison Small-Scale Waste Management Project, with the following exceptions.

i. The minimum separation distance between the natural ground surface and the anticipated maximum ground water table: 12 inches.

ii. Mound systems may be built over naturally existing soil types per Section R317-4-13 Table 5 or 6 provided the minimum depth of suitable soil is:

(1) between the natural ground surface and bedrock formations or unsuitable soils: 36 inches; or

(2) above soils that have a percolation rate faster than one minute per inch: 24 inches.

iii. The minimum depth of sand media over natural soil: 12 inches.

iv. The maximum slope of natural ground surface: 25 %.

v. The separation distances in Section R317-4-13 Table 2 are measured from the toe of the final cover.

vi. The effluent loading rate at the sand media to natural soil interface shall be calculated using Section R317-4-13 Table 5 or 6.

vii. The effluent entering a mound system shall be at levels at or below the defined parameters of non-domestic effluent.

viii. The minimum thickness of aggregate media around the distribution pipes of the absorption system shall be the sum of 6 inches below the distribution pipe, the diameter of the distribution pipe and 2 inches above the distribution pipe or 10 inches, whichever is larger.

ix. The cover may not be less than 6 inches in thickness, and shall provide protection against erosion, frost, storm water infiltration and support vegetative growth and aeration of distribution cell.

x. A minimum of three observation ports shall be located within the mound at each end and the center of the distribution cell.

(1) At least one port shall be installed at the gravel-sand interface, and one port at the sand-soil interface.

b. Mounds shall use pressure distribution.

i. The Utah Guidance for Performance, Application, Design, Operation and Maintenance: Pressure Distribution Systems document and Subsection R317-4-6.14.D.4 shall be used for design requirements.

(1) See Section R317-4-14 Appendix B for pump and control requirements.

3. Packed Bed Media Systems.

Packed bed media systems shall conform to the following:

a. System Design Criteria.

i. Wastewater Design Flows.

(1) For single-family dwellings the design shall be based on a minimum of 300 gallons per day for two bedrooms and 100 gallons per day for each additional bedroom.

(2) All other flow estimates shall be based on Subsection R317-4-6.4.

(3) Special design considerations shall be given for non-domestic effluent.

ii. Effluent Distribution.

Effluent shall be uniformly distributed over the filter media using pressure distribution.

b. Absorption System Requirements.

Absorption systems shall conform to the following:

i. Siting Conditions.

Packed bed media absorption systems may be sited under the following conditions:

(1) The minimum separation distance between the natural ground surface and the anticipated maximum ground water table: 12 inches.

(2) Packed bed media absorption systems may be built over naturally existing soil types per Section R317-4-13 Table 5 or 6 provided the minimum depth of suitable soils:

(a) above soils that have a percolation rate faster than one minute per inch: 24 inches; and

(b) between the natural ground surface and bedrock formations or unsuitable soils: 36 inches; or

(c) between the natural ground surface and bedrock formations or unsuitable soils: 18 inches based on an evaluation of infiltration rate and hydrogeology from a professional geologist or engineer that is certified at the appropriate level to perform onsite wastewater system design and having sufficient experience in geotechnical engineering based on:

(i) type, extent of fractures, presence of bedding planes, angle of dip;

(ii) hydrogeology of surrounding area; and

(iii) cumulative effect of all existing and future systems within the area for any localized mounding or surfacing that may create a public health hazard or nuisance, description of methods used to determine infiltration rate and evaluations of surfacing or mounding conditions.

(3) A non-chemical disinfection unit, capable of meeting laboratory testing parameters in Table 7.3, and a maintenance schedule consistent to Section R317-4-13 Tables 7.1 and 7.3, shall be used in excessively permeable soils.

(4) Conformance with the minimum setback distances in Section R317-4-13 Table 2, except for the following that require a minimum of 50 feet of separation:

(a) watercourses, lakes, ponds, reservoirs;

(b) non-culinary springs or wells;

(c) foundation drains, curtain drains; or

(d) non-public culinary grouted wells, constructed as required by Title R309.

ii. Sizing Criteria.

The minimum required effective absorption area shall be calculated using Section R317-4-13 Table 5 or 6 and may be reduced by: 30%.

(1) The use of chambered trenches with a packed bed media system may not receive additional reductions as allowed in Subsection R317-4-6.14.E.1.c.

iii. Separation from Ground Water Table.

The bottom of the absorption system shall have a vertical separation distance of at least 12 inches from the anticipated maximum ground water table.

iv. Observation Ports.

A minimum of two observation ports shall be provided within the absorption area.

v. Drip Irrigation.

Drip irrigation absorption may be used for packed bed media absorption system effluent dispersal based on type of soil and drip irrigation manufacturer's recommendations.

(1) Materials shall be specifically designed and manufactured for onsite wastewater applications.

(2) Non-absorption components shall be installed per

Section R317-4-6 and Section R317-4-13 Table 2.

c. Intermittent Sand Filter Systems.

i. Media.

Either sand media or sand fill as described below may be used.

(1) Minimum depth of sand media: 24 inches.

(2) Minimum depth of sand fill: 24 inches.

(a) Effective size: 0.35-0.5 millimeter.

(b) Uniformity coefficient: less than 4.0.

(c) Maximum fines passing through #200 sieve: 1%.

ii. Maximum application rate per day per square foot of media surface area:

(1) Sand media: 1.0 gallons.

(2) Sand fill: 1.2 gallons.

iii. Maximum dose volume through any given orifice for each dosing: 2 gallons.

iv. Effluent entering an intermittent sand filter shall be at levels at or below the defined parameters of non-domestic effluent.

c. Recirculating Sand Filter (RSF) Systems.

i. Media.

(1) Minimum depth of washed sand: 24 inches.

(2) Effective size: 1.5-2.5 millimeter.

(3) Uniformity coefficient: less than 3.0.

(4) Maximum fines passing through #50 sieve: 1%.

ii. Maximum application rate per day per square foot of media surface area: 5 gallons.

d. Recirculating Gravel Filter (RGF) Systems.

i. Media.

(1) Minimum depth of washed gravel: 36 inches.

(2) Effective size: 2.5-5.0 millimeter.

(3) Uniformity Coefficient: less than 2.0.

(4) Maximum fines passing through #16 sieve: 1%.

ii. Maximum application rate per day per square foot of media surface area: 15 gallons.

e. Textile Filter Systems.

i. Media shall be geotextile, AdvanTex, or an approved equal.

ii. Maximum application rate per day per square foot of media surface area: 30 gallons.

f. Peat Filter Systems.

i. Minimum depth of peat media: 24 inches.

ii. Maximum application rate per day per square foot of media surface area: 5 gallons.

4. Sand Lined Trench Systems.

Sand lined trench systems shall conform to the following:

a. Siting Conditions.

i. The minimum depth of suitable soil or saprolite between the sand media in trenches and the anticipated maximum ground water table: 12 inches.

ii. Sand lined trench systems may be built over naturally existing:

(1) soil types 1 through 4; or

(2) soils or saprolite with a percolation rate between 1 and 60 minutes per inch.

iii. The minimum depth of suitable soil or saprolite is:

(1) between the sand media in trenches and bedrock formations or unsuitable soils: 36 inches; or

(2) above soils or saprolite that have a percolation rate faster than one minute per inch: 24 inches.

c. Trench Requirements.

Sand lined trenches shall conform to the requirements applicable to absorption trenches except for the following:

i. Trenches in Suitable Soil.

The minimum required effective absorption area shall be calculated using Section R317-4-13 Table 5 or 6.

ii. Trenches in Saprolite.

The minimum required effective absorption area shall be based on percolation rate using Section R317-4-13 Table 5.

(1) This rate shall be determined by conducting percolation tests. The soil shall be allowed to swell not less than 24 hours or more than 30 hours.

iii. The use of chambered trenches with a sand media system may not receive additional reductions as allowed in Subsection R317-4-6.14.E.1.c.

iv. Width of absorption trench excavations: 36 inches.

v. The entire trench sidewall shall be installed in natural ground. At-Grade system designs are not allowed.

vi. Minimum depth of sand media: 24 inches.

vii. Sand lined trenches with drain media.

(1) Minimum depth of drain media under the pressure lateral distribution pipe: 6 inches.

(2) Minimum depth of drain media over pressure lateral distribution pipe: 2 inches.

(3) Minimum depth of soil cover or saporlite over drain media: 6 inches.

viii. Sand lined trenches with Type A chambers.

(1) Minimum depth of soil cover or saporlite over chambers: 12 inches.

ix. Minimum number of observation ports per trench: 1.

c. Effluent Distribution.

Effluent shall be uniformly distributed over the sand media using pressure distribution.

i. Design shall generally be based on the Utah Guidance for Performance, Application, Design, Operation and Maintenance: Pressure Distribution Systems document.

R317-4-7. Construction and Installation.

7.1. System Installation.

A. Approved Plans.

The installer may not deviate from the approved plans or conditions of the construction permit without the approval of the designer and the reviewing regulatory authority.

B. Installation Restrictions.

A regulatory authority may limit the time period or area in which a system can be installed to ensure that soil conditions, weather, groundwater, or other conditions do not adversely affect the reliability of the system.

C. General Requirements.

1. Prior to installation, all minimum setback distances shall be field verified.

2. All absorption areas shall be protected prior to and during site construction.

3. The regulatory authority may require a temporary barrier around the absorption area, including the replacement area for additional protection prior to and during any site construction. If necessary, a more permanent barrier may be required following construction.

4. All absorption excavations and piping shall be level within a tolerance of plus or minus 1 inch. The overall slope from effluent entry to terminus shall be no more than 4 inches per hundred feet.

5. Absorption system excavations shall be made such that the soil in the bottom and sides of the excavation is not compacted. Strict attention shall be given to the protection of the natural absorption properties of the soil.

6. Absorption systems may not be excavated when the soil is wet enough to smear or compact easily.

7. All smeared or compacted surfaces should be raked to a depth of 1 inch, and loose material removed before the absorption system components are placed in the excavation.

8. Open absorption system excavations shall be protected from surface runoff to prevent the entrance of silt and debris.

9. Absorption systems shall be backfilled with earth that is free from stones 10 inches or more in diameter.

10. Distribution pipes may not be crushed or misaligned during backfilling. When backfilling, the earth shall be mounded slightly above the surface of the ground to allow for settlement

and prevent depressions for surface ponding of water.

11. Final grading shall prevent ponding throughout the entire system area and promote surface water runoff.

12. Heavy wheeled equipment may not be driven in or over absorption systems prior to or during construction or backfilling.

D. Building and Effluent Sewer.

1. Pipe, pipe fittings, and similar materials comprising building and effluent sewers shall conform to the applicable standards as outlined in Section R317-4-13 Table 4.

2. Each length of pipe shall be stamped or marked as required by the International Plumbing Code.

3. Where two different sizes or types of pipe are connected, a proper type of fitting or conversion adapter shall be used.

4. All sewers:

a. shall have watertight, root-proof joints; and

b. may not receive any ground water or surface runoff.

5. Pipes shall be installed on a foundation of undisturbed earth, or stabilized earth that is not subject to settling.

E. Tanks.

Tank installation shall conform to the following requirements.

1. All tanks shall be installed on a level, stable base that will not settle.

2. The hole to receive the tank shall be large enough to permit the proper placement of the tank and backfill.

3. Where ground water, rock or other undesirable protruding obstructions are encountered, the bottom of the hole shall be excavated an additional 6 inches, and backfilled with sand, crushed stone, or gravel to the proper grade.

4. Backfill around and over the septic tank shall be placed in such a manner as to prevent undue strain or damage to the tank or connected pipes.

F. Absorption Systems.

1. Cover shall be evenly graded over the entire absorption area.

2. Distribution and Drop Boxes.

a. The inlet and outlet piping shall be sealed watertight to the sidewalls of the box.

b. The box shall be provided with a means of access. Access shall be brought to final grade.

c. The lid of the riser shall be adequate to prevent entrance of water, dirt or other foreign material, but made removable for observation and maintenance of the system.

d. The top of the box shall be at least 6 inches below final grade.

e. The box shall be installed on a level, stable base to ensure against tilting or settling, and to minimize movement from frost action.

f. Unused knock-out holes in boxes shall be sealed watertight.

3. The solid and distribution pipes shall be bedded true to line and grade, uniformly and continuously supported by firm, stable material.

4. No cracked, weakened, modified or otherwise damaged chamber or bundled synthetic aggregate units shall be used in any installation.

G. Pressure Distribution.

1. Installation practices shall follow the approved design.

G. Alternative Systems.

1. At-Grade and Mound Systems.

a. The site shall be cleared of surface vegetation, without removing soil, and scarified to an approximate depth of 6 inches. Any furrows resulting from the scarification shall be perpendicular to any slope on the site.

i. Rotary tilling is prohibited for scarification.

b. The system may not be installed in wet or moist soil conditions.

- c. No equipment shall be driven over the scarified area.
- d. The site shall be graded such that surface water drains away from the system and adjoining area.

2. Packed Bed Media and Sand Lined Trench Systems.
Installation practices shall follow the approved design.

R317-4-8. Final Inspections.

8.1. Final Inspections.

The regulatory authority shall inspect the entire installation before backfilling to determine compliance with this rule. Some components or system types require additional testing or inspection methods as outlined in the following.

A. Tank Water Tightness Testing.

Each tank shall be tested for water tightness prior to backfill.

1. The tanks shall be filled 24 hours before the inspection to allow stabilization of the water level. Considering water absorption by the concrete, there may not be a change in the water level nor any water moving visibly into or out of the tank. Testing shall be supervised by the regulatory authority. Tanks exhibiting obvious defects or leaks may not be approved unless such deficiencies are repaired to the satisfaction of the regulatory authority.

a. The regulatory authority may allow two piece tanks, with the joint below the water level, to be backfilled up to 3 inches below the joint to provide adequate support to the seam of the tank.

b. Polyethylene or fiber glass tanks may be backfilled as per manufacturers' recommendations.

2. If ground water elevations inhibit the ability to visibly inspect the exterior of the tank, the tanks may be tested by their ability to exclude water.

B. Distribution and Drop Boxes.

1. Distribution and drop boxes should be installed level and the flow distribution lines shall be checked by filling the boxes with water up to the outlets.

C. Pressure Distribution, Effluent Pumps.

1. Verify the correct operation of the pump, controls, and alarm.

D. Deep Wall Trenches, Seepage Pits.

1. Verify the depth of the trench excavation.

E. At Grade and Mound Systems.

1. Verify the preparation of the original ground before the placement of fill.

2. Verify that the final cover meets requirements.

E. Alternative and Experimental Systems.

1. All additional inspections will be dictated by the complexity of the system and absorption system type as identified by the regulatory authority.

G. Final Approval.

Final approval shall be issued by the regulatory authority prior to operation of the system, and shall include an as-built drawing of the completed system.

R317-4-9. Experimental Systems.

9.1. Administrative Requirements.

A. Where unusual conditions exist, experimental methods of onsite wastewater treatment and dispersal may be employed provided they are acceptable to the division and to the local health department having jurisdiction.

B. When considering proposals for experimental onsite wastewater systems, the division or the local health departments may not be restricted by this rule provided that:

1. the experimental system proposed is attempting to resolve an existing pollution or public health hazard, or when the experimental system proposal is for new construction, it has been predetermined that an acceptable back-up wastewater system will be installed in event of failure of the experiment;

2. the proposal for an experimental onsite wastewater

system shall be in the name of and bear the signature of the person who will own the system; and

3. the person proposing to utilize an experimental system has the responsibility to maintain, correct, or replace the system in event of failure of the experiment.

C. When sufficient, successful experience is established with experimental onsite wastewater systems, the division may designate them as approved alternative onsite wastewater systems.

D. Following this approval of alternative onsite wastewater systems, the division may initiate rulemaking.

9.2 General Requirements.

A. All experimental systems shall be designed, installed and operated under the following conditions:

1. The ground water requirements shall be determined as described in Subsection R317-4-4.1.B.3.

2. The local health department shall advise the owner of the system of the experimental status of that type of system. The advisory shall contain information concerning risk of failure, level of maintenance required, financial liability for repair, modification or replacement of a failed system and periodic monitoring requirements that are all specific to the type of system to be installed.

3. The local health department and the owner shall be provided with sufficient design, installation and operating information to produce a successful, properly operating installation.

4. The local health department is responsible for provision of, or oversight of an approved installation, inspection and maintenance and monitoring program for the systems. Such programs shall include approved procedures for complete periodic maintenance and monitoring of the systems.

5. The local health department may impose more stringent design, installation, operating and monitoring conditions than those required by the division.

6. All failures, repairs or alterations shall be reported to the local health department. All repairs or alterations shall be approved by the local health department.

B. When an experimental wastewater system exists on a property, notification of the existence of that system shall be recorded in the chain of title for that property.

R317-4-10. Wastewater Holding Tanks Administrative, Design, and Installation.

10.1. Administrative Requirements.

A. Requests for the use of wastewater holding tanks shall receive the written approval of the local health department prior to the installation of the holding tank and be administered under an annual operating permit.

B. Wastewater holding tanks are only permitted:

1. where an absorption system for an existing dwelling has failed and installation of a replacement absorption system is not practicable;

2. as a temporary, not to exceed one year, wastewater system for a new dwelling until a connection is made to an approved sewage collection system;

3. as a temporary, not to exceed one year, wastewater system that may include construction sites, labor camps, temporary mass gatherings, or emergency refuge sheltering; or

4. for other essential and unusual situations where both the division and the local health department having jurisdiction concur that the proposed holding tank will be designed, installed and maintained in a manner that provides long term protection of the waters of the state.

a. Requests for the use of wastewater holding tanks in this instance shall receive the written approval of both agencies prior to the installation of such devices.

C. Except on those lots recorded and approved for wastewater holding tanks prior to May 21, 1984, wastewater

holding tanks are not permitted for use in new housing subdivisions, or commercial, institutional, and recreational developments except in those instances where these devices are part of a specific watershed protection program acceptable to the division and the local health department having jurisdiction.

10.2. General Requirements.

The design, site placement, installation, and maintenance of all wastewater holding tanks shall comply with the following:

A. No wastewater holding tank shall be installed and used unless plans and specifications covering its design and construction have been submitted to and approved by the appropriate regulatory authority.

B. A statement accompanying the application, that a contract with an approved pumper per Rule R317-550 will be obtained stating that the tank will be pumped out periodically at regular intervals or as needed, and contents will be disposed in an approved manner.

C. If authorization is necessary for disposal of wastewater at certain facilities, evidence of such authorization must be submitted for review.

10.3. Basic Plan Information Required.

Depending on the individual site and circumstances, or as determined by the regulatory authority, some or all of the following plan information may be required.

A. Applicant Information.

1. The name, current address, and telephone number of the applicant.

2. Complete address, legal description of the property, or both, to be served by this onsite wastewater system.

B. A plot or site plan showing:

1. direction of North;

2. daily wastewater flow;

3. location and liquid capacity of wastewater holding tank;

4. source and location of water supply;

5. location of water service line and building sewer; and

6. location of streams, ditches, watercourses, ponds, etc., near property.

C. Plan detail of wastewater holding tank and high wastewater level warning device.

D. Relative elevations of:

1. building floor drain;

2. building sewer;

3. invert of inlet for tank;

4. lowest plumbing fixture or drain in building served; and

5. the maximum liquid level of the tank.

E. Statement indicating the maximum anticipated ground water table.

10.4. Construction.

A. The tank shall be constructed of sound and durable material not subject to excessive corrosion and decay and designed to withstand hydrostatic and external loads. All wastewater holding tanks shall comply with the manufacturing materials and construction requirements specified for septic tanks.

B. Construction of the tank shall be such as to assure water tightness and to prevent the entrance of rainwater, surface drainage or ground water.

C. Tanks shall be provided with a maintenance access manhole at the ground surface or above and of at least 18 inches in diameter. Access covers shall have adequate handles and shall be designed and constructed in such a manner that they cannot pass through the access opening, and when closed will be child-proof and prevent entrance of surface water, dirt, or other foreign material, and seal the odorous gases in the tank.

D. A high water warning device shall be installed on each tank to indicate when it is within 75% of being full.

1. This device shall be either an audible or a visual alarm.

a. If the latter, it shall be conspicuously mounted.

2. All wiring and mechanical parts of such devices shall be

corrosion resistant.

3. All conduit passage ways through the tank top or walls shall be water and vapor tight.

E. No overflow, vent, or other opening shall be provided in the tank other than those described above.

F. The regulatory authority may require that wastewater holding tanks be filled with water and allowed to stand overnight to check for leaks. Tanks exhibiting obvious defects or leaks may not be approved unless such deficiencies are repaired to the satisfaction of the regulatory authority.

G. The building sewer shall comply with this rule.

H. Above ground holding tanks shall be clearly labeled as "Sewage".

10.5. Capacity.

The liquid capacity of the wastewater holding tank shall be based on wastewater flows for the type of dwelling or facility being served as identified in Section R317-4-13 Table 3 and on the desired time period between each pumping.

A. The minimum capacity of underground wastewater holding tanks shall be 1,000 gallons.

10.6. Location.

Any wastewater holding tank must be located:

A. in an area readily accessible to the pump truck in any type of weather that is likely to occur during the period of use;

B. in accordance with the requirements for septic tanks as specified in Section R317-4-13 Table 2; and

C. where it will not tend to float out of the ground due to a high ground water table or a saturated soil condition, since it will be empty or only partially full most of the time. In areas where the ground water table may be high enough to float the tank out of the ground when empty or partially full, adequate ground anchoring procedures shall be provided.

10.7. Management.

A. Wastewater holding tanks shall be pumped periodically, at regular intervals or as needed, and the wastewater contents shall be disposed of in a manner and at a facility meeting the approval of the appropriate regulatory authority.

B. Wastewater holding tanks for seasonal dwellings should be pumped out before each winter season to prevent freezing and possible rupture of the tank.

C. A record of the liquid waste hauler, pumping dates, and amounts pumped shall be maintained and made available to the appropriate regulatory authorities upon request.

D. Wastewater holding tanks shall be checked at frequent intervals by the owner or occupant and if leakage is detected it shall be immediately reported to the regulatory authority.

E. Repairs or replacements shall be conducted under the direction of the regulatory authority.

F. Improper location, construction, operation, or maintenance of a particular holding tank may result in appropriate legal action against the owner by the regulatory authority having jurisdiction.

G. Each holding tank installed under this rule, shall be inspected upon renewal of the operating permit.

R317-4-11. Operation and Maintenance of Systems.

11.1. Purpose.

The purpose of this section is to diminish the possibility of onsite wastewater system failures by informing the owners of required periodic maintenance, servicing, and monitoring. More complex systems will require a higher level of operation and maintenance.

11.2. Conventional Systems.

All conventional systems should be assessed after the first year of operation, and thereafter at the following minimum frequency.

A. Systems with daily flows between 1 and 3,000 gallons: every three years.

B. Systems with daily flows between 3,001 and 5,000 gallons: every two years.

C. Systems with non-domestic wastewater flows: yearly.

11.3. Pressure Distribution.

A. Each system utilizing pressure distribution shall be inspected as outlined in Section R317-4-13 Tables 7.1 and 7.2.

11.4. Alternative Systems.

A. Each alternative system shall be inspected as outlined in Section R317-4-13 Tables 7.1 and 7.2.

B. Each packed bed media system shall be sampled a minimum of every six months as outlined in Section R317-4-13 Table 7.3.

1. The grab sample shall be taken before discharge to an absorption system.

2. Effluent not meeting the standards of Section R317-4-13 Table 7.3 shall be followed with two successive weekly tests of the same type within a 30-day period from the first exceedance.

3. If two successive samples exceed the minimum standards, the system shall be deemed to be malfunctioning, and shall require further evaluation and a corrective action plan, see Subsection R317-4-3.11.

a. Effluent quality testing shall continue every two weeks until three successive samples are found to be in compliance.

11.4. Tank Servicing.

For recommended tank servicing see Section R317-4-14 Appendix E.

11.5. Distribution and Drop Box Maintenance.

Distribution and drop boxes, if provided, should be inspected and cleaned periodically.

11.6. Repair of a Malfunctioning System.

If corrective action is required see Subsection R317-4-3.11.

R317-4-12. Variance to Design Requirements.

12.1. Reasons for a Variance.

An applicant may request a variance from requirements of this rule only when a property has been deemed not feasible for the design or construction of an onsite wastewater system. A variance may not be granted for separation distances from public culinary water sources.

12.2. Conditions for a Variance.

A variance will not be approved unless the applicant demonstrates that all of the following conditions are met:

A. An onsite wastewater system consistent with this rule and local health department requirements cannot be constructed and a connection to a public or community-based sewerage system is not available or practicable. This determination will be made by the local health department.

B. Wastewater from the proposed onsite wastewater system will not:

- 1. contaminate ground water or surface water; and
- 2. surface or move off site before it is adequately treated to protect public health and the environment.

C. The proposed system will result in equal or greater protection of public health and the environment than is required by meeting the minimum standards and intent of this rule.

D. Adjacent properties, including the current and reasonably anticipated uses of adjacent properties, will not be jeopardized if the proposed system is constructed, operated, and maintained.

12.3. Procedure for Requesting a Variance.

A. A variance request shall include the information and documentation described in Subsection R317-4-12.5.

B. The local health department shall review the variance request and prepare a written determination outlining the conditions of approval or denial of the request. The review shall identify the factors considered in the process and specify the basis for the determination.

12.4. Variance Approvals.

A. A variance will not be approved unless the applicant demonstrates that all of the conditions in Subsection R317-4-12.2 are met.

B. A local health department may not issue an approval or an operating permit for an onsite wastewater system that does not comply with this rule unless a variance has been approved.

C. Notice of the conditions shall be recorded in the chain of title for the property in the office of the county recorder. The notice shall include:

- 1. the description of the system and variance conditions;
- 2. operation and maintenance requirements;
- 3. permission for the regulatory authority to access the property for the purpose of inspection and monitoring of the system; and
- 4. owner responsibilities to correct, repair, or replace the system at the direction of the regulatory agency.

12.5. Application Requirements.

The variance application shall include all information and documentation necessary to ensure that the standards in Subsection R317-4-12.2 will be met.

A. As appropriate, the information required under this section shall be submitted in a report by a professional engineer or a professional geologist that is certified at the appropriate level to perform onsite wastewater system design. An engineer or geologist who submits a report shall be licensed to practice in Utah and shall have sufficient experience and expertise to make the determinations in the report. Any such report shall include the engineer's or geologist's name and registration number, and a summary of qualifications. The report shall be imprinted with the engineer's or geologist's registration seal and signature. Information shall include at least the following.

- 1. Information demonstrating that connection to a public or community-based sewerage system is not available or practicable.
- 2. Technical justification and appropriate engineering, geotechnical, hydrogeologic, and reliability information justifying the request for a variance and how the conditions in 12.2 will be met.
- 3. A detailed description of the proposed system, including a detailed explanation of wastewater treatment technologies allowed by this rule that have been considered for use, and that will provide the best available treatment.
- 4. A statement of alternatives considered in lieu of a variance.
- 5. An operation, maintenance, and troubleshooting plan to keep the installed system operating as described in the application.
- 6. Documentation provided by the local health department that the adjoining land owners have been notified and provided opportunity for comment on the proposed variance.

R317-4-13. Tables.

TABLE 1.1

Minimum Lot Size (a) by Soil Type and Culinary Water Source

Soil Type	Public Water Supply	Non-public Water Supply (b)
1	12,000 sq. ft.	1 Acre
2	15,000 sq. ft.	1.25 Acres
3	18,000 sq. ft.	1.5 Acres
4	20,000 sq. ft.	1.75 Acres
5 (c)	20,000 sq. ft. (c)	1.75 Acres (c)

TABLE 1.2

Soil Type Key (d)

Soil Type	Soil Texture (e)	Soil Structure	Percolation Rate (minutes per inch)
-----------	------------------	----------------	-------------------------------------

1	Coarse Sand, Sand, Loamy Coarse Sand, Loamy Sand	Single Grain	1-10	Non-public Culinary Water Sources (d)			
2	Fine Sand, Very Fine Sand, Loamy Fine Sand, Loamy Very Fine Sand	Single Grain	11-20	Culinary Water Supply Line	(f)	10 (f)	10 (f)
3	Coarse Sandy Loam, Sandy Loam	Prismatic, Blocky, Granular	21-40	Non-culinary Well or Spring	10	25	100
4	Coarse Sandy Loam, Sandy Loam	Massive, Platy	41-60	Lake, Pond, Reservoir (a)	10	25	100
	Fine Sandy Loam, Very Fine Sandy Loam, Loam, Silt Loam	Prismatic, Blocky, Granular		Watercourse (live or ephemeral stream, river, subsurface drain, canal, storm water drainage systems, etc.)		25	100 (g)
5	Fine Sandy Loam, Very Fine Sandy Loam, Loam, Silt Loam,	Massive, Platy	61-120	Building Foundation Without foundation drain		5	5 (h)
	Sandy Clay Loam, Clay Loam, Silty Clay Loam	Massive		With foundation drain		10	100 (i)
	Sandy Clay Loam, Clay Loam, Silty Clay Loam, Sandy Clay, Clay, Silty Clay, Silt	Prismatic, Blocky, Granular		Curtain drains	10	10	100 (i)
				Dry washes, gulches, and gullies		25	50
6 (f)	Sandy Clay Loam, Clay Loam, Silty Clay Loam	Platy	>120	Swimming pool, below ground	3	10	25
	Sandy Clay, Clay, Silty Clay, Silt	Massive, Platy		Dry wells, catch basins		5	25
				Down slopes that exceed 35%. This includes all natural slopes or escarpments and any manmade cuts, retaining walls, or embankments.		10	50 (j)

NOTES

(a) Excluding public streets and alleys or other public rights-of-way, lands or any portion thereof abutting on, running through or within a building lot for a single-family dwelling. These minimum lot size requirements do not apply to building lots that have received final local health department approval prior to the adoption of this rule.

(b) Lots that are part of subdivisions that have received final local health department approval prior to the adoption of this rule are only exempt from the minimum lot size requirements if the developer has and is proceeding with reasonable diligence. Notwithstanding this grandfather provision for approved lots, the minimum lot size requirements are applicable if compelling or countervailing public health interests would necessitate application of these more stringent requirements. The shape of the lot shall also be acceptable to the regulatory authority.

(c) See the separation requirements in Section R317-4-13 Table 2.

(d) Packed bed media systems are required for this soil type.

(e) When there is a substantial discrepancy between the percolation rate and the soil classification, it shall be resolved to the satisfaction of the regulatory authority, or the soil type requiring the largest lot shall be used.

(f) See the USDA soil classification system for a more detailed description.

(g) These soils are unsuitable for any absorption system.

Property line 5 5 5

NOTES

(a) All distances are from edge to edge. Where surface waters are involved, the distance shall be measured from the high water line.

(b) See Subsection R317-4-6.14 for setback requirements.

(c) All distances shall be consistent with Rules R309-600 and R309-605.

(d) Compliance with separation requirements does not guarantee acceptable water quality in every instance. Where geological or other conditions warrant, greater distances may be required by the regulatory authority.

(e) For ungrouted wells and springs the distance shall be 200 feet. A private or individual well is considered to be grouted if it meets the construction standards required in Section R655-4-11, which requires a minimum 30-foot deep grout surface seal. Private or individual wells not constructed to this minimum standard are considered to be ungrouted. Although this distance shall be generally adhered to as the minimum required separation distance, exceptions may be approved by the regulatory authority, taking into account geology, hydrology, topography, existing land use agreements, consideration of the drinking water source protection requirements, protection of public health and potential for pollution of water source. Any person proposing to locate an absorption system closer than 200 feet to an individual or nonpublic ungrouted well or spring must submit a report to the regulatory authority that considers the above items. In no case shall the regulatory authority grant approval for an onsite wastewater system to be closer than 100 feet from an ungrouted well or a spring.

(f) If the water supply line is for a public water supply, the separation distance shall comply with the requirements of Rule R309-550. No culinary water service line shall pass through any portion of an absorption area.

(g) Lining or enclosing watercourses with an acceptable impervious material may permit a reduction in the separation requirement. In situations where the bottom of a canal or watercourse is at a higher elevation than the ground in which the absorption system is to be installed,

TABLE 2

Minimum Separation Distances in Feet (a)

Item Requiring Setback	From Building Sewers and Effluent Sewers	From Septic, Pump, and Other Tanks	From Absorption Area and Replacement Area
Absorption and Replacement Areas		5	(b)
Public Culinary Water Sources	(c)	100 (c)	100 (c)
Individual or	25	50	100 (e)

- a reduction in the distance requirement may be justified, but each case shall be decided on its own merits by the regulatory authority.
- (h) Horizontal setback between a deep wall trench or seepage pit and a foundation of any building is at least 20 feet.
 - (i) The regulatory authority may reduce the separation distance, if it can be shown that the effluent will not enter the drain, but each case must be decided on its own merits by the regulatory authority. In no case shall the regulatory authority grant approval for an absorption area to be closer than 20 feet.
 - (j) This setback may be reduced if a 53 foot reference line originating at the bottom of the distribution pipe, sloped at 35% below horizontal, will not daylight or intersect the ground surface.

Mobile Home Parks	400 per unit
Movie Theaters	
a. auditorium	5 per seat
b. drive-in	10 per car space
Nursing Homes	200 per bed space
Office Buildings and Business Establishments, not including food service, per eight hour shift	15 per employee
Picnic Parks, toilet wastes only	5 per person
Recreational Vehicle Parks	
a. temporary or transient with no sewer connections	50 per space
b. temporary or transient with sewer connections	125 per space
Recreational Vehicle Dump Station, per self-contained vehicle	50
Schools	
a. boarding	75 per person
b. day, without cafeteria, gymnasiums or showers	15 per person
c. day, with cafeteria, but no gymnasiums and showers	20 per person
d. day, with cafeteria, gymnasium and showers	25 per person
Service Stations, per day, per pump	250
Skating Rink, Dance Halls, Ski Areas, etc.	10 per person
Stores, including Convenience Stores	
a. per public toilet room	500
b. per employee	11
Swimming Pools and Bathhouses, Using Maximum Bather Load	10 per person
Taverns, Bars, Cocktail lounges with No Food Service	20 per seat
Visitor Centers	5 per visitor

TABLE 3

Estimated Flow Rates of Wastewater (a)

Type of Establishment	Gallons per Day
Airports	
a. per passenger	3
b. per employee	15
Boarding and Rooming Houses	
a. for each resident boarder and employee	50 per person
b. additional for each nonresident boarder	10 per person
Bowling Alleys, not including food service	85 per alley
Camps	
a. developed with flush toilets and showers	30 per person
b. developed with flush toilets	20 per person
c. developed with no flush toilets	5 per person
Churches, per person	5
Condominiums, Multiple Family Dwellings, or Apartments	150 per bedroom
Dentist's Office	
a. per chair	200
b. per staff member	35
Doctor's Office	
a. per patient	10
b. per staff member	35
Fairgrounds	1 per person
Fire Stations	
a. with full-time employees and food preparation	70 per person
b. with no full-time employees and no food preparation	5 per person
Food Service Establishment (b)	
a. ordinary restaurants, not 24 hour service	35 per seat
b. 24 hour service	50 per seat
c. single service customer utensils only	2 per customer
d. or, per customer served, includes toilet and Kitchen wastes	10
Gyms	
a. participant and staff member	25 per person
b. spectator	4 per person
Hairdresser, per chair	65
Highway Rest Stops, improved with restroom facilities	5 per vehicle
Hospitals	250 per bed space
Hotels, Motels, and Resorts	125 per unit
Industrial Buildings, exclusive of industrial waste	
a. with showers, per 8 hour shift	35 per person
b. with no showers, per 8 hour shift	15 per person
Labor or Construction Camps	50 per person
Launderette	580 per washer

NOTES

- (a) When more than one use will occur, the multiple use shall be considered in determining total flow. Small industrial plants maintaining a cafeteria or showers and club houses or motels maintaining swimming pools or laundries are typical examples of multiple uses. Uses other than those listed above shall be considered in relation to established flows from known or similar installations.
- (b) No commercial food waste disposal unit shall be connected to an onsite wastewater system unless first approved by the regulatory authority.

TABLE 4

Minimum Standards for Building Sewer, Effluent Sewer, and Distribution Pipe Materials (a)

Acceptable Building Sewer and Effluent Sewer Materials	
Type of Pipe	Minimum Standard
Acrylonitrile-Butadiene Styrene (ABS)	ASTM (b) D-2680 (c), D-2751, F-628
Polyvinyl Chloride (PVC)	ASTM D-2665, D-3033, D-3034
Acceptable Distribution Pipe Materials	
Type of Pipe	Minimum Standard
ABS	ASTM D-2661, D-2751
Polyethylene (PE), Smooth Wall	ASTM D-3350
PVC	ASTM D-2665, D-3033, D-3034, D-2729 (d)

NOTES

- (a) Each length of building sewer, effluent sewer, and distribution pipe shall be stamped or marked.

- (b) American Society for Testing and Materials.
- (c) For domestic wastewater only, free from industrial wastes.
- (d) Although perforated PVC, ASTM D-2729 is approved for absorption system application, the solid-wall version of this pipe is not approved for any application.

TABLE 5

Maximum Hydraulic Loading Rates for Percolation Testing

Percolation Rate (Minutes per Inch)	Absorption Systems Hydraulic Loading Rates (a)			Absorption Beds and Mound Systems Hydraulic Loading Rates (b)		
	(c)	(d)	(e)	(c)	(d)	(f)
0-10 (g)	0.90			0.45		
11-20	0.70			0.35		
21-30	0.60			0.3		
31-40	0.55			0.27		
41-50	0.50			0.25 (h)		
51-60	0.45			0.22 (h)		
61-90 (i)	0.40			(j)		
91-120 (i)	0.35			(j)		

NOTES

- (a) The following formula may be used in place of the values in this table: $q = 2.35$ divided by the square root of the percolation rate and then add 0.15 where q is the hydraulic loading rate. In no case shall the loading rate be greater than 1.0.
- (b) The following formula may be used in place of the values in this table: $q = 1.2$ divided by the square root of the percolation rate and then add 0.08 where q is the hydraulic loading rate. In no case shall the loading rate be greater than 0.5.
- (c) Minimum absorption area is equal to the actual or estimated wastewater flow in gallons per day shown in Section R317-4-13 Table 3, divided by the hydraulic loading rate within the applicable percolation rate category.
- (d) For non-residential facilities, if a garbage grinder is not used, the absorption area may be reduced by 10% (0.9 multiplier). If any automatic sequence washer is not used, the absorption area may be reduced by 30% (0.7 multiplier). If both of these appliances are not used, the absorption area may be reduced by 40% (0.6 multiplier).
- (e) For non-residential facilities, a minimum of 150 square feet of trench bottom or sidewall absorption area shall be provided.
- (f) For non-residential facilities, a minimum of 300 square feet of absorption area shall be provided.
- (g) Soils with a percolation rate faster than 1 minute per inch are only acceptable with the use of an alternative packed bed media system with a disinfection unit.
- (h) Not suitable for absorption beds.
- (i) Acceptable for alternative packed bed media systems only.
- (j) Not suitable for absorption beds or mounds.

TABLE 6

Maximum Hydraulic Loading Rates for Soil Classification

Texture	Structure	Absorption Systems Hydraulic Loading Rate (gal/ft ² /day)	
		(a)(b)(c)	(a)(b)(d)
Coarse sand, sand, loamy coarse sand, loamy sand	Single grain	0.9 (e)	0.45 (e)
Fine sand, very fine sand, loamy sand, loamy fine sand, loamy very fine sand	Single grain	0.7	0.35
Coarse sandy loam, sandy	Massive Platy	0.45 0.5	0.22 (f) 0.25 (f)

loam	Prismatic, blocky, granular	0.65	0.32
Fine sandy loam, very fine sandy loam	Massive Platy Prismatic, blocky, granular	0.4 0.35 0.5	(g) (g) 0.25 (f)
Loam	Massive Platy Prismatic, blocky, granular	0.4 (e) 0.5	(g) (g) 0.25 (f)
Silt loam	Massive Platy Prismatic, blocky, granular	(e) (e) 0.45	(g) (g) 0.22 (f)
Sandy clay loam, clay loam, silty (g)	Massive Platy Prismatic, clay loam granular	(e)(h) (i) blocky,	(g) (i) 0.4 (e)(h)
Silt, silty clay, sandy clay, clay	Massive Platy Prismatic, blocky, granular	(i) (i) 0.35 (e)(h)	(i) (i) (g)

NOTES

- (a) Minimum absorption area is equal to the actual or estimated wastewater flow in gallons per day, using Section R317-4-13 Table 3, divided by the hydraulic loading rate within the applicable soil texture and structure category.
- (b) For non-residential facilities, if a garbage grinder is not used, the absorption area may be reduced by 10% (0.9 multiplier). If any automatic sequence washer is not used, the absorption area may be reduced by 30% (0.7 multiplier). If both of these appliances are not used, the absorption area may be reduced by 40% (0.6 multiplier).
- (c) For non-residential facilities, a minimum of 150 square feet of trench bottom or sidewall absorption area shall be provided.
- (d) For non-residential facilities, a minimum of 300 square feet of absorption area shall be provided.
- (e) These soils are usually considered unsuitable for absorption systems, but may be suitable, depending upon the percentage and type of fines in coarse grained porous soils, and the percentage of sand and structure in fine grained soils. Percolation testing shall be used for further evaluation.
- (f) Not suitable for absorption beds.
- (g) Not suitable for absorption beds or mounds.
- (h) These soils may be permissible for packed bed media absorption systems only.
- (i) These soils are unsuitable for any absorption system.

TABLE 7: Minimum Inspection Frequency, Components, and Effluent Sampling Parameters

TABLE 7.1

Minimum Inspection Frequency (a)

Type of System	Annual	Semi-annual
Pressure Distribution	X	
At-Grade (first 5 years only)	X	
Mound	X	
Packed Bed Media		X
Sand Lined Trench	X	
Holding Tank	X	
Experimental System		X

NOTES (a) Or more frequently as directed by the regulatory authority.

TABLE 7.2

Components (a)

Type of System	Septic Tank and Other Tanks	Distribution or Drop Boxes (if accessible)	Pumps, Float Settings, Control Panel	Pressure Laterals, Absorption Area	Disinfection Unit (c)
Pressure Distribution	X		X	X	
At-Grade Mound	X	X	X	X	
Packed Bed Media	X	X	X	X	X
Sand Lined Trench Holding Tank (b)	X		X	X	
Experimental	X	X	X	X	

NOTES

- (a) Inspect other components as directed by the regulatory authority.
- (b) Including pumping records.
- (c) Required for absorption systems installed in excessively permeable soils, or as directed by the regulatory authority.

TABLE 7.3

Effluent Sampling Parameters
 Packed Bed Media System Routine Sampling Parameters
 Must sample Turbidity, or BOD5 and TSS.

Field Testing	Laboratory Testing			
Turbidity	BOD5	TSS	COD (a)	E. coli
=<20 NTU	=<25 mg/l	=<25 mg/l	=<75 mg/l	<126/100 ml
				(b)

NOTES

- (a) Chemical oxygen demand (COD) may be used in place of BOD5.
- (b) E. coli testing required when a disinfection unit is installed.

R317-4-14. Appendices.

Appendix A. Septic Tank Construction.

1.1. Plans for Tanks Required.

Plans for all septic tanks and underground holding tanks shall be submitted to the division for approval. Such plans shall show all dimensions, capacities, reinforcing, maximum depth of soil cover, and such other pertinent data as may be required. All tanks shall conform to the design drawing and shall be constructed under strict, controlled supervision by the manufacturer.

A. Precast Reinforced Concrete Tanks.

1. The walls and base of precast tanks shall be securely bonded together and the walls shall be of monolithic or keyed construction.

2. The sidewalls and bottom of such tanks shall be at least 3 inches in thickness.

3. The top shall have a minimum thickness of 4 inches.

4. Such tanks shall have reinforcing of at least 6 inch x 6 inch No. 6, welded wire fabric, or equivalent. Exceptions to this reinforcing requirement may be considered by the division based on an evaluation of acceptable structural engineering data submitted by the manufacturer.

5. All concrete used in precast tanks shall be Class A, at least 4,000 pounds per square inch, and shall be vibrated or well-rodged to minimize honeycombing and to assure water tightness.

6. Precast sections shall be set evenly in a full bed of sealant. If grout is used it shall consist of two parts plaster sand to one part cement with sufficient water added to make the grout flow under its own weight.

7. Excessively mortared joints should be trimmed flush.

8. The inside and outside of each mortar joint shall be sealed with a waterproof bituminous sealing compound.

9. For the purpose of early reuse of forms, the concrete may be steam cured. Other curing by means of water spraying or a membrane curing compound may be used and shall comply

to best acceptable methods as outlined in Guide to Curing Concrete, ACI308R-01, by American Concrete Institute, Farmington Hills, Michigan.

B. Poured-In-Place Concrete Septic Tanks.

1. The top of poured-in-place septic tanks with a liquid capacity of 1,000 to 1,250 gallons shall be a minimum of 4 inches thick, and reinforced with 3/8 inch reinforcing rods 12 inches on center both ways, or equivalent.

2. The top of tanks with a liquid capacity of greater than 1,250 gallons shall be a minimum of 6 inches thick, and reinforced with 3/8 inch reinforcing rods 8 inches on center both ways, or equivalent.

3. The walls and floor shall be a minimum of 6 inches thick. The walls shall be reinforced with 3/8 inch reinforcing rods 8 inches on center both ways, or equivalent. Inspections by the regulatory authority may be required of the tank reinforcing steel before any concrete is poured.

4. A 6 inch water stop shall be used at the wall-floor juncture to ensure water tightness.

5. All concrete used in poured-in-place tanks shall be Class A, at least 4,000 pounds per square inch, and shall be vibrated or well-rodged to minimize honeycombing and to ensure water tightness.

6. Curing of concrete shall comply with the requirements in Subsection R317-4-14 Appendix A.1.2.

C. Fiberglass Tanks.

1. Fiberglass tanks shall comply with one of the following criteria for acceptance.

a. The Interim Guide Criteria for Glass-Fiber-Reinforced Polyester Septic Tanks, International Association of Plumbing and Mechanical Officials Z1000-2007. The identifying seal of the International Association of Plumbing and Mechanical Officials shall be permanently embossed in the fiberglass as evidence of compliance.

b. Manufactured to meet the structural requirements of Underwriters Laboratories (UL) Standard 1316.

c. Professionally engineered plans demonstrating compliance to tank configuration requirements of this rule including acceptable structural calculations or other pertinent data as may be required.

2. Inlet and outlet tees shall be attached to the tank by a rubber or synthetic rubber ring seal and compression plate, or in some other manner approved by the division.

3. The tank shall be installed in accordance with the manufacturer's recommendations.

D. Polyethylene Tanks.

1. Polyethylene tanks shall comply with the criteria for acceptance established in Prefabricated Septic Tanks and Wastewater Holding Tanks, Can3-B66-10 by the Canadian Standards Association, Ontario, Canada.

2. Inlet and outlet tees shall be attached to the tank by a rubber or synthetic rubber ring seal and compression plate, or in some other manner approved by the division.

3. The tank shall be installed in accordance with the manufacturer's recommendations.

1.2. Identifying Marks.

A. All prefabricated or precast tanks that are commercially manufactured shall be plainly, legibly, and permanently marked or stamped with:

1. the manufacturer's name and address, or nationally registered trademark;

2. the liquid capacity of the tank in gallons on the exterior at the outlet end within 6 inches of the top of the wall; and

3. the inlet and outlet of all such tanks shall be plainly marked as "IN" or "OUT" respectively.

1.3. Inlets and Outlets.

Inlets and outlets of tanks or compartments thereof shall meet the minimum diameter requirements for building sewers.

A. Only one inlet or outlet is allowed, unless

preauthorized by the regulatory authority.

B. Inlets and outlets shall be located on opposite ends of the tank.

1. The invert of flow line of the inlet shall be located at least 2 inches, above the invert of the outlet to allow for momentary rise in liquid level during discharge to the tank.

2. Approved tanks with offset inlets may be used when approved by the regulatory authority.

C. All inlets and outlets shall have a baffle or sanitary tee.

1. An inlet baffle or sanitary tee of wide sweep design shall be provided to divert the incoming wastewater downward. This baffle or tee is to penetrate at least 6 inches below the liquid level, but the penetration is not to be greater than that allowed for the outlet device.

2. For tanks with vertical sides, outlet baffles or sanitary tees shall extend below the liquid surface a distance equal to approximately 40% of the liquid depth. For horizontal cylindrical tanks and tanks of other shapes, that distance shall be reduced to approximately 35% of the liquid depth.

3. All baffles shall be constructed from sidewall to sidewall or shall be designed as a conduit.

4. All sanitary tees shall be permanently fastened in a vertical, rigid position.

D. Inlet and outlet pipe connections to the septic tank shall be sealed and adhere to the tank and pipes to form watertight connections with a bonding compound or sealing rings.

E. Inlet and outlet devices may not include any design features preventing free venting of gases generated in the tank or absorption system back through the roof vent in the building plumbing system. The top of the baffles or sanitary tees shall extend at least 6 inches above the liquid level in order to provide scum storage, but no closer than 1 inch to the inside top of the tank.

1.4. Liquid Depth of Tanks.

Liquid depth of tanks shall be at least 30 inches. Depth in excess of 72 inches may only be considered in calculating liquid volume required in Subsection R317-4-6.6 if the tank length is at least two times the liquid depth.

1.5. Burial Depth.

The maximum burial depth shall be stated on the plans submitted.

1.6. Tank Compartments.

Septic tanks may be divided into compartments provided they meet the following:

A. The volume of the first compartment shall equal or exceed two-thirds of the total required septic tank volume;

B. No compartment shall have an inside horizontal dimension less than 24 inches;

C. Inlets and outlets shall be designed as specified for tanks, except that when a partition wall is used to form a multi-compartment tank, an opening in the partition may serve for flow between compartments provided the minimum dimension of the opening is 4 inches, the cross-sectional area is not less than that of a 6 inch diameter pipe (28.3 square inches), and the mid-point is below the liquid surface a distance approximately equal to 40% of the liquid depth of the tank.

1.7. Scum Storage.

Scum storage volume shall consist of 15% or more of the required liquid capacity of the tank and shall be provided in the space between the liquid surface and the top of inlet and outlet devices.

1.8. Access to Tank Interior.

Adequate access to the tank shall be provided to facilitate inspection, servicing and maintenance, and shall have no structure or other obstruction placed over it and shall conform to the following requirements:

A. Access to each compartment of the tank shall be provided through properly placed manhole openings not less than 18 inches in diameter, in minimum horizontal dimension or

by means of an easily removable lid section.

B. All access covers shall be designed and constructed in such a manner that they cannot pass through the access openings, and when closed will be child-proof and prevent entrance of surface water, dirt, or other foreign material, and seal the odorous gases in the tank. Concrete access covers for manhole openings shall have adequate handles.

C. Access to inlet and outlet devices shall be provided through properly spaced openings not less than 12 inches in minimum horizontal dimension or by means of an easily removable lid section.

Appendix B. Pressure Distribution, Pumps, Controls, and Alarms.

1.1. Design.

The design shall generally be based on the Utah Guidance for Performance, Application, Design, Operation and Maintenance: Pressure Distribution Systems document with the following exceptions:

A. Design and equipment shall emphasize ease of maintenance, longevity, and reliability of components and shall be proven suitable by operational experience, test, or analysis, acceptable to the regulatory authority.

B. Electrical disconnects shall be provided that are appropriate for the installation and shall have gas-tight junction boxes or splices. Electrical components used in onsite wastewater systems shall comply with applicable requirements of the State of Utah Electrical Code.

C. All components shall be constructed and installed to facilitate ease of service without having to alter any other part.

1.2. Pumps, Controls, and Alarms.

Prior to final approval for operation, all pumps, controls and related apparatus shall be field tested and found to operate as designed.

A. When duplex pump system is designed, controls shall be provided that an alarm will signal when one of the pumps malfunctions.

B. Where multiple pumps are operated in series, controls shall be installed to prevent the operation of a pump or pumps preceding a station that experiences a high level alarm event.

C. Controls shall be capable of controlling all functions incorporated or required in the design of the system.

1. The control panel for all pressure distribution systems shall include a pump run-time hour meter and a pump event counter or other acceptable flow measurement method.

2. The control panel shall be installed within sight of the access risers.

a. Other locations may be approved by the regulatory authority.

3. Supporting hydraulic calculations and pump curve analysis shall be submitted to the regulatory authority with the design.

Appendix C. Soil Exploration Pits, Soil Logs, Soil Evaluations.

1.1. Soil Exploration Pit Construction.

Soil conditions shall be obtained from soil exploration pit(s) dug to a depth of 10 feet in the absorption area, or to the ground water table if it is shallower than 10 feet below ground surface. In the event that absorption system excavations will be deeper than 6 feet, soil exploration pits shall extend to a depth of at least 4 feet below the bottom of the proposed absorption system excavation.

A. Soil exploration pits shall be constructed in a manner to reduce potential for physical injury. One end of each pit should be sloped gently or "stair-stepped" to permit easy entry if necessary.

1.2. Soil Logs.

A. The soil log shall contain the following information.

1. A signed statement certifying that the logs were evaluated and recorded in accordance with this rule.

2. The names of all qualified individuals per Rule R317-11 conducting the tests.

3. The location of the property.

4. The location of the soil exploration pit on the property.

5. The date of the log.

6. A description and depths of the soil horizons throughout the soil exploration pit to include:

a. soil texture and structure using the USDA system of classification;

b. estimated volume percentage of coarse fragments defined as:

i. "Gravel" means a rock fragment from 0.1 inches to 3 inches in diameter;

ii. "Cobble" means rock fragment from 3 inches to 10 inches in diameter;

iii. "Stone" means a rock fragment greater than 10 inches in diameter;

c. the presence and abundance of mottling defined as:

i. "Few" when less than 2% of the exposed surface is occupied by mottles;

ii. "Common" when from 2% to 20% of the exposed surface is occupied by mottles; and

iii. "Many" when more than 20% of the exposed surface is occupied by mottles;

d. depth to groundwater or bedrock, if encountered, and maximum anticipated groundwater table; and

e. other pertinent information.

1.3. Soil Evaluation.

Soils shall be evaluated using the USDA Soil Texture Classification method.

A. The soil horizon with the lowest loading rate shall be used in calculating the required absorption area.

Appendix D. Percolation Method.

1.1. Percolation Test Requirements.

Percolation tests shall be completed by an individual certified per Rule R317-11 and shall be conducted in accordance with the instructions in this appendix.

A. Typical Areas.

When percolation tests are conducted, such tests shall be conducted at points and elevations selected as typical of the area in which the absorption system will be located.

B. Percolation Test Certificate.

Percolation test results shall be submitted on a signed "Percolation Test Certificate". The test certificate shall contain the following:

1. A signed statement certifying that the tests were conducted in accordance with this rule.

2. The names of all individuals per Rule R317-11 conducting the tests.

3. The location of the property.

4. The location of the percolation tests on the property.

5. The depth to the bottom of the percolation test hole from the existing grade.

6. The final stabilized percolation rate of each test in minutes per inch.

7. The date of the tests.

8. Other pertinent information.

C. Specific Requirements.

Percolation tests shall be conducted at the owner's expense and in accordance with the following:

1. Conditions Prohibited for Test Holes.

Percolation tests may not be conducted in test holes that extend into ground water, bedrock, or frozen ground. Where shrink-swell clays, fissured soil formations, or saprolite is encountered, tests shall be made under the direction of the regulatory authority.

2. Soil Exploration Pit Prerequisite to Percolation Tests.

Since the appropriate percolation test depth depends on the soil conditions at a specific site, the percolation test shall be

conducted only after the soil exploration pit has been dug and examined for suitable and porous strata and ground water table information. Percolation test results should be related to the soil conditions found.

3. Test Holes to Commence in Specially Prepared Excavations.

All percolation test holes should commence in specially prepared larger excavations, preferably made with a backhoe, of sufficient size that extend to a depth approximately 6 inches above the strata to be tested.

4. Type, Depth, and Dimensions of Test Holes.

Test holes shall be dug or bored, preferably with hand tools such as shovels or augers, etc., and shall have horizontal dimensions ranging from 4 to 18 inches, preferably 8 to 12 inches. The vertical sides shall be at least 12 inches deep, terminating in the soil at an elevation 6 inches below the bottom of the proposed onsite wastewater system. In testing individual soil strata for deep wall trenches and seepage pits, the percolation test hole shall be located entirely within the strata to be tested, if possible.

5. Preparation of Percolation Test Hole.

Carefully remove any smeared soil surfaces to provide an open, natural soil interface into that water may percolate. Remove all loose soil from the bottom of the hole. Add 2 to 3 inches of clean pea gravel to protect the bottom from scouring or sealing with sediment when water is added. Caving or sloughing in some test holes can be prevented by placing in the test hole a wire cylinder or perforated pipe surrounded by clean pea gravel.

6. Saturation and Swelling of the Soil.

It is important to distinguish between saturation and swelling. Saturation means that the void spaces between soil particles are full of water. This can be accomplished in a relatively short period of time. Swelling is a soil volume increase caused by intrusion of water into the individual soil particles. This is a slow process, especially in clay-type soil, and is the reason for requiring a prolonged swelling period.

7. Placing Water in Test Holes.

Water should be placed carefully into the test holes by means of a small diameter siphon hose or other suitable method to prevent washing down the side of the hole.

8. Percolation Rate Measurement, General.

Necessary equipment should consist of a tape measure with at least 1/16 inch calibration or float gauge, and a time piece or other suitable equipment. All measurements shall be made from a fixed reference point near the top of the test hole to the surface of the water.

9. Percolation Test Procedure.

The hole shall be carefully filled with clear water and a minimum depth of 12 inches shall be maintained above the gravel for at least a four hour period by refilling whenever necessary. Water remaining in the hole after four hours may not be removed. Immediately following the saturation period, the soil shall be allowed to swell not less than 16 hours or more than 30 hours. Immediately following the soil swelling period, the percolation rate measurements shall be made as follows:

a. Any soil that has sloughed into the hole shall be removed and water shall be adjusted to 6 inches over the gravel.

b. Thereupon, from the fixed reference point, the water level shall be measured and recorded at approximately 30 minute intervals for a period of four hours.

i. If 6 inches of water seeps away in less than 30 minutes, a shorter time interval of 15 minutes between measurements may be used.

ii. If 6 inches of water seeps away in less than 15 minutes, a shorter time interval of 5 minutes between measurements may be used.

iii. Eight consecutive time intervals shall be recorded unless two successive water level drops do not vary more than

1/16 of an inch and indicate that an approximate stabilized rate has been obtained.

c. The hole shall be filled with 6 inches of clear water above the gravel after each time interval.

d. In no case shall the water depth exceed 6 inches above the gravel.

e. The final water level drop shall be used to calculate the percolation rate.

i. If no stabilized rate is achieved, the smallest drop shall be used to make this calculation.

f. Precautions shall be taken to prohibit water or soil from freezing during the test procedure.

10. Test Procedure for Type 1 and Type 2 Soils.

The hole shall be carefully filled with clear water to a minimum depth of 12 inches over the gravel and the time for this amount of water to seep away shall be determined. The procedure shall be repeated and if the water from the second filling of the hole at least 12 inches above the gravel seeps away in 10 minutes or less, the test may proceed immediately as follows:

a. Water shall be added to a point not more than 6 inches above the gravel.

b. Thereupon, from the fixed reference point, water levels shall be measured at 10 minute intervals for a period of one hour.

i. If 6 inches of water seeps away in less than 10 minutes, a shorter time interval of 5 minutes between measurements may be used.

ii. Six consecutive time intervals shall be recorded unless two successive water level drops do not vary more than 1/16 of an inch and indicate that an approximate stabilized rate has been obtained.

c. The hole shall be filled with 6 inches of clear water above the gravel after each time interval.

d. In no case shall the water depth exceed 6 inches above the gravel.

e. The final water level drop shall be used to calculate the percolation rate.

i. If no stabilized rate is achieved, the smallest drop shall be used to make this calculation.

11. Calculation of Percolation Rate.

The percolation rate is equal to the time elapsed in minutes for the water column to drop, divided by the distance the water dropped in inches and fractions thereof.

12. Using Percolation Rate to Determine Absorption Area.

The minimum or slowest percolation rate shall be used in calculating the required absorption area.

Appendix E. Tank Operation and Maintenance.

1.1. Maintenance of Septic Tanks.

A. Septic tanks shall be emptied before too much sludge or scum is allowed to accumulate and seriously reduce the tank volume settling depth. If either the settled solids or floating scum layer accumulate too close to the bottom of the outlet baffle or bottom of the sanitary tee pipe in the tank, solid particles will overflow into the absorption system and eventually clog the soil and ruin its absorption capacity.

B. A septic tank that receives normal loading should be inspected as indicated in Section R317-4-11 to determine if it needs emptying. Although there are wide differences in the rate that sludge and scum accumulate in tanks, a septic tank for a private residence will generally require emptying every three to five years. Actual measurement of scum and sludge accumulation is the only sure way to determine when a tank needs to be emptied. Experience for a particular system may indicate the desirability of longer or shorter intervals between inspections.

C. The tank should be completely emptied if either the bottom of the floating scum mat is within 3 inches of the bottom of the outlet baffle or tee or the sludge level has built up to

approximately 12 inches from the bottom of the outlet baffle or tee, or the scum and sludge layers together equal 40% or more of the tank volume. All scum and solids should be washed out and removed from the tank.

D. If multiple tanks or tanks with multiple compartments are provided, care should be taken to ensure that each tank or compartment is inspected and emptied.

E. Septic tank wastes contain disease causing organisms and shall be disposed of only in areas and in a manner that is acceptable to local health authorities and consistent with state rules.

F. Immediate replacement of damaged inlet or outlet fittings in the septic tank is essential for effective operation of the system.

G. Effluent screens or filters.

Remove the filter in a manner that prevents solids from passing to the absorption system. Wash the filter over the inlet side of septic tank. Replace the cleaned filter back into the outlet tee.

H. When the tank is empty, the interior surfaces of the tank should be inspected for leaks or cracks using a strong light.

I. A written record of all maintenance of the septic tank and absorption system should be kept by the owner of that system.

J. The functional operation of septic tanks is not improved by the addition of yeasts, disinfectants, additives or other chemicals; therefore, use of these materials is not recommended.

K. The advice of your regulatory authority should be sought before chemicals arising from a hobby or home industry or other unusual activities are discharged into a septic tank system.

L. Economy in the use of water helps prevent overloading of a septic tank system that could shorten its life and necessitate expensive repairs. The plumbing fixtures in the building should be checked regularly to repair any leaks that can add substantial amounts of water to the system. Industrial wastes and other liquids that may adversely affect the operation of the onsite wastewater system should not be discharged into such a system. Paper towels, facial tissue, disinfectant wipes, newspaper, wrapping paper, disposable diapers, sanitary napkins, coffee grounds, rags, sticks, and similar materials should also be excluded from the septic tank since they do not readily decompose and can lead to clogging of both the plumbing and the absorption system.

1.2. Maintenance of Other Tanks.

A. Other Tanks.

Any measurable amount of sludge or scum present in other tanks should be removed.

B. If a screen is present, it should be rinsed and cleaned over the opening of the septic tank.

KEY: waste water, onsite wastewater systems, alternative onsite wastewater systems, septic tanks

Notice of Continuation February 3, 2015

19-5-104

R357. Governor, Economic Development.**R357-3. Economic Development Tax Increment Financing Tax Credit.****R357-3-1. Authority.**

(1) Subsection 63N-2-104 requires the office to make rules establishing the conditions that a business entity must meet to qualify for a tax credit under 63N-2-101 et. seq. of the Utah Code Annotated.

R357-3-2. Definitions.

(1) Terms in these rules are used as defined in UCA 63N-2-103.

(2) "Administrator" means the internal staff position(s) created by the Executive Director of GOED.

(3) "Direct investment within the geographic boundaries" means that the applicant for the tax credit will invest in a new commercial project in the economic development zones.

(4) "Employee," "Employee Position" or "Full Time Equivalent (FTE)" means an employee, or leased employee, who is a Utah resident working at and dedicated to the new commercial project. Each Employee Position shall be entitled to the same basic health insurance, , if any, given by the new commercial project to its other FTEs in order for the Employee Position to count toward the hiring projection headcount. This is exclusive of those benefits given to any of the new commercial project's executive and other highly compensated employees. Pursuant to 63N-2-103(4) benefits shall not be calculated into wage amounts for the purpose of determining high paying jobs.

(a) When counting FTEs, if an FTE has his or her employment with the new commercial project terminated for any reason before completion of the applicable year, another FTE otherwise meeting the requirements described above may be hired full-time to fill the terminated FTE's position and complete the year of qualifying full-time employment, so long as such position is filled within 60 days for a non-exempt FTE and 90 days for an exempt employee.

(5) "GOED" means The Governor's Office of Economic Development.

(6) "Leased Employees" means Employees, Employee Positions, or FTEs contracted through a third party professional employee service, and such leased employees are entitled to comparable benefits as the other Employees, Employee Positions or FTEs, and that meet the definition of an Employee, Employee Position or FTE. For the sake of clarity, a "temporary" worker assigned short-term to a new commercial project shall not be considered a Leased Employee, Employee Position, or FTE.

(7) "Rural" means the following counties:

- (i) Beaver;
- (ii) Box Elder;
- (iii) Cache;
- (iv) Carbon;
- (v) Daggett;
- (vi) Duchesne;
- (vii) Emery;
- (viii) Garfield;
- (ix) Grand;
- (x) Iron;
- (xi) Juab;
- (xii) Kane;
- (xiii) Millard;
- (xiv) Morgan;
- (xv) Piute;
- (xvi) Rich;
- (xvii) San Juan;
- (xviii) Sanpete;
- (xix) Sevier;
- (xx) Summit;

- (xxi) Tooele;
- (xxii) Uintah;
- (xxiii) Wasatch;
- (xxiv) Washington; and
- (xxv) Wayne.

(8) "Target industry" means the industries designated as such by the GOED Board of Economic Development pursuant to 63N-3-110.

R357-3-3. Application Process.

(1) In order to apply for an Economic Development Tax Incentive, a business entity must submit an application in a form prescribed by GOED.

(2) In order to verify the information submitted in the application, the company may be required to supply additional information, which may include:

- (a) Balance Sheets;
- (b) Income Statements;
- (c) Cash Flow Statements;
- (d) Tax filings;
- (e) Market analyses;
- (f) Competing states' incentive offers;
- (g) Corporate structure;
- (h) Workforce data;

(i) Forecasted new state revenue associated with the new commercial project;

(j) Forecasted incremental job creation associated with the new commercial project;

(k) Forecasted wages associated with the new commercial project; or

(l) Other information as determined by GOED within its reasonable discretion.

(3) Information provided by the business entity is subject to the Government Records Access and Management Act. The business entity has the option, at its sole discretion and responsibility, to designate what information provided is private or protected subject to UCA 63G-2-302 and/or UCA 63G-2-305.

(4) GOED will review the applications to consider at least the following factors:

(a) Whether the new commercial project meets the criteria set forth in UCA 63N-2-104 and UCA 63N-2-105;

(b) Whether the company is projecting positive long term growth;

(c) The overall benefit to the State of the new commercial project;

(d) The uniqueness of the economic opportunity;

(e) Other factors that, in conjunction with (a) through (d), would mitigate the loss or potential loss of new state and local revenues in the state, high paying jobs, new economic growth, or that address the factors set forth in UCA 63N-2-102 and 104.

(5) Pursuant to UCA 63N-3-110, the GOED Board of Economic Development shall determine which industries shall be targeted for economic development.

R357-3-4. Factors to Be Considered in Authorizing an Economic Development Tax Credit Award.

(1) The amount and duration of the tax credit award shall be determined on a case-by-case basis. Factors to be considered include but are not limited to:

(a) Whether the industry has been determined by the GOED Board as a Target Industry;

(b) The competitive nature of the project, including whether the Company has secured real estate for its new commercial project at the time of application;

(c) To what extent other states have available incentives for the new commercial project, and the competitiveness of the other incentives, if known;

(d) Comparison to previously incented projects in size and

scope, and in conjunction with other factors listed;

- (e) The economic environment, including the unemployment rate and the underemployment rate, at the time the new commercial project or business entity applies;
- (f) The location of the new commercial project;
- (g) The average wage level of the forecasted jobs created;
- (h) What terms would result in the most effective incentive for the new commercial project;
- (i) The overall benefit to the State of the new commercial project;
- (j) The demonstrated support of the local community for the project; and
- (k) Other factors as reasonably determined by the Administrator.

(3) All annual tax credits shall be based on actual incremental taxes paid by the business entity or withheld on behalf of employees of a new commercial project.

(4) GOED shall propose a tax credit structure based on the factors set forth in this rule in a combination GOED deems the most effective and beneficial in weighing the benefits of the State, local community, and company.

(a) GOED shall propose the tax credit terms and structure to the GOED Economic Development Board prior to making a final offer to the business entity.

(5) The GOED Economic Development Board may advise GOED Executive Director regarding the Tax Credit Offer.

(6) If the Executive Director of GOED approves an Economic Development Tax Credit, GOED shall provide a tax credit offer letter to a business entity that includes:

- (a) The proposed terms of the Economic Development Tax Credit, including the maximum amount of aggregate annual tax credits and the time period over which the Tax Credits may be claimed;
- (b) the documentation that will be required each year in order to claim a tax credit for the following tax year as outlined in the Agreement.
- (7) If the applicant intends to accept the incentive offer, it shall counter-execute the tax credit offer letter.
- (8) If the Executive Director of GOED denies an application for an Economic Development Tax Credit, GOED shall provide a letter to the business entity that includes:
 - (a) Notice of the application denial;
 - (b) Reason for denial; and
 - (c) Notice that the business entity can reapply for a tax credit if changes to the proposed new commercial project are made.

R357-3-5. Application for and Verification of Information Supporting an Annual Economic Development Tax Credit.

(1) In order to receive a tax credit certificate during the term of an EDTIF agreement, a business entity must demonstrate to GOED's satisfaction, that the business entity has satisfied all of the criteria set forth in UCA 63N-2-103 and 63N-2-104, that the new commercial project resulted in new incremental tax revenue, that the contractual incremental job creation at the required wage criteria was achieved, and that the business entity is otherwise in compliance with the contractual requirements.

(a) If the jobs, wage, and other contractual criteria are met then a tax credit award is calculated annually based on the new commercial project's new state revenue performance for the disbursement period.

(2) In general, tax revenue shall be verified in the following ways with additional verification to be determined by GOED as needed:

(a) Employee Withholding Taxes: Report the employee withholding taxes remitted to the Utah State Tax Commission and dates paid.

(b) Vendor Paid Sales Tax: Report the Utah sales tax paid to vendors, total invoice amounts, and taxable total purchase

amount.

(c) Corporate Income Taxes: Report the corporate tax in a format prescribed by GOED including Use Taxes from the annual tax filing.

(d) Annual, Quarterly or monthly Utah Sales and Use Tax Return TC-62 form report the Line 4 "Goods purchased tax free and used by you" amounts and date the taxes were remitted to the Utah tax commission.

(e) If the new commercial project is not inclusive of the Company's total Utah operation, documentation supporting the apportionment of corporate tax liability to the project is required. The apportionment methodology must be approved by the GOED Administrator and documented.

(3) In order to verify direct investment in an Economic Development Zone, when requested by GOED the applicant shall provide:

(a) a lease agreement or occupancy permit that shows that the new commercial project is located in the economic development zone, during the first applicable year.

(4) In order to verify new incremental jobs, GOED may review:

(a) Aggregate Employee data from the Department of Workforce Services; or

(b) Company or a Payroll vendor for the new commercial project provided a list that included the following information but is not limited to: the number of employees, the gross wages paid including overtime pay, bonuses and other compensation, and the taxes withheld for each employee of the new commercial project.

(5) In order to verify creation of new incremental jobs and to determine whether such jobs comply with the wage requirement, GOED shall consider and/or the applicant shall provide:

(a) The employee data provided by the Department of Workforce Services, the business entity, or the private professional employment or payroll organization.

(b) If a business entity fails to produce sufficient documentation to demonstrate increased state revenue and compliance with the terms of their contract, GOED shall either request additional information or deny the tax credit pursuant to UCA 63N-2-105(4).

R357-3-6. Requests for Modification of the Tax Credit Offer or Contract.

(1) GOED may modify, or a business entity may apply to modify, the terms of a tax credit agreement as set forth below.

(2) Nonsubstantive Modifications: GOED and the business entity may, by written amendment, make nonsubstantive modifications to the tax credit contract if:

(a) Necessary to correct clerical errors made in the initial application, the offer, the contract, or the tax credit;

(b) Necessary to make technical changes, including but not limited to: changing the business entity's legal name, timeline change subject to subsection (c) below, any other condition that does not alter the tax incentive amount or violate any state or federal law;

(c) For the purposes of this section, a timeline change of no more than 24 months is generally considered "nonsubstantive".

(d) all nonsubstantive modifications shall be documented and maintained by the GOED staff.

(3) Substantive Modifications: Under extraordinary circumstances, a business entity may apply to GOED to modify the terms of the tax credit agreement if:

(a) There is a substantial change to new commercial project plan; and

(b) Modifying the terms of the tax credit would benefit the State.

(4) Substantive Modifications be will brought to the

GOED Executive Director for final approval after open consultation and comment with the GOED Board of Economic Development.

63N-2-104

Notice of Continuation May 30, 2013

R380. Health, Administration.**R380-200. Patient Safety Surveillance and Improvement Program (PSSIP).****R380-200-1. Purpose and Authority.**

(1) These rules establish a Patient Safety Surveillance and Improvement program (PSSIP) which extends the past Sentinel Event Reporting program and consists of two components. The first component includes a reportable events program intended to meet public accountability and transparency needs at a state-wide level. The second component uses the data obtained from the reportable events requirement as a foundation intended to develop state-wide patient safety related improvement solutions.

(2) The rule requires certain health care facilities to report patient safety events specified in this rule as determined by PSSIP in consultation with the patient safety quality work group.

(3) Reporting requirements for this rule will provide an annual state-wide report released in March of each year for public accountability and transparency. Additionally, data obtained from the reporting requirements will be used to help the Utah Department of Health and Health Care Providers understand patterns of failures, identify and implement state-wide improvement interventions, and evaluate state-wide interventions for improved outcomes. The PSSIP intends to be consistent with national regulatory and quality organizational standards to which facilities currently report and may include requirements from the Joint Commission, Agency for Healthcare Research and Quality, American Association of Ambulatory Surgical Centers, DNV Healthcare, Patient Safety Organizations, National Healthcare Safety Network, Centers for Medicaid and Medicare, and the National Quality Forum. As national standards for condition reporting change so may the PSSIP reporting requirements. The quality work output of the PSSIP provides limited access to identifiable health information that facilities report.

(4) This rule is authorized by Utah Code Subsections "Utah Code Ann. Subsections 26-1-30(3), (4), (6), (7), (8), and (9)".

R380-200-2. Definitions.

(1) "Adverse event" is an injury associated with healthcare processes rather than the underlying patient condition or disease itself and that prolongs medical intervention or results in harm, disability or death.

(2) "Causal analysis" means a process for identifying the basic or causal factor(s) that underlie variation in performance, resulting in the occurrence or possible occurrence of a patient safety event, which may include a Root Cause Analysis, a Failure Mode and Effect Analysis, hazards analysis, evidence review, observation or any other relevant analytical process aimed at identifying and understanding contributing factors.

(3) "Contaminated" means contamination that can be seen with the naked eye, or with use of detection mechanisms in general use, as they become reported or known to the health care facility.

(4) "Harm Scale" is a systematic method to designate a patient's level of harm that includes;

- (a) unsafe conditions,
- (b) near miss which is an event that was stopped prior to reaching the patient,
- (c) no harm,
- (d) additional monitoring or treatment to prevent harm,
- (e) temporary harm requiring intervention,
- (f) temporary harm requiring hospitalization,
- (g) permanent patient harm,
- (h) intervention to sustain life, or
- (i) patient death.

(5) "Health care facility" as defined in Title 26, Chapter 21 Part 1, Section 2, (13)(a).

(6) "Incident facility" means a facility where the patient safety event occurred while in the facility or immediately following discharge within a certain time period defined by specifically by the type of event from that facility.

(7) "Medication Error" means medication administration:

- (a) of a drug other than as prescribed or indicated;
- (b) of a dose other than as prescribed or indicated;
- (c) to a patient who was not prescribed the drug;
- (d) at a time other than prescribed or indicated;
- (e) at a rate other than as prescribed or indicated;
- (f) of an improperly prepared drug;
- (g) by a means other than as prescribed or indicated; or
- (h) unintentional administration of a drug to a patient who has a known allergy or drug interaction to the prescribed medication.

(8) "Patient safety events" are a compilation of serious, largely preventable, and harmful clinical adverse events that includes but are not limited to surgical events, product or device events, patient protection events, care management events, environmental events and criminal events.

R380-200-3. Reporting of Patient Safety Events.

(1) Each facility shall report to the Department all patient safety events within seventy-two hours of the facility's determination that a patient safety event may have occurred.

(2) Patient safety events are categorized as:

- (a) Reportable Events with outcome assessed by harm scale;

(b) Reportable Events resulting in permanent patient harm, intervention to sustain life, or patient death; and

(c) Reportable Events referenced by other reporting rules.

(3) Patient Safety Events include:

(a) Reportable Events required to be reported through the reporting portal and with the outcome level assessed by a harm scale:

(i) Surgery or procedures requiring consent performed on the wrong body part;

(ii) Surgery or procedures requiring consent performed on the wrong patient;

(iii) Incorrect surgery or procedures requiring consent performed on a patient;

(iv) Unintended retention of a foreign object in a patient after surgery or other procedures requiring consent;

(v) Infant discharged to the wrong person;

(vi) Neonatal hyperbilirubinemia, where bilirubin is greater than 25 milligrams per deciliter;

(vii) Stage 3 or 4 pressure ulcers acquired after admission to the facility, except for pressure ulcers that progress from Stage 2 to Stage 3, if the Stage 2 ulcer was documented upon admission;

(viii) Any incident in which a line designated for oxygen or other gas to be delivered to a patient contains the wrong gas or is contaminated by a toxic substance;

(ix) Unexpected flame or unanticipated smoke during and episode of care;

(x) Any care ordered by or provided by someone impersonating a physician, nurse, pharmacist, or other licensed or certified health care provider;

(xi) Abduction of a patient of any age;

(xii) Non-consensual sexual contact on a patient, staff member, or visitor by another patient, staff member or unknown perpetrator while on the premises of the facility; or

(xiii) Elopement or disappearance of a patient with cognitive impairment for more than 4 hours;

(b) Reportable Events resulting in permanent patient harm, intervention to sustain life, or patient death required to be reported to the reporting portal;

(i) Arising from Intraoperative or immediately post-operative death of a patient who the facility classified prior to

surgery as Anesthesia Surgical Assessment Class I or discharged home from an Ambulatory Surgical Center. "Intraoperative" means literally during surgery. "Immediately post-operative" means within 24 hours after surgery, or other invasive procedure was completed, or after induction of anesthesia if surgery not completed;

(ii) Arising from the use of contaminated drugs, devices, or biologics provided by the facility;

(iii) Arising from the use or function of a device in patient care in which the device is used for an off-label use, except where the off-label use is pursuant to informed consent;

(iv) Arising from intravascular air embolism that occurs while being cared for in the facility, except for intravascular air emboli associated with neurosurgical procedures;

(v) Arising from Patient suicide or unsuccessful attempt while in the facility or ER within 72 hours of discharge;

(vi) Arising from a medication error;

(vii) Arising from a hemolytic reaction due to the administration of ABO/HLA incompatible blood or blood products;

(viii) Arising from hypoglycemia, the onset of hypoglycemia which occurs while the patient is being cared for in the facility;

(ix) Arising from the irretrievable loss of an irreplaceable biological specimen;

(x) Arising from failure to follow up or communicate laboratory, pathology, or imaging test results;

(xi) Arising from an unintended electric shock while being cared for at a health care facility, excluding emergency defibrillation in ventricular fibrillation and electroconvulsive therapies;

(xii) Arising from a burn incurred from any source while being cared for in a facility;

(xiii) Arising from the use of restraints or bedrails while being cared for in a facility;

(xiv) Arising from a fall while being cared for in a health care facility;

(xv) Arising from a criminal assault or battery that occurs on the premises of the health care facility;

(xvi) Arising from the introduction of a metallic object into the MRI area;

(xvii) Arising from labor or delivery while being cared for in a facility; or

(xviii) Of an infant born at gestation equal to or greater than 32 weeks excluding congenital causes.

(c) Reportable events required by other reporting rules:

The following set of reportable events is governed by other existing Utah law or rule and facility reporting to the reporting portal under this rule is not needed.

(i) Prolonged fluoroscopy with cumulative dose greater than 1500 rads to single field (R313-20-5);

(ii) Radiology to the wrong body region (R313-20-5);

(iii) Radiotherapy greater than 25% above the prescribed radiotherapy dose (R313-20-5);

(iv) Death or permanent loss of function related to a healthcare acquired infection (R386-705); and

(v) Provider Preventable Conditions (R414-1-29).

(4) If a facility suspects that a patient safety event may have occurred to a patient who was transferred from another facility, the receiving facility shall report the suspected patient safety event to the transferring facility.

(5) All facility required reports will be submitted through a secured reporting portal and consist of the following:

(a) facility information;

(b) patient information;

(c) condition information

(d) type of occurrence;

(e) analysis findings; and

(f) corrective actions.

R380-200-4. Causal Analysis.

(1) The incident facility shall establish a causal analysis process.

(2) The incident facility shall designate a responsible individual to be the facility lead for each patient safety event.

(3) The incident facility may request the Department representative to participate in the facility's causal analysis in a consultative role to enhance the reliability and thoroughness of the causal analysis.

(4) The Department shall notify the facility's lead within 72 hours of receiving the patient safety event report whether the Department intends to participate in the facility's root cause analysis.

(5) Participation in the facility's causal analysis by the Department representative shall not be construed to imply Department endorsement of the facility's final findings or action plan.

(6) The incident facility and the Department shall each make reasonable accommodations when necessary to allow for the Department representative's participation in the causal analysis.

(7) If, during the review process, the Department representative discovers problems with the facility's processes that limit either the thoroughness or credibility of the findings or recommendations, the representative shall report these to the designated responsible individual orally within 24 hours of discovery and in writing within 72 hours.

(8) The facility shall conduct a causal analysis which is timely, thorough and credible to determine whether reasonable system changes would likely prevent a patient safety event in similar circumstances.

(9) The causal analysis shall:

(a) focus primarily on systems and processes, not individual performance;

(b) progress from specific, direct causes in clinical processes to contributing causes in organizational processes;

(c) seek to determine related and underlying causes for identified causes;

(d) identify changes which could be made in systems and processes, either through redesign or development of new systems or processes, that would reduce the risk of such events occurring in the future; and

(e) may include a Known Complication Test Revision set of questions to be utilized when requesting a more thorough response from a unit or physician on evaluation of a known complication related to a procedure, treatment or test. These questions should address:

(i) Whether the procedure/treatment/test was appropriate and Warranted and based on nationally recognized standards of care;

(ii) Whether the complication is a known risk, was anticipated before the procedure and that the standard of care applied to mitigate the risk;

(iii) Whether the complication was identified in a timely manner (i.e. at the time of the occurrence);

(iv) Whether the complication treatment was according to the standard of care and in a timely manner; and

(v) Whether the treatment of the complication follows a nationally recognized standard of care.

(10) The Department shall determine the causal analysis to be complete if it:

(a) involves a complete review of the patient safety event including interviews with all readily identifiable witnesses and participants and a review of all related documentation;

(b) identifies the human and other factors in the chain of events leading to the final patient safety event, and the process and system limitations related to the occurrence;

(c) searches readily retrievable records to analyze the underlying systems and processes to determine where redesign

might reduce risk;

(d) makes reasonable attempts to identify and analyze trends of similar events which have occurred at the facility in the past;

(e) identifies risk points and their potential contributions to this type of event;

(f) determines potential improvement in processes or systems that would tend to decrease the likelihood of such events in the future, or that no such improvement opportunities exist; and

(g) is based on the evidence from the research literature, data from other sources, or is derived from a formal organizational improvement strategy.

(11) The Department shall determine the causal analysis to be credible if it:

(a) is led by someone with training in causal analysis processes and who was not involved in the patient safety event;

(b) involves any necessary consultation with either internal or external experts in the processes in question who were not involved in the patient safety event;

(c) includes participation by the leadership of the organization;

(d) includes individuals most closely involved in the processes and systems under review;

(e) is internally consistent, does not contradicting itself or leave obvious questions unanswered;

(f) provides an explanation for all findings of "not applicable" or "no problem"; and

(g) includes consideration of relevant, available literature.

R380-200-5. Reports and Action Plan.

(1) Within 60 calendar days of determination of the patient safety event, the incident facility shall submit to the department a final report with an action plan that:

(a) identifies changes that can be implemented to reduce risk or formulates a rationale for not implementing changes; and

(b) where improvement actions are planned, identifies who is responsible for implementation, when the action will be implemented (including any pilot testing), and how the effectiveness of the actions will be evaluated.

(2) The incident facility shall provide a final report to the facility's administration and the Department in a Department-approved electronic format that includes:

- (a) type of harm;
- (b) contributing factors;
- (c) preventability; and
- (d) actions taken.

(3) The Department representative may submit a separate written dissenting report to the administrator of the incident facility and the Department if the Department representative identifies problems with the processes that limit the thoroughness or credibility of the findings and recommendations and that have not been corrected after reporting them to the designated responsible individual.

(4) The incident facility may seek review of the dissenting report by filing a request for agency as allowed by the Utah Administrative Procedures Act and Department rule.

(5) If a dissenting report is not challenged or is upheld on review:

(a) the facility shall include it in the facility's records of the causal analysis; and

(b) the Department may forward it, together with the facility's report, to the appropriate state agencies responsible for licensing the facility.

R380-200-6. Confidentiality.

(1) Information that the Department holds under this rule is confidential under the provisions of Title 26, Chapter 3. Because of the public interest to foster health care systems

improvements, the Department may exercise its discretion under Section 26-3-8 and shall not release information collected under this rule to any person pursuant to the provisions of Subsections 26-3-7(1) or (8).

(2) Information produced or collected by a facility is confidential and privileged under the provisions of Title 26, Chapter 25.

R380-200-7. Extensions and Waivers.

(1) The Department may grant an extension of any time requirement of this rule if the facility demonstrates that the delay is due to factors beyond its control or that the delay will not adversely affect the required root cause analysis and the purposes of this rule.

(2) A facility requesting a waiver must submit the request to the Department representative prior to the deadline for the required action.

(3) The Department may grant a waiver of any other provision of this rule if the facility demonstrates that the waiver will not adversely affect the required root cause analysis and the purposes of this rule.

R380-280-8. Advisory Panel.

(1) The Department shall establish a multi-disciplinary advisory panel to assist in carrying out the Department's responsibilities under this rule.

(2) At least one representative from each healthcare system that is required to report under this rule shall be invited to be members of the advisory panel.

(3) Representatives from other Department patient safety initiatives and Health Care Associations shall be invited to participate and include but are not limited to:

- (a) infection control,
- (b) maternal and infant mortality,
- (c) women and infant care, and
- (d) other participants, as identified.

(4) Members of the advisory panel will complete confidentiality documents.

(5) The advisory panel will meet at least quarterly in person or via electronic meeting.

(6) An annual report will be provided to the panel one month prior to public release for review and corrections.

R380-200-9. Reporting.

(1) The Department will report at a minimum one time a year in March on all events occurring in the state the previous year.

(2) This report will be de-identified and publicly available.

(3) Internal reports may be generated for quality improvement initiatives and shared with members of the advisory panel.

(4) An annual report of events will be requested from the governing program and incorporated in the annual March Patient Safety Report.

R380-200-10. Penalties.

An entity that violates any provision of this rule may be assessed a civil money penalty not to exceed the sum of \$5,000 or be punished for violation of a class B misdemeanor for the first violation and for any subsequent similar violation within two years for violation of a class A misdemeanor as provided in Section 26-23-6.

R384. Disease Control and Prevention, Health Promotion.**R384-415. Electronic-Cigarette Substance Standards.****R384-415-1. Authority and Purpose.**

(1) This rule is authorized by Section 26-57-103 and Subsection 59-14-803(5).

(2) This rule establishes standards for labeling, nicotine content, packaging, and product quality for electronic-cigarette substances for the regulation of electronic-cigarettes.

(3) This rule does not apply to a manufacturer-sealed electronic-cigarette substance.

(4) A product in compliance with this rule is not endorsed as safe.

R384-415-2. Definitions.

As used in this rule:

(1) "Artificial coloring" means the same as the term is defined in 21 C.F.R. 101.22(a)(4) (April 1, 2015) and as the term "color additive" is defined in 21 C.F.R. 70.3(f) (April 1, 2015).

(2) "Artificial flavoring" means the same as the term is defined in 21 C.F.R. 101.22(a)(1) (April 1, 2015).

(3) "Batch number" means the same as the term "lot number, control number, or batch number" is defined in 21 C.F.R. 210.3(b)(11) (April 1, 2015).

(4) "Business" means any sole proprietorship, partnership, joint venture, corporation, association, or other entity formed for profit or non-profit purposes.

(5) "Child resistant" means the same as the term "special packaging" is defined in 16 C.F.R. 1700.1(a)(4) (January 1, 2015) and is tested in accordance with the method described in 16 C.F.R. 1700.20 (January 1, 2015).

(6) "Department" means the Utah Department of Health.

(7) "Electronic-cigarette" means the same as the term is defined in Subsections 26-38-2(1) and 59-14-802(2).

(8) "Electronic-cigarette Product" means the same as the term is defined in Subsection 59-14-802(3).

(9) "Electronic-cigarette substance" means the same as the term is defined in Subsection 59-14-802(4).

(10) "EP standards" means the standards established for medicines by the European Pharmacopoeia, the European equivalent of the United States Pharmacopoeia. The EP standards define requirements for the qualitative and quantitative composition of medicines, and the tests that are to be used on medicines, substances, and materials used in their production.

(11) "Generally Recognized As Safe" means an United States Food and Drug Administration designation that a substance added to food is generally recognized, by qualified experts, as having been adequately shown to be safe under the conditions of its intended use, as found in 21 C.F.R. 170.30 (April 1, 2015). Such a substance is exempted from the usual Federal Food, Drug, and Cosmetic Act, 21 U.S.C. Sec. 301 et sq. (2013).

(12) "Local health department" means the same as the term is defined in Subsection 26A-1-102(5).

(13) "Manufacture" means the same as the term is defined in Subsection 26-57-102(5).

(14) "Manufacturer" means the same as the term is defined in Subsection 26-57-102(6).

(15) "Mg/mL" means milligrams per milliliter, a ratio for measuring an ingredient, in liquid form, where accuracy is measured in milligrams per milliliter, or a percentage equivalent.

(16) "Natural flavoring" means the same as the term is defined in 21 C.F.R. 101.22(a)(3) (April 1, 2015).

(17) "Nicotine" means the same as the term is defined in the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. Sec. 387(12) (2013).

(18) "Manufacturer-sealed electronic-cigarette substance" means the same as the term defined is in Subsection 26-57-

102(6).

(19) "Pharmaceutical" means a compound manufactured for use as a medicinal drug.

(20) "Retailer" means any person who sells, offers for sale, or offers to exchange for any form of consideration, an electronic-cigarette substance to a consumer. This definition is without regard to the quantity of an electronic-cigarette substance sold, offered for sale, exchanged, or offered for exchange.

(21) "Retailing" means involvement in any of the activities listed in Subsection R384-415-2(20). This definition is without regard to the quantity of an electronic-cigarette substance sold, offered for sale, exchanged, or offered for exchange.

(22) "Straight color" means a color additive approved for human consumption in food and drugs as listed in 21 C.F.R. 73.1 through 21 C.F.R. 73.1991 (April 1, 2015), 21 C.F.R. 74.101 through 21 C.F.R. 74.1711 (April 1, 2015), and 21 C.F.R. 81.1 (April 1, 2015), and includes substances as are permitted by the specifications for such color.

(23) "Tamper-evident" means the packaging uses an indicator or barrier to entry that is distinctive by design, or must employ an identifying characteristic.

(24) "Transaction statement" means a statement, in paper or electronic form, which the manufacturer transferring ownership of the product certifies that the electronic-cigarette substance is in compliance with the standards in this rule.

(25) "USFDA Food Standards" means the United States Food and Drug Administration's common designation for standards of identity, standards of quality, and standards of fill of container promulgated under the Federal Food, Drug and Cosmetics Act, 21 U.S.C. Sec. 301 et seq. (2013) and as contained in 21 C.F.R. 130 through 21 C.F.R. 169 (April 1, 2015).

(26) "USP-NF standards" means the standards for drug products established by the United States Pharmacopoeia and National Formulary. The USP-NF standards include standards for chemical and biological drug substances, dosage forms, compounded preparations, excipients, medical devices, and dietary supplements.

R384-415-3. General Labeling.

(1) The retailer shall ensure that a container holding an electronic-cigarette substance offered for sale to the consumer conforms to the following labeling standards:

- (a) the label is smear resistant; and
- (b) the label clearly displays:
 - (i) the nicotine content in mg/mL or percent by volume;
 - (ii) the manufacturer name;
 - (iii) the batch number;
 - (iv) the ingredients, as required in Section R384-415-4;
 - (v) a tamper-evident warning, which meets the requirements of Section R384-415-5; and
 - (vi) a safety warning, which meets the requirements of Section R384-415-6.

R384-415-4. Labeling of Ingredients.

(1) The retailer shall ensure that:

(a) an ingredient of an electronic-cigarette substance is listed on the label of the container holding an electronic-cigarette substance, except as provided for in Subsection R384-415-4(1)(c)(i).

(b) An artificial coloring ingredient is listed on the label using the classification system that best applies. Classification systems include:

- (i) Food, Drug, and Cosmetic color designation and number;
- (ii) Drug and Cosmetic color designation and number; or
- (iii) the generic straight color name, if the artificial color is not classified under the systems found in Subsection R384-

415-4(1)(b)(i) or Subsection R384-415-4(1)(b)(ii).

(c)(i) An ingredient included in the manufacturer's proprietary mixture of flavorings is exempt from being listed on the label by name.

(ii) An ingredient included in the manufacturer's proprietary mixture of flavorings is listed on the label under the generic term of artificial flavoring, natural flavoring, or both.

R384-415-5. Labeling of Tamper-Evident Warning.

(1) The retailer shall ensure that the label of an electronic-cigarette substance displays a tamper-evident warning alerting the consumer to the tamper-evident feature of the packaging

(2) The retailer shall ensure that the tamper-evident warning:

- (a) is prominently displayed to consumers;
- (b) is placed on the label so that it would be unaffected if the tamper-evidence feature is removed; and
- (c) lists the type of tamper-evident feature used with the product.

R384-415-6. Labeling of Safety Warning.

(1) The retailer shall ensure that an electronic-cigarette substance offered for sale to the consumer features a safety warning stating "nicotine is addictive and poisonous. Keep away from children and pets".

(2) The retailer shall ensure that the safety warning:

- (a) occupies at least 30 percent of the largest panel of the container and any additional immediate packaging;
- (b) is in capitalized letters;
- (c) has a font size that occupies the maximum amount of the area described in Subsection R384-415-6(2)(a);
- (d) uses the Helvetica, Arial, or Univers font; and
- (e) uses either a black font on a white background or a white font on a black background.

R384-415-7. Nicotine Content.

(1) The retailer shall comply with the following nicotine content standards regarding an electronic-cigarette substance sold to the consumer:

- (a) The nicotine content for an electronic-cigarette substance is limited to 240 mg per container, and does not exceed a 24mg/mL concentration.
- (b) The nicotine level for an electronic-cigarette substance is limited to a 10% variation in mg/mL above the content level indicated on the label.
- (c) An electronic-cigarette substance labeled 0 mg/mL or 0% by volume contains no nicotine.

R384-415-8. Packaging.

(1) The retailer shall ensure that the packaging of an electronic-cigarette substance intended for sale to a consumer;

- (a) is certified as child resistant;
- (b) does not leak at the time of sale; and
- (c) utilizes a tamper-evident feature by means of one or more of the following:
 - (i) a bubble pack;
 - (ii) a heat shrink band;
 - (iii) a breakable cap; or
 - (iv) an inner-seal.

R384-415-9. Product Quality.

(1) The retailer shall ensure that an ingredient in an electronic-cigarette substance is compliant with either USP-NF standards, EP standards, USFDA Food Standards, or is Generally Recognized As Safe at the time of sale.

(2) The retailer shall be prohibited from selling an electronic-cigarette substance that contains:

- (a) vitamins or other additives that create the impression that an electronic-cigarette substance has a health benefit or

presents reduced health risks;

- (b) pharmaceuticals;
- (c) caffeine or taurine or other additives and stimulant compounds that are associated with energy and vitality;
- (d) illegal or controlled substances as identified in Section 58-37-3; and
- (e) additives having coloring properties for emissions.

R384-415-10. Record Keeping and Testing.

(1) The retailer shall provide the electronic-cigarette substances transaction statement to the department or the local health department within five working days of a request. The retailer shall ensure that the transaction statement includes manufacturer certifications that:

- (a) the nicotine content of an electronic-cigarette substance is compliant with Section R384-415-7;
- (b) the packaging of an electronic cigarette-substance is child-resistant; and
- (c) an ingredient used in an electronic-cigarette substance meets the appropriate standard found in Section R384-415-9.

(2)(a) The retailer shall have a system in place to trace production of an electronic-cigarette substance through the labeled batch number to the ingredients used in manufacturing.

(b) The retailer shall provide documents produced from batch tracing to the enforcing agency within five working days of a request.

(c) The retailer shall ensure that documents produced through batch tracing provide evidence in support of the electronic-cigarette substances transaction statement.

(3) The retailer shall maintain the documents described in Subsections R384-415-10(1) and R384-415-10(2) for a period of two years after the retailer purchases the electronic-cigarette substance.

R384-415-11. Enforcement.

(1) The department may enforce and seek penalties for the violation of public health rules including, the standards for electronic cigarettes set forth in this rule as prescribed in Sections 26-23-1 through 26-23-10.

(2) A local health department may enforce and seek penalties for the violation of the standards for electronic cigarettes set forth in this rule. A local health department shall have authority to enforce and seek penalties for violations of public health law including this rule as is found in Sections 26-23-1 through 26-23-10, 26A-1-108, 26A-1-114(1) and 26A-1-123.

(3) The department or local health department is responsible to make a determination as to if a person holding a Utah State Tax Commission license to sell electronic cigarettes has violated the standards of this rule. If the department or local health department makes such a determination it shall notify the Utah State Tax Commission to revoke the person's license as provided in Subsection 59-14-803(5).

(4) Administrative or civil enforcement of this rule by the department or local health departments does not preclude criminal enforcement by a law enforcement agency and prosecution of any violation of the standards in this rule that can constitute a criminal offense under state law.

R414. Health, Health Care Financing, Coverage and Reimbursement Policy.**R414-1. Utah Medicaid Program.****R414-1-1. Introduction and Authority.**

(1) This rule generally characterizes the scope of the Medicaid Program in Utah, and defines all of the provisions necessary to administer the program.

(2) The rule is authorized by Title XIX of the Social Security Act, and Sections 26-1-5, 26-18-2.1, 26-18-2.3, UCA.

R414-1-2. Definitions.

The following definitions are used throughout the rules of the Division:

- (1) "Act" means the federal Social Security Act.
- (2) "Applicant" means any person who requests assistance under the medical programs available through the Division.
- (3) "Categorically needy" means aged, blind or disabled individuals or families and children:
 - (a) who are otherwise eligible for Medicaid; and
 - (i) who meet the financial eligibility requirements for AFDC as in effect in the Utah State Plan on July 16, 1996; or
 - (ii) who meet the financial eligibility requirements for SSI or an optional State supplement, or are considered under section 1619(b) of the federal Social Security Act to be SSI recipients; or
 - (iii) who is a pregnant woman whose household income does not exceed 133% of the federal poverty guideline; or
 - (iv) is under age six and whose household income does not exceed 133% of the federal poverty guideline; or
 - (v) who is a child under age one born to a woman who was receiving Medicaid on the date of the child's birth and the child remains with the mother; or
 - (vi) who is least age six but not yet age 18, or is at least age six but not yet age 19 and was born after September 30, 1983, and whose household income does not exceed 100% of the federal poverty guideline; or
 - (vii) who is aged or disabled and whose household income does not exceed 100% of the federal poverty guideline; or
 - (viii) who is a child for whom an adoption assistance agreement with the state is in effect.
- (b) whose categorical eligibility is protected by statute.
- (4) "Code of Federal Regulations" (CFR) means the publication by the Office of the Federal Register, specifically Title 42, used to govern the administration of the Medicaid Program.
- (5) "Client" means a person the Division or its duly constituted agent has determined to be eligible for assistance under the Medicaid program.
- (6) "CMS" means The Centers for Medicare and Medicaid Services, a Federal agency within the U.S. Department of Health and Human Services. Programs for which CMS is responsible include Medicare, Medicaid, and the State Children's Health Insurance Program.
- (7) "Department" means the Department of Health.
- (8) "Director" means the director of the Division.
- (9) "Division" means the Division of Health Care Financing within the Department.
- (10) "Emergency medical condition" means a medical condition showing acute symptoms of sufficient severity that the absence of immediate medical attention could reasonably be expected to result in:
 - (a) placing the patient's health in serious jeopardy;
 - (b) serious impairment to bodily functions;
 - (c) serious dysfunction of any bodily organ or part; or
 - (d) death.
- (11) "Emergency service" means immediate medical attention and service performed to treat an emergency medical condition. Immediate medical attention is treatment rendered within 24 hours of the onset of symptoms or within 24 hours of

diagnosis.

(12) "Emergency Services Only Program" means a health program designed to cover a specific range of emergency services.

(13) "Executive Director" means the executive director of the Department.

(14) "InterQual" means the McKesson Criteria for Inpatient Reviews, a comprehensive, clinically based, patient focused medical review criteria and system developed by McKesson Corporation.

(15) "Medicaid agency" means the Department of Health.

(16) "Medical assistance program" or "Medicaid program" means the state program for medical assistance for persons who are eligible under the state plan adopted pursuant to Title XIX of the federal Social Security Act; as implemented by Title 26, Chapter 18.

(17) "Medical or hospital assistance" means services furnished or payments made to or on behalf of recipients under medical programs available through the Division.

(18) "Medically necessary service" means that:

(a) it is reasonably calculated to prevent, diagnose, or cure conditions in the recipient that endanger life, cause suffering or pain, cause physical deformity or malfunction, or threaten to cause a handicap; and

(b) there is no other equally effective course of treatment available or suitable for the recipient requesting the service that is more conservative or substantially less costly.

(19) "Medically needy" means aged, blind, or disabled individuals or families and children who are otherwise eligible for Medicaid, who are not categorically needy, and whose income and resources are within limits set under the Medicaid State Plan.

(20) "Medical standards," as applied in this rule, means that an individual may receive reasonable and necessary medical services up until the time a physician makes an official determination of death.

(21) "Prior authorization" means the required approval for provision of a service that the provider must obtain from the Department before providing the service. Details for obtaining prior authorization are found in Section I of the Utah Medicaid Provider Manual.

(22) "Provider" means any person, individual or corporation, institution or organization that provides medical, behavioral or dental care services under the Medicaid program and who has entered into a written contract with the Medicaid program.

(23) "Recipient" means a person who has received medical or hospital assistance under the Medicaid program, or has had a premium paid to a managed care entity.

(24) "Undocumented alien" means an alien who is not recognized by Immigration and Naturalization Services as being lawfully present in the United States.

(25) "Utilization review" means the Department provides for review and evaluation of the utilization of inpatient Medicaid services provided in acute care general hospitals to patients entitled to benefits under the Medicaid plan.

(26) "Utilization Control" means the Department has implemented a statewide program of surveillance and utilization control that safeguards against unnecessary or inappropriate use of Medicaid services, safeguards against excess payments, and assesses the quality of services available under the plan. The program meets the requirements of 42 CFR, Part 456.

R414-1-3. Single State Agency.

The Utah Department of Health is the Single State Agency designated to administer or supervise the administration of the Medicaid program under Title XIX of the federal Social Security Act.

R414-1-4. Medical Assistance Unit.

Within the Utah Department of Health, the Division of Health Care Financing has been designated as the medical assistance unit.

R414-1-5. Incorporations by Reference.

The Department incorporates the October 1, 2015, versions of the following by reference:

(1) Utah Medicaid State Plan, including any approved amendments, under Title XIX of the Social Security Act Medical Assistance Program;

(2) Medical Supplies Utah Medicaid Provider Manual, Section 2, Medical Supplies, as applied in Rule R414-70, and the manual's attachment for Donor Human Milk Request Form;

(3) Hospital Services Utah Medicaid Provider Manual with its attachments;

(4) Home Health Agencies Utah Medicaid Provider Manual, and the manual's attachment for the Private Duty Nursing Acuity Grid;

(5) Speech-Language Pathology and Audiology Services Utah Medicaid Provider Manual;

(6) Hospice Care Utah Medicaid Provider Manual, and the manual's attachment for the Utah Medicaid Prior Authorization Request for Hospice Services;

(7) Long Term Care Services in Nursing Facilities Utah Medicaid Provider Manual with its attachments;

(8) Personal Care Utah Medicaid Provider Manual and the manual's attachment for the Request for Prior Authorization: Personal Care and Capitated Programs;

(9) Utah Home and Community-Based Waiver Services for Individuals Age 65 or Older Utah Medicaid Provider Manual;

(10) Utah Home and Community-Based Waiver Services for Individuals with an Acquired Brain Injury Utah Medicaid Provider Manual;

(11) Utah Community Supports Waiver for Individuals with Intellectual Disabilities or Other Related Conditions Utah Medicaid Provider Manual;

R414-1-6. Services Available.

(1) Medical or hospital services available under the Medical Assistance Program are generally limited by federal guidelines as set forth under Title XIX of the federal Social Security Act and Title 42 of the Code of Federal Regulations (CFR).

(2) The following services provided in the State Plan are available to both the categorically needy and medically needy:

(a) inpatient hospital services, with the exception of those services provided in an institution for mental diseases;

(b) outpatient hospital services and rural health clinic services;

(c) other laboratory and x-ray services;

(d) skilled nursing facility services, other than services in an institution for mental diseases, for individuals 21 years of age or older;

(e) early and periodic screening and diagnoses of individuals under 21 years of age, and treatment of conditions found, are provided in accordance with federal requirements;

(f) family planning services and supplies for individuals of child-bearing age;

(g) physician's services, whether furnished in the office, the patient's home, a hospital, a skilled nursing facility, or elsewhere;

(h) podiatrist's services;

(i) optometrist's services;

(j) psychologist's services;

(k) interpreter's services;

(l) home health services;

(i) intermittent or part-time nursing services provided by a home health agency;

(ii) home health aide services by a home health agency; and

(iii) medical supplies, equipment, and appliances suitable for use in the home;

(m) private duty nursing services for children under age 21;

(n) clinic services;

(o) dental services;

(p) physical therapy and related services;

(q) services for individuals with speech, hearing, and language disorders furnished by or under the supervision of a speech pathologist or audiologist;

(r) prescribed drugs, dentures, and prosthetic devices and eyeglasses prescribed by a physician skilled in diseases of the eye or by an optometrist;

(s) other diagnostic, screening, preventive, and rehabilitative services other than those provided elsewhere in the State Plan;

(t) services for individuals age 65 or older in institutions for mental diseases:

(i) inpatient hospital services for individuals age 65 or older in institutions for mental diseases;

(ii) skilled nursing services for individuals age 65 or older in institutions for mental diseases; and

(iii) intermediate care facility services for individuals age 65 or older in institutions for mental diseases;

(u) intermediate care facility services, other than services in an institution for mental diseases. These services are for individuals determined, in accordance with section 1902(a)(31)(A) of the Social Security Act, to be in need of this care, including those services furnished in a public institution for the mentally retarded or for individuals with related conditions;

(v) inpatient psychiatric facility services for individuals under 22 years of age;

(w) nurse-midwife services;

(x) family or pediatric nurse practitioner services;

(y) hospice care in accordance with section 1905(o) of the Social Security Act;

(z) case management services in accordance with section 1905(a)(19) or section 1915(g) of the Social Security Act;

(aa) extended services to pregnant women, pregnancy-related services, postpartum services for 60 days, and additional services for any other medical conditions that may complicate pregnancy;

(bb) ambulatory prenatal care for pregnant women furnished during a presumptive eligibility period by a qualified provider in accordance with section 1920 of the Social Security Act; and

(cc) other medical care and other types of remedial care recognized under state law, specified by the Secretary of the United States Department of Health and Human Services, pursuant to 42 CFR 440.60 and 440.170, including:

(i) medical or remedial services provided by licensed practitioners, other than physician's services, within the scope of practice as defined by state law;

(ii) transportation services;

(iii) skilled nursing facility services for patients under 21 years of age;

(iv) emergency hospital services; and

(v) personal care services in the recipient's home, prescribed in a plan of treatment and provided by a qualified person, under the supervision of a registered nurse.

(dd) other medical care, medical supplies, and medical equipment not otherwise a Medicaid service if the Division determines that it meets both of the following criteria:

(i) it is medically necessary and more appropriate than any Medicaid covered service; and

(ii) it is more cost effective than any Medicaid covered service.

R414-1-7. Aliens.

Certain qualified aliens described in Title IV of Pub. L. No.

104 193, 110 Stat. 2105, may be eligible for the Medicaid program. All other aliens are prohibited from receiving non-emergency services as described in Section 1903(v) of the Social Security Act.

R414-1-8. Statewide Basis.

The medical assistance program is state-administered and operates on a statewide basis in accordance with 42 CFR 431.50.

R414-1-9. Medical Care Advisory Committee.

There is a Medical Care Advisory Committee that advises the Medicaid agency director on health and medical care services. The committee is established in accordance with 42 CFR 431.12.

R414-1-10. Discrimination Prohibited.

In accordance with Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d et seq.), Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 70b), and the regulations at 45 CFR Parts 80 and 84, the Medicaid agency assures that no individual shall be subjected to discrimination under the plan on the grounds of race, color, gender, national origin, or handicap.

R414-1-11. Administrative Hearings.

The Department has a system of administrative hearings for medical providers and dissatisfied applicants, clients, and recipients that meets all the requirements of 42 CFR, Part 431, Subpart E.

R414-1-12. Utilization Review.

(1) The Department conducts hospital utilization review as outlined in the Hospital Services Utah Medicaid Provider Manual in effect at the time service is rendered.

(2) The Department shall determine medical necessity and appropriateness of inpatient admissions during utilization review by use of InterQual Criteria, published by McKesson Corporation.

(3) The standards in the InterQual Criteria shall not apply to services in which a determination has been made to utilize criteria customized by the Department or that are:

(a) excluded as a Medicaid benefit by rule or contract;

(b) provided in an intensive physical rehabilitation center as described in Rule R414-2B; or

(c) organ transplant services as described in Rule R414-10A.

In these exceptions, or where InterQual is silent, the Department shall approve or deny services based upon appropriate administrative rules or its own criteria as incorporated in the Medicaid provider manuals.

R414-1-13. Provider and Client Agreements.

(1) To meet the requirements of 42 CFR 431.107, the Department contracts with each provider who furnishes services under the Utah Medicaid Program.

(2) By signing a provider agreement with the Department, the provider agrees to follow the terms incorporated into the provider agreements, including policies and procedures, provider manuals, Medicaid Information Bulletins, and provider letters.

(3) By signing an application for Medicaid coverage, the client agrees that the Department's obligation to reimburse for services is governed by contract between the Department and the provider.

R414-1-14. Utilization Control.

(1) In order to control utilization, and in accordance with 42 CFR 440, Subpart B, services, equipment, or supplies not specifically identified by the Department as covered services

under the Medicaid program are not a covered benefit. In addition, the Department will also use prior authorization for utilization control. All necessary and appropriate medical record documentation for prior approvals must be submitted with the request. If the provider has not obtained prior authorization for a service as outlined in the Medicaid provider manual, the Department shall deny coverage of the service.

(2) The Department may request records that support provider claims for payment under programs funded through the Department. These requests must be in writing and identify the records to be reviewed. Responses to requests must be returned within 30 days of the date of the request. Responses must include the complete record of all services for which reimbursement is claimed and all supporting services. If there is no response within the 30 day period, the Department will close the record and will evaluate the payment based on the records available.

(3)(a) If the Department pays for a service which is later determined not to be a benefit of the Utah Medicaid program or does not comply with state or federal policies and regulations, the provider shall refund the payment upon written request from the Department.

(b) If services cannot be properly verified or when a provider refuses to provide or grant access to records, the provider shall refund to the Department all funds for services rendered. Otherwise, the Department may deduct an equal amount from future reimbursements.

(c) Unless appealed, the refund must be made to Medicaid within 30 days of written notification. An appeal of this determination must be filed within 30 days of written notification as specified in Rule R410-14.

(d) A provider shall reimburse the Department for all overpayments regardless of the reason for the overpayment.

(e) Provider appeals of action for recovery or withholding of money initiated by the Office of Inspector General of Medicaid Services (OIG) shall be governed by the OIG Administrative Hearings Procedures Manual incorporated by reference in Section R414-1-5.

R414-1-15. Medicaid Fraud.

The Department has established and will maintain methods, criteria, and procedures that meet all requirements of 42 CFR 455.13 through 455.21 for prevention and control of program fraud and abuse.

R414-1-16. Confidentiality.

State statute, Title 63G, Chapter 2, and Section 26-1-17.5, impose legal sanctions and provide safeguards that restrict the use or disclosure of information concerning applicants, clients, and recipients to purposes directly connected with the administration of the plan.

All other requirements of 42 CFR Part 431, Subpart F are met.

R414-1-17. Eligibility Determinations.

Determinations of eligibility for Medicaid under the plan are made by the Division of Health Care Financing, the Utah Department of Workforce Services, and the Utah Department of Human Services. There is a written agreement among the Utah Department of Health, the Utah Department of Workforce Services, and the Utah Department of Human Services. The agreement defines the relationships and respective responsibilities of the agencies.

R414-1-18. Professional Standards Review Organization.

All other provisions of the State Plan shall be administered by the Medicaid agency or its agents according to written contract, except for those functions for which final authority has been granted to a Professional Standards Review Organization

under Title XI of the Act.

R414-1-19. Timeliness in Eligibility Determinations.

The Medicaid agency shall adhere to all timeliness requirements of 42 CFR 435.911, for processing applications, determining eligibility, and approving Medicaid requests. If these requirements are not completed within the defined time limits, clients may notify the Division of Health Care Financing at 288 North, 1460 West, Salt Lake City, UT 84114-2906.

R414-1-20. Residency.

Medicaid is furnished to eligible individuals who are residents of the State under 42 CFR 435.403.

R414-1-21. Out-of-state Services.

Medicaid services shall be made available to eligible residents of the state who are temporarily in another state. Reimbursement for out-of-state services shall be provided in accordance with 42 CFR 431.52.

R414-1-22. Retroactive Coverage.

Individuals are entitled to Medicaid services under the plan during the 90 days preceding the month of application if they were, or would have been, eligible at that time.

R414-1-23. Freedom of Choice of Provider.

Unless an exception under 42 CFR 431.55 applies, any individual eligible under the plan may obtain Medicaid services from any institution, pharmacy, person, or organization that is qualified to perform the services and has entered into a Medicaid provider contract, including an organization that provides these services or arranges for their availability on a prepayment basis.

R414-1-24. Availability of Program Manuals and Policy Issuances.

In accordance with 42 CFR 431.18, the state office, local offices, and all district offices of the Department maintain program manuals and other policy issuances that affect recipients, providers, and the public. These offices also maintain the Medicaid agency's rules governing eligibility, need, amount of assistance, recipient rights and responsibilities, and services. These manuals, policy issuances, and rules are available for examination and, upon request, are available to individuals for review, study, or reproduction.

R414-1-25. Billing Codes.

In submitting claims to the Department, every provider shall use billing codes compliant with Health Insurance Portability and Accountability Act of 1996 (HIPAA) requirements as found in 45 CFR Part 162.

R414-1-26. General Rule Format.

The following format is used generally throughout the rules of the Division. Section headings as indicated and the following general definitions are for guidance only. The section headings are not part of the rule content itself. In certain instances, this format may not be appropriate and will not be implemented due to the nature of the subject matter of a specific rule.

(1) Introduction and Authority. A concise statement as to what Medicaid service is covered by the rule, and a listing of specific federal statutes and regulations and state statutes that authorize or require the rule.

(2) Definitions. Definitions that have special meaning to the particular rule.

(3) Client Eligibility. Categories of Medicaid clients eligible for the service covered by the rule: Categorically Needy or Medically Needy or both. Conditions precedent to the client's obtaining coverage such as age limitations or otherwise.

(4) Program Access Requirements. Conditions precedent external to the client's obtaining service, such as type of certification needed from attending physician, whether available only in an inpatient setting or otherwise.

(5) Service Coverage. Detail of specific services available under the rule, including limitations, such as number of procedures in a given period of time or otherwise.

(6) Prior Authorization. As necessary, a description of the procedures for obtaining prior authorization for services available under the particular rule. However, prior authorization must not be used as a substitute for regulatory practice that should be in rule.

(7) Other Sections. As necessary under the particular rule, additional sections may be indicated. Other sections include regulatory language that does not fit into sections (1) through (5).

(b) Rule R380-210;

(c) Rule R386-705;

(d) Rule R428-10; and

(e) Section 26-6-31.

(3) Utilizing the reporting mechanism from one of the rules noted above shall not impact confidentiality and privacy protections for reporting entities as noted in Title 26, Chapter 25, Confidential Information Release.

**KEY: Medicaid
December 8, 2015
Notice of Continuation March 2, 2012**

26-1-5

26-18-3

26-34-2

R414-1-27. Determination of Death.

(1) In accordance with the provisions of Section 26-34-2, the fiduciary responsibility for medically necessary care on behalf of the client ceases upon the determination of death.

(2) Reimbursement for the determination of death by acceptable medical standards must be in accordance with Medicaid coverage and billing policies that are in place on the date the physician renders services.

R414-1-28. Cost Sharing.

(1) An enrollee is responsible to pay the:

(a) hospital a \$220 coinsurance per year;

(b) hospital a \$6 copayment for each non-emergency use of hospital emergency services;

(c) provider a \$3 copayment for outpatient office visits for physician and physician-related mental health services except that no copayment is due for preventive services, immunizations, health education, family planning, and related pharmacy costs; and

(d) pharmacy a \$3 copayment per prescription up to a maximum of \$15 per month;

(2) The out-of-pocket maximum payment for copayments for physician and outpatient services is \$100 per year.

(3) The provider shall collect the copayment amount from the Medicaid client. Medicaid shall deduct that amount from the reimbursement it pays to the provider.

(4) Medicaid clients in the following categories are exempt from copayment and coinsurance requirements;

(a) children;

(b) pregnant women;

(c) institutionalized individuals;

(d) American Indians; and

(e) individuals whose total gross income, before exclusions and deductions, is below the temporary assistance to needy families (TANF) standard payment allowance. These individuals must indicate their income status to their eligibility caseworker on a monthly basis to maintain their exemption from the copayment requirements.

R414-1-29. Provider-Preventable Conditions.

(1) In accordance with 42 CFR 447.26, October 1, 2011 ed., which is incorporated by reference, Medicaid will not reimburse providers or contractors for provider-preventable conditions as noted therein. Please see Utah Medicaid State Plan Attachments 4.19-A and 4.19-B for detail.

(2) Medicaid providers who treat Medicaid eligible patients must report all provider-preventable conditions whether or not reimbursement for the services is sought. Medicaid providers shall meet this requirement by complying with existing state reporting requirements (rules and legislation) of these events that include:

(a) Rule R380-200;

R414. Health, Health Care Financing, Coverage and Reimbursement Policy.**R414-3A. Outpatient Hospital Services.****R414-3A-1. Introduction and Authority.**

This rule defines the scope of outpatient hospital services available to Medicaid clients for the treatment of disorders other than mental disease. This rule is authorized under Section 26-18-3 and governs the services allowed under 42 CFR 440.20.

R414-3A-2. Definitions.

(1) "Allowed charges" mean actual charges submitted by the provider less any charges for non-covered services.

(2) "CHEC" means Child Health Evaluation and Care and is the Utah specific term for the federally mandated program of Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) for children under the age of 21.

(3) "Clinical Laboratory Improvements Act" (CLIA) is the Centers for Medicare and Medicaid Services (CMS) program that limits reimbursement for laboratory services based on the equipment and capability of the physician or laboratory to provide an appropriate, competent level of laboratory service.

(4) "Hyperbaric Oxygen Therapy" is therapy that places the patient in an enclosed pressure chamber for medical treatment.

(5) "Other Practitioner of the Healing Arts" means a doctor of dental surgery or a podiatrist.

(6) "Outpatient" is defined in 42 CFR 440.20.

(7) "Prepaid Mental Health Plan" means the prepaid, capitated program through which the Department pays contracted community mental health centers to provide all needed inpatient and outpatient mental health services to residents of the community mental health center's catchment area who are enrolled in the plan.

R414-3A-3. Client Eligibility Requirements.

Outpatient hospital services are available to categorically and medically needy individuals who are under the care of a physician or other practitioner of the healing arts.

R414-3A-4. Program Access Requirements.

(1) The Department reimburses for outpatient hospital services and supplies only if they are:

(a) furnished in a hospital;

(b) provided by hospital personnel by or under the direction of a physician or dentist;

(c) provided as evaluation and management of illness or injury under hospital medical staff supervision and according to the written orders of a physician or dentist.

(2) All outpatient hospital services are subject to review by the Department.

R414-3A-5. Prepaid Mental Health Plan.

A Medicaid client residing in a county for which a prepaid mental health contractor provides mental health services must obtain authorization for outpatient psychiatric services from the prepaid mental health contractor for the client's county of residence.

R414-3A-6. Services.

(1) Services appropriate in the outpatient hospital setting for adequate diagnosis and treatment of a client's illness are limited to less than 24 hours and encompass medically necessary diagnostic, therapeutic, rehabilitative, or palliative medical services and supplies ordered by a physician or other practitioner of the healing arts.

(2) Outpatient hospital services include:

(a) the service of nurses or other personnel necessary to complete the service and provide patient care during the provision of service;

(b) the use of hospital facilities, equipment, and supplies; and

(c) the technical portion of clinical laboratory and radiology services.

(3) Laboratory services are limited to tests identified by the Centers for Medicare and Medicaid Services (CMS) where the individual laboratory is CLIA certified to provide, bill and receive Medicaid payment.

(4) Cosmetic, reconstructive, or plastic surgery is limited to:

(a) correction of a congenital anomaly;

(b) restoration of body form following an injury; or

(c) revision of severe disfiguring and extensive scars resulting from neoplastic surgery.

(5) Abortion procedures are limited to procedures certified as medically necessary, cleared by review of the medical record, approved by division consultants, and determined to meet the requirements of Section 26-18-4 and 42 CFR 441.203.

(6) Sterilization procedures are limited to those that meet the requirements of 42 CFR 441, Subpart F.

(7) Nonphysician psychosocial counseling services are limited to evaluations and may be provided only through a prepaid mental health plan by a licensed clinical psychologist for:

(a) mentally retarded persons;

(b) cases identified through a CHEC/EPSDT screening; or

(c) victims of sexual abuse.

(8) Outpatient individualized observation of a mental health patient to prevent the patient from harming himself or others is not covered.

(9) Sleep studies are available only in a sleep disorder center accredited by the American Academy of Sleep Medicine.

(10) Hyperbaric Oxygen Therapy is limited to service in a facility in which the hyperbaric unit is accredited by the Undersea and Hyperbaric Medical Society.

(11) Take home supplies and durable medical equipment are not reimbursable.

(12) Prescriptions are not a covered Medicaid service for a client who is eligible to receive emergency services only.

R414-3A-7. Prior Authorization.

Prior authorization must be obtained on certain medical and surgical procedures in accordance with Section R414-1-14.

R414-3A-8. Copayment Policy.

Each Medicaid client is responsible for a copayment as established in the Utah Medicaid State Plan and incorporated by reference in Rule R414-1.

R414-3A-9. Reimbursement for Services.

Reimbursement for outpatient hospital services is in accordance with Attachment 4.19-B of the Utah Medicaid State Plan, which is incorporated by reference in Rule R414-1.

KEY: Medicaid**December 8, 2015****Notice of Continuation October 10, 2012**

26-1-5

26-18-2.3

26-18-3(2)

26-18-4

R432. Health, Family Health and Preparedness, Licensing.**R432-104. Specialty Hospital - Long-Term Acute Care.****R432-104-1. Legal Authority.**

This rule is adopted pursuant to Title 26, Chapter 21.

R432-104-2. Purpose.

The purpose of this rule is to promote the public health and welfare through the establishment and enforcement of program standards for the operation of long-term acute care (LTAC) hospitals.

R432-104-3. License.

- (1) To be licensed as an LTAC hospital, the facility shall:
 - (a) Have a duly constituted governing body with overall administrative and professional responsibility;
 - (b) Have an organized medical staff which provides 24-hour inpatient care;
 - (c) Have a chief executive officer to whom the governing body delegates the responsibility for the operation of the hospital;
 - (d) Maintain at least one nursing unit containing patient rooms, patient care spaces, and service spaces defined in construction rules R432-10-3;
 - (e) Each nursing unit shall contain at least six patient beds;
 - (f) Rooms and spaces comprising each nursing unit shall be organized in a contiguous arrangement.
 - (g) Maintain current and complete medical records.
 - (h) Provide continuous registered nurse supervision and other nursing services;
 - (i) Provide in house the following basic services:
 - (i) Pharmacy;
 - (ii) Laboratory;
 - (iii) Nursing services;
 - (iv) Occupational, Physical, Respiratory and Speech therapies;
 - (v) Dietary;
 - (vi) Social Services; and
 - (vii) Specialized Diagnosis and therapeutic services.
- (2) The LTAC hospital shall provide on site all basic service required of a general hospitals that are needed for the diagnosis, therapy, and treatment offered or required by all patients admitted to the hospital.

R432-104-4. General Design Requirements.

- (1) See R432-10, Long-Term Acute Care Hospital Construction Rules.
- (2) The LTAC hospital may be located within an existing licensed health care facility or be freestanding.

R432-104-5. Hospital located within an Acute Care Hospital.

- (1) If an LTAC is located within a licensed acute care hospital, it must:
 - (a) have a separate governing body, chief executive officer, chief medical officer, and medical staff from the co-located hospital;
 - (b) perform basic functions independently from the host hospital;
 - (c) incur not more than 15 per cent of its total inpatient operating costs for items and services supplied by the host hospital;
 - (d) admit 75 per cent of patients from other sources than the host hospital;
 - (e) maintain admission and discharge records separately from those of the hospital in which it is co-located;
 - (f) not commingle beds with beds in which it is located; and
 - (g) be serviced by the same Medicare fiscal intermediary as the hospital of which it is a part.

R432-104-6. Organization and Staff.

- (1) The following services and policies shall comply with R432-100.
 - (a) Governing Body, R432-100-5.
 - (b) Administrator, R432-100-6.
 - (c) Medical and Professional Staff, R432-100-7.
 - (d) Nursing Care Services, R432-100-12.
 - (e) Personnel Management Services, R432-100-8.
 - (f) Infection Control, R432-100-10.
 - (g) Quality Improvement Plan, R432-100-9.
 - (h) Patient Rights, R432-100-11.

R432-104-7. Admission and Discharge Policy.

- (1) An LTAC shall implement as an admission policy an average inpatient length of stay greater than 25 days and which complies with R432-104-7(2).
- (2) Patients who have one or more of the following conditions may be admitted to an LTAC:
 - (a) the patient is medically unstable due to chronic or long-term illness and requires a weekly physician visit; or
 - (b) the patient requires dangerous drug therapy, continuous use of a respirator or ventilator, or suctioning or nasopharyngeal aspiration at least once per nursing shift.
 - (c) the patient requires skilled nursing services and care which requires a registered nurse present for care 24 hours per day for at least three of the following treatments at the specified frequency;
 - (i) extensive dressings for deep decubiti, surgical wounds, or vascular ulcers daily;
 - (ii) isolation for infectious disease 24 hours per day;
 - (iii) suctioning three days per week;
 - (iv) occupational therapy, physical therapy, or speech therapy five days a week;
 - (v) respiratory therapy;
 - (vi) special ostomy care daily;
 - (vii) oxygen daily;
 - (viii) traction; or
 - (ix) catheter or wound irrigation daily.
- (3) Within 24 hours of admission the attending physician shall document:
 - (i) The patient's current medical and respiratory status, including pertinent clinical parameters;
 - (ii) Treatment plan and goals;
 - (iii) Estimated length of stay; and
 - (iv) Anticipated discharge plan.
- (4) The LTAC shall discharge the patient from the facility if:
 - (a) the physician documents that the patient:
 - (i) requires additional intense services in an acute hospital;
 - (ii) exhibits no evidence of progress towards current, documented goals over an eight-week period and a medically appropriate alternative for discharge exists; or
 - (iii) has met documented goals established at or modified following admission and medically appropriate alternatives for discharge exist; or
 - (b) the patient or care giver exhibit ability to care for the patient's physical needs.

R432-104-8. Clinical Services.

- (1) The following services shall be provided in-house and comply with R432-100.
 - (a) Pharmacy Service, R432-100-24.
 - (b) Laboratory Service, R432-100-22.
 - (c) Rehabilitation Therapy Services, R432-100-20.
 - (d) Dietary Service, R432-100-31.
 - (e) Social Services, R432-100-25.
- (2) Occupational Therapy Services shall be available for all patients who require the service.
 - (a) The occupational therapy services shall be directed by

a licensed occupational therapist who shall have administrative responsibility for the occupational therapy department.

(b) Staff occupational therapists shall be licensed by the Utah Department of Commerce Title 58, Chapter 42.

(i) If Occupational Therapy Assistants are employed to provide patient services they shall be supervised by a licensed therapist.

(ii) Patient services shall be commensurate with each person's documented training and experience.

(c) Occupational Therapy services shall be initiated by an order from the medical staff.

(d) Written policies and procedures shall be developed and approved in conjunction with the medical staff to include:

- (i) Methods of referral for services;
- (ii) Scope of services to be provided;
- (iii) Responsibilities of professional therapists;
- (iv) Admission and discharge criteria for treatment;
- (v) infection control;
- (vi) safety;
- (vii) individual treatment plans, objectives, clinical documentation and assessment;
- (viii) incident reporting system; and
- (ix) emergency procedures.

(e) Equipment shall be calibrated to manufacturer's specifications.

(f) There shall be a written individual treatment plan for each patient appropriate to the diagnoses and condition.

(g) The Occupational Therapy department shall organize and participate in continuing education programs.

(3) Speech Therapy services shall be available for all patients who require the service.

(a) The Speech-Pathology language services shall be directed by a licensed Speech-Pathologist or Audiologist who shall have administrative responsibility for the Speech-Audiology therapy department.

(b) Staff speech therapist and audiologist shall be licensed the Utah Department of Commerce, see Title 58, Chapter 41.

(i) If Speech-language pathology aides or audiology aides are employed to provide patient services they shall be supervised by a licensed therapist.

(ii) Patient services shall be commensurate with each person's documented training and experience.

(c) Speech and Audiology services shall be initiated by an order from the medical staff.

(d) Written policies and procedures shall be developed and approved in conjunction with the medical staff to include:

- (i) Methods of referral for services;
- (ii) Scope of services to be provided;
- (iii) Responsibilities of professional therapists;
- (iv) Admission and discharge criteria for treatment;
- (v) Infection control;
- (vi) Assistive Technology;
- (vii) Individual treatment plans, objectives, clinical documentation and assessment;
- (viii) Incident reporting system; and
- (ix) Emergency procedures.

(e) Equipment shall be calibrated to manufacturer's specifications.

(f) There shall be a written individual treatment plan for each patient appropriate to the diagnoses and condition.

(g) The Department shall organize and participate in continuing education programs.

(4) Respiratory Care Services shall comply with R432-100-19.

R432-104-9. Emergency Services.

(1) Each specialty hospital shall have the ability to provide emergency first aid treatment to patients, staff, and visitors and to persons who may be unaware of or unable to immediately

reach services in other facilities.

(2) Provisions for services shall include:

- (a) Treatment room;
- (b) Storage for supplies;
- (c) reception area and control of walk-in traffic;
- (d) Patient toilet room;
- (e) Telephone service in order to call the poison control center;
- (f) Staff available in the facility to respond in case of an emergency.

(3) Each hospital shall have available an automated external defibrillator unit and at least one staff on duty who is competent on its use.

R432-104-10. Complementary Services.

(1) If the following services are provided in-house, they shall comply with R432-100.

- (a) Radiology Services, R432-100-21.
- (b) Outpatient Services, R432-100-28.
- (c) Pediatric Services, R432-100-18.

R432-104-11. Ancillary Services.

(1) The following services shall be provided in-house and shall comply with R432-100.

- (a) Central Supply, R432-100-34.
- (b) Laundry, R432-100-35.
- (c) Medical Records, R432-100-33.
- (d) Maintenance, R432-100-37.
- (e) Housekeeping, R432-100-36.
- (f) Emergency and Disaster Plans, R432-100-38.

R432-104-12. Penalties.

Any person who violates any provision of this rule may be subject to the penalties enumerated in 26-21-11 and R432-3-6 and be punished for violation of a class A misdemeanor as provided in 26-21-16.

R477. Human Resource Management, Administration.**R477-7. Leave.****R477-7-1. Conditions of Leave.**

- (1) An employee shall be eligible for leave when:
 - (a) in a position designated by the agency as eligible for benefits; and
 - (b) in a position which normally requires working a minimum of 40 hours per pay period.
- (2) An eligible employee shall accrue annual, sick and holiday leave in proportion to the time paid as determined by DHRM.
- (3) An employee shall use leave in no less than quarter hour increments.
- (4) An employee may not use annual, sick, or holiday leave before accrued. Leave accrued during a pay period may not be used until the following pay period.
- (5) An employee may not use annual leave, converted sick leave used as annual leave, or use excess or compensatory hours without advance approval by management.
- (6) An employee may not use any type of leave except jury leave to accrue excess hours.
- (7) An employee transferring from one agency to another is entitled to transfer all accrued annual, sick, and converted sick leave to the new agency.
- (8) An employee separating from state service shall be paid in a lump sum for all annual leave and excess hours. An FLSA nonexempt employee shall also be paid in a lump sum for all compensatory hours.
 - (a) An employee separating from state service for reasons other than retirement shall be paid in a lump sum for all converted sick leave.
 - (b) Converted sick leave for a retiring employee shall be subject to Section R477-7-5.
 - (c) Annual, sick and holiday leave may not be used or accrued after the last day worked, except for:
 - (i) leave without pay;
 - (ii) administrative leave specifically approved by management to be used after the last day worked;
 - (iii) leave granted under the FMLA; or
 - (iv) leave granted for other medical reasons that was approved prior to the commencement of the leave period.
- (9) After four months cumulative leave from the first day of absence due to the inability to perform the regular position in a 24 month period, the employee shall be separated from employment regardless of paid leave status unless prohibited by state or federal law. Exceptions may be granted by the agency head in consultation with DHRM.
- (10) Contributions to benefits may not be paid on cashed out leave, other than FICA tax, except as it applies to converted sick leave in Section R477-7-5(2) and the Retirement Benefit in Section R477-7-6.

R477-7-2. Holiday Leave.

- (1) The following dates are paid holidays for eligible employees:
 - (a) New Years Day -- January 1
 - (b) Dr. Martin Luther King Jr. Day -- third Monday of January
 - (c) Washington and Lincoln Day -- third Monday of February
 - (d) Memorial Day -- last Monday of May
 - (e) Independence Day -- July 4
 - (f) Pioneer Day -- July 24
 - (g) Labor Day -- first Monday of September
 - (h) Columbus Day -- second Monday of October
 - (i) Veterans' Day -- November 11
 - (j) Thanksgiving Day -- fourth Thursday of November
 - (k) Christmas Day -- December 25
 - (l) Any other day designated as a paid holiday by the

Governor.

- (2) If a holiday falls or is observed on a regularly scheduled day off, an eligible employee shall receive equivalent time off, not to exceed eight hours, or shall accrue excess hours.
 - (a) If a holiday falls on a Sunday, the following Monday shall be observed as a holiday.
 - (b) If a holiday falls on a Saturday, the preceding Friday shall be observed as a holiday.
- (3) If an employee is required to work on an observed holiday, the employee shall receive appropriate holiday leave, or shall accrue excess hours.
- (4) A new hire shall be in a paid status on or before the holiday in order to receive holiday leave.
- (5) A separating employee shall be in a paid status on or after the holiday in order to receive holiday leave.

R477-7-3. Annual Leave.

- (1) An eligible employee shall accrue leave based on the following years of state service:
 - (a) less than 5 years -- four hours per pay period;
 - (b) at least 5 and less than 10 years -- five hours per pay period;
 - (c) at least 10 and less than 20 years -- six hours per pay period;
 - (d) 20 years or more -- seven hours per pay period.
- (2) The maximum annual leave accrual rate shall be granted to an employee under the following conditions:
 - (a) an employee in schedule AB, and agency deputy directors and division directors appointed to career service exempt positions.
 - (b) an employee who is schedule A, FLSA exempt and who has a direct reporting relationship to an elected official, executive director, deputy director, commissioner or board.
 - (c) The maximum accrual rate shall be effective from the day the employee is appointed through the duration of the appointment. Employees in these positions on July 1, 2003, shall have the leave accrual rate adjusted prospectively.
- (3) The accrual rate for an employee rehired to a position which receives leave benefits shall be based on all eligible employment in which the employee accrued leave.
- (4) The first eight hours of annual leave used by an employee in the calendar leave year shall be the employee's personal preference day.
- (5) Agency management shall allow every employee the option to use annual leave each year for at least the amount accrued in the year, subject to Subsection R477-7-1(5).
- (6) Unused accrued annual leave time in excess of 320 hours shall be forfeited during year end processing for each calendar year.

R477-7-4. Sick Leave.

- (1) An eligible employee shall accrue sick leave, not to exceed four hours per pay period. Sick leave shall accrue without limit.
- (2) Agency management may grant sick leave for preventive health and dental care, maternity, paternity, and adoption care, or for absence from duty because of illness, injury or disability of the employee, a spouse, children, or parents living in the employee's home; or qualifying FMLA purposes.
 - (3) Agency management may grant exceptions for other unique medical situations.
 - (4) When management approves the use of sick leave, an employee may use any combination of Program I, Program II, and Program III sick leave.
 - (5) An employee shall contact management prior to the beginning of the scheduled workday the employee is absent due to illness or injury.
 - (6) Any application for a grant of sick leave to cover an

absence that exceeds three consecutive working days shall be supported by administratively acceptable evidence.

(7) If there is reason to believe that an employee is abusing sick leave, a supervisor may require an employee to produce evidence regardless of the number of sick hours used.

(8) Unless retiring, an employee separating from state employment shall forfeit any unused sick leave without compensation.

(a) An employee rehired into a benefited position within one year of separation due to a reduction in force shall have forfeited sick leave reinstated to Program I, Program II, and Program III as accrued prior to the reduction in force.

(b) An employee rehired with benefits within one year of separation for reasons other than a reduction in force shall have forfeited sick leave reinstated as Program III sick leave.

(c) An employee who retires from state service and is rehired may not reinstate forfeited sick leave.

R477-7-5. Converted Sick Leave.

(1) An employee may not accrue converted sick leave hours on or after January 3, 2014. Converted sick leave hours accrued before January 3, 2014 can be used for retirement per R477-7-5(6) or cashed out if the employee leaves employment.

(a) Converted sick leave hours accrued prior to January 1, 2006 shall remain Program I converted sick leave hours.

(b) Converted sick leave hours accrued after January 1, 2006 shall remain Program II converted sick leave hours.

(2) An employee may use converted sick leave as annual leave or as regular sick leave.

(3) When management approves the use of converted sick leave, an employee may use any combination of Program I and Program II converted sick leave.

(4) Employees retiring from LTD who have converted sick leave balances still intact may use these hours for the unused converted sick leave retirement program at the time they become eligible for retirement.

(5) Upon retirement, 25% of the value of the unused converted sick leave, but not to exceed Internal Revenue Service limitations, shall be placed in the employee's 401(k) account as an employer contribution.

(a) Converted sick leave hours from Program II shall be placed in the 401(k) account before hours from Program I.

(b) The remainder shall be used for:

(i) the purchase of health care insurance and life insurance under Subsection R477-7-6(3)(a) if the converted sick leave was accrued in Program I ; or

(ii) a contribution into the employees PEHP health reimbursement account under Subsection R477-7-6(6)(b) if the converted sick leave was accrued in Program II.

(6) Upon retirement, Program I converted sick leave hours may not be suspended or deferred for future use. This includes retired employees who reemploy with the state and choose to suspend their defined benefit payments.

R477-7-6. Sick Leave Retirement Benefit.

Upon retirement from active employment, an employee shall receive an unused sick leave retirement benefit under Sections 67-19-14.2 and 67-19-14.4.

(1) An employee in the Tier I retirement system or the Tier II hybrid retirement system shall become eligible for this benefit when actively retiring with Utah Retirement Systems.

(2) An employee in the Tier II defined contribution system shall become eligible when terminating employment on or after the retirement date established by the Utah Retirement Systems. This date reflects service time accrued by the employee as if the employee were in the Tier II hybrid retirement system.

(3)(a) Sick leave hours accrued prior to January 1, 2006 shall be Program I sick leave hours.

(b) Sick leave hours accrued on or after January 1, 2006

shall be Program II sick leave hours.

(4) An agency may offer the Unused Sick Leave Retirement Option Program I to an employee who is eligible to receive retirement benefits. However, any decision whether or not to participate in this program shall be agency wide and shall be consistent through an entire fiscal year.

(a) If an agency decides to withdraw for the next fiscal year after initially deciding to participate, the agency shall notify all employees at least 60 days before the new fiscal year begins.

(5) An employee in a participating agency shall receive the following benefit provided by the Unused Sick Leave Retirement Options Program I.

(a) 25% of the value of the unused sick leave and converted sick leave, but not to exceed Internal Revenue Service limitations, shall be placed in the employees 401(k) account as an employer contribution.

(i) Sick leave hours from Program II shall be placed in the 401(k) account before hours from Program I.

(ii) After the 401(k) contribution is made, the remaining Program I sick leave hours and converted sick leave hours from Subsection R477-7-5(5)(b)(i) shall be used to provide the following benefit.

(iii) The purchase of PEHP health insurance, or a state approved program, and life insurance coverage for the employee until the employee reaches the age eligible for Medicare.

(A) Health insurance shall be the same coverage carried by the employee at the time of retirement; i.e., family, two-party, or single.

(B) The purchase rate shall be eight hours of sick leave or converted sick leave for the state paid portion of one month's premium.

(C) The employee shall pay the same percentage of the premium as a current employee on the same plan. The premium amount shall be determined from the approved PEHP retiree rate and not the active employee rates.

(D) Life insurance provided shall be the minimum authorized coverage provided for state employees at the time the employee retires.

(iv) When the employee becomes eligible for Medicare, a Medicare supplement policy provided by PEHP may be purchased at the rate of eight hours of sick leave or converted sick leave for one month's premium.

(v) When the employee becomes eligible for Medicare, a PEHP health insurance policy, or another state approved policy, may be purchased for a spouse until the spouse is eligible for Medicare.

(A) The purchase rate shall be eight hours of sick leave or converted sick leave for one month's premium.

(B) The employee shall pay the same percentage of the premium as a current employee on the same plan. The premium amount shall be determined from the approved PEHP retiree rate and not the active employee rates.

(vi) When the spouse reaches the age eligible for Medicare, the employee may purchase a Medicare supplement policy provided by PEHP for the spouse at the rate of eight hours of sick leave or converted sick leave for one month's premium.

(vii) In the event an employee is killed in the line of duty, the employee's spouse shall be eligible to use the employee's available sick leave hours for the purchase of health and dental insurance under Section 67-19-14.3.

(b) Employees retiring from LTD who have sick leave balances still intact may use these hours for the unused sick leave retirement program at the time they become eligible for retirement.

(c) Upon retirement, Program I sick leave hours may not be suspended or deferred for future use. This includes retired employees who reemploy with the state and choose to suspend their defined benefit payments.

(6) An employee shall receive the following benefit provided by the Unused Sick Leave Retirement Option Program II.

(a) 25% of the value of the unused sick leave and converted sick leave, but not to exceed Internal Revenue Service limitations, shall be placed in the employee's 401(k) account as an employer contribution.

(b) After the 401(k) contribution the remaining sick leave hours and the converted sick leave hours from Subsection R477-7-5(5)(b)(ii) shall be deposited in the employee's PEHP health reimbursement account at the greater of:

(i) the employee's rate of pay at retirement, or

(ii) the average rate of pay of state employees who retired in the same retirement system in the previous calendar year.

(c) A retired employee who is reemployed in a benefited position with the state shall have a benefit calculated on any Program II sick leave hours if:

(i) The employee chooses to suspend pension;

(ii) The employee was separated for one year or more;

(iii) The employee was reemployed before January 2, 2014; and

(iv) The employee must work for two years or more to receive this benefit.

(7) A retired employee who is reemployed in a benefited position with the state after January 4, 2014 shall accrue Program III sick leave, which shall have no benefit upon subsequent retirement.

R477-7-7. Administrative Leave.

(1) Administrative leave may be granted consistent with agency policy for the following reasons:

(a) administrative;

(i) governor approved holiday leave;

(ii) during management decisions that benefit the organization;

(iii) when no work is available due to unavoidable conditions or influences; or

(iv) other reasons consistent with agency policy.

(b) protected;

(i) suspension with pay pending hearing results;

(ii) personal decision making prior to discipline;

(iii) removal from adverse or hostile work environment situations;

(iv) fitness for duty or employee assistance; or

(v) other reasons consistent with agency policy.

(c) reward in lieu of cash;

(i) the agency head or designee may grant paid administrative leave up to one day per occurrence;

(ii) administrative leave in excess of one day may be granted with written approval by the agency head.

(iii) administrative leave given as a reward in lieu of cash may not exceed 40 hours in a fiscal year.

(iv) administrative leave given as a reward in lieu of cash may be given from one agency to employees of another agency if both agency heads agree in advance.

(d) employee education assistance.

(2) An employee shall be granted up to two hours of administrative leave to vote in an official election if the employee has fewer than three total hours off the job between the time the polls open and close, and the employee applies for the leave at least 24 hours in advance.

(a) Management may specify the hours when the employee may be absent.

(3) Administrative leave shall be given for non-performance based purposes to employees who are on Family and Medical Leave or a military leave of absence if the leave would have been given had the employee been in a working status.

(4) With the exception of administrative leave used as a

reward, under Subsection R477-7-7(1)(c), the agency head or designee may grant paid administrative leave.

(5) Administrative leave taken shall be documented in the employee's leave record.

R477-7-8. Witness and Jury Leave.

(1) An employee is entitled to a leave of absence from a regularly scheduled work day with full pay when, in obedience to a subpoena or direction by proper authority, the employee is required to:

(a) appear as a witness as part of the employee's position for the federal government, the State of Utah, or a political subdivision of the state; or

(b) serve as a witness in a grievance hearing under Section 67-19-31 and Title 67, Chapter 19a; or

(c) serve on a jury.

(2) An employee on jury leave may accrue excess hours in the same pay period during which the jury leave is used.

(3) An employee choosing to use accrued leave while on jury duty shall be entitled to keep juror's fees; otherwise, juror's fees received shall be returned to agency finance or agency payroll staff for deposit with the State Treasurer.

(4) An employee who is absent in order to litigate in matters unrelated to state employment shall use eligible accrued leave or leave without pay.

R477-7-9. Bereavement Leave.

An employee may receive a maximum of three work days bereavement leave per occurrence with pay, at management's discretion, following the death of a member of the employee's immediate family. Bereavement leave may not be charged against accrued sick or annual leave.

(1) The immediate family means relatives of the employee or spouse including in-laws, step-relatives, or equivalent relationship as follows:

(a) spouse;

(b) parents;

(c) siblings;

(d) children;

(e) all levels of grandparents; or

(f) all levels of grandchildren.

R477-7-10. Military Leave.

An employee who is a member of the National Guard or Military Reserves and is on official military orders is entitled to paid military leave not to exceed 120 hours each calendar year, including travel time, under Section 39-3-2.

(1) An employee may not claim salary for nonworking days spent in military training or for traditional weekend training.

(2) An employee may use any combination of military leave, accrued leave or leave without pay under Section R477-7-13.

(a) Accrued sick leave may only be used if the reason for leave meets the conditions in Section R477-7-4.

(3) An employee on military leave is eligible for any service awards or non-performance administrative leave the employee would otherwise be eligible to receive.

(4) An employee shall give notice of official military orders as soon as possible.

(5) Upon release from official military orders under honorable conditions, an employee shall be placed in a position in the following order of priority.

(a) If the period of service was for less than 91 days, the employee shall be placed:

(i) in the same position the employee held on the date of the commencement of the service in the uniformed services; or

(ii) in the same position the employee would have held if the continuous employment of the employee had not been

interrupted by the service.

(b) If the period of service was for more than 90 days, the employee shall be placed:

(i) in a position of like seniority, status and salary, of the position the employee held on the date of the commencement of the service in the uniformed services; or

(ii) in a position of like seniority, status, and salary the employee would have held if the continuous employment of the employee had not been interrupted by the service.

(c) When a disability is incurred or aggravated while on official military orders, the employing agency shall adhere to the Uniformed Services Employment and Reemployment Rights Act (USERRA), United States Code, Title 38, Chapter 43.

(d) The cumulative length of time allowed for reemployment may not exceed five years. This rule incorporates by reference 20CFR1002.103 for the purposes of calculating cumulative time.

(e) An employee is entitled to reemployment rights and benefits including increased pension and leave accrual to which the employee would have been entitled had the employee not been absent due to military service. An employee entering military leave may elect to have payment for annual leave deferred.

(6) In order to be reemployed, an employee shall present evidence of military service, and:

(a) for service less than 31 days, return at the beginning of the next regularly scheduled work period on the first full day after release from service unless impossible or unreasonable through no fault of the employee;

(b) for service of more than 30 days but less than 181 days, submit a request for reemployment within 14 days of release from service, unless impossible or unreasonable through no fault of the employee; or

(c) for service of more than 180 days, submit a request for reemployment within 90 days of release from service.

R477-7-11. Disaster Relief Volunteer Leave.

(1) An employee may be granted leave from work with pay, by the agency head or designee, for an aggregate of 15 working days in any 12 month period to participate in disaster relief services for a disaster relief organization. To request this leave an employee shall be a certified disaster relief volunteer and file a written request with the employing agency. The request shall include:

(a) a copy of a written request for the employee's services from an official of the disaster relief organization;

(b) the anticipated duration of the absence;

(c) the type of service the employee is to provide; and

(d) the nature and location of the disaster where the employee's services will be provided.

R477-7-12. Organ Donor Leave.

An employee who serves as a bone marrow or human organ donor shall be granted paid leave for the donation and recovery.

(1) An employee who donates bone marrow shall be granted up to seven days of paid leave.

(2) An employee who donates a human organ shall be granted up to 30 days of paid leave.

R477-7-13. Leave of Absence Without Pay.

(1) An employee shall apply in writing to agency management and be approved before taking a leave of absence without pay.

(2) Leave without pay may be granted only when there is an expectation that the employee will return to work.

(3) A leave of absence may not be granted when documentation from one or more qualified healthcare providers clearly establishes that the employee has a permanent condition preventing the employee from returning to the last held regular

position unless prohibited by state or federal law.

(4) An employee who receives no compensation for a complete pay period shall be responsible for payment of the full premium of state provided benefits.

(5) An employee who returns to work on or before the expiration of leave without pay shall be placed in a position with comparable pay and seniority to the previously held position.

(6) Upon request, an employee who is granted this leave shall provide a monthly return to work status update to the employee's supervisor.

R477-7-14. Furlough.

(1) Agency management may furlough employees as a means of saving salary costs in lieu of or in addition to a reduction in force. Furlough plans are subject to the approval of the agency head and the following conditions:

(a) Furlough hours shall be counted for purposes of annual, sick and holiday leave accrual.

(b) Payment of all state paid benefits shall continue at the agency's expense.

(i) Benefits that have fixed costs shall be paid at the full rate regardless of how many days an employee is furloughed.

(ii) Benefits that are paid as a percentage of actual wages shall continue to be paid as percentage of actual wages if the furlough is less than one pay period. Employees who are furloughed for a full pay period shall have no percentage based benefits paid.

(c) An employee who is furloughed shall continue to pay the employee portion of all benefits. Voluntary benefits shall remain entirely at the employee's expense.

(d) An employee shall return to the current position.

(e) Furlough is applied equitably; e.g., to all persons in a given class, all program staff, or all staff in an organization.

R477-7-15. Family and Medical Leave.

(1) An eligible employee is allowed up to 12 work weeks of family and medical leave each calendar year for any of the following reasons:

(a) birth of a child;

(b) adoption of a child;

(c) placement of a foster child;

(d) a serious health condition of the employee; or

(e) care of a spouse, child, or parent with a serious medical condition.

(f) A qualifying exigency arising as a result of a spouse, son, daughter or parent being on active duty or having been notified of an impending call or order to active duty in the Armed Forces.

(2) An employee is allowed up to 26 work weeks of family and medical leave during a 12 month period to care for a spouse, son, daughter, parent or next of kin who is a recovering service member as defined by the National Defense Authorization Act.

(3) An employee on FMLA leave shall continue to receive the same health insurance benefits the employee was receiving prior to the commencement of FMLA leave provided the employee pays the employee share of the health insurance premium.

(4) An employee on FMLA leave shall receive any administrative leave given for non-performance based reasons if the leave would have been given had the employee been in a working status.

(5) To be eligible for family and medical leave, the employee shall:

(a) be employed by the state for at least one year;

(b) be employed by the state for a minimum of 1250 hours worked, as determined under FMLA, during the 12 month period immediately preceding the commencement of leave.

(6) To request FMLA leave, the employee or an appropriate spokesperson, shall apply in writing for the initial leave and when the reason for requesting family medical leave changes:

- (a) thirty days in advance for foreseeable needs; or
- (b) as soon as practicable in emergencies.

(7) An employee with a serious health condition may use accrued annual leave, sick leave, converted sick leave, excess hours and compensatory time prior to going into leave without pay status for the family and medical leave period.

(a) An employee who chooses to use accrued annual leave, sick leave, converted sick leave, excess hours and compensatory time prior to going into leave without pay status for the family and medical leave period shall notify the agency.

(b) If an employee fails to notify the agency under this Subsection, accrued leave will be used to pay the employee's payroll deductions in the following order:

- (i) Program III sick leave;
- (ii)(A) Compensatory time;
- (B) Excess leave; or
- (C) Annual leave;
- (iii)(A) Converted sick leave;
- (B) Program II sick leave; or
- (C) Program I sick leave.

(8) An employee who chooses to use FMLA leave shall use FMLA leave for all absences related to that qualifying event.

(9) Any period of leave for an employee with a serious health condition who is determined by a health care provider to be incapable of applying for Family and Medical Leave and has no agent or designee shall be designated as FMLA leave.

(10) An employee with a serious health condition covered under workers' compensation may use FMLA leave concurrently with the workers' compensation benefit.

(11) If an employee has gone into leave without pay status and fails to return to work after FMLA leave has ended, an agency may recover, with certain exceptions, the health insurance premiums paid by the agency on the employee's behalf. An employee is considered to have returned to work if the employee returns for at least 30 calendar days.

(a) Exceptions to this provision include:

(i) an FLSA exempt and schedule AB, AD and AR employee who has been denied restoration upon expiration of their leave time;

(ii) an employee whose circumstances change unexpectedly beyond the employee's control during the leave period preventing the return to work at the end of 12 weeks.

(12) Leave taken for purposes of childbirth, adoption, placement for adoption or foster care may not be taken intermittently or on a reduced leave schedule unless the employee and employer mutually agree.

(13) Medical records created for purposes of FMLA and the Americans with Disabilities Act shall be maintained in accordance with confidentiality requirements of Subsection R477-2-5.

R477-7-16. Workers Compensation Leave.

(1) An employee may use accrued leave benefits to supplement the workers compensation benefit.

(a) The combination of leave benefit, wages and workers compensation benefit may not exceed the employee's gross salary. Leave benefits shall only be used in increments of one hour in making up any difference.

(b) The use of accrued leave to supplement the worker compensation benefit shall be terminated if the:

- (i) employee is declared medically stable by a licensed medical authority;
- (ii) workers compensation fund terminates the benefit;
- (iii) employee has been absent from work for four months in a 24 month period;

(iv) employee refuses to accept appropriate employment offered by the state; or

(v) employee is notified of approval for Long Term Disability or Social Security Disability benefits.

(c) The employee shall refund to the state any accrued leave paid which exceeds the employee's gross salary for the period for which the benefit was received.

(2) Workers compensation hours shall be counted for purposes of annual, sick and holiday leave accrual while the employee is receiving a workers compensation time loss benefit for up to six months from the last day worked in the regular position.

(3) Health insurance benefits shall continue for an employee on leave without pay while receiving workers compensation benefits. The employee is responsible for the payment of the employee share of the premium.

(4) If an employee has applied for LTD and is approved, the employee shall be eligible to receive a medical coverage stipend in their LTD check each month, beginning the day after the employee's last day worked pursuant to R477-7-17(2).

(5) If the employee is able to return to work in the employee's regular position, the agency shall place the employee in the previously held position or a similar position at a comparable salary range.

(6) If the employee is unable to return to work in the regular position after four months cumulative leave in a 24 month period, or if documentation from one or more qualified health care providers clearly establishes that the employee has a permanent condition preventing the employee from returning to the last held regular position, the employee shall be separated from state employment unless prohibited by state or federal law. Exceptions may be granted by the agency head in consultation with DHRM.

(7) An employee who files a fraudulent workers compensation claim shall be disciplined under Rule R477-11.

(8) An employee covered under 67-19-27 who is injured in the course of employment shall be given a leave of absence with full pay during the period the employee is temporarily disabled.

(a) the employee shall be placed on administrative leave; and

(b) any compensation received from the state's workers compensation administrator shall be returned to the agency payroll clerks for deposit with the State Treasurer as a refund of expenditure in the unit number where the salary is recorded.

R477-7-17. Long Term Disability Leave.

(1) An employee who has applied for the Long Term Disability Program (LTD) may be granted up to four months cumulative leave in a 24 month period as the result of health conditions, unless documentation from one or more qualified health care providers clearly establishes that the employee has a permanent condition preventing the employee from returning to the last-held regular position.

(a) After four months of cumulative leave in a 24 month period, the employee shall be separated from state employment unless prohibited by state or federal law. Exceptions may be granted by the agency head in consultation with DHRM.

(2) An employee determined eligible for Long Term Disability benefits shall be eligible to receive a medical coverage stipend in their LTD check each month, beginning the day after the employee's last day worked or the last day of FMLA leave.

(3) Upon approval of the LTD claim:

(a) Biweekly salary payments that the employee may be receiving shall cease. If the employee received any salary payments after the three month waiting period, the LTD benefit shall be offset by the amount received.

(b) The employee shall be paid for remaining balances of

annual leave, excess hours, and compensatory hours earned by FLSA non-exempt employees in a lump sum payment. This payment shall be made at the time LTD is approved unless the employee requests in writing to receive it upon separation from state employment. No reduction of the LTD payment shall be made to offset this payment. Upon return to work from an approved leave of absence, the employee has the option of buying back annual leave at the current hourly rate.

(c) An employee with a converted sick leave balance at the time of LTD eligibility shall have the option to receive a lump sum payout of all or part of the balance or to keep the balance intact to pay for health and life insurance upon retirement. The payout shall be at the rate at the time of LTD eligibility.

(d) An employee who retires from state government directly from LTD may be eligible for health and life insurance under Subsection 67-19-14.

(e) Unused sick leave balance shall remain intact until the employee retires. At retirement, the employee shall be eligible for the 401(k) contribution and the purchase of health and life insurance under Subsection 67-19-14.2.

(4) An employee in the Tier I retirement system shall continue to accrue service credit for retirement purposes while receiving long term disability benefits.

(5) Conditions for return from long term disability include:

(a) If an employee provides an administratively acceptable medical release allowing a return to work, the agency shall place the employee in the previously held position or similar position in a comparable salary range provided the employee is able to perform the essential functions of the job with or without a reasonable accommodation.

(6) An employee who files a fraudulent long term disability claim shall be disciplined under Rule R477-11.

(7) Long term disability benefits are provided to eligible employees in accordance with 49-21-403.

R477-7-18. Disabled Law Enforcement Officer Amendments.

(1) A law enforcement officer or state correctional officer, as defined in 67-19-27, who is injured in the course of employment, as defined in 67-19-27, shall be given a leave of absence with 100% of the officer's regular monthly salary and benefits, either:

(a) during the period the employee has a temporary disability; or

(b) in the case of a total disability, until the employee is eligible for an unreduced retirement under Title 49 or reaches the retirement age of 62 years, whichever occurs first.

(2) The eligible employee shall disclose to the agency any time-loss benefit amounts received by, or payable to, the employee, from outside sources, as soon as the employee is made aware.

(a) These amounts do not include benefits received from sources in which the employee pays the full premium.

(3) The agency shall apply R477-7-16, workers compensation leave, and R477-7-17, long term disability leave rules first. They then must consider any benefit amounts received under (2). If the total of these benefits is less than 100% of the employee's monthly salary and benefits, the agency shall make arrangements through payroll to pay the employee the difference.

(4) DHRM shall work with the Division of Risk Management, Workers' Compensation, and the Public Employee's Health Program on a periodic and case-by-case basis to assure that eligible employees receive full benefits.

(a) If at any time it is discovered that the employee is receiving less than 100% of their regular monthly salary and benefits, the agency shall make up the difference to the employee.

(5) If an employee discloses other time-loss benefits

received under (2) after these additional payments by the agency have been made, the employee shall reimburse the agency for salary and benefits paid in overage.

R477-7-19. Leave Bank.

With the approval of the agency head, agencies may establish a leave bank program.

(1) A leave bank program shall include a policy with the following:

(a) Access to a leave bank is not an employee right and shall be authorized at management discretion.

(b) Any application for a leave bank program shall be supported by administratively acceptable medical documentation.

(c) An approval process that prohibits leave donors, supervisors, managers or management teams from reviewing any employee's medical certifications or physician statements.

(d) An employee may not receive donated leave until all individually accrued leave is exhausted.

(e) Leave shall be accrued if an employee is on sick leave donated from an approved leave bank program.

(f) Employees using donated leave may not work a second job without written consent of the agency head.

(g) Only compensatory time earned by an FLSA nonexempt employee, annual leave, excess hours, and converted sick leave hours may be donated to a leave bank.

(h) Only employees of agencies with approved leave bank programs may donate leave hours to another agency with a leave bank program, if mutually agreed on by both agencies.

(3) All medical records created for the purpose of a leave bank, shall be maintained in accordance with confidentiality requirements of Subsection R477-2-5.

R477-7-20. Policy Exceptions.

The Executive Director, DHRM, may authorize exceptions to this rule consistent with Subsection R477-2-2(1).

R501. Human Services, Administration, Administrative Services, Licensing.**R501-15. Therapeutic Schools.****R501-15-1. Authority and Purpose.**

1. This rule is authorized under Section 62A-2-106.
2. This rule establishes:
 - a. basic health and safety standards for therapeutic schools;
 - b. procedures and standards for permitting a therapeutic school to provide services to an adult in the same facility and under the same conditions as a child; and
 - c. minimum administration and financial requirements.

R501-15-2. Definitions.

1. "Academic professional" means an educator with a "level 2 license" or "level 3 license," issued in accordance with Section 53A-6-101 et seq.
2. "Adult" means a person 18 years of age or older.
3. "Background screening clearance" means written verification that the Office of Licensing has approved an applicant's criminal, abuse, neglect, and exploitation background screenings.
4. "Child" is defined in Section 62A-2-101.
5. "Client" is defined in Section 62A-2-101.
6. "Dangerous weapon" is defined in Section 76-10-501.
7. "Dietician" means an individual certified in accordance with Utah Code Ann. Title 58 Chapter 49.
8. "Direct access" is defined in Section 62A-2-101.
9. "Direct care staff" means an individual who provides educational, therapeutic services, supervision or care directly to a client, and does not include support staff who do not supervise clients and who only provide support services such as maintenance, office or kitchen duties.
10. "Directly supervised" is defined in Section 62A-2-120.
11. "Explosive, chemical, or incendiary device" is defined in Section 76-10-306.
12. "Facility" means the physical area where program activities take place, and includes the buildings and grounds that are owned or leased by the therapeutic school or its governing body.
13. "Firearm or antique firearm" are defined in Section 76-10-501.
14. "Incident report" means a written description of any notable event, including but not limited to any crime, discipline, injury or illness, or unauthorized absence, and how that event was addressed.
15. "Medical practitioner" means an individual licensed by the State of Utah under Utah Code Ann. Title 58 as a physician, dentist, physician's assistant, practical nurse, or registered nurse.
16. "Mental health therapist" is defined in Section 58-60-102.
17. "Mental illness" is defined in Section 62A-15-602.
18. "Mental retardation" means having significantly below average intellectual functioning, and at the same time needing help with two or more basic life skills.
19. "On call" means immediately available to staff by telephone, and able to be present on site within one hour after a staff telephone call for assistance.
20. "On duty" means awake, within visual and auditory proximity of clients, and immediately available to clients.
21. "Recreational therapist" means an individual licensed to practice recreational therapy in accordance with Utah Code Ann. Title 58 Chapter 40.
22. "Regular business hours" is defined in Section 62A-2-101.
23. "Residential treatment" is defined in Section 62A-2-101.
24. "Service plan" means a written description of the educational, therapeutic, and other services an individual client requires, as determined and updated after periodic assessments

by a mental health therapist or an academic professional.

25. "Sick" means to have a fever, an illness that may be contagious, or to be experiencing diarrhea or vomiting.

26. "Staff" means therapeutic school directors, supervisors, faculty, employees, agents, interns or volunteers who provide any therapeutic school services.

27. "Supervisor designee" means a direct care staff who currently meets all qualifications described in R501-15-6.C and is assigned by the program Director to act as a supervisor for a specified limited period of time.

28. "Therapeutic school" is defined in Section 62A-2-101.

R501-15-3. Legal Requirements.

1. A therapeutic school shall comply with this R501-15 and:
 - a. R495-876, Provider Code of Conduct;
 - b. R501-2, Core Standards;
 - c. R501-14, Background Screening;
 - d. R710-4, Buildings Under the Jurisdiction of the State Fire Prevention Board;
 - e. R710-9, Rules Pursuant to the Utah Fire Prevention Law; and
 - f. all applicable local, state, and federal laws.
- 2.a. A therapeutic school shall comply with R501-19 and obtain a residential treatment license prior to offering any residential treatment services.
 - b. A therapeutic school shall comply with R501-16 and obtain an intermediate secure treatment license prior to offering any intermediate secure treatment services.

R501-15-4. Administration Requirements.

1. A current policy and procedure manual will be maintained, and shall include:
 - a. admission criteria and procedures, which shall include:
 - i. A student may not attend a therapeutic school unless there is presented to the school a certificate of immunization from a licensed physician or authorized representative of the state or local health department stating that the student has received immunization against communicable diseases as required by Utah Administrative Rule R396-100, unless exempted as provided in Section 53A-11-302; and
 - ii. client admission, exclusion, and expulsion criteria described in Subsection R501-15-4.2.a.
 - b. quarterly client needs evaluation and assessment procedures;
 - c. behavior management training requirements;
 - d. methods for compliance with each section of this R501-15;
 - e. an emergency transportation plan, describing how the therapeutic school shall safely transport each client to the client's legal guardian within 48 hours;
 - f. an emergency response plan, describing how the therapeutic school shall safely care for each client in the event of severe weather, a fire, natural disaster, significant criminal activity, major medical incident, prolonged power outage, or other emergency; and
 - g. methods for compliance with each legal requirement.
2. A current client manual will be provided to each client and each client's legal guardian before the therapeutic school accepts any payment or processes any application to provide services. The manual shall include detailed descriptions of:
 - a. client admission, exclusion, and expulsion criteria and procedures, including but not limited to:
 - i. A therapeutic school shall not admit or provide services to an individual who:
 - A. has a recent history (within the past 2 years) of attempting suicide or making serious self-harm gestures (requiring medical or therapeutic treatment),
 - B. has a psychosis, schizophrenia, severe depression,

mental retardation, or a severe mental illness (requiring medical or therapeutic treatment),

C. is violent, highly combative, or physically or sexually aggressive,

D. presents substantial security risks,

E. requires medical detoxification,

F. lacks the ability to engage in a rational decision-making process or exhibits severely impaired judgment, or

G. has a history of repeated runaway attempts or incidents;

ii. A therapeutic school shall expel a client who exhibits high risk behavior or conditions, including but not limited to a client who:

A. attempts suicide or makes serious self-harm gestures (requiring medical or therapeutic treatment),

B. has a psychosis, schizophrenia, severe depression, mental retardation, or a severe mental illness (requiring medical or therapeutic treatment),

C. is violent, highly combative, or physically or sexually aggressive,

D. presents substantial security risks,

E. requires medical detoxification,

F. lacks the ability to engage in a rational decision-making process or exhibits severely impaired judgment,

G. runs away or attempts to runaway more than two times,

H. uses or attempts to use illegal substances (including but not limited to drugs or alcohol) more than two times, or

I. exhibits any other behavioral or emotional conditions that require more intense supervision and treatment than that permitted in a therapeutic school;

b. academic accreditation, or disclosure that the school is not accredited;

c. curriculum;

d. criteria for awarding course credit, and whether credits are transferable;

e. grades, progress assessment, and testing;

f. academic and career counseling;

g. academic activities and methods;

h. graduation requirements;

i. post-graduation planning services;

j. methods of providing specialized structure and supervision of clients on-site;

k. methods of providing specialized structure and supervision of clients off-site;

l. services or treatment related to a client's disability, emotional development, behavioral development, familial development, or social development;

m. behavior management practices;

n. individual, group, or family counseling services;

o. therapeutic school rules, including but not limited to rules regarding discipline, searches, visitation, correspondence, and personal possessions;

p. food service and weekly menus;

q. physical education and recreational activities;

r. client rights statement;

s. permitted and prohibited weapons;

t. a client grievance policy, including an appeal process;

and
u. name and contact information for the Office of Licensing.

3. All staff and client files, manuals, and records shall be maintained in an on-site office. The on duty supervisor or supervisor designee shall have access to all locked files, including computer files, and make them available upon request to the Office of Licensing.

R501-15-5. Financial Requirements.

1. A therapeutic school shall provide a written disclosure of all fees and expenses a client may incur, and identify which fees may be non-refundable, before accepting any payment,

processing any application, or entering any contract to provide client services.

2. A therapeutic school shall provide an itemized accounting of actual expenditures made on behalf of each client before requiring reimbursement from the client's guardian.

3. A therapeutic school shall maintain an accurate log of all funds deposited and all withdrawals made for the personal use of each client. Receipts for purchases of over \$20.00 shall be signed by the client and staff, and maintained with the log.

R501-15-6. Staff Requirements.

1. Each owner and board member of a therapeutic school shall successfully complete a minimum of 8 hours of annual training relating to therapeutic school services.

2. A therapeutic school shall employ a director who is responsible for daily client supervision and operation of the program.

a. A director shall be on duty or on call at all times.

b. The director shall:

i. be at least 25 years of age;

ii. have a BS or BS social services degree, or a minimum of three years of documented training or experience in providing therapeutic school or residential treatment services;

iii. have a minimum of two years of therapeutic school or residential treatment program supervisory experience; and

iv. demonstrate a comprehensive knowledge of this R501-15, R495-876, R501-1, R501-2, R501-3, R710-4, R710-9, and all applicable local, state, and federal laws.

c. The governing body of a therapeutic school may appoint an acting director to fulfill the responsibilities of the Director.

i. An acting director shall satisfy all requirements of Subsection R501-15-6.2.b at the time of appointment.

3. A therapeutic school shall have a minimum of one supervisor or supervisor designee on duty at all times.

a. A supervisor or supervisor designee shall have:

i. a demonstrated, documented competency and proficiency in providing services to children in out-of-home placements;

ii. qualifications, including education, experience, licensing or certification requirements, and current annual continuing education and training, directly related to providing:

A. specialized structure and supervision of clients; or

B. services or treatment related to a client's disability, emotional development, behavioral development, familial development, or social development;

iii. current certification in standard first aid;

iv. current certification in CPR;

v. current certification in passive restraint techniques; and

vi. current background screening clearance.

4. A therapeutic school shall maintain a staff manual, which shall include specific:

a. job descriptions for each staff position;

b. qualifications, including education, experience, and licensing or certification requirements, for each staff position;

c. competency and proficiency requirements for each staff position; and

d. continuing education and training requirements for each staff position.

5. Each staff with direct access to a client shall be directly supervised by a supervisor or supervisor designee until the staff:

a. achieves the qualifications, competency and proficiency requirements, and training requirements of the applicable job description;

b. receives current certification in standard first aid;

c. receives current certification in CPR;

d. receives current certification in passive restraint techniques;

e. successfully completes annual training in working with clients who have a history of failing to function at home or in

school;

- f. receives current background screening clearance; and
- g. demonstrates a working knowledge of:
 - A. R495-876, Provider Code of Conduct;
 - B. R501-2, Core Standards;
 - C. R501-15, Therapeutic Schools;
 - D. the current therapeutic school policy and procedure manual;
 - E. the current therapeutic school client manual and
 - F. all applicable local, state, and federal laws.
- 6. A therapeutic school shall have a policy, subject to the approval of the Office of Licensing, which clearly defines the minimum levels of supervision of clients by direct care staff.
 - a. A therapeutic school shall submit a proposed minimum direct care staff-to-client ratio with its license application and each time the activities or the client population of the therapeutic school are modified.
 - b. A therapeutic school shall identify the minimum direct care staff-to-client ratio for each type of activity its clients engage in, including but not limited to various types of on-site and off-site activities, specific low risk and high risk activities, individual and group activities, and waking and sleeping hours.
 - c. A therapeutic school shall consider factors particular to its client population, including but not limited to clients' presenting problems, risk to the community, age, maturity, behavior, and daily schedule, in determining its minimum direct care staff-to-client ratio.
 - d. A minimum of 2 staff shall be on duty at all times.
 - e. A minimum of one male staff shall be on duty when a male client is present, and a minimum of one female staff shall be on duty when a female client is present.
 - f. A client who has earned the privilege of unsupervised time off site shall be required to engage in two-way communication with on duty direct care staff once every 4 hours.
 - i. A therapeutic school shall develop and adhere to a policy that specifies what measures shall be taken if a client fails to check-in with staff when scheduled.
 - g. A therapeutic school's approved minimum direct care staff-to-client ratio shall be visibly posted.
 - h. A therapeutic school shall comply with approved minimum direct care staff-to-client ratios.
 - i. Support staff shall not be counted when ascertaining compliance with the approved minimum direct care staff-to-client ratios.
- 7. A therapeutic school shall be required to justify, to the satisfaction of the Office of Licensing, basic low risk, on-site "waking hours" direct care staff-to-client ratio that does not meet or exceed:
 - a. two direct care staff on duty for 1-8 clients;
 - b. three direct care staff on duty for 9-24 clients;
 - c. four direct care staff on duty for 25-48 clients;
 - d. five direct care staff on duty for 49-96 clients;
 - e. 1:20 direct care staff-to-client ratio for 97 or more clients, and never any less than six direct care staff on duty.
- 8. A therapeutic school shall be required to justify, to the satisfaction of the Office of Licensing, any "sleeping hours" direct care staff-to-client ratio that does not meet or exceed:
 - a. two direct care staff on duty for 1-48 clients;
 - b. a 1:40 direct care staff-to-client ratio for 49 or more clients, and never any less than three direct care staff on duty.

R501-15-7. Documentation.

- 1. A therapeutic school shall maintain a current roster of all clients, including the name, date of birth, sex, and emergency contact information.
- 2. A therapeutic school shall maintain staff files, which shall include:
 - a. application and resume;

- b. qualifications for the staff position held;
- c. written competency evaluations, which shall be completed six months after the date of hire and a minimum of once annually;
- d. continuing education, training, and certifications; and
- e. background screening approval verification.
- 3. A therapeutic school shall maintain client files, which shall include:
 - a. application forms and contracts signed by client's legal guardian;
 - b. acknowledgment of client rights signed by client and client's legal guardian;
 - c. academic records, including quarterly progress reports and all records of standardized testing, grades, credits earned, and diplomas awarded;
 - d. medical records, including medication log and medical treatment records;
 - e. counseling notes, signed by the counselor;
 - f. incident reports, signed by supervisor or supervisor designee on duty; and
 - g. daily shift report, signed by supervisor or supervisor designee on duty.

R501-15-8. Client Services.

- 1. A service plan, to include specific educational and therapeutic goals, shall be developed within thirty days after admission.
 - a. A service plan shall be reviewed, updated, and signed by the client and a supervisor no less than quarterly.
 - i. the service plan shall include a quarterly reassessment of the suitability of the therapeutic school in providing for the client's needs.
 - b. A copy of the service plan shall be provided to the client's legal guardian within two weeks after it is developed and within two weeks after it is updated.
- 2. A therapeutic school shall have written policies and procedures describing how medical services will be promptly provided.
 - a. A therapeutic school that must travel more than thirty miles to an emergency room or 24-hour urgent care facility shall retain the on-call services of a medical practitioner and a licensed mental health therapist.
 - b. Upon admission, each client shall be informed of the right to consult with a medical practitioner or a licensed mental health therapist.
- 3. A client who has a serious illness, who sustains a serious injury, or who requests the services of a medical practitioner, shall receive an immediate assessment by a certified wilderness first responder, certified EMT, or a medical practitioner.
 - a. The therapeutic school shall attach the written assessment to an incident report.
 - b. The therapeutic school shall comply with the recommendations of the certified wilderness first responder, certified EMT, or medical practitioner.
- 4. A monthly schedule of activities shall be posted in the common area and the office. Monthly schedules of activities shall be filed and retained for a minimum of one year.
- 5. A therapeutic school's academic curriculum shall be accredited by an accrediting entity recognized by the Utah State Board of Education, or it shall present an educational service plan and educational funding plan in accordance with Section 62A-2-108.1.
 - a. The therapeutic school curriculum shall be provided to each client and the client's legal guardian prior to accepting any payment or processing any application to provide services.
 - b. The therapeutic school curriculum shall be reviewed and updated annually.
 - c. Modifications to the curriculum shall be provided to

each client and the client's legal guardian within two weeks of any curriculum change.

6. The therapeutic school shall monitor and document each client's academic progress, and communicate this information to the client's legal guardian monthly.

R501-15-9. Physical Environment.

1. A therapeutic school shall provide written verification of compliance with:

- a. local zoning ordinances;
- b. local business license requirements;
- c. local building codes, as evidenced by the local governmental entity's building inspector;
- d. state fire prevention laws and rules; and
- e. state and local health codes and rules regarding sanitation and infectious disease control.

2. The building and grounds shall be maintained in a safe and sanitary manner.

3. A therapeutic school shall have on-site offices.

a. Staff and client records shall be stored in locked file cabinets when not in active use.

b. A private office shall be available for individual counseling sessions.

4. A therapeutic school shall provide indoor common areas, such as gymnasiums, recreation areas, cafeterias, classrooms, libraries, and lounges, for group activities.

a. The total common area space in a therapeutic school shall be a minimum of thirty square feet per client.

5.a. A therapeutic school shall maintain a minimum of 3 feet between beds and 2 feet at the end of each bed.

b. Bedroom ceilings shall be a minimum of 7 feet in height.

c. A minimum of fifty square feet per client shall be provided in a multiple occupant bedroom.

i. Storage space shall not be counted when calculating square footage requirements.

d. A minimum eighty square feet per client shall be provided in a single occupant bedroom.

i. Storage space shall not be counted when calculating square footage requirements.

e. Each client shall have a minimum of thirty cubic feet of private storage space.

f. Sleeping areas shall have a source of natural light, and shall be ventilated by mechanical means or equipped with a screened window that opens.

g. Each bed shall be solidly constructed.

h. Bed mattresses shall be in a clean and safe condition.

i. Each client shall be provided with clean linens upon arrival, when soiled, and a minimum of once per week.

j. Sleeping quarters serving male and female clients shall be structurally separated.

6. A therapeutic school shall provide a minimum of one toilet, one sink, one mirror, and one bathtub or shower, for each six clients.

a. Each bathroom shall be designated for males only or for females only.

b. A bathroom with multiple toilets, showers, or bathtubs shall be subdivided to preserve each client's privacy.

c. Each bathroom shall be maintained in good operating order and in a clean and safe condition.

d. Each bathroom shall be equipped with personal hygiene supplies, including but not limited to toilet paper, clean towels, trashcans, and soap.

e. Bathrooms shall be well lighted and ventilated by mechanical means or equipped with a screened window that opens.

7. Live-in staff shall have a separate bedroom with a private bathroom.

8. Clients who are sick shall have a bedroom and bathroom

separate from clients who are not sick.

9. All furniture and equipment shall be maintained in a clean and safe condition.

10. School desks or tables, lights, and chairs shall be provided for each client.

11. A therapeutic school shall contract with a laundry service or shall provide laundry appliances and supplies for washing, drying, and ironing.

a. Each client shall have a dirty laundry hamper for personal linens and clothing;

b. all personal linens and clothing shall be laundered weekly;

c. clients who launder their own linens or clothing shall have weekly access to laundry appliances and supplies for washing, drying, and ironing;

d. a common laundry hamper shall be provided for linens owned by the therapeutic school;

i. dirty linens shall be laundered within 72 hours; and

e. laundry appliances shall be maintained in a clean and safe operating condition.

12.a. Firearms, antique firearms, ammunition, and explosive, chemical, or incendiary devices, shall not be permitted on site.

b. Dangerous weapons, including but not limited to tools, knives (including kitchen knives), scissors, matches, lighters, clubs, bats, and arrows, shall be inaccessible to clients, except as specifically authorized in the client manual.

i. A therapeutic school's client manual shall describe which dangerous weapons are permitted and which dangerous weapons are prohibited on site.

A. the determination of permitted and prohibited dangerous weapons shall be made in accordance with the age and behavioral characteristics of the client population to be served.

ii. A therapeutic school's client manual shall describe how dangerous weapons shall be stored, and the circumstances under which they may be accessible to clients.

13.a. Animals and pets shall be free from disease and cared for in a safe and clean manner.

b. A therapeutic school shall maintain a file documenting the health of each pet or domestic animal on site. The file shall include written verification of each animal's current rabies vaccinations, species-specific vaccinations, health care, and health history.

R501-15-10. Food Service.

1. A therapeutic school shall contract with or employ a dietitian to plan nutritious, appetizing, snacks and meals.

a. a current weekly menu shall be posted in the kitchen and the office.

2. A therapeutic school shall provide snacks and three daily meals in accordance with the dietitian's menu.

3. A therapeutic school shall maintain a current log of each client's food allergies and other individual dietary needs, and comply with the instructions of the client's physician or dietician.

4. A therapeutic school shall establish and post kitchen safety and sanitation rules.

5. A therapeutic school kitchen shall have clean, safe, and operational equipment and supplies for the preparation, storage, serving, and clean up of food.

6. A dining area shall be provided, with tables and chairs for each client.

7. The dining area shall be maintained in a clean and safe condition.

8. No staff or client shall prepare food without first obtaining Utah Department of Health food handler certification.

R501-15-11. Hazardous Chemicals and Materials.

1. A therapeutic school shall place all hazardous chemicals

and materials, including but not limited to poisonous substances, explosive or flammable substances, laundry detergent and cleaning supplies, in locked storage when not in active use.

a. a client shall have no access to any hazardous chemicals or materials unless the client is directly supervised by staff.

2. A therapeutic school shall place all medications in locked storage when not in active use.

a. Non-prescription medications shall be stored in their original manufacturer's packaging together with manufacturer's directions and warnings.

b. Prescription medications shall be stored in their original pharmacy packaging together with the pharmacy label, directions and warnings.

3. A therapeutic school supervisor or supervisor designee shall:

a. administer or oversee the self-administration of prescription medications only as prescribed by a licensed physician;

b. administer or oversee the self-administration of non-prescription medications only as directed by the manufacturer;

c. observe the client consume any medication;

d. maintain an individual client medication log, which shall include the medication, time and dosage dispensed, and the effects of the medication.

4. Each client medication log shall be maintained together with the medication in locked storage while the client is actively enrolled in the therapeutic school, and transferred to the client's file when the client leaves the therapeutic school.

5. Unused medications shall be destroyed by two staff; and the destruction shall be documented.

R510. Human Services, Aging and Adult Services.**R510-401. Utah Caregiver Support Program (UCSP).****R510-401-1. Utah Caregiver Support Program Purpose.**

The Utah Caregiver Support Program is created under authority of the Older Americans Act of 1965 as amended in 2000 (PL 89-73) Part E - National Family Caregiver Support Program (NFCSP) and 2006 (PL 109-365) Subpart 1 - Caregiver Support Program.

The purpose of the program is to provide support services including information and assistance, counseling, support groups, respite and other home and community-based services to family caregivers of frail older individuals. The program also recognizes the needs of grandparents and other relatives (not biological or adoptive parents) 55 years of age and older providing care to children under the age of 18 years as well as to grandparents and other relatives (not biological or adoptive parents) 55 years of age and older providing care to adults, age 18 to 59 years, with disabilities. Adult family members (age 18 years of older) or other adult informal caregivers providing care to individuals of any age with Alzheimer's disease and related disorders are also served under this program.

Operation of the program is a joint responsibility of the State Division of Aging and Adult Services and local Area Agencies on Aging (AAA). Funds are distributed by formula (R510-100-1) to local AAAs.

R510-401-2. Authority.

This Rule is authorized by 62A-3-104; 42 USC Section 3001.

R510-401-3. Definitions.

(1) "Adult" means an individual who is 18 years of age or older.

(2) "Agency or Area Agency on Aging (AAA)" means the agency designated by the Division of Aging and Adult Services (DAAS) to coordinate and provide services for a defined geographical area.

(3) "Agency Director" means the director of the Agency.

(4) "Caregiver or Family Caregiver" means an adult family member, or another adult individual, who is an informal provider of in-home and community care to an older individual who is:

(a) 60 years of age or older; or is a
(b) caregiver 60 years of age or older who is caring for persons with mental retardation or related developmental disabilities; or is an

(c) adult family member (age 18 years or older) or other adult informal caregiver providing care to individuals of any age with Alzheimer's disease and related disorders; or is a

(d) grandparent 55 years of age or older individual who is a relative caregiver (not biological or adoptive parents) of a child not more than 18 years of age; or is a

(e) grandparent and other relatives (not biological or adoptive parents) 55 years of age and older providing care to adults, age 18 to 59 years, with disabilities.

(f) This definition excludes agency and privately-paid supportive service providers.

(5) "Care Receiver" means an adult 60 years of age or older who receives assistance from, or is dependent upon, another for care and is:

(a) unable to perform at least two activities of daily living without substantial human assistance, including verbal reminding, physical cueing, or supervision; or

(b) due to a cognitive or other mental impairment, requires substantial supervision; or

(6) "Child" means an individual who is not more than 18 years of age or who is an individual with a disability.

(7) "Companion Services" means non-medical, basic supervisory services which are provided to the eligible care

receiver in his home on a short-term, intermittent basis. Companion Services provide respite to a caregiver who is caring for eligible care receivers who do not require any personal care assistance, medical assistance, or housekeeping services during the time when companion services are provided.

(8) "Counseling, Support Groups, or Caregiver Training" means provision of advice, guidance, and education about options and methods of caregiving to provide support to caregivers in an individual or group setting.

(9) "Director" means the director of the Division of Aging and Adult Services (DAAS), Utah Department of Human Services).

(10) "Disability" means a disability attributable to mental or physical impairment, or a combination of mental and physical impairments, that results in substantial functional limitation in 1 or more of the following areas of major life activity:

- (a) self care,
- (b) receptive and expressive language,
- (c) learning,
- (d) mobility,
- (e) self-direction,
- (f) capacity for independent living,
- (g) economic self-sufficiency,
- (h) cognitive functions, and
- (i) emotional adjustment.

(11) "Division" means the Division of Aging and Adult Services (DAAS), Utah Department of Human Services.

(12) "Formal Resources" means an entity or individual that provides services for a fee or reimbursement.

(13) "Grandparent or Older Individual who is a Relative Caregiver" means a grandparent or step-grandparent of a child, or a relative of a child by blood, marriage, or adoption who is 55 years of age or older and:

- (a) lives with the child;
- (b) is the primary caregiver of the child because the biological or adoptive parents are unable or unwilling to serve as the primary caregiver of the child; and,
- (c) has a legal relationship to the child, such as legal custody or guardianship, or is raising the child informally.

(14) "Informal Resources" means family, friends, neighbors, community organizations or others who offer resources and support and are not assigned by formal agencies or organizations, irrespective of any payment received.

(15) "Multifaceted Systems" means a variety of systems of support for the caregiver including but not limited to those described in the required five service categories of the (NFCSP), Title III E of the Older Americans Act, as amended in 2000.

(16) "National Family Caregiver Support Program or NFCSP" is the federal program enacted as P. L. 106-501, Title III E of the Older Americans Act, P. L. 89-73, 42 USC Section 3001 et seq., as amended in 2000.

(17) "Relief means ease from or lessening of discomfort, anxiety, fear, stress, or burden.

(18) "Respite or Respite Care" is temporary, substitute supports or living arrangements to provide a brief period of relief or rest for caregivers as outlined in the service plan developed by a case manager following a formal assessment. It can be in the form of in-home respite, adult day care respite, or institutional respite for an overnight stay on an intermittent, occasional, or emergency basis. Respite can be provided for a caregiver for no more than 12 consecutive months from the date of enrollment and shall not exceed the annual service expenditure limit per client, as established by the Division in consultation the Area Agencies on Aging annually. If either condition is met, the caregiver must come off of the program and then may reapply on the anniversary of the start of services. Temporary respite may not be provided by the twenty percent (20%) maximum supplemental services funds.

(19) "Severe Disability" means a severe, chronic disability

attributable to mental or physical impairment, or a combination of mental and physical impairments, that:

- (a) is likely to continue indefinitely; and
- (b) results in substantial functional limitation in 3 or more of the following major life activities:
 - (i) self care,
 - (ii) receptive and expressive language,
 - (iii) learning,
 - (iv) mobility,
 - (v) self-direction,
 - (vi) capacity for independent living, and
 - (vii) economic self-sufficiency.

(20) "Service Plan" means a written plan which contains a description of the needs of the caregiver, the care recipient, and the services and goals necessary to meet those needs.

(21) "Supplemental Services" means other services to complement the care of caregivers, on a limited basis as determined by a case manager through the assessment process and included in a service plan. Supplemental services shall serve to maximize the support of caregivers and shall be flexible, adaptable, and responsive to the needs of the individual caregiver or care receiver wherever they reside in the State of Utah. Services provided under supplemental services shall not fall into other categories defined in the UCSP or the NFCSP.

(a) Expenditures for Supplemental Services are not included in the annual established service expenditure limit for Respite.

(b) Necessity for Supplemental Services shall be specified in the service plan goals. Reimbursement shall include the purchase and/or rental, installation, removal, replacement, or repair of approved items or services for the twelve months that the caregiver is on the program. The case manager will document in the caregiver file all funding resources explored and reasons alternative funding cannot be accessed. Items or services exceeding \$250 per purchase must be prior approved by the Agency Director, or designee, based on a formal written request by the case manager or designee documenting the determination of need and estimated cost. The original approved waiver request will be placed and maintained by the Agency in the caregiver file and a copy sent in writing to the Division.

(c) "Supplies or Equipment" means durable and non-durable goods purchased and/or rented under supplemental services to provide support and assistance to caregivers in their caregiving responsibilities. Reimbursement shall include the purchase of supplies, and the purchase, and/or rental, installation, removal, replacement or repair of approved equipment.

(d) "Modifications or durable adaptive aids and devices" purchased as supplemental services shall be one-time purchases to provide support and assistance to caregivers in their caregiving responsibilities. Minor modifications of homes shall facilitate the ability of older individuals to remain at home or provide for the safety of the care receiver. Adaptive aids and devices shall assist the caregivers helping care receivers to perform normal living activities, and shall include the cost of any necessary installation fitting, adjustment, repair, and training. Adaptive aids and devices may be fabricated by a professional if the care receiver needs specialized aids and devices.

(e) "Legal, Financial, or Placement Services" purchased as supplemental services shall provide support and assistance to caregivers in their caregiving responsibilities. Services will provide the caregiver with legal, financial, and placement advice, counseling, and representation by an attorney, certified financial advisor, or other person acting under the supervision of an attorney, certified financial advisor, or placement professional.

(f) "Miscellaneous" services shall provide support and assistance to caregivers in their caregiving responsibilities.

Miscellaneous services will facilitate the ability to provide services to caregivers that arise from unusual circumstances and shall assist the caregiver in performing their caregiving responsibilities.

(22) "Waiver" means an intentional release in writing by the Agency Director or designee, as authorized in the rules, from a program limitation included in these rules.

R510-401-4. Eligibility for Services.

(1) Services listed in Section R510-406-5 are available to caregivers, grandparents and older individuals who are relative caregivers.

(2) Priority to receive services shall be given in the order below:

(a) caregivers who are older individuals with greatest social need, and older individuals with greatest economic need (with particular attention to low-income older individuals); and

(b) family caregivers who provide care for individuals with Alzheimer's disease and related disorders with neurological and organic brain dysfunction; and

(c) older individuals providing care to individuals with severe disabilities, including children with severe disabilities; and

(d) grandparents or older individuals who are relative caregivers who provide care for children with severe disabilities.

(3) Respite care and Supplemental Services are available to caregivers who are:

(a) caregivers of adults 60 years of age or older; or are

(b) adult family members (age 18 years or older) or other adult informal caregivers providing care to individuals of any age with Alzheimer's disease and related disorders; or are

(c) caregivers 60 years of age or older caring for persons with mental retardation or related developmental disabilities; or are

(d) grandparents or older individuals (not biological or adoptive parents) 55 years of age or older who are a relative caregiver of a child not more than 18 years of age. ; or are

(e) grandparents and other relatives (not biological or adoptive parents) 55 years of age and older providing care to adults, age 18 to 59 years, with disabilities.

(4) To provide Respite and Supplemental Services to eligible the care receiver must be:

(a) Functionally impaired because the individual is unable to perform at least two activities of daily living without substantial human assistance, including verbal reminding, physical cueing or supervision; or

(b) Due to a cognitive or other mental impairment, requires substantial supervision because the individual behaves in a manner that poses a serious health or safety hazard to the individual or to another individual; or

(c) A child physically or mentally impaired because the individual is unable to perform at least two areas of major life activity.

(d) The caregiver must demonstrate a medium-to-high risk score according to the DAAS Approved Demographic Intake and Screening tool and complete the DAAS-approved Assessment and DAAS-approved Burden score.

(5) In the event that there is insufficient funds to bring an individual on the program the Agency shall maintain a list of potential applicants. All potential applicants will be served in turn by using the DAAS-approved Demographic Intake and Risk Screening tool, and a Caregiver Burden score to determine eligibility for services.

R510-401-5. Responsibilities of the Division.

(1) Pursuant to UCA 62A-3-104, the Division shall:

(a) establish a funding formula for the distribution of the funds as approved by the Board;

(b) monitor, and at the request of the Area Agency on

Aging, consult and assist in UCSP;

- (c) provide training opportunities;
- (d) define minimal documentation and client assessment standards; and
- (e) approve or disapprove waivers and exceptions.

R510-401-6. Program Content.

(1) Each Area Agency on Aging shall provide a multifaceted system of caregiver support services for caregivers and for grandparents or older individuals who are relative caregivers to include:

- (a) information to caregivers about available services;
- (b) individual, one-on-one assistance to caregivers in gaining access to services in the form of information and assistance or case management. Assistance may include but is not limited to such activities as phone contact and home visits;
- (c) individual counseling, support groups, and caregiver training to assist the caregivers in making decisions and solving problems relating to their caregiving roles;
- (d) respite care to enable caregivers to be temporarily relieved from their caregiving responsibilities; and
- (e) Supplemental Services, on a limited basis, to complement the care provided by caregivers.

(2) The Area Agency on Aging shall use the DAAS-approved Demographic Intake and Risk Screening form and assessment tool to determine eligibility for respite and supplemental services and said tools shall be kept in the client file.

(3) Prior to receiving respite or supplemental services the Area Agency on Aging shall develop a written service plan for the caregiver, which shall be kept in the client file.

(4) The Area Agency on Aging shall ensure the provision of the full range of caregiver support services in the community by coordinating its activities with the activities of other community agencies and voluntary organizations providing supportive services to family caregivers and grandparents or older individuals who are relative caregivers of children.

(5) Older Americans Act information and services shall be provided to family caregivers in a direct and helpful manner. In cases where caregiver support programs already exist within the community, coordination of these programs and the UCSP is essential to maximize the dollars available for family caregivers and avoid duplication of services.

(6) To assure coordination of caregiver services in the planning and service area, the Area Agency on Aging shall convene a minimum of one joint planning meeting annually with other local providers who currently provide support services to family caregivers. As practical, the Area Agency on Aging shall coordinate the activities under this program with other community agencies and voluntary organizations providing services to caregivers.

(7) Funds allocated on an annual basis under the UCSP for services provided by an Area Agency on Aging shall be expended as follows:

- (a) Information to caregivers about available services: the Area Agency on Aging may not use less than three percent of the funds allocated under the UCSP to provide these services.
- (b) Assistance to caregivers in gaining access to the services: the Area Agency on Aging may not use less than five percent of the funds allocated under the UCSP to provide these services.

(c) Individual counseling, organization of support groups, and caregiver training to caregivers to assist the caregivers in the areas of health, nutrition and financial literacy and in making decisions and solving problems relating to their caregiving roles. The Area Agency on Aging may not use less than five percent of the funds allocated under the UCSP to provide these services.

(d) Respite care to enable caregivers to be temporarily relieved from their caregiving responsibilities: The Area

Agency on Aging may not use less than five percent of the funds allocated under the UCSP to provide these services.

(e) Supplemental Services, on a limited basis, to complement the care provided by caregivers: The Area Agency on Aging may not use more than twenty percent of the funds allocated under the UCSP to provide these services.

(f) The Area Agency on Aging shall spend no more than ten percent of funds on services provided to grandparents and other individuals who are relative caregivers of a child not more than 18 years of age.

(8) If a customer discontinues Respite and/or Supplemental Services before the end of the twelve-month period and before the annual established service expenditure limit per client is reached, the case shall be closed.

(a) If funds are available, the caregiver may be readmitted to the program subsequent to the case closing but shall do so within twelve months from the original date of enrollment.

(b) If no funds are available, the person will be placed at the top of the list to be the first person to be admitted to the program if the person still has time left on the program.

(c) If funds become available, but there is no time remaining based on the original admission, then the caregiver needs to reapply and be considered for admission to the program with all other applicants.

(9) The Area Agency on Aging shall make use of trained volunteers to expand the provision of available resources and, if possible, work in coordination with organizations that have experience in providing training, placement, and stipends for volunteers or participants (such as organizations carrying out Federal service programs administered by the Corporation for National and Community Service), in community settings.

R510-401-7. Caregiver Advisory Council.

(1) The Area Agency on Aging shall develop and maintain a Caregiver Advisory Council.

(2) The Caregiver Advisory Council may be a subgroup of the Area Agency on Aging Advisory Council providing they meet the requirements set forth in the rule.

(a) The Caregiver Advisory Council may be comprised of no less than five members, some of who shall be caregivers.

(3) The Caregiver Advisory Council shall meet no less than semiannually, and meetings shall be scheduled by each Area Agency on Aging.

(4) The primary duty of the Caregiver Advisory Council shall include but not be limited to conducting an annual caregiver satisfaction survey for the caregiver program.

(5) The Caregiver Advisory Council shall advise the Area Agency on Aging in determining service needs and developing action plans. When there is a concern over the use of limited resources for Respite Care and Supplemental Services, the Area Agencies on Aging, in consultation with their Caregiver Advisory Council, may further limit the amount of services provided to an individual caregiver. This local policy decision shall be in writing and shall be uniform for all caregivers for the current fiscal year.

R510-401-8. Voluntary Contributions.

(1) Individuals receiving services from this program may be encouraged to participate in voluntary contributions for services, provided that the method of solicitation is non-coercive.

(2) Voluntary contributions shall in no way be based on a means test of an individual client's income.

(3) Each Area Agency on Aging shall implement procedures for voluntary contributions in the UCSP, and shall comply, at a minimum, with the following:

(a) provide each recipient with an opportunity to voluntarily contribute to the cost of the services;

(b) clearly inform each recipient that there is no obligation

to contribute and that the contribution is purely voluntary;

(c) protect the privacy and confidentiality of each recipient with respect to the recipient's contribution or lack of contribution; and

(d) establish appropriate procedures to safeguard and account for voluntary contributions.

(4) Use all collected voluntary contributions to expand the service for which such contributions were given.

(5) In no instance shall services be denied if individuals do not participate in voluntary contributions.

(6) Area Agencies on Aging will consult with relevant service providers and older individuals in their planning and service area to determine the best method for accepting voluntary contributions.

R510-401-9. Reporting.

(1) The Area Agency on Aging shall collect data and maintain records relating to the UCSP in the format specified by the Division.

(2) The Area Agency on Aging shall furnish the records to the DAAS as specified.

(3) The Area Agency on Aging shall report to DAAS, as specified, the activities and determinations of the Caregiver Advisory Council.

(4) The Area Agency on Aging shall report to DAAS any mechanisms used with caregivers regarding information about and access to various services so that the persons can better carry out their caregiver responsibilities.

R510-401-10. Waiver Requests for Respite and Supplemental Services.

(1) An Area Agency on Aging may request in writing a waiver for Respite and Supplemental Services in order to enable the caregiver to carry out their duties in assisting the care receiver. In requesting a waiver, the Area Agency on Aging must demonstrate that effort has been made to access other sources of services or funds. The Agency Director, or designee, may grant a waiver for Supplemental Services or Respite on a case-by-case basis provided that such waiver is consistent with the law. A copy of the approved waiver request must be placed in the client file and a copy sent in writing to the Division.

KEY: caregiver, care receiver, elderly, respite

January 19, 2010 63A-3-104(4)

Notice of Continuation December 23, 2015 62A-3-104(5)

R523. Human Services, Substance Abuse and Mental Health.**R523-1. General Provisions.****R523-1-1. Authority.**

This rule establishes procedures and standards for administration of substance use disorder and mental health services as granted by Section 62A-15-105.

R523-1-2. Purpose.

- (1) The purpose of this rule is to:
- (a) Define the continuum of substance use disorder services;
 - (b) Clarify funding for Medical detoxification programs; and
 - (c) Adopt the American Society of Addiction Medicine (ASAM) Patient Placement Criteria to determine the level of care provided to all individuals served by programs provided by or contracted with the Division or county local authorities.

R523-1-3. Continuum of Services.

(1) Prevention means a proactive comprehensive approach to reduce risk factors and promote protective factors of substance use disorders and mental illness. The comprehensive approach is to include services in universal, selective, and indicated settings across a broad array of activities, programs, and strategies.

(2) Substance Use Disorder Treatment means those services which target individuals or families who are functionally impaired psychologically, physically, or socially in association with the patterned misuse of or dependence on alcohol, tobacco, or other drugs. This includes only those individuals upon whom a written consumer record, as defined in licensing standards (Rule R501-2-5) as adopted by the Division of Substance Abuse and Mental Health, is maintained.

(3) Mental Health services means a broad array of activities directly or indirectly related to mental well-being and includes promotion of well-being, the prevention of mental disorders, and the treatment and rehabilitation of people affected by mental disorders.

(4) Recovery Support Services means those services or activities provided before, during or after completion of acute treatment services to enhance a person's ability to either attain or retain their recovery from either mental health or substance use disorders.

R523-1-4. Funding of Medical Detoxification Programs.

Medical detoxification programs shall not be funded by the Division on an ongoing basis.

R523-1-5. Use of Standard Criteria.

(1) All contractors and subcontractors shall conduct an assessment of each client to determine the degree of severity of any substance use disorder. This assessment shall evaluate the client's status in the following dimensions.

- (a) Risk of acute psychosis, intoxication/withdrawal;
 - (b) Biomedical conditions or complications;
 - (c) Emotional, Behavioral Cognitive Conditions;
 - (d) Readiness to change;
 - (e) Relapse, continued use or continued problem potential;
- and
- (f) Recovery environment.

(2) The assessment shall include relevant information on the client's:

- (a) Substance use history, and any treatment history;
 - (b) Legal status; and
 - (c) Criminogenic Risk and needs.
- (3) The placement decisions for all patients treated in programs funded by or contracting with the Division of Substance Abuse and Mental Health or subcontracted to any

local authority shall be based upon the current placement criteria developed by the American Society of Addiction Medicine (ASAM).

(4) Documentation of the use of ASAM placement criteria must be included in each patient's record.

KEY: substance disorder, financing of programs, service continuum, assessment instruments
December 22, 2015 **62A-15-105**

R523. Human Services, Substance Abuse and Mental Health.**R523-2. Local Mental Health Authorities and Local Substance Abuse Authorities.****R523-2-1. Authority.**

This rule is promulgated under authority granted to the Division of Substance Abuse and Mental Health (Division) by Subsections 62A-15-105, 62A-15-108(1), 62A-15-611(2)(a), 62A-15-612(2) and 62A-15-902(2)(c).

R523-2-2. Purpose.

- (1) The purpose of this rule is to provide:
 - (a) Guidance on the priorities for treatment services
 - (b) Guidance on the rights of individuals participating in services.
 - (c) A process for Local Mental Health Authorities (LMHAs) and Local Substance Abuse Authorities (LSAAs) to set policies on fees for service.
 - (d) Guidance on LMHA/LSAA program standards.
 - (e) Guidance on the formula for allocation of funding.
 - (f) Guidance on allocation of Utah State Hospital (Hospital) beds to LMHAs.
 - (g) Guidance on admission to the Hospital and coordination of care.
 - (h) Guidance on determining the proper LMHA under special situations.
 - (i) Guidance on transfer planning between LMHAs from the Hospital.
 - (j) Guidance on conflict resolution.
 - (k) Guidance on prohibited items and devices on the grounds of public mental health facilities.

R523-2-3. Priorities for Treatment Services.

(1) Programs providing substance use disorder and mental health treatment services with public funds (federal, state, and local match) shall comply with the priorities listed below. The Division shall regularly seek and receive input from the Utah Behavioral Health Planning and Advisory Council on priorities for services.

(2) Mental Health services provided with public funds (federal, state, and local match) shall provide services based on immediacy of need and severity of the mental illness. Priority may also be given to under-served age groups as appropriately demonstrated through needs studies.

(a) Effective and responsive crisis intervention, suicide prevention, assessment, direct care, and referral program available to all citizens.

(b) Provision of the least restrictive and most appropriate treatment and settings for:

- (i) Children, youth, and adults with severe mental illness;
 - (ii) Children, youth, and adults with acute mental illness;
- and

(iii) Children, youth and adults who are receiving services from other divisions within the Department of Human Services.

(c) Provisions of services to children with emotional disabilities, youth and aged citizens who are neither acutely nor severely mentally ill, but whose adjustment is critical for their future as well as for society in general.

(d) Provision of services to emotionally disabled adults who are neither acutely nor severely mentally ill, but whose adjustment is critical to their personal quality of life as well as for society in general.

(e) Provision of consultation, education and preventive mental health services targeted at high risk groups in particular.

(3) Substance use disorder treatment services provided with public funds (federal, state, and local match) shall provide priority admission to the following populations (in order of priority):

- (a) Pregnant females who use drugs by injection

- (b) Pregnant females who use substances
- (c) Other persons who use drugs by injection;
- (d) Substance using females with dependent children and their families, including women who are attempting to regain custody of their children; and
- (e) All other clients with a substance use disorder, regardless of gender or route of use.

R523-2-4. Rights of Individuals Participating in Services.

(1) All service providers contracted with the Division and County Local Authority programs shall disclose the following information in writing to all individuals participating in treatment services:

- (a) Rights and responsibilities to participate in the development of the treatment or other type of service plan.
- (b) Right to be involved in selection of their primary therapist.
- (c) Right to access their individual treatment records.
- (d) Right to informed consent regarding medications.
- (e) Rights regarding medication-assisted treatment.
- (f) Disclosure of all program fees and personal financial responsibility.

(g) Information on grievance procedures that includes all necessary information to file a formal grievance.

(h) Service provider's commitment to treat individuals with substance use disorders and mental health consumers with dignity and individuality in a positive, supportive and empowering manner.

(2) This information shall be shared with the individual participating in treatment services at the time of intake and a signed copy made part of their individual file. The Division shall periodically review this process to assure appropriate content within the rights statement and proper application of the intent of this policy.

(3) If an individual is impaired or temporarily incapable of understanding the initial information, it shall be shared again when the individual is able to understand the information and give informed consent. This shall also be made part of their individual file.

R523-2-5. LMHA/LSAA Fee Policy.

(1) Each LMHA/LSAA shall require all programs that receive federal and state funds from the Division and provide services to clients to establish a policy to set and collect fees.

(a) Each fee policy shall include:

- (i) A fee reduction plan based on the client's ability to pay for services; and
- (ii) A provision that clients who have received an assessment and require mental health or substance use disorder services shall not be denied services based on the lack of ability to pay.

(b) Any adjustments to the assessed fee shall follow the procedures approved by the LMHA/LSAA.

(2) The governing body of each LMHA/LSAA shall approve the fee policy and shall set a usual and customary rate for services rendered.

(3) All LMHA/LSAA programs shall provide a written explanation of the fee policy to all clients at the time of intake except in the case of emergency services.

(4) All clients shall be assessed fees based on:

- (a) The usual and customary rate established by the LMHA/LSAA, or
- (b) A negotiated contracted cost of services rendered to clients.

(5) Fees assessed to clients shall not exceed the average cost of delivering the service.

(6) All fees assessed to clients, including upfront administrative fees, shall be reasonable as determined by the LMHA/LSAA.

(7) All programs shall make reasonable effort to collect outstanding fee charges and may use an outside collection agency.

(8) All programs may reduce the assessed fee for services if the fee is determined to be a financial hardship for the client.

(9) The Division shall annually review each program's policy and fee schedule to ensure that the elements set in this rule are incorporated.

R523-2-6. LMHA/LSAA Program Standards.

(1) The Division establishes minimum standards for LMHA/LSAA programs.

(a) Each LMHA/LSAA program shall have the appropriate current license issued by the Office of Licensing, Department of Human Services and any other required licenses.

(b) Each LMHA/LSAA shall have a comprehensive plan of service which shall be reviewed and updated at least annually to reflect changing needs. The plan shall:

(i) Be consistent with the Division Directives for the Division of Substance Abuse and Mental Health;

(ii) Designate the projected use of state and federal contracted dollars and the 20% county match dollars; and

(iii) Define the LMHA/LSAA's priorities for service and the population to be served.

(c) Each LMHA shall provide or arrange for the provision of services within the following continuum of care:

(i) Inpatient care and services (hospitalization);

(ii) Residential care and services;

(iii) Day treatment and psycho-social rehabilitation;

(iv) Outpatient care and services;

(v) Twenty-four hour crisis care and services;

(vi) Psychotropic medication management;

(vii) Case management services;

(viii) Community supports including in-home services, housing, family support services and respite services;

(ix) Consultation, education and preventative services, including case consultation, collaboration with other county service agencies, public education and public information; and

(x) Services to persons incarcerated in a county jail or other county correctional facility.

(d) Each LSAA shall provide or arrange for the provision of services within the following continuum of care:

(i) Universal prevention;

(ii) Selective prevention;

(iii) Indicated prevention including the educational series approved by the Division in R523-11 for individuals convicted of driving under the influence; and

(iv) Treatment services prescribed by Division contract and Directives; and

(v) Recovery Support Services.

(e) Each LMHA/LSAA shall participate in a yearly on-site evaluation conducted by the Division.

(f) The LMHA/LSAA shall be responsible for monitoring and evaluating all subcontracts to ensure:

(i) Services delivered to consumers commensurate with funds provided; and

(ii) Progress is made toward accomplishing contract goals and objectives.

(g) The LMHA/LSAA shall conduct a minimum of one site visit per year with each subcontractor. There shall be a written report to document the review activities and findings, a copy of which will be made available to the Division.

R523-2-7. Formula for Allocation of Funding.

(1) The Division establishes by rule, a formula for the annual allocation of funds to LSAs and a formula for the annual allocation of funds to the LMHAs.

(a) The formulas do not apply to funds used by the Division for administration, statewide services consistent with

the requirements of Section 62A-15-201 et seq. for discretionary grants awarded to the Division, funds appropriated for drug court, the Drug Offender Reform Act and the Medicaid Match funds.

(b) Funds used by the Division for administration shall not exceed 5% of the total annual legislative appropriation to the Division excluding the appropriation for the Utah State Hospital.

(c) The funding formulas shall be applied annually to state and federal block grant funds appropriated by the legislature to the Division and are intended for the annual equitable distribution of these funds to the state's LMHAs and LSAs.

(d) Excluding discretionary grants, DORA, Drug Court, and other programs for which Utah Code establishes the funding process, funds used by the Division for statewide substance use disorder services consistent with requirements of Section 62A-15-201 et seq. shall not exceed 15% of the total annual substance abuse legislative appropriation to the Division.

(e) Population data used in the formulas shall be updated annually using the most current data available from the Utah Department of Health's website, Public Health Indicator Based Information System (IBIS).

(f) New funding and/or decreases in funding shall be processed and distributed through the funding formulas.

(g) Each LMHA/LSAA shall provide funding equal to at least 20% of the state general fund appropriation that it receives to fund services described in that LMHA/LSAA's annual plan.

(i) The Division determines that the funds required by Subsection 17-43-301(4)(a)(x) (normally called the 20% match requirement) shall be paid from tax revenues assessed by the county legislative body and collected by the County Clerk.

(ii) If a LMHA/LSAA is unable to provide the required matching funds, the LMHA/LSAA shall be allocated the amount the LMHA/LSAA can match.

(iii) Excess funds may be allocated on a one-time basis to LMHAs/LSAs with the ability to provide matching funds.

(iv) If no LMHA/LSAA can provide the required match, the Division may use the funds to purchase statewide services.

(h) Changes in funding related to the adoption of new formulas in 2014 shall be phased in over a five year period beginning in State Fiscal year 2015.

(2) Funding for mental health shall be allocated as follows:

(a) The Division shall allocate 5% of mental health funds to the 24 smallest counties ranked by population as a rural differential. The rural differential shall be allocated using the following methodology:

(i) 35% divided in equal amounts to the six smallest counties.

(ii) 30% divided in equal amounts to the seventh through twelfth smallest counties.

(iii) 20% divided in equal amounts to the thirteenth through the eighteenth smallest counties.

(iv) 15% divided in equal amounts to the nineteenth through the twenty-fourth smallest counties.

(b) The Division shall allocate all remaining mental health funds to the LMHAs on a per capita basis, according to the most current population data available from IBIS.

(c) The funding formula may utilize a determination of need other than population if the Division establishes by valid and acceptable data, that other defined factors are relevant and reliable indicators of need.

(3) The funding formula for substance use disorder services shall be applied annually to state and federal funds appropriated by the legislature to the Division and is intended for the annual equitable distribution of these funds to the state's LSAs.

(a) The Division shall allocate a total of \$2,390,643 in funds used for prior cost of living increases and funds previously contracted with statewide residential providers to the

LMHAs/LSAAs in an amount equal to the 2014 allocation.

(b) The Division shall allocate 5% of the remaining funds to the 24 smallest counties ranked by population. The rural differential shall be allocated using the following methodology:

(i) 35% divided in equal amounts to the six smallest counties.

(ii) 30% divided in equal amounts to the seventh through twelfth smallest counties.

(iii) 20% divided in equal amounts to the thirteenth through the eighteenth smallest counties.

(iv) 15% divided in equal amounts to the nineteenth through the twenty-fourth smallest counties.

(c) Sixty percent of the remaining funds shall be allocated to each county based on the incidence and prevalence of substance use disorders based on the following;

(i) The percent of adults estimated to be binge drinkers as reported by the Behavioral Risk Factor Surveillance System (BRFSS).

(ii) The percent of adults estimated to be chronic drinkers as reported by BRFSS.

(iii) The percent of youth reporting alcohol use within the past 30 days by the most current Student Health and Risk Protection Survey (SHARP).

(iv) The percent of youth estimated to be binge drinkers by the most current SHARP.

(v) The percent of youth needing drug treatment as reported by the most current SHARP.

(d) Forty percent of the remaining funds shall be allocated to LSAAs on a per capita basis, according to the most current population data available from the IBIS.

R523-2-8. Formula for Allocation of Medicaid Match Funds.

(1) Medicaid match funds appropriated to the Division shall be allocated to the LMHAs/LSAAs using the methodology described below:

(a) The Division shall obtain the following data from the Utah Department of Health:

(i) The number of eligible Medicaid recipients in each county, for each month of the previous state fiscal year hereinafter called Medicaid Member Months; and;

(ii) The actuarially established rates for each county.

(b) The Division shall calculate County Need for Medicaid match funds by multiplying each County's Total Medicaid Member Months by their corresponding actuarial rates for the most current 12 month period.

(c) The Division shall sum all County Need to determine the State Medicaid Match Need.

(d) The percent of total Medicaid match funds for each local authority shall be determined by dividing the sum of County Need by the State Medicaid Match Need.

(e) Local authorities that do not participate in the Medicaid prospective payment-capitation plan shall receive the amount of funds they would have received if the funds had been distributed using state population.

(f) Each LMHA and LSAA shall provide funding from tax revenues assessed by the County legislative body equal to at least 20% of the Medicaid match funds.

(i) If a LMHA/LSAA is unable to provide the required matching funds, the LMHA/LSAA shall be allocated the amount the LMHA/LSAA can match.

(ii) Excess funds may be allocated on a one-time basis to local authorities with the ability to provide matching funds.

R523-2-9. Distribution of Fee-On-Fine (DUI) Funds.

(1) The Fee-On-Fine funds collected by the court system under the criminal surcharge law and remitted to the State Treasurer will be allocated to the LSAAs based upon each county's percent of the total state population as determined at the time of the funding formula as described in Section R523-4-

4. The Division shall authorize quarterly releases of these funds to the county commission of each county for which they are allocated unless notified in writing by the LSAA's governing board to send the funds to the local service provider.

R523-2-10. Allocation of Utah State Hospital Adult Bed Days to Local Mental Health Authorities.

(1) The Division herein establishes a formula to allocate to LMHAs the adult beds for persons who meet the requirements of Subsection 62A-15-610(2)(a).

(2) The formula established provides for allocation based on:

(a) The percentage of the state's adult population located within a LMHA catchment area; and

(b) A differential to compensate for the additional demand for hospital beds in LMHA catchment areas that are located within urban areas.

(3) The Division hereby establishes a formula to determine adult bed allocation:

(a) The most recent available population estimates are obtained from IBIS.

(b) The total adult population figures for the State are identified. Adult means age 18 and over.

(c) Adult population numbers are identified for each county.

(d) The urban counties are identified (county classifications are determined by the lieutenant governor's office pursuant to Subsections 17-50-501 and 17-50-502 and the most recent classifications are used to determine which counties are defined as urban) and given a differential as follows:

(i) The total number of adult beds available at the Utah State Hospital is determined.

(ii) 4.8% is subtracted from the total number of beds available for adults to be allocated as an urban differential.

(e) The total number of available adult beds minus the urban differential is multiplied by the county's percentage of the state's total adult population to determine the number of allocated beds for each county.

(f) Each catchment area's individual county numbers are added to determine the total number of beds allocated to a catchment area. This fractional number is rounded to the nearest whole bed.

(g) The urban differential beds are then distributed to urban counties based on their respective percentage of urban counties as a whole.

(h) At least one adult bed is allocated to each LMHA.

(4) In accordance with Subsection 62A-15-611(6), the Division shall periodically review and make changes in the formula as necessary to accurately reflect changes in population.

(5) Applying the formula:

(a) Adjustments of adult beds, as the formula is applied, shall become effective at the beginning of the next fiscal year.

(b) The Division is responsible to calculate the adult bed allocation.

(c) Each LMHA will be notified of changes in adult bed allocation.

(6) The number of allocated adult beds shall be reviewed and adjusted as necessary or at least every three years as required by statute.

(7) A LMHA may sell or loan its allocation of adult beds to another LMHA.

R523-2-11. Allocation of Utah State Hospital Pediatric Beds to Local Mental Health Authorities.

(1) The Division establishes a formula to allocate to LMHAs the pediatric beds at the Utah State Hospital.

(2) The formula established provides for allocation based on the percentage of the state's population of persons under the age of 18 located within a LMHA catchment area.

(3) Each LMHA shall be allocated at least one pediatric bed.

(4) The formula to determine pediatric bed allocation:

(a) The most recent available population estimates are obtained from IBIS.

(b) The total pediatric population figures for the State are identified. Pediatric means under the age of 18.

(c) Pediatric population figures are identified for each county.

(d) The total number of pediatric beds available is multiplied by the county's percentage of the state's total pediatric population. This will determine the number of allocated pediatric beds for each county.

(e) Each catchment area's individual county numbers are added to determine the total number of pediatric beds allocated to a catchment area. This fractional number is rounded to the nearest whole bed.

(5) The Division shall periodically review and make changes in the formula as necessary.

(6) Applying the formula:

(a) Adjustments of pediatric beds, as the formula is applied, shall become effective at the beginning of the new fiscal year.

(b) Each LMHA shall be notified of changes in pediatric bed allocation.

(7) The number of allocated pediatric beds shall be reviewed and adjusted as necessary or at least every three years as required by statute.

(8) A LMHA may sell or loan its allocation of pediatric beds to another LMHA.

R523-2-12. Admission to the Hospital and Coordination of Care.

(1) The Division has oversight of the Utah State Hospital as per Subsection 62A-15-103(2)(b)(ii) and shall oversee the Continuity of Care Committees for adult and children/youth patients (when the patient is a child or youth, then patient also refers to the parent and/or legal guardian), as it pertains to Admissions, Coordination of Care, Discharges and Transfers between LMHAs of patients to and from the Utah State Hospital (Hospital). The Division shall conduct monthly Continuity of Care Committee meetings, unless the time for the meetings is postponed or canceled for good cause.

(2) Each LMHA shall assign a liaison to the Hospital as the identified representative of the LMHA.

(a) The Liaison shall coordinate patient needs for admission to the Hospital and shall complete the Hospital Pre-admission packet, which includes identifying community discharge and treatment options prior to admission. Any individual or family member independently requesting voluntary Hospital admission shall be referred to the appropriate LMHA geographical area in which the individual currently resides.

(b) LMHA liaisons are responsible to participate in the coordination of care at the Hospital. This includes participation in clinical staffing, at least monthly. The liaisons and Hospital staff are required to participate in order to coordinate patient treatment, discuss the progress of assigned patients and meet with patients and Hospital staff jointly to formulate patient care.

(c) Patients admitted to the Forensic units are under the jurisdiction of the criminal court system; if the need arises the LMHA liaison will participate in community discharge placements, and follow up care.

(d) Hospital staff and liaison shall coordinate discharge plans. As there are multiple factors inherent in determining "readiness for discharge," this decision will be made on an individual basis, with input from the patient, the Hospital, the LMHA and the Division as necessary. Outplacement funds shall be used to resolve financial barriers that delay or complicate patients discharge. Patient's preferences and feedback regarding

discharge placements shall be considered. For adult patients the LMHA liaison is required to arrange discharge placement and follow up care once the patient is ready for discharge as indicated by the Division's REDI program (Readiness, Evaluation and Discharge Implementation). The Hospital and LMHAs are required to use the REDI program. REDI information will be distributed monthly to the Hospital, and the LMHAs to track progress toward discharge. The philosophy of the Hospital is to provide short-term inpatient care for the purpose of stabilization with the goal of transition to a less restrictive level of care as soon as possible. If the Hospital and/or the LMHA determine that the patient is ready for discharge and the coordination of the placement is not occurring, the Hospital and/or liaison is required to notify the Division within five business days.

(e) The Liaison shall follow the Hospital's policies on admission, treatment, discharge, and transfers of all Hospital patients.

R523-2-13. Determining the Proper LMHA Under Special Situations.

(1) In the following special situations, the proper LMHA will be determined as follows:

(a) Homeless: Individuals who are homeless and in need of Hospital admission shall be the responsibility of the LMHA in which the individual came to the attention of local emergency services. If from out of state, the individual shall be referred to the LMHA where the individual was identified as mentally ill and in need of services.

(b) Children and Adolescent Patients: Children and Adolescents in state custody shall be referred to the LMHA in which they resided prior to their custody being changed to the Division of Child and Family Services or the Division of Juvenile Justice Services.

(c) Forensic Patients: When a forensic patient, placed at the Hospital pursuant to criminal adjudication as set forth in Utah Code Section 62A-15-902, and is determined to meet criteria for civil commitment, the patient shall be committed to the LMHA where the patient resided prior to his/her arrest.

(d) Prison Transfers: Utah State Prison inmates who are transferred to the Hospital Forensic Unit and subsequently civilly committed become the responsibility of the LMHA where the person resided prior to incarceration.

(e) Developmental Center Transfers: Individuals placed at the Utah State Developmental Center (USDC), who are transferred to the Hospital for treatment of a mental illness are the responsibility of the LMHA of their last community residence (excluding foster and group home placements less than one year in duration). If the individual was admitted to the USDC as a child, the residence of the custodial parent(s) at the time of admission to USDC shall be used to determine the responsible LMHA. The LMHA is responsible for treatment and discharge planning during the course of the individual's Hospital stay.

R523-2-14. Transfer Planning Between LMHAs From the Hospital.

(1) When a Hospital patient or the patient's legal guardian desires to relocate to a new geographical area, the patient's LMHA liaison (the liaison responsible for the civil bed in which the patient currently resides), shall notify the receiving LMHA regarding the desire of the patient. It is the referring liaison's responsibility to discuss the matter with the patient and with the receiving LMHA and work toward discharge.

(2) The referring and receiving LMHA liaison shall discuss the transfer and shall provide information as needed.

(3) Once the receiving LMHA accepts the referral, the receiving LMHA shall proceed with Hospital patient discharge planning. During the time period between the referral to the

receiving LMHA and Hospital discharge, the Hospital patient shall continue to be assessed against the bed allocation of the referring LMHA. The receiving LMHA is expected to work toward discharge.

62A-15-610(2)(a)
 62A-15-611
 62A-15-612
 62A-15-902
 76-8-311.1
 76-8-311.3
 76-10-523.5

(4) The LMHAs may negotiate an agreement (LMHA to LMHA) if the patient returns to the Hospital, the patient returns to the referring LMHA bed. The agreement is not to exceed one year, whereby the referring LMHA agrees the patient's bed shall be assessed against the bed allocation of the referring LMHA. The agreement specifies the role of each LMHA and who is responsible for providing needed services and payment for those services. Any such agreement shall be made in writing. If a LMHA to LMHA agreement cannot be reached, then the conflict resolution process as outlined in R523-2-15 below shall be followed.

(5) At the conclusion of the negotiated period, the receiving LMHA shall assume all responsibility for the full continuum of mental health services, including Hospital care.

R523-2-15. Conflict Resolution.

(1) The Division will work to resolve conflicts between the Hospital and a LMHA, as well as conflicts between LMHAs.

(a) If negotiations between LMHAs and the USH regarding admissions, discharges or provisions of consumer services fail to be resolved at the local level, the following steps shall be taken:

(i) The director of the Division or designee shall appoint a committee to review the facts of the conflict and make recommendations;

(ii) If the recommendations of the committee do not adequately resolve the conflict, the clinical or medical director of the LMHA and USH clinical director shall meet and attempt to resolve the conflict;

(iii) If a resolution cannot be reached, the LMHA director and the superintendent of the USH shall meet and attempt to resolve the conflict;

(iv) If a resolution cannot be reached, the director of the Division or designee shall make the final decision.

(b) If conflicts arise between LMHAs regarding admissions, discharges, or provisions of consumer services, the final authority for resolution shall rest with the director of the Division or designee.

R523-2-16. Prohibited Items and Devices on the Grounds of Public Mental Health Facilities.

(1) Pursuant to the requirements of Subsection 62A-15-602 (9), and Sections 76-10-523.5, 76-8-311.1, and 76-8-311.3, all facilities owned or operated by community mental health centers that have any contracts with a LMHA and/or the Division are designated as secure areas. Accordingly all weapons, contraband, controlled substances, implements of escape, ammunition, explosives, spirituous or fermented liquors, firearms, or any other devices that are normally considered to be weapons are prohibited from entry into community mental health centers. There shall be a prominent visual notice of secure area designation. Law enforcement personnel are authorized to carry firearms while completing official duties on the grounds of those facilities.

R523. Human Services, Substance Abuse and Mental Health.**R523-3. Screening, Assessment, Education and Treatment Standards for Court-referred Youth Under the Age of 21.****R523-3-1. Authority.**

This rule is authorized by Subsection 62A-15-105(6) requiring the Division of Substance Abuse and Mental Health (Division) to provide form and content of screening, assessment, education and treatment as defined in Section 41-6a-501.

R523-3-2. Purpose.

(1) This rule prescribes the standards for substance use disorder screening, assessment, treatment, and required educational series for court-referred youth (hereinafter youth):

- (a) Under the age of 21 found in violation of:
 - (i) Section 41-6a-502 driving under the influence of alcohol, drugs or a combination of both;
 - (ii) Section 53-3-231 person under 21 may not operate a vehicle or motorboat with detectable alcohol in body;
 - (iii) Section 41-6a-517 driving with any measurable controlled substance in the body;
 - (iv) Section 41-6a-520 blood alcohol test refusal;
 - (v) Section 32B-4-409 unlawful purchase, possession, consumption of alcohol;
 - (vi) Section 32B-4-410 unlawful admittance or attempt to gain admittance;
 - (vii) Section 76-9-701 intoxication; and/or
 - (viii) Section 32B-4-411 unlawful use of proof of age; or
- (b) Under the age of 18 is in violation of:
 - (i) Section 58-37-8;
 - (ii) Title 58, Chapter 37a, Utah Drug Paraphernalia Act;
 - (iii) Title 58, Chapter 37b, Imitation Controlled Substances Act;

R523-3-3. Definitions.

(1) "Assessment" means an in-depth clinical interview with a licensed mental health therapist used to determine if a youth is in need of:

- (a) Substance use disorder treatment that is obtained at a substance use disorder program;
- (b) An educational series; or
- (c) A combination of Subsection R523-3-3(1)(a) and Subsection R523-3-3(1)(b).

(2) "Educational series" means a court-ordered and evidence-based instructional series for youth with low criminogenic risk obtained at a substance use disorder program that is approved by the Division of Substance Abuse and Mental Health in accordance with Section 62A-15-105 designed to prevent the onset of substance use and/or mental health disorders and reduce criminogenic risk. (3) "Criminogenic Risk" means youth characteristics that are directly related to researched causation of delinquency.

(4) "Criminogenic Need" means dynamic or changeable attributes of youth that are directly linked to delinquency that should be targeted to develop a comprehensive treatment plan.

(5) "Level of Care" means the intensity of either substance use disorder services needed as defined by the American Society of Addiction Medicine (ASAM) or the array of services needed to address a youth's mental health issues.

(6) "Recovery" means a process of change through which youth improve their health and wellness, live a self-directed life, and strive to reach their full potential.

(7) "Recovery Support" means services or activities provided before, during or after completion of acute treatment services to enhance a youth's ability to either attain or retain their recovery from either mental health or substance use disorders.

(8) "Screening" means a preliminary appraisal of a youth used to determine:

- (a) Criminogenic risk, and;
 - (b) If the youth is in need of further assessment.
- (9) "Youth" for purposes of this rule are defined as any person under the age of twenty-one years of age.

R523-3-4. Standards for Criminogenic Risk Screening and Assessment.

(1) Prior to referral to a certified educational series or treatment program, all youth shall be given a brief, validated, risk and needs screen in the preliminary stages of involvement with the justice system to determine whether the youth is of low, moderate, or high risk to re-offend.

(a) For youth under the age of eighteen (18) years of age, the screening instrument to be used shall be the most current version of the Pre-Screen Risk Assessment (PSRA) or other instrument currently approved by the Juvenile Court.

(b) For youth between the ages of eighteen (18) and twenty-one (21), the screening instrument to be used shall be the most current version of the Level of Service Inventory-Revised: Screening Version (LSI-R:SV).

(2) The screen shall collect information about behaviors and characteristics known to predict re-offending including delinquency history, social history, and attitudes/behaviors.

(3) If the screen indicates a high likelihood of re-offending, the youth shall be given an in-depth assessment of criminogenic risk and need.

(a) For youth under the age of eighteen (18) years of age, the assessment instrument to be used shall be the most current version of the Protective and Risk Assessment (PRA).

(b) For youth between the ages of eighteen (18) and twenty-one (21), the assessment instrument to be used if a criminogenic risk assessment is necessary shall be the Level of Service/Risk, Need, Responsivity (LS/RNR).

(4) The criminogenic assessment shall examine a wide variety of factors related to the youth's strengths and challenges including: delinquency history, school, employment, relationships, environment, current living arrangements, alcohol and drugs, mental health, attitudes and behaviors, and skills.

(5) The criminogenic assessment shall also identify protective factors that are related to the reduced likelihood of re-offending and risk factors that are related to the increased likelihood of re-offending.

R523-3-5. Standards for Substance Use and Co-occurring Mental Health Disorder Screenings.

(1) A court may order a Substance Use and Mental Health Disorder Screening for a youth upon a first violation of the offenses in Section R523-3-2.

(2) A court shall order a Substance Use and Mental Health Disorder Screening for second or subsequent violation of the offenses in Section R523-3-2.

(3) Youth shall be screened using an instrument(s) that has been evaluated and found reliable and valid by the scientific community to determine whether youth are in need of comprehensive assessment.

(4) Screenings shall be:

(a) Conducted by a person that has completed all training recommended by the developer of the specific instrument being used; and

(b) Trauma-informed developmentally appropriate, short, simple, and easy to administer and interpret by a wide variety of professionals who work with youth;

(5) The youth shall be referred for an assessment if the screening identifies a potential substance use and/or mental health disorder.

(6) Screenings shall not be used to determine diagnosis.

(7) Examples of validated substance use disorder screening instruments for youth include but are not limited to the Substance Abuse Subtle Screening Inventory (SASSI); the

Problem Oriented Screening Instrument for Teenagers (POSIT), the Personal Experience Screening Questionnaire (PESQ) and the CRAFFT Screening Tool recommended by the American Academy of Pediatrics' Committee on Substance Abuse.

R523-3-6. Standards for Substance Use Disorder and Co-occurring Mental Health Assessments.

(1) Assessments shall be conducted by a licensed mental health therapist using a standardized instrument(s) and process that has been evaluated by the scientific community and determined to be reliable and valid for the purpose of assessing youth.

(2) Assessments shall identify: relevant information to the youth's use of substances that will assist in determining the need for placement in services based on the ASAM Dimensions as outlined in the ASAM Criteria, 2013 Edition, or most current ASAMH criteria.

(3) Assessments shall focus on the youth's substance use severity, mental health status, legal problems, physical condition, educational functioning, living situation and the criminogenic risk factors that predict the likelihood of re-offense.

(4) Based on the screening and the assessment, the assessor shall recommend needed services, and supervision requirements that address the youth's clinical and criminogenic needs.

(5) Examples of validated substance use disorder assessment instruments for youth include but are not limited to: The Global Appraisal of Youth Needs (GAIN), Teen Addiction Severity Index (T-ASI) and the Personal Experience Inventory (PEI).

R523-3-7. Standards for Educational Series.

(1) Applicants wishing to certify an intervention, program, activity or curriculum for approval to fulfill the legal requirements of court-referred youth as set forth in Section 41-6a-501 shall submit an application to the Division for review that shows the ability to:

(a) Meet the requirements for listing on Utah's registry of evidence-based programs identified in Section R523-9;

(b) Maintain records documenting the location, fees collected, date(s) of service, attendance and course completion or failure to complete;

(c) Serve youth in settings that are segregated from adults;

(d) Serve low risk youth and high risk youth in separate groups.

(e) Provide accurate information about the harms of underage drinking and drug use and be designed to promote compliance with Utah laws.

(4) All individuals working with youth shall complete a background check that meets the standards for working with vulnerable populations. This must be completed before engaging in or participating in youth programs or activities under this rule.

R523-3-8. Standards for Substance Use Disorder Treatment.

(1) All programs shall maintain the appropriate license from the Department of Human Services, Office of Licensing for the services being provided.

(2) All programs shall submit Treatment Episode Data (TEDs) admission and discharge data as outlined in the Division's most current Division Directives.

(3) Programs shall evaluate all participants for criminogenic risk and need, and deliver services that target the specific risk and needs identified.

(4) Youth with high risk and youth with low risk to reoffend shall be treated separately.

(5) Programs shall coordinate and communicate with the Juvenile Court, Juvenile Justice Services, the State Office of

Education, and other necessary agencies on a regular and consistent basis as agreed.

(6) Programs shall provide multi-dimensional services that target the validated criminogenic risk factors. (7) Treatment participation and length shall be of sufficient dosage/duration to affect stable behavioral change.

(7) The appropriateness of treatment intensity, duration and modality shall be adjusted based on medical necessity using the current ASAM or comparable mental health criteria and ongoing assessment process.

(a) The Division shall develop performance metrics that evaluate the ability of programs to engage and retain individuals in the appropriate intensity and modality of service.

(8) Treatment programs shall ensure that public funds are the payor of last resort.

(a) Treatment programs shall coordinate or refer youth and families to the Department of Workforce Services or healthcare navigators for assistance with eligibility for public or private insurance plans.

(b) Treatment programs may negotiate and assess usual and customary fees to youth.

(9) Youth treatment programs shall:

(a) Assess youth for substance use and mental health disorders and motivation to seek treatment using validated instruments and protocols;

(b) Identify barriers to treatment participation and develop specific strategies to address each barrier as early as possible;

(c) Diagnose, treat or ensure treatment for co-occurring mental illness;

(d) Provide comprehensive treatment services;

(e) As appropriate and with consent, involve families in the treatment process;

(f) Use developmentally appropriate and informed treatments;

(g) Have qualified, and licensed staff trained to work with youth with substance use disorders and mental illness;

(h) Recognize gender, cultural, and youth differences;

(i) Provide or link to ongoing chronic disease management, recovery supports, monitoring and aftercare services;

(j) Ensure that low risk youth and high risk youth are treated in separate groups;

(k) Use specific evidence-based or evidence-informed clinical interventions, strategies, and procedures to achieve specific treatment goals and objectives;

(l) Youth testing positive for drugs or alcohol shall not be denied entry or removed from treatment from a program solely for positive drug tests.

(m) Programs shall comply with all Division Directives for Drug testing as published in the annual DSAMH Division Directives.

(n) Conduct program evaluation and ongoing process improvement activities;

(o) Agree to allow the Division to perform qualitative review and audits;

(p) Agree to allow program information to be published in the Division's Online Guide to Adolescent Substance Use Disorder Treatment programs in Utah;

(q) Complete and submit the National Survey on Substance Abuse Treatment Services (N-SATTS); and

(r) All individuals working with youth shall complete a background check that meets the standards for working with vulnerable populations prior to beginning employment.

R523-3-9. Documentation Standards for Substance Use Disorder and Co-occurring Treatment.

(1) A complete and accurate record of all clinical services shall be kept for each youth served that contains the following information:

- (a) Any and all screenings and assessments completed;
- (b) Any and all consent forms or required disclosures;
- (c) A comprehensive treatment plan;
- (d) Progress notes;
- (e) Continuing recovery recommendations upon discharge;

and

- (f) Record reflects cultural and gender specificity in treatment.

(2) The youth record is maintained in a manner so as to protect confidentiality and comply with 42 CFR Part 2 and the Health Insurance Portability and Accountability Act of 1996 (HIPAA) documentation/privacy standards. The record is organized, clear, complete, current and legible.

(a) Consent forms for any release of information shall be found in the file.

(b) Consent forms shall be complete, and contain a statement that consent is subject to revocation, shall be signed and dated by the patient, and guardian if the patient is a minor.

(c) Each file shall contain a signed and witnessed Acknowledgement of Receipt of Privacy statement.

(3) The youth record shall contain documentation of the initial assessment/engagement session.

(a) The assessment/engagement identifies presenting problem(s), youth goals and identifies the initial diagnosis.

(b) The assessment/engagement includes a statement of the youth's presenting problem(s) and:

(i) Identification and documentation of acute psychosis, intoxication/withdrawal relevant to the presenting problem;

(ii) Identification and documentation of biomedical conditions and complications relevant to the presenting problem;

(iii) Identification and documentation of emotional; behavioral, cognitive conditions and or complications relevant to the youth's current situation and the presenting problem;

(iv) Identification, evaluation and documentation of the readiness to change relevant to the presenting problem;

(v) Identification and documentation of relapse, or continued problem potential relevant to the presenting problem;

(vi) Identification and documentation of the youth's recovery environment relative to the presenting problem;

(vii) Identification of recovery support services needed relevant to the presenting problem;

(viii) An assessment/engagement summary includes recommendations for level of care and intensity of services needed; and

(ix) Documentation of an assignment for the youth to complete for their next session.

(4) Any and all screenings and assessments shall be documented in the youth file.

(a) The assessment information is current and includes the justification for the assessed level of care and array of services, as well as justification if the level of care is being substituted.

(b) Assessment dimensions are current and are updated as new information is received, new goals are identified and youth progresses or regresses.

(c) Assessment process is ongoing and changes to assessment information are reflected throughout the record.

(d) Level of care and intensity of services are supported by ongoing assessment information, or difference is clinically justified.

(e) Assessment shall be signed and include the title of a person licensed in the State of Utah to diagnose, assess and treat people with mental health and substance use disorders.

(5) A treatment plan that contains the following:

(a) Specific individualized long range goals;

(b) Behaviorally measurable short-term objectives that support long range goals;

(c) Evidence of youth's participation in development of the plan;

(d) Evidence that the plan is based on the youth's goals and other needs identified in the screening and assessments;

(e) Objectives that are measurable, achievable within a specified time frame and reflect developmentally appropriate activities that support progress towards achievement of youth goals;

(f) Substance use disorder treatment plans should be based on the six ASAM Patient Placement Dimensions and shall address critical areas identified in each dimension. Mental Health Recovery Plans shall be organized in a similar manner;

(g) Interventions designed to help the patient complete the objectives; and

(h) Signature and title of a person licensed in the State of Utah to diagnose, assess and treat people with mental health and substance use disorders.

(6) The youth file shall include documentation of the youth's status throughout the youth record including:

(a) Changes in types, schedule, duration and frequency of therapeutic interventions to facilitate youth progress as well as changes in youth objectives and goals;

(b) Each contact shall be documented in a timely manner;

(c) Progress notes shall be kept that identify the date, duration and type of intervention;

(d) Progress notes shall document progress or lack of progress on the youth's goals as well as the clinician's assessment of the youth's changes in behaviors, attitudes and beliefs;

(e) Progress notes shall reflect clinician's assessment of the effectiveness of the therapeutic interventions and plans for future interventions;

(f) Notes shall be legible and signed by a qualified staff indicating appropriate credentials;

(g) No-shows, cancellations or gaps in service such as vacation, incarceration, home visits shall be documented;

(h) Youth and group notes shall be specific and document progress towards achievement of the objectives identified in the treatment plan and as each objective is completed, identify a new objective;

(i) Lack of progress toward treatment/recovery plan goals and resulting adjustments to the recovery plan shall also be documented;

(j) Notes shall reflect behavioral changes as well as changes in attitudes and beliefs;

(k) Other group activities such as psychoeducation, life skills, case management, and recreation may be summarized and dated with the date the activity occurred;

(l) Recovery support services are documented to the extent required for clinical continuity and in order to meet financial requirements;

(m) Changes in assessment information, current level of care and treatment plan; and

(n) Upon discharge, recommendations for ongoing services include the extent to which established goals and objectives were achieved, what ongoing services are recommended, and a description of the youth's recovery support plan.

R523-3-10. Certification Procedures for Educational Series and Treatment Programs.

(1) Programs seeking first-time approval or re-approval shall make application to the Division at least 60 days prior to delivering services.

(2) All application forms shall be reviewed by the Division.

(3) The Division shall determine if the application is complete and demonstrates compliance with this rule.

(4) The Division approves the application and determines the program has met all other requirements, the Division shall certify the program for a period of two years.

(5) The Division shall notify all applicants within 30 days of submission of an application, whether the application is:

- (a) Approved,
- (b) Denied; or
- (c) Requires additional information.

(6) If an application for re-approval requires additional information, a previously certified program may continue to provide services for 30 days from the date of notification unless notified by the Department of Human Services to cease and desist.

R523-3-11. Corrective Action.

(1) The Division shall notify the Department of Human Services, Office of Licensing immediately if the Division becomes aware of an issue that may affect the imminent health, safety, or well-being of youth.

(2) When the Division becomes aware that a program is in violation of this rule but the violation does likely not affect the imminent health, safety, or well-being of youth, the Division shall:

- (a) Identify in writing the specific areas in which the program is not in compliance, and;
- (b) Send written notice to the program within 30 days after becoming aware of the violation.

(3) The program shall submit a written plan for achieving compliance within thirty (30) days of notification of noncompliance.

R523-3-12. Suspension and Revocation.

(1) The Division may suspend the approval of a program when a program fails to:

- (a) Respond in writing to areas of noncompliance identified in writing by the Division within the thirty (30) days.
- (b) Comply with the corrective action plan in its written response to the Division; or
- (c) Allow the Division access to information or records necessary to determine the program's compliance under this rule.

(2) The Division may revoke approval if a program:

- (a) Continues to provide the educational series or treatment services after suspension;
- (b) Fails to comply with corrective action while under a suspension; or
- (c) Commits a second violation which constitutes grounds for suspension when a previous violation resulted in a suspension during the last 24 months.

(3) The Division shall notify the Juvenile Court, the Division of Juvenile Justice Services, the State Office of Education, the Department of Human Services, Office of Licensing and county local authorities when a certification is suspended or revoked.

R523-3-13. Procedure for Denial, Suspension, or Revocation.

(1) If the Division has grounds for action under this rule and intends to deny, suspend or revoke approval of a program, the Division shall notify the applicant or program of the action to be taken.

(2) A notice to suspend or revoke approval shall contain the reasons for the action, to include all statutory or rule violations, and a date when the action shall become effective.

(3) The program may request a meeting with the Director or designee of the Division within ten calendar days of receipt of notification.

(4) A request for a meeting for this purpose shall be in writing.

(5) Within ten days following the close of the meeting, the Division shall inform the program or applicant in writing of the decision of the Division Director or Designee.

R523-3-14. Posting of Certified Programs.

(1) The Division shall maintain a current list of certified educational series and treatment programs on its website.

(2) The list of Educational Series programs shall include the contact information for the program, the program's business location, information on the cost of services, the number of hours required to complete the educational series and a short description of the series.

(3) The list of treatment programs shall include the contact information for the programs, the program's business location, and information on the cost of services.

R523. Human Services, Substance Abuse and Mental Health.**R523-4. Screening, Assessment, Prevention, Treatment and Recovery Support Standards for Adults Required to Participate in Services by the Criminal Justice System.****R523-4-1. Authority.**

This rule is authorized by Section 62A-15-103(h) requiring the Division of Substance Abuse and Mental Health (Division) to establish by rule, in accordance with Title 63G, Chapter 3, Utah Administrative Rulemaking Act, minimum standards and requirements for the provision of substance use disorder and mental health treatment to individuals who are required to participate in treatment by the court or the Board of Pardons and Parole, or who are incarcerated.

R523-4-2. Purpose.

This rule prescribes the standards for mental health and substance use disorder screening, assessment, prevention, treatment, education and recovery supports services for adults required to participate in treatment by the court or the Board of Pardons and Parole, or who are incarcerated.

R523-4-3. Definitions.

(1) "Assessment" means an in-depth clinical interview with a licensed mental health therapist, used to:

- (a) Determine if an individual is in need of:
 - (i) Mental health or substance use disorder treatment services;
 - (ii) Educational or Prevention series;
 - (iii) Recovery support services;
 - (iv) Services to reduce criminogenic risk factors; or
 - (v) A combination of Subsection R523-4-3(1)(a)(i) through Subsection R523-4-3(1)(a)(iv).
- (b) Recommend a needed level of care or array of services.

(2) "Criminogenic Risk" means offender characteristics that are directly related to researched causation of crime.

(3) "Criminogenic Need" means dynamic or changeable attributes of offenders that are directly linked to criminal behavior that should be targeted to develop a comprehensive treatment plan.

(4) "Educational or Prevention Series" means a court-ordered and evidence-based instructional series for individuals with low criminogenic risk obtained at a substance use disorder program that is approved by the Division of Substance Abuse and Mental Health in accordance with Section 62A-15-105 designed to prevent the onset of substance use and/or mental health disorders and reduce criminogenic risk.

(5) "Level of Care" means the intensity of either substance use disorder services needed as defined by the American Society of Addiction Medicine (ASAM) or the array of services needed to address an individual's mental health issues.

(6) "Recovery" means a process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential.

(7) "Recovery Support" means social support services or activities provided before, during or after completion of acute treatment services to enhance an individual's ability to either attain or retain their recovery from either mental health or substance use disorders.

(8) "Screening" means a preliminary appraisal of an individual to determine if further assessment of mental health, substance use or criminogenic needs is needed.

(9) "Treatment" means the array of therapeutic services, including individual, family, group services, medications and interventions designed to improve and enhance social or psychological functioning and reduce criminogenic risk for individuals identified as having either mental health or substance use disorders. The ultimate goal of treatment services is to engage the individual in a process of recovery.

R523-4-4. Standards for Criminogenic Risk Screening and Assessment.

(1) Prior to participating in educational, preventative or treatment services adults shall be given a brief, validated, risk and needs screen to determine whether the adult is of low, moderate, or high risk to re-offend.

(a) For individuals over the age of eighteen (18), the screening instrument to be used shall be the most current version of the Level of Service Inventory-Revised: Screening Version (LSI-R:SV).

(2) Screenings shall:

(a) Be conducted by an individual that has completed training recommended by the developer of the specific instrument being used and/or approved by the Division;

(b) Collect information about behaviors and characteristics known to predict re-offending including delinquency history, social history, and attitudes/behaviors.

(3) If the screen indicates a high or moderate likelihood of re-offending the adult shall be given an in-depth assessment of criminogenic risk and need.

(a) The Level of Service/Risk, Need, Responsivity (LS/RNR) shall be used for males.

(b) The Women's Risk Needs Assessment (WRNA) shall be used for females.

(4) The criminogenic assessment shall examine a wide variety of factors related to the adult's strengths and challenges including: criminal history, school, employment, relationships, environment, current living arrangements, alcohol and drugs, mental health, attitudes, behaviors, and skills.

(5) The criminogenic assessment shall also identify protective factors that are related to the reduced likelihood of re-offending and risk factors that are related to the increased likelihood of re-offending.

R523-4-5. Standards for Substance Use and Mental Health Disorder Screenings.

(1) Adults shall be screened using an instrument(s) that has been evaluated and found reliable and valid by the scientific community to determine whether the adult is in need of a comprehensive assessment.

(2) Screenings shall be:

(a) Conducted by an individual that has completed training recommended by the developer of the specific instrument being used and/or approved by the Division;

(b) Trauma-sensitive, developmentally appropriate, culturally sensitive, short, simple, and easy to administer and interpret by a wide variety of professionals who work with adults. (3) The individual shall be referred for an assessment if the screening identifies a potential substance use and/or mental health disorder.

(4) Screenings shall not be used to determine diagnosis but may assist in determining the need for further assessment.

R523-4-6. Standards for and Substance Use and Mental Health Disorder Assessments.

(1) Assessments shall be conducted by a licensed mental health therapist using a standardized process/instrument(s) that has been evaluated by the scientific community and determined to be reliable and valid for the purpose of assessing individuals.

(2) Assessments shall identify the individual's need for Substance Use Disorder or Mental Health services in the following modified ASAM Patient Placement Criteria dimensions:

(a) Risk of acute psychosis, intoxication/withdrawal;

(b) Biomedical conditions or complications;

(c) Emotional, behavioral, or cognitive conditions;

(d) Readiness to change;

(e) Relapse, continued use or continued problem potential; and

- (f) Recovery environment.
- (3) The assessment shall include relevant information on:
 - (a) The individual's psychosocial function, substance use including tobacco/nicotine, mental and physical health, and other factors, such as educational experiences, trauma history, cultural issues, legal involvement, risk to criminally re-offend and family relationships that are relevant to the purpose of the assessment;
 - (b) Strengths, resiliencies, natural supports, interests of the individual, and an evaluation of the individual's unique abilities;
 - (c) Developmental and functional levels, social, emotional, communication abilities and strengths, and independent living skills;
 - (d) Cognitive, social, and affective development; family, peer, and intimate relationships; trauma; current or past emotional, physical or sexual abuse; suicidality; and safety;
 - (e) Collateral information from other sources that are relevant to the individual's situation and provides insight into the issues in Subsection R523-4-6(2)(a) through (2)(d).
- (4) The assessment will include a diagnosis when clinically indicated.
- (5) Based on the screening and the assessment, the assessor shall make recommendations regarding the needed level of care and services to address the identified clinical and criminogenic needs.
- (6) The level of care and array of services shall be based on the ASAM or equivalent Mental Health criteria.

R523-4-7. Standards for Providers of Educational or Prevention Series.

- (1) Entities wishing to provide an intervention, program, activity or curriculum to fulfill the legal requirements of court-referred individuals set forth in Subsection 62A-15-103(h) shall:
 - (a) Obtain and maintain an outpatient or residential facility license from the Department of Human Services, Office of Licensing.
 - (b) Submit an application to the Division for review that includes a description of how their proposed intervention, activity, or curriculum:
 - (i) Meets the requirements for listing on Utah's registry of evidence-based practices identified in Section R523-9;
 - (ii) Addresses the substance use, mental health and criminogenic needs of the targeted population;
 - (iii) Meets the requirements set forth in Subsection 62A-15-103(h) and Subsection R523-4-7(1)(b) through 1(f).
 - (c) Not implement any educational programs until approved by the Division.
 - (d) Maintain records documenting the individual's attendance and course completion or failure to attend and/or complete.
 - (e) Shall not include minors in adult groups.
 - (f) Serve low criminogenic risk individuals and high criminogenic risk individuals separately.
 - (g) Provide accurate information and be designed to promote compliance with Utah laws.

R523-4-8. Standards for Community-based Treatment Programs.

- (1) All programs shall maintain the appropriate license from the Department of Human Services Office of Licensing for the services being provided.
- (2) All programs shall submit Treatment Episode Data (TEDs) admission and discharge data as outlined in the Division's most current Division Directives.
- (3) Programs shall evaluate all participants for criminogenic risk and need, and deliver services that target the specific risk and needs identified.
- (4) Individuals with high risk and individuals with low risk to re-offend shall be treated separately.
- (5) Programs shall coordinate and communicate with

Adult Probation and Parole, county sheriff's offices, or other necessary criminal justice agencies on a regular and consistent basis as agreed.

- (6) Programs shall provide multi-dimensional treatment that targets the validated criminogenic risk factors.
- (7) Treatment participation and length shall be of sufficient dosage/duration to affect stable behavioral change.
- (8) Treatment intensity, duration and modality shall be based on the current ASAM or comparable mental health criteria and medical necessity determined by the ongoing assessment process.
- (9) The Division shall develop performance metrics to evaluate the ability of programs to engage and retain adults in the appropriate intensity and modality of service.
- (10) Treatment programs shall ensure that public funds are the payor of last resort.
 - (a) Treatment programs shall coordinate or refer individuals to the Department of Workforce Services or healthcare navigators for assistance with eligibility for public or private insurance plans.
 - (b) Treatment programs may negotiate and assess usual and customary fees to adults.
- (11) Treatment programs shall:
 - (a) First assess level of motivation for treatment and implement strategies to increase engagement;
 - (b) Assess individuals for mental health, substance use disorder and other criminogenic risks using validated instruments and protocols;
 - (c) Diagnose, treat or ensure treatment for co-occurring conditions;
 - (d) Develop an individualized treatment plan that identifies a comprehensive set of tools and strategies that address the client's identifiable strengths as well as her or his problems and deficits;
 - (e) Provide comprehensive treatment services;
 - (f) As appropriate and with consent, involve families and support persons in the treatment and recovery process;
 - (g) Use developmentally appropriate and informed treatments;
 - (h) Monitor drug use through drug testing and other means;
 - (i) Individuals testing positive for drugs or alcohol shall not be denied entry or removed from treatment from a program solely for positive drug tests.
 - (ii) Programs shall comply with all Division Directives for Drug testing as published in the Annual DSAMH Division Directives.
 - (i) Have qualified staff licensed and capable of assessing individuals for both mental health and substance use disorders;
 - (j) Recognize gender, cultural, linguistic, and other individual differences in their treatment approach;
 - (k) Provide or link to ongoing chronic disease management, recovery support, monitoring and aftercare services;
 - (l) Ensure all individuals with alcohol and/or opioid disorders shall be educated and screened for the potential use of medication-assisted treatment; and
 - (m) Develop strategies to screen for, prevent, and refer to treatment adults with serious chronic conditions such as HIV/AIDS, Hepatitis B and C, and tuberculosis.
 - (n) Complete and submit the National Survey on Substance Abuse Treatment Services (N-SATTS);
- (12) Treatment programs shall work with individuals to identify needed and desired recovery supports.
 - (a) Participation in recovery support shall be voluntary.
 - (b) Whenever possible, individuals shall be encouraged and given a choice of potential recovery support services and a choice of programs.
 - (c) Services such as case management, housing,

employment training, transportation, childcare, healthcare, and peer support may be provided before, during or after the completion of acute treatment services.

R523-4-9. Standards for Jail or Prison Treatment Programs.

(1) Individuals should be screened for criminogenic risk, mental health, substance use disorders and substance withdrawal syndromes.

(2) Individuals with signs and symptoms of withdrawal should receive timely medical care or a transfer to a more appropriate facility that can provide standard detoxification services.

(3) Jail or prison-based treatment service providers shall coordinate care with community-based treatment providers so that individuals may transition to treatment services in the community.

(4) Treatment programs shall:

(a) First assess level of motivation for treatment and implement strategies to increase engagement;

(b) Assess individuals for mental health, substance use disorders and criminogenic risk using scientifically validated instruments and protocols;

(c) Diagnose and treat or ensure treatment for co-occurring conditions;

(d) Provide comprehensive treatment services;

(e) As appropriate and with consent, involve families and support persons in the treatment process;

(f) Use developmentally appropriate and informed treatments;

(g) Monitor drug use through drug testing and other means;

(i) Programs shall comply with all Division Directives for drug testing as published in the annual DSAMH Division Directives.

(h) Have qualified staff licensed and capable of assessing individuals for both mental health and substance use disorders.

(i) Recognize gender, cultural, linguistic, and other individual differences in their treatment approach;

(j) Provide ongoing chronic disease management, recovery support, monitoring and link to needed community supports

(k) All individuals with alcohol and/or opioid disorders shall be educated and screened for the potential use of medication-assisted treatment.

(l) Treatment providers shall develop strategies to screen for, prevent, and refer to treatment adults with serious chronic conditions such as HIV/AIDS, Hepatitis B and C, and tuberculosis.

(m) Work with individuals to identify needed and desired recovery supports.

(i) Recovery supports may include preparation/planning for housing, employment, healthcare, peer support or other services upon release.

(ii) Recovery supports may be provided before, during or after the completion of acute treatment services.

(n) Complete and submit the National Survey on Substance Abuse Treatment Services (N-SATTS);

R523-4-10. Documentation Standards for Community and Jail/Prison Based Treatment Services.

(1) A complete and accurate record of all clinical services shall be kept for each individual served that contains the following information:

(a) Any and all screenings and assessments completed;

(b) Any and all consent forms or required disclosures;

(c) A comprehensive treatment plan;

(d) Progress notes;

(e) Continuing recovery recommendations upon discharge; and

(f) Record reflects cultural and gender specificity in

treatment.

(2) The individual record is maintained in a manner so as to protect confidentiality and comply with 42 CFR Part 2 and the Health Insurance Portability and Accountability Act of 1996 (HIPAA) documentation/privacy standards. The record is organized, clear, complete, current and legible.

(a) Consent forms for any release of information shall be found in the file.

(b) Consent forms shall be complete, and contain a statement that consent is subject to revocation, and shall be signed and dated by the patient.

(c) Each file shall contain a signed and witnessed Acknowledgement of Receipt of Privacy Statement.

(3) The individual record shall contain documentation of the initial assessment/engagement session.

(a) The assessment/engagement session identifies presenting problems, individual goals and <http://useonlyasdirected.org/get-help-now/initial-diagnosis>.

(b) The assessment/engagement session includes a statement of the individual's presenting problem(s) and:

(i) Identification and documentation of acute psychosis, intoxication/withdrawal relevant to the presenting problem.

(ii) Identification and documentation of biomedical conditions and complications relevant to the presenting problem.

(iii) Identification and documentation of emotional, behavioral, cognitive conditions, and/or complications relevant to the individual's current situation and presenting problem.

(iv) Identification, evaluation and documentation of readiness to change relevant to presenting problem.

(v) Identification and documentation of relapse, or continued problem potential relevant to presenting problem.

(vi) Identification and documentation of the individual's recovery environment relative to presenting problem.

(vii) Identification of recovery support services needed relevant to presenting problem.

(viii) An assessment/engagement session summary includes recommendations for level of care and intensity of services needed.

(ix) Documentation of an assignment for the individual to complete for their next session.

(4) Any and all screenings and assessments shall be documented in the individual file.

(a) The assessment information is current and includes the justification for the assessed level of care and array of services, as well as justification if level of care is being substituted.

(b) Assessment dimensions are current and are updated as new information is received, new goals are identified, and as the individual progresses or regresses.

(c) Assessment process is ongoing and changes to assessment information are reflected throughout the record.

(d) Level of care and intensity of services are supported by ongoing assessment information, or difference is clinically justified.

(e) Assessment shall be signed and include the title of a person licensed in the State of Utah to diagnose, assess and treat people with mental health and substance use disorders.

(5) A treatment plan that contains the following:

(a) Specific individualized long-range goals;

(b) Behaviorally measurable short-term objectives that support long-range goals;

(c) Evidence of the individual's participation in development of the plan;

(d) Evidence that the plan is based on the individual's goals and other needs identified in the screening and assessments;

(e) Objectives that are measurable, achievable within a specified time frame and reflect developmentally appropriate activities that support progress towards achievement of

individual goals;

(f) Substance use disorder treatment plans should be based on the six ASAM Patient Placement Dimensions and shall address critical areas identified in each dimension. Mental Health Recovery Plans shall be organized in a similar manner;

(g) Interventions designed to help the patient complete the objectives; and

(h) Signature and title of a person licensed in the State of Utah to diagnose, assess and treat people with mental health and substance use disorders.

(6) The individual file shall include documentation of the individual's status throughout the individual record including:

(a) Changes in types, schedule, duration and frequency of therapeutic interventions to facilitate individual progress as well as changes in individual objectives and goals;

(b) Each contact shall be documented in a timely manner;

(c) Progress notes shall be kept that identify the date, duration and type of intervention;

(d) Progress notes shall document progress or lack of progress on the individual's goals as well as the clinician's assessment of the individual's changes in behaviors, attitudes and beliefs;

(e) Progress notes shall reflect clinician's assessment of the effectiveness of the therapeutic interventions and plans for future interventions;

(f) Notes shall be legible and signed by a qualified staff indicating appropriate credentials;

(g) No-shows, cancellations or gaps in service such as vacation, incarceration or home visits shall be documented;

(h) Individual and group notes shall be specific and document progress towards achievement of the objectives identified in the recovery plan and as each objective is completed, identify a new objective;

(i) Lack of progress toward treatment/recovery plan goals and resulting adjustments to the recovery plan shall also be documented;

(j) Notes shall reflect behavioral changes as well as changes in attitudes and beliefs;

(k) Other group activities such as psychoeducation, life skills, case management, and recreation may be summarized and dated with the date the activity occurred;

(l) Recovery support services are documented to the extent required for clinical continuity and in order to meet financial requirements;

(m) Changes in assessment information, current level of care and treatment plan; and

(n) Upon discharge, recommendations for ongoing services include the extent to which established goals and objectives were achieved, what ongoing services are recommended, and a description of the individual's recovery support plan.

R523-4-11. Certification Procedures for Educational Series and Treatment Providers.

(1) Programs seeking first-time approval or re-approval shall make application to the Division at least 60 days prior to delivering services.

(2) All application forms shall be reviewed by the Division.

(3) The Division shall determine if the application is complete and demonstrates compliance with this rule.

(4) The Division approves the application and determines the program has met all other requirements, the Division shall certify the program for a period of two years.

(5) The Division shall notify in writing all applicants within 30 days of submission of an application, whether the application is:

- (a) Approved,
- (b) Denied, or

(c) Requires additional information.

(6) If an application for re-approval requires additional information, a previously certified program may continue to provide services for 30 days from the date of notification unless notified by the Department of Human Services to cease and desist.

R523-4-12. Corrective Action.

(1) When the Division becomes aware that a provider is in violation of this rule the Division shall:

(a) Identify in writing the specific areas in which the provider is not in compliance; and

(b) Send written notice to the provider within 30 days after becoming aware of the violation.

(2) The provider shall submit a written plan for achieving compliance within 30 days of notification of noncompliance.

R523-4-13. Suspension and Revocation.

(1) The Division may suspend the approval of a provider when a provider fails to:

(a) Respond in writing to areas of noncompliance identified in writing by the Division within the defined period;

(b) Comply with corrective action as agreed upon in its written response to the Division; or

(c) Allow the Division access to information or records necessary to determine the provider's compliance under this rule.

(2) The Division may revoke approval if a provider:

(a) Continues to provide the educational series after suspension;

(b) Fails to comply with corrective action while under a suspension; or

(c) Commits a second violation which constitutes grounds for suspension when a previous violation resulted in a suspension during the last 24 months.

(3) The Division shall notify the Administrative Office of the Courts, the Utah Department of Corrections, the Department of Human Services, Office of Licensing and county local authorities when a certification is suspended or revoked.

R523-4-14. Procedure for Denial, Suspension, or Revocation.

(1) If the Division has grounds for action under this rule and intends to deny, suspend or revoke approval of a provider, the Division shall notify the applicant or provider of the action to be taken.

(2) A notice to suspend or revoke approval shall contain the reasons for the action, to include all statutory or rule violations, and a date when the action shall become effective.

(3) The provider may request a meeting with the Director or their designee within ten calendar days of receipt of notification.

(4) A request for a meeting for this purpose shall be in writing.

(5) Within ten days following the close of the meeting the Division shall inform the provider or applicant in writing of the decision of the Director or Designee of the Division.

R523-4-15. Posting of Certified Providers.

(1) The Division shall maintain and make public a list of all certified educational or prevention series and treatment programs.

(2) The list shall include agency contact information, service location address, target population, information on cost and reimbursement policies, and a brief description of the program.

42 CFR Part 2

R523. Human Services, Substance Abuse and Mental Health.**R523-5. Adult Peer Support Specialist Training and Certification.****R523-5-1. Purpose, Authority and Intent.**

(1) Purpose. This rule prescribes standards for certification of Peer Support Specialist Training programs; the qualifications required of instructors for providing Peer Support Training; and the requirements to become an Adult Peer Support Specialist.

(2) Statutory Authority. These standards are promulgated by the Utah Department of Human Services through the Division of Substance Abuse and Mental Health, hereinafter referred to as "Division", as authorized by Section 62A-15-402.

(3) Intent. The objective of the peer support specialist training is to establish training programs to certify individuals that have completed requisite training to work as substance use disorder and/or mental health peer support specialists.

R523-5-2. Definitions.

(1) "Adult Peer Support Specialist (PSS)" is an individual who has successfully completed an approved Adult Peer Support Specialist Training Program and for ongoing certification has met the requirements outlined in paragraph R523-5-6.

(2) "Approved Curriculum" means a curriculum which has been approved by the Division in accordance with these rules.

(3) "Certification" means that the Division verifies the individual has met the requirements outlined in this rule to be a peer support specialist and has completed the required training.

(4) "Director" means the Director of the Division of Substance Abuse and Mental Health.

(5) "Division" means the Division of Substance Abuse and Mental Health.

(6) "Peer Support Specialist Training Program" is an instructional series operated by an approved agency or organization which satisfies the standards established by the Division and is herein referred to as an "Adult Peer Support Specialist Training Program".

(7) "Program Certificate" is a written authorization issued by the Division to the training entity which indicates that the Program has been found to be in compliance with these Division standards.

(8) "Recovery" is a process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential.

R523-5-3. Certification Requirements for Peer Support Specialist Training Programs.

(1) An application for Program Certification will require that the program provide, among other things:

(a) Qualifications of individuals who will be providing the training.

(b) A curriculum that outlines no less than forty (40) hours of face-to-face instruction covering the curriculum requirements outlined in paragraph R523-5-5 for a PSS.

(c) A plan to ensure that instructors continue to meet reported qualifications and adhere to the approved curriculum.

(d) An agreement to maintain records of the individual's attendance and completion of all program requirements for at least seven years.

(e) An agreement to comply with all applicable local, state and federal laws and regulations.

(2) The Division Director has the authority to grant exceptions to any of the certification requirements.

R523-5-4. Division Oversight of Program.

(1) The Division may enter and survey the physical facility, program operation, review curriculum and interview

staff to determine compliance with this rule or any applicable contract to provide such services.

(2) The PSS Training Program shall also allow representatives from the Division and from the local authorities as authorized by the Division to attend the classes held. Such visits may be announced or unannounced.

(3) The Division will establish an application process to review and approve applicants for the PSS Training Program. This process will:

(a) Develop and publish an application to be a PSS.

(b) Solicit input from stakeholders, Peer Support Specialists and other individuals on the review process.

(c) Establish further criteria for acceptance into the PSS program as needed.

R523-5-5. Curriculum Requirements for Adult Peer Support Specialist Training Programs.

(1) This curriculum shall provide at least forty (40) hours of instruction for original certification and twenty (20) hours for any and all re-certifications. The curriculum shall include the following components as they relate to the PSS's lived experience and recovery in order to assist in the identified client's recovery:

(a) Etiology of mental illness and substance use disorders;

(b) The stages of recovery from mental illness and substance use disorders;

(c) The relapse prevention process;

(d) Combating negative self-talk;

(e) The Role of Peer Support in the Recovery Process and Using Your Recovery Story as a Recovery Tool;

(f) Dynamics of Change;

(g) Strengthening the Peer Specialist's recovery;

(h) Ethics of Peer Support;

(i) Professional relationships, boundaries and limits;

(j) Scope of Peer Support;

(k) Cultural Competence: Self-Awareness - Cultural Identity;

(l) Stigma and Labeling;

(m) Community resources to support individuals in recovery;

(n) Assisting individuals in Accomplishing Recovery Goals;

(o) Coach, Mentor, and Role Model recovery;

(p) Assist in identification of natural, formal and informal supports;

(q) Stress Management Techniques;

(r) Assisting individuals in reaching educational and vocational goals;

(s) Crisis prevention; and

(t) Assist with physical health and wellness.

(2) The curriculum must be strength based and include:

(a) Active listening and communication skills; and

(b) Basic motivational interviewing skills.

(3) The curriculum must include a strong emphasis on ethical behavior, dual relationships, scope of peer support and professional boundaries and should include case studies, role plays and experiential learning.

R523-5-6. Requirements to Become an Adult Peer Support Specialist.

(1) Be an individual who participated in substance use disorder or mental health treatment services who is now in sustained recovery, or

(2) Be an individual in recovery from substance use or mental health disorders through means other than treatment services who is now in sustained recovery.

(3) Be at least 18 years of age.

(4) Complete the application process with the Division.

(5) Pass the qualification exam with score of 70% or

above.

(6) Have attended and successfully completed a Division approved Peer Support Specialist training program and have a valid certificate from that training.

R523-5-7. Requirements to Remain Qualified as an Adult Peer Support Specialist.

(1) Complete at least twenty (20) hours of continuing education every two (2) years including two (2) hours of ethics training, six (6) hours pertaining specifically to Peer Support Services, one (1) hour of suicide prevention trainings and twelve (12) hours of general mental health and/or substance use disorder training.

(2) Each Adult Peer Support Specialist shall maintain adequate documentation as proof of compliance with this Section, such as a certificate of completion, school transcript, course description, or other course materials. The Adult Peer Support Specialist shall retain this proof for a period of three years after the end of the renewal cycle for which the continuing education is due; and

(a) At a minimum, the documentation shall contain the following:

- (i) Date of the course;
- (ii) Name of the course provider;
- (iii) Name of the instructor;
- (iv) Course title;
- (v) Number of hours of continuing education credit; and
- (vi) Course objectives.

62A-15-402

R523. Human Services, Substance Abuse and Mental Health.**R523-6. Child/Family Peer Support Specialist Training and Certification.****R523-6-1. Purpose, Authority and Intent.**

(1) Purpose. This rule prescribes standards for certification of Peer Support Specialist Training programs; the qualifications required of instructors for providing Peer Support Training; and the requirements to become a Child/Family Peer Support Specialist.

(2) Statutory Authority. These standards are promulgated by the Utah Department of Human Services through the Division of Substance Abuse and Mental Health (hereinafter referred to as "Division") as authorized by Section 62A-15-402.

(3) Intent. The objective of the peer support specialist training is to establish training programs to certify individuals that have completed requisite training to work as substance use disorder and/or mental health peer support specialists.

R523-6-2. Definitions.

(1) "Approved Curriculum" means a curriculum which has been approved by the Division in accordance with these rules.

(2) "Certification" means that the Division verifies the individual has met the requirements outlined in this rule to be a peer support specialist and has completed the required training.

(3) Child/Family Peer Support Specialist is a "Family Resource Facilitator" (FRF) who is an individual who has successfully completed an approved Family Resource Facilitator Training Program and for ongoing certification has met the requirements outlined in paragraph R523-6-6.

(4) "Director" means the Director of the Division of Substance Abuse and Mental Health.

(5) "Division" means the Division of Substance Abuse and Mental Health.

(6) "Peer Support Specialist Training Program" is an instructional series operated by an approved agency or organization which satisfies the standards established by the Division and is herein referred to as a "Family Resource Facilitator Training Program".

(7) "Program Certificate" is a written authorization issued by the Division to the training entity which indicates that the Program has been found to be in compliance with these Division standards.

R523-6-3. Certification Requirements for PSS Training Programs.

(1) An application for Program Certification will require that the program provide, among other things:

(a) Qualifications of individuals who will be providing the training.

(b) A curriculum that outlines no less than forty (40) hours of face-to-face instruction covering the curriculum requirements outlined in paragraph R523-6-5 for Family Resource Facilitator Training.

(c) A plan to ensure that instructors continue to meet reported qualifications and adhere to the approved curriculum.

(d) An agreement to maintain records of the individual's attendance and completion of all program requirements for at least seven years.

(e) An agreement to comply with all applicable local, state and federal laws and regulations.

(2) The Division Director has the authority to grant exceptions to any of the certification requirements.

R523-6-4. Division Oversight of Program.

(1) The Division may enter and survey the physical facility, program operation, review curriculum and interview staff to determine compliance with this rule or any applicable contract to provide such services.

(2) The Family Resource Facilitator Training Program also agrees to allow representatives from the Division and from the local authorities as authorized by the Division to attend the classes held. Such visits may be announced or unannounced.

(3) The Division will establish an application process to review and approve applicants for the Family Resource Facilitator Training Program. This process will:

(a) Develop and publish an application to be a Family Resource Facilitator Training Program.

(b) Solicit input from stakeholders, Family Resource Facilitators and other individuals on the review process.

(c) Establish further criteria for acceptance into the program as needed.

R523-6-5. Curriculum Requirements for Family Resource Facilitator Training Programs.

(1) This curriculum shall provide at least forty (40) hours of instruction for original certification and twenty (20) hours for any and all re-certifications. The curriculum shall include the following components as they relate to the FRF's lived experience as a parent or caregiver of a youth with complex mental health and/or substance use needs in order to promote family and youth resiliency and assist in the identified client's recovery:

(a) Systems of Care
(i) Providing family driven, youth guided, culturally competent and community based services

(A) History of the family involvement movement
(i) Wraparound and Wraparound process including:
(A) Strength, Needs and Cultural Discovery
(B) Assist in identification of natural, formal and informal supports

(C) Prioritize needs/goals and develop a plan of care
(D) Crisis Prevention
(E) Implement action steps and celebrate successes
(F) Transition Planning

(b) Family Resource Facilitator (FRF) model for strengthening families and building communities.

(i) FRF Roles
(A) Resource Coordination
(B) Family Education and Support
(C) Family Advocacy
(D) Wraparound to Fidelity
(ii) Training and supervision expectations
(c) Ethics of Peer Support
(d) Professional relationships, boundaries and limits
(e) Multi-agency coordination
(f) Family advocacy (individual and system change)
(g) Stigma and Labeling
(h) Assisting Individuals in Accomplishing Recovery

Goals
(i) Coach, Mentor, and Role Model recovery
(j) Stress Management Techniques
(k) Assist with reaching age appropriate educational and vocational goals; and

(l) Assist with physical health and wellness
(2) The curriculum must be strength based and include:
(a) Active listening and communication skills
(b) Basic motivational interviewing skills.

(3) The curriculum must include a strong emphasis on ethical behavior, dual relationships, scope of peer support and professional boundaries and should include case studies, role plays and experiential learning.

R523-6-6. Requirements to Become a Family Resource Facilitator.

(1) Be a parent of a child who has received services for a mental, emotional, behavioral or substance use disorder or an adult who has an on-going and personal relationship with a

family member who is a child who is receiving or has received services for a mental, emotional, behavioral or substance use disorder.

(2) Be at least 18 years of age.

(3) Have attended and successfully completed a Division approved Child, Youth and Family Peer Support Specialist training program and have a valid certificate from that training.

(4) Pass the qualification exam with a score of 80% or above.

R523-6-7. Requirements to Remain Qualified as a Family Resource Facilitator.

(1) FRF's are encouraged to advance toward additional levels of demonstrated competency and specialization achieved through continued training, mentoring and evaluation during an approved practicum.

(2) Complete at least twenty (20) hours of approved continuing education per year including two (2) hours of ethics training and six (6) hours pertaining specifically to Family Resource Facilitation.

(3) Provide proof to the Division of completing the required training on an annual basis.

62A-15-402

R523. Human Services, Substance Abuse and Mental Health.**R523-7. Certification of Designated Examiners and Case Managers.****R523-7-1. Authority.**

This rule is promulgated under authority of Section 62A-15-105.

R523-7-2. Purpose.

The purpose of this rule is to provide guidance on the process for designated examiners to attain certification from the Division of Substance Abuse and Mental Health (Division).

R523-7-3. Designated Examiners Certification.

(1) A "Designated Examiner" is a licensed physician or other licensed mental health professional designated by the Division as specially qualified by training or experience in the diagnosis of mental or related illness, as defined in Subsection 62A-15-602(3).

(a) The Division shall certify that a designated examiner is qualified by training and experience in the diagnosis of mental or related illness. Certification will require at least five years continual experience in the treatment of mental or related illness in addition to successful completion of training provided by the Division.

(b) Application for certification will be achieved by the applicant making a written request to the Division for their consideration. Upon receipt of a written application, the Director will initiate a review and examination of the applicant's qualifications.

(c) The applicant must meet the following minimum standards in order to be certified.

(i) The applicant must be a licensed mental health professional.

(ii) The applicant must be a resident of the State of Utah.

(iii) The applicant must demonstrate a complete and thorough understanding of abnormal psychology and abnormal behavior, to be determined by training, experience and written examination.

(iv) The applicant must demonstrate a fundamental and working knowledge of the mental health law. In particular, the applicant must demonstrate a thorough understanding of the conditions which must be met to warrant involuntary commitment, to be determined by training, experience and written examination.

(v) The applicant must be able to discriminate between abnormal behavior due to mental illness which poses a substantial likelihood of serious harm to self or others from those forms of abnormal behavior which do not represent such a threat. Such knowledge will be determined by experience, training and written examination.

(vi) The applicant must be able to demonstrate a general knowledge of the court process and the conduct of commitment hearings. The applicant must demonstrate an ability to provide the court with a thorough and complete oral and written evaluation that addresses the standards and questions set forth in the law, to be determined by experience, training and written and oral examination.

(vii) The applicant shall attend the training for the certification of designated examiners that is provided by the Division and pass the exam at the completion of the training with a minimum of 70% correct.

(d) The Division Director or designee will determine if experience and qualifications are satisfactory to meet the required standards. The Division Director or designee will also determine if there are any training requirements that may be waived due to prior experience and training to grant an exception of any of the above requirements.

(e) Upon satisfactory completion of the required

experience and training, the Division Director or designee will certify the qualifications of the applicant, make record of such certification and issue a certificate to the applicant reflecting his status as a designated examiner and authorize the use of privileges and responsibilities as prescribed by law.

R523-7-4. Case Management Certification.

(1) Definitions.

(a) Case Management Certification means the process by which an individual obtains certification from the Division that allows them to provide case management services for individuals with mental illness and / or substance use disorders.

(i) Case Management services can be provided by:

(A) A qualified provider, as defined in the Utah Medicaid Provider Manual, found at <https://medicaid.utah.gov/Documents/manuals/pdfs/Medicaid%20Provider%20Manuals/Targeted%20Case%20Management/Serious%20Mental%20Illness/Archive/2014/SeriousMentalIllness1-14.pdf>.

(B) An individual under the supervision of a qualified provider employed or contracted by the local mental health or substance abuse authority. The qualified provider shall be responsible for coordinating, advocating, linking and monitoring the Case Manager.

(b) Case Manager tasks include activities that assist individuals with:

- (i) Serious mental illness;
- (ii) Serious emotional disorder; and
- (iii) Individuals with substance use disorders.

(c) Case Managers tasks include:

(i) Access medical and related therapeutic services; and

(ii) To promote the individual's general health and their ability to function independently and successfully in the community.

(2) A certified case manager must meet the following minimum standards:

- (a) Be at least 18 years of age;
- (b) Have at least a high school degree or a GED;
- (c) Have at least have at least two years experience in Human Services or related field (may include relevant education/volunteer activities).

(d) Be employed or subcontracted by a local mental health authority or a local substance abuse authority;

(e) Pass a Division exam which tests basic knowledge, ethics, attitudes and case management skills with a score of 70 percent or above; and

(f) Have completed an approved case management practicum.

(3) An individual applying to become a certified case manager may request a waiver of the minimum standards in Subsection R523-7-4(2) based on their prior experience and training. The individual shall submit the request in writing to the Division. The Division shall review the documentation and issue a written decision regarding the request for waiver.

(4) Applications and instructions to apply for certification to become a case manager can be obtained from the Division. Only complete applications supported by all necessary documents shall be considered.

(a) Individuals will be notified in writing of disposition and determination to grant or deny the application within 30 days of completion of case management requirements. The Division shall issue a certificate for three years.

(b) If the application is denied the individual may file a written appeal within 30 days to the Division Director or designee.

(5) Each certified case manager is required to complete and document eight hours of continuing education (CEU) credits each calendar year related to mental health, substance use disorder or related topics.

(a) A certified case manager shall retain CEU documentation. Documentation should not be sent to the Division unless requested for an audit.

(b) Documents to verify CEU credits include:

(i) A certificate of completion documenting continuing education validation furnished by the presenter:

(ii) A letter of certificate from the sponsoring agency verifying the name of the program, presenter, and number of hours attended and participants; or

(iii) An official grade transcript verifying completion of an undergraduate or graduate course(s) of study.

(6) Certified case managers shall abide by the Provider Code of Conduct pursuant to Section R495-876, and as also found in the Department of Human Services Provider Code of Conduct Policy.

(a) Each employer shall notify the Division within 30 days, if a certified case manager engages in unprofessional or unlawful conduct.

(b) The Division shall revoke, refuse to certify or renew a certification to an individual who is substantiated to have engaged in unprofessional or unlawful conduct.

(c) An individual who has been served a Notice of Agency Action that the certification has been revoked or will not be renewed may request a Request for Review to the Division Director or designee within 30 days of receipt of notice.

(d) The Division Director or designee will review the findings of the Notice of Agency Action and shall determine to uphold, amend or revise the action of denial or revocation of the certification.

(7) If a certified case manager fails to complete the requirements for CEUs, their certificate will be revoked or allowed to expire and will not be renewed.

(8) If an individual fails the Division examination they must wait 30 days before taking the examination again. The individual may only attempt to pass the examination two times within a twelve-month period.

(9) The case manager's certification shall be posted and available upon request.

(10) The LMHA/LSAA shall notify the Division in writing when a Case Manager is no longer employed or subcontracted. The Case Manager certification shall be void upon separation of employment or termination of contract with the LMHA/LSAA.

**62A-15-105
62A-15-602(3)**

R523. Human Services, Substance Abuse and Mental Health.**R523-8. Medication, Psychosurgery and Electroshock Procedures for Children, Consumer Rights, Due Process, Family Involvement.****R523-8-1. Authority.**

This rule is promulgated under authority of Section 62A-15-105.

R523-8-2. Purpose.

- (1) The purpose of this rule is to provide:
- Guidance on medication procedures for children.
 - Guidance on Psychosurgery and Electroshock Therapy Procedures for Children.
 - Guidance on Family Involvement.
 - Guidance on Consumer Rights.

R523-8-3. Definitions.

- (1) For the purposes of this administrative rule, "guardian" means a parent, and/or legal guardian, and/or legal custodian.
- (2) Neutral and Detached Fact Finder is as defined in Subsection 62A-15-703(3).
- (3) The "Division" is the Division of Substance Abuse and Mental Health (Division)
- (4) "Antipsychotic medication" means any antipsychotic agent usually and customarily prescribed and administered in the chemical treatment of psychosis.
- (5) A "legal custodian" is one who has been appointed by the Juvenile Court and may include the Division of Child and Family Services, the Division of Juvenile Justice Services, and the Division of Substance Abuse and Mental Health.
- (6) A "legal guardian" is one who is appointed by a testamentary appointment or by a court of law.

R523-8-4. Medication Procedures for Children, Legal Authority.

- (1) The Division hereby establishes due process procedures for children prior to the administration of antipsychotic medication.
- This policy applies to persons under the age of 18 who are committed to the physical custody of a local mental health authority and/or committed to the legal custody of the Division.
 - A person under the age of 18 may be treated with antipsychotic medication when, as provided in this section, any one or more of the following exist:
 - The child and guardian give consent.
 - The child or the guardian does not give consent, but a Designated Examiner determines that antipsychotic medication is an appropriate treatment through a due process proceeding as described in Section 62A-15-704.
 - The medication is necessary in order to control the child's dangerous behavior and it is administered for an exigent circumstance according to Subsection R523-8-4(1)(f) below.
 - A local mental health authority has the obligation to provide a child and guardian with the following information when recommending that the child be treated with antipsychotic medications:
 - The nature of the child's mental illness.
 - The recommended medication treatment, its purpose, the method of administration, and dosage recommendations.
 - The desired beneficial effects on the child's mental illness as a result of the recommended treatment.
 - The possible or probable mental health consequences to the child if recommended treatment is not administered.
 - The possible side effects, if any, of the recommended treatment.
 - The ability of the staff to recognize any side effects which may actually occur and the possibility of ameliorating or abating those side effects.

(vii) The possible, if any, alternative treatments available and whether those treatments are advisable.

(viii) The right to give or withhold consent for the proposed medication treatment.

(ix) When informing a child and their guardian that they have the right to withhold consent the staff must inform them that the mental health authority has the right to initiate a medication hearing and have a designated examiner determine whether the proposed treatment is necessary.

(d) The child and guardian shall then be afforded an opportunity to sign a consent form stating that they have received the information under Subsection R523-8-4(1)(c), and that they consent to the proposed medication treatment.

(e) If either the child or guardian refuses to give consent, the mental health authority may initiate a medication hearing in accordance with Subsection R523-8-4(1)(g).

(f) Antipsychotic medication may be administered under the following exigent circumstances:

(i) A qualified physician has determined and certifies that they believe the child is likely to cause injury to themselves or to others if not immediately treated. That certification shall be recorded in the Physician's Orders of the child's medical record and shall contain at least the following information:

(A) A statement by the physician that they believe the child is likely to cause injury to themselves or others if not immediately restrained and provided medication treatment.

(B) The basis for that belief, including a statement of the child's behaviors.

(C) The medication administered.

(D) The date and time the medication was begun.

(g) Involuntary treatment in exigent circumstances may be continued for 48 hours, excluding Saturdays, Sundays, and legal holidays. At the expiration of that time period, the child shall not be involuntarily treated unless a Notice to Convene a Medication Hearing has been prepared and provided to the child pursuant to the provision of Subsection R523-8-4(1)(h).

(h) If the child or guardian refuse to give consent the treating staff may request a medication hearing be held to determine if medication treatment is appropriate.

(i) The treating physician shall document in the child's medical record, the child's diagnosis, the recommended treatment, the possible side effects of such treatment, the desired benefit of such treatment, and the prognosis.

(ii) The treating staff shall complete a Request to Convene a Medication Hearing form and submit it to the Director/Designee of the local mental health authority who will contact a Neutral and Detached Fact Finder and set a date and time for the hearing. The child and guardian shall be provided notice of the medication hearing and the hearing shall be set as soon as reasonably possible after a request has been made, but no sooner than 24 hours of notification being provided to the child and guardian.

(iii) Prior to the hearing, the Neutral and Detached Fact Finder is provided documentation regarding the child's mental condition, including the child's medical records, physician's orders, diagnosis, nursing notes, and any other pertinent information.

(i) Medication hearings shall be conducted by a Neutral and Detached Fact Finder, shall be heard where the child is currently being treated, and shall be conducted in an informal, non-adversarial manner as to not have a harmful effect upon the child.

(i) The child has the right to attend the hearing, have an adult informant (guardian /foster parent, etc.) present, and to ask pertinent questions. Other persons may attend the hearing if appropriate.

(ii) The Neutral and Detached Fact Finder shall begin each medication hearing by explaining the purpose and procedure of the hearing to the child, guardian, and any other persons

present.

(iii) The Neutral and Detached Fact Finder will review the child's current condition and recommended course of treatment.

(iv) The child, guardian, and others present shall then be afforded an opportunity to comment on the issue of medication treatment.

(v) Following the review of the case and hearing of comments, the Neutral and Detached Fact Finder shall render a decision.

(vi) If needed, the Neutral and Detached Fact Finder may ask everyone to leave the room to allow them time to deliberate.

(j) The Neutral and Detached Fact Finder may order medication treatment of a child if, after consideration of the record and deliberation, the Neutral and Detached Fact Finder finds that the following conditions exist:

(i) The child has a mental illness; and

(ii) The child is gravely disabled and in need of medication treatment for the reason that they suffer from a mental illness such that they (a) are in danger of serious physical harm resulting from a failure to provide for their essential human needs of health or safety, or (b) manifest severe deterioration in routine functioning evidenced by repeated and escalating loss of cognitive or volitional control over their actions and is not receiving such care as is essential for their health safety; and/or

(iii) Without medication treatment, the child poses a likelihood of serious harm to themselves, others, or their property. Likelihood of serious harm means either (a) substantial risk that physical harm will be inflicted by an individual upon their own person, as evidenced by threats or attempts to commit suicide or inflict physical harm on one's own self, or (b) a substantial risk that physical harm will be inflicted by an individual upon another, as evidenced by behavior which has caused such harm or which placed another person or persons in reasonable fear of sustaining such harm, or (c) a substantial risk that physical harm will be inflicted by an individual upon the property of others, as evidenced by behavior which has caused substantial loss or damage to the property of others; and

(iv) The proposed medication treatment is in the medical best interest of the patient, taking into account the possible side effects as well as the potential benefits of the treatment; and

(v) The proposed medication treatment is in accordance with prevailing standards of accepted medical practice.

(k) The basis for the decision is supported by adequate documentation. The Neutral and Detached Fact Finder shall complete and sign a Medication Hearing form at the end of the hearing. A copy shall be provided to the child and/or guardian.

(l) A child or guardian may appeal the decision of a Neutral and Detached Fact Finder according to the following process, by submitting a written appeal to the Director/Designee of the Local Mental Health Authority providing treatment to the child, within 24 hours (excluding Saturdays, Sundays, and legal holidays) of the initial hearing.

(i) Upon receipt of the appeal, a panel consisting of two physicians and a non-physician licensed professional (RN, LCSW, PhD, etc.) shall be assigned to hear the appeal.

(ii) The panel shall review the available documentation and make a decision within 48 hours (excluding Saturdays, Sundays, and legal holidays) of the date of the appeal.

(iii) A written decision from the panel shall be provided to the child, the child's guardian, the local mental health authority providing treatment to the child, and any other appropriate party.

(m) In the event that a significant medication change is proposed, the child and/or guardian shall be provided an opportunity to give consent in accordance to Subsection R523-8-4(1)(c) of this section. If the child and guardian refuse to give consent, a medication hearing may be initiated in accordance with Subsection R523-8-4(1)(h) of this section.

(n) Medication treatment ordered pursuant to Subsection

R523-8-4(1)(h) of this section may continue after the initial hearing according to the following process:

(i) A Neutral and Detached Fact Finder shall review the case within 180 days of the initial hearing.

(ii) The Neutral and Detached Fact Finder shall review the medical record before rendering a decision to continue medication treatment.

(iii) The Neutral and Detached Fact Finder may order continued medication treatment if they find the following conditions are met:

(A) The child is still mentally ill; and

(B) Absent continued medication treatment, the child will suffer severe and abnormal mental and emotional distress as indicated by recent past history, and will experience deterioration in their ability to function in the least restrictive environment, thereby making them a substantial danger to themselves or others, and

(C) The medication treatment is in the medical best interest of the patient, taking into account the possible side effects as well as the potential benefits of the treatment; and

(D) The medication treatment is in accordance with prevailing standards of accepted medical practice.

(iv) If the neutral and Detached Fact Finder approves continued medication treatment, they shall complete a Review of Continued Medication form, which shall be placed in the child's medical record. A copy shall be provided to the child and/or guardian.

(v) At the end of 12 months, the case shall again be reviewed as outlined in this Subsection R523-8-4(1)(n), and shall be reviewed every 6 months while the course of treatment is being administered.

R523-8-5. Psychosurgery and Electroshock Therapy Procedures for Children, Legal Authority.

(1) By this rule, the Division establishes the following due process procedure for children prior to their being administered psychosurgery or electroshock therapy.

(a) This policy applies to persons under the age of 18 who are committed to the physical custody of a local mental health authority or committed to the legal custody of the Division. The following terms are herein defined:

(b) "ECT" means electroconvulsive therapy.

(c) "Psychosurgery" means a neurosurgical intervention to modify the brain to reduce the symptoms of a severely ill psychiatric patient.

(d) A local mental health authority has the obligation to provide a child and guardian with the following information when recommending that the child be treated with ECT or Psychosurgery:

(i) The nature of the child's mental illness;

(ii) The recommended ECT/Psychosurgery treatment, its purpose, the method of administration, and recommended length of time for treatment;

(iii) The desired beneficial effects on the child's mental illness as a result of the recommended treatment;

(iv) The possible or probable mental health consequences to the child if recommended treatment is not administered;

(v) The possible side effects, if any, of the recommended treatment;

(vi) The ability of the staff to recognize any side effects, should any actually occur, and the possibility of ameliorating or abating those side effects;

(vii) The possible, if any, alternative treatments available and whether those treatments are advisable;

(viii) The right to give or withhold consent for the proposed ECT/psychosurgery; and

(ix) When informing a child and their guardian they have the right to withhold consent, the local mental health authority shall inform them that regardless of whether they give or

withhold consent, a due process procedure will be conducted before two Neutral and Detached Fact Finders to determine the appropriateness of such treatment.

(e) The child and guardian shall then be afforded an opportunity to sign a consent form stating that they have received the information listed in Subsection R523-8-5(1)(d) of this section, and that they consent or do not consent to the proposed treatment.

(f) If the guardian refuses to consent to ECT/psychosurgery, the local mental health authority shall consider a treatment team dispositional review to determine whether the child is appropriate for treatment through their services.

(g) Regardless of whether the child or guardian agrees or disagrees with the proposed ECT/psychosurgery, a due process procedure shall be conducted before the treatment can be administered.

(h) A physician shall request ECT or psychosurgery for a child by completing a Request to Treat With ECT or Psychosurgery form and submitting to the Director/Designee of the Local Mental Health Authority providing treatment.

(i) Upon receipt of the request, the Director/Designee shall contact two Neutral and Detached Fact Finders, one of which must be a physician, and set a date and time for an ECT/Psychosurgery Hearing.

(j) The child and guardian shall be provided notice of the hearing.

(k) Prior to the hearing, the two designated examiners shall be provided documentation regarding the child's mental condition, including the child's medical records, physician's orders, diagnosis, nursing notes, and any other pertinent information. The attending physician shall document their proposed course of treatment and reason(s) justifying the proposal in the medical record.

(l) ECT/psychosurgery hearings shall be conducted by two Designated Examiners, one of whom is a physician. Hearings shall be held where the child is currently being treated, and shall be conducted in an informal, non-adversarial manner as to not have a harmful effect upon the child.

(i) The child has the right to attend the hearing, have an adult informant (guardian/foster parent, etc.) present, and to ask pertinent questions.

(ii) If the child or others become disruptive during the hearing, the two Neutral and Detached Fact Finders may request that those persons be removed. The hearing shall continue in that person's absence.

(iii) The hearing shall begin with the child, guardian, and any others being informed of the purpose and procedure of the hearing.

(iv) The record shall be reviewed by the Neutral and Detached Fact Finders and the proposed treatment shall be discussed.

(v) The child, guardian, and others present shall be afforded an opportunity to comment on the issue of ECT or psychosurgery.

(vi) Following the review of the case and the hearing of comments, the two Neutral and Detached Fact Finders shall render a decision.

(vii) If needed the two Neutral and Detached Fact Finders may ask everyone to leave the room to allow them time to deliberate.

(m) The Designated Examiners may order ECT or psychosurgery if, after consideration of the record and deliberation, they both find that the following conditions exist:

(i) The child has a mental illness as defined in the current edition of the Diagnostic and Statistical Manual of the American Psychiatric Association (DSM); and

(ii) The child is gravely disabled and in need of ECT or Psychosurgery for the reason that he/she suffers from a mental

illness such that they (a) are in danger of serious physical harm resulting from a failure to provide for his essential human needs of health or safety, or (b) manifests severe deterioration in routine functioning evidenced by repeated and escalating loss of cognitive or volitional control over their actions and is not receiving such care as is essential for their health safety; and/or

(iii) Without ECT or psychosurgery, the child poses a likelihood of serious harm to self, others, or property. Likelihood of serious harm means either:

(A) a substantial risk that physical harm will be inflicted by an individual upon their own person, as evidenced by threats or attempts to commit suicide or inflict physical harm on one's own self, or

(B) a substantial risk that physical harm will be inflicted by an individual upon another, as evidenced by behavior which has caused such harm or which has placed another person or persons in reasonable fear of sustaining such harm, or

(C) a substantial risk that physical harm will be inflicted by an individual upon the property of others, as evidenced by behavior which has caused substantial loss or damage to the property of others; and

(iv) The proposed treatment is an appropriate and accepted method of treatment for the patient's mental condition; and

(v) The proposed medication treatment is in accordance with prevailing standards of accepted medical practice.

(n) The basis for the decision shall be supported by adequate documentation. The Neutral and Detached Fact Finders shall complete and sign an ECT or Psychosurgery form at the end of the hearing. A copy of the decision shall be provided to the child and/or guardian.

(o) The child and/or guardian may request a second opinion of a decision to treat with ECT or psychosurgery by filing a Request for a Second Opinion form with the Director/designee of the Division within 24 hours (excluding Saturdays, Sundays, and legal holidays) of the initial hearing.

(p) ECT or psychosurgery may be commenced within 48 hours of the decision by the Neutral and Detached Fact Finders, if no request for a second opinion is made. If a request is made, treatment may be commenced as soon as the Director/designee physician renders their affirmative decision.

(q) Upon receipt of a Request, the Director/designee will review the record, consult with whomever he/she believes is necessary, and render a decision within 48 hours (excluding Saturdays, Sundays, and legal holidays) of receipt of the Request. The Director/designee shall sign a Second Opinion for Decision to Treat with ECT/Psychosurgery form which is placed in the child's record. A copy shall be provided to the child and the guardian prior to the commencement of treatment.

(r) If a child has been receiving ECT treatment and requires further treatment than that outlined in the original ECT plan, the procedures set forth in R523-8-5(1)(d) through (q) shall be followed before initiating further treatment.

R523-8-6. Family Involvement.

(1) Each mental health authority shall annually prepare and submit to the Division a plan for mental health funding and service delivery. Included in the plan shall be a method to educate families concerning mental illness and substance use disorders to promote family involvement when appropriate, and with patient consent, in the services of a family member.

(2) The Division will monitor for compliance as part of the annual quality of care site visits.

R523-8-7. Consumers Rights.

(1) Each LMHA and LSAA shall have a written statement reflecting consumers rights. General areas for consideration should be:

(a) Consumer involvement in treatment planning.

(b) Consumer involvement in selection of their primary

therapist.

- (c) Consumer access to their individual treatment records.
- (d) Informed consent regarding medication
- (e) Grievance procedures

(2) This statement should also indicate the LMHA/LSAA's commitment to always treat the consumers with dignity and individuality in a positive, supportive and empowering manner. This document is to be shared with the consumer at the time of intake and a signed copy made part of their individual file. The Division shall periodically review this process to assure appropriate content within the rights statement and proper application of the intent of this policy.

R523-8-8. Declaration for Mental Health Treatment.

(1) The Division will make available information concerning the declaration for mental health treatment. Included will be information concerning available assistance in completing the document.

(2) Each LMHA shall have information concerning declarations for mental health treatment. Information will be distributed with consumer rights information at the time of intake.

(3) Utah State Hospital will provide information concerning the declaration for mental health treatment at the time of admittance to the hospital.

(4) Consumers who choose to complete a declaration for mental health treatment may deliver a copy to their mental health therapist, to be included as part of their medical record.

R523. Human Services, Substance Abuse and Mental Health.**R523-9. Evidence-Based Prevention Registry.****R523-9-1. Purpose and Statutory Authority.**

(1) Purpose. This rule defines evidence-based prevention and evidence-informed prevention and prescribes standards for listing a prevention program or intervention on a statewide registry of evidence-based prevention programs.

(2) Statutory Authority. These definitions and standards are promulgated by the Utah Department of Human Services through the Division of Substance Abuse and Mental Health (DSAMH) as authorized by Subsection 32B-2-402(1)(f).

(3) Intent. The objective of this rule is to decrease the harmful effects of substance use through implementation of evidence-based and evidence-informed prevention.

R523-9-2. Definitions.

(1) Evidence-based prevention includes programs, activities and strategies (hereinafter referred to as "interventions") that:

(a) Are included in private or federal registries that identify evidence-based interventions proven to result in sustained positive benefits to individuals or communities.

(b) Have been reported in peer-reviewed journals and with demonstrated positive effects on the primary targeted outcome; or

(c) Have documented effectiveness supported by other sources of information and the consensus judgment of informed experts, and meet the following criteria:

(i) The intervention is based on a theory of change that is documented in a clear logic or conceptual model; and

(ii) The intervention is similar in content and structure to interventions that appear in registries and/or the peer-reviewed literature; and

(iii) The intervention is supported by documentation that it has been effectively implemented in the past, and multiple times, in a manner attentive to scientific standards of evidence and with results that show a consistent pattern of credible and positive effects; and

(iv) The intervention is reviewed and deemed appropriate by the Division of Substance Abuse and Mental Health.

(2) Evidence-informed prevention includes programs, activities and strategies (hereinafter referred to as "interventions"):

(a) With documented effectiveness supported by other sources of information and the consensus judgment of informed experts; and

(b) Have been reviewed by the DSAMH and determined to meet the criteria for listing on Utah's Statewide Registry of Evidence-based Programs.

R523-9-3. Requirements For Listing On the Statewide Registry of Evidence-Based Programs.

(1) The DSAMH shall develop and publish a statewide registry of evidence-based prevention interventions. This registry should be made available to the public in print and electronic formats.

(2) The DSAMH shall develop and make available registry application forms that include guidance on the documentation needed for review by DSAMH to the public in print and electronic formats.

(3) Only programs/interventions determined to be evidence-based in accordance with the definition in this rule shall be listed on the registry upon completion of an application and required forms.

(4) The registry shall at a minimum include contact information for key staff, a short program description, identification of the target population, and identify the long-term goals.

(5) Programs/interventions shall annually submit an application with a DSAMH approved logic model for continued listing on the registry.

R523-9-4. DSAMH Review Process.

(1) The DSAMH shall create an Evidence-based Prevention workgroup comprised of informed prevention experts to review programs that includes:

(a) At least one Doctorate level social scientist with at least three years experience evaluating prevention interventions similar to those under review;

(b) At least one urban prevention practitioner;

(c) One rural prevention practitioner;

(d) One representative from the Utah Substance Abuse Advisory Council;

(e) A representative from public health;

(f) DSAMH prevention staff; and

(g) Other members as needed.

(2) The Evidence-based Prevention Workgroup shall review all submissions to DSAMH and make recommendations to the DSAMH Division Director regarding whether the submission should be listed on the Statewide Registry of Evidence-based Programs.

(3) Programs for which the Evidence-based Workgroup determines do not meet the criteria for inclusion on the Statewide Registry of Evidence-Based Programs shall receive a written explanation of the decision and recommendations for the intervention that would improve the likelihood of meeting the requirements for listing on the registry.

R523. Human Services, Substance Abuse and Mental Health.**R523-10. Standards for Methadone Addiction Treatment Providers.****R523-10-1. Statutory Authority.**

The Division of Substance Abuse and Mental Health under the authority granted to it by Section 62A-15-105, establishes the following standards for providers of methadone and other opioid treatment medication services.

R523-10-2. Regulatory Compliance for Methadone Providers.

(1) All Substance Abuse providers, contractors or licensed persons who dispense methadone or other opioid treatment medications shall:

(a) Comply with all Federal regulations, including 42 CFR Part 8;

(b) Comply with all State, and Local requirements regulating licensing for the purchasing, possession, distribution, and dispensing of methadone or other opioid treatment medications;

(c) Comply with all requirements of licensed substance abuse treatment programs; and

(d) Comply with the requirements of the Utah Department of Human Services "Provider Code of Conduct".

R523-10-3. Division Duties in Monitoring Methadone Treatment.

(1) The Division of Substance Abuse and Mental Health, in consultation with, and receiving input from the licensed Opioid Treatment Providers (OTPs) in the state, shall:

(a) Conduct regular meetings of the licensed OTPs in the state;

(b) Work with licensed OTPs and other agencies as necessary to preclude dual enrollments of clients;

(c) Disseminate current research and information pertaining to opioid treatment;

(d) Review and act on Exemption Requests to Federal Take Home regulations in accordance with 42 CFR Part 8; and

(e) Develop and promulgate a protocol for take home exceptions for long distance clients in conjunction with the Center for Substance Abuse Treatment's Division of Pharmacologic Therapies and the licensed OTPs with the state.

R523. Human Services, Substance Abuse and Mental Health.**R523-11. Utah Standards for Approval of Alcohol and Drug Educational Providers and Instructors for Court-Referred DUI Offenders.****R523-11-1. Purpose and Statutory Authority.**

(1) Purpose. This rule prescribes standards for approval of Providers and certification of Instructors for providing alcohol and drug education to court-referred offenders convicted of a Driving Under the Influence (DUI) violation of Sections 41-6a-502, 41-6a-510, 41-6a-528, and 73-18-12.

(2) Statutory Authority. This rule is promulgated by the Utah Department of Human Services through the Division of Substance Abuse and Mental Health (hereinafter referred to as "Division") as authorized by Sections 41-6a-502, 62A-15-103, 62A-15-105, 17-43-201, 62A-15-501 through 503 and 76-5-207.

(3) Intent. The objective of the DUI Educational Program is to: (a) eliminate alcohol and other drug-related traffic offenses by helping the participant examine the behavior that led to the arrest, (b) assist the participant in implementing behavior changes to cope with problems associated with alcohol and other drug use, and (c) impress upon the participant the severity of the DUI offense.

R523-11-2. Definitions.

(1) "DUI Educational Program" herein referred to as "Program" is an instructional series offered by a licensed substance abuse treatment Provider agency which satisfies the standards established by the Division.

(2) "Provider" is a licensed substance abuse treatment agency that has been approved to offer DUI Education.

(3) "DUI" is driving or being in actual physical control of a vehicle while under the influence of alcohol or any drug or the combined influence of alcohol and any drug to a degree, which renders the person incapable of safely driving a vehicle. In these standards, "DUI" shall refer to individuals convicted of violating Sections 41-6a-510, 41-6a-502, 41-6a-528, and 73-18-12.

(4) "Certificate" is a written authorization issued by the Division to indicate that the Provider agency has been found to be in compliance with these Division standards and may offer DUI Education.

(5) "Screening" is a process using the SASSI (Substance Abuse Subtle Screening Inventory) or other Division approved screening tool in order to identify the need for additional assessment.

(6) "Instructor" is a person employed by a Provider who has been certified by the Division to instruct the state approved education course for a court-referred participant convicted of DUI.

(7) "Participant" is a person attending DUI Education classes as a result of a DUI conviction or arrest. This person has received a screening which indicated education is appropriate.

(8) "Victim Impact Panel". A presentation designed to reflect the principles taught in the educational program that helps participants understand the potential impact on others of driving under the influence.

R523-11-3. Certification Requirements for DUI Educational Providers.

(1) In order to operate, a potential DUI Educational Provider shall make application to the Division at least 60 days prior to the planned effective date. The Division will provide the application form.

(2) Application for certification shall require the following:

(a) A brief description and purpose of the agency, and an explanation of the agency's relationship with other components

of the local DUI system, i.e., Local Substance Abuse Authorities, local courts, police, Probation and Parole, Alcoholics or Narcotics Anonymous, etc.;

(b) The geographical area to be served;

(c) The ownership and person or group responsible for agency operation;

(d) The location and time that DUI classes would normally be held;

(e) A list of instructors employed by the agency; and

(f) A copy of their substance abuse treatment license.

(g) An outline describing how the agency will conduct the victim impact panel required by Section 62A-15-501;

(h) Copies of all materials, i.e., presentations, workbooks, written documents, photographs used in the presentation or distributed to participants during victim impact panels shall be submitted to the Division for approval prior to use.

(i) A written plan that describes goals, objectives and format of in person victim impact panels to the Division for approval prior to use.

(3) A DUI Educational Provider shall also:

(a) Ensure that each participant receive no less than 16 hours of face-to-face instruction using the Division's approved curriculum with no more than 4 hours of instruction occurring in any calendar day;

(b) Allow no more than 25 persons, including participant and others to a class;

(c) Follow the recommendations of the screening which has been provided;

(d) Ensure that screenings are conducted by staff from a licensed treatment agency who have been trained in administering the screening tool;

(e) Report the number of participants completing the DUI Educational Program to the Division at least every quarter;

(f) Have policies ensuring confidentiality of information maintained on each participant that conform to the requirements in 42 Code of Federal Regulations Chapter 1 Subchapter A Part 2;

(g) Ensure that Instructors follow the Division-approved curriculum;

(h) Have available for review a copy of the Provider's charter, constitution, or bylaws;

(i) Outline the eligibility criteria for admission to the program, including the screening tool used;

(j) Ensure that all Instructors employed by the Provider have completed the Division required DUI training/certification;

(k) Inform the Division of any licensing or address change;

(l) Comply with all applicable local, state and federal laws and regulations.

(m) Ensure that none of the Instructors are on probation or parole for any offense;

(n) Ensure that none of the Instructors has been convicted of a felony of any kind or any drug or alcohol misdemeanor offense in the previous 3 years;

(o) Notify the Division in writing within 30 days if any Instructor has been arrested for any reason;

(p) Provide separate classes for participants who are younger than 21 years of age at the completion of the course; and

(4) Ensure that any victim impact panel be consistent with the educational program taught, and ensure that the total attendance is no more than 25 participants.

(5) A participant's participation in the DUI Educational Program shall not be a substitute for treatment as determined by an assessment.

(6) The Division shall issue the Provider a certificate after determination has been made that the applicant is in compliance with these standards.

(7) The Division Director has the authority to grant

exceptions to any of the certification requirements.

R523-11-4. On-site Survey of Provider.

(1) After a review of the application, a site review may be scheduled by a designated representative of the Division. With each initial application and application for renewal the applicant agrees, as a condition of Provider certification, to permit representative(s) of the Division and/or the local substance abuse authority as authorized by the Division to enter and survey the physical facility, program operation, client records and to interview staff for determining compliance with applicable laws.

(2) The DUI Educational Provider also agrees to allow representatives from the Division and from the local substance abuse authority as authorized by the Division to attend the classes held. Such visits may be announced or unannounced.

(3) Review Procedures. Within 30 days after completion of an on-site survey, the Division shall notify the applicant of action taken: approval, denial, or request for further information.

R523-11-5. Instructor Certification.

(1) By this rule the Division hereby establishes certification requirements for Instructors, which consist of the following:

(a) All Instructors employed by any DUI Educational Provider shall be certified by the Division prior to instructing the state approved DUI curriculum for any DUI Educational Provider.

(b) All Instructors shall attend and complete the requirements of the Instructor training sponsored by the Division.

(c) Requirements in R523-11-5(a) and (b) above shall be complete and verifiable.

(d) The Instructor agrees, as a condition of certification, to use only the Division-approved curriculum when conducting a DUI Educational Program.

(e) The Instructor agrees to attend all required DUI training sessions sponsored or approved by the Division.

(f) An Instructor shall not be certified to teach DUI Education if he or she is on probation or parole for any offense.

(g) An Instructor shall not be certified to teach DUI Education if he or she has been convicted of a felony of any kind or any drug or alcohol misdemeanor offense in the previous three years.

(h) A Certified Instructor shall notify the Division within 30 days of any arrest.

R523-11-6. Recertification of Instructors.

(1) An Instructor must recertify every twenty-four months by: annually, on a calendar year basis attending and completing the requirements of any Division-sponsored or approved DUI training sessions. The Instructor shall sign a register at those training sessions which have been set aside for DUI Instructor recertification.

(2) It is the responsibility of the Instructor to notify the Division immediately of any address change.

(3) An Instructor shall not be certified to teach DUI Education if he or she is on probation or parole for any offense.

(4) An Instructor shall not be certified to teach DUI Education if he or she has been convicted of a felony of any kind or any drug or alcohol misdemeanor offense in the previous three years.

(5) If a current Instructor is arrested, he or she has 30 days to report the arrest to the Division.

(6) The Division Director or designee has the authority to grant exceptions to any of the certification requirements.

R523-11-7. Corrective Action for a Provider or an Instructor.

(1) If the Division becomes aware that a DUI education Provider or an Instructor is in violation of these standards, it shall proceed with the following steps:

(a) Within 30 days of becoming aware of the violation, the Division shall notify the Provider or the Instructor in writing of the area(s) of noncompliance.

(b) Within 30 days of receiving notification of violation, the program or the Instructor shall submit a written plan to the Division for achieving compliance.

(c) If the written plan is not accepted as satisfactory by the Division within 30 days the Provider or the Instructor shall be notified that they have been suspended until compliance is achieved.

(d) A Provider or an Instructor must cease conducting any DUI Educational Provider until the suspension is lifted.

(e) If the Division does not receive written evidence of compliance within 30 days of notification of suspension, the Division shall revoke the Provider or Instructor's certification.

R523-11-8. Revocation of a Provider's or an Instructor's Certification.

(1) The Division shall revoke the certification of a Provider or an Instructor for the following reasons:

(a) If the Provider or the Instructor fails to provide the Division by certified mail with written evidence of compliance within 30 days of notification of suspension.

(b) If the Provider or the Instructor continues to provide any DUI Education during the period of suspension, or

(c) If any Provider or Instructor receives more than two notices of noncompliance with these standards in a one-year period.

(2) If any Provider or Instructor's certification is revoked, they may not reapply for recertification for a period of six months.

R523-11-9. Redress Procedures for Programs or Instructors.

(1) Any Provider or Instructor whose certification has been revoked may request in writing an informal hearing with the Division Director or his designee within ten days of receiving notice of revocation. Within ten days following the close of the hearing, the Division shall inform the Provider or the Instructor in writing of the decision as required under Section 63G-4-302 and R497-100-1 through R497-100-10.

(2) If they so choose, the Provider or the Instructor may appeal in writing the decision of the Division Director by requesting a reconsideration hearing with the Office of Administrative Hearings as provided for under Section 63G-4-302.

R523-11-10. Standards for Victim Impact Panels.

(1) Victim impact panels may be conducted in person or by use of filmed versions approved by the Division.

(2) Providers shall ensure that victim impact panels are available in English, Spanish and other languages as needed.

(3) Providers shall limit attendance at victim impact panels to no more than 25 participants.

R523. Human Services, Substance Abuse and Mental Health.**R523-12. On-Premise Alcohol Training and Education Seminar Rules of Administration.****R523-12-1. Authority and Intent.**

(1) This rule is adopted under the authority of Section 62A-15-401 authorizing the Division of Substance Abuse and Mental Health (Division) to administer the Alcohol Training and Education Seminar Program.

(2) The intent of this rule is to require every person who sells or furnishes alcoholic beverages to the public for on-premise consumption to complete a training seminar in the scope of the person's employment.

(3) This rule includes:

(a) Certification of providers;

(b) Approval of the Seminar curriculum;

(c) The ongoing activities of providers; and

(d) The process for approval, denial, suspension and revocation of provider certification.

R523-12-2. Definitions.

(1) "Approved Curriculum" means a provider's curriculum which has been approved by the Division in accordance with these rules.

(2) "Certification" means written approval from the Division stating a person or company has met the requirements to become a seminar provider.

(3) "Director" means the Director of the Division of Substance Abuse and Mental Health.

(4) "Division" means the Division of Substance Abuse and Mental Health.

(5) "Manager" means a person chosen or appointed to manage, direct, or administer the operations at the premises of a licensee. A manager may also be a supervisor.

(6) "On-premise consumption" means the consumption of alcoholic products by a person within any building, enclosure, room, or designated area which has been legally licensed to allow consumption of alcohol.

(7) "Seminar" means the Alcohol Training and Education Seminar.

(8) "Server" is an employee who actually makes available, serves to, or provides a drink or drinks to a customer for consumption on the premises of the licensee.

(9) "Supervisor" means an employee who, under the direction of a manager, if the business establishment employs a manager, or under the direction of the owner or president of the corporation if no manager is hired, directs or has the responsibility to direct, transfer, or assign duties to employees who actually provide alcoholic beverages to customers on the premises of the licensee.

R523-12-3. Provider Certification Application Procedure.

(1) A provider seeking first-time certification shall make application to the Division at least 30 days prior to the first scheduled seminar date. A provider seeking recertification to administer the seminar shall make application to the Division at least 30 days prior to expiration of the current certification.

(2) Any seminar conducted by a noncertified provider is void and shall not meet the server training requirements authorized under Section 62A-15-401.

(3) All application forms shall be reviewed by the Division. The Division shall determine if the application is complete and in compliance with Section 62A-15-401 and these rules. If the Division approves the application, the curriculum and determines the provider has met all other requirements, the Division shall certify the provider.

(4) Within 30 days after the Division has taken action, the Division shall officially notify the applicant of the action taken: denial, approval, or request for further information. Notification

of the action taken shall be forwarded in writing to the applicant.

(5) If an application requires additional information of corrective action, a provider may continue to conduct seminars for 30 days from the date of notification. If the provider has not resolved the action required with the Division by that date, the provider is no longer certified to provide the seminar and must cease until all actions are approved by the Division.

R523-12-4. Provider Responsibilities.

(1) For each person completing the seminar, the provider shall electronically submit to the Division the name, last four digits of the person's social security number, the date the person completed the training, and the required fee, within 30 days of the completion of the seminar.

(2) Each person who has completed the seminar and passed the provider-administered and Division-approved examination shall be approved as a server for a period which begins at the completion of the seminar and expires three years from this date. Recertification requires the server to complete a new seminar every three years.

(3) The provider shall issue a certification card to the server. The card shall contain at least the name of the server and the expiration date. The provider shall be responsible for issuing any duplicates or lost cards.

(4) The Provider shall implement at least three of the following measures to prevent fraud:

(a) Authentication that accurately identifies the individual taking the online course or test;

(b) Measures to ensure that an individual taking the online course or test is focused on training material throughout the entire training period;

(c) Measures to track the actual time an individual taking the online course or test is actively engaged online;

(d) A seminar provider to provide technical support, such as requiring a telephone number, email, or other method of communication that allows an individual taking the online course or test to receive assistance if the individual is unable to participate online because of technical difficulties;

(e) A test to meet quality standards, including randomization of test questions and maximum time limits to take a test;

(f) A seminar provider to have a system to reduce fraud as to who completes an online course or test, such as requiring a distinct online certificate with information printed on the certificate that identifies the person taking the online course or test, or requiring measures to inhibit duplication of a certificate;

(g) Measures to allow an individual taking an online course or test to provide an evaluation of the online course or test;

(h) A seminar provider to track the Internet protocol address or similar electronic location of an individual who takes an online course or test;

(i) An individual who takes an online course or test to use an e-signature; or

(j) A seminar provider to invalidate a certificate if the seminar provider learns that the certificate does not accurately reflect the individual who took the online course or test.

R523-12-5. Server Responsibilities.

A server is required within 30 days of employment to pass the Seminar.

R523-12-6. Division Responsibilities.

The Division shall maintain the database of servers who have completed the seminar.

R523-12-7. Approved Curriculum.

(1) Each provider must have a curriculum approved by the Division. This curriculum must provide at least three hours of

instruction both for original certification and for any and all recertifications. The contents of an approved curriculum shall include the following components:

(a) Alcohol as a drug and its effect on the body and behavior:

- (i) Facts about alcohol;
- (ii) What alcohol is; and
- (iii) Alcohol's path through the body.

(b) Factors influencing the effect of alcohol including:

- (i) Food and digestive factors;
- (ii) Weight, physical fitness and gender factors;
- (iii) Psychological factors;
- (iv) Tolerance; and
- (v) Alcohol used in combination with other drugs.

(c) Recognizing drinking levels:

(i) Explanation of behavioral signs and indications of impairment;

(ii) Classification of behavioral signs; and

(iii) Defining intoxication.

(d) Recognizing the problem drinker and techniques for servers to help control consumption:

(i) Use of classification system;

(ii) Use of alcohol facts;

(iii) Continuity of service; and

(iv) Drink counting.

(e) Overview of state alcohol laws:

(i) Utah liquor distribution and control;

(ii) Legal age;

(iii) prohibited sales;

(iv) Third party liability and the Dram Shop Law;

(v) Legal definition of intoxication; and

(vi) Legal responsibilities of servers.

(f) Techniques for dealing with the problem customer including rehearsal and practice of these techniques.

(g) Intervention techniques:

(i) Slowing down service;

(ii) Offering food or nonalcoholic beverages;

(iii) Serving water with drinks;

(iv) Not encouraging reorders; and

(v) Cutting off service.

(h) Establishing house rules for regulating alcoholic beverages:

(i) Management and co-workers' support; and

(ii) Dealing with minors; and

(i) Alternative means of transportation and getting the customer home safely:

(i) ask customer to arrange alternative transportation;

(ii) Call a taxi or transportation service;

(iii) Accommodations for the night; and

(iv) Telephone the police.

R523-12-8. Examination.

The examination shall include questions concerning alcohol as a drug and its effect on the body and behavior, recognizing and dealing with the problem drinker, Utah alcohol laws, terminating service, and alternative means of transportation to get the customer safely home. The portion of the exam concerning Utah's alcohol laws shall be uniform questions approved by the Department of Alcoholic Beverage Control or as updated and approved by the Division.

R523-12-9. Alcohol Training and Education Seminar Provider Standards.

(1) The Division may certify an applicant who has a program course that:

(a) Does not have a history of liquor law violations or any convictions showing disregard for laws related to being a responsible liquor provider;

(b) Identifies all program instructors and instructor trainers

and certifies in writing that they have been trained to present the course material and that they have not been convicted of a felony or of any violation of the laws or ordinances concerning alcoholic beverages, within the last five years;

(c) Agrees to notify the Division in writing of any changes in instructors and submit the assurances called for in Subsection R523-12-9(1)(b) for all new instructors;

(d) Will establish and maintain course completion records.

(2) All online training courses shall be provided on a secure website.

R523-12-10. Grounds for Denial, Corrective Action, Suspension, and Revocation.

(1) The Division may deny, suspend or revoke certification if:

(a) The provider or applicant violates these rules, as provided in Section 62A-15-401; or

(b) The applicant fails to correctly complete all required steps of the application process as determined by these rules or other rules or statutes referenced in these rules; or

(c) A provider whose certification has been previously denied, suspended or revoked has reapplied without taking the previously required corrective action.

R523-12-11. Corrective Action.

(1) If the Division becomes aware that a provider is in violation of these rules or other rules or statutes referenced in these rules:

(a) Within 30 days after becoming aware of the violation, the Division shall identify in writing the specific areas in which the provider is not in compliance and send written notice to the provider; and

(b) Within 30 days of notification of noncompliance, the provider shall submit a written plan for achieving compliance. The provider may be granted an extension.

R523-12-12. Suspension and Revocation.

(1) The Director or designee may suspend the certification of a provider as follows:

(a) When a provider fails to respond in writing to areas of noncompliance identified in writing by the Division within the defined period. The defined period is 30-days plus any extensions granted by the Division.

(b) When a provider fails to take corrective action as agreed upon in its written response to the Division.

(c) When a provider fails to allow the Division access to information or records necessary to determine the provider's compliance under these rules and referenced rules and statutes.

(2) The Director or designee may revoke certification of a provider as follows:

(a) A provider or its authorized instructors continue to provide the seminar while the provider is under a suspended certification.

(b) A provider fails to comply with corrective action while under a suspension.

(c) A program has committed a second violation which constitutes grounds for suspension when a previous violation resulted in a suspension during the last 24 months.

R523-12-13. Procedure for Denial, Suspension, or Revocation.

(1) If the Division has grounds for action under these rules, referenced rules, or as required by law, and intends to deny, suspend or revoke certification of a provider, the steps governing the action are as follows:

(a) The Division shall notify the applicant or provider by personal service or by certified mail, return receipt requested, of the action to be taken. The notice shall contain reasons for the action, to include all statutory or rule violations, and a date

when the action shall become effective.

(b) The provider may request an informal hearing with the Director within ten calendar days. The request shall be in writing. Within ten days following the close of the hearing, the Director or designee shall inform the provider or applicant in writing as required under Section 63G-4-203. The provider may appeal to the Department of Human Services Office of Administrative Hearing as provided for under Section 63G-4-203.

R523. Human Services, Substance Abuse and Mental Health.**R523-13. Off-Premise Retailer (Clerk, Licensee and Manager) Alcohol Training and Education Seminar Rules of Administration.****R523-13-1. Authority and Intent.**

(1) This rule is adopted under the authority of Section 62A-15-401 authorizing the Division of Substance Abuse and Mental Health (Division) to administer the Alcohol Training and Education Seminar Program.

(2) The intent of this rule is to require every person to complete the Seminar who sells or furnishes alcoholic beverages to the public for off-premise consumption in the scope of the person's employment with a general food store or similar business.

(3) These rules include:

- (a) Curriculum content standards,
- (b) Seminar provider standards,
- (c) Provider certification process;
- (d) The ongoing activities of providers, and
- (e) The process for approval, denial, suspension and revocation of provider certification.

R523-13-2. Definitions.

(1) "Approved Curriculum" means a provider's curriculum which has been approved by the Division in accordance with these rules.

(2) "Certification" means written approval from the Division stating a person or company has met the requirements to become a seminar provider.

(3) "Director" means the Director of the Division of Substance Abuse and Mental Health.

(4) "Division" means the Division of Substance Abuse and Mental Health.

(5) "Manager" means a person chosen or appointed to manage, direct, or administer the operations at the premises of a licensee. A manager may also be a supervisor.

(6) "Provider" means an individual or company who has had their curriculum approved and certified by the Division.

(7) "Seminar" means the Off-Premise Alcohol Training and Education Seminar.

(8) "Supervisor" means an employee who, under the direction of a manager, if the business establishment employs a manager, or under the direction of the owner or president of the corporation if no manager is hired, directs or has the responsibility to direct, transfer, or assign duties to employees who actually sell or furnish alcoholic beverages to customers for off-premise consumption.

(9) "Retail employee" (clerk or supervisor) means any person employed by a general food store or similar business and who is engaged in the sale of or directly supervises the sale of beer to consumers for off-premise consumption.

R523-13-3. Provider Certification Application Procedure.

(1) A provider seeking first-time certification shall make application to the Division at least 30 days prior to the first scheduled seminar date. A provider seeking recertification to administer the seminar shall make application to the Division at least 30 days prior to expiration of the current certification.

(2) Any seminar conducted by a non-certified provider shall not meet the retailer training requirements authorized under Section 62A-15-401.

(3) All application forms shall be reviewed by the Division. The Division shall determine if the application is complete and in compliance with Section 62A-15-401 and these rules. If the Division approves the application and curriculum, and determines the provider has met all other requirements, the Division shall certify the provider.

(4) Within 30 days after the Division has taken action, the

Division shall officially notify the applicant of the action taken: denial, approval, or request for further information, and notification of the action taken shall be forwarded in writing to the applicant. If an application for recertification requires additional information or corrective action, a provider may continue to conduct seminars for 30 days from the date of notification. If the provider has not resolved the action required with the Division by that date, the provider is no longer certified to provide the seminar and must cease until all actions are approved by the Division.

R523-13-4. Provider Responsibilities.

(1) For each person completing the seminar, the provider shall electronically submit to the Division the name, last four digits of the person's social security number, the date the person completed the training and the required fee, within 30 days of the completion of the seminar.

(2) Each person who has completed the seminar and passed the provider-administered and Division-approved examination shall be approved as a retail employee for a period which begins at the completion of the seminar and expires five years from that date.

(3) The provider shall issue a certification card to the retail employee. The card shall contain at least the name of the retail employee and the expiration date. The provider shall be responsible for issuing any duplicates for lost cards.

(4) The Provider shall implement at least three of the following measures to prevent fraud:

(a) Authentication that accurately identifies the individual taking the online course or test;

(b) Measures to ensure that an individual taking the online course or test is focused on training material throughout the entire training period;

(c) Measures to track the actual time an individual taking the online course or test is actively engaged online;

(d) Provide technical support, such as a telephone number, email, or other method of communication that allows an individual taking the online course or test to receive assistance if the individual is unable to participate online because of technical difficulties;

(e) A test to meet quality standards, including randomization of test questions and maximum time limits to take a test;

(f) Issue a distinct online certificate with information printed on the certificate that identifies the person taking the online course or test, or requiring measures to inhibit duplication of a certificate;

(g) Measures to allow an individual taking an online course or test to provide an evaluation of the online course or test;

(h) Track the internet protocol address or similar electronic location of an individual who takes an online course or test;

(i) Provide an individual who takes an online course or test the opportunity to use an e-signature; or

R523-13-5. Retail Employee Responsibilities.

A retail employee is required within 30 days of employment by a general food store or similar business to complete and pass the Seminar.

R523-13-6. Division Responsibilities.

The Division shall maintain the database of retail employees who have completed the Seminar and make this information available to the public.

R523-13-7. Approved Curriculum.

(1) Each provider must have a curriculum approved by the Division. This curriculum must provide at least sixty minutes

of instruction both for original certification and for any and all re-certifications. The contents of an approved curriculum shall include the following components:

- (a) Alcohol as a drug;
- (b) Alcohol's effect on the body and behavior including education on the effects of alcohol on the developing youth brain, which information shall be provided by the Division;
- (c) Recognizing the problem drinker or signs of intoxication;
- (d) Statistics identifying the underage drinking problem, which information provided by the Division;
- (e) Discussion of criminal and administrative penalties for salesclerks and retail stores for selling beer to underage and intoxicated persons;
- (f) Strategies commonly used by minors to gain access to alcohol;
- (g) Process for checking ID, for example the FLAG system: Feel Look, Ask, Give Back);
- (h) Policies and procedures to prevent beer purchases by intoxicated individuals;
- (i) Techniques for declining a sale including rehearsal and practice of these techniques using face-to-face role play; and
- (j) Recognition of beverages containing alcohol including examples of such beverages.

R523-13-8. Examination.

The examination shall include questions from each of the curriculum components identified in Section R523-13-7. The examination shall be submitted for approval with the rest of the provider application.

R523-13-9. Alcohol Training and Education Seminar Provider Standards.

- (1) The Division may certify a provider applicant who:
 - (a) Identifies all program instructors and instructor trainers and certifies in writing that they:
 - (i) Have been trained to present the course material, and
 - (ii) That they have not been convicted of a felony or of any violation of the laws or ordinances concerning alcoholic beverages, within the past five years;
 - (b) Agrees to notify the Division in writing of any changes in instructors and submit the assurances called for in Subsection R523-13-9(a) for all new instructors;
 - (c) Allow the Division to audit all online courses or tests at any time the Division requests;
 - (d) Agrees to invalidate a course completion certificate if the seminar provider learns that the certificate does not accurately reflect the individual who took the online course or test;
 - (e) Will establish and maintain course completion records.
- (2) All online training courses shall be provided on a secure website.

R523-13-10. Grounds For Denial, Corrective Action, Suspension, and Revocation.

- (1) The Division may deny, suspend or revoke certification if:
 - (a) The provider or applicant violates these rules, or
 - (b) the applicant fails to correctly complete all required steps of the application process as determined by these rules or other rules or statutes referenced in these rules; or
 - (c) A provider whose certification has been previously denied, suspended or revoked and has reapplied without correcting the problem that resulted in the denial, suspension or revocation.

R523-13-11. Corrective Action.

- (1) If the Division becomes aware that a provider is in violation of these rules or other rules or statutes referenced in

these rules:

(a) Within 30 days after becoming aware of the violation, the Division shall identify in writing the specific areas in which the provider is not in compliance and send written notice to the provider.

(b) Within 30 days of notification of noncompliance, the provider shall submit a written plan for achieving compliance. The provider may be granted an extension.

R523-13-12. Suspension and Revocation.

(1) The Director or designee may suspend the certification of a provider as follows:

(a) When a provider fails to respond in writing to address areas of noncompliance identified in writing by the Division within the defined period. The defined period is 30-days plus any extensions granted by the Division.

(b) When a provider fails to take corrective action as agreed upon in its written response to the Division.

(c) When a provider fails to allow the Division access to information or records necessary to determine the provider's compliance under these rules and referenced rules and statutes.

(2) The Director or designee may revoke certification of a provider as follows:

(a) A provider or its authorized instructors continue to provide the Seminar while the provider is under a suspended certification.

(b) A provider fails to comply with corrective action while under a suspension.

(c) A program has committed a second violation which constitutes grounds for suspension when a previous violation resulted in a suspension during the last 24 months.

R523-13-13. Procedure for Denial, Suspension, or Revocation.

(1) If the Division has grounds for action under these rules, or as required by law, and intends to deny, suspend or revoke certification of a provider, the steps governing the action are as follows:

(a) The Division shall notify the applicant or provider by personal service or by certified mail, return receipt requested, of the action to be taken. The notice shall contain reasons for the action, to include all statutory or rule violations, and a date when the action shall become effective.

(b) The provider may request an informal hearing with the Director, or the Director's designee, within ten calendar days. The request shall be in writing. Within ten days following the close of the hearing, the Director or designee shall inform the provider or applicant in writing as required under Section 63G-4-203. The provider may appeal to the Department of Human Services Office of Administrative Hearing as provided for under Section 63G-4-203.

62A-15-1101

R590. Insurance, Administration.**R590-205. Privacy of Consumer Information Compliance Deadline.****R590-205-1. Authority.**

This rule is promulgated pursuant to Subsections 31A-2-202(1), 31A-2-201(2) and 31A-2-201(3)(a) in which the commissioner is empowered to administer and enforce Title 31A, to perform duties imposed by Title 31A and to make administrative rules to implement the provisions of Title 31A. Furthermore, Title V, Section 505, 15 U.S.C. 6805, empowers the Utah Insurance Commissioner to enforce Subtitle A of Title V of the Gramm-Leach-Bliley Act of 1999, 15 U.S.C. 6801 through 6820. Title V, Section 505, 15 U.S.C. 6805(b)(2), authorizes the commissioner to issue rules to implement the requirements of Title V, Section 501(b) of the federal act.

R590-205-2. Purpose.

The purpose of this rule is provide an extension to persons and entities under the jurisdiction of the Utah Insurance Department that are required to adopt policies, procedures, and controls to prevent the unauthorized disclosure of personal nonpublic information relating to their customers under Title V of the Gramm-Leach-Bliley Act of 1999, 15 U.S.C. 6801 through 6827. The extension would give such persons and entities time to comply with the requirements of Title V of the Gramm-Leach-Bliley Act of 1999, 15 U.S.C. 6801 through 6827.

A further purpose of the rule is to avoid the application of Title V, Section 505(c) of the Gramm-Leach-Bliley Act of 1999 that provides that if a state fails to adopt regulations to implement Title V of the federal act, the State shall not be eligible to override any federal insurance customer protections prescribed by a Federal Banking Agency.

R590-205-3. Applicability and Scope.

This rule shall apply to all insurers, producers, and other persons licensed or required to be licensed or required to be authorized, registered or required to be registered or domiciled in Utah pursuant to the Utah Insurance Code. It also applies to unauthorized insurers who accept business through a licensed surplus line broker in Utah, if the surplus line placements are placed pursuant to Section 31A-15-103.

R590-205-4. Definitions.

For the purposes of this rule the commissioner adopts the following definitions:

(1) "Utah Insurance Code" means Title 31A of the Utah Code.

(2) "Licensee" means all insurers, producers, and other persons licensed or required to be licensed or required to be authorized, registered or required to be registered or domiciled in Utah pursuant to the Utah Insurance Code, including but not limited to unauthorized insurers who accept business through a licensed surplus line broker in Utah, if the surplus line placements are placed pursuant to Section 31A-15-103.

R590-205-5. Enforcement.

Title V of the Gramm-Leach-Bliley Act of 1999, 15 U.S.C. 6801 through 6827 shall be enforced by the commissioner with respect to all licensees of the department.

R590-205-6. Compliance Date.

In order to provide sufficient time for licensees to establish policies, procedures and controls relating to the use and disclosure of personal nonpublic information of their customers and to comply with the requirements of Title V of the Gramm-Leach-Bliley Act of 1999, 15 U.S.C. 6801 through 6827, effective November 13, 2000, the commissioner extends the time for compliance for all licensees to July 1, 2001.

R590-205-7. Severability.

If any provision or clause of this rule or its application to any person or situation is held invalid, such validity shall not affect any other provision or application of this rule which can be given effect without the invalid provision or application, and to this end the provisions of this rule are declared to be severable.

KEY: insurance law privacy**January 11, 2001****Notice of Continuation December 4, 2015****31A-2-201****31A-2-202****15 U.S.C 6805**

R590. Insurance, Administration.**R590-233. Health Benefit Plan Insurance Standards.****R590-233-1. Authority.**

This rule is issued by the insurance commissioner pursuant to the following provisions of the Utah Insurance Code:

- (1) Subsection 31A-2-201(3)(a) authorizes rules to implement the Insurance Code;
- (2) Sections 31A-2-202 and 31A-23a-412 authorize the commissioner to request reports, conduct examinations, and inspect records of any licensee;
- (3) Subsection 31A-22-605(4) requires the commissioner to adopt rules to establish standards for disclosure in the sale of, and benefits to be provided by individual and franchise accident and health policies;
- (4) Section 31A-22-623 authorizes the commissioner to establish by rule minimum standards of coverage for dietary products for inborn metabolic errors;
- (5) Section 31A-22-626 authorizes the commissioner to establish by rule minimum standards of coverage for diabetes for accident and health insurance;
- (6) Subsection 31A-23a-402(8) authorizes the commissioner to define by rule acts and practices that are unfair and unreasonable; and
- (7) Subsection 31A-26-301(1) authorizes the commissioner to set standards for timely payment of claims.

R590-233-2. Purpose and Scope.

- (1) Purpose. The purpose of this rule is to provide reasonable standardization and simplification of terms and coverages of insurance policies in order to facilitate public understanding and comparison and to prohibit provisions which may be misleading or confusing in connection either with the purchase of such coverages or with the settlement of claims, and to provide for full disclosure in the sale of such insurance.
- (2) Scope.
 - (a) Except as excluded under (b), this regulation applies to all individual and group health benefit plan policies, including policies issued to associations, trusts, discretionary groups, or other similar groupings.
 - (b) This rule shall not apply to employer group health benefit plans.
- (3) The requirements contained in this regulation shall be in addition to any other applicable regulations previously adopted.

R590-233-3. Definitions.

In addition to the definitions of Sections 31A-1-301 and 31A-22-605(2), the following definitions shall apply for the purpose of this rule.

- (1) "Accident," "accidental injury," and "accidental means" shall be defined to employ result language and shall not include words that establish an accidental means test or use words such as "external, violent, visible wounds" or similar words of description or characterization.
 - (a) The definition shall not be more restrictive than the following: "injury" or "injuries" means accidental bodily injury sustained by the insured person that is the direct cause of the condition for which benefits are provided, independent of disease or bodily infirmity or any other cause and that occurs while the insurance is in force.
 - (b) Unless otherwise prohibited by law, the definition may exclude injuries for which benefits are paid under worker's compensation, any employer's liability or similar law, or a motor vehicle no-fault plan.
- (2) "Certificate of Completion" shall mean a document issued by the Utah Board of Education to a person who completes an approved course of study not leading to a diploma, or to one who passes a challenge for that same course of study, or to one whose out-of-state credentials and certificate are

acceptable to the Board.

(3) "Complications of Pregnancy" shall mean diseases or conditions the diagnoses of which are distinct from pregnancy but are adversely affected or caused by pregnancy and not associated with a normal pregnancy.

(a) "Complications of Pregnancy" include acute nephritis, nephrosis, cardiac decompensation, ectopic pregnancy which is terminated, a spontaneous termination of pregnancy when a viable birth is not possible, puerperal infection, eclampsia, pre-eclampsia and toxemia.

(b) This definition does not include false labor, occasional spotting, doctor prescribed rest during the period of pregnancy, morning sickness, and conditions of comparable severity associated with management of a difficult pregnancy.

(4) "Convalescent Nursing Home," "extended care facility," or "skilled nursing facility" shall mean a facility duly licensed and operating within the scope of such license.

(5) "Cosmetic Surgery" or "Reconstructive Surgery" shall mean any surgical procedure performed primarily to improve physical appearance.

(a) This definition does not include surgery, which is necessary:

- (i) to correct damage caused by injury or sickness;
- (ii) for reconstructive treatment following medically necessary surgery;
- (iii) to provide or restore normal bodily function; or
- (iv) to correct a congenital disorder that has resulted in a functional defect.

(b) This provision does not require coverage for preexisting conditions otherwise excluded.

(6) "Elimination Period" or "Waiting Period" means the length of time an insured shall wait before benefits are paid under the policy.

(7) "Enrollment Form" shall mean application as defined in Section 31A-1-301.

(8) "Experimental Treatment" is defined as medical treatment, services, supplies, medications, drugs, or other methods of therapy or medical practices, which are not accepted as a valid course of treatment by the Utah Medical Association, the U.S. Food and Drug Administration, the American Medical Association, or the Surgeon General.

(9) "Home Health Agency" shall mean a public agency or private organization, or subdivision of a health care facility, licensed and operating within the scope of such license.

(10) "Home Health Aide" shall mean a person who obtains a Certificate of Completion, as required by law, which allows performance of health care and other related services under the supervision of a registered nurse from the home health agency, or performance of simple procedures as an extension of physical, speech, or occupational therapy under the supervision of licensed therapists.

(11) "Home Health Care" shall mean services provided by a home health agency.

(12) "Homemaker/Home Health Aide" shall mean a person who has obtained a Certificate of Completion, as required by law, which allows performance of both homemaker and home health aide services, and who provides health care and other related services under the supervision of a registered nurse from the home health agency or under the supervision of licensed therapists.

(13) "Hospice" shall mean a program of care for the terminally ill and their families which occurs in a home or in a health care facility and which provides medical, palliative, psychological, spiritual, or supportive care and treatment and is licensed and operating within the scope of such license.

(14) "Hospital" means a facility that is licensed and operating within the scope of such license. This definition may not preclude the requirement of medical necessity of hospital confinement or other treatment.

(15) "Intermediate Nursing Care" shall mean nursing services provided by, or under the supervision of, a registered nurse. Such care shall be for the purpose of treating the condition for which confinement is required.

(16) "Medical Necessity" means:

(a) health care services or products that a prudent health care professional would provide to a patient for the purpose of preventing, diagnosing or treating an illness, injury, disease or its symptoms in a manner that is:

(i) in accordance with generally accepted standards of medical practice in the United States;

(ii) clinically appropriate in terms of type, frequency, extent, site, and duration;

(iii) not primarily for the convenience of the patient, physician, or other health care provider; and

(iv) covered under the contract;

(b) when a medical question-of-fact exists medical necessity shall include the most appropriate available supply or level of service for the individual in question, considering potential benefits and harms to the individual, and known to be effective.

(i) For interventions not yet in widespread use, the effectiveness shall be based on scientific evidence.

(ii) For established interventions, the effectiveness shall be based on:

(A) scientific evidence;

(B) professional standards; and

(C) expert opinion.

(17) "Medicare" means the "Health Insurance for the Aged Act, Title XVIII of the Social Security Amendments of 1965 as Then Constituted or Later Amended."

(18) "Medicare Supplement Policy" shall mean an individual, franchise, or group policy of accident and health insurance, other than a policy issued pursuant to a contract under Section 1876 of the federal Social Security Act, 42 U.S.C. Section 1395 et seq., or an issued policy under a demonstration project specified in 41 U.S.C. Section 1395ss(g)(1), that is advertised, marketed, or primarily designed as a supplement to reimbursements under Medicare for hospital, medical, or surgical expenses of persons eligible for Medicare.

(19) "Mental or Nervous Disorders" may not be defined more restrictively than a definition including neurosis, psychoneurosis, psychosis, or any other mental or emotional disease or disorder which does not have a demonstrable organic cause.

(20) "Nurse" may be defined so that the description of nurse is restricted to a type of nurse, such as registered nurse, or licensed practical nurse. If the words "nurse" or "registered nurse" are used without specific instruction, then the use of such terms requires the insurer to recognize the services of any individual who qualifies under such terminology in accordance with applicable statutes or administrative rules.

(21) "Nurse, Licensed Practical" shall mean a person who is registered and licensed to practice as a practical nurse.

(22) "Nurse, Registered" shall mean any person who is registered and licensed to practice as a registered nurse.

(23) "Nursing Care" shall mean assistance provided for the health care needs of sick or disabled individuals, by or under the direction of licensed nursing personnel.

(24) "Physician" may be defined by including words such as qualified physician or licensed physician. The use of such terms requires an insurer to recognize and to accept, to the extent of its obligation under the contract, all providers of medical care and treatment when such services are within the scope of the provider's licensed authority and are provided pursuant to applicable laws.

(25) "Probationary Period" shall mean the period of time following the date of issuance or effective date of the policy before coverage begins for all or certain conditions.

(26)(a) "Scientific evidence" means:

(i) scientific studies published in or accepted for publication by medical journals that meet nationally recognized requirements for scientific manuscripts and that submit most of their published articles for review by experts who are not part of the editorial staff; or

(ii) findings, studies or research conducted by or under the auspices of federal government agencies and nationally recognized federal research institutes.

(b) Scientific evidence shall not include published peer-reviewed literature sponsored to a significant extent by a pharmaceutical manufacturing company or medical device manufacturer or a single study without other supportable studies.

(27) "Sickness" means illness, disease, or disorder of an insured person.

(28) "Skilled Nursing Care" shall mean nursing services provided by, or under the supervision of, a registered nurse. Such care shall be for the purpose of treating the condition for which the confinement is required and not for the purpose of providing intermediate or custodial care.

(29) "Therapist" may be defined as a professionally trained or duly licensed or registered person, such as a physical therapist, occupational therapist, or speech therapist, who is skilled in applying treatment techniques and procedures under the general direction of a physician.

(30)(a) "Total Disability" shall mean an individual who:

(i) is not engaged in employment or occupation for which he is or becomes qualified by reason of education, training or experience; and

(ii) is unable to perform all of the substantial and material duties of his or her regular occupation or words of similar import.

(b) An insurer may require care by a physician other than the insured or a member of the insured's immediate family.

(c) The definition may not exclude benefits based on the individual's:

(i) ability to engage in any employment or occupation for wage or profit;

(ii) inability to perform any occupation whatsoever, any occupational duty, or any and every duty of his occupation; or

(iii) inability to engage in any training or rehabilitation program.

(31)(a) "Usual and Customary" shall mean the most common charge for similar services, medicines or supplies within the area in which the charge is incurred.

(b) In determining whether a charge is usual and customary, insurers shall consider one or more of the following factors:

(i) the level of skill, extent of training, and experience required to perform the procedure or service;

(ii) the length of time required to perform the procedure or services as compared to the length of time required to perform other similar services;

(iii) the severity or nature of the illness or injury being treated;

(iv) the amount charged for the same or comparable services, medicines or supplies in the locality; the amount charged for the same or comparable services, medicines or supplies in other parts of the country;

(v) the cost to the provider of providing the service, medicine or supply; and

(vi) other factors determined by the insurer to be appropriate.

(32) "Waiting Period" shall mean "Elimination Period."

R590-233-4. Prohibited Policy Provisions.

(1) Probationary periods.

(a) A policy shall not contain provisions establishing a

probationary period during which no coverage is provided under the policy except as provided in R590-233-4(1)(b), (c), and (d).

(b) A policy may specify a probationary period not to exceed twelve months for losses resulting from:

- (i) amenorrhea;
 - (ii) cataracts;
 - (iii) congenital deformities, unless coverage is required pursuant to Subsection 31A-22-610(2);
 - (iv) cystocele;
 - (v) dysmenorrhea;
 - (vi) enterocele;
 - (vii) infertility;
 - (viii) rectocele;
 - (ix) seasonal allergies, limited to testing and treatment;
 - (x) sleep disorders, including sleep studies;
 - (xi) surgical treatment for:
 - (A) adenoidectomy,
 - (B) bunionectomy,
 - (C) carpal tunnel,
 - (D) hysterectomy, except in cases of malignancy,
 - (E) joint replacement,
 - (F) reduction mammoplasty,
 - (G) Morton's neuroma,
 - (H) myringotomy and tympanotomy, with or without tubes inserted,
 - (I) nasal septal repair, except for injuries after the effective date of coverage,
 - (J) retained hardware removal,
 - (K) sterilization, and
 - (L) tonsillectomy;
 - (xii) urethrocele;
 - (xiii) uterine prolapse; and
 - (xiv) varicose veins.
- (c) Coverage must be provided for conditions and procedures prohibited in Subsection (1)(b) for emergency medical conditions in compliance with Section 31A-22-627.
- (d) The probationary period must be reduced by the number of days of creditable coverage the enrollee has as of the enrollment date, in accordance with Subsection 31A-22-605.1(4)(b).
- (2) Preexisting conditions provisions shall comply with Sections 31A-1-301, and 31A-22-605.1.
- (3) Limitations or exclusions. A policy shall not limit or exclude coverage or benefits by type of illness, accident, treatment or medical condition, except as follows:
- (a) abortion;
 - (b) acupuncture and acupressure services;
 - (c) administrative charges for completing insurance forms, duplication services, interest, finance charges, or other administrative charges, unless otherwise required by law;
 - (d) administrative exams and services;
 - (e) alcoholism and drug addictions;
 - (f) allergy tests and treatments;
 - (g) aviation;
 - (h) axillary hyperhidrosis;
 - (i) benefits provided under:
 - (i) Medicare or other governmental program, except Medicaid;
 - (ii) state or federal worker's compensation; or
 - (iii) employer's liability or occupational disease law.
 - (j) cardiopulmonary fitness training, exercise equipment, and membership fees to a spa or health club;
 - (k) charges for appointments scheduled and not kept;
 - (l) chiropractic;
 - (m) complementary and alternative medicine;
 - (n) corrective lenses, and examination for the prescription or fitting thereof, but policies may not exclude required lens implants following cataract surgery;
 - (o) cosmetic surgery; reversal, revision, repair,

complications, or treatment related to a non-covered cosmetic surgery. This exclusions does not apply to reconstructive surgery when the service is incidental to or follows surgery resulting from trauma, infection or other diseases of the involved part; or reconstructive surgery because of congenital disease or anomaly of a covered dependent child that has resulted in a functional defect;

- (p) custodial care;
- (q) dental care or treatment;
- (r) dietary products, except as required by Rule R590-194;
- (s) educational and nutritional training, except as required by Rule R590-200;
- (t) experimental and/or investigational services;
- (u) felony, riot or insurrection, when the insured is a voluntary participant;
- (v) foot care in connection with corns, calluses, flat feet, fallen arches, weak feet, chronic foot strain or symptomatic complaints of the feet, including orthotics. The exclusion of routine foot care does not apply to cutting or removal of corns, calluses, or nails when provided to a person who has a systemic disease, such as diabetes with peripheral neuropathy or circulatory insufficiency, of such severity that unskilled performance of the procedure would be hazardous;
- (w) gastric or intestinal bypass services including lap banding, gastric stapling, and other similar procedures to facilitate weight loss; the reversal, or revision of such procedures; or services required for the treatment of complications from such procedures;
- (x) gene therapy;
- (y) genetic testing;
- (z) hearing aids, and examination for the prescription or fitting thereof;
- (aa) illegal activities, limited to losses related directly to the insured's voluntary participation;
- (bb) infertility services, except as required by Rule R590-76;
- (cc) interscholastic sports, with respect to short-term nonrenewable policies;
- (dd) mental or emotional disorders;
- (ee) motor vehicle no-fault law, except when the covered person is required by law to have no-fault coverage, the exclusion applies to charges up to the minimum coverage required by law whether or not such coverage is in effect;
- (ff) nuclear release;
- (gg) preexisting conditions or diseases as allowed under Section 31A-22-605.1, except for coverage of congenital anomalies as required by Section 31A-22-610;
- (hh) pregnancy, except for complications of pregnancy;
- (ii) refractive eye surgery;
- (jj) rehabilitation therapy services, such as physical, speech, and occupational, unless required to correct an impairment caused by a covered accident or illness;
- (kk) respite care;
- (ll) rest cures;
- (mm) routine physical examinations;
- (nn) service in the armed forces or units' auxiliary to it;
- (oo) services rendered by employees of hospitals, laboratories or other institutions;
- (pp) services performed by a member of the covered person's immediate family;
- (qq) services for which no charge is normally made in the absence of insurance;
- (rr) sexual dysfunction;
- (ss) shipping and handling, unless otherwise required by law;
- (tt) suicide, sane or insane, attempted suicide, or intentionally self-inflicted injury;
- (uu) telephone/electronic consultations;
- (vv) territorial limitations outside the United States;

(ww) terrorism, including acts of terrorism;
 (xx) transplants;
 (yy) transportation;
 (zz) treatment provided in a government hospital, except for hospital indemnity policies;

(aaa) war or act of war, whether declared or undeclared; or
 (bbb) others as may be approved by the commissioner.

(4) Waivers. All waivers issued must comply with 31A-30-107.5. Where waivers are required as a condition of issuance, renewal or reinstatement, signed acceptance by the insured is required.

(5) Commissioner authority. Policy provisions precluded in this section shall not be construed as a limitation on the authority of the commissioner to prohibit other policy provisions that in the opinion of the commissioner are unjust, unfair or unfairly discriminatory to the policyholder, beneficiary or a person insured under the policy.

R590-233-5. General Requirements.

(1) Policy definitions. No policy subject to this rule may contain definitions respecting the matters defined in Section R590-233-3 unless such definitions comply with the requirements of that section.

(2) Rights of spouse. The following provisions apply to policies that provide coverage to a spouse of the insured:

(a) A policy may not provide for termination of coverage of the spouse solely because of the occurrence of an event specified for termination of coverage of the insured, other than for nonpayment of premium.

(b) A policy shall provide that in the event of the insured's death the spouse of the insured shall become the insured.

(3) Cancellation, Renewability, and Termination. Policy cancellation, renewability and termination provisions must comply with Sections 31A-8-402.3, 31A-8-402.5, 31A-8-402.7, 31A-22-721 and 31A-30-107, 107.1 and 107.3.

(4) Termination of the policy shall be without prejudice to a continuous loss that commenced while the policy or certificate was in force. The continuous total disability of the insured may be a condition for the extension of benefits beyond the period the policy was in force, limited to the duration of the benefit period, if any, or payment of the maximum benefits.

(5) Military service. If a policy contains a status-type military service exclusion or a provision that suspends coverage during military service, the policy shall provide, upon receipt of written request, for refund of premiums as applicable to the person on a pro rata basis.

(6) Pregnancy benefit extension. In the event the insurer cancels or refuses to renew a policy providing pregnancy benefits, the policy shall provide an extension of benefits for a pregnancy commencing while the policy is in force and for which benefits would have been payable had the policy remained in force. This requirement does not apply to a policy that is canceled for the following reasons:

(a) the insured fails to pay the required premiums in accordance with the terms of the plan; or

(b) the insured person performs an act or practice that constitutes fraud in connection with the coverage or makes an intentional misrepresentation of material fact under the terms of the coverage.

(7) Transplant donor coverage. A policy providing coverage for the recipient in a transplant operation shall also provide reimbursement of any medical expenses of a live donor to the extent that benefits remain and are available under the recipient's policy or certificate, after benefits for the recipient's own expenses have been paid.

(8) Notice of premium change. A notice of change in premium shall be given no fewer than 45 days before the renewal date.

R590-233-6. Required Provisions.

(1) Applications.

(a) Questions used to elicit health condition information may not be vague and must reference a reasonable time frame in relation to the health condition.

(b) Completed applications shall be made part of the policy. A copy of the completed application shall be provided to the applicant prior to or upon delivery of the policy.

(c) Application forms shall provide a statement regarding the pre-existing waiting period and the requirements to receive any applicable credit for previous coverage.

(d) An application form shall include a question designed to elicit information as to whether the insurance to be issued is intended to replace any other accident and health insurance presently in force. A supplementary application or other form to be signed by the applicant containing the question may be used.

(2) Renewal and nonrenewal provisions. Accident and health insurance shall include a renewal, continuation or nonrenewal provision. The provision shall be appropriately captioned, shall appear on the first page of the policy, and shall clearly state the duration, where limited, of renewability and the duration of the term of coverage for which the policy is issued and for which it may be renewed.

(3) Endorsement acceptance.

(a) Except for endorsements by which the insurer effectuates a request made in writing by the policyholder or exercises a specifically reserved right under the policy, all endorsements added to a policy after date of issue or at reinstatement or renewal that reduce or eliminate benefits or coverage in the policy shall require signed acceptance by the policyholder.

(b) After the date of policy issue, any endorsement that increases benefits or coverage with a concurrent increase in premium during the policy term, must be agreed to in writing signed by the policyholder, except if the increased benefits or coverage is required by law.

(4) Additional premium. Where a separate additional premium is charged for benefits provided in connection with endorsements, the premium charge shall be set forth in the policy or certificate.

(5) Benefit payment standard. A policy or certificate that provides for the payment of benefits based on standards described as usual and customary, reasonable and customary, or words of similar import shall include a definition of the terms and an explanation of the terms in its accompanying outline of coverage.

(6) Preexisting conditions. If a policy or certificate contains any limitations with respect to preexisting conditions, the limitations shall appear as a separate paragraph of the policy or certificate and be labeled as "Preexisting Condition Limitations."

(7) Conversion privilege. If a policy or certificate contains a conversion privilege, it shall comply, in substance, with the following: The caption of the provision shall read "Conversion Privilege" or words of similar import. The provision shall indicate the persons eligible for conversion, the circumstances applicable to the conversion privilege, including any limitations on the conversion, and the person by whom the conversion privilege may be exercised. The provision shall specify the benefits to be provided on conversion or may state that the converted coverage will be as provided on a policy form then being used by the insurer for that purpose.

R590-233-7. Accident and Health Standards for Benefits.

The following standards for benefits are prescribed for the categories of coverage noted in the following subsections. An accident and health insurance policy or certificate subject to this rule shall not be delivered or issued for delivery unless it meets

the required standards for the specified categories. This section shall not preclude the issuance of any policy or contract combining two or more categories set forth in Subsection 31A-22-605(5).

Benefits for coverages listed in this section shall include coverage of inborn metabolic errors as required by Sections 31A-22-623 and Rule R590-194, and benefits for diabetes as required by Sections 31A-22-626 and Rule R590-200, if applicable.

(1) Major Medical Expense Coverage.

Major medical expense coverage is a policy of accident and health insurance that provides hospital, medical and surgical expense coverage.

(a) An aggregate maximum of not less than \$1,000,000 may be applied and include any combination of the following:

(i) coinsurance percentage, paid by the covered person, not to exceed 50% of covered charges per covered person per year;

(ii) coinsurance out-of-pocket maximum after any deductibles not to exceed \$20,000 per covered person per year; or

(iii) deductibles stated on per person, per family, per illness, per benefit period, or per year basis.

(b) A combination of the bases provided under Subsections(1)(a)(i), (ii), and (iii) may not exceed 5% of the aggregate maximum limit under the policy for each covered person.

(c) The following services must be provided:

(i) daily hospital room and board expenses subject only to limitations based on average daily cost of the semiprivate room rate in the area where the insured resides;

(ii) miscellaneous hospital services;

(iii) surgical services;

(iv) anesthesia services;

(v) in-hospital medical services;

(vi) out-of-hospital care, consisting of physician services rendered on an ambulatory basis where coverage is not provided elsewhere in the policy for diagnosis and treatment of sickness or injury, diagnostic x-ray, laboratory services, radiation therapy, and hemodialysis ordered by a physician; and

(vii) at least three of the following additional benefits must also be provided:

(A) in-hospital private duty registered nurse services;

(B) convalescent nursing home care;

(C) diagnosis and treatment by a radiologist or physiotherapist;

(D) rental of special medical equipment, as defined by the insurer in the policy;

(E) artificial limbs or eyes, casts, splints, trusses or braces;

(F) treatment for functional nervous disorders, and mental and emotional disorders; or

(G) out-of-hospital prescription drugs and medications.

(d) All required benefits may be subject to all applicable deductibles, coinsurance and general policy exceptions and limitations.

(e) A major medical expense policy may also have special or internal limitations for those services covered under Subsection (1)(c).

(f) Except as authorized by this subsection through the application of special or internal limitations, a major medical expense policy must be designed to cover, after any deductibles or coinsurance provisions are met, the usual, customary and reasonable charges, as determined consistently by the carrier and as subject to approval by the commissioner, or another rate agreed to between the insurer and provider, for covered services up to the lifetime policy maximum.

(2) Basic Medical Expense Coverage.

Basic medical expense coverage is a policy of accident and health insurance that provides hospital, medical and surgical expense coverage.

(a) An aggregate maximum of not less than \$500,000 may be applied, and may include any combination of the following:

(i) coinsurance percentage, paid by the covered person, not to exceed 50% of covered charges per covered person per year;

(ii) coinsurance out-of-pocket maximum after any deductibles, not to exceed \$25,000 per covered person per year; or

(iii) deductibles stated on per person, per family, per illness, per benefit period, or per year basis.

(b) A combination of the bases provided in Subsections (2)(a)(i), (ii) and (iii) may not exceed 10% of the aggregate maximum limit under the policy.

(c) The following services must be covered:

(i) daily hospital room and board expenses subject only to limitations based on average daily cost of the semiprivate room rate in the area where the insured resides or such other rate agreed to between the insurer and provider for a period of not less than 31 days during continuous hospital confinement;

(ii) miscellaneous hospital services;

(iii) surgical services;

(iv) anesthesia services;

(v) in-hospital medical services;

(vi) out-of-hospital care, consisting of physicians' services rendered on an ambulatory basis where coverage is not provided elsewhere in the policy for diagnosis and treatment of sickness or injury, diagnostic x-ray, laboratory services, radiation therapy and hemodialysis ordered by a physician; and

(vii) three of the following additional benefits must also be provided:

(A) in-hospital private duty registered nurse services;

(B) convalescent nursing home care;

(C) diagnosis and treatment by a radiologist or physiotherapist;

(D) rental of special medical equipment, as defined by the insurer in the policy;

(E) artificial limbs or eyes, casts, splints, trusses or braces;

(F) treatment for functional nervous disorders, and mental and emotional disorders; or

(G) out-of-hospital prescription drugs and medications.

(d) If the policy is written to complement underlying basic hospital expense coverage and basic medical-surgical expense coverage, the deductible may be increased by the amount of the benefits provided by the underlying basic coverage.

(e) The benefits required by Subsection (2) may be subject to all applicable deductibles, coinsurance and general policy exceptions and limitations.

(f) Basic medical expense policies may also have special or internal limitations for prescription drugs, nursing facilities, intensive care facilities, mental health treatment, alcohol or substance abuse treatment, transplants, experimental treatments, mandated benefits required by law and those services covered under Subsection (2)(c) and other such special or internal limitations as are authorized or approved by the commissioner.

(g) Except as authorized by this subsection through the application of special or internal limitations, basic medical expense policies must be designed to cover, after any deductibles or coinsurance provisions are met, the usual customary and reasonable charges, as determined consistently by the carrier and as subject to approval by the commissioner, or another rate agreed to between the insurer and provider, for covered services up to the lifetime policy maximum.

(3) Catastrophic Coverage.

Catastrophic coverage is a policy of accident and health insurance that:

(a) provides benefits for medical expenses incurred by the insured to an aggregate maximum of not less than \$1,000,000;

(b) contains no separate internal dollar limits;

(c) may be subject to a policy deductible which does not exceed the greater of 2% of the policy limit or the amount of

other in-force accident and health insurance coverage for the same medical expenses; and

(d) contains no percentage participation or coinsurance clause for expenses which exceed the deductible.

R590-233-8. Outline of Coverage Requirements.

(1) Major Medical Expense Coverage.

An outline of coverage, in the form prescribed below, shall be issued in connection with policies meeting the standards of Rule R590-233-7(1). The items included in the outline of coverage must appear in the sequence prescribed:

TABLE I

(COMPANY NAME)
 MAJOR MEDICAL EXPENSE COVERAGE
 OUTLINE OF COVERAGE

Read Your (Policy)(Certificate) Carefully - This outline of coverage provides a very brief description of the important features of your policy. This is not the insurance contract and only the actual policy provisions will control. The policy itself sets forth in detail the rights and obligations of both you and your insurance company. It is, therefore, important that you READ YOUR (POLICY)(CERTIFICATE) CAREFULLY!
 Major medical expense coverage is designed to provide, to persons insured, comprehensive coverage for major hospital, medical, and surgical expenses incurred as a result of a covered accident or sickness. Coverage is provided for daily hospital room and board, miscellaneous hospital services, surgical services, anesthesia services, in-hospital medical services, and out-of-hospital care, subject to any deductibles, copayment provisions, or other limitations that may be set forth in the policy.
 A brief specific description of the benefits, including dollar amounts, contained in this policy, in the following order:
 daily hospital room and board;
 miscellaneous hospital services;
 surgical services;
 anesthesia services;
 in-hospital medical services;
 out-of-hospital care; maximum dollar amount for covered charges; and other benefits, if any.
 A description of any policy provisions that exclude, eliminate, restrict, reduce, limit, delay, or in any other manner operate to qualify payment of the benefits.
 A description of policy provisions respecting renewability or continuation of coverage, including age restrictions or any reservation of right to change premiums.

(2) Basic Medical Expense Coverage.

An outline of coverage, in the form prescribed below, shall be issued in connection with policies meeting the standards of Subsection R590-233-7(2). The items included in the outline of coverage must appear in the sequence prescribed:

TABLE II

(COMPANY NAME)
 BASIC MEDICAL EXPENSE COVERAGE
 THIS (POLICY)(CERTIFICATE) PROVIDES LIMITED BENEFITS
 OUTLINE OF COVERAGE

Read Your (Policy)(Certificate) Carefully-This outline of coverage provides a very brief description of the important features of your policy. This is not the insurance contract and only the actual policy provisions will control. The policy itself sets forth in detail the rights and obligations of both you and your insurance company. It is, therefore, important that you READ YOUR (POLICY)(CERTIFICATE) CAREFULLY!
 Basic medical expense coverage is designed to provide, to persons insured, limited coverage for major hospital, medical, and surgical expenses incurred as a result of a covered accident or sickness. Coverage is provided for daily hospital room and board, miscellaneous hospital services, surgical services, anesthesia services, in-hospital medical services, and out-of-hospital care, subject to any deductibles, copayment provisions, or other limitations that may be set forth in the policy.
 A brief specific description of the benefits, including dollar amounts, contained in this policy, in the following order:

daily hospital room and board;
 miscellaneous hospital services;
 surgical services;
 anesthesia services;
 in-hospital medical services;
 out-of-hospital care;
 maximum dollar amount for covered charges; and other benefits, if any.
 A description of any policy provisions that exclude, eliminate, restrict, reduce, limit, delay, or in any other manner operate to qualify payment of the benefits.
 A description of policy provisions respecting renewability or continuation of coverage, including age restrictions or any reservation of right to change premiums.

(3) Catastrophic Coverage.

An outline of coverage, in the form prescribed below, shall be issued in connection with policies meeting the standards of Subsection R590-233-7(3). The items included in the outline of coverage must appear in the sequence prescribed:

TABLE III

(COMPANY NAME)
 CATASTROPHIC COVERAGE

OUTLINE OF COVERAGE
 Read Your (Policy)(Certificate) Carefully-This outline of coverage provides a very brief description of the important features of your policy. This is not the insurance contract and only the actual policy provisions will control. The policy itself sets forth in detail the rights and obligations of both you and your insurance company. It is, therefore, important that you READ YOUR (POLICY) (CERTIFICATE) CAREFULLY!
 Catastrophic coverage is designed to provide benefits for medical expenses incurred by the insured. Coverage is provided for daily hospital room and board, miscellaneous hospital services, surgical services, anesthesia services, in-hospital medical services, and out-of-hospital care, subject to any deductibles with no separate internal dollar limits.
 A brief specific description of the benefits, including dollar amounts, contained in this policy, in the following order:
 daily hospital room and board;
 miscellaneous hospital services;
 surgical services;
 anesthesia services;
 in-hospital medical services;
 out-of-hospital care; and other benefits, if any.
 A description of any policy provisions that exclude, eliminate, restrict, reduce, limit, delay, or in any other manner operate to qualify payment of the benefits.
 A description of policy provisions respecting renewability or continuation of coverage, including age restrictions or any reservation of right to change premiums.

(4) An insurer shall deliver an outline of coverage to an applicant or enrollee prior to upon the sale of an individual accident and health insurance policy as required in this rule.

(5) If an outline of coverage was delivered at the time of application or enrollment and the policy or certificate is issued on a basis which would require revision of the outline, a substitute outline of coverage properly describing the policy or certificate must accompany the policy or certificate when it is delivered and contain the following statement in no less than 12-point type, immediately above the company name:

"NOTICE: Read this outline of coverage carefully. It is not identical to the outline of coverage provided upon application, and the coverage originally applied for has not been issued."

(6) Where the prescribed outline of coverage is inappropriate for the coverage provided by the policy or certificate, an alternate outline of coverage shall be submitted to the commissioner for prior approval.

(7) Advertisements may fulfill the requirements for outlines of coverage if they satisfy the standards specified for outlines of coverage in this rule.

R590-233-9. Replacement of Accident and Health Insurance Requirements.

(1) Upon determining that a sale will involve replacement, an insurer, other than a direct response insurer, or its producer, shall furnish the applicant, prior to issuance or delivery of the policy, the notice described in Subsection (2). The insurer shall retain a copy of the notice. A direct response insurer shall deliver to the applicant, upon issuance of the policy, the notice described in Subsection (3).

(2) The notice required by Subsection (1) for an insurer, other than a direct response insurer, shall provide, in substantially the following form:

TABLE IV

NOTICE TO APPLICANT REGARDING REPLACEMENT OF ACCIDENT AND HEALTH INSURANCE

According to (your application) (information you have furnished), you intend to lapse or otherwise terminate existing accident and health insurance and replace it with a policy to be issued by (insert company name) Insurance Company. For your own information and protection, you should be aware of and seriously consider certain factors that may affect the insurance protection available to you under the new policy. Health conditions which you may presently have, (preexisting conditions) may not be immediately or fully covered under the new policy. This could result in denial or delay of a claim for benefits under the new policy, whereas a similar claim might have been payable under your present policy. You may wish to secure the advice of your present insurer or its producer regarding the proposed replacement of your present policy. This is not only your right, but it is also in your best interests to make sure you understand all the relevant factors involved in replacing your present coverage. If, after due consideration, you still wish to terminate your present policy and replace it with new coverage, be certain to truthfully and completely answer all questions on the application concerning your medical/health history. Failure to include all material medical information on an application may provide a basis for the company to deny any future claims and to refund your premium as though your policy had never been in force. After the application has been completed and before you sign it, reread it carefully to be certain that all information has been properly recorded. The above "Notice to Applicant" was delivered to me on: (Date) (Applicant's Signature)

(3) The notice required by Subsection (1) for a direct response insurer shall be as follows:

TABLE V

NOTICE TO APPLICANT REGARDING REPLACEMENT OF ACCIDENT AND HEALTH INSURANCE

According to (your application) (information you have furnished), you intend to lapse or otherwise terminate existing accident and health insurance and replace it with the policy delivered herewith issued by (insert company name) Insurance Company. Your new policy provides 30 days within which you may decide without cost whether you desire to keep the policy. For your own information and protection, you should be aware of and seriously consider certain factors that may affect the insurance protection available to you under the new policy. Health conditions that you may presently have, (preexisting conditions) may not be immediately or fully covered under the new policy. This could result in denial or delay of a claim for benefits under the new policy, whereas a similar claim might have been payable under your present policy. You may wish to secure the advice of your present insurer or its producer regarding the proposed replacement of your present policy. This is not only your right, but it is also in your best interests to make sure you understand all the relevant factors involved in replacing your present coverage. (To be included only if the application is attached to the policy). If, after due consideration, you still wish to terminate your present policy and replace it with new coverage, read the copy of the application attached to your new policy and be sure that all questions are answered fully and correctly. Omissions or misstatements in the application could cause an otherwise valid claim to be denied. Carefully check the application and write to (insert company name and address) within ten days if any

information is not correct and complete, or if any past medical history has been left out of the application. COMPANY NAME

R590-233-10. Existing Contracts.

Contracts issued prior to the effective date of this rule must be amended to comply with the revised provisions on the first policy anniversary following the effective date of this rule.

R590-233-11. Enforcement Date.

The commissioner will begin enforcing this rule January 1, 2006.

R590-233-12. Severability.

If any provision of this rule or the application thereof to any person or circumstance is for any reason held to be invalid, the remainder of the rule and the application of the provision to other persons or circumstances shall not be affected thereby.

R590. Insurance, Administration.**R590-267. Personal Injury Protection Relative Value Study Rule.****R590-267-1. Authority.**

This rule is promulgated by the insurance commissioner pursuant to Subsections 31A-2-201(3) and 31A-22-307(2).

R590-267-2. Purpose.

(1) The purpose of this rule is to establish a reasonable value of services and accommodations for the diagnosis, care, recovery, or rehabilitation of an injured person under automobile personal injury protection coverage as described in Subsection 31A-22-307(1)(a).

(2) As required by Subsection 31A-22-307(2), the reasonable value is based on the 75th percentile of medical, dental, and chiropractic charges, as they presently exist in the most populous county in this State.

R590-267-3. Scope.

This rule applies to services and accommodations provided:

- (1) under automobile personal injury protection coverage as described in Subsection 31A-22-307(1)(a); and
- (2) on or after January 1, 2014.

R590-267-4. Definitions.

(1) As used in this rule "Conversion Factor" means a multiplier used to convert the relative value unit or units of a service or a procedure to a reimbursement rate.

(2) As used in this rule "RVD 2015" means 2015 Edition of the Relative Values for Dentists published by Optum360, 2525 Lake Park Blvd., Salt Lake City, UT 84120; phone: (800) 464-3649; email: customerassistance@optum.com; website: www.optumcoding.com.

(3) As used in this rule "RVD 2013" means 2013 Edition of the Relative Values for Dentists published by Relative Values Studies, Inc., 12301 N. Grant St., Suite 230, Thornton, CO, 80241; phone: (866) 310-7874; email: info@rvsdata.com; website: www.rvsdata.com.

(4) As used in this rule "RVP 2015" means 2015 Edition of the Relative Values for Physicians published by Optum360, 2525 Lake Park Blvd., Salt Lake City, UT 84120; phone: (800) 464-3649; email: customerassistance@optum.com; website: www.optumcoding.com.

(5) As used in this rule "RVP 2013" means 2013 Edition of the Relative Values for Physicians published by Optum 360, 2525 Lake Park Blvd., Salt Lake City, UT 84120; phone: (800) 464-3649; email: customerassistance@optum.com; website: www.optumcoding.com.

(6) As used in this rule "Relative Value Unit" means a numerical value assigned to a medical or dental procedure as published in RVP and RVD respectively.

(7) The publications identified in Subsections R590-267-4(2), (3), (4), and (5) are hereby incorporated by reference within this rule.

R590-267-5. Conversion Factors.

(1)(a) The following conversion factors shall be used with RVP 2015 to determine the reasonable value of medical services or accommodations provided on or after January 1, 2016:

- (i) anesthesia, 97.13;
- (ii) surgery, 200.00;
- (iii) radiology, 35.84;
- (iv) pathology, 24.29;
- (v) medicine, 11.67;
- (vi) evaluation and management, 13.16.

(b) The conversion factor used with RVD 2015 to determine the reasonable value of dental services or accommodations provided on or after January 1, 2016 shall be 60.00.

(2)(a) The following conversion factors shall be used with RVD 2013 to determine the reasonable value of medical services or accommodations provided from January 1, 2014 through December 31, 2015:

- (i) anesthesia, 91.57;
- (ii) surgery, 180.00;
- (iii) radiology, 35.18;
- (iv) pathology, 23.85;
- (v) medicine, 10.87;
- (vi) evaluation and management, 11.85.

(b) The conversion factor used with RVD 2013 to determine the reasonable value of dental services or accommodations provided from January 1, 2014 through December 31, 2015 shall be 55.00.

R590-267-6. Fee Schedule.

The reasonable value of any service or accommodation shall be calculated by multiplying the relative value unit assigned to the service or accommodation by the applicable conversion factor prescribed in R590-267-5.

R590-267-7. Penalties.

A person found to be in violation of this rule shall be subject to penalties as provided under Section 31A-2-308.

R590-267-8. Severability.

If any provision of this rule or its application to any person or situation is held to be invalid, that invalidity shall not affect any other provision or application of this rule which can be given effect without the invalid provision or application, and to this end the provisions of this rule are declared to be severable.

R590. Insurance Administration.**R590-268. Small Employer Stop-Loss Insurance.****R590-268-1. Authority.**

This rule is promulgated pursuant to Section 31A-43-304 wherein the commissioner may make rules to implement Title 31A, Chapter 43.

R590-268-2. Scope.

This rule applies to all small employer stop-loss contracts issued or renewed on or after July 1, 2013.

R590-268-3. Purpose.

The purpose of this rule is to provide the content of the stop-loss insurance disclosure, prohibit lasering, and establish the form and manner of form and rate filings and of the annual actuarial certification and report on stop-loss experience.

R590-268-4. Definitions.

For the purposes of this rule, the commissioner adopts the definitions of Sections 31A-1-301 and 31A-43-102.

R590-268-5. Stop-Loss Insurance Disclosure.

(1) Stop-loss insurers marketing to small employers shall use the Utah Small Employer Stop-loss Disclosure.

(2) The stop-loss insurer may display the insurer's name, identifying logo, and address on the disclosure.

(3) The Utah Small Employer Stop-loss Disclosure, published January 15, 2014, is hereby incorporated by reference and is available on the Department's website at <https://insurance.utah.gov/legal-resources/rules/current-rules.php>.

(4) The disclosure may be altered for reasons specifically approved by the commissioner.

R590-268-6. Lasering.

(1) Subsection 31A-43-301(2)(a) prohibits lasering. For the purpose of this rule lasering includes:

(a) assigning a different attachment point for an individuals based on their expected claims or a given diagnosis;

(b) assigning a deductible to an individual that must be met before stop loss coverage applies;

(c) denying stop loss coverage to an individual who is otherwise covered by the small employer's medical plan; and

(d) applying an actively at work exclusion to stop loss coverage.

R590-268-7. Form and Rate Filings.

(1) A contract filing consists of one contract form, the application, any related documents, disclosure, rate manual, and actuarial memorandum.

(2) A new or revised rate manual shall:

(a) include a summary of how the rate is calculated;

(b) contain specific area factors applicable in Utah;

(c) be filed 30 days prior to use;

(d) be applied in the same manner for all small employer stop-loss contracts;

(e) describe how the overall rate is reviewed for compliance; and

(f) include an actuarial certification signed by a qualified actuary.

(3) All filings shall be submitted using SERFF.

R590-268-8. Annual Actuarial Memorandum and Certification.

(1) The insurer shall submit annually on or before April 1 using SERFF:

(a) stop-loss experience for the previous year for Utah;

(b) certification of compliance with requirements of section 31A-43-301; and

(c) an actuarial memorandum describing the review done in preparation of the certification.

(2) The insurer's stop-loss experience shall be presented by small employer and shall include:

(a) employer size including both covered lives count and employee count as of the beginning of the contract;

(b) covered lives exposure years and employee exposure years for the experience time period;

(c) specific attachment point;

(d) expected claims in the absence of stop loss insurance;

(e) expected claims under the specific attachment point;

(f) aggregate attachment point;

(g) earned premium; and

(h) claims paid by the stop loss insurance broken out by specific losses and aggregate losses.

R590-268-9. Penalties.

A person found to be in violation of this rule shall be subject to penalties as provided under Section 31A-2-308.

R590-268-10. Severability.

If any provision of this rule or its application to any person or situation is held to be invalid, that invalidity shall not affect any other provision or application of this rule which can be given effect without the invalid provision or application, and to this end the provisions of this rule are declared to be severable.

Title 31A, Chapter 43**

R612. Labor Commission, Industrial Accidents.**R612-100. Workers' Compensation Rules - General Provisions.****R612-100-1. Authority.**

These rules are enacted pursuant to the following statutory authority:

- A. Section 34A-1-104 of the Utah Labor Commission Act;
- B. Section 34A-2-103, 34A-2-201.3, 34A-2-407 and 34A-2-412 of the Utah Workers' Compensation Act;
- C. Section 34A-2-1001 et seq. of the Workers' Compensation Coverage Waiver Act;
- D. Section 59-9-101 of the Taxation of Admitted Insurers Act;
- E. Section 63G-4-202(1) of the Utah Administrative Procedures Act; and
- F. Section 78B-8-404 of Chapter 8, Title 78B, Utah Code Annotated.

R612-100-2. Definitions.

A. "Administrative Law Judge" or "ALJ" means a person designated by the Commission to hear and decide disputed cases.

B. "Claimant" means an injured employee, dependent(s) of an injured employee, medical providers, or any other person seeking relief or claiming benefits under the Utah Workers' Compensation Act or Utah Occupational Disease Act.

C. "Award" means a determination of the Commission, Appeals Board or Administrative Law Judge of the benefits due a claimant.

D. "Benefits" includes any payment, entitlement, or other relief provided under the Utah Workers' Compensation Act or Utah Occupational Disease Act.

E. "Commission" means the Utah Labor Commission.

F. "Defendant" means an employer, insurance carrier, Employers' Reinsurance Fund, Uninsured Employers' Fund or other person or entity against whom a claim for benefits is made.

G. "Division" means the Division of Industrial Accidents within the Commission.

H. "Disabled Injured Worker" means an injured worker who:

- 1. because of the injury or disease that is the basis for the employee being an injured worker:
 - a. is or will be unable to return to work in the injured worker's usual and customary occupation; or
 - b. is unable to perform work for which the injured worker has previous training and experience; and
- 2. reasonably can be expected to attain gainful employment after an evaluation provided for in accordance with Section 34A-2-413.5.

I. "Employer" is defined in Section 34A-2-103 of the Utah Workers' Compensation Act and includes self-insured employers and uninsured employers.

J. "First Aid" is medical care that is:

- 1. administered on-site or at an employer-sponsored free clinic; and
- 2. limited to the following:
 - a. non-prescription medications at non-prescription strength;
 - b. tetanus immunizations;
 - c. cleaning and applying bandages to skin surface wounds;
 - d. hot or cold packs, contrast baths and paraffin;
 - e. non-rigid support, such as elastic bandages, wraps, and back belts;
 - f. temporary immobilization devices for transporting an accident victim, such as splints, slings, neck collars, or back boards;
 - g. drilling a fingernail or toenail to relieve pressure, or draining fluids from blisters;
 - h. eye patches or use of simple irrigation or a cotton swab

to remove foreign bodies not embedded in or adhering to an eye;

- i. use of irrigation, tweezers, or cotton swab to remove splinters or foreign material;
 - j. finger guards;
 - k. massages;
 - l. drinking fluids to relieve heat stress.
3. "First aid" is limited to initial treatment and one follow-up visit within a seven-day period after the initial treatment, except that if first aid treatment was provided by a licensed health professional in an employer-sponsored free clinic, first aid includes initial treatment and two follow-up visits within a fourteen-day period after the initial treatment.
4. "First aid" does not include any treatment of a work injury that results in:
- a. loss of consciousness;
 - b. loss of work;
 - c. restriction of work;
 - d. transfer to another job.
- K. "Injury" includes work-related accidental injury and occupational disease.

L. "Insurance Carrier" includes any worker's compensation insurance carriers, self-insured employer and self-insured employer's adjusting company, unless otherwise specified.

M. "Payor" means any insurance carrier, self-insured employer, or uninsured employer that is liable for any benefit or other relief under the Utah Workers' Compensation Act or Utah Occupational Disease Act.

N. "Usual and Customary Rate (UCR)" is the rate of payment using Ingenix, or a similar service, for charges for services in a particular zip code.

R612-100-3. Forms Used By Industrial Accidents Division.

A. Physician's Initial Report of Work Injury Or Occupational Disease - Form 123. This form is used by physicians to report initial treatment of injured employees as required by Subsection R612-300-4.A. This form must be completed by the physician for any treatment for which a bill is generated, and for any treatment beyond "first aid" as that term is defined in Section R612-100-2.

B. Restorative Services Authorization - Forms 221a (Spine), 221b (Upper Extremity), and 221c (Lower Extremity). These forms must be used by any medical provider billing under the "Restorative Services" provisions of Subsection R612-300-5.G.

C. Statement of Benefits Paid by Insurance Carrier or Uninsured Employer - Form 141. This form is used by insurance carriers and uninsured employers to report the initial benefits paid to a claimant as required by Subsection R612-200-1.C.1.c.

D. Employee Notification of Denial of Claim - Form 089. This form is used by insurance carriers or uninsured employers, as required by Subsection R612-200-1.C.1.b. to notify a claimant of the reasons that the claim has been denied.

E. Statement of Suspension of Benefits - Form 142. An insurance carrier or uninsured employer must use this form to notify a claimant if disability compensation benefits are to be suspended. The form must specify the reason for suspension. The form shall be mailed to the employee and filed with the Division five days before the suspension occurs. Suspension of benefits shall not occur until 5 days after the form is mailed and filed.

F. Final Report of Injury and Statement of Losses - Form 130. This form is used by insurance carriers and uninsured employers to report the total losses occurring in each claim. This form must be filed with the Division within 30 days from closure of each claim and shall include all payments, including medical, disability compensation, dependent's benefits, and any other payments.

G. Dependents' Benefit Order - Form 151. This form is used by the Division in all accidental death cases where no issue of liability for the death or establishment of dependency is raised and only one household of dependents is involved. The carrier indicates acceptance of liability by completing the top half of the form and filing it with the Division.

H. Medical Information Authorization - Form 046. This form is used to release the applicant's medical records for use by the Commission or its subdivisions.

I. Application to Change Doctors - Form 102. This form must be submitted by an injured worker seeking to change physicians as provided by Subsection R612-300-2.D.3.

J. Notice of Intent to Leave State - Form 044. As required by Subsection R612-300-2.F. an injured worker must submit this form, together with Form 043, "Attending Physician's Statement," to the Division prior to the injured worker's change of residency from Utah to another locale.

K. Attending Physician's Statement - Form 043. As required by Subsection R612-300-2.F., this form must be completed by an injured worker and his Utah attending physician and then submitted to the Division with Form 044 before the injured worker changes residency from Utah to another locale.

L. Statement of Compensation - Form 219. As required by Section R612-200-5, insurance carriers and uninsured employers shall use this form to notify injured workers or dependents of the basis upon which compensation has been computed.

M. Request for Copies from Claimant's File - Form 205. This form is used to request copies from a claimant's file in the Commission with the appropriate authorized release.

N. Reemployment Program Forms.

1. "Initial Assessment Report - Form 206" - This form is completed either by the self-insured employer, the workers' compensation insurance provider, or by a rehabilitation agency contracted by the employer/carrier. The report contains claimant demographics and insurance coverage details, and addresses the issue of need for vocational assistance.

2. "Request for Decision of Administrative Review - Form 207" - This form is completed when the employee wishes to contest the information/decision made by the carrier or rehabilitation agency.

3. "U.S.O.R. Rehabilitation Progress Report - Form 208A" - This form shall be requested from the Utah State Office of Rehabilitation at each stage of the reemployment process (eligibility determination, reemployment plan development/implementation and case closure) or at any interruption of the process. An Individualized Written Rehabilitation Program (USOR 5 IWRP) shall also be requested when a plan is developed. All other private rehabilitation providers shall submit a Form 206 for any plan progress, postponement, or interruption in the plan.

4. "Reemployment Plan - Form 209" - This form is used for either an original or amended work plan. The form contains the details and estimated costs in returning the injured worker to the work force.

5. "Reemployment Plan Closure Report - Form 210" - This form is submitted to the Division upon completion of the reemployment plan. The closure report shall detail costs by category either by dollar amounts or time expended (only in the categories of evaluation and counseling). The report shall also contain all the details on the return to work.

6. "Application for Certification as a Reemployment Provider - Form 212" - This form is completed by rehabilitation providers who wish to be certified by the Division. It contains provider demographics, Utah staff credentials, services/fees, and references.

7. "Administrative Review Determination - Form 213" - This form is used by the Division to summarize the outcome of

the administrative review.

O. Medical Records - Form 302. This form is used by a claimant to request a free copy of his or her medical records from a medical provider. This form must be signed by a staff member of the Division.

R612-100-4. Designation as Informal Proceedings.

A. Pursuant to Section 63G-4-202, the following are designated as informal adjudicatory proceedings:

1. Assessment of penalty under Section 34A-2-211 against an employer conducting business without obtaining workers' compensation coverage;

2. Assessment of penalty under Section 34A-2-201.3 against an insured employer for direct payment of workers' compensation benefits; and

3. Assessment of penalty under Section 34A-2-407 against an employer or insurance carrier who does not timely report an industrial accident.

4. Assessment of penalty under Section 34A-2-205 against an insurance carrier for improperly notifying the division of coverage written in this state or for this state.

B. All subsequent adjudicative proceedings in the above-identified matters are designated as formal proceedings.

R612. Labor Commission, Industrial Accidents.**R612-200. Workers' Compensation Rules - Filing and Paying Claims.****R612-200-1. Reporting and Investigating Injuries.****A. Employers' Duty to Report Work Injuries.**

1. An employer is not required to report an injury that requires only first aid treatment, as defined by Subsection R612-100-3.A.

2. Except for injuries treated only by first aid, an employer shall report each employee work injury within 7 days after receiving initial notice of the injury, as follows:

a. An employer that has obtained workers' compensation insurance shall report the injury to its insurance carrier.

b. An employer that has received Division authorization to self-insure shall report the injury to its claims administrator.

c. An employer that has failed to obtain worker's compensation coverage shall report the injury by contacting the Division directly.

3. An employer has notice of a work injury upon the earliest of:

a. Observation of the injury;

b. Verbal or written notice of the injury from any source; or

c. Receipt of any other information sufficient to warrant further inquiry by the employer.

B. Submitting Reports of Injury to the Division.

1. Except for injuries treated only by first aid as defined by Subsection R612-100-3.A, an insurance carrier, self-insured claim administrator, or uninsured employer shall submit a First Report of Injury to the Division within fourteen days after receiving initial notice of the injury.

a. An insurance carrier or self-insured claim administrator has notice of a work injury upon receipt of verbal or written information that includes the name of the employer, the name of the employee and the date of injury.

b. The insurance carrier or self-insured claim administrator shall submit the First Report of Injury to the Division electronically in compliance with the content and formatting requirements of the Industrial Accidents Division Claims EDI Implementation Guide ("EDI Guide" V2.2, 04-19-13) and the Utah Claims R3 EDI Tables ("EDI Tables"; 04-19-13) adopted and incorporated by this reference as part of these rules.

c. An uninsured employer shall report the information required by this subsection as part of the employer's initial contact with the Division required by subsection A.2.c of this rule.

C. Investigation of Claims; Notice to Division and Claimants; Commencement of Benefits.

1. An insurance carrier, self-insured employer, or uninsured employer shall promptly investigate a reported work injury and either accept or deny workers' compensation liability for the claim within 21 days after receiving initial notice of the injury.

a. If, with reasonable diligence, an insurance carrier, self-insured employer, or uninsured employer cannot complete its investigation within 21 days after initial notice, it may complete and submit Division Form 441, "Notice of Further Investigation of a Workers' Compensation Claim" notify the Division and claimant that the matter remains under investigation. The insurance carrier, self-insured employer, or uninsured employer is then allowed 24 days in addition to the initial 21-day period to complete its investigation and accept or deny liability of the claim.

b. An insurance carrier or self-insured employer denying a claim for workers' compensation benefits shall report such denial through current EDI processes. An uninsured employer denying a claim for workers' compensation benefits shall complete and mail to the Division Form 089, "Employee Notification of Denial of Claim" and to the claimant.

c. If the insurance carrier, self-insured employer, or uninsured employer accepts liability for the claim, payment of benefits shall commence within 7 days from the date of acceptance. The insurance carrier, self-insured employer, or uninsured employer shall use Division Form 141, "Statement of Insurance Carrier or Uninsured Employer with Respect to Payment of Benefits" to report the initial benefits paid to a claimant. Form 141 must accompany the first payment to the claimant and must be filed with or mailed to the Division on that same date.

d. An insurance carrier, self-insured employer, or uninsured employer's payment of benefits during investigation of a claim does not prevent subsequent denial of the claim after the investigation is completed.

D. Consequences of Failure to Comply.

1. Pursuant to Subsection 34A-2-407(8) of the Utah Workers' Compensation Act, the Division may impose a civil assessment of up to \$500 for an insurance carrier, insured employer, self-insured employer, or uninsured employer's failure, without good cause, to comply with the requirements of this rule.

a. "Good cause" includes a claimant's unreasonable failure to sign requested medical releases or otherwise cooperate in the investigation of a claim.

b. For improperly filed reports, the civil assessment shall be imposed for the report as a whole and not for each data element within a report.

2. In addition to the civil assessment authorized by Subsection 34A-2-407(8), an insurance company or self-insured employer's failure, without good cause, to comply with the requirements of this rule may result in:

a. referral of the insurance company to the Insurance Department for appropriate disciplinary action; or

b. revocation of a self-insured employer's authorization to remain self-insured.

3. The method of issuing the assessments shall be set by the division's policies and procedures.

4. Assessments shall be issued in the form of an order signed by the division's presiding officer and pursuant to the requirements contained in Section 63G-4-203.

5. An aggrieved party may seek agency review of any order pursuant to Section 63G-4-301.

R612-200-2. Payment of Benefits, Interest and Attorney Fees.

A. Timing and payment of benefits. A workers' compensation benefit is due and payable when the claimant has satisfied all legal requirements applicable to that benefit.

1. Payment intervals for compensation. After entitlement to disability compensation or dependent's benefits has been established, such compensation shall be paid in regular intervals of at least once a month, except that TTD and TPD benefits shall be paid twice monthly.

2. Form of payment. A payor may choose to pay benefits by check, debit card or electronic fund transfer, provided that the form of payment allows a claimant to access the full amount of the benefit on the date the payment is due. No fee or charge of any kind may be assessed against the claimant.

3. Payment to be made directly to claimant. Workers' compensation disability benefits and dependents' benefits shall be paid solely and directly to the claimant. Benefits may be paid "in care of" the employer if the employer coordinates employee benefits. If payment of such benefits is made by check, the check shall be personally delivered to the claimant or mailed to the claimant's home address.

B. Deduction and payment of attorney fee. The computation and payment of fees for claimants' attorneys is governed by 34A-1-309 and Section R602-2-4, "Attorney Fees." A separate check should be issued to the worker's attorney in the

amount approved or ordered by the Commission, unless otherwise directed by the Commission. Payment of the worker's attorney by issuing a check payable to the worker and his attorney jointly constitutes a violation of this rule.

C. Interest. As required by Subsection 34A-2-420(3) of the Utah Workers' Compensation Act, any final order of the Commission awarding benefits will include interest on the principal amount of the benefits at the rate of 8% per annum from the date the benefit or any part thereof was due and payable.

D. Discounting of lump sum payments. Any proposal to pay all or part of a claimant's future workers' compensation benefits in a present lump sum must be submitted to the Adjudication Division for review and approval. A discount rate of eight percent per annum shall be used to determine the present value of such benefits. The following table may be used to determine a benefit's present value by interpolating, when necessary, the weeks to be discounted between the weeks listed on the table.

TABLE

R612-200-3. Statement of Compensation.

At the time a payor first pays permanent partial disability compensation or dependent's benefits to a claimant, the payor shall complete Form 219 "Statement of Compensation." The completed form and supporting documents shall be mailed to the claimant or dependents but need not be filed with the Division unless requested.

R612-200-4. Insurance Carrier/Employer Liability.

A. This rule governs responsibility for payment of benefits for a work injury when:

1. The claimant's entitlement to benefits is not in dispute; and
2. There is a dispute between payors regarding their respective liability for such benefits because the claimant has suffered separate compensable injuries which are the liability of the different payors.

B. In cases meeting the criteria of subsection A, the payor providing coverage for the most recent compensable injury shall advance benefits to the claimant. The benefits advanced shall be

limited to medical benefits and temporary total disability compensation and shall be paid according to the entitlement in effect on the date of the earliest related injury.

1. The payor advancing benefits shall notify the non-advancing payor within the time periods established by Subsection R612-200-1.B, that benefits are to be advanced pursuant to this rule.

2. The payor not advancing benefits, upon notification from the advancing payor, shall notify the advancing payor within 10 working days of any potential defenses or limitations of the non-advancing payor's liability.

C. Payors are encouraged to settle liabilities pursuant to this rule. However, any party may file a request for agency action with the Commission for determination of liability for the benefits at issue.

D. The medical utilization decisions of the payor advancing benefits pursuant to this rule shall be presumed reasonable with respect to the issue of reimbursement.

R612-200-5. Permanent Total Disability.

A. This rule applies to claims for permanent total disability compensation under the Utah Workers' Compensation Act.

1. Subsection B applies to permanent total disability claims arising from accident or disease prior to May 1, 1995.

2. Subsection C applies to permanent total disability claims arising from accident or disease on or after May 1, 1995.

B. For claims arising from accident or disease on or after July 1, 1988 and prior to May 1, 1995, the Commission is required under Section 34A-2-413, to make a finding of total disability as measured by the substance of the sequential decision-making process of the Social Security Administration under Title 20 of the Code of Federal Regulations, amended April 1, 1993. The use of the term "substance of the sequential decision-making process" is deemed to confer some latitude on the Commission in exercising a degree of discretion in making its findings relative to permanent total disability. The Commission does not interpret the code section to eliminate the requirement that a finding by the Commission in permanent and total disability shall in all cases be tentative and not final until rehabilitation training and/or evaluation has been accomplished.

1. In the event that the Social Security Administration or its designee has made, or is in the process of making, a determination of disability under the foregoing process, the Commission may use this information in lieu of instituting the process on its own behalf.

2. In evaluating industrial claims in which the injured worker has qualified for Social Security disability benefits, the Commission will determine if a significant cause of the disability is the claimant's industrial accident or some other unrelated cause or causes.

3. To make a tentative finding of permanent total disability the Commission incorporates the rules of disability determination in 20 CFR 404.1520, amended April 1, 1993. The sequential decision making process referred to requires a series of questions and evaluations to be made in sequence. In short, these are:

- a. Is the claimant engaged in a substantial gainful activity?
- b. Does the claimant have a medically severe impairment?
- c. Does the severe impairment meet or equal the duration requirement in 20 CFR 404.1509, amended April 1, 1993, and the listed impairments in 20 CFR Subpart P Appendix 1, amended April 1, 1993?
- d. Does the impairment prevent the claimant from doing past relevant work?
- e. Does the impairment prevent the claimant from doing any other work?

4. After the Commission has made a tentative finding of permanent total disability:

- a. In those cases arising after July 1, 1994, the Commission

shall order initiation of payment of permanent total disability compensation;

b. the Commission shall review a summary of reemployment activities undertaken pursuant to the Utah Injured Worker Reemployment Act, as well as any qualified reemployment plan submitted by the employer or its insurance carrier; and

c. unless otherwise stipulated, the Commission shall hold a hearing to consider the possibility of rehabilitation and reemployment of the claimant pending final adjudication of the claim.

5. After a hearing, or waiver of the hearing by the parties, the Commission shall issue an order finding or denying permanent total disability based upon the preponderance of the evidence and with due consideration of the vocational factors in combination with the residual functional capacity which the Commission incorporates as published in 20 CFR 404 Subpart P Appendix 2, amended April 1, 1993.

C. For permanent total disability claims arising on or after May 1, 1995, Section 34A-2-413 requires a two-step adjudicative process. First, the Commission must make a preliminary determination whether the applicant is permanently and totally disabled. If so, the Commission will proceed to the second step, in which the Commission will determine whether the applicant can be reemployed or rehabilitated.

1. First Step - Preliminary Determination of Permanent Total Disability: On receipt of an application for permanent total disability compensation, the Adjudication Division will assign an Administrative Law Judge to conduct evidentiary proceedings to determine whether the applicant's circumstances meet each of the elements set forth in Subsections 34A-2-413(1)(b) and (c).

(a) If the ALJ finds the applicant meets each of the elements set forth in Subsections 34A-2-413(1)(b) and (c), the ALJ will issue a preliminary determination of permanent total disability and shall order the employer or insurance carrier to pay permanent total disability compensation to the applicant pending completion of the second step of the adjudication process. The payment of permanent total disability compensation pursuant to a preliminary determination shall commence as of the date established by the preliminary determination and shall continue until otherwise ordered.

(b) A party dissatisfied with the ALJ's preliminary determination may obtain additional agency review by either the Labor Commissioner or Appeals Board pursuant to Subsection 34A-2-801(3). If a timely motion for review of the ALJ's preliminary determination is filed with either the Labor Commissioner or Appeals Board, no further adjudicative or enforcement proceedings shall take place pending the decision of the Commissioner or Board.

(c) A preliminary determination of permanent total disability by the Labor Commissioner or Appeals Board is a final agency action for purposes of appellate judicial review.

(d) Unless otherwise stayed by the Labor Commissioner, the Appeals Board or an appellate court, an appeal of the Labor Commissioner or Appeals Board's preliminary determination of permanent total disability shall not delay the commencement of "second step" proceedings discussed below or payment of permanent total disability compensation as ordered by the preliminary determination.

(e) The Commissioner or Appeals Board shall grant a request for stay if the requesting party has filed a petition for judicial review and the Commissioner or Appeals Board determine that:

(i) the requesting party has a substantial possibility of prevailing on the merits;

(ii) the requesting party will suffer irreparable injury unless a stay is granted; and

(iii) the stay will not result in irreparable injury to other

parties to the proceeding.

2. Second Step - Reemployment and Rehabilitation: Pursuant to Subsection 34A-2-413(6), if the first step of the adjudicatory process results in a preliminary finding of permanent total disability, an additional inquiry must be made into the applicant's ability to be reemployed or rehabilitated, unless the parties waive such additional proceedings.

(a) The ALJ will hold a hearing to consider whether the applicant can be reemployed or rehabilitated.

(i) As part of the hearing, the ALJ will review a summary of reemployment activities undertaken pursuant to the Utah Injured Worker Reemployment Act;

(ii) The employer or insurance carrier may submit a reemployment plan meeting the requirements set forth in Subsection 34A-2-413(6)(a)(ii) and Subsections 34A-2-413(6)(d)(i) through (iii).

(b) Pursuant to Subsection 34A-2-413(4)(b) the employer or insurance carrier may not be required to pay disability compensation for any combination of disabilities of any kind in excess of the amount of compensation payable over the initial 312 weeks at the applicable permanent total disability compensation rate.

(i) Any overpayment of disability compensation may be recouped by the employer or insurance carrier by reasonably offsetting the overpayment against future liability paid before or after the initial 312 weeks.

(ii) An advance of disability compensation to provide for the employee's subsistence during the rehabilitation process is subject to the provisions of Subsection 34A-2-413(4)(b), described in subsection 2.(b) above, but can be funded by reasonably offsetting the advance of disability compensation against future liability normally paid after the initial 312 weeks.

(iii) To fund an advance of disability compensation to provide for an employee's subsistence during the rehabilitation process, a portion of the stream of future weekly disability compensation payments may be discounted from the future to the present to accommodate payment. Should this be necessary, the employer or insurance carrier shall be allowed to reasonably offset the amounts paid against future liability payable after the initial 312 weeks. In this process, care should be exercised to reasonably minimize adverse financial impact on the employee.

(iv) In the event the parties cannot agree as to the reasonableness of any proposed offset, the matter may be submitted to an ALJ for determination.

(c) Subsections 34A-2-413(7) and (9) require the applicant to fully cooperate in any evaluation or reemployment plan. Failure to do so shall result in dismissal of the applicant's claim or reduction or elimination of benefit payments including disability compensation and subsistence allowance amounts, consistent with the provisions of Section 34A-2-413(7) and (9).

(d) Subsection 34A-2-413(6) requires the employer or its insurance carrier to diligently pursue any proffered reemployment plan. Failure to do so shall result in a final award of permanent total disability compensation to the applicant.

(e) If, after the conclusion of the foregoing "second step" proceeding, the ALJ concludes that successful rehabilitation is not possible, the ALJ shall enter a final order for continuing payment of permanent total disability compensation. The period for payment of such compensation shall commence on the date the employee became permanently and totally disabled, as determined by the ALJ.

(f) Alternatively, if after the conclusion of the "second step" proceeding, the ALJ concludes that successful rehabilitation and/or reemployment is possible, the ALJ shall enter a final order to that effect, which order shall contain such direction to the parties as the ALJ shall deem appropriate for successful implementation and continuation of rehabilitation and/or reemployment. As necessary under the particular circumstances of each case, the ALJ's final order shall provide

for reasonable offset of payments of any disability compensation that constitute an overpayment under Subsection 34A-2-413(4)(b).

(g) The ALJ's decision is subject to all administrative and judicial review provided by law.

D. For purposes of this rule, the following standards and definitions apply:

1. Other work reasonably available: Subject to medical restrictions and other provisions of the Act and rules, other work is reasonably available to a claimant if such work meets the following criteria:

a. The work is either within the distance that a resident of the claimant's community would consider to be a typical or acceptable commuting distance, or is within the distance the claimant was traveling to work prior to his or her accident;

b. The work is regular, steady, and readily available; and

c. The work provides a gross income at least equivalent to:

(1) The current state average weekly wage, if at the time of the accident the claimant was earning more than the state average weekly wage then in effect; or

(2) The wage the claimant was earning at the time of the accident, if the employee was earning less than the state average weekly wage then in effect.

2. Cooperation: As determined by an administrative law judge, an employee is not entitled to permanent total disability compensation or subsistence benefits unless the employee fully cooperates with any evaluation or reemployment plan. The ALJ will evaluate the cooperation of the employee using, but not limited to, the following factors: attendance, active participation, effort, communication with the plan coordinator, and compliance with the requirements of the vocational plan. In determining if these factors were met, the ALJ shall consider relevant changes in the employee's documented medical condition.

3. Diligent Pursuit: The employer or its insurance carrier shall diligently pursue the reemployment plan. The ALJ will evaluate the employer or insurance carrier's diligent pursuit of the plan using, but not limited to, the following factors: timely payment of expenses and benefits outlined in the vocational plan, and as required by the educational institution providing the vocational training, communication with the employee, compliance with the requirements of the vocational plan, and timely modification of the plan as required by documented changes in the employee's medical condition.

4. Resolution of disputes regarding "cooperation" and "diligent pursuit": If a party believes another party is not cooperating with or diligently pursuing either the evaluations necessary to establish a plan, or the requirements of an approved reemployment or rehabilitation plan, the aggrieved party shall submit to the workers' compensation mediation unit an outline of the specific instances of non-cooperation or lack of diligence. Other parties may submit a reply. The Mediation Unit will promptly schedule mediation to reestablish cooperation among the parties necessary to evaluate or comply with the plan. If mediation is unsuccessful, a party may request the Adjudication Division resolve the dispute. The Adjudication Division will conduct a hearing on the matter within 30 days and shall issue a written decision within 10 days thereafter.

R612-200-6. Burial Expenses.

1. The Commission adopts this rule pursuant to authority granted by Section 34A-2-418 of the Utah Workers' Compensation Act.

2. If death results from a work injury, burial expenses up to \$9,000 shall be paid. Unusual circumstances may require additional payment, either voluntarily or through Commission order.

3. During each even-numbered year the Commission shall review this rule and make such adjustments as are necessary so

that payment of burial expense required by this rule remains equitable when compared to the average cost of burial in this state.

**34A-2-101 et seq.
34A-3-101 et seq.
34A-1-104**

R612. Labor Commission, Industrial Accidents.**R612-300. Workers' Compensation Rules - Medical Care.****R612-300-1. Purpose, Scope and Definitions.**

A. Purpose and scope. Pursuant to authority granted the Utah Labor Commission under Subsection 34A-2-407(9) and Subsection 34A-2-407.5(1) of the Utah Workers' Compensation Act, these rules establish:

1. Reasonable fees for medical care necessary to treat workplace injuries;
2. Standards for disclosure of medical records;
3. Reporting requirements; and
4. Treatment protocols and quality care guidelines.

B. Definitions. The following definitions apply within Rule R612-300:

1. "Health care provider" is defined by Subsection 34A-2-111(1)(a) as "a person who furnishes treatment or care to persons who have suffered bodily injury" and includes hospitals, clinics, emergency care centers, physicians, nurses and nurse practitioners, physician's assistants, paramedics and emergency medical technicians.

2. "Injured worker" is an individual claiming workers' compensation medical benefits for a work-related injury or disease.

3. "Payor" is the entity responsible for payment of an injured worker's medical expenses;

4. "Physician" is defined by Subsection 34A-2-111(1)(b) to include any licensed podiatrist, physical therapist, physician, osteopath, dentist or dental hygienist, physician's assistant, naturopath, acupuncturist, chiropractor, or advance practice registered nurse.

5. "Workplace injury" is an injury or disease compensable under either the Utah Workers' Compensation Act or the Utah Occupational Disease Act.

R612-300-2. Obtaining Medical Care for Injured Workers.

A. Right of payor to designate initial health care provider.

1. A Payor may adopt managed health care programs. Such programs may designate specific health care providers as "preferred providers" for providing initial medical care for injured workers.

2. A preferred provider program must allow an injured worker to select from two or more health care providers to obtain necessary medical care. At the time a preferred provider program is established, the payor must notify employees of the requirements of the program.

3. If the requirement of subsection A.2. are met, an injured worker subject to a preferred provider program must seek initial medical care from a preferred provider unless:

- a. No preferred provider is available;
- b. The injured worker believes in good faith that his or her medical condition is not a workplace injury; or
- c. Travel to a preferred provider is unduly burdensome.

4. If an injured worker who is subject to a preferred provider program fails to obtain initial medical care from a preferred provider, the payor's liability for the cost of such initial medical care is limited to the amount the payor would have paid a preferred provider. The injured worker may be held personally liable for the remaining balance.

B. Liability for medical expense incurred at payor's direction. If a payor directs an injured worker to obtain an initial medical assessment of a possible work injury, the payor is liable for the cost of such assessment.

1. A medical provider performing an initial assessment must obtain the payor's preauthorization for any diagnostic studies beyond plain x-rays.

C. Injured worker's right to select provider after initial medical care. After an injured worker has received initial care from a preferred provider, the injured worker may obtain subsequent medical care from a qualified provider of his or her

choice. The payor is liable for the expense of such medical care.

1. An injured worker's right to select medical providers is subject to subsection D. of this rule, "Limitations to Injured Worker's Right to Change Physicians."

D. Limitations on injured worker's right to change physicians.

1. An injured worker may change health care providers one time without obtaining permission from the payor. The following circumstances DO NOT constitute a change of health care provider:

a. A treating physician's referral of the injured worker to another health care provider for treatment or consultation;

b. Transfer of treatment from an emergency room to a private physician, unless the emergency room was designated as the payor's preferred provider;

c. Medically necessary emergency treatment;

d. A change of physician necessitated by the treating physician's failure or refusal to rate a permanent partial impairment.

2. The injured worker shall promptly report any change of provider to the payor.

3. After an injured worker has exercised his or her one-time right to change health care providers, the worker must request payor approval of any subsequent change of provider. If the payor denies or fails to respond to the request, the injured worker may request approval from the Director of the Division of Industrial Accidents. The Director will authorize a change of provider if necessary for the adequate medical treatment of the injured worker or for other reasonable cause.

4. An injured worker who changes health care providers without payor or Division approval may be held personally liable for the non-approved provider's fees.

E. Hospital or surgery pre-authorization. Except when immediate surgery or hospitalization is medically necessary on an emergency basis, surgery or hospitalization must be pre-authorized by the payor.

1. Within two working days of receipt of a request for authorization, the payor shall notify the physician and injured worker that the request is either approved or denied, or is undergoing medical review.

2. Any medical review of a pending request for authorization must be conducted promptly.

F. Notification required from injured workers leaving Utah. Section 34A-2-604 of the Workers' Compensation Act requires injured workers receiving medical care for a workplace injury to notify the Industrial Accidents Division before leaving the state or locality. Division forms 043 and Form 044 are to be used to provide such notice.

G. Injured worker's right to privacy. No agent of the payor may be present during an injured worker's medical care without the consent of the injured worker. However, if the payor's agent is excluded from a medical visit, the physician and the injured worker shall meet with the agent at the conclusion of the visit or at some other reasonable time so as to communicate regarding medical care and return-to-work issues.

H. Payor's right of medical examination. The payor may arrange for the medical examination of an injured worker at any reasonable time and place. A copy of the medical examination report shall be made available to the Commission upon request.

R612-300-3. Required Reports.

A. Form 123, Physician's Initial Report. Within one week after providing initial medical care to an injured worker, a health care provider shall complete "Form 123 - Physicians' Initial Report." The provider shall fully complete Form 123 according to its instructions. The provider shall then file Form 123 with the Division and payor.

1. Form 123 must be completed and filed for every initial visit for which a bill is generated, including first aid, when the

worker reports that his or her medical condition is work related.

2. If initial medical care is provided by any health care provider other than a physician, Form 123 must be countersigned by the supervising physician.

B. Form 221, Restorative Services Authorization. Form 221, "Restorative Services Authorization Form" required by Subsection R612-300-5. C. 7. shall be filed with both the payor and the Division.

C. Forms 043, Employee's Intent to Leave State, and Form 044, Attending Physician's Statement. These forms are to be submitted to the Division before an injured worker leaves Utah.

D. Form 110, Release to Return to Work. Form 110 shall be mailed by either the health care provider or payor to the injured worker and Division within five calendar days after the health care provider releases the injured worker to return to work.

R612-300-4. General Method For Computing Medical Fees.

A. Adoption of "CPT" and "RBRVS." The Labor Commission hereby adopts and by this reference incorporates: "Optum 2015 The Essential RBRVS, 2015 1st Quarter Emergency Update," designated as 1761/RBRCU/U1779R--RBRC15/RBRC/U1779R, ("RBRVS" hereafter).

B. Medical fees calculated according to the RBRVS relative value unit assigned to each CPT code. Unless some other provision of these rules specifies a different method, the RBRVS is to be used in conjunction with the "conversion factors" established in subsection C. of this rule to calculate payments for medical care provided to injured workers.

C. Conversion Factors. Fees for medical care of injured workers shall be computed by determining the relative value unit ("RVU") assigned by the RBRVS to a CPT code and then multiplying that RVU by the following conversion factors for specific medical specialties:

1. Anesthesiology (1 unit per 15 minutes of anesthesia): \$53.00;
2. Medicine (Evaluation and Medicine Codes 99201 - 99204 and 99211-99214): \$50.00;
3. Pathology and Laboratory: \$56.00;
4. Radiology: \$58.00;
5. Restorative Services: \$50.00;
6. Surgery (all 20000 codes, codes 49505 thru 49525, and all 60000 codes): \$62.00;
7. Other Surgery: \$40.00.

D. Fees for Medical care not addressed by CPT/RBRVS, or requiring unusual treatment.

1. The payor and medical provider may establish and agree to a reasonable fee for medical care of an injured worker if:

- a. neither the CPT/RBRVS or any other provision of these rules address the medical care in question; or
- b. application of CPT/RBRVS or other provisions of these rules would result in an inadequate fee due to extraordinary difficulty of treatment.

2. If the medical provider and payor cannot agree to a reasonable fee in such cases, the provider can request a hearing before the Commission's Adjudication Division to establish a reasonable fee.

R612-300-5. Fees for Specific Procedures.

A. Needle procedures: Trigger point injections are reported per muscle. Payment under CPT code 20553 for injections of up to three muscles is the maximum allowed for any one treatment session, regardless of the number of muscles treated.

B. Radiology.

1. The cost of radioisotopes, gadolinium and comparable materials may be charged at the provider's cost plus 15%.

2. When x-rays are reviewed as part of an independent evaluation of the patient, a consultation, or other office visit, the

review is included as a part of the basic service to the patient and may not be billed separately.

C. Restorative Services.

1. The following criteria must be met before payment is allowed for restorative services:

- a. The patient's condition must have the potential for restoration of function;
- b. The treatment must be prescribed by the treating physician;
- c. The treatment must be specifically targeted to the patient's condition; and
- d. The provider must be in constant attendance during the providing of treatment.

2. No payment is allowed for CPT codes 97024, diathermy; 97026, infrared therapy; 97028, ultraviolet therapy/cold laser therapy; 97005, athletic training evaluations; 97006, athletic training reevaluation.

3. All restorative services provided must be itemized even if not billed.

4. Medical providers billing under CPT codes 97001 through 97610 are limited to payment for a maximum of three procedures/units per visit, or six procedures if different sites are treated. Services billed under CPT codes 97545, 97546 and 97150 require preauthorization and are limited to 4 units per injury. The payor shall pay the three highest valued procedures for each treatment site for the visit.

5. Patient education is to be billed using CPT code 97535 rather than codes 98960 through 98962, and is limited to 4 units per injury claim.

6. The entire spine is considered to be a single body part or unit. For that reason, CPT codes 98941 through 98943 and 98926 through 98929 may not be used for billing purposes.

7. When a change in treatment or a new RSA is required, physicians and physical therapists may bill for one evaluation and up to 2 modalities/procedures. Without an evaluation, they may bill for up to 3 modalities/procedures. With prior authorization from the payor, physicians and physical therapists may make additional billing when justified by special circumstances.

8. Any medical provider billing for restorative services shall file the appropriate version of Form 221, "Restorative Services Authorization (RSA) form" with the payor and the Division within ten days of the initial evaluation. Subjective/objective/assessment/plan ("SOAP") notes are to be sent to the payor in addition to the RSA form. SOAP notes are not to be sent to the Division unless requested.

a. Upon receipt of the provider's RSA form and SOAP notes, the payor shall respond within ten days by authorizing a specified number of treatments or denying the request. No more than eight treatments may be provided during this ten-day authorization period.

b. A payor may deny the requested treatments for the following reasons:

i. The injury or disease being treated is not work related;

or

ii. The payor has received written medical opinion or other medical information indicating the treatment is not necessary. A copy of such written opinion or information must be provided to the injured worker, the medical provider, and the Division.

c. In cases where approval is received for initial treatment, the provider shall submit updated RSA forms and SOAP notes to the payor for approval or denial at least every six treatments.

d. An injured worker or provider may request a hearing before the Division of Adjudication to resolve issues of compensability, necessity of treatment, and compliance with this subsection's time limits.

D. Functional Capacity Evaluations. The following functional capacity evaluations require payor preauthorization and are billed in 15 minute increments under CPT code 97750:

1. A limited functional capacity evaluation to determine an injured worker's dynamic maximal repetitive lifting, walking, standing and sitting tolerance. Billing for this type of evaluation is limited to a maximum of 45 minutes.

2. A full functional capacity evaluation to determine an injured worker's maximum and repetitive lifting, walking, standing, sitting, range of motion, predicted maximal oxygen uptake, as well as ability to stoop, bend, crawl or perform work in an overhead or bent position. In addition, this evaluation includes reliability and validity measures concerning the individual's performance. Billing for this type of evaluation is limited to a maximum of 2.5 hours.

3. A work capacity evaluation to determine an injured worker's capabilities based on the physical aspects of a specific job description. Billing for this type of evaluation is limited to a maximum of 2 hours.

4. A job analysis to determine the physical aspects of a particular job. Billing is not subject to a maximum time limit due to the variability of factors involved in the analysis.

E. Impairment Ratings and Insurance Medical Examinations.

1. Impairment Rating by Treating Physician. Treating physicians shall bill for preparation of impairment ratings under CPT code 99455, with 2.0 RVU assigned/30 minutes.

2. Impairment Rating by Non-Treating Physician. Non-treating physicians may bill for preparation of impairment ratings under CPT code 99456, with 2.65 RVU assigned/30 minutes.

3. Medical Evaluations Commissioned by Payors. The Labor Commission does not regulate fees for medical evaluations requested by payors.

F. Transcutaneous Electrical Nerve Stimulators (TENS). No fee is allowed for TENS unless it is prescribed by a physician and supported by prior diagnostic testing showing the efficacy of TENS in control of the patient's chronic pain. TENS testing and training is limited to four (4) sessions and a 30-day trial period but may be extended with written documentation of medical necessity.

G. Electrophysiologic Testing. A physician who is legally authorized by his or her medical practice act to diagnose injury or disease is entitled to the full fee for electrophysiologic testing. Physical therapists and physicians who are qualified to perform such testing but who are not legally authorized to diagnose injury or disease are entitled to payment of 75% of the full fee.

H. Dental Injuries.

1. Initial Treatment.

a. If an employer maintains a medical staff or designates a company doctor, an employee requiring treatment for a workplace dental injury shall report to such medical staff or doctor and follow their directions for obtaining the necessary dental treatment.

b. If an employer does not maintain a medical staff or designate a company doctor, or if such medical staff or doctor is unavailable, the injured worker may obtain the necessary dental care from a dentist of his or her choice. The payor shall pay the dentist at 70% of UCR for services rendered.

2. Subsequent treatment.

a. If additional dental care is necessary, the dentist who provided initial treatment may submit to the payor a request for authorization to continue treatment. The transmission date of the request must be verifiable. The request itself must include a description of the injury, the additional treatment required, and the fee to be charged for the additional treatment.

i. The payor shall respond to the request for authorization within 10 working days of the request's transmission. This 10-day period can be extended with written approval of the Director of the Industrial Accidents Division.

ii. If the payor does not respond to the dentist's request for authorization within 10 working days, the dentist may proceed

with treatment and the payor shall pay the cost of treatment as contained in the request for authorization.

iii. If the payor approves the proposed treatment, the payor shall send written authorization to the dentist and injured worker. This authorization shall include the amount the payor agrees to pay for the treatment. If the dentist accepts the payor's payment offer, the dentist may proceed to provide the approved services and shall be paid the agreed upon amount.

iv. If the dentist proceeds with treatment without authorization, the dentist's fee is limited to 70% of UCR.

b. If the dentist who provided initial treatment is unwilling to provide subsequent treatment under the terms outlined in subsection 2.a., above, the payor shall within 20 calendar days direct the injured worker to a dentist located within a reasonable travel distance who will accept the payor's payment offer.

i. If, after receiving notice that the payor has arranged for the services of a dentist, the injured worker chooses to obtain treatment from a different dentist, the payor shall only be liable for payment at 70% of UCR. The treating dentist may bill the injured worker for the difference between the dentist's charges and the amount paid by the insurer.

c. If the payor is unable to locate another dentist to provide the necessary services, the payor shall attempt to negotiate a satisfactory reimbursement with the dentist who provided initial treatment.

I. Drug testing. Drug screenings for addictive classes of pain medications shall be performed as recommended in the Utah clinical Guidelines on Prescribing Opiates for Treatment of Pain, Utah Department of Health 2009. The collection and billing shall be limited to one 80300 code per date of service, except for unusual circumstances.

J. Procedures for which no fee is allowed. Due to a lack of evidence of medical efficacy, no payment is authorized for the following:

1. Muscle Testing, CPT codes 95832 through 95857;
2. Computer based Motion Analysis, CPT codes 96000 through 96004;
3. Athletic Training Evaluation, CPT codes 97005 and 97006;
4. Acupuncture, CPT codes 97810 through 97814;
5. Analysis of Data, now BR, CPT code 99090;
6. Patient Education, CPT codes 98960 through 98962;
7. Educational supplies, CPT code 99071; or
8. Thermograms, artificial discs, percutaneous discectomies, endoscopic discectomies, IDEPT, platelet rich plasma injections, thermo-rhizotomies and other heat or chemical treatments for discs.

R612-300-6. Limitations on Fees for Specific Medical Providers and Non-Physicians.

A. Physician Assistants, Nurse Practitioners, Medical Social Workers, Nurse Anesthetists, and Physical Therapy Assistants. Fees for services performed by physician assistants, nurse practitioners, medical social workers, nurse anesthetists, and physical therapy assistants are set at 75% of the amount that would otherwise be allowed by these rules and shall be billed using an 83 modifier.

B. Assistant Surgeons. Fees for assistant surgeons are limited as follows:

1. Medical doctors, osteopaths and podiatrists, designated with an -80 modifier, are to be paid 20% of the primary surgeon's fee;
2. Minimum paramedicals, designated with an -81 modifier, are to be paid 15% of the primary surgeon's value or 75% of the amount allowed under subsection B. 1., above.
3. When a qualified resident surgeon is not available, 20% of the primary surgeon's fee;
4. Other paramedical assistants, such as surgical assistants, are not billed separately.

C. Home health care. The following fees, which include mileage and travel time, are payable for Home Health Codes 99500 through 99602:

1. RN: \$100/ 2 hours
2. LPN: \$75 / 2 hours
3. Home Health Aide: \$25 / hour + \$6 additional 30 min.
4. Speech Therapists: \$80 / visit
5. Physical Therapy: \$125/ hour
6. Occupational Therapy: \$125/ hour

7. Home Infusion Providers are to be paid according to contract between the payor and home infusion provider. If no contract is established, the payor shall pay the amount specified in Days Guidelines and pay UCR or Cost + 15% for the drugs and supplies.

D. Acupuncturists, naturopathic providers and massage therapy. Payor preauthorization is required for any services provided by acupuncturists and naturopaths. Payment for massage therapy is only allowed when administered by a medical provider and billed according to the requirements of Rule R612-300. 5. C, "Restorative Services."

E. Ambulance. Ambulance charges are limited to the rates set by the State Emergency Medical Service Commission.

R612-300-7. Billing and Payment.

A. Billing Limitations.

1. Except as otherwise provided by a specific provision of the Workers' Compensation Act or these rules, an injured worker may not be billed for the cost of medical care necessary to treat his or her workplace injuries.

2. A health care provider may not submit a bill for medical care of an injured worker to both the employer and the insurance carrier.

B. Discounting and down-coding.

1. Discounting or reducing the fees established by these rules is permitted only pursuant to a specific contract between the medical provider and payor.

2. A payor may change the CPT code submitted by a health care provider under the following circumstances:

- a. The submitted code is incorrect;
- b. Another code more closely identifies the medical care;
- c. The medical provider has not submitted the documentation necessary to support the code; or
- d. The medical care is part of a larger procedure and included in the fee for that procedure.

3. If a payor changes a code number, the payor shall explain the reason for the change and provide the name and phone number of the payor's claims processor to the medical provider in order to allow further discussion.

C. Place of Treatment. A medical provider's billing for a medical procedure must identify the setting where a procedure was performed.

1. In an office or clinic: Fees for procedures performed in an office or clinic are to be computed using the Non-Facility Total RVU.

2. In a facility setting: Fees for physician services for procedures performed in a facility are to be computed using the "Facility Total RVU," as the facility will be billing for the direct and indirect costs related to the service.

D. Separate Bills. Separate bills must be presented by each medical provider within 30 days of treatment on a HCFA 1500 billing form. All bills must contain the federal ID number of the provider submitting the bill.

E. Hospital Fees.

1. The Labor Commission does not have authority to set fees for hospital care of injured workers. However, hospitals are subject to the Commission's reporting requirements, and fees charged by health care providers for services performed in a hospital are subject to the Commission's fee rules.

2. Fees covering hospital care shall be separate from those

for professional services and shall not extend beyond the actual necessary hospital care.

3. All billings must be submitted on a UB92 form, properly itemized and coded, and shall include all documentation, including discharge summary, necessary to support the billing. No separate fee may be charged for billing or documentation of hospital services.

F. Charges for Supplies, Materials, or Drugs.

1. Ordinary supplies, materials or drugs used in treatment shall not be charged separately but shall be included in the amount allowed for the underlying medical care.

2. Special or unusual supplies, materials, or drugs not included as a normal and usual part of the service or procedure may be billed at cost plus 15% restocking fees and any taxes paid.

G. Miscellaneous.

1. A physician may bill the new patient E and M code when seeing an established patient for a new work injury.

2. Payment for hospital care is limited to the bed rate for semi-private room unless a private room is medically necessary.

3. Non-facility RVS total unit values apply, except that procedures provided in a facility setting shall be reimbursed at the facility total unit value and the facility may bill a separate facility charge.

4. Items that are a portion of an overall procedure are NOT to be itemized or billed separately.

5. Payors may round charges to the nearest dollar. If this is done on some charges, it must be done with all charges.

H. Prompt Payment and Interest.

1. All bills for medical care of injured workers must be paid within 45 days of submission to the payor unless the bill or some portion of the bill is in dispute. Any portion of the bill not in dispute remains payable within 45 days of billing.

2. As required by Section 34A-2-420 of the Utah Workers' Compensation Act, any award for medical care made by the Commission shall include interest at 8% per annum from the date of billing for such medical care.

I. Billing Disputes. Payors and health care providers shall use the following procedures to resolve billing disputes.

1. The provider shall submit a bill for services with supporting documentation to the payor within one year of the date of service.

2. The payor shall evaluate the bill and pay the appropriate fee as established by these rules.

3. If the provider believes the payor has improperly computed the fee, the provider may submit a written request for reevaluation to the payor. The request shall describe the specific areas of disagreement and include all appropriate documentation. Any such request for re-evaluation must be submitted to the payor within one year of the date of the original payment.

4. Within 30 days of receipt of the request for re-evaluation, the payor shall either pay the additional fee due the provider or respond with a specific written explanation of the basis for its denial of additional fees. The payor shall maintain proof of transmittal of its response.

5. A payor seeking reimbursement from a provider for overpayment of a bill shall, within one year of the overpayment, submit to the provider a written request for repayment that explains the basis for request. Within 90 days of receipt of the request, the provider shall either make appropriate repayment or respond with a specific written denial of the request.

6. If the provider and payor continue to disagree regarding the proper fee, either party may request informal review of the matter by the Division. Any party may also file a request for hearing on the dispute with the Adjudication Division.

R612-300-8. Travel Allowance for Injured Workers.

A. Payment for Travel to Obtain Medical Care. An

injured worker who must travel outside his or her community to obtain necessary medical care is entitled to payment of meals, lodging and other travel expense. Payors shall reimburse injured workers for these expenses according to the standards set forth in State of Utah Accounting Policies and Procedures, Section FIACCT 10-02.00, "Travel Reimbursement".

1. All travel must be by the most direct route and to the nearest location where adequate treatment is reasonably available.

2. Travel may not be required between the hours of 10:00 p.m. and 6:00 a.m., unless approved by the Commission.

B. Time Limits for Requesting and Paying Travel Expenses.

1. Requests for travel reimbursement must be submitted to the payor for payment within one year after the subject travel expenses were incurred;

2. The payor must pay an injured employee's travel expenses at the earlier of:

- a. Every three months;
- b. Upon accrual of \$100 in such expense; or
- c. At closure of the injured worker's claim.

C. Prescriptions. Travel allowance shall not include picking up prescriptions with the following exceptions:

1. Travel allowance will be allowed if documentation is provided substantiating a claim that prescriptions cannot be obtained locally within the injured worker's community;

2. Travel allowance will be allowed in instances where dispensing laws do not allow a medication to be called in to a pharmacy thus requiring an injured worker to physically obtain an original prescription from the provider's office.

R612-300-9. Permanent Impairment Ratings.

A. Utah's 2006 Impairment Guides. The "Utah 2006 Impairment Guides" are incorporated by reference and are to be used to rate a permanent impairment not expressly listed in Section 34A-2-412 of the Utah Workers' Compensation Act.

B. American Medical Association's "Guides to the Evaluation of Permanent Impairment, Fifth Edition." For those permanent impairments not addressed in either Section 34A-2-412 or the "Utah 2006 Impairment Guides," impairment ratings are to be established according to the American Medical Association's "Guides to the Evaluation of Permanent Impairment, Fifth Edition."

R612-300-10. Medical Records.

A. Relationship between HIPAA and Workers' Compensation Disclosure Requirements. Workers' compensation insurers, employers and the Utah Labor Commission need access to health information of individuals who are injured on the job or who have a work-related illness in order to process or adjudicate claims, or to coordinate care under Utah's workers' compensation system. Generally, this health information is obtained from health care providers who treat these individuals and who may be covered by federal "HIPAA" privacy rules.

The HIPAA Privacy Rule specifically recognizes the legitimate need of the workers' compensation system to have access to individuals' health information to the extent authorized by State law. See 45 CFR 164.512(1). The Privacy Rule also recognizes the importance of permitting disclosures required by other laws. See 45 CFR 164.512(a). Therefore, disclosures permitted by this rule for workers' compensation purposes or otherwise required by this rule do not conflict with and are not prohibited by the HIPAA Privacy Rule.

B. Disclosures Permitted Without Authorization. A medical provider, without authorization from the injured worker, shall:

1. For purposes of substantiating a bill submitted for payment or filing required Labor Commission forms, such as the

"Physician's Initial Report of Injury/Illness" or the "Restorative Services Authorization," disclose medical records necessary to substantiate the billing, including drug and alcohol testing, to:

a. An employer's workers' compensation insurance carrier or third party administrator;

b. A self-insured employer who administers its own workers' claims.

c. The Uninsured Employers' Fund;

d. The Employers' Reinsurance Fund; or

e. The Labor Commission as required by Labor Commission rules.

2. Disclose medical records pertaining to treatment of an injured worker who makes a claim for workers' compensation benefits, to another physician for specialized treatment, to a new treating physician chosen by the claimant, or for a consultation regarding the claimed work related injury or illness.

C. Disclosures Requiring Authorization.

1. Except as limited in C(3), a medical provider, whose medical records are relevant to a worker's compensation claim, shall, upon receipt of a Labor Commission medical records release form, or an authorization form that conforms to HIPAA requirements, disclose his/her medical records to:

a. An employer's insurance carrier or third party administrator;

b. A self-insured employer who administers its own workers' compensation claims;

c. An agent of an entity listed in B(1)(a through e), which includes, but is not limited to a case manager or reviewing physician;

d. The Uninsured Employers' Fund;

e. The Employers' Reinsurance Fund;

f. The Labor Commission;

g. The injured worker;

h. An injured workers' personal representative;

i. An attorney representing any of the entities listed above in an industrial injury or occupational disease claim.

2. Medical records are relevant to a workers' compensation claim if:

a. The records were created after the reported date of the accident or onset of the illness for which workers' compensation benefits have been claimed; or

b. The records were created in the past ten years (15 years if permanent total disability is claimed) and:

i. There is a specific reason to suspect that the medical condition existed prior to the reported date of the claimed work related injury or illness or;

ii. The claim is being adjudicated by the Labor Commission.

3. Medical records related to care provided by a psychiatrist, psychologist, obstetrician, or care related to the reproductive organs may not be disclosed by a medical provider unless a claim has been made for a mental condition, a condition related to the reproductive organs, or the claimant has signed a separate, specific release for these records.

D. Disclosure Regarding Return to Work. A medical provider, who has treated an injured worker for a work related injury or illness, shall disclose information to an injured workers' employer as to when and what restrictions an injured worker may return to work.

E. Additional Disclosures Requiring Specific Approval. Requests for medical records beyond what subsections B, C, and D permit require a signed approval by the director, the medical director, a designated person(s) within the Industrial Accidents Division or an administrative law judge if the claim is being adjudicated.

F. Appeals. A party affected by the decision made by a person in subsection E may appeal that decision to the Adjudication Division of the Labor Commission.

G. Injured Worker's Duty to Disclose Medical Treatment

and Providers. Upon receipt and within the scope of this rule, an injured worker shall provide those entities or persons listed in C(1) the names, address, and dates of medical treatment (if known) of the medical providers who have provided medical care within the past 10 years (15 years for permanent total disability claim) except for those medical providers names in C(3). Labor Commission form number 307 "Medical Treatment Provider List" must be used for this purpose. Parties listed in C(1) of this rule must provide each medical provider identified on form 307 with a signed authorization for access to medical records. A copy of the signed authorization may be sent to the medical providers listed on form 307.

H. Injured Worker's Right to Contest Requests for Pre-Injury Medical Records. An injured worker may contest, for good reason, a request for medical records created prior to the reported date of the accident or illness for which the injured worker has made a claim for benefits by filing a complaint with the Labor Commission. Good reason is defined as the request has gone beyond the scope of this rule or sensitive medical information is contained in a particular medical record.

I. Limitations on Use and Re-disclosure of Medical Information.

1. Any party obtaining medical records under authority of this rule may not disclose those medical records, without a valid authorization, except as required by law.

2. An employer may only use medical records obtained under the authority of this rule to:

- a. Pay or adjudicate workers' compensation claims if the employer is self-insured;
- b. To assess and facilitate an injured workers' return to work;
- c. As otherwise authorized by the injured worker.

3. An employer obtaining medical records under authority of this rule must maintain the medical records separately from the employee's personnel file.

4. Any medical records obtained under the authority of this rule to make a determination regarding the acceptance of liability or for treatment of a condition related to a workers' compensation claim shall only be used for workers' compensation purposes and shall not be released, without a signed release by the injured worker or his/her personal representative, to any other party. An employer shall make decisions related only to the workers' compensation claim based on any medical information received under this rule.

K. Permissible Fees for Providing Medical Records. When any medical provider provides copies of medical records, other than the records required when submitting a bill for payment or as required by the Labor Commission rules, the following charges are presumed reasonable:

1. A search fee of \$15 payable in advance of the search;
2. Copies at \$.50 per page, including copies of microfilm, payable after the records have been prepared and
3. Actual costs of postage payable after the records have been prepared and sent. Actual cost of postage is deemed to be the cost of regular mail unless the requesting party has requested the delivery of the records by special mail or method.
4. The Labor Commission will release its records per the above charges to parties/entities with a signed and notarized release from the injured worker unless the information is classified and controlled under the Government Records Access and Management Act (GRAMA).

5. No fee shall be charged when the RBRVS or the Commission's Medical Fee Guidelines require specific documentation for a procedure or when medical providers are required to report by statute or rule.

6. An injured worker or his/her personal representative may obtain one copy of each of the following records related to the industrial injury or occupational disease claim, at no cost, when the injured worker or his/her personal representative have

signed a form by the Industrial Accidents Division to substantiate his/her industrial injury/illness claim;

- a. History and physical;
 - b. Operative reports of surgery;
 - c. Hospital discharge summary;
 - d. Emergency room records;
 - e. Radiological reports;
 - f. Specialized test results; and
 - g. Physician SOAP notes, progress notes, or specialized reports.
- h. Alternatively, a summary of the patients records may be made available to the injured worker or his/her personal representative at the discretion of the physician.

R612-300-11. Utilization Review Standards.

A. Purpose of Utilization Review and Definitions.

1. "Utilization Review" is used to manage medical costs, improve patient care and enhance decision-making. Utilization review includes, but is not limited to, the review of requests for authorization and the review of medical bills to determine whether the medical services were or are necessary to treat a workplace injury. Utilization review does not include:

- a. bill review for the purpose of determining whether the medical services rendered were accurately billed, or
- b. any system, program, or activity used to determine whether an individual has sustained a workplace injury.

2. Any utilization review system shall incorporate a two-level review process that meets the criteria set forth in subsections B and C of this rule.

3. Definitions. As used in this rule:

- a. "Request for Authorization" means any request by a physician for assurance that appropriate payment will be made for a course of proposed medical treatment.
- b. "Reasonable Attempt" requires at least two phone calls and a fax, two phone calls and an e-mail, or three phone calls, within five business days from date of the payor's receipt of the physician's request for review.

B. Level I - Initial Request and Review.

1. A health care provider may use Form 223 to request authorization and payment for proposed medical treatment. The provider shall attach all documentation necessary for the payor to make a decision regarding the proposed treatment.

a. Requests for approval of restorative services are governed by the provisions of Section R612-300.5. C. 7. which requires submission of the appropriate RSA form and documentation.

2. Upon receipt of the provider's request for authorization, the payor may use medical or non-medical personnel to apply medically-based criteria to determine whether to approve the request. The payor must:

- a. Within 5 business days after receiving the request and documentation, transmit Form 223 back to the physician, in a verifiable manner, advising of the payor's approval or denial of the proposed treatment.
 - i. If approval is denied, the payor must include with its denial a statement of the criteria it used to make its determination. A copy of the denial must also be mailed to the injured worker.

C. Level II - Review.

1. A health care provider who has been denied authorization or has received no timely response may request a physician's review by completing and sending the applicable portion of Commission Form 223 to the payor.

a. The provider must include the times and days that he/she is available to discuss the case with the reviewing physician, and must be reasonably available during normal business hours.

b. This request for review may be used by a health care provider who has been denied authorization for restorative

services pursuant to Subsection R612-300-5.C.7.

2. The payor's physician representative must complete the review within five business days of the treating physician's request for review. Additional time may be requested from the Commission to accommodate highly unusual circumstances or particularly difficult cases.

a. The insurer's physician representative must make a reasonable effort to contact the requesting provider to discuss the request for treatment. The payor shall notify the Commission if an additional five days is needed in order to contact the treating physician or to review the case.

b. If the payor again denies approval of the recommended treatment, the payor must complete the appropriate portion of Commission Form 223, and shall include:

i. the criteria used by the payor in making the decision to deny authorization; and

ii. the name and specialty of the payor's reviewing physician;

iii. appeals information.

c. The denial to authorize payment for treatment must then be sent to the physician, the injured worker and the Commission.

3. The payor's failure to respond to the review request within five business days, by a method which provides certification of transmission, shall constitute authorization for payment of the treatment.

D. Mediation and Adjudication. Upon receipt of denial of authorization for payment for medical treatment at Level II, the Commission will facilitate, upon the request of the injured worker, the final disposition of the case.

1. If the parties agree, the medical dispute will be referred to Commission staff for mediation.

2. If the parties do not agree to mediation, the matter will be referred to the Division of Adjudication for hearing and decision.

E. Reduction of Fee for Failure to Follow Utilization Review Standards.

1. In cases in which a health care provider has received notice of this rule but proceeds with non-emergency medical treatment without obtaining payor authorization, the following shall apply:

a. If the medical treatment is ultimately determined to be necessary to treat a workplace injury, the fee otherwise due the health care provider shall be reduced by 25%.

b. If the medical treatment is ultimately determined to be unnecessary to treat a workplace injury, the payor is not liable for payment for such treatment. The injured worker may be liable for the cost of treatment.

2. The penalty provision in D. 1. shall not apply if the medical treatment in question has been preauthorized by some other non-worker's compensation insurance company or other payor.

R612-300-12. Commission Approval of Health Care Treatment Protocols.

A. Authority. Pursuant to authority granted by Subsection 34A-2-111(2)(c)(i)(B)(VII) of the Utah Workers' Compensation Act, the Utah Labor Commission establishes the following standards and procedures for Commission approval of medical treatment and quality care guidelines.

B. Standards

1. Scientifically based: Subsection 34A-2-111(2)(c)(i)(B)(VII)(Aa) of the Act requires that guidelines be scientifically based. The Commission will consider a guideline to be "scientifically based" when it is supported by medical studies and/or research.

2. Peer reviewed: Subsection 34A-2-111(2)(c)(i)(B)(VII)(Bb) of the Act requires that guidelines be peer reviewed. The Commission will consider a guideline to be

"peer reviewed" when the medical study's content, methodology, and results have been reviewed and approved prior to publication by an editorial board of qualified experts.

3. Other standards: Pursuant to its rulemaking authority under Subsection 34A-2-111(2)(c)(i)(B)(VII), the Utah Labor Commission establishes the following additional standards for medical treatment and quality care guidelines.

a. The guidelines must be periodically updated and, subject to Commission discretion, may not be approved for use unless updated in whole or in part at least biannually;

b. Guideline sources must be identified;

c. The guidelines must be reasonably priced;

d. The guidelines must be easily accessible in print and electronic versions.

C. Procedure: Pursuant to Subsection 34A-2-111(2)(c)(i)(B)(VII) of the Utah Workers' Compensation Act, a party seeking Commission action to approve or disapprove a guideline shall file a petition for such action with the Labor Commission.

R612-300-13. HIV, Hepatitis B and C Testing and Reporting for Emergency Medical Service Providers.

A. Purpose and Authority. This rule, established pursuant to U.C.A. Section 78B-8-404, establishes procedures for testing and reporting following a significant exposure of an emergency medical services provider to infectious diseases.

B. Definitions. In addition to the terms defined in Section 78B-8-401, the following definitions apply for purposes of this rule.

1. Contact means designated person(s) within the emergency medical services agency or the employer of the emergency medical services provider.

2. Emergency medical services (EMS) agency means an agency, entity, or organization that employs or utilizes emergency medical services providers as defined in (4) as employees or volunteers.

3. Source Patient means any individual cared for by a pre-hospital emergency medical services provider, including but not limited to victims of accidents or injury, deceased persons, prisoners or persons in the custody of the Department of Corrections, a county correctional facility, or a public law enforcement entity.

4. Receiving facility means a hospital, health care or other facility where the patient is delivered by the emergency medical services provider for care.

C. Emergency Medical Services Provider Responsibility.

1. The EMS provider shall document and report all significant exposures to the receiving facility and contact as defined in C.2.

2. The reporting process is as follows:

a. The exposed EMS provider shall complete the Exposure Report Form (ERF) at the time the patient is delivered to the receiving facility and provide a copy to the person at the receiving facility authorized by the facility to receive the form. In the event the exposed EMS provider does not accompany the source patient to the receiving facility, he/she may report the exposure incident, with information requested on the ERF, by telephone to a person authorized by the facility to receive the form. In this event, the exposed EMS provider shall nevertheless submit a written copy of the ERF within three days to an authorized person of the receiving facility.

b. The exposed EMS provider shall, within three days of the incident, submit a copy of the ERF to the contact as defined in C.2.

D. Receiving Facility Responsibility.

1. The receiving facility shall establish a system to receive ERFs as well as telephoned reports from exposed EMS providers on a 24-hour per day basis. The facility shall also have available or on call, trained pre-test counselors for the

purpose of obtaining consent and counseling of source patients when HIV testing has been requested by EMS providers. The receiving facility shall contact the source patient prior to release from the facility to provide the individual with counseling or, if unable to provide counseling, provide the source patient with phone numbers for a trained counselor to provide the counseling within 24 hours.

2. Upon notification of exposure, the receiving facility shall request permission from the source patient to draw a blood sample for disease testing. In conjunction with this request, the source patient must be advised of his/her right to refuse testing and be advised that if he/she refuses to be tested that fact will be forwarded to the EMS agency or employer of EMS provider. The source patient shall also be advised that if he/she refuses to be tested, the EMS agency or provider may seek a court order to compel the source patient to submit to a blood draw for the disease testing.

Testing is authorized only when the source patient, his/her next of kin or legal guardian consents to testing, with the exception that consent is not required from an individual who has been convicted of a crime and is in the custody or under the jurisdiction of the Department of Corrections, a county correctional facility, a public law enforcement entity, or if the source patient is dead. If consent is denied, the receiving facility shall complete the ERF and send it to the EMS agency or employer of the EMS provider. If consent is received, the receiving facility shall draw a sample of the source patient's blood and send it, along with the ERF, to a qualified laboratory for testing.

3. The laboratory that the receiving facility has sent source patient's blood draw to shall send the disease test results, by Case ID number, to the EMS agency or employer of the EMS provider.

F. EMS Agency/Employer Responsibility:

1. The EMS agency/employer, upon receipt of the disease tests, from the receiving facility laboratory, shall immediately report the result, by case number, not name, to the exposed EMS provider.

2. The EMS agency/employer, upon the receipt of refusal of testing by the source, shall report that refusal to the EMS provider.

3. The agency/employer or its insurance carrier shall pay for the EMS provider and the source patient testing for the covered diseases per the Labor Commission fee schedule.

4. The EMS agency/employer shall maintain the records of any disease exposures contained in this rule per the OSHA Blood Borne Pathogen standards.

**KEY: workers' compensation, fees, medical practitioners
December 8, 2015**

**34A-1-104
34A-2-201**

R612. Labor Commission, Industrial Accidents.**R612-400. Workers' Compensation Insurance, Self-Insurance and Waivers.****R612-400-1. Policy Reporting by Workers' Compensation Insurance Carriers.**

An insurance carrier writing workers' compensation insurance in Utah shall report to the Division the information required by Section 34A-2-205 of the Utah Workers' Compensation Act as follows:

A. The report shall be filed on behalf of the insurance carrier by an agent that has been approved by the Division as meeting the Division's filing standards.

B. The insurance carrier's agent shall submit the information electronically in accordance with the standards and format established by the International Association of Industrial Accidents Boards and Commissions (IAIABC).

C. Consequences of Failure to Comply.

1. Pursuant to Subsection 34A-2-205(1) of the Utah Workers' Compensation Act, the division may impose civil assessments up to \$150 for failure to properly report insurance policy information per the requirements of this rule.

D. Assessments will be issued on a per file or reported policy basis rather than on each individual error within a file or reported policy.

E. The opportunity to correct the filing errors, the amount of the assessments, and the method of issuing shall be set by the division's policies and procedures.

F. Assessments shall be issued in the form of an order signed by the division's presiding officer and pursuant to the requirements contained in Section 63G-4-203.

G. An aggrieved party may seek agency review of any order pursuant to Section 63G-4-301.

R612-400-2. Workers' Compensation Coverage for Professional Employer Organizations and Client Companies.**A. Purpose, Authority and Scope.**

1. Purpose. The Utah Professional Employer Organization Licensing Act, Title 31A, Chapter 40, Utah Code Annotated, ("the Act") allows a professional employer organization ("PEO") and a client company to establish a contractual relationship by which the PEO and client company are co-employers of some or all of the client company's workers. This rule establishes workers' compensation coverage and reporting requirements for such co-employment relationships.

2. Authority. This rule is enacted pursuant to authority granted by Section 34A-40-209 of the Act.

3. Scope. This rule applies only to those situations in which one or more workers are co-employees of a PEO and client company. The rule does not apply to workers who are solely employed by either a PEO or a client company. In such cases, the coverage and reporting requirements generally applicable to sole employers must be followed.

B. Alternatives for Providing Workers' Compensation Insurance Coverage for Co-employees.

1. Coverage provided by Client Company utilizing a PEO. A client company may provide workers' compensation coverage for co-employees of the client company and PEO by purchasing an insurance policy from a workers' compensation insurance company. The insurance policy shall list the client company as the named insured and shall provide coverage for the PEO as an additional insured by means of an individual endorsement.

2. Coverage provided through a PEO for a client company. Alternatively, a PEO may provide workers' compensation coverage for co-employees of the client company and PEO by purchasing an insurance policy, if available, from a workers' compensation insurance company. The insurance policy shall list the PEO as the named insured and shall provide coverage for the client company as an additional insured by means of an individual endorsement.

C. Insurance Carrier Reporting Obligation.

1. New Policies. An insurance company providing workers' compensation coverage to a PEO and client company shall comply with the reporting requirements set forth in Subsection R612-400-1. Such reports shall identify any PEO or client company covered by endorsement under the policy.

2. Additional insureds under an existing policy. If an insurance company extends coverage under an existing policy to a PEO or client company by means of an additional endorsement, the company shall report such additional endorsement and coverage to the Division in accordance with the requirements of Section R612-400-1.

3. Cancellations. An insurance company shall notify the Division of cancellation of coverage for any PEO or client company by complying with the requirements of Section R612-400-1. Failure by an insurance company to provide such notice will result in the continuation of coverage by the insurance company until the Division receives notification and may also result in imposition of penalties pursuant to Section 34A-2-205.

D. Reporting Injuries.

Work-related injuries of co-employees shall be reported in the name of the client company.

R612-400-3. Self Insurance of Workers' Compensation Obligations.

A. Purpose, Authority and Scope. 34A-2-201.5 of the Utah Workers' Compensation Act allows an employer or public agency insurance mutual to request authorization from the Division to self-insure workers' compensation obligations. Pursuant to the authority granted by Section 34A-2-201.5, this rule establishes procedures for applying for authorization to self-insure; it also establishes standards for Division decisions to grant, deny, or revoke such authorization and addresses the process for appealing Division decisions.

B. Definitions. In addition to the definitions found in Subsection 34A-2-201.5(1) and Section R612-100-2, the following definitions apply to this rule:

1. "Acceptable Credit Rating Agency" means Dun and Bradstreet or another similarly reputable credit rating agency acceptable to the Division.

2. "Aggregate Excess Insurance" is the amount of insurance required to cover the total accumulated workers' compensation benefits for all claims payable for a given period of time with the employer retaining an obligation for a designated amount as a deductible and insurance company paying all amounts due thereafter up to a maximum total obligation.

3. "Applicant" means an employer or public agency insurance mutual seeking initial authorization or renewal authorization to self-insure workers' compensation obligations.

4. "Reserve" is defined as the amount necessary to satisfy all debts, past, present, and future, incurred by reason of industrial accidents or occupational diseases, the origins of which commenced prior to the date of reserve determination.

5. "Self-Insured" means an employer or public agency insurance mutual that is authorized by the Division to self-insure workers' compensation obligations.

6. "Specific Excess Insurance" is defined as the amount of insurance required to satisfy workers' compensation obligations related to a workplace accident or disease with the employer retaining an obligation for a designated amount as a deductible and the insurance company assuming the obligation for all amounts due thereafter.

C. Application Process. An Applicant must complete the following process to receive Division authorization to self-insure.

1. The Applicant shall complete Division Form 109, "Application for Self Insurance" and submit the form to the Division, together with payment of the applicable fee as

established by the Commission pursuant to Section 63J-1-504.

2. The Applicant shall demonstrate that it has been in business continuously for five years immediately preceding its application.

a. If the Applicant is a wholly-owned subsidiary of another company, it may satisfy this requirement by demonstrating that the parent company has been in business continuously for five years immediately preceding the application, provided that the parent company guarantees the Applicant's workers' compensation obligations. Unless this guarantee requirement is waived by the Division, the form and substance of any such guarantee is subject to Division approval.

b. If the Applicant has changed its business name, the applicant may satisfy this requirement by demonstrating that it has been in business under a combination of its current name and previous name continuously for five years immediately preceding the application.

c. If the Applicant has been formed by merger of two or more companies, the applicant may satisfy this requirement by demonstrating that it and at least one of its predecessor companies, when considered jointly, have been in business continuously for five years immediately preceding the application.

3. The Applicant shall demonstrate sufficient financial strength and liquidity to pay its workers' compensation obligations promptly and in full. The Applicant shall submit to the Division:

a. A current, certified financial statement or other proof acceptable to the Division of the Applicant's financial ability to pay direct compensation and other related expenses;

b. Proof that the Applicant is covered by specific aggregate excess insurance issued by a company authorized to transact such business in Utah and with policy limits and retention amounts acceptable to the Division. The insurance company shall execute Division Form 303, "Utah Bankruptcy and Insolvency Endorsement" for each covered self-insured entity and shall name the Uninsured Employers' Fund as an additional insured.

c. A surety bond issued by a corporate surety authorized to transact such business in this state or other acceptable security as approved by the Division. If a surety bond is submitted, it shall be issued on Division Form 213E, "Self-Insurance Aggregate Surety Bond" in an amount established by the Division based on its review of the applicant's past incurred losses, exposure, and contingency factors. The minimum bond shall be \$100,000.

i. With Division approval, a surety bond provided under this subsection may be replaced with another surety bond, provided that a 60-day notice of termination of liability is given to the Division by the original surety, the replacement bond is issued on the prescribed form, and the new surety accepts the liability of the previous surety or a guarantee is filed by all sureties acknowledging their respective liabilities and periods of time covering such liabilities.

ii. The Division may waive surety bond requirements for a public entity.

4. The Division shall confirm through Dun and Bradstreet or other acceptable credit rating agency that the Applicant is within the agency's two highest composite credit appraisal ratings and two highest ratings of estimated financial strength.

a. An Applicant that is within the agency's two highest composite credit appraisal ratings but has received only a "fair" or equivalent composite credit rating may be granted authorization to self-insure by satisfying any additional security requirements required by the Division.

b. The Division may waive credit rating requirements for a public entity, provided that the public entity files financial statements or such other supplemental information as the Division finds necessary.

5. The Applicant shall demonstrate its ability to properly administer a self-insurance program.

a. The Applicant shall either procure the services of an insurance carrier or adjusting company to administer claims and establish reserves or demonstrate that the Applicant has sufficient competent staff to perform such tasks.

b. The Applicant or its adjusting company shall maintain within Utah a knowledgeable contact concerning claims and shall maintain a toll free number or accept a reasonable number of collect calls from injured employees.

c. The Applicant shall register with the Division a designated agent in Utah who is authorized to receive on behalf of the Applicant all notices or orders provided for under the Utah Workers' Compensation Act or the Utah Occupational Disease Act.

d. At its discretion, the Division may train and test adjusters and administrators of self-insurance programs.

6. A subsidiary company may rely upon its parent company to satisfy any of the requirements of subsection C of this rule, provided that the parent company guarantees all the subsidiary company's workers' compensation liabilities. The form and substance of such guarantees must be approved by the Division.

D. Division Action to Grant or Deny Authorization to Self-Insure.

1. If the Division determines that the Applicant has satisfactorily completed the application process required by subsection C, the Division shall issue written authorization for the applicant to self-insure. Such authorization shall be effective for one year from issuance and may be renewed annually as set forth in subsection E of this rule.

2. If the Division determines that the Applicant has not satisfied the requirement of subsection C, the Division will issue a written notice denying the Applicant's request to self-insure. The notice of denial shall state the basis for denial, advise the Applicant of any actions necessary to correct deficiencies in its application, and set forth the Applicant's right to appeal the denial.

E. Renewal of Authorization to Self-Insure.

1. Annual Renewal Application. To request annual renewal of authority to self-insure, a self-insured shall complete and submit Division Form 223E, "Renewal Application for Self Insurance" together with payment of the applicable fee as established by the Commission pursuant to Section 63J-1-504.

a. The completed "Renewal Application" and applicable fee must be submitted at least 60 days before the expiration of the previous self-insurance authorization. Late filing of a renewal application may result in suspension or cancellation of self-insurance privileges.

b. Renewal applicants must satisfy all requirements set forth in subsection C of this rule, except that renewal applicants whose financial information cannot be obtained from Dun and Bradstreet will be required to file financial statements or such other supplemental information as the Division finds necessary.

2. If the Division determines that the renewal applicant qualifies for renewal of authorization to self-insure, the Division shall issue a written renewal. Such renewal shall be effective for one year from issuance.

3. If the Division determines that the renewal applicant has not satisfied the requirements of this rule, the Division will issue a written denial of the request to renew, stating the specific basis for denial, advising the applicant of any actions necessary to correct deficiencies in its renewal application, and the applicant's right to appeal the denial.

F. Revocation of Authority to Self-Insure.

1. In cases where a self-insured entity merges with another entity, the existing authorization to self-insure will be revoked and the newly formed entity must apply for authority to self-insure in its own right.

2. If the Division receives complaints regarding a self-insured's practices or ability to satisfy its obligations, has other reason to believe that a self-insured no longer meets the standards for self-insurance set forth in this rule, or has failed to meet other requirements imposed by law upon self-insureds, the Division shall provide written notice to the self-insured and provide the self-insured a reasonable opportunity to respond.

a. If, after reviewing the self-insured's response, the Division remains of the opinion that the self-insured no longer meets the standards for self-insurance, the Division shall commence informal adjudicative proceedings to revoke the self-insured's authority to self-insure.

b. At the conclusion of such proceedings, the Division shall issue either:

i. written confirmation of the self-insured's continuing authority to self-insure; or

ii. written revocation of authority to self-insure, stating the specific basis for revocation, the self-insured's appeal rights, and the self-insured's right to continue its self insured status by providing additional security pursuant to subsection F of this rule.

c. Within 60 days of notice of revocation, a self-insured whose self-insurance privileges are revoked shall obtain security for their reserve requirements under the two step process set forth in subsection G.1 and 2 of this rule.

G. Continuation of Self-Insurance Authorization by Providing Additional Security.

1. A self-insured that falls below the standards required by subsection C.4 of this rule may, at the discretion of the Division, be allowed to continue self-insurance privileges if the following steps are taken:

a. An independent actuarial study, at the self-insured's expense and satisfactory to the Division, establishes the self-insured's reserve requirements.

b. The self-insured provides acceptable security to the Division for such reserve requirements.

2. Self-insured which retain their self-insurance authorization by complying with the requirements of subsection F.1 and 2 are subject to quarterly financial reviews by the Division

H. Appeals.

An entity dissatisfied with a Division decision to deny or revoke self-insured status may contest the decision by filing an Application For Hearing with the Commission's Adjudication Division pursuant to 34A-302(1) of the Utah Labor Commission Act and complying with the rules and procedures of the Adjudication Division.

R612-400-4. Waivers.

A. Authority and Purpose.

Pursuant to Title 34A, Chapter Two, Part Ten, Workers' Compensation Coverage Waivers Act ("the Act"), this rule establishes procedures for applying for workers' compensation coverage waivers. The rule also addresses the effect of coverage waivers and procedures to be followed by the Labor Commission's Industrial Accidents Division in granting, denying, or revoking coverage waivers.

B. Procedure for Application, Issuance and Renewal of Coverage Waiver.

1. A business entity may obtain a coverage waiver by:

a. completing the application process, available either online at the Utah Labor Commission website or by written application also available at the Commission;

b. submitting the supporting documents required by 34A-2-1004 of the Act; and

c. paying a non-refundable application fee of \$50, used to defray the costs of processing and evaluating the application. Payment of the fee by check may delay issuance of a coverage waiver until the check has been honored.

2. If the Division determines that a business entity has satisfied each requirement for a coverage waiver, the Division will issue the coverage waiver. If the Division determines that a business entity has not satisfied each requirement for a workers' compensation insurance waiver, the Division will issue a written denial to the business entity, stating the basis for denial and setting forth the business entity's appeal rights.

3. Subject to revocation of a coverage waiver as provided by subsection C. of this section, a coverage waiver remains in effect for the following time periods:

a. A coverage waiver issued by a licensed workers' compensation insurance company prior to July 1, 2011, the effective date of the Act, shall remain effective for the period shown on the coverage waiver.

b. A coverage waiver issued by the Division after July 1, 2011, shall be effective for one year from the date the coverage waiver is issued.

4. A business entity may renew a coverage waiver by completing the on-line renewal application available at the Utah Labor Commission website and satisfying the requirements set forth in subsection B.1.b. and c. of this rule.

C. Revocation.

1. If the Division has reason to believe that a business entity no longer qualifies for a coverage waiver, the Division shall institute proceedings to determine whether the business entity's coverage waiver should be revoked. Such proceedings shall be conducted as informal proceedings under the Utah Administrative Procedures Act.

2. If the Division concludes that the business entity does not satisfy each requirement for a coverage waiver, the Division will issue a written order revoking the waiver certificate. The order shall state the basis for revocation and the business entity's appeal rights. The Division may also initiate other proceedings authorized by the Utah Workers' Compensation Act to compel the business entity to obtain workers' compensation coverage for its employees.

D. Appeal Rights.

A business entity may challenge a Division decision to deny or revoke a coverage waiver by filing an appeal of the decision with the Adjudication Division. Such appeal proceedings shall be conducted as de novo formal adjudicatory proceedings under the Utah Administrative Procedures Act.

E. Effect, Verification and Limitation of Coverage Waiver.

1. Effect of coverage waiver. Subsection 34A-2-103 (7) (c) permits an employer contracting with a business entity to rely upon a valid coverage waiver issued by the Division as proof that the business entity is not required to have a workers' compensation insurance policy.

2. Verification of coverage waiver. Before an employer may rely upon a business entity's coverage waiver, the employer shall retain the following documents:

a. A photocopy of the coverage waiver issued to the business entity by the Division; and

b. A printout of the Division's waiver status verification web page showing that the business entity's coverage waiver had not been revoked as of the date on which the employer contracted with the business entity.

3. Limitations to effect of coverage waiver. A coverage waiver does not excuse a business entity from obtaining and maintaining workers' compensation insurance coverage for employees who are entitled to such coverage under the Utah Workers' Compensation Act. If and when a business entity has such employees, any coverage waiver previously issued to that business entity becomes void and the business entity must immediately obtain workers' compensation coverage.

R612-400-5. Premium Rates for the Uninsured Employers' Fund and the Employers' Reinsurance Fund.

A. Pursuant to Section 59-9-101(2), Section 59-9-101.3

and 34A-2-202 the workers' compensation premium rates effective January 1, 2016, as established by the Labor Commission, shall be:

1. 0.35% for the Uninsured Employers' Fund;
2. 3.0% for the Employers' Reinsurance Fund;

B. The premium rates are a percentage of the total workers' compensation insurance premium income as detailed in Section 59-9-101(2)(a).

**KEY: workers' compensation, insurance, rates, waivers
December 8, 2015 59-9-101(2)**

R614. Labor Commission, Occupational Safety and Health.**R614-1. General Provisions.****R614-1-1. Authority.**

A. These rules and all subsequent revisions as approved and promulgated by the Labor Commission, Utah Occupational Safety and Health Division, are authorized pursuant to Title 34A, Chapter 6, Utah Occupational Safety and Health Act.

B. The intent and purpose of this chapter is stated in Section 34A-6-202 of the Act.

C. In accordance with legislative intent these rules provide for the safety and health of workers and for the administration of this chapter by the Utah Occupational Safety and Health Division of the Labor Commission.

R614-1-2. Scope.

These rules consist of the administrative procedures of the Utah Occupational Safety and Health Division, incorporating by reference applicable federal standards from 29 CFR 1904, 1908, 1910 and 1926, and the Utah initiated occupational safety and health standards found in Utah Administrative Code R614-1 through R614-7.

R614-1-3. Definitions.

A. "Access" means the right and opportunity to examine and copy.

B. "Act" means the Utah Occupational Safety and Health Act of 1973.

C. "Administrator" means the director of the Division.

D. "Amendment" means such modification or change in a code, standard, rule, or order intended for universal or general application.

E. "Analysis using exposure or medical records" means any compilation of data, or any research, statistical or other study based at least in part on information collected from individual employee exposure or medical records or information collected from health insurance claims records, provided that either the analysis has been reported to the employer or no further work is currently being done by the person responsible for preparing the analysis.

F. "Commission" means the Utah Labor Commission.

G. "Days" means calendar days, including Saturdays, Sundays, and holidays. The day of receipt of any notice shall not be included, and the last day of any time frame shall be included. If the last day of any time period is a Saturday, Sunday, or legal holiday, the period continues to run until the end of the next day that is not a Saturday, Sunday or legal holiday.

H. "Designated representative" means any individual or organization to whom an employee gives written authorization to exercise a right of access. For the purpose of access to employee exposure records and analyses using exposure or medical records, a recognized or certified collective bargaining agent shall be treated automatically as a designated representative without regard to written employee authorization.

I. "Division" means the Utah Occupational Safety and Health Division (UOSH) within the Commission.

J. "Employee" includes any person suffered or permitted to work by an employer.

1. For Medical Records: "Employee" means a current employee, a former employee, or an employee being assigned or transferred to work where there will be exposure to toxic substances or harmful physical agents. In the case of deceased or legally incapacitated employee, the employee's legal representative may directly exercise all the employee's rights under this section.

K. "Employee exposure record" means a record containing any of the following kinds of information concerning employee exposure to toxic substances or harmful physical agents:

1. Environmental (workplace) monitoring or measuring,

including personal, area, grab, wipe, or other form of sampling, as well as related collection and analytical methodologies, calculations, and other background data relevant to interpretations of the results obtained;

2. Biological monitoring results which directly assess the absorption of a substance or agent by body systems (e.g., the level of a chemical in the blood, urine, breath, hair, fingernails, etc.) but not including results which assess the biological effect of a substance or agent;

3. Safety data sheets; or

4. In the absence of the above, any other record which reveals the identity (e.g., chemical, common, or trade name) of a toxic substance or harmful physical agent.

L. Employee medical record

1. "Employee medical record" means a record concerning the health status of an employee which is made or maintained by a physician, nurse, or other health care personnel, or technician including:

a. Medical and employment questionnaires or histories (including job description and occupational exposures);

b. The results of medical examinations (pre-employment, pre-assignment, periodic, or episodic) and laboratory tests (including X-ray examinations and all biological monitoring);

c. Medical opinions, diagnoses, progress notes, and recommendations;

d. Descriptions of treatments and prescriptions; and

e. Employee medical complaints.

2. "Employee medical record" does not include the following:

a. Physical specimens (e.g., blood or urine samples) which are routinely discarded as a part of normal medical practice, and not required to be maintained by other legal requirements;

b. Records concerning health insurance claims if maintained separately from the employer's medical program and its records, and not accessible to the employer by employee name or other direct personal identifier (e.g., social security number, payroll number, etc.); or

c. Records concerning voluntary employee assistance programs (alcohol, drug abuse, or personal counseling programs) if maintained separately from the employer's medical program and its records.

M. "Employer" means:

1. The state;

2. Each county, city, town, and school district in the state; and

3. Every person, firm, and private corporation, including public utilities, having one or more workers or operatives regularly employed in the same business, or in or about the same establishment, under any contract of hire.

4. For medical records: "Employer" means a current employer, a former employer, or a successor employer.

N. "Establishment" means a single physical location where business is conducted or where services or industrial operations are performed. (For example: A factory, mill, store, hotel, restaurant, movie theater, farm, ranch, bank, sales office, warehouse, or central administrative office.) Where distinctly separate activities are performed at a single physical location (such as contract construction activities from the same physical location as a lumber yard), each activity shall be treated as a separate physical establishment, and separate notices shall be posted in each establishment to the extent that such notices have been furnished by the Administrator.

O. "Exposure" or "exposed" means that an employee is subjected to a toxic substance or harmful physical agent in the course of employment through any route of entry (inhalation, ingestion, skin contact or absorption, etc.) and includes past exposure and potential (e.g., accidental or possible) exposure, but does not include situations where the employer can demonstrate that the toxic substance or harmful physical agent

is not used, handled, stored, generated, or present in the workplace in any manner different from typical non-occupational situations.

P. "Hearing" means a proceeding conducted by the commission.

Q. "Imminent danger" means a danger exists which reasonably could be expected to cause an occupational disease, death, or serious physical harm immediately, or before the danger could be eliminated through enforcement procedures under this chapter.

R. "Inspection" means any inspection of an employer's factory, plant, establishment, construction site, or other area, workplace or environment where work is performed by an employee of an employer, and includes any inspection conducted pursuant to a complaint filed under R614-1-6.K.1. and 3., any re-inspection, follow-up inspection, accident investigation or other inspection conducted under Section 34A-6-301 of the Act.

S. "National consensus standard" means any occupational safety and health standard or modification:

1. Adopted by a nationally recognized standards-producing organization under procedures where it can be determined by the administrator and division that persons interested and affected by the standard have reached substantial agreement on its adoption;

2. Formulated in a manner which affords an opportunity for diverse views to be considered; and

3. Designated as such a standard by the Secretary of the United States Department of Labor.

T. "Person" means the general public, one or more individuals, partnerships, associations, corporations, legal representatives, trustees, receivers, and the state and its political subdivisions.

U. "Publish" means publication in accordance with Title 63G, Chapter 3, Utah Administrative Rulemaking Act.

V. "Record" means any item, collection, or grouping of information regardless of the form or process by which it is maintained (e.g., paper document, microfiche, microfilm, X-ray film, or automated data processing.)

W. "Safety and Health Officer" means a person authorized by the Division to conduct inspections.

X. "Secretary" means the Secretary of the United States Department of Labor.

Y. "Specific written consent" means written authorization containing the following:

1. The name and signature of the employee authorizing the release of medical information;

2. The date of the written authorization;

3. The name of the individual or organization that is authorized to release the medical information;

4. The name of the designated representative (individual or organization) that is authorized to receive the released information;

5. A general description of the medical information that is authorized to be released;

6. A general description of the purpose for the release of medical information; and

7. A date or condition upon which the written authorization will expire (if less than one year).

8. A written authorization does not operate to authorize the release of medical information not in existence on the date of written authorization, unless this is expressly authorized, and does not operate for more than one year from the date of written authorization.

9. A written authorization may be revoked in writing prospectively at any time.

Z. "Standard" means an occupational health and safety standard or group of standards which requires conditions, or the adoption or use of one or more practices, means, methods,

operations, or processes, reasonably necessary to provide safety and healthful employment and places of employment.

AA. "Toxic substance" or "harmful physical agent" means any chemical substance, biological agent (bacteria, virus, fungus, etc.) or physical stress (noise, heat, cold, vibration, repetitive motion, ionizing and non-ionizing radiation, hypo and hyperbaric pressure, etc) which:

1. Is regulated by any Federal law or rule due to a hazard to health;

2. Is listed in the latest printed edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS) (See R614-1-12B);

3. Has yielded positive evidence of an acute or chronic health hazard in human, animal, or other biological testing conducted by, or known to the employer; or

4. Has a material safety data sheet available to the employer indicating that the material may pose a hazard to human health.

BB. "Variance" means a special, limited modification or change in the code or standard applicable to the particular establishment of the employer or person petitioning for the modification or change.

CC. "Workplace" means any place of employment.

R614-1-4. Incorporation of Federal Standards.

A. The following federal occupational safety and health standards are hereby incorporated:

1. 29 CFR 1904, July 1, 2015, is incorporated by reference, except the workplace fatality, injury and illness reporting requirements found in 29 CFR 1904.1, 1904.2, 1904.7 and 1904.39. Workplace fatalities, injuries and illnesses shall be reported pursuant to the more specific Utah standards in Utah Code Ann. Subsection 34A-6-301(3)(b)(2) and the Utah Administrative Code R614-1-5(C)(1).

2. 29 CFR 1908, July 1, 2015, is incorporated by reference.

3. 29 CFR 1910.6 and 1910.21 through the end part of 1910, July 1, 2015, are incorporated by reference.

4. 29 CFR 1926.6 and 1926.20 through the end of part 1926, of the July 1, 2015, edition are incorporated by reference.

R614-1-5. Adoption and Extension of Established Federal Safety Standards and State of Utah General Safety Orders.

A. Scope and Purpose.

1. The provisions of this rule adopt and extend the applicability of: (1) established Federal Safety Standards, (2) R614, and (3) Workers' Compensation Coverage, as in effect July 1, 1973 and subsequent revisions, with respect to every employer, employee and employment within the boundaries of the State of Utah, covered by the Utah Occupational Safety and Health Act of 1973.

2. All standards and rules including emergency and/or temporary, promulgated under the Federal Occupational Safety and Health Act of 1970 shall be accepted as part of the Standards, Rules and Regulations under the Utah Occupational Safety and Health Act of 1973, unless specifically revoked or deleted.

3. All employers will provide workers' compensation benefits as required in Section 34A-2-201.

4. Any person, firm, company, corporation or association employing minors must comply fully with all orders and standards of the Labor Division of the Commission. UOSH standards shall prevail in cases of conflict.

B. Construction Work.

Federal Standards, 29 CFR 1926 and selected applicable sections of R614 are accepted covering every employer and place of employment of every employee engaged in construction work of:

1. New construction and building;
2. Remodeling, alteration and repair;
3. Decorating and painting;
4. Demolition; and
5. Transmission and distribution lines and equipment erection, alteration, conversion or improvement.

C. Reporting Requirements.

1. Each employer shall within 8 hours of occurrence, notify the Division of Utah Occupational Safety and Health of the Commission of any work-related fatalities, of any disabling, serious, or significant injury and of any occupational disease incident. Call (801) 530-6901.

2. Tools, equipment, materials or other evidence that might pertain to the cause of such accident shall not be removed or destroyed until so authorized by the Labor commission or one of its Compliance Officers.

3. Each employer shall investigate or cause to be investigated all work-related injuries and occupational diseases and any sudden or unusual occurrence or change of conditions that pose an unsafe or unhealthful exposure to employees.

4. Each employer shall file a report with the Commission within seven days after the occurrence of an injury or occupational disease, after the employers' first knowledge of the occurrence, or after the employee's notification of the same, on forms prescribed by the Commission, of any work-related fatality or any work-related injury or occupational disease resulting in medical treatment, loss of consciousness or loss of work, restriction of work, or transfer to another job. Each employer shall file a subsequent report with the Commission of any previously reported injury or occupational disease that later resulted in death. The subsequent report shall be filed with the Commission within seven days following the death or the employer's first knowledge or notification of the death. No report is required for minor injuries, such as cuts or scratches that require first-aid treatment only, unless the treating physician files, or is required to file the physician's initial report of work injury or occupational disease with the Commission. Also, no report is required for occupational disease which manifest after the employee is no longer employed by the employer with which the exposure occurred, or where the employer is not aware of an exposure occasioned by the employment which results in an occupational disease as defined by Section 34A-3-103.

5. Each employer shall provide the employee with a copy of the report submitted to the Commission. The employer shall also provide the employee with a statement, as prepared by the Commission, of his rights and responsibilities related to the industrial injury or occupational disease.

6. Each employer shall maintain a record in a manner prescribed by the Commission of all work-related injuries and all occupational disease resulting in medical treatment, loss of consciousness, loss of work, restriction or work, or transfer to another job.

7. No person shall remove, displace, destroy, or carry away any safety devices or safeguards provided for use in any place of employment, or interfere in any way with the use thereof by other persons, or interfere in any method or process adopted for the protection of employees. No employee shall refuse or neglect to follow and obey reasonable orders that are issued for the protection of health, life, safety, and welfare of employees.

D. Employer, Employee Responsibility.

1. It shall be the duty and responsibility of any employee upon entering his or her place of employment, to examine carefully such working place and ascertain if the place is safe, if the tools and equipment can be used with safety, and if the work can be performed safely. After such examination, it shall be the duty of the employee to make the place, tools, or equipment safe. If this cannot be done, then it becomes his or her duty to immediately report the unsafe place, tools, equipment, or conditions to the foreman or supervisor.

2. Employees must comply with all safety rules of their employer and with all the Rules and Regulations promulgated by UOSH which are applicable to their type of employment.

3. Management shall inspect or designate a competent person or persons to inspect frequently for unsafe conditions and practices, defective equipment and materials, and where such conditions are found to take appropriate action to correct such conditions immediately.

4. Supervisory personnel shall enforce safety regulations and issue such rules as may be necessary to safeguard the health and lives of employees. They shall warn all employees of any dangerous condition and permit no one to work in an unsafe place, except for the purpose of making it safe.

E. General Safety Requirements.

1. Where there is a risk of injury from hair entanglement in moving parts of machinery, employees shall confine their hair to eliminate the hazard.

2. Body protection: Clothing which is appropriate for the work being done should be worn. Loose sleeves, tails, ties, lapels, cuffs, or similar garments which can become entangled in moving machinery shall not be worn where an entanglement hazard exists. Clothing saturated or impregnated with flammable liquids, corrosive substances, irritant, oxidizing agents or other toxic materials shall be removed and shall not be worn until properly cleaned.

3. General. Wrist watches, rings, or other jewelry shall not be worn on the job where they constitute a safety hazard.

4. Safety Committees. It is recommended that a safety committee comprised of management and employee representatives be established. The committee or the individual member of the committee shall not assume the responsibility of management to maintain and conduct a safe operation. The duties of the committee should be outlined by management, and may include such items as reviewing the use of safety apparel, recommending action to correct unsafe conditions, etc.

5. No intoxicated person shall be allowed to go into or loiter around any operation where workers are employed.

6. No employee shall carry intoxicating liquor into a place of employment, except that the place of employment shall be engaged in liquor business and this is a part of his assigned duties.

7. Employees who do not understand or speak the English language shall not be assigned to any duty or place where the lack or partial lack of understanding or speaking English might adversely affect their safety or that of other employees.

8. Good housekeeping is the first law of accident prevention and shall be a primary concern of all supervisors and workers. An excessively littered or dirty work area will not be tolerated as it constitutes an unsafe, hazardous condition of employment.

9. Emergency Posting Required.

a. Good communications are necessary if a fire or disaster situation is to be adequately coped with. A system for alerting and directing employees to safety is an essential step in a safety program.

b. A list of telephone numbers or addresses as may be applicable shall be posted in a conspicuous place so the necessary help can be obtained in case of emergency. This list shall include:

- (1) Responsible supervision (superintendent or equivalent)
- (2) Doctor
- (3) Hospital
- (4) Ambulance
- (5) Fire Department
- (6) Sheriff or Police

10. Lockouts and Tagging.

a. Where there is any possibility of machinery being started or electrical circuits being energized while repairs or maintenance work is being done, the electrical circuits shall be

locked open and/or tagged and the employee in charge (the one who places the lock) shall keep the key until the job is completed or he is relieved from the job, such as by shift change or other assignment. If it is expected that the job may be assigned to other workers, he may remove his lock provided the supervisor or other workers apply their lock and tag immediately. Where there is danger of machinery being started or of steam or air creating a hazard to workers while repairs on maintenance work is being done, the employee in charge shall disconnect the lines or lock and tag the main valve closed or blank the line on all steam driven machinery, pressurized lines or lines connected to such equipment if they could create a hazard to workers.

b. After tagging and lockout procedures have been applied, machinery, lines, and equipment shall be checked to insure that they cannot be operated.

c. If locks and tags cannot be applied, conspicuous tags made of nonconducting material and plainly lettered, "EMPLOYEES WORKING" followed by the other appropriate wording, such as "Do not close this switch" shall be used.

d. When in doubt as to procedure, the worker shall consult his supervisor concerning safe procedure.

11. Safety-Type hooks shall be used wherever possible.

12. Emergency Showers, Bubblers, and Eye Washers.

a. Readily accessible, well marked, rapid action safety showers and eye wash facilities must be available in areas where strong acid, caustic or highly oxidizing or irritating chemicals are being handled. (This is not applicable where first aid practices specifically preclude flushing with running water.)

b. Showers should have deluge type heads, easily accessible, plainly marked and controlled by quick opening valves of the type that stay open. The valve handle should be equipped with a pull chain, rope, etc., so the blinded employee will be able to more easily locate the valve control. In addition, it is recommended that the floor platform be so constructed to actuate the quick opening valve. The shower should be capable of supplying large quantities of water under moderately high pressure. Blankets should be located so as to be reasonably accessible to the shower area.

c. All safety equipment should be inspected and tested at regular intervals, preferably daily and especially during freezing weather, to make sure it is in good working condition at all times.

13. Grizzlies Over Chutes, Bins and Tank Openings.

a. Employees shall be furnished with and be required to use approved type safety harnesses and shall be tied off securely so as to suspend him above the level of the product before entering any bin, chute or storage place containing material that might cave or run. Cleaning and barring down in such places shall be started from the top using only bars blunt on one end or having a ring type or D handhold.

b. Employees shall not work on top of material stored or piled above chutes, drawholes or conveyor systems while material is being withdrawn unless protected.

c. Chutes, bins, drawholes and similar openings shall be equipped with grizzlies or other safety devices that will prevent employees from falling into the openings.

d. Bars for grizzly grids shall be so fitted that they will not loosen and slip out of place, and the operator shall not remove a bar temporarily to let large rocks through rather than to break them.

F. All requirements of PSM Standard 29 CFR 1910.119 are hereby extended to include the blister agents, HT, HD, H, Lewisite, and the nerve agents, GA, VX.

R614-1-6. Personal Protective Equipment.

A. When no other method or combination of methods can be provided to prevent employees from becoming exposed to toxic dusts, fumes, gases, flying particles or other objects,

dangerous rays or burns from heat, acid, caustic, or any other hazard of a similar nature, the employer must provide each worker with the necessary personal protection equipment, such as respirators, goggles, gas masks, certain types of protective clothing, etc. Provision must also be made to keep all such equipment in good, sanitary working condition at all times.

B. Where there is a risk of injury from hair entanglement in moving parts of machinery, employees shall confine their hair to eliminate the hazard.

C. Except when, in the opinion of the Administrator, their use creates a greater hazard, life lines and safety harnesses shall be provided for and used by workers engaged in window washing, in securing or shifting thrustouts, inspecting or working on overhead machines supporting scaffolds or other high rigging, and on steeply pitched roofs. Similarly, they shall be provided for and used by all exposed to the hazard of falling, and by workmen on poles workers or steel frame construction more than ten (10) feet above solid ground or above a temporary or permanent floor or platform.

D. Every life line and safety harness shall be inspected by the superintendent or his authorized representative and the worker before it is used and at least once a week while continued in use.

E. Wristwatches, rings, or other jewelry shall not be worn on the job where they constitute a safety hazard.

R614-1-7. Inspections, Citations, and Proposed Penalties.

A. The Utah Occupational Safety and Health Act (Title 34A, Chapter 6) requires, that every employer covered under the Act furnish to his employees employment and a place of employment which are free from recognized hazards that are likely to cause death or serious physical harm to his employees. The Act also requires that employers comply with occupational safety and health standards promulgated under the Act, and that employees comply with standards, rules, regulations and orders issued under the Act applicable to employees actions and conduct. The Act authorizes the Utah Occupational Safety and Health Division to conduct inspections, and to issue citations and proposed penalties for alleged violations. The Act, under Section 34A-6-301, also authorizes the Administrator to conduct inspections and to question employers and employees in connection with research and other related activities. The Act contains provisions for adjudication of violations, periods prescribed for the abatement of violations, and proposed penalties by the Labor Commission, if contested by an employer or by an employee or authorized representative of employees, and for a judicial review. The purpose of R614-1-7 is to prescribe rules and general policies for enforcement of the inspection, citations, and proposed penalty provisions of the Act. Where R614-1-7 sets forth general enforcement policies rather than substantive or procedural rules, such policies may be modified in specific circumstances where the Administrator or his designee determines that an alternative course of action would better serve the objectives of the Act.

B. Posting of notices; availability of Act, regulations and applicable standards.

1. Each employer shall post and keep posted notices, to be furnished by the Administrator, informing employees of the protections and obligations provided for in the Act, and that for assistance and information, including copies of the Act and of specific safety and health standards, employees should contact their employer or the office of the Administrator. Such notices shall be posted by the employer in each establishment in a conspicuous place where notices to employees are customarily posted. Each employer shall take steps to insure that such notices are not altered, defaced, or covered by other material.

2. Where employers are engaged in activities which are physically dispersed, such as agriculture, construction, transportation communications, and electric, gas and sanitary

services, the notices required shall be posted at the location where employees report each day. In the case of employees who do not usually work at, or report to, a single establishment, such as traveling salesman, technicians, engineers, etc., such notices shall be posted in accordance with the requirements of R614-1-7.Q.

3. Copies of the Act, all regulations published under authority of Section 34A-6-202 and all applicable standards will be available at the office of the Administrator. If an employer has obtained copies of these materials, he shall make them available upon request to any employee or his authorized representative.

4. Any employer failing to comply with the provisions of this Part shall be subject to citation and penalty in accordance with the provisions of Sections 34A-6-302 and 34A-6-307 of the Act.

C. Authority for Inspection.

1. Safety and Health Officers of the Division are authorized to enter without delay and at reasonable times any factory, plant, establishment, construction site, or other area, workplace or environment where work is performed by an employee of an employer; to inspect and investigate during regular working hours and at other reasonable times, and within reasonable limits and in a reasonable manner, any such place of employment, and all pertinent conditions, structures, machines, apparatus, devices, equipment and materials therein; to question privately any employer, owner, operator, agent or employee; and to review records required by the Act and regulations published in R614-1-7 and 8, and other records which are directly related to the purpose of the inspection.

2. Prior to inspecting areas containing information which has been classified as restricted by an agency of the United States Government in the interest of national security, Safety and Health Officers shall obtain the appropriate security clearance.

D. Objection to Inspection.

1. Upon a refusal to permit the Safety and Health Officer, in exercise of his official duties, to enter without delay and at reasonable times any place of employment or any place therein, to inspect, to review records, or to question any employer, owner, operator, agent, or employee, in accordance with R614-1-7.B. and C. or to permit a representative of employees to accompany the Safety and Health Officer during the physical inspection of any workplace in accordance with R614-1-7.G. the Safety and Health Officer shall terminate the inspection or confine the inspection to other areas, conditions, structures, machines, apparatus, devices, equipment, materials, records or interview concerning which no objection is raised.

2. The Safety and Health Officer shall endeavor to ascertain the reason for such refusal, and shall immediately report the refusal and the reason therefor to the Administrator. The Administrator shall take appropriate action, including compulsory process, if necessary.

3. Compulsory process shall be sought in advance of an attempted inspection or investigation if, in the judgment of the Administrator circumstances exist which make such preinspection process desirable or necessary. Some examples of circumstances in which it may be desirable or necessary to seek compulsory process in advance of an attempt to inspect or investigate include (but are not limited to):

a. When the employers past practice either implicitly or explicitly puts the Administrator on notice that a warrantless inspection will not be allowed;

b. When an inspection is scheduled far from the local office and procuring a warrant prior to leaving to conduct the inspection would avoid, in case of refusal of entry, the expenditure of significant time and resources to return to the office, obtain a warrant and return to the work-site;

c. When an inspection includes the use of special

equipment or when the presence of an expert or experts is needed in order to properly conduct the inspection, and procuring a warrant prior to an attempt to inspect would alleviate the difficulties or costs encountered in coordinating the availability of such equipment or expert.

4. For purposes of this section, the term compulsory process shall mean the institution of any appropriate action, including ex parte application for an inspection warrant or its equivalent. Ex parte inspection warrants shall be the preferred form of compulsory process in all circumstances where compulsory process is relied upon to seek entry to a workplace under this section.

E. Entry not a Waiver.

Any permission to enter, inspect, review records, or question any person, shall not imply a waiver of any cause of action, citation, or penalty under the Act. Safety and Health Officers are not authorized to grant such waivers.

F. Advance notice of Inspections.

1. Advance notice of inspections may not be given, except in the following instances:

a. In cases of apparent imminent danger, to enable the employer to abate the danger as quickly as possible.

b. In circumstances where the inspection can most effectively be conducted after regular business hours or where special preparations are necessary for an inspection.

c. Where necessary to assure the presence of the employer or representative of the employer and employees or the appropriate personnel needed to aid the inspection; and

d. In other circumstances where the Administrator determines that the giving of advance notice would enhance the probability of an effective and thorough inspection.

2. In the instances described in R614-1-7.F.1., advance notice of inspections may be given only if authorized by the Administrator, except that in cases of imminent danger, advance notice may be given by the Safety and Health Officer without such authorization if the Administrator is not immediately available. Where advance notice is given, it shall be the employer's responsibility to notify the authorized representative of the employees of the inspection, if the identity of such representatives is known to the employer. (See R614-1-7.H.2. as to instances where there is no authorized representative of employees.) Upon the request of the employer, the Safety and Health Officer will inform the authorized representative of employees of the inspection, provided that the employer furnishes the Safety and Health Officer with the identity of such representatives and with such other information as is necessary to enable him promptly to inform such representatives of the inspection. A person who fails to comply with his responsibilities under this paragraph, may be subject to citation and penalty under Sections 34A-6-302 and 34A-6-307 of the Act. Advance notice in any of the instances described in R614-1-7.F. shall not be given more than 24 hours before the inspection is scheduled to be conducted, except in cases of imminent danger and other unusual circumstances.

3. The Act provides in Subsection 34A-6-307(5)(b) conditions for which advanced notice can be given and the penalties for not complying.

G. Conduct of Inspections.

1. Subject to the provisions of R614-1-7.C., inspections shall take place at such times and in such places of employment as the Administrator or the Safety and Health Officer may direct. At the beginning of an inspection, Safety and Health Officers shall present their credentials to the owner, operator, or agent in charge at the establishment; explain the nature and purpose of the inspection; and indicate generally the scope of the inspection and the records specified in R614-1-7.C. which they wish to review. However, such designations of records shall not preclude access to additional records specified in R614-1-7.C.

2. Safety and Health Officers shall have authority to take environmental samples and to take photographs or video recordings related to the purpose of the inspection, employ other reasonable investigative techniques, and question privately any employer, owner, operator, agent or employee of an establishment. (See R614-1-7.I. on trade secrets.) As used herein, the term "employ other reasonable investigative techniques" includes, but is not limited to, the use of devices to measure employee exposures and the attachment of personal sampling equipment such as dosimeters, pumps, badges, and other similar devices to employees in order to monitor their exposures.

3. In taking photographs and samples, Safety and Health Officers shall take reasonable precautions to insure that such actions with flash, spark-producing, or other equipment would not be hazardous. Safety and Health Officers shall comply with all employer safety and health rules and practices at the establishment being inspected, and shall wear and use appropriate protective clothing and equipment.

4. The conduct of inspections shall preclude unreasonable disruption of the operations of the employer's establishment.

5. At the conclusion of an inspection, the Safety and Health Officer shall confer with the employer or his representative and informally advise him of any apparent safety or health violations disclosed by the inspection. During such conference, the employer shall be afforded an opportunity to bring to the attention of the Safety and Health Officer any pertinent information regarding conditions in the workplace.

H. Representative of employers and employees.

1. Safety and Health Officer shall be in charge of inspections and questioning of persons. A representative of the employer and a representative authorized by his employees shall be given an opportunity to accompany the Safety and Health Officer during the physical inspection of any workplace for the purpose of aiding such inspection. A Safety and Health Officer may permit additional employer representative and additional representatives authorized by employees to accompany him where he determines that such additional representatives will further aid the inspection. A different employer and employee representative may accompany the Safety and Health Officer during each phase of an inspection if this will not interfere with the conduct of the inspection.

2. Safety and Health Officers shall have authority to resolve all disputes as to who is the representative authorized by the employer and the employees for purpose of this Part. If there is no authorized representative of employees, or if the Safety and Health Officer is unable to determine with reasonable certainty who is such representative, he shall consult with a reasonable number of employees concerning matters of safety and health in the workplace.

3. The representative(s) authorized by employees shall be an employee(s) of the employer. However, if in the judgment of the Safety and Health Officer, good cause has been shown why accompaniment by a third party who is not an employee of the employer (such as an industrial hygienist or safety engineer) is reasonably necessary to the conduct of an effective and thorough physical inspection of the workplace, such third party may accompany the Safety and Health Officer during the inspection.

4. Safety and Health Officers are authorized to deny the right of accompaniment under this Part to any person whose conduct interferes with a fair and orderly inspection. The right of accompaniment in areas containing trade secrets shall be subject to the provisions of R614-1-7.I.3. With regard to information classified by an agency of the U.S. Government in the interest of national security, only persons authorized to have access to such information may accompany a Safety and Health Officer in areas containing such information.

I. Trade secrets.

1. Section 34A-6-306 of the Act provides provisions for

trade secrets.

2. At the commencement of an inspection, the employer may identify areas in the establishment which contain or which might reveal a trade secret. If the Safety and Health Officer has no clear reason to question such identification, information obtained in such areas, including all negatives and prints of photographs, and environmental samples, shall be labeled "confidential-trade secret" and shall not be disclosed except in accordance with the provisions of Section 34A-6-306 of the Act.

3. Upon the request of an employer, any authorized representative of employees under R614-1-7.H. in an area containing trade secrets shall be an employee in that area or an employee authorized by the employer to enter that area. Where there is not such representative or employee, the Safety and Health Officer shall consult with a reasonable number of employees who work in that area concerning matters of safety and health.

J. Consultation with employees.

Safety and Health Officers may consult with employees concerning matters of occupational safety and health to the extent they deem necessary for the conduct of an effective and thorough inspection. During the course of an inspection, any employee shall be afforded an opportunity to bring any violation of the Act which he has reason to believe exists in the workplace to the attention of the Safety and Health Officer.

K. Complaints by employees.

1. Any employee or representative of employees who believe that a violation of the Act exists in any workplace where such employee is employed may request an inspection of such workplace by giving notice of the alleged violation to the Administrator or to a Safety and Health Officer. Any such notice shall be reduced to writing, shall set forth with reasonable particularity the grounds for the notice, and shall be signed by the employee or representative of employees. A copy of the notice shall be provided the employer or his agent by the Administrator or Safety and Health Officer no later than at the time of inspection, except that, upon the request of the person giving such notice, his name and the names of individual employees referred to therein shall not appear in such copy or on any record published, released, or made available by the Administrator.

2. If upon receipt of such notification the Administrator determines that the complaint meets the requirements set forth in R614-1-7.K.1., and that there are reasonable grounds to believe that the alleged violation exists, he shall cause an inspection to be made as soon as practicable. Inspections under this Part shall not be limited to matters referred to in the complaint.

3. Prior to or during any inspection of a workplace, any employee or representative of employees employed in such workplace may notify the Safety and Health Officer, in writing, of any violation of the Act which they have reason to believe exists in such workplace. Any such notice shall comply with requirements of R614-1-7.K.1.

4. Section 34A-6-203 of the Act provides protection for employees while engaged in protected activities.

L. Inspection not warranted; informal review.

1. If the Administrator determines that an inspection is not warranted because there are no reasonable grounds to believe that a violation or danger exists with respect to a complaint under K, he shall notify the complaining party in writing of such determination. The complaining party may obtain review of such determination by submitting a written statement of position with the Administrator. The Administrator, at his discretion, may hold an informal conference in which the complaining party and the employer may orally present their views. After considering all written and oral view presented, the Administrator shall affirm, modify, or reverse the determination

of the previous decision and again furnish the complaining party and the employer written notification of his decision and the reasons therefor.

2. If the Administrator determines that an inspection is not warranted because the requirements of R614-1-7.K.1. have not been met, he shall notify the complaining party in writing of such determination. Such determination shall be without prejudice to the filing of a new complaint meeting the requirements of R614-1-7.K.1.

M. Imminent danger.

Whenever a Safety and Health Officer concludes, on the basis of an inspection, that conditions or practices exist in any place of employment which could reasonably be expected to cause death or serious physical harm before the imminence of such danger can be eliminated through the enforcement procedures of the Act, he shall inform the affected employees and employers of the danger, that he is recommending a civil action to restrain such conditions or practices and for other appropriate citations of proposed penalties which may be issued with respect to an imminent danger even though, after being informed of such danger by the Compliance Officer, the employer immediately eliminates the imminence of the danger and initiates steps to abate such danger.

N. Citations.

1. The Administrator shall review the inspection report of the Safety and Health Officer. If, on the basis of the report the Administrator believes that the employer has violated a requirement of Section 34A-6-201 of the Act, of any standard, rule, or order promulgated pursuant to Section 34A-6-202 of the Act, or of any substantive rule published in this chapter, shall issue to the employer a citation. A citation shall be issued even though, after being informed of an alleged violation by the Safety and Health Officer, the employer immediately abates, or initiates steps to abate, such alleged violations. Any citation shall be issued with reasonable promptness after termination of the inspection. No citation may be issued after the expiration of 6 months following the occurrence of any violation.

2. Any citation shall describe with particularity the nature of the alleged violation, including a reference to the provision of the Act, standard, rule, regulations, or order alleged to have been violated. Any citation shall also fix a reasonable time or times for the abatement of the alleged violations.

3. If a citation is issued for an alleged violation in a request for inspection under R614-1-7.K.1. or a notification of violation under R614-1-7.K.3., a copy of the citation shall also be sent to the employee or representative of employees who made such request or notification.

4. Following an inspection, if the Administrator determines that a citation is not warranted with respect to a danger or violation alleged to exist in a request for inspection under R614-1-7.K.1. or a notification of violation under R614-1-7.K.3., the informal review procedures prescribed in R614-1-7.L.1. shall be applicable. After considering all views presented, the Administrator shall either affirm, order a re-inspection, or issue a citation if he believes that the inspection disclosed a violation. The Administrator shall furnish the complaining party and the employer with written notification of his determination and the reasons therefor.

5. Every citation shall state that the issuance of a citation does not constitute a finding that a violation of the Act has occurred unless there is a failure to contest as provided for in the Act or, if contested, unless the citation is affirmed by the Commission.

O. Petitions for modification of abatement date.

1. An employer may file a petition for modification of abatement date when he has made a good faith effort to comply with the abatement requirements of the citation, but such abatement has not been completed because of factors beyond his reasonable control.

2. A petition for modification of abatement date shall be in writing and shall include the following information.

a. All steps taken by the employer, and the dates of such action, in an effort to achieve compliance during the prescribed abatement period.

b. The specific additional abatement time necessary in order to achieve compliance.

c. The reasons such additional time is necessary, including the unavailability, of professional or technical personnel or of materials and equipment, or because necessary construction or alteration of facilities cannot be completed by the original abatement date.

d. All available interim steps being taken to safeguard the employees against the cited hazard during the abatement period.

e. A certification that a copy of the petition has been posted and, if appropriate, served on the authorized representative of affected employees, in accordance with paragraph R614-1-7.O.3.a. and a certification of the date upon which such posting and service was made.

3. A petition for modification of abatement date shall be filed with the Administrator who issued the citation no later than the close of the next working day following the date on which abatement was originally required. A later-filed petition shall be accompanied by the employer's statement of exceptional circumstances explaining the delay.

a. A copy of such petition shall be posted in a conspicuous place where all affected employees will have notice thereof or near such location where the violation occurred. The petition shall remain posted for a period of ten (10) days. Where affected employees are represented by an authorized representative, said representative shall be served with a copy of such petition.

b. Affected employees or their representatives may file an objection in writing to such petition with the aforesaid Administrator. Failure to file such objection within ten (10) working days of the date of posting of such petition or of service upon an authorized representative shall constitute a waiver of any further right to object to said petition.

c. The Administrator or his duly authorized agent shall have authority to approve any petition for modification of abatement date filed pursuant to paragraphs R614-1-7.O.2. and 3. Such uncontested petitions shall become final orders pursuant to Subsection 34A-6-303(1) of the Act.

d. The Administrator or his authorized representative shall not exercise his approval power until the expiration of ten (10) days from the date of the petition was posted or served pursuant to paragraphs R614-1-7.O.3.a. and b. by the employer.

4. Where any petition is objected to by the affected employees, the petition, citation, and any objections shall be forwarded to the Administrator per R614-1-7.O.3.b. Upon receipt the Administrator shall schedule and notify all interested parties of a formal hearing before the Administrator or his authorized representative(s). Minutes of this hearing shall be taken and become public records of the Commission. Within ten (10) days after conclusion of the hearing, a written opinion by the Administrator will be made, with copies to the affected employees or their representatives, the affected employer and to the Commission.

P. Proposed penalties.

1. After, or concurrent with, the issuance of a citation and within a reasonable time after the termination of the inspection, the Administrator shall notify the employer by certified mail or by personal service by the Safety and Health Officer of the proposed penalty under Section 34A-6-307 of the Act, or that no penalty is being proposed. Any notice of proposed penalty shall state that the proposed penalty shall be deemed to be the final order of the Commission and not subject to review by any court or agency unless, within 30 days from the date of receipt of such notice, the employer notifies the Adjudication Division

in writing that he intends to contest the citation or the notification of proposed penalty before the Commission.

2. The Administrator shall determine the amount of any proposed penalty, giving due consideration to the appropriateness of the penalty with respect to the size of the business, of the employer being charged, the gravity of the violation, the good faith of the employer, and the history of previous violations, in accordance with the provisions of Section 34A-6-307 of the Act.

3. Appropriate penalties may be proposed with respect to an alleged violation even though after being informed of such alleged violation by the Safety and Health Officer, the employer immediately abates, or initiates steps to abate, such alleged violation. Penalties shall not be proposed for violations which have no direct or immediate relationship to safety or health.

Q. Posting of citations.

1. Upon receipt of any citation under the Act, the employer shall immediately post such citation, or copy thereof, unedited, at or near each place of alleged violation referred to in the citation occurred, except as hereinafter provided. Where, because of the nature of the employer's operations, it is not practicable to post the citation at or near each place of alleged violation, such citation shall be posted, unedited, in a prominent place where it will be readily observable by all affected employees. For example, where employees are engaged in activities which are physically dispersed (see R614-1-7.B.), the citation may be posted at the location to which employees report each day. Where employees do not primarily work at or report to a single location (see R614-1-7.B.2.), the citation must be posted at the location from which the employees commence their activities. The employer shall take steps to ensure that the citation is not altered, defaced, or covered by other material.

2. Each citation or a copy thereof, shall remain posted until the violation has been abated, or for 3 working days which ever is later. The filing by the employer of a notice of intention to contest under R614-1-7.R. shall not affect his posting responsibility unless and until the Commission issues a final order vacating the citation.

3. An employer, to whom a citation has been issued, may post a notice in the same location where such citation is posted indicating that the citation is being contested before the Commission, such notice may explain the reasons for such contest. The employer may also indicate that specified steps have been taken to abate the violation.

4. Any employer failing to comply with the provisions of R614-1-7.Q.1. and 2. shall be subject to citation and penalty in accordance with the provisions of Section 34A-6-307 of the Act.

R. Employer and employee hearings before the Commission.

1. Any employer to whom a citation or notice of proposed penalty has been issued, may under Section 34A-6-303 of the Act, notify the Adjudication Division in writing that the employer intends to contest such citation or proposed penalty before the Commission. Such notice of intention to contest must be received by the Adjudication Division within 30 days of the receipt by the employer of the notice of proposed penalty. Every notice of intention to contest shall specify whether it is directed to the citation or to the proposed penalty, or both. The Adjudication Division shall handle such notice in accordance with the rules of procedures prescribed by the Commission.

2. An employee or representative of employee of an employer to whom a citation has been issued may, under Section 34A-6-303(3) of the Act, file a written notice with the Adjudication Division alleging that the period of time fixed in the citation for the abatement of the violation is unreasonable. Such notice must be received by the Adjudication Division within 30 days of the receipt by the employer of the notice of proposed penalty or notice that no penalty is being proposed. The Adjudication Division shall handle such notice in

accordance with the rules of procedure prescribed by the Commission.

S. Failure to correct a violation for which a citation has been issued.

1. If an inspection discloses that an employer has failed to correct an alleged violation for which a citation has been issued within the period permitted for its correction, the Administrator shall notify the employer by certified mail or by personal service by the Safety and Health Officer of such failure and of the additional penalty proposed under Section 34A-6-307 of the Act by reason of such failure. The period for the correction of a violation for which a citation has been issued shall not begin to run until the entry of a final order of the Commission in the case of any review proceedings initiated by the employer in good faith and not solely for delay or avoidance of penalties.

2. Any employer receiving a notification of failure to correct a violation and of proposed additional penalty may, under Section 34A-6-303(3) of the Act, notify the Adjudication Division in writing that he intends to contest such notification or proposed additional penalty before the Commission. Such notice of intention to contest shall be postmarked within 30 days of receipt by the employer of the notification of failure to correct a violation and of proposed additional penalty. The Adjudication Division shall handle such notice in accordance with the rules of procedures prescribed by the Commission.

3. Each notification of failure to correct a violation and of proposed additional penalty shall state that it shall be deemed to be the final order of the Commission and not subject to review by any court or agency unless, within 30 days from the date of receipt of such notification, the employer notifies the Adjudication Division in writing that he intends to contest the notification or the proposed additional penalty before the Commission.

T. Informal conferences.

At the request of an affected employer, employee, or representative of employees, the Administrator may hold an informal conference for the purpose of discussing any issues raised by an inspection, citation, notice of proposed penalty, or notice of intention to contest. The Administrator shall provide in writing the reasons for any settlement of issues at such conferences. If the conference is requested by the employer, an affected employee or his representative shall be afforded an opportunity to participate, at the discretion of the Administrator. If the conference is requested by an employee or representative of employees, the employer shall be afforded an opportunity to participate, at the discretion of the Administrator. Any party may be represented by counsel at such conference. No such conference or request for such conference shall operate as a stay of any 30 day period for filing a notice of intention to contest as prescribed in R614-1-7.R.

U. Multi-Employer worksites.

1. Pursuant to Section 34A-6-201 of the Act, violation of an applicable standard adopted under Section 34A-6-202 of the Act at a multi-employer worksite may result in a citation issued to more than one employer.

2. An employer on a multi-employer worksite may be considered a creating, exposing, correcting, or controlling employer. An employer may be cited should:

a. It meet the definition of a creating employer and be found to have failed to exercise the duty of care required by this Rule for a creating employer: or

b. It meet the definition of an exposing, correcting, or controlling employer and be found to have failed to exercise the duty of care required by this Rule for that category of employer.

c. Even if an employer meets its duty of reasonable care applicable to one category of employer, it may still be cited should it meet the definition of another category of employer and be found to have failed to exercise the duty of care required by this Rule for that category of employer. No employer will be

cited for the same violation under multiple categories of employers.

3. **Creating Employer.** A creating employer is one that created a hazardous condition on the worksite. A creating employer may be cited if:

- a. Its own employees are exposed or if the employees of another employer at the site are exposed to this hazard; and
- b. The employer did not exercise reasonable care by taking prompt and effective steps to alert employees of other employers of the hazard and to correct or remove the hazard or, if the creating employer does not have the ability or authority to correct or remove the hazard, to notify the controlling or correcting employer of the hazard.

4. **Exposing Employer.** An exposing employer is one that exposed its own employees to a hazard. If the exposing employer created the hazard, it is citable as the creating employer, not the exposing employer.

a. If the exposing employer did not create the hazard, it may be cited as the exposing employer if:

- i. It knew of the hazard or failed to exercise reasonable care to discover the hazard; and
- ii. Upon obtaining knowledge of the hazard, it failed to take prompt and reasonable precautions, consistent with its authority on the worksite, to protect its employees.

b. An exposing employer will be deemed to have exercised reasonable care to discover a hazard if it demonstrates that it has regularly and diligently inspected the worksite.

c. If the exposing employer has the authority to correct or remove the hazard, it must correct or remove the hazard with reasonable diligence. If the exposing employer lacks such authority, it may still be cited if:

- i. It failed to make a good faith effort to ask the creating and/or controlling employer to correct the hazard;
- ii. It failed to inform its employees of the hazard; and
- iii. It failed to take reasonable alternative measures, consistent with its authority on the worksite, to protect its employees.

5. **Correcting Employer.** A correcting employer is one responsible for correcting a hazardous condition, such as installing or maintaining safety and health devices or equipment, or implementing appropriate health and safety procedures. A correcting employer must exercise reasonable care in preventing and discovering hazards and ensure such hazards are corrected in a prompt manner, which shall be determined in light of the scale, nature and pace of the work, and the amount of activity of the worksite.

6. **Controlling Employer.** A controlling employer is one with general supervisory authority over a worksite. This authority may be established either through contract or practice and includes the authority to correct safety and health violations or require others to do so, but it is separate from the responsibilities and care to be exercised by a correcting employer.

a. A controlling employer will not be cited if it has exercised reasonable care to prevent and detect violations on the worksite. The extent of the measures used by a controlling employer to satisfy this duty, however, is less than the extent required of an employer when protecting its own employees. A controlling employer is not required to inspect for hazards or violations as frequently or to demonstrate the same knowledge of applicable standards or specific trade expertise as the employer under its control.

b. When determining the duty of reasonable care applicable to a controlling employer on a multi-employer worksite, the factors that may be considered include, but are not limited to:

- i. The nature of the worksite and industry in which the work is being performed;
- ii. The scale, nature and pace of the work, including the

pace and frequency at which the worksite hazards change as the work progresses;

iii. The amount of activity at the worksite, including the number of employers under its control and the number of employees working on the worksite;

iv. The implementation and monitoring of safety and health precautions for the entire worksite requiring that other employers on the worksite comply with their respective obligations and standards of care for the safety of employees, a graduated system of discipline for non-compliant employees and/or employers, regular worksite safety meetings, and when appropriate for atypical hazards, the providing of adequate safety training by employers for atypical hazards present on the worksite; and

v. The frequency of worksite inspections, particularly at the commencement of a project or the commencement of work on the project by other employers that come under its control. As work progresses, the frequency and sufficiency of such inspections shall be determined in relation to other employers' compliance with their respective obligations and standards of care as required by this Rule.

c. When evaluating whether a controlling employer has demonstrated reasonable care in preventing and discovering violations, the following factors, though not inclusive, shall be considered:

i. Whether the controlling employer conducted worksite inspections with sufficient frequency as contemplated by subsection 6(b);

ii. The controlling employer's implementation and monitoring of an effective system for identifying a hazardous condition and promptly notifying employers under its control of the hazard so as to ensure compliance with their respective duties of care under this Rule;

iii. Whether the controlling employer implements a graduated system of discipline for non-compliant employees and/or employers with their respective safety and health requirements;

iv. Whether the controlling employer performs follow-up inspections to ensure hazards are corrected; and

v. Other actions demonstrating the implementation and monitoring of safety and health precautions for the entire worksite.

7. In accordance with Section 34A-6-110, nothing in this Rule shall:

a. be deemed to limit or repeal requirements imposed by statute or otherwise recognized by law; or

b. be construed or held to supersede or in any manner affect workers' compensation or enlarge or diminish or affect the common-law or statutory rights, duties, or liabilities of employers and employees under any law with respect to injuries, occupational or other diseases, or death of employees arising out of, or in the course of employment.

R614-1-8. Recording and Reporting Occupational Injuries and Illnesses.

A. The rules in this section implement Sections 34A-6-108 and 34A-6-301(3) of the Act. These sections provide for record-keeping and reporting by employers covered under the Act, for developing information regarding the causes and prevention of occupational accidents and illnesses, and for maintaining a program of collection, compilation, and analysis of occupational safety and health statistics. Regardless of size or type of operation, accidents and fatalities must be reported to UOSH in accordance with the requirements of R614-1-5.C.

NOTE: Utah has adopted and will enforce the Federal Recordkeeping Standard 29CFR1904.

Utah Specific Recordkeeping requirements follow:

B. Supplementary record.

Each employer shall have available for inspection at each

establishment within 6 working days after receiving information that a recordable case has occurred, a supplementary record for that establishment. The record shall be completed in the detail prescribed in the instructions accompanying federal OSHA Form No. 301, Utah Industrial Accidents Form 122. Workers' compensation, insurance, or other reports are acceptable alternative records if they contain the information required by the federal OSHA Form No. 301, Utah Industrial Accidents Form 122. If no acceptable alternative record is maintained for other purposes, Federal OSHA Form No. 301, Utah Industrial Accidents Form 122 shall be used or the necessary information shall be otherwise maintained.

C. Retention of records.

Preservation of records.

a. This section applies to each employer who makes, maintains or has access to employee exposure records or employee medical records.

b. "Employee exposure record" means a record of monitoring or measuring which contains qualitative or quantitative information indicative of employee exposures to toxic materials or harmful physical agents. This includes both individual exposure records and general research or statistical studies based on information collected from exposure records.

c. "Employee medical record" means a record which contains information concerning the health status of an employee or employees exposed or potentially exposed to toxic materials or harmful physical agents. These records may include, but are not limited to:

(1) The results of medical examinations and tests;

(2) Any opinions or recommendations of a physician or other health professional concerning the health of an employee or employees; and

(3) Any employee medical complaints relating to workplace exposure. Employee medical records include both individual medical records and general research or statistical studies based on information collected from medical records.

d. Preservation of records. Each employer who makes, maintains, or has access to employee exposure records or employee medical records shall preserve these records.

e. Availability of records. The employer shall make available, upon request to the Administrator, or a designee, and to the Director of the Division of Health, or a designee, all employee exposure records and employee medical records for examination and copying.

D. Access to records.

1. Records provided for in R614-1-8.A., E., and F. shall be available for inspection and copying by Compliance Officers during any occupational safety and health inspection provided for under R614-1-7 and Section 34A-6-301 of the Act.

2. The log and summary of all recordable occupational injuries and illnesses (OSHA No. 200) (the log) provided for in R614-1-8.A. shall, upon request, be made available by the employer to any employee, former employee, and to their representatives for examination and copying in a reasonable manner and at reasonable times. The employee, former employee, and their representatives shall have access to the log for any establishment in which the employee is or has been employed.

3. Nothing in this section shall be deemed to preclude employees and employee representatives from collectively bargaining to obtain access to information relating to occupational injuries and illnesses in addition to the information made available under this section.

4. Access to the log provided under this section shall pertain to all logs retained under requirements of R614-1-8.G.

E. Reporting of fatality or accidents. (Refer to Utah Occupational Safety and Health Rule, R614-1-5.C.)

F. Falsification or failure to keep records or reports.

1. Section 34A-6-307 of the Act provides penalties for

false information and recordkeeping.

2. Failure to maintain records or file reports required by this part, or in the details required by forms and instructions issued under this part, may result in the issuance of citations and assessment of penalties as provided for in Sections 34A-6-302 and 34A-6-307 of the Act.

G. Description of statistical program.

1. Section 34A-6-108 of the Act directs the Administrator to develop and maintain a program of collection, compilation, and analysis of occupational safety and health statistics. The program shall consist of periodic surveys of occupational injuries and illnesses.

2. The sample design encompasses probability procedures, detailed stratification by industry and size, and a systematic selection within Stratification. Stratification and sampling will be carried out in order to provide the most efficient sample for eventual state estimates. Some industries will be sampled more heavily than others depending on the injury rate level based on previous experience. The survey should produce adequate estimates for most four-digit Standard Industrial Classification (SIC) industries in manufacturing and for three-digit classification (SIC) in non-manufacturing. Full cooperation with the U. S. Department of Labor in statistical programs is intended.

R614-1-9. Rules of Practice for Temporary or Permanent Variance from the Utah Occupational Safety and Health Standards. (Also Adopted and Published as Chapter XXIII of the Utah Occupational Safety and Health Field Operations Manual.)

A. Scope.

1. This rule contains Rules of Practice for Administrative procedures to grant variances and other relief under Section 34A-6-202 of the Act. General information pertaining to employer-employee rights, obligations and procedures are included.

B. Application for, or petition against Variances and other relief.

1. The applicable parts of Section 34A-6-202 of the Act shall govern application and petition procedure.

2. Any employer or class of employers desiring a variance from a standard must make a formal written request including the following information:

a. The name and address of applicant;

b. The address of the place or places of employment involved;

c. A specification of the standard or portion thereof from which the applicant seeks a variance;

d. A statement by the applicant, supported by opinions from qualified persons having first-hand knowledge of the facts of the case, that he is unable to comply with the standard or portion thereof and a detailed statement of the reasons therefore;

e. A statement of the steps the applicant has taken and will take, with specific dates where appropriate, to protect employees against the hazard covered by the existing standard;

f. A statement of when the applicant expects to be able to comply with the standard and of what steps he has taken and will take, with specific dates where appropriate, to come into compliance with the standards (applies to temporary variances);

g. A statement of the facts the applicant would show to establish that (applies to newly promulgated standards);

(1) The applicant is unable to comply with a standard by its effective date because of unavailability of professional or technical personnel or of materials and equipment needed to come into compliance with the standard or because necessary construction or alteration of facilities cannot be completed by the effective date;

(2) He is taking all available steps to safeguard his employees against the hazards covered by the standards; and

(3) He has an effective program for coming into compliance with the standard as quickly as practicable;

h. Any request for a hearing, as provided in this rule;

i. A statement that the applicant has informed his affected employees of the application for variance by giving a copy thereof to their authorized representative, posting a summary statement of the application at the place or places where notices to employees are normally posted specifying where a copy may be examined; and

j. A description of how affected employees have been informed of their rights to petition the Administrator for a hearing.

3. The applicant shall designate the method he will use to safeguard his employees until a variance is granted or denied.

4. Whenever a proceeding on a citation or a related issue concerning a proposed penalty or period of abatement has been contested and is pending before an Administrative Law Judge or any subsequent review under the Administrative Procedures Act, until the completion of such proceeding, the Administrator may deny a variance application on a subject or an issue concerning a citation which has been issued to the employer.

C. Hearings.

1. The Administrator may conduct hearings upon application or petition in accordance with Section 34A-6-202(4) of the Act if:

a. Employee(s), the public, or other interested groups petition for a hearing; or

b. The Administrator deems it in the public or employee interest.

2. When a hearing is considered appropriate, the Administrator shall set the date, time, and place for such hearing. He shall provide timely notification to the applicant for variance and the petitioners. In the notice of hearing to the applicant, the applicant will be directed to notify his employees of the hearing.

3. Notice of hearings shall be published in the Administrative Rulemaking Bulletin. This shall include a statement that the application request may be inspected at the UOSH Division Office.

4. A copy of the Notification of Hearing along with other pertinent information shall be sent to the U.S. Department of Labor, Regional Administrator for OSHA.

D. Inspection for Variance Application.

1. A variance inspection will be required by the Administrator or his designee prior to final determination of either acceptance or denial.

2. A variance inspection is a single purpose, pre-announced, non-compliance inspection and shall include employee or employer representative participation or interview where necessary.

E. Interim order.

1. The purpose of an interim order is to permit an employer to proceed in a non-standard operation while administrative procedures are being completed. Use of this interim procedure is dependent upon need and employee safety.

2. Following a variance inspection, and after determination and assurance that employees are to be adequately protected, the Administrator may immediately grant, in writing, an interim order. To expedite the effect of the interim order, it may be issued at the work-site by the Administrator. The interim order will remain in force pending completion of the administrative promulgation action and the formal granting or denying of a temporary/permanent variance as requested.

F. Decision of the Administrator.

1. The Administrator may deny the application if:

a. It does not meet the requirements of paragraph R614-1-8.B.;

b. It does not provide adequate safety in the workplace for affected employees; or

c. Testimony or information provided by the hearing or inspection does not support the applicant's request for variance as submitted.

2. Letters of notification denying variance applications shall be sent to the applicant, and will include posting requirements to inform employees, affected associations, and employer groups.

a. A copy of correspondence related to the denial request shall be sent to the U.S. Department of Labor, Regional Administrator for OSHA.

b. The letter of denial shall be explicit in detail as to the reason(s) for such action.

3. The Administrator may grant the request for variances provided that:

a. Data supplied by the applicant, the UOSHA inspection and information and testimony affords adequate protection for the affected employee(s);

b. Notification of approval shall follow the pattern described in R614-1-9.C.2. and 3.;

c. Limitations, restrictions, or requirements which become part of the variance shall be documented in the letter granting the variance.

4. The Administrator's decision shall be deemed final subject to Section 34A-6-202(6).

G. Recommended Time Table for Variance Action.

1. Publication of agency intent to grant a variance. This includes public comment and hearing notification in the Utah Administrative Rulemaking Bulletin: within 30 days after receipt.

2. Public comment period: within 20 days after publication.

3. Public hearing: within 30 days after publication

4. Notification of U.S. Department of Labor Regional Administrator for OSHA: 10 days after agency publication of intent.

5. Final Order: 120 days after receipt of variance application if publication of agency intent is made.

6. Rejection of variance application without publication of agency intent: 20 days after receipt of application.

a. Notification of U.S. Department of Labor Regional Administrator for OSHA: 20 days after receipt of application.

H. Public Notice of Granted Variances, Tolerances, Exemptions, and Limitations.

1. Every final action granting variance, exemption, or limitation under this rule shall be published as required under Title 63G, Chapter 3, Utah Administrative Rulemaking Act, and the time table set forth in R614-1-9.G.

I. Acceptance of federally Granted Variances.

1. Where a variance has been granted by the U.S. Department of Labor, Occupational Safety and Health Administration, following Federal Promulgation procedures, the Administrator shall take the following action:

a. Compare the federal OSHA standard for which the variance was granted with the equivalent UOSH standard.

b. Identify possible application in Utah.

c. If the UOSH standard under consideration for application of the variance has exactly or essentially the same intent as the federal standard and there is the probability of a multi-state employer doing business in Utah, then the Administrator shall accept the variance (as federally accepted) and promulgate it for Utah under the provisions of Title 63G, Chapter 3, Utah Administrative Rulemaking Act.

d. If the variance has no apparent application to Utah industry, or to a multi-state employer in Utah, or if it conflicts with Utah Legislative intent, or established policy or procedure, the federal variance shall not be accepted. In such case, the Regional Administrator will be so notified.

J. Revocation of a Variance.

1. Any variance (temporary or permanent) whether

approved by the state or one accepted by State based on Federal approval, may be revoked by the Administrator if it is determined through on-site inspection that:

- a. The employer is not complying with provisions of the variance as granted;
- b. Adequate employee safety is not afforded by the original provisions of the variance; or
- c. A more stringent standard has been promulgated, is in force, and conflicts with prior considerations given for employee safety.

2. A federally approved national variance may be revoked by the state for a specific work-site or place of employment within the state for reasons cited in R614-1-9.J.1. Such revocations must be in writing and give full particulars and reasons prompting the action. Full rights provided under the law, such as hearings, etc., must be afforded the employer.

3. Normally, permanent variances may be revoked or changed only after being in effect for at least six months.

K. Coordination.

1. All variances issued by the Administrator will be coordinated with the U.S. Department of Labor, OSHA to insure consistency and avoid improper unilateral action.

R614-1-10. Discrimination.

A. General.

1. The Act provides, among other things, for the adoption of occupational safety and health standards, research and development activities, inspections and investigations of work places, and record keeping requirements. Enforcement procedures initiated by the Commission; review proceedings as required by Title 63G, Chapter 4, Administrative Procedures Act; and judicial review are provided by the Act.

2. This rule deals essentially with the rights of employees afforded under section 34A-6-203 of the Act. Section 34A-6-203 of the Act prohibits reprisals, in any form, against employees who exercise rights under the Act.

3. The purpose is to make available in one place interpretations of the various provisions of Section 34A-6-203 of the Act which will guide the Administrator in the performance of his duties thereunder unless and until otherwise directed by authoritative decisions of the courts, or concluding, upon reexamination of an interpretation, that it is incorrect.

B. Persons prohibited from discriminating.

Section 34A-6-203 defines employee protections under the Act, because the employee has exercised rights under the Act. Section 34A-6-103(11) of the Act defines "person". Consequently, the prohibitions of Section 34A-6-203 are not limited to actions taken by employers against their own employees. A person may be chargeable with discriminatory action against an employee of another person. Section 34A-6-203 would extend to such entities as organizations representing employees for collective bargaining purposes, employment agencies, or any other person in a position to discriminate against an employee. (See, *Meek v. United States*, F. 2d 679 (6th Cir., 1943); *Bowe v. Judson C. Burnes*, 137 F 2d 37 (3rd Cir., 1943).)

C. Persons protected by section 34A-6-203.

1. All employees are afforded the full protection of Section 34A-6-203. For purposes of the Act, an employee is defined in Section 34A-6-103(6). The Act does not define the term "employ". However, the broad remedial nature of this legislation demonstrates a clear legislative intent that the existence of an employment relationship, for purposes of Section 34A-6-203, is to be based upon economic realities rather than upon common law doctrines and concepts. For a similar interpretation of federal law on this issue, see, *U.S. v. Silk*, 331 U.S. 704 (1947); *Rutherford Food Corporation v. McComb*, 331 U.S. 722 (1947).

2. For purposes of Section 34A-6-203, even an applicant

for employment could be considered an employee. (See, *NLRB v. Lamar Creamery*, 246 F. 2d 8 (5th Cir., 1957).) Further, because Section 34A-6-203 speaks in terms of any employee, it is also clear that the employee need not be an employee of the discriminator. The principal consideration would be whether the person alleging discrimination was an "employee" at the time of engaging in protected activity.

3. In view of the definitions of "employer" and "employee" contained in the Act, employees of a State or political subdivision thereof would be within the coverage of Section 34A-6-203.

D. Unprotected activities distinguished.

1. Actions taken by an employer, or others, which adversely affect an employee may be predicated upon nondiscriminatory grounds. The proscriptions of Section 34A-6-203 apply when the adverse action occurs because the employee has engaged in protected activities. An employee's engagement in activities protected by the Act does not automatically render him immune from discharge or discipline for legitimate reasons, or from adverse action dictated by non-prohibited considerations. (See, *NLRB v. Dixie Motor Coach Corp.*, 128 F. 2d 201 (5th Cir., 1942).)

2. To establish a violation of Section 34A-6-203, the employee's engagement in protected activity need not be the sole consideration behind discharge or other adverse action. If protected activity was a substantial reason for the action, or if the discharge or other adverse action would not have taken place "but for" engagement in protected activity, Section 34A-6-203 has been violated. (See, *Mitchell v. Goodyear Tire and Rubber Co.*, 278 F. 2d 562 (8th Cir., 1960); *Goldberg v. Bama Manufacturing*, 302 F. 2d 152 (5th Cir., 1962).) Ultimately, the issue as to whether a discharge was because of protected activity will have to be determined on the basis of the facts in the particular case.

E. Specific protections - complaints under or related to the Act.

1. Discharge of, or discrimination against an employee because the employee has filed "any complaint under or related to this Act" is prohibited by Section 34A-6-203. An example of a complaint made "under" the Act would be an employee request for inspection pursuant to Section 34A-6-301(6). However, this would not be the only type of complaint protected by Section 34A-6-203. The range of complaints "related to" the Act is commensurate with the broad remedial purposes of this legislation and the sweeping scope of its application, which entails the full extent of the commerce power. ((See *Cong. Rec.*, vol. 116 P. 42206 December 17, 1970).)

2. Complaints registered with Federal agencies which have the authority to regulate or investigate occupational safety and health conditions are complaints "related to" this Act. Likewise, complaints made to State or local agencies regarding occupational safety and health conditions would be "related to" the Act. Such complaints, however, must relate to conditions at the workplace, as distinguished from complaints touching only upon general public safety and health.

3. Further, the salutary principles of the Act would be seriously undermined if employees were discouraged from lodging complaints about occupational safety and health matters with their employers. Such complaints to employers, if made in good faith, therefore would be related to the Act, and an employee would be protected against discharge or discrimination caused by a complaint to the employer.

F. Proceedings under or related to the act.

1. Discharge of, or discrimination against, any employee because the employee has exercised the employee's rights under or related to this Act is also prohibited by Section 34A-6-203. Examples of proceedings which would arise specifically under the Act would be inspections of work-sites under Section 34A-6-301 of the Act, employee contest of abatement date under

Section 34A-6-303 of the Act, employee initiation of proceedings for promulgation of an occupational safety and health standard under Section 34A-6-202 of the Act and Title 63G, Chapter 3, employee application for modification of revocation of a variance under Section 34A-6-202(4)(c) of the Act and R614-1-9., employee judicial challenge to a standard under Section 34A-6-202(6) of the Act, and employee appeal of an order issued by an Administrative Law Judge, Commissioner, or Appeals Board under Section 34A-6-304. In determining whether a "proceeding" is "related to" the Act, the considerations discussed in R614-1-10.G. would also be applicable.

2. An employee need not himself directly institute the proceedings. It is sufficient if he sets into motion activities of others which result in proceedings under or related to the Act.

G. Testimony.

Discharge of, or discrimination against, any employee because the employee "has testified or is about to testify" in proceedings under or related to the Act is also prohibited by Section 34A-6-203. This protection would of course not be limited to testimony in proceedings instituted or caused to be instituted by the employee, but would extend to any statements given in the course of judicial, quasi-judicial, and administrative proceedings, including inspections, investigations, and administrative rulemaking or adjudicative functions. If the employee is giving or is about to give testimony in any proceeding under or related to the Act, he would be protected against discrimination resulting from such testimony.

H. Exercise of any right afforded by the Act.

1. In addition to protecting employees who file complaints, institute proceedings under or related to the Act it also prohibited by Section 34A-6-203 discrimination occurring because of the exercise "of any right afforded by this Act." Certain rights are explicitly provided in the Act; for example, there is a right to participate as a party in enforcement proceedings (34A-6-303). Certain other rights exist by necessary implications. For example, employees may request information from the Utah Occupational Safety and Health Administration; such requests would constitute the exercise of a right afforded by the Act. Likewise, employees interviewed by agents of the Administrator in the course of inspections or investigations could not subsequently be discriminated against because of their cooperation.

2. Review of the Act and examination of the legislative history discloses that, as a general matter, there is no right afforded by the Act which would entitle employees to walk off the job because of potential unsafe conditions at the workplace. Hazardous conditions which may be violative of the Act will ordinarily be corrected by the employer, once brought to his attention. If corrections are not accomplished, or if there is dispute about the existence of a hazard, the employee will normally have opportunity to request inspection of the workplace pursuant to Section 34A-6-301 of the Act, or to seek the assistance of other public agencies which have responsibility in the field of safety and health. Under such circumstances, therefore, an employer would not ordinarily be in violation of Section 34A-6-203 by taking action to discipline an employee for refusing to perform normal job activities because of alleged safety or health hazards.

a. Occasions might arise when an employee is confronted with a choice between not performing assigned tasks or subjecting himself to serious injury or death arising from a hazardous condition at the workplace. If the employee, with no reasonable alternative, refuses in good faith to expose himself to the dangerous condition, he would be protected against subsequent discrimination. The condition causing the employee's apprehension of death or injury must be of such a nature that a reasonable person, under the circumstances then confronting the employee, would conclude that there is a real

danger of death or serious injury and that there is insufficient time, due to the urgency of the situation, to eliminate the danger through resort to regular statutory enforcement channels. In addition, in such circumstances, the employee, where possible, must also have sought from his employer, and been unable to obtain, a correction of the dangerous condition.

I. Procedures - Filing of complaint for discrimination.

1. Who may file. A complaint of Section 34A-6-203 discrimination may be filed by the employee himself, or by a representative authorized to do so on his behalf.

2. Nature of filing. No particular form of complaint is required.

3. Place of filing. Complaint should be filed with the Administrator, Division of Occupational Safety and Health, Labor Commission, 160 East 300 South, Salt Lake City, Utah 84114-6650, Telephone 530-6901.

4. Time for filing.

a. Section 34A-6-203(2)(b) provides protection for an employee who believes that he has been discriminated against.

b. A major purpose of the 30-day period in this provision is to allow the Administrator to decline to entertain complaints which have become stale. Accordingly, complaints not filed within 30 days of an alleged violation will ordinarily be presumed to be untimely.

c. However, there may be circumstances which would justify tolling of the 30-day period on recognized equitable principles or because of strongly extenuating circumstances, e.g., where the employer has concealed, or misled the employee regarding the grounds for discharge or other adverse action; where the employee has, within the 30-day period, resorted in good faith to grievance-arbitration proceedings under a collective bargaining agreement or filed a complaint regarding the same general subject with another agency; where the discrimination is in the nature of a continuing violation. In the absence of circumstances justifying a tolling of the 30-day period, untimely complaints will not be processed.

J. Notification of administrator's determination.

The Administrator is to notify a complainant within 90 days of the complaint of his determination whether prohibited discrimination has occurred. This 90-day provision is considered directory in nature. While every effort will be made to notify complainants of the Administrator's determination within 90 days, there may be instances when it is not possible to meet the directory period set forth in this section.

K. Withdrawal of complaint.

Enforcement of the provisions of Section 34A-6-203 is not only a matter of protecting rights of individual employees, but also of public interest. Attempts by an employee to withdraw a previously filed complaint will not necessarily result in termination of the Administrator's investigation. The Administrator's jurisdiction cannot be foreclosed as a matter of law by unilateral action of the employee. However, a voluntary and uncoerced request from a complainant to withdraw his complaint will be given careful consideration and substantial weight as a matter of policy and sound enforcement procedure.

L. Arbitration or other agency proceedings.

1. An employee who files a complaint under Section 34A-6-203(2) of the Act may also pursue remedies under grievance arbitration proceedings in collective bargaining agreements. In addition, the complainant may concurrently resort to other agencies for relief, such as the National Labor Relations Board. The Administrator's jurisdiction to entertain Section 34A-6-203 complaints, to investigate, and to determine whether discrimination has occurred, is independent of the jurisdiction of other agencies or bodies. The Administrator may file action in district court regardless of the pendency of other proceedings.

2. However, the Administrator also recognizes the policy favoring voluntary resolution of disputes under procedures in collective bargaining agreements. (See, e.g., Boy's Market, Inc.

v. Retail Clerks, 398 U.S. 235 (1970); Republic Steel Corp. v. Maddox, 379 U.S. 650 (1965); Carey v. Westinghouse Electric Co., 375 U.S. 261 (1964); Collier Insulated Wire, 192 NLRB No. 150 (1971).) By the same token, due deference should be paid to the jurisdiction of other forums established to resolve disputes which may also be related to Section 34A-6-203 complaints.

3. Where a complainant is in fact pursuing remedies other than those provided by Section 34A-6-203, postponement of the Administrator's determination and deferral to the results of such proceedings may be in order. (See, Burlington Truck Lines, Inc., v. U.S., 371 U.S. 156 (1962).)

4. Postponement of determination. Postponement of determination would be justified where the rights asserted in other proceedings are substantially the same as rights under Section 34A-6-203 and those proceedings are not likely to violate the rights guaranteed by Section 34A-6-203. The factual issues in such proceedings must be substantially the same as those raised by Section 34A-6-203 complaint, and the forum hearing the matter must have the power to determine the ultimate issue of discrimination. (See, Rios v. Reynolds Metals Co., F. 2d (5th Cir., 1972), 41 U.S.L.W. 1049 (October 10, 1972); Newman v. Avco Corp., 451 F. 2d 743 (6th Cir., 1971).)

5. Deferral to outcome of other proceedings. A determination to defer to the outcome of other proceedings initiated by a complainant must necessarily be made on a case-to-case basis, after careful scrutiny of all available information. Before deferring to the results of other proceedings, it must be clear that those proceedings dealt adequately with all factual issues, that the proceedings were fair, regular, and free of procedural infirmities, and that the outcome of the proceedings was not repugnant to the purpose and policy of the Act. In this regard, if such other actions initiated by a complainant are dismissed without adjudicative hearing thereof, such dismissal will not ordinarily be regarded as determinative of the Section 34A-6-203 complaint.

M. Employee refusal to comply with safety rules.

Employees who refuse to comply with occupational safety and health standards or valid safety rules implemented by the employer in furtherance of the Act are not exercising any rights afforded by the Act. Disciplinary measures taken by employers solely in response to employee refusal to comply with appropriate safety rules and regulations, will not ordinarily be regarded as discriminatory action prohibited by Section 34A-6-203. This situation should be distinguished from refusals to work, as discussed in R614-1-10.H.

R614-1-11. Rules of Agency Practice and Procedure Concerning UOSH Access to Employee Medical Records.

A. Policy.

UOSH access to employee medical records will in certain circumstances be important to the agency's performance of its statutory functions. Medical records, however, contain personal details concerning the lives of employees. Due to the substantial personal privacy interests involved, UOSH authority to gain access to personally identifiable employee medical information will be exercised only after the agency has made a careful determination of its need for this information, and only with appropriate safeguards to protect individual privacy. Once this information is obtained, UOSH examination and use of it will be limited to only that information needed to accomplish the purpose for access. Personally identifiable employee medical information will be retained by UOSH only for so long as needed to accomplish the purpose for access, will be kept secure while being used, and will not be disclosed to other agencies or members of the public except in narrowly defined circumstances. This section establishes procedures to implement these policies.

B. Scope.

1. Except as provided in paragraphs R614-1-11.B.3. through 6. below, this rule applies to all requests by UOSH personnel to obtain access to records in order to examine or copy personally identifiable employee medical information, whether or not pursuant to the access provision of R614-1-12.D.

2. For the purposes of this rule, "personally identifiable employee medical information" means employee medical information accompanied by either direct identifiers (name, address, social security number, payroll number, etc.) or by information which could reasonably be used in the particular circumstances indirectly to identify specific employees (e.g., exact age, height, weight, race, sex, date of initial employment, job title, etc.).

3. This rule does not apply to UOSH access to, or the use of, aggregate employee medical information or medical records on individual employees which is not a personally identifiable form. This section does not apply to records required by R614-1-8 to death certificates, or to employee exposure records, including biological monitoring records defined by R614-1-3.M. or by specific occupational safety and health standards as exposure records.

4. This rule does not apply where UOSH compliance personnel conduct an examination of employee medical records solely to verify employer compliance with the medical surveillance record keeping requirements of an occupational safety and health standard, or with R614-1-12. An examination of this nature shall be conducted on-site and, if requested, shall be conducted under the observation of the record holder. The UOSH compliance personnel shall not record and take off-site any information from medical records other than documentation of the fact of compliance or non-compliance.

5. This rule does not apply to agency access to, or the use of, personally identifiable employee medical information obtained in the course of litigation.

6. This rule does not apply where a written directive by the Administrator authorizes appropriately qualified personnel to conduct limited reviews of specific medical information mandated by an occupational safety and health standard, or of specific biological monitoring test results.

7. Even if not covered by the terms of this rule, all medically related information reported in a personally identifiable form shall be handled with appropriate discretion and care befitting all information concerning specific employees. There may, for example, be personal privacy interests involved which militate against disclosure of this kind of information to the public.

C. Responsible persons.

1. UOSH Administrator. The Administrator of the Division of Occupational Safety and Health of the Labor Commission shall be responsible for the overall administration and implementation of the procedures contained in this rule, including making final UOSH determinations concerning:

a. Access to personally identifiable employee medical information, and
b. Inter-agency transfer or public disclosure of personally identifiable employee medical information.

2. UOSH Medical Records Officer. The Administrator shall designate a UOSH official with experience or training in the evaluation, use, and privacy protection of medical records to be the UOSH Medical Records Officer. The UOSH Medical Records Officer shall report directly to the Administrator on matters concerning this section and shall be responsible for:

a. Making recommendations to the Administrator as to the approval or denial of written access orders.
b. Assuring that written access orders meet the requirements of paragraphs R614-1-11.D.2. and 3. of this rule.
c. Responding to employee, collective bargaining agent, and employer objections concerning written access orders.
d. Regulating the use of direct personal identifiers.

e. Regulating internal agency use and security of personally identifiable employee medical information.

f. Assuring that the results of agency analyses of personally identifiable medical information are, where appropriate, communicated to employees.

g. Preparing an annual report of UOSH's experience under this rule.

h. Assuring that advance notice is given of intended inter-agency transfers or public disclosures.

3. Principal UOSH Investigator. The Principal UOSH Investigator shall be the UOSH employee in each instance of access to personally identifiable employee medical information who is made primarily responsible for assuring that the examination and use of this information is performed in the manner prescribed by a written access order and the requirements of this section. When access is pursuant to a written access order, the Principal UOSH Investigator shall be professionally trained in medicine, public health, or allied fields (epidemiology, toxicology, industrial hygiene, bio-statistics, environmental health, etc.)

D. Written access orders.

1. Requirement for written access order. Except as provided in paragraph R614-1-11.D.4. below, each request by a UOSH representative to examine or copy personally identifiable employee medical information contained in a record held by an employer or other record holder shall be made pursuant to a written access order which has been approved by the Administrator upon the recommendation of the UOSH Medical Records Officer. If deemed appropriate, a written access order may constitute, or be accompanied by an administrative subpoena.

2. Approval criteria for written access order. Before approving a written access order, the Administrator and the UOSH Medical Records Officer shall determine that:

a. The medical information to be examined or copied is relevant to a statutory purpose and there is a need to gain access to this personally identifiable information.

b. The personally identifiable medical information to be examined or copied is limited to only that information needed to accomplish the purpose for access, and

c. The personnel authorized to review and analyze the personally identifiable medical information are limited to those who have a need for access and have appropriate professional qualifications.

3. Content of written access order. Each written access order shall state with reasonable particularity:

a. The statutory purposes for which access is sought.

b. The general description of the kind of employee medical information that will be examined and why there is a need to examine personally identifiable information.

c. Whether medical information will be examined on-site, and what type of information will be copied and removed off-site.

d. The name, address, and phone number of the Principal UOSH Investigator and the names of any other authorized persons who are expected to review and analyze the medical information.

e. The name, address, and phone number of the UOSH Medical Records Officer, and

f. The anticipated period of time during which UOSH expects to retain the employee medical information in a personally identifiable form.

4. Special situations. Written access orders need not be obtained to examine or copy personally identifiable employee medical information under the following circumstances:

a. Specific written consent. If the specific written consent of an employee is obtained pursuant to R614-1-12.D., and the agency or an agency employee is listed on the authorization as the designated representative to receive the medical information,

then a written access order need not be obtained. Whenever personally identifiable employee medical information is obtained through specific written consent and taken off-site, a Principal UOSH Investigator shall be promptly named to assure protection of the information, and the UOSH Medical Records Officer shall be notified of this person's identity. The personally identifiable medical information obtained shall thereafter be subject to the use and security requirements of paragraphs R614-1-11.H.

b. Physician consultations. A written access order need not be obtained where a UOSH staff or contract physician consults with an employer's physician concerning an occupational safety or health issue. In a situation of this nature, the UOSH physician may conduct on-site evaluation of employee medical records in consultation with the employer's physician, and may make necessary personal notes of his or her findings. No employee medical records however, shall be taken off-site in the absence of a written access order or the specific written consent of an employee, and no notes of personally identifiable employee medical information made by the UOSH physician shall leave his or her control without the permission of the UOSH Medical Records Officer.

E. Presentation of written access order and notice to employees.

1. The Principal UOSH Investigator, or someone under his or her supervision, shall present at least two (2) copies each of the written access order and an accompanying cover letter to the employer prior to examining or obtaining medical information subject to a written access order. At least one copy of the written access order shall not identify specific employees by direct personal identifier. The accompanying cover letter shall summarize the requirements of this section and indicate that questions or objections concerning the written access order may be directed to the Principal UOSH Investigator or to the UOSH Medical Records Officer.

2. The Principal UOSH Investigator shall promptly present a copy of the written access order (which does not identify specific employees by direct personal identifier) and its accompanying cover letter to each collective bargaining agent representing employees whose medical records are subject to the written access order.

3. The Principal UOSH Investigator shall indicate that the employer must promptly post a copy of the written access order which does not identify specific employees by direct personal identifier, as well as post its accompanying cover letter.

4. The Principal UOSH Investigator shall discuss with any collective bargaining agent and with the employer the appropriateness of individual notice to employees affected by the written access order. Where it is agreed that individual notice is appropriate, the Principal UOSH Investigator shall promptly provide to the employer an adequate number of copies of the written access order (which does not identify specific employees by direct personal identifier) and its accompanying cover letter to enable the employer either to individually notify each employee or to place a copy in each employee's medical file.

F. Objections concerning a written access order. All employees, collective bargaining agents, and employer written objections concerning access to records pursuant to a written access order shall be transmitted to the UOSH Medical Records Officer. Unless the agency decides otherwise, access to the record shall proceed without delay notwithstanding the lodging of an objection. The UOSH Medical Records Officer shall respond in writing to each employee's and collective bargaining agent's written objection to UOSH access. Where appropriate, the UOSH Medical Records Officer may revoke a written access order and direct that any medical information obtained by it be returned to the original record holder or destroyed. The principal UOSH Investigator shall assure that such instructions

by the UOSH Medical Records Officer are promptly implemented.

G. Removal of direct personal identifiers. Whenever employees medical information obtained pursuant to a written access order is taken off-site with direct personal identifiers included, the Principal UOSH Investigator shall, unless otherwise authorized by the UOSH Medical Records Officer, promptly separate all direct personal identifiers from the medical information, and code the medical information and the list of direct identifiers with a unique identifying number of each employee. The medical information with its numerical code shall thereafter be used and kept secured as though still in a directly identifiable form. The Principal UOSH Investigator shall also hand deliver or mail the list of direct personal identifiers with their corresponding numerical codes to the UOSH Medical Records Officer. The UOSH Medical Records Officer shall thereafter limit the use and distribution of the list of coded identifiers to those with a need to know its contents.

H. Internal agency use of personally identifiable employee medical information.

1. The Principal UOSH Investigator shall in each instance of access be primarily responsible for assuring that personally identifiable employee medical information is used and kept secured in accordance with this section.

2. The Principal UOSH Investigator, the UOSH Medical Records Officer, the Administrator, and any other authorized person listed on a written access order may permit the examination or use of personally identifiable employee medical information by agency employees and contractors who have a need for access, and appropriate qualifications for the purpose for which they are using the information. No UOSH employee or contractor is authorized to examine or otherwise use personally identifiable employee medical information unless so permitted.

3. Where a need exists, access to personally identifiable employee medical information may be provided to attorneys in the office of the State Attorney General, and to agency contractors who are physicians or who have contractually agreed to abide by the requirements of this section and implementing agency directives and instructions.

4. UOSH employees and contractors are only authorized to use personally identifiable employee medical information for the purposes for which it was obtained, unless the specific written consent of the employee is obtained as to a secondary purpose, or the procedures of R614-1-11.D. through G. are repeated with respect to the secondary purpose.

5. Whenever practicable, the examination of personally identifiable employee medical information shall be performed on-site with a minimum of medical information taken off-site in a personally identifiable form.

I. Security procedures.

1. Agency files containing personally identifiable employee medical information shall be segregated from other agency files. When not in active use, files containing this information shall be kept secured in a locked cabinet or vault.

2. The UOSH Medical Records Officer and the Principal UOSH Investigator shall each maintain a log of uses and transfers of personally identifiable employee medical information and lists of coded direct personal identifiers, except as to necessary uses by staff under their direct personal supervision.

3. The photocopying or other duplication of personally identifiable employee medical information shall be kept to the minimum necessary to accomplish the purposes for which the information was obtained.

4. The protective measures established by this rule apply to all worksheets, duplicate copies, or other agency documents containing personally identifiable employee medical information.

5. Intra-agency transfers of personally identifiable employee medical information shall be by hand delivery, United States mail, or equally protective means. Inter-office mailing channels shall not be used.

J. Retention and destruction of records.

1. Consistent with UOSH records disposition programs, personally identifiable employee medical information and lists of coded direct personal identifiers shall be destroyed or returned to the original record holder when no longer needed for the purposes for which they were obtained.

2. Personally identifiable employee medical information which is currently not being used actively but may be needed for future use shall be transferred to the UOSH Medical Records Officer. The UOSH Medical Records Officer shall conduct an annual review of all centrally-held information to determine which information is no longer needed for the purposes for which it was obtained.

K. Results of an agency analysis using personally identifiable employee medical information.

1. The UOSH Medical Records Officer shall, as appropriate, assure that the results of an agency analysis using personally identifiable employee medical information are communicated to the employees whose personal medical information was used as a part of the analysis.

2. Annual report. The UOSH Medical Records Officer shall on an annual basis review UOSH's experience under this section during the previous year, and prepare a report to the UOSH Administrator which shall be made available to the public. This report shall discuss:

a. The number of written access orders approved and a summary of the purposes for access;

b. The nature and disposition of employee; collective bargaining agent, and employer written objections concerning UOSH access to personally identifiable employee medical information; and

c. The nature and disposition of requests for inter-agency transfer or public disclosure of personally identifiable employee medical information.

L. Inter-agency transfer and public disclosure.

1. Personally identifiable employee medical information shall not be transferred to another agency or office outside of UOSH (other than to The Attorney General's Office) or disclosed to the public (other than to the affected employee or the original record holder) except when required by law or when approved by the Administrator.

2. Except as provided in paragraph R614-1-11.L.3. below, the Administrator shall not approve a request for an inter-agency transfer of personally identifiable employee medical information, which has not been consented to by the affected employees, unless the request is by a public health agency which:

a. Needs the requested information in a personally identifiable form for a substantial public health purpose;

b. Will not use the requested information to make individual determinations concerning affected employees which could be to their detriment;

c. Has regulations or established written procedures providing protection for personally identifiable medical information substantially equivalent to that of this section; and

d. Satisfies an exemption to the Privacy Act to the extent that the Privacy Act applies to the requested information (See 5 U.S.C. 552a(b); 29 CFR 70a.3).

3. Upon the approval of the Administrator, personally identifiable employee medical information may be transferred to:

a. The National Institute for Occupational Safety and Health (NIOSH).

b. The Department of Justice when necessary with respect to a specific action under the federal Occupational Safety and

Health Act of 1970 and Utah Occupational Safety and Health Act of 1973.

4. The Administrator shall not approve a request for public disclosure of employee medical information containing direct personal identifiers unless there are compelling circumstances affecting the health or safety of an individual.

5. The Administrator shall not approve a request for public disclosure of employee medical information which contains information which could reasonably be used indirectly to identify specific employees when the disclosure would constitute a clearly unwarranted invasion of personal privacy.

6. Except as to inter-agency transfers to NIOSH or the State Attorney General's Office, the UOSH Medical Records Officer shall assure that advance notice is provided to any collective bargaining agent representing affected employees and to the employer on each occasion that UOSH intends to either transfer personally identifiable employee medical information to another agency or disclose it to a member of the public other than to an affected employee. When feasible, the UOSH Medical Records Officer shall take reasonable steps to assure that advance notice is provided to affected employees when the employee medical information to be released or disclosed contains direct personal identifiers.

M. Effective date.

This rule shall become effective on January 15, 1981.

R614-1-12. Access to Employee Exposure and Medical Records.

A. Purpose.

To provide employees and their designated representatives a right of access to relevant exposure and medical records, and to provide representatives of the Administrator a right of access to these records in order to fulfill responsibilities under the Utah Occupational Safety and Health Act. Access by employees, their representatives, and the Administrator is necessary to yield both direct and indirect improvements in the detection, treatment, and prevention of occupational disease. Each employer is responsible for assuring compliance with this Rule, but the activities involved in complying with the access to medical records provisions can be carried out, on behalf of the employer, by the physician or other health care personnel in charge of employee medical records. Except as expressly provided, nothing in this Rule is intended to affect existing legal and ethical obligations concerning the maintenance and confidentiality of employee medical information, the duty to disclose information to a patient/employee or any other aspect of the medical-care relationship, or affect existing legal obligations concerning the protection of trade secret information.

B. Scope.

1. This rule applies to each general industry, maritime, and construction employer who makes, maintains, contracts for, or has access to employee exposure or medical records, or analyses thereof, pertaining to employees exposed to toxic substances or harmful physical agents.

2. This rule applies to all employee exposure and medical records, and analyses thereof, of employees exposed to toxic substances or harmful physical agents, whether or not the records are related to specific occupational safety and health standards.

3. This rule applies to all employee exposure and medical records, and analyses thereof, made or maintained in any manner, including on an in-house or contractual (e.g., fee-for-service) basis. Each employer shall assure that the preservation and access requirements of this rule are complied with regardless of the manner in which records are made or maintained.

C. Preservation of records.

1. Unless a specific occupational safety and health

standard provides a different period of time, each employer shall assure the preservation and retention of records as follows:

a. Employee medical records. Each employee medical record shall be preserved and maintained for at least the duration of employment plus thirty (30) years, except that health insurance claims records maintained separately from the employer's medical program and its records need not be retained for any specified period.

b. Employee exposure records. Each employee exposure record shall be preserved and maintained for at least thirty (30) years, except that:

(1) Background data to environmental (workplace) monitoring or measuring, such as laboratory reports and worksheets, need only be retained for one (1) year so long as the sampling results, the collection methodology (sampling plan), a description of the analytical and mathematical methods used, and a summary of other background data relevant to interpretation of the results obtained, are retained for at least thirty (30) years; and

(2) Material safety data sheets and paragraph R614-1-3.M.4. records concerning the identity of a substance or agent need not be retained for any specified period as long as some record of the identity (chemical name if known) of the substance or agent, where it was used, and when it was used is retained for at least thirty (30) years; and

c. Analyses using exposure or medical records. Each analysis using exposure or medical records shall be preserved and maintained for at least thirty (30) years.

2. Nothing in this rule is intended to mandate the form, manner, or process by which an employer preserves a record so long as the information contained in the record is preserved and retrievable, except that X-ray films shall be preserved in their original state.

D. Access to records.

1. Whenever an employee or designated representative requests access to a record, the employer shall assure that access is provided in a reasonable time, place, and manner, but in no event later than fifteen (15) days after the request for access is made.

2. Whenever an employee or designated representative requests a copy of a record, the employer shall, within the period of time previously specified, assure that either:

a. A copy of the record is provided without cost to the employee or representative;

b. The necessary mechanical copying facilities (e.g., photocopying) are made available without cost to the employee or representative for copying the record; or

c. The record is loaned to the employee or representative for a reasonable time to enable a copy to be made.

3. Whenever a record has been previously provided without cost to an employee or designated representative, the employer may charge reasonable, non-discriminatory administrative costs (i.e., search and copy expenses but not including overhead expenses) for a request by the employee or designated representative for additional copies of the record, except that:

a. An employer shall not charge for an initial request for a copy of new information that has been added to a record which was previously provided; and

b. An employer shall not charge for an initial request by a recognized or certified collective bargaining agent for a copy of an employee exposure record or an analysis using exposure or medical records.

4. Nothing in this rule is intended to preclude employees and collective bargaining agents from collectively bargaining to obtain access to information in addition to that available under this rule.

5. Employee and designated representative access.

a. Employee exposure records. Each employer shall, upon

request, assure the access of each employee and designated representative to employee exposure records relevant to the employee. For the purpose of this rule exposure records relevant to the employee consist of:

- (1) Records of the employee's past or present exposure to toxic substances or harmful physical agents,
- (2) Exposure records of other employees with past or present job duties or working conditions related to or similar to those of the employee,
- (3) Records containing exposure information concerning the employee's workplace or working conditions, and
- (4) Exposure records pertaining to workplaces or working conditions to which the employee is being assigned or transferred.

b. Employee medical records.

(1) Each employer shall, upon request, assure the access of each employee to employee medical records of which the employee is the subject, except as provided in R614-1-12.D.4.

(2) Each employer shall, upon request, assure the access of each designated representative to the employee medical records of any employee who has given the designated representative specific written consent. R614-1-12A., Appendix A to R614-1-12., contains a sample form which may be used to establish specific written consent for access to employee medical records.

(3) Whenever access to employee medical records is requested, a physician representing the employer may recommend that the employee or designated representative:

- (a) Consult with the physician for the purposes of reviewing and discussing the records requested;
- (b) Accept a summary of material facts and opinions in lieu of the records requested; or
- (c) Accept release of the requested records only to a physician or other designated representative.

(4) Whenever an employee requests access to his or her employee medical records, and a physician representing the employer believes that direct employee access to information contained in the records regarding a specific diagnosis of a terminal illness or a psychiatric condition could be detrimental to the employees health, the employer may inform the employee that access will only be provided to a designated representative of the employee having specific written consent, and deny the employee's request for direct access to this information only. Where a designated representative with specific written consent requests access to information so withheld, the employer shall assure the access of the designated representative to this information, even when it is known that the designated representative will give the information to the employee.

(5) Nothing in this rule precludes physician, nurse, or other responsible health care personnel maintaining employee medical records from deleting from requested medical records the identity of a family member, personal friend, or fellow employee who has provided confidential information concerning an employee's health status.

c. Analysis using exposure or medical records.

(1) Each employer shall, upon request, assure the access of each employee and designated representative to each analysis using exposure or medical records concerning the employee's working conditions or workplace.

(2) Whenever access is requested to an analysis which reports the contents of employee medical records by either direct identifier (name, address, social security number, payroll number, etc.) or by information which could reasonably be used under the circumstances indirectly to identify specific employees (exact age, height, weight, race, sex, date of initial employment, job title, etc.) the employer shall assure that personal identifiers are removed before access is provided. If the employer can demonstrate that removal of personal identifiers from an analysis is not feasible, access to the personally identifiable portions of analysis need not be provided.

(3) UOSH access.

(a) Each employer shall, upon request, assure the immediate access of representatives of the Administrator to employee exposure and medical records and to analysis using exposure or medical records. Rules of agency practice and procedure governing UOSH access to employee medical records are contained in R614-1-8.

(b) Whenever UOSH seeks access to personally identifiable employee medical information by presenting to the employer a written access order pursuant to R614-1-8, the employer shall prominently post a copy of the written access order and its accompanying cover letter for at least fifteen (15) working days.

E. Trade Secrets.

1. Except as provided in paragraph R614-1-12.E.2., nothing in this rule precludes an employer from deleting from records requested by an employee or designated representative any trade secret data which discloses manufacturing processes, or discloses the percentage of a chemical substance in a mixture, as long as the employee or designated representative is notified that information has been deleted. Whenever deletion of trade secret information substantially impairs evaluation of the place where or the time when exposure to a toxic substance or harmful physical agent occurred, the employer shall provide alternative information which is sufficient to permit the employee to identify where and when exposure occurred.

2. Notwithstanding any trade secret claims, whenever access to records is requested, the employer shall provide access to chemical or physical agent identities including chemical names, levels of exposure, and employee health status data contained in the requested records.

3. Whenever trade secret information is provided to an employee or designated representative, the employer may require, as a condition of access, that the employee or designated representative agree in writing not to use the trade secret information for the purpose of commercial gain and not to permit misuse of the trade secret information by a competitor or potential competitor of the employer.

F. Employee information.

1. Upon an employee's first entering into employment, and at least annually thereafter, each employer shall inform employees exposed to toxic substances or harmful physical agents of the following:

- a. The existence, location, and availability of any records covered by this rule;
- b. The person responsible for maintaining and providing access to records; and
- c. Each employee's right of access to these records.

2. Each employer shall make readily available to employees a copy of this rule and its appendices, and shall distribute to employees any informational materials concerning this rule which are made available to the employer by the Administrator.

G. Transfer of Records

1. Whenever an employer is ceasing to do business, the employer shall transfer all records subject to this Rule to the successor employer. The successor employer shall receive and maintain these records.

2. Whenever an employer is ceasing to do business and there is no successor employer to receive and maintain the records subject to this standard, the employer shall notify affected employees of their rights of access to records at least three (3) months prior to the cessation of the employer's business.

3. Whenever an employer either is ceasing to do business and there is no successor employer to receive and maintain the records, or intends to dispose of any records required to be preserved for at least thirty (30) years, the employer shall:

- a. Transfer the records to the Director of the National

Institute for Occupational Safety and Health (NIOSH) if so required by a specific occupational safety and health standard; or

b. Notify the Director of NIOSH in writing of the impending disposal of records at least three (3) months prior to the disposal of the records.

4. Where an employer regularly disposes of records required to be preserved for at least thirty (30) years, the employer may, with at least (3) months notice, notify the Director of NIOSH on an annual basis of the records intended to be disposed of in the coming year.

a. Appendices. The information contained in the appendices to this rule is not intended, by itself, to create any additional obligations not otherwise imposed by this rule nor detract from any existing obligation.

H. Effective date. This rule shall become effective on December 5, 1980. All obligations of this rule commence on the effective date except that the employer shall provide the information required under R614-1-12.F.1. to all current employees within sixty (60) days after the effective date.

R614-1-12A. Appendix A to R614-1-12 SAMPLE.

Authorization letter for the Release of Employee Medical Record Information to Designated Representative.

I, (full name of worker/patient), hereby authorize (individual or organization holding the medical records), to release to (individual or organization authorized to receive the medical information), the following medical information from my personal medical records: (Describe generally the information desired to be released).

I give my permission for this medical information to be used for the following purpose:, but I do not give permission for any other use or re-disclosure of this information.

(Note---Several extra lines are provided below so that you can place additional restrictions on this authorization letter if you want to. You may, however, leave these lines blank. On the other hand, you may want to (1) specify a particular expiration date for this letter (if less than one year); (2) describe medical information to be created in the future that you intend to be covered by this authorization letter, or (3) describe portions of the medical information in your records which you do not intend to be released as a result of this letter.)

Full name of Employee or Legal Representative
Signature of Employee or Legal Representative
Date of Signature

R614-1-12B. Appendix B to R614-1-12 Availability of NIOSH Registry of Toxic Effects of Chemical Substances (RTECS).

R614-1-12 applies to all employee exposure and medical records, and analysis thereof, of employees exposed to toxic substances or harmful physical agents (see R614-1-12.B.2.). The term "toxic substance" or "harmful physical agent" is defined by paragraph R614-1-3.FF. to encompass chemical substances, biological agents, and physical stresses for which there is evidence of harmful health effects. The standard uses the latest printed edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS) as one of the chief sources of information as to whether evidence of harmful health effects exists. If a substance is listed in the latest printed RTECS, the standard applies to exposure and medical records (and analysis of these records) relevant to employees exposed to the substances.

It is appropriate to note that the final standard does not require that employers purchase a copy of RTECS and many employers need not consult RTECS to ascertain whether their employee exposure or medical records are subject to the standard. Employers who do not currently have the latest

printed edition of the NIOSH RTECS, however, may desire to obtain a copy. The RTECS is issued in an annual printed edition as mandated by Rule 20(a)(6) of the Occupational Safety and Health Act (29 U.S.C. 669 (a)(6)). The 1978 edition is the most recent printed edition as of May 1, 1980. Its Forward and Introduction describes the RTECS as follows:

"The annual publication of a list of known toxic substances is a NIOSH mandate under the Occupational Safety and Health Act of 1970. It is intended to provide basic information on the known toxic and biological effects of chemical substances for the use of employers, employees, physicians, industrial hygienists, toxicologists, researchers, and, in general, anyone concerned with the proper and safe handling of chemicals. In turn, this information may contribute to a better understanding of potential occupational hazards by everyone involved and ultimately may help to bring about a more healthful workplace environment.

"This registry contains 142,247 listings of chemical substances: 33,929 are names of different chemicals with their associated toxicity data and 90,318 are synonyms. This edition includes approximately 7,500 new chemical compounds that did not appear in the 1977 Registry.

"The Registry's purposes are many, and it serves a variety of users. It is a single source document for basic toxicity information and for other data, such as chemical identifiers and information necessary for the preparation of safety directives and hazard evaluations for chemical substances. The various types of toxic effects linked to literature citations provide researchers and occupational health scientists with an introduction to the toxicological literature, making their own review of the toxic hazards of a given substance easier. By presenting data on the lowest reported doses that produce effects by several routes of entry in various species, the Registry furnishes valuable information to those responsible for preparing safety data sheets for chemical substances in the workplace. Chemical and production engineers can use the Registry to identify the hazards which may be associated with chemical intermediates in the development of final products, and thus can more readily select substitutes or alternate processes which may be less hazardous.

"In this edition of the Registry, the editors intend to identify "all known toxic substances" which may exist in the environment and to provide pertinent data on the toxic effects from known doses entering an organism by any route described. Data may be used for the evaluation of chemical hazards in the environment, whether they be in the workplace, recreation area, or living quarters.

"It must be reemphasized that the entry of a substance in the Registry does not automatically mean that it must be avoided. A listing does mean, however, that the substance has the documented potential of being harmful if misused, and care must be exercised to prevent tragic consequences."

The RTECS 1978 printed edition may be purchased for \$13.00 from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington, D.C. 20402 (202-783-3238) (GPO Stock No. 017-033-00346-7). The 1979 printed edition is anticipated to be issued in the summer of 1980. Some employers may also desire to subscribe to the quarterly update to the RTECS which is published in a microfiche edition. An annual subscription to the quarterly microfiche may be purchased from the GPO for \$14.00 (Order the "Microfiche Edition, Registry of Toxic Effects of Chemical Substances"). Both the printed edition and the microfiche edition of RTECS are available for review at many university and public libraries throughout the country. The latest RTECS editions may also be examined at OSHA Technical Data Center, Room N2439-Rear, United States Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210 (202-523-9700), or any OSHA Regional or Area Office (See major city

telephone directories under United States Government-Labor Department).

Notice of Continuation October 22, 2012

34A-6

R623. Lieutenant Governor, Elections.**R623-4. Processing Partisan Candidate Nomination Petitions.****R623-4-1. Purpose.**

A. Pursuant to Utah Code Annotated Subsection 20A-9-403(3)(f), this rule provides for the transparent orderly, and timely submission, verification, and certification of nomination petition signatures.

B. Pursuant to Utah Code Annotated Section 20A-9-410, this rule provides procedures for complying with, and verifying compliance with, the candidate nominating process described in that part.

R623-4-2. Authority.

This rule is required by Chapter 9 of Title 20A, Candidate Qualifications and Nominating Procedures, and is enacted under the authority of the Utah Constitution Art. VII, Sections 1 and 14, and Chapter 3 of Title 63G, the Utah Administrative Rulemaking Act.

R623-4-3. Definitions.

A. "Filing Officer" for the purposes of this section means:

1. The Lieutenant Governor will serve as the filing officer for federal, state and multicounty legislative races.

2. The County Clerk will serve as the filing officer for single county legislative races.

B. "Qualification Threshold" means:

1. The number of signatures required for a given office as set forth in 20A-9-403(3) (a)(ii) and 20A-9-408(8)(b).

R623-4-4. Uniform Nomination Petition Processing Standards.

A. Nomination Petition Packet Submission Procedure.

1. Any candidate who submits a nomination petition for verification shall submit their nomination petition packets, personally or by a designated agent, to the filing officer before the deadlines established in UCA Sections 20A-9-403 and 20A-9-408.

2. Any submission of nomination petition packets must contain sufficient signatures to meet or exceed the qualification threshold.

3. At the time of submitting any nomination petition, a candidate or designated agent must provide, on a form provided by the filing officer:

a. The candidate's contact information.

b. The estimated number of nomination petition packets in the submission.

c. The estimated number of signatures in the submission.

d. A signed statement that the candidate has gathered the amount of signatures, required to meet the qualification threshold.

4. The filing officer shall provide the candidate a receipt of the submission that includes:

a. The date and submission time.

b. A copy of the form required by Subsection (A)(3).

5. The filing officer shall reject a submission if:

a. The candidate fails to provide the form required in Subsection (A)(3);

b. The candidate did not gather the amount of signatures required to meet or exceeds the qualification threshold;

c. The candidate did not meet the submission deadline established in Utah Code Sections 20A-9-403 and 20A-9-408; or

d. The candidate has already met the qualification threshold.

6. If the filing officer rejects a submission in accordance with Subsection (A)(5), the filing officer shall provide the candidate with a written explanation of the rejection.

B. Supplementing Nomination Petition Packets.

1. Candidates may submit supplemental nomination petition packets following their first submission until the filing officer notifies the candidate that they have met the qualification threshold in accordance with Subsection (E)(1) or until the deadlines established in Utah Code Sections 20A-9-403 and 20A-9-408, whichever comes first.

2. The intake of supplemental nomination petition packets shall comply with Subsections (A)(1) through (A)(6).

3. The processing of supplemental nomination petition packets shall comply with Subsection (C)(1) through (E)(1).

C. Order of Nomination Petition Packet Verification.

1. The filing officer shall verify nomination petition submissions in the order received.

2. The filing officer shall ensure that nomination petition packets for candidates for the same office are not verified simultaneously.

D. Verifying Nomination Petition Packets.

1. The filing officer shall verify nomination petition packets in accordance with Utah Code Section 20A-7-206.3.

2. The filing officer shall verify all signatures of a nomination petition until the candidate has sufficient signatures to meet the qualification threshold.

3. The filing officer may discontinue the verification of a nomination petition if the candidate officially withdraws their candidacy or withdraws their notice of intent to gather signatures.

E. Communication of Results to Candidate.

1. Within one (1) business day after verifying all signatures in a candidate's submission or after the candidate meets or exceeds the qualification threshold, the filing officer shall notify the candidate of the total number of valid signatures in the submission and whether the candidate has met the qualification threshold.

R623-4-5. Withdrawal of Petition Packets and Petition Signatures.

A. A candidate may not withdraw nomination petition packets once they are submitted in accordance with Subsection R623-4-4(A).

B. A voter who has signed a candidate's nomination petition may have the voter's signature removed from the petition by submitting to the filing officer a statement requesting that the voter's signature be removed.

C. The statement shall include:

1. the name of the voter;

2. the name of the candidate;

3. the resident address at which the voter is registered to vote;

4. the last four digits of the voter's Social Security number;

5. the voter's driver license or identification card number; and

6. the signature of the voter.

D. A voter may not submit a statement by email or other electronic means.

E. In order for the signature to be removed, the statement must be received before the candidate submits any petition signatures for verification in accordance with Subsection R623-4-4(A).

R624-4-6. Declarations of Candidacy for State and Local School Board Candidates.

A. Any state or local school board candidate under Utah Code Title 20A shall file a declaration of candidacy in accordance with 20A-9-201 and 20A-9-202.

B. If Utah Code does not establish a deadline for state or local school board candidates to file a declaration of candidacy, the candidate shall file a declaration of candidacy before 5 p.m. on the third Thursday in March before the next regular general election.

R657. Natural Resources, Wildlife Resources.**R657-39. Wildlife Board and Regional Advisory Councils.****R657-39-1. Purpose and Authority.**

This rule is established under the authority of Sections 23-14-2, 23-14-2.6(7), 23-14-3, and 23-14-19 to provide the standards and procedures for the operation of the Wildlife Board and regional advisory councils.

R657-39-2. Definitions.

- (1) Terms used in this rule are defined in Section 23-13-2.
- (2) In addition:
 - (a) "Anchor location" means the physical location from which:
 - (i) an electronic meeting originates; or
 - (ii) the participants are connected.
 - (b) "Electronic meeting" means a public meeting convened or conducted by means of a conference using electronic communications.

R657-39-3. Regional Advisory Council Memberships -- Terms of Office.

(1)(a) There are created five regional advisory councils which shall consist of at least 12 members and not more than 15 members each from the wildlife region whose boundaries are established for administrative purposes by the division.

(b) Regional advisory councils shall be established as follows:

- (i) two members who represent agriculture;
- (ii) two members who represent sportsman;
- (iii) two members who represent nonconsumptive wildlife;
- (iv) one member who represents locally elected public officials;
- (v) one member who represents the U.S. Forest Service;
- (vi) one member who represents the Bureau of Land Management;
- (vii) one member who represents Native Americans where appropriate; and
- (viii) two members of the public at large who represent the interests of the region.

(c) The executive director of the Department of Natural Resources, in consultation with the director of the Division of Wildlife Resources, shall appoint additional members to the councils, up to a total of 15 per region, if deemed necessary to provide adequate representation of local interests and needs.

(d) Members of the councils shall serve a term of four years, except members may be appointed for a term of two years to ensure that the terms of office are staggered.

(e) Members may serve no more than two terms, except:

- (i) members representing Native Americans may serve unlimited terms;

(ii) members filling a vacancy under Subsection (3) for two years or less will not be credited with having served a term; and

(iii) members who have served two terms may be eligible to serve an additional two terms after four years absence from regional advisory council membership.

(f) Members' terms expire on July 1 of the final year in the appointed term.

(2) The executive director of the Department of Natural Resources, in consultation with the director of the Division of Wildlife Resources, may remove members of the councils from office for cause, but may not do so without a public hearing if requested by the member.

(3) If a vacancy occurs, the executive director of the Department of Natural Resources, in consultation with the director of the Division of Wildlife Resources, shall appoint a replacement to serve the remainder of the term from a list of nominees submitted by the respective interest group, agency, or the public at large.

(4)(a) Each council shall appoint:

(i) a chair to conduct meetings and present council recommendations to the Wildlife Board; and

(ii) a vice chair to conduct meetings in the absence of the chair.

(b) The chair and vice chair shall serve for a two year term of office, the regional advisory council may re-appoint the chair and vice chair to serve a second two year term.

(i) neither the chair nor the vice chair may serve more than two term.

(5) Regional supervisors of the division shall serve as executive secretary to the councils and shall provide administrative support.

(6) Each new member shall attend an orientation course provided by the division to assist them in the performance of the duties of their office.

(7) Any member who fails to attend two consecutive, previously scheduled meetings without contacting the chair shall be considered to have resigned and shall be replaced as provided in this section.

R657-39-4. Regional Advisory Council Meetings.

(1) Meeting dates and times may be proposed by the Division of Wildlife Resources, but shall be determined by the chair upon at least ten days notice or upon shorter notice in emergency situations.

(2) Meeting locations may be proposed by the Division of Wildlife Resources, but shall be determined by the chair and must be held within the council's regional boundary.

(3) Meetings should be conducted in accordance with Robert's Rules of Order.

(4)(a) Each council shall provide not less than 24 hours' public notice of the agenda, date, time, and place of each of its meetings.

(b) Public notice is satisfied by:

(i) posting written notice at the regional division office; and

(ii) providing notice to at least one newspaper of general circulation within the geographic jurisdiction of the council, or to a local media correspondent.

(c) When because of unforeseen circumstances it is necessary for a council to consider matters of an emergency or urgent nature, the notice requirements in this section may be disregarded and the best notice practicable given. No such meeting shall be held unless an attempt has been made to notify all of its members and a majority votes in the affirmative to hold the meeting.

(5) No formal decisions or recommendations may be made at any meeting unless there is a quorum present consisting of a simple majority of the membership of the council.

(6) Written minutes shall be kept of all council meetings pursuant to Section 52-4-7. Such minutes shall include:

(a) the date, time and place of the meeting;

(b) the names of members present and absent;

(c) the substance of all matters proposed, discussed, or decided, and a record, by individual member, of votes taken;

(d) the names of all citizens who appeared and the substance in brief of their testimony;

(e) any other information that any member requests be entered into the minutes.

(7)(a) All council meetings shall be open to the public except that a council may hold a closed meeting as authorized in Utah Code Sections 52-4-4 and 52-4-5.

(b) A record of all closed meetings shall be kept and maintained consistent with Utah Code Section 52-4-7.5.

R657-39-5. Regional Advisory Council Recommendations.

(1) Each council shall:

(a) hear broad input, including recommendations,

biological data, and information regarding the effects of wildlife;

(b) gather information from staff, the public, and government agencies; and

(c) make recommendations to the Wildlife Board in an advisory capacity.

(2) The chair of each council or his or her designee shall submit a written recommendation to the Wildlife Board and present its recommendations orally to the Wildlife Board during an open public meeting.

(3) Councils may not make formal recommendations to the Wildlife Board concerning the internal policies and procedures of the division, personnel matters, or expenditure of the division's budget.

R657-39-6. Wildlife Board Electronic Meetings.

(1) Utah Code Section 52-4-207 authorizes a public body to convene or conduct an electronic meeting provided written procedures are established for such meetings. This rule establishes procedures for conducting Wildlife Board meetings by electronic means.

(2) The following provisions govern any meeting at which one or more Wildlife Board members appear telephonically or electronically pursuant to Section 52-4-207:

(a) If one or more board members participate in a public meeting electronically or telephonically, public notices of the meeting shall specify:

(i) the board members participating in the meeting electronically and how they will be connected to the meeting;

(ii) the anchor location where interested persons and the public may attend, monitor, and participate in the open portions of the meeting;

(iii) the meeting agenda; and

(iv) the date and time of the meeting.

(b) Written or electronic notice of the meeting and the agenda shall be posted or provided no less than 24 hours prior to the meeting:

(i) at the anchor location;

(ii) on the Utah Public Notice Website; and

(iii) to at least one newspaper of general circulation within the state or to a local media correspondent.

These notices shall be provided at least 24 hours before the meetings.

(c) Notice of the possibility of an electronic meeting shall be given to board members at least 24 hours before the meeting. In addition, the notice shall describe how a board member may participate in the meeting electronically or telephonically.

(d) When notice is given of the possibility of a board member appearing electronically or telephonically, any board member may do so and shall be counted as present for purposes of a quorum and may fully participate and vote on any matter coming before the board.

(i) At the commencement of the meeting, or at such time as any board member initially appears electronically or telephonically, the chair should identify for the record all those who are appearing telephonically or electronically.

(ii) Votes by members of the board who are not at the physical location of the meeting shall be confirmed by the chair.

(e) The anchor location, unless otherwise designated in the notice, shall be at the offices of the Utah Department of Natural Resources, 1594 West North Temple, Salt Lake City, Utah.

(i) The anchor location is the physical location from which the electronic meeting originates or from which the participants are connected.

(ii) The anchor location shall have space and facilities so that interested persons and the public may attend, monitor, and participate in the open portions of the meeting.

R657-39-7. Wildlife Board Emergency Meetings.

(1) There are times when, due to the necessity of considering matters of an emergency or urgent nature, the public notice provisions of Sections 52-4-202(1) cannot be met. Pursuant to Section 52-4-202(5), the notice requirements in Section 52-4-202(1) may be disregarded when unforeseen circumstances require the wildlife board to meet and consider matters of an emergency or urgent nature.

(2) The following procedure shall govern any emergency meeting:

(a) No emergency meeting shall be held unless an attempt has been made to notify all of the members of the board of the proposed meeting and a majority of the convened members vote in the affirmative to hold such an emergency meeting.

(b) Public notice of the emergency meeting shall be provided as soon as practicable and shall include at a minimum the following:

(i) Posting of the date, time, and place of the meeting and the topics to be considered:

(A) at the offices of the division;

(B) on the division's web page; and

(C) at the location where the emergency meeting will be held.

(ii) If members of the board appear electronically or telephonically, notice shall comply with the requirements of R657-39-6(2) to the extent practicable.

(c) In convening the meeting and voting in the affirmative to hold such an emergency meeting, the board shall affirmatively state and find what unforeseen circumstances have rendered it necessary for the board to hold an emergency meeting to consider matters of an emergency or urgent nature such that the ordinary public notice of meetings provisions of Utah Code Section 52-4-202 could not be followed.

KEY: terms of office, public meetings, regional advisory councils

October 22, 2009

23-14-2.6(7)

Notice of Continuation December 7, 2015

23-14-19

R657. Natural Resources, Wildlife Resources.**R657-40. Wildlife Rehabilitation.****R657-40-1. Purpose and Authority.**

(1) Under Sections 23-13-4, 23-14-18, and 23-20-3, this rule provides the standards and procedures for possessing protected wildlife in captivity for rehabilitation purposes. In accordance with the provisions of this rule, the Wildlife Board encourages responsible wildlife rehabilitation by trained and educated individuals as a public service and for the benefit of Utah's wildlife resources.

(2)(a) This rule does not govern the rehabilitation of species of wildlife classified as non-protected wildlife in Subsection 23-13-2(35)(b), including coyote, field mouse, gopher, ground squirrel, jack rabbit, muskrat, and raccoon.

(b) Holding raccoons and coyotes in captivity is governed by the Department of Agriculture under Section 4-23-11 and Rule R58-14. Authorization from the Department of Agriculture is required for their live possession.

R657-40-2. Definitions.

(1) Terms used in this rule are defined in Section 23-13-2.

(2) In addition:

(a) "Apprentice" means a person listed on a certificate of registration for wildlife rehabilitation who is authorized to rehabilitate wildlife under the direct supervision of a wildlife rehabilitator.

(b) "CFR" means the Code of Federal Regulations;

(c) "Direct Supervision" means to provide personal assistance and instruction to an apprentice for wildlife rehabilitation, including prior approval of treatment and disposition of wildlife undergoing rehabilitation.

(d) "Taxa" means the following classes of wildlife species that have similar requirements for food, habitat, and other ecological or behavioral needs pertinent to wildlife rehabilitation:

- (i) amphibians;
- (ii) reptiles;
- (iii) birds, except raptors;
- (iv) raptors;
- (v) mammals, except big game and carnivores;
- (vi) big game mammals; and
- (vii) carnivores.

(e) "Wildlife rehabilitation" means to care for injured, sick, orphaned, or otherwise distressed wildlife for the purpose of returning it to the wild.

(f) "Wildlife rehabilitator" means a person authorized by the division to rehabilitate wildlife.

R657-40-3. Certificate of Registration Required.

(1) A valid certificate of registration is required before any person may engage in wildlife rehabilitation or possess protected wildlife in captivity for rehabilitation.

(2) Certificates of registration are issued for the sole purpose of restoring protected wildlife to a condition that it may be returned to the wild. A wildlife rehabilitator may not keep protected wildlife in captivity for any other purpose or exhibit any wildlife held in captivity to the general public without prior written authorization from the division.

(3) Certificates of registration shall specify:

(a) the person responsible for rehabilitation activities and each apprentice acting under the direction of the wildlife rehabilitator;

(b) the taxa or specific species of protected wildlife that may be rehabilitated; and

(c) the locations where rehabilitation activities may occur.

(4) All protected wildlife and its progeny held under a certificate of registration:

(a) shall remain under the jurisdiction of the state of Utah and may not be considered privately owned or legally acquired

and shall be returned to the division upon request; and

(b) may not be used for any purpose other than rehabilitation for release to the wild without prior written authorization from the division.

R657-40-4. Application Procedure.

(1) Applications for certificates of registration are available from division offices.

(2) Applicants for:

(a) wildlife rehabilitation must be 18 years of age or older; and

(b) wildlife apprenticeship must be 18 years of age or older.

(3) In addition to a completed application, the applicant for wildlife rehabilitation must provide the following information:

(a) the name, date of birth, mailing address, and phone number of the applicant;

(b) the name, date of birth, mailing address, and phone number of each apprentice;

(c) the street address or an adequate description of the location and all premises where wildlife rehabilitation facilities will be established and maintained;

(d) a detailed diagram of all wildlife rehabilitation facilities and cages in which protected wildlife will be held;

(e) the taxa or species of wildlife proposed to be rehabilitated;

(f) the signature of the applicant and date of submittal of the application;

(g)(i) the name, address, and signed statement from a licensed veterinarian agreeing to assist the applicant in wildlife rehabilitation activities; or

(ii) a copy of a valid veterinary license if the applicant is a veterinarian;

(h) a signed, written statement from a wildlife rehabilitator indicating the applicant has a minimum of two years experience performing wildlife rehabilitation under that person's direction. The experience must have been for an average of at least eight hours per week and for the taxa of animals for which the applicant is applying;

(i) a signed, written statement from the city or county in which the applicant proposes to rehabilitate wildlife granting approval for the proposed activities; and

(j) documentation of a passing score of the exam as provided in Section R657-40-5.

(4) The division may waive the training standards required in Subsection (3)(h) for a specific taxa if it is not possible to obtain the required experience because there are no existing rehabilitators authorized to rehabilitate an apprentice for that taxa.

(5) In addition to the information required in Subsection (3), the division may require additional information for rehabilitating potentially dangerous animals, protection of human safety, or other information that will allow the division to effectively assess the applicant's abilities to rehabilitate wildlife.

(6)(a) If the applicant requests authorization to rehabilitate migratory birds, the applicant must provide a copy of the federal application for a special purpose permit as required under 50 CFR 21.27.

(b) The certificate of registration may not be issued until the federal application is approved by the U.S. Fish and Wildlife Service.

(7) Completed applications must be submitted to the Wildlife Registration office located in the Salt Lake division office.

(8) An incomplete application or an application that does not include the information required under this section may be returned to the applicant.

(9)(a) Upon receiving a completed application and the documentation required under this section, a division representative shall inspect the applicant's facilities in accordance with state and federal guidelines.

(b) A certificate of registration will not be issued and an amendment will not be granted to an existing certificate of registration until after the applicant's facilities have been inspected and approved by the division.

(10)(a) The division shall, within 45 days after inspecting the applicant's facility, approve or deny the application based on:

- (i) the need for wildlife rehabilitation in the area;
- (ii) the applicant's knowledge, background, proficiency, and skill as it relates to wildlife rehabilitation;
- (iii) the applicant's facilities and ability to adequately care for injured animals;
- (iv) the exam required under Section R657-40-5;
- (v) any other relevant information available to the division;

and

- (vi) whether the applicant has been convicted of a wildlife violation related to the applicant's ability to rehabilitate wildlife or the conviction of any violation that demonstrates a lack of willingness or ability to comply with laws related to wildlife and activities associated with wildlife rehabilitation.

(b) If an application is denied, the division shall provide the applicant with a written notice stating the reasons for denial.

(11) Certificates of registration shall expire three years after the date of issuance.

R657-40-5. Exam.

(1)(a) Before a certificate of registration is issued, the applicant must pass an exam relating to wildlife rehabilitation for the requested taxa and other applicable subject matter.

(b) The exam shall cover wildlife rehabilitation techniques, biology and natural history, habitat requirements, safety considerations in handling and transport practices, and state and federal laws and regulations that apply to rehabilitation.

(2) To pass the exam, the applicant must correctly answer 80 percent of the questions asked for each taxa on the exam.

(3) The exam shall be administered by appointment at division offices. The exam is scored at the Salt Lake division office.

(4) The division shall mail the written score to the applicant within 30 days of taking the examination.

(5) The applicant is required to take only the sections of the examination relevant to the taxa for which the person is applying.

R657-40-6. Rehabilitation Guidelines.

(1) In addition to the provisions of this rule, the division may impose the following restrictions on the certificate of registration:

- (a) the taxa or specific species of wildlife that may be rehabilitated;
- (b) locations where the wildlife may be held in possession or released;
- (c) standards of care and facilities that shall be used for specific species of protected wildlife or individual animals;
- (d) length of time that the wildlife may be held in captivity; and
- (e) restrictions on the disposal or other disposition of the wildlife.

(2)(a) Wildlife that has been injured, to the extent that it cannot be released to the wild without a reasonable chance of survival, must be immediately euthanized or disposed of as provided in Section R657-40-9 or as otherwise authorized by the division.

(b) The division may allow a rehabilitator to convey an animal to another person for educational use or personally use

the animal for an educational use only as provided in Rule R657-3.

(3) Each rehabilitator must have a veterinarian available for consultation who is competent in treating wildlife.

(4)(a) Rehabilitators are responsible for all costs associated with the rehabilitation activities and may not charge a fee or receive any other compensation for wildlife rehabilitation functions performed. All accepted donations are the responsibility of the rehabilitator and are subject to applicable tax laws.

(b) Rehabilitators may not charge a fee for training an apprentice.

(c) Rehabilitators may accept donations to defray expenses or to provide materials and facilities essential to wildlife rehabilitation.

(5) Rehabilitators and apprentices are responsible for understanding and complying with all local, state, and federal laws relevant to wildlife rehabilitation.

(6) Any wildlife undergoing rehabilitation may not be displayed, used for demonstrations, held as a pet, or held for any purpose other than to rehabilitate it for release to the wild.

(7) The rehabilitator is responsible for all actions or omissions of the apprentice relating to wildlife rehabilitation.

R657-40-7. Duration of Care.

(1)(a) Wildlife, except migratory birds, may not be held in possession longer than 180 days without written permission from the division.

(b) Migratory birds may be held in possession only for the time period allowed by the U.S. Fish and Wildlife Service.

(2) Any request to hold wildlife longer than 180 days must be submitted in writing to the division's Wildlife Registration office in Salt Lake City.

(3) The division may require the wildlife rehabilitator to submit a signed, written statement from a licensed veterinarian setting forth the medical reasons why the extension is necessary.

(4)(a) The division shall notify the rehabilitator in writing whether the request is granted or denied.

(b) Denial of the request shall include the reasons for denial and directions on disposal or other disposition of the animal.

(5) The rehabilitator may retain the wildlife in possession while the division considers the request.

R657-40-8. Release of Wildlife.

(1) Rehabilitated wildlife shall be released according to the stipulations provided on the rehabilitator's certificate of registration and the following provisions:

(a) The animal to be released must have attained physical and psychological maturity and has attained a full state of health and recovery from injury or illness, except black bear cubs as provided in Subsection (2);

(b) The animal must be released at the appropriate time of year taking into account the animal's seasonal needs for habitat, hibernation, and migration;

(c) The animal must be released in the same geographical area where it was obtained or into suitable habitat to sustain it, specifically an area that provides all life-sustaining needs for the animal including natural food, fresh water, cover, and range; and

(d) The animal may not be released into any area where that species does not occur naturally or where there is an immediate threat to the animal or humans, or domestic animals.

(2) Black bear cubs may be released to a den site during the first winter after birth, provided the bear cubs are healthy and are of sufficient weight to sustain them through hibernation.

R657-40-9. Disposal of Wildlife.

(1) Within ten days after any wildlife dies or is euthanized,

the rehabilitator shall, except as provided in Subsection (2), dispose of the carcass by burial or incineration, or transport the carcass to a local landfill that accepts animal carcasses.

(2) Migratory birds, bald and golden eagles, and threatened and endangered species, may be disposed of only as provided in accordance with the rehabilitator's federal permit and other applicable federal regulations.

R657-40-10. Records -- Annual Report.

(1) Each rehabilitator shall keep a current log showing the date of acquisition, location, and disposition of all wildlife held in possession pursuant to the certificate of registration. The log shall be maintained and available for inspection by the division.

(2) On or before January 31, each year, the rehabilitator shall submit a written report to the division of all rehabilitation activities for the previous calendar year.

(3) The annual report must include the following information:

(a) the name, address, and phone number of the rehabilitator and each apprentice;

(b) the federal permit number that relates to any rehabilitative function performed by the rehabilitator; and

(c) an itemized list of each animal held or previously held in captivity pursuant to the certificate of registration.

(4) The itemized list of each animal held or previously held in captivity must include the following information:

(a) species;

(b) injury or condition that required rehabilitation;

(c) source, location, and date of acquisition;

(d) age class at acquisition;

(e) treatment administered;

(f) date and location of release or disposal;

(g) band or identification number if applicable; and

(h) status at the end of the year on the condition requiring rehabilitation.

R657-40-11. Amending the Certificate of Registration.

(1) A rehabilitator may request an amendment to the certificate of registration at any time to add or delete an apprentice or taxon.

(2) The request must be made on a form provided by the division and must include:

(a) a written statement explaining why the amendment is requested;

(b) the documentation required under Section R657-40-4 applicable to the species requested to be added; and

(c) the names, addresses, and phone numbers of any person requested to be added; and

(d) a copy of any documentation required by the U.S. Fish and Wildlife Service, including any request to add an apprentice to the federal permit or to add authorization for additional species of migratory birds.

(3) The division shall approve or deny the request within 60 days of receipt.

R657-40-12. Apprentices.

(1)(a) A rehabilitator may designate individuals to work as apprentices.

(b) Apprentices must be 18 years of age or older.

(2) Each apprentice must be approved by the division and listed on the rehabilitator's certificate of registration.

(3) The rehabilitator must directly supervise each apprentice while engaging in rehabilitation efforts except as provided in Subsection (4).

(4) An apprentice may, without direct supervision:

(a) transport wildlife to or from the rehabilitation facility or to a veterinarian;

(b) release wildlife according to this rule and the rehabilitator's certificate of registration; and

(c) clean and maintain facilities.

(5) A supervising rehabilitator is expected to teach the apprentice the skills necessary to effectively rehabilitate wildlife.

R657-40-13. Termination or Revocation of a Certificate of Registration.

(1)(a) A wildlife rehabilitator may terminate the certificate of registration by submitting written notification to the Wildlife Registration office.

(b) The request for termination must state the requested date of termination.

(c) On or before the date of termination, the wildlife rehabilitator must provide the division with:

(i) an annual report stating all wildlife rehabilitation activity for the past year as provided in R657-40-10;

(ii) an inventory of animals currently held in possession; and

(iii) the location where any animal still held in possession will be transferred.

(2) The division may:

(a) revoke a certificate of registration if the rehabilitator violates any of the provisions of Chapter 23, Wildlife Resources Code, this rule, or the stipulations provided on the certificate of registration; or

(b) revoke or suspend a certificate of registration if the division finds that the rehabilitator is incompetent to rehabilitate wildlife. A finding of incompetency shall be determined based upon the following:

(i) an inordinately high number of wildlife in the care of the rehabilitator die or are not able to be returned back into the wild without sufficient explanation or reasoning; or

(ii) improper or inhumane care or medical treatment is given to the animals in the care of the rehabilitator.

R657-40-14. Renewal.

(1)(a) On or before the expiration date of the certificate of registration, a rehabilitator may apply to renew a certificate of registration by following the procedures provided in Section R657-40-4.

(b) Documentation required by Section R657-40-4 that is on file with the division's Wildlife Registration office does not need to be resubmitted, provided the applicant indicates that the required information is already on file.

(2) The division may deny a renewal application if the rehabilitator:

(a) failed to submit an annual report as required in R657-40-10;

(b) violated any of the provisions of Chapter 23, Wildlife Resources Code or this rule relating to wildlife rehabilitation or any stipulation provided on the certificate of registration;

(c) violated any state or federal animal welfare law during the period in which the certificate of registration was valid; or

(d) jeopardized the safety of a person or any wildlife held in possession or has failed to provide adequate housing, feeding, or sanitary conditions.

R657-40-15. Facilities and Captivity Standards.

(1) All protected wildlife held pursuant to a certificate of registration shall be kept in as humane a manner as possible to safeguard and protect the interests of the protected wildlife held.

(2) All facilities shall meet the following minimum standards:

(a) The facility shall:

(i) be constructed of such strength as is appropriate for the nature of the animal held;

(ii) be properly braced and constructed of material of sufficient strength to resist any force the animal may be capable of exerting against it;

(iii) be constructed in such a manner as to reasonably prevent the animal's escape or the entry of unauthorized persons or other animals;

(iv) be structurally sound, and shall be maintained in good repair in order to protect the animals from injury and to facilitate the humane practices prescribed in this rule.

(b) Each animal shall be supplied with sufficient water to meet its needs. If potable water is not accessible to the animal at all times, it shall be provided as often as necessary for the health and comfort of the animal and the rehabilitator shall ensure that the level of available water is monitored once daily or more often as the needs of the animal dictate. All water receptacles shall be kept in a clean and sanitary condition.

(c)(i) Food shall be wholesome, palatable, and free from contamination, and of sufficient appeal, quantity, and nutritive value to maintain each animal held in good health.

(ii) Each animal's diet shall be prepared based upon the nutritional needs and preferences of the animal with consideration for the age, species, condition, size, and type of the animal, and all veterinary directions or recommendations in regard to diet.

(iii) The quantity of food supplied to each animal shall be sufficient to meet its needs and keep it in good health.

(iv) Each animal shall be fed as often as its needs dictate, taking into consideration hibernation, veterinary treatment or recommendation, normal fasts or other professionally accepted humane practices.

(v) The rehabilitator shall ensure the level of available food for each animal is monitored once daily, except for those periods of time where professionally accepted humane practices dictate that the animal not consume any food during the entire day.

(vi) Food and food receptacle, if used, shall be sufficient in quantity and accessible to all animals in the facility and shall be placed to minimize potential contamination. Food receptacles shall be kept clean and sanitary at all times. Any self-feeding food receptacles shall function properly and the food they provide shall not be subject to deterioration, contamination, molding, caking, or any other process which would render such food unsafe or unpalatable for the animal to be fed.

(vii) Appropriate means of refrigeration shall be provided for supplies or perishable animal foods.

(d)(i) The facility shall be kept sanitary and regularly cleaned as the nature of the animal requires and allows.

(ii) Adequate provision shall be made for the removal and disposal of animal waste, food waste, unusable bedding materials, trash, debris, and dead animals not intended for food.

(iii) The facility shall be maintained to minimize the potential of vermin infestation, disease, and unseemly odors.

(iv) Excrement shall be removed from the primary enclosure facility as often as necessary to prevent contamination of the animals and to minimize hazard of disease and to reduce unseemly odors.

(v) The sanitary condition of the facility shall be monitored by the rehabilitator at least daily.

(vi) When the facility is cleaned by hosing, flushing or the introduction of any chemical substances, adequate measures shall be taken to ensure the animal has no direct contact with any chemical substance and is not directly sprayed with water, steam, or chemical substances or otherwise wetted involuntarily.

(d) A sanitary and humane method shall be provided to rapidly eliminate excess water from the facility. If drains are used, they shall be properly constructed and kept in good repair to avoid foul odors and installed so as to prevent backup or accumulation.

(e) No animal shall be exposed to any human activity or environment which has a harmful effect upon the animal.

(f) Facilities shall not be constructed or maintained in proximity to any physical condition which may give rise to any

health threat to the animal, including trash or garbage collection sites and pools of standing water. All persons caring for the animals shall maintain themselves in a sufficiently clean condition when dealing in or around the animal so as to minimize any threat to the health of the animal.

(g) All animals housed in the same facility or within the same enclosed area shall be compatible and shall not pose a substantial threat to the health, life, or well being of any other animal in the same facility or enclosure.

(h) Facilities for the enclosure of animals shall be constructed and maintained to provide sufficient space and to allow each animal adequate freedom of movement to make normal postural and social adjustments. The facility area shall be large enough and constructed in such a manner to allow the animal proper and adequate exercise as is characteristic to each animal's natural behavior and physical need. Facilities for digging or burrowing animals shall have secure safe floors below materials supplied for such digging or burrowing activity. Animals which naturally climb shall be provided with safe and adequate climbing apparatus. Animals which naturally live in an aquatic environment shall be supplied with sufficient access to safe water so as to meet their aquatic behavioral needs.

(3) In addition to the standards set forth in this section:

(a) the division may require additional standards to adequately maintain the health and safety of the animals held and the individuals providing care for the animals; and

(b) facilities used for rehabilitation must meet applicable federal standards provided in 7 USC 2139-2159, Animal Welfare Act, and those regulations promulgated thereunder in 9 CFR Subchapter A, which are hereby incorporated by reference.

(4) Facilities may be inspected at any reasonable time by division representatives.

R657-40-16. Temporary Holding of The Taxa Not Listed on The Certificate of Registration.

The division may issue a temporary holding permit to a licensed rehabilitator to hold taxa of protected wildlife not specifically listed on the rehabilitator's certificate of registration provided:

(1) the rehabilitator has the facilities to hold the taxa of protected wildlife temporarily until the taxa are transported to a licensed rehabilitator for that taxa; and

(2) the temporary holding of the taxa must not exceed 72 hours.

23-20-3

R722. Public Safety, Criminal Investigations and Technical Services, Criminal Identification.**R722-310. Regulation of Bail Bond Recovery and Enforcement Agents.****R722-310-1. Purpose.**

The purpose of the rule is to establish procedures for the licensing of bail enforcement agents, bail bond recovery agencies, bail recovery agents, and bail recovery apprentices.

R722-310-2. Authority.

This rule is authorized by Subsection 53-11-103(5).

R722-310-3. Definitions.

(1) Terms used in this rule are defined in Section 53-11-102.

(2) In addition:

(a) "act involving moral turpitude" means conduct which:

(i) is done knowingly contrary to justice, honesty, or good morals;

(ii) has an element of falsification or fraud; or

(iii) contains an element of harm or injury directed to another person or another's property;

(b) "bureau" means the Bureau of Criminal Identification within the Department of Public Safety established by Section 53-10-201;

(c) "felony" means a crime under the laws of this state, any other state, the United States, or any district, possession, or territory of the United States for which the penalty is a term of imprisonment in excess of one year;

(d) "licensee" means an individual who has received a bail enforcement agent license, bail bond recovery agency license, bail recovery agent license or bail recovery apprentice license;

(e) "revocation" means the permanent deprivation of a bail bond recovery license, however revocation does not preclude an individual from applying for a new bail bond recovery license if the reason for revocation no longer exists; and

(f) "suspension" means the temporary deprivation, for a specified period of time, of a bail bond recovery license.

R722-310-4. Application for Licensure.

(1)(a) An applicant seeking to obtain a license as a bail bond agency, bail enforcement agent, bail recovery agent, or a bail recovery apprentice shall submit a completed application packet to the bureau.

(b) The application packet shall include:

(i) a written application form provided by the bureau with the applicant's residential or physical address and mailing or business address;

(ii) one recent color photograph of passport quality which contains the applicant's name written on the back of the photograph, unless the applicant submitted a photo which meets these requirements to the bureau within the previous three years;

(iii) a photocopy of a state-issued driver license or identification card;

(iv) one completed FBI applicant fingerprint card (Form FD-258) with the applicant's legible fingerprints;

(v) a non-refundable processing fee in the form of cash, check, money order, or credit card in the amount required by Section 53-11-115;

(vi) documentation from an approved provider indicating that the applicant has completed the 16-hour training program, described in Subsection 53-11-108(4); and

(vii) documentation showing the licensee has a surety bond in amount of \$10,000 which meets the requirements described in Subsection 53-11-113(3).

(2) If the applicant is applying for license as a bail enforcement agent, the applicant must also provide documentation indicating that the applicant has 2,000 hours of experience related to bail bond recovery and enforcement.

(3) If an applicant for license as a bail enforcement agent wishes to operate a bail bond recovery agency, the applicant shall also provide:

(a) the name under which the bail bond recovery agency will operate; and

(b) a certificate of workers' compensation insurance, if applicable.

(4) If the applicant is applying for license as a bail recovery agent, the applicant shall also provide:

(a) documentation indicating that the applicant has 1,000 hours of experience related to bail bond recovery and enforcement; and

(b) verification from a bail bond recovery agency indicating that the agency will employ or contract with the applicant.

(5) If the applicant is applying for license as a bail recovery apprentice, the applicant shall also provide verification from a bail bond recovery agency indicating that the agency will employ or contract with the applicant.

(6) If the applicant is seeking to carry a firearm as a licensee, the applicant shall comply with all of the requirements found in R722-300 and provide documentation from an approved bail enforcement firearms instructor indicating that the applicant has completed the 16-hour firearms training course required in Subsection 53-11-108(5).

(7)(a) Once the application packet is complete, the bureau shall submit it to the board for their review at the next regularly scheduled meeting.

(b) Application packets that are received or completed less than seven days prior to a scheduled board meeting may not be considered by the board until the next regularly scheduled board meeting.

R722-310-5. Training Program Requirements.

(1) The 16-hour training program described in Subsection 53-11-108(4), which is required for licensure, shall be provided by a training program provider approved by the board.

(2) Training program providers seeking to become approved by the board shall provide a detailed course curriculum for the board's review.

(3)(a) Training programs which are approved by the board shall be open to anyone who wishes to attend.

(b) If a training provider charges a fee for the training program, the same fee shall apply to all participants in the training program.

(4) Training program providers shall notify the bureau, at least five days in advance, of the dates, times, and location of all courses provided.

(5)(a) Bureau investigators shall periodically monitor approved training programs to ensure that the training program is providing instruction as required by Subsection 53-11-108(4).

(b) The training program may not charge an investigator a fee for monitoring the program.

(6) If the board receives information that a training program is not providing instruction as required by Subsection 53-11-108(4), the board may terminate its approval of the training program after notice and an opportunity for a hearing before the board.

R722-310-6. Verification of Experience.

(1) When verifying the experience necessary for licensure as a bail enforcement agent or a bail recovery agent, an applicant shall provide a written statement which lists, in detail, the number of hours and the type of bail bond recovery work performed by the applicant.

(2) The verification of experience shall be signed and notarized by the applicant's employer or by an individual who has personal knowledge of the bail bond recovery work performed.

(3) The bail bond recovery work shall have been performed within ten years from the date of the application.

R722-310-7. Credit for Specified Training.

(1) An applicant who wishes to receive credit towards the experience requirement for licensure, shall provide documentation indicating that the applicant has a criminal justice bachelor's degree or has successfully completed a basic training course described in Subsections 53-11-114(1)(b) or 53-11-114(1)(c).

(2) An applicant may receive up to 1,000 hours of credit towards the experience requirement for licensure under Section 53-11-114.

(3) An applicant seeking credit under Section 53-11-114, is not exempt from completing the 16-hour training course required by Subsection 53-11-108(4).

R722-310-8. Renewal of a License.

(1)(a) A licensee seeking to renew a license as a bail bond agency, bail enforcement agent, bail recovery agent, or a bail recovery apprentice shall submit a completed renewal packet to the bureau.

(b) The renewal packet shall include:

(i) a written renewal form provided by the bureau with the licensee's residential or physical address and mailing or business address;

(ii) one recent color photograph of passport quality which contains the licensee's name written on the back of the photograph, unless the licensee submitted a photo which meets these requirements to the bureau within the previous three years;

(iii) a non-refundable processing fee in the form of cash, check, money order, or credit card in the amount required by Section 53-11-115;

(iv) evidence that the licensee has completed eight hours of continuing classroom instruction required by Subsection 53-11-111(2); and

(v) documentation showing the licensee has a \$10,000 surety bond which meets the requirements described in Subsection 53-11-113(3).

(2)(a) Once the renewal packet is complete, the bureau shall review it to determine if the licensee meets the requirements for renewal.

(b) If the bureau determines the licensee does not meet the requirements for renewal, the bureau shall submit the renewal packet to the board for their review at the next regularly scheduled meeting.

(c) Renewal packets that are received or completed less than seven days prior to a scheduled board meeting may not be considered by the board until the next regularly scheduled board meeting.

(3) A licensee whose license has been expired for more than 90 days, shall reapply and meet all requirements found in R722-310-4.

R722-310-9. Requirements for Continuing Classroom Instruction.

(1) A licensee who renews his or her license for the first time shall attend four hours of continuing classroom instruction provided by the bureau, which shall count towards the eight hours of continuing classroom instruction required by Subsections 53-11-111(2) and 53-11-109(2).

(2) The course provided by the bureau shall:

(a) provide updates on Utah law, administrative changes, and other pertinent information designed to enhance the licensee's knowledge of bail recovery; and

(b) be taught by the bureau twice yearly, with the dates posted on the bureau's website.

R722-310-10. Criteria for Certified Bail Enforcement

Firearms Instructor.

(1) The 16-hour firearms training program described in Subsection 53-11-108(5), shall be provided by a bail enforcement firearms instructor approved by the bureau.

(2) A bail enforcement firearms instructor approved by the bureau shall be a certified Utah concealed firearm permit instructor under Subsection 53-5-704(9) and be in good standing with the bureau.

(3)(a) Each approved bail enforcement firearms instructor shall adhere to the curriculum adopted by the bureau.

(b) An instructor may supplement, but may not detract from the set curriculum.

R722-310-11. Notice to Commissioner.

A bail bond recovery agency may provide notice of a change in the name or address of a bail bond agency, or any change of employees or contract employees, to the commissioner as required by Subsection 53-11-116(5) by sending a written notice to the bureau that is signed by the licensee.

R722-310-12. Adjudicative Proceedings.

(1) All adjudicative proceedings shall be informal according to the provisions in Sections 63G-4-202 through 63G-4-203.

(2)(a) The board may deny a license application or renewal for failure to comply with the requirements in Sections 53-11-108 through 53-11-115, or for any of the reasons set forth in Section 53-11-118.

(b) The bureau may deny a license renewal for failure to comply with the requirements in Sections 53-11-108 through 53-11-115, or for any of the reasons set forth in Section 53-11-118.

(3) The board shall review all investigations presented by the bureau and may take disciplinary action against a licensee based on a violation of Section 53-11-119.

(4)(a) The board shall issue a written decision within ten days after the board meets to decide the matter.

(b) The board's written decision shall indicate that the applicant or licensee may appeal to the commissioner within 30 days from the date that the written decision is issued.

(5)(a) If an applicant or licensee appeals the board's decision, the commissioner, or his designee, shall review the materials in the bureau's file, the findings of the board along with any materials submitted by the applicant or licensee, and may affirm, adopt, modify, supplement, reverse, or reject the board's findings, or return the matter to the board for reconsideration.

(b) If the applicant or licensee requests a hearing, the commissioner, or his designee, shall schedule a hearing within 60 days from the receipt of the request for review.

R722-310-13. Identification of Licensees.

(1)(a) A licensee shall be issued an identification card by the bureau which identifies the licensee as a bail enforcement agent, bail bond recovery agency, bail recovery agent or bail recovery apprentice.

(b) The identification card shall indicate on its face if the licensee is authorized to carry a loaded and concealed firearm as provided in Subsection 53-11-108(5).

(2)(a) A bail enforcement agent or bail recovery agent may possess and display a badge that is identical to the badge depicted on the bureau's website in accordance with Section 53-11-121.

(b) A bail enforcement agent or bail recovery agent may obtain a badge from any source, so long as it complies with the following specifications:

(i) the badge shall be 2.55 inches high and 2.66 inches wide;

(ii) the badge shall be in the shape of a five-point star on a circle;

(iii) the star shall be gold in color and the circle must be silver in color;

(iv) the center of the star shall be black in color and contain a seal with the phrase "Liberty and Justice For All";

(v) the text of the badge shall be written in block lettering and must be black;

(vi) the silver circle shall contain two panels with writing to indicate whether the agent is a bail enforcement or bail recovery agent; and

(vii) the badge shall contain two gold panels with writing to indicate the word "Utah" on the top panel and the agent's license number on the bottom panel.

(3) The design approved by the board under Subsection 53-11-121(5) shall contain the words "bail enforcement agent" or "bail recovery agent" written on both the chest and back in writing which is:

(a) at least two inches in height on the back;

(b) at least one half of an inch in height on the front; and

(c) in a color that contrasts with the color of the item of clothing.

December 22, 2015 **53-11-103(5)**
Notice of Continuation January 7, 2015

R722. Public Safety, Criminal Investigations and Technical Services, Criminal Identification.**R722-360. Certificate of Eligibility for Removal from the Sex Offender and Kidnap Offender Registry.****R722-360-1. Purpose.**

The purpose of this rule is to establish procedures by which a petitioner may seek a certificate of eligibility for removal from the Utah Sex Offender and Kidnap Offender Registry (SOR) pursuant to Section 77-41-112.

R722-360-2. Authority.

This rule is authorized by Subsection 63G-4-203(1).

R722-360-3. Definitions.

- (1) Terms used in this rule are defined in Section 77-41-102.
- (2) In addition:
- (a) "SOR certificate of eligibility" has the same meaning as "certificate of eligibility" as defined in Subsection 77-41-102(3);
- (b) "petitioner" means a person seeking an SOR certificate of eligibility from the bureau; and
- (c) "traffic offense" has the same meaning as defined in Subsection 77-40-102(11).

R722-360-4. Application for a Certificate of Eligibility for Removal.

(1)(a) A person may apply for an SOR certificate of eligibility by submitting a completed Application for Removal of Name from the Sex Offender/Kidnap Registry form to the bureau.

(b) The application form must be accompanied by a payment of the application fee established by the bureau in the form of cash, check, money order, or credit card.

(2)(a) Upon receipt of a completed application form and payment of the application fee, the bureau shall review each criminal episode contained on the petitioner's criminal history, in its entirety, to determine whether the petitioner meets the requirements for an SOR certificate of eligibility found in Subsections 77-41-112(1)(b) and (d).

(b) In making its determination, the bureau shall also review all federal, state and local criminal records, to which it has access.

(3) If the bureau has insufficient information to determine whether the petitioner meets the requirements for an SOR certificate of eligibility, the bureau may require the petitioner to submit additional information.

(4) If the bureau finds that the petitioner meets the requirements for the issuance of an SOR certificate of eligibility, the bureau shall send a letter to the petitioner, at the address indicated on the application form, indicating that the petitioner must pay the issuance fee established by the bureau in order to receive the SOR certificate of eligibility.

(5) If the bureau finds that the petitioner does not meet the criteria for the issuance of an SOR certificate of eligibility, the bureau shall send a letter to the petitioner, at the address indicated on the application form, which describes the reasons why the petitioner's application was denied and notifies the petitioner that the petitioner may seek agency review of the bureau's decision by following the procedures outlined in R722-360-5.

R722-360-5. Agency Review of a Decision to Deny an Application for a Certificate of Eligibility for Removal.

(1) A petitioner may seek agency review of the denial of an application for an SOR certificate of eligibility, as provided by Section 63G-4-301, by mailing a written request for review to the bureau within 30 days from the date the denial letter is issued.

- (2) The request for agency review must:
- (a) be signed by the petitioner;
- (b) state the specific grounds upon which relief is requested;
- (c) indicate the date upon which it was mailed; and
- (d) include documentation which supports the petitioner's request for review.
- (3) An employee of the bureau shall be designated to review the petitioner's written request, any accompanying documents supplied by the petitioner, and the materials contained in the application file to determine whether the petitioner meets the requirements for an SOR certificate of eligibility.
- (4)(a) Within a reasonable time after receiving the request for review, the bureau shall issue a final written order on review, which shall be mailed to the petitioner at the address indicated on the application.
- (b) If further review indicates that the petitioner meets the requirements for the issuance of an SOR certificate of eligibility, the order shall indicate that the petitioner must pay the issuance fee before receiving the SOR certificate of eligibility.
- (c) If further review indicates that the petitioner does not meet the requirements for an SOR certificate of eligibility, the order shall describe the reasons why the bureau's decision was upheld and notify the petitioner that the petitioner's opportunity to review the bureau's decision is limited to review by the district court as described in R722-360-6.

R722-360-6. Judicial Review.

A petitioner may seek judicial review of the bureau's final written order on review denying an application for an SOR certificate of eligibility, as provided by Section 63G-4-402, by filing a complaint in the district court within 30 days from the date that the bureau's final written order is issued.

77-40-102(11)

R722. Public Safety, Criminal Investigations and Technical Services, Criminal Identification.**R722-390. Certificate of Eligibility for Removal from the Utah White Collar Crime Offender Registry.****R722-390-1. Purpose.**

The purpose of this rule is to establish procedures by which a petitioner may seek a certificate of eligibility for removal from the Utah White Collar Crime Offender Registry (WCCR) pursuant to Section 77-42-108.

R722-390-2. Authority.

This rule is authorized by Subsection 63G-4-203(1).

R722-390-3. Definitions.

(1) Terms used in this rule are defined in Section 77-42-102.

(2) In addition:

(a) "WCCR certificate of eligibility" has the same meaning as "certificate of eligibility" as defined in Subsection 77-42-102(4);

(b) "petitioner" means a person seeking a WCCR certificate of eligibility from the bureau; and

(c) "traffic offense" has the same meaning as defined in Subsection 77-40-102(10).

R722-390-4. Application for a Certificate of Eligibility for Removal.

(1)(a) A person may apply for a WCCR certificate of eligibility by submitting a completed Application for Removal of Name from the White Collar Crime Offender Registry form to the bureau.

(b) The application form must be accompanied by a payment of the application fee established by the bureau in the form of cash, check, money order, or credit card.

(2)(a) Upon receipt of a completed application form and payment of the application fee, the bureau shall review each criminal episode contained on the petitioner's criminal history, in its entirety, to determine whether the petitioner meets the requirements for a WCCR certificate of eligibility found in Subsection 77-41-108(2)(b).

(b) In making its determination, the bureau shall also review all federal, state and local criminal records, to which it has access.

(3) If the bureau has insufficient information to determine whether the petitioner meets the requirements for a WCCR certificate of eligibility, the bureau may require the petitioner to submit additional information.

(4) If the bureau finds that the petitioner meets the requirements for the issuance of a WCCR certificate of eligibility, the bureau shall send the WCCR certificate to the petitioner at the address indicated on the application form.

(5) If the bureau finds that the petitioner does not meet the criteria for the issuance of a WCCR certificate of eligibility, the bureau shall send a letter to the petitioner, at the address indicated on the application form, which describes the reasons why the petitioner's application was denied and notifies the petitioner that the petitioner may seek agency review of the bureau's decision by following the procedures outlined in R722-390-5.

R722-390-5. Agency Review of a Decision to Deny an Application for a Certificate of Eligibility for Removal.

(1) A petitioner may seek agency review of the denial of an application for a WCCR certificate of eligibility, as provided by Section 63G-4-301, by mailing a written request for review to the bureau within 30 days from the date the denial letter is issued.

(2) The request for agency review must:

(a) be signed by the petitioner;

(b) state the specific grounds upon which relief is requested;

(c) indicate the date upon which it was mailed; and

(d) include documentation which supports the petitioner's request for review.

(3) An employee of the bureau shall be designated to review the petitioner's written request, any accompanying documents supplied by the petitioner, and the materials contained in the application file to determine whether the petitioner meets the requirements for a WCCR certificate of eligibility.

(4)(a) Within a reasonable time after receiving the request for review, the bureau shall issue a final written order on review, which shall be mailed to the petitioner at the address indicated on the application.

(b) If further review indicates that the petitioner meets the requirements for the issuance of a WCCR certificate of eligibility, the order shall indicate that the petitioner must pay the issuance fee before receiving the WCCR certificate of eligibility.

(c) If further review indicates that the petitioner does not meet the requirements for a WCCR certificate of eligibility, the order shall describe the reasons why the bureau's decision was upheld and notify the petitioner that the petitioner's opportunity to review the bureau's decision is limited to review by the district court as described in R722-390-6.

R722-390-6. Judicial Review.

A petitioner may seek judicial review of the bureau's final written order on review denying an application for a WCCR certificate of eligibility, as provided by Section 63G-4-402, by filing a complaint in the district court within 30 days from the date the bureau's final written order is issued.

77-42-108

77-42-102

77-40-102(10)

R722. Public Safety, Criminal Investigations and Technical Services, Criminal Identification.**R722-900. Access to Bureau Records.****R722-900-1. Purpose.**

The purpose of this rule is to establish procedures whereby criminal justice agencies, qualified entities, and individuals may obtain access to bureau records.

R722-900-2. Authority.

This rule is authorized by Subsections 53-10-108(9) and (10).

R722-900-3. Definitions.

- (1) Terms used in this rule are found in Section 53-10-102.
- (2) In addition:
 - (a) "agency" means a criminal justice agency as defined in Subsection 53-10-102(9) and 28 U.S.C. Subsection 534(e), or a non-criminal entity authorized to access CJIS under state or federal law;
 - (b) "bureau" means the Utah Bureau of Criminal Identification within the Department of Public Safety established by Section 53-10-201;
 - (c) "CJIS" means the Criminal Justice Information System administered by the FBI;
 - (d) "entity" means an entity qualified to access criminal history information under state or federal law;
 - (e) "entity id" means an entity's unique identifier that is used to access criminal history information;
 - (f) "FBI" means the Federal Bureau of Investigation within the United States Department of Justice;
 - (g) "login id" means a unique identifier in UCJIS for a user or non-user;
 - (h) "misuse" means the access, use, disclosure, or dissemination of records for a purpose prohibited or not permitted by statute, rule, regulation, or policy of a governmental entity;
 - (i) "NCIC" means the National Crime Information Center;
 - (j) "non-user" means a person working for or with an agency, who does not have direct access to UCJIS but has indirect access to records, including individuals who may:
 - (i) access computer systems or programs used to access UCJIS files; or
 - (ii) have unrestricted access to a location containing UCJIS records or a computer with UCJIS access;
 - (k) "ORI" means originating agency identifier;
 - (l) "provider" means a law enforcement agency as defined in Subsection 53-1-102(1)(c), the Utah Attorney General's Office, a county attorney's office, a district attorney's office, or a city prosecutor's office;
 - (m) "records" means records created, maintained, or to which access is granted by the bureau, including criminal history information;
 - (n) "right of access program" means a program established under Subsection 53-10-108(9) in which a provider makes an individual's UCH and warrant of arrest information available to the subject of the record;
 - (o) "TAC" means an agency's terminal agency coordinator;
 - (p) "UCH" means Utah Criminal History;
 - (q) "UCJIS" means Utah Criminal Justice Information System, which includes the Criminal Justice Information System; and
 - (r) "user" means a person working for or with an agency who has direct access to UCJIS or who obtains UCJIS records from a person who has direct access.

R722-900-4. Direct Access to UCJIS for Agencies.

(1) An agency seeking direct access to UCJIS shall submit a completed Criminal Justice Agency Application Packet to the bureau.

(2)(a) The bureau shall submit the agency's information to the FBI, which shall determine whether the agency meets the requirements for access to CJIS records established by the FBI.

(b) If the FBI determines the agency is entitled to access any CJIS records, the FBI shall assign the agency an ORI and the bureau shall notify the agency in writing what records it may access on UCJIS using the assigned ORI.

(c)(i) If the FBI determines that the agency is not entitled to access records on CJIS, the bureau shall notify the agency of the FBI's decision and refer the agency to the agencies whose records are available on UCJIS to determine if the agency may have access to those records.

(ii) If the agency is granted access to any records on UCJIS, the bureau shall assign the agency an ORI and notify the agency in writing which records the agency may access using that ORI.

(iii) If the agency is not entitled to access any records on UCJIS, the bureau shall notify the agency in writing and provide notice of the right to appeal pursuant to R722-900-10.

(3)(a) Within 30 days after an agency is granted access to records on UCJIS, it shall submit the following documents to the bureau:

(i) a Criminal Justice Agency Agreement, signed by the agency administrator; and

(ii) a CJIS fingerprint submission form with a legible FD258 fingerprint card for the TAC, which shall be retained in the FBI Rap Back System in accordance with Subsection 53-10-108(14).

(b) The bureau shall conduct a fingerprint-based criminal history background check of the TAC.

(c) If the bureau determines that the TAC meets all the requirements for access to UCJIS, the TAC shall complete the new TAC orientation training provided by the bureau within six months.

(d) If the bureau determines that the TAC does not meet the requirements for access to UCJIS, the bureau shall notify the agency and the TAC in writing including notice of the right to appeal pursuant to R722-900-10.

(4)(a) The agency TAC shall conduct a criminal history check using the name and date of birth of each user or non-user at the agency.

(b) If the criminal history check indicates that the user or non-user does not have any criminal history, the TAC shall create an account on UCJIS and assign the user or non-user a login id.

(c) Within 30 days of assigning a login id to a user or non-user, the TAC shall submit to the bureau:

(i) a UCJIS User Agreement for each user and non-user; and

(ii) a CJIS fingerprint submission form with a legible FD258 fingerprint card for all users and non-users employed at the agency, which shall be retained in the FBI Rap Back System in accordance with Subsection 53-10-108(14).

(d) The bureau shall conduct a fingerprint-based criminal history background check for all users and non-users employed at the agency.

(e) If the bureau determines that a user or non-user meets the requirements for access to CJIS, the bureau shall notify the TAC that the user or non-user has been approved.

(f) If the bureau determines a user or non-user does not meet the requirements for access to CJIS, the bureau shall notify the user or non-user, the TAC, and the agency administrator in writing which includes the right to appeal pursuant to R722-900-10.

(5)(a) Within six months of assigning a login id to a user or non-user, the TAC shall train the user or non-user in accordance with the BCI Operations Manual.

(b) Upon completion of the training, the TAC shall administer a test to the users and submit to the bureau a signed

testing agreement form from each user indicating that the user passed all of the required training and testing.

(6)(a) The TAC shall attend the annual TAC training meeting and provide updates to all users and non-user at the agency based on the training.

(b) The TAC shall be responsible for ensuring that all users or non-users at the agency complete all training required by the bureau.

(c) The TAC shall be responsible for ensuring that all users at the agency complete all re-testing required by the bureau.

(d) The bureau may suspend or revoke a TAC's, user's, non-user's access to records if the TAC, user, or non-user fails to complete the required training or testing.

R722-900-5. Access for Entities.

(1)(a) An entity seeking access to criminal background check information for employment background checks or other screening purposes shall submit a completed Qualified Entity Application Packet to the bureau, which includes the following:

(i) a Qualified Entity Application Form;

(ii) documentation that it is a business, organization, or governmental entity that is qualified to access criminal background check information;

(iii) a description of why the entity is seeking to conduct employment background checks or other screenings;

(iv) billing information; and

(v) contact information for:

(A) the entity's administrator; and

(B) a point of contact.

(2)(a) The bureau shall review the entity's application to determine whether the entity meets the requirements for access to criminal background check information found in state or federal law.

(b) The bureau may request additional documentation from the entity to verify whether the entity is qualified to access criminal history information.

(c) If the bureau determines that an entity is qualified to access criminal background check information, it shall notify the entity in writing and assign it an entity id.

(d) If the bureau determines the entity is not qualified to access criminal background check information, the bureau shall notify the entity of the bureau's decision in writing and provide notice of the right to appeal pursuant to R722-900-10.

(3)(a) Once an entity has been granted access to criminal background check information, it shall submit the following documents to the bureau:

(i) a Qualified Entity Agreement, signed by the entity administrator; and

(ii) a signed Qualified Entity Employee Agreement for each employee of the entity who will have access to criminal background check information.

(b) Any employee of the entity who has access to criminal background check information shall successfully complete all training and testing required by the bureau.

(c) The bureau may suspend or revoke access to criminal background check information if an employee of an entity fails to complete the required training and testing.

R722-900-6. Individual Right of Access.

(1) An individual may review his or her own criminal history record information contained in a UCH, by submitting a completed Criminal History Record Application to the bureau along with:

(a) a set of fingerprints which have been verified with photo identification at the time the fingerprints were taken;

(b) a copy of a government issued photo identification; and

(c) payment of the processing fee required by Subsection 53-10-108(9)(b).

(2)(a) An individual may challenge the completeness and

accuracy of the information contained in the individual's UCH by submitting a completed Application to Challenge Criminal History Records to the bureau along with:

(i) the challenge fee; and

(ii) documentation to establish what information is missing or incorrect on the UCH.

(b) The challenge process shall be an informal adjudicative proceeding under Section 63G-4-203.

(c)(i) If the bureau determines that the individual's criminal history record information is incomplete or inaccurate, the bureau shall amend the UCH.

(ii) The bureau shall send the individual a letter notifying the individual of the changes made to the individual's UCH and a copy of the individual's corrected UCH.

(d)(i) If the bureau determines that the criminal history record information is correct, the bureau shall notify the individual in writing that the UCH shall not be amended.

(ii) An individual may appeal the bureau's decision not to amend a record to district court in accordance with Section 63G-4-402.

(e) If the bureau determines that the individual seeking to challenge the information in the UCH is not the subject of the record, the bureau shall notify the individual in writing.

R722-900-7. Right of Access Programs.

(1) A provider seeking to establish a right of access program shall submit a completed Right of Access Contract.

(2)(a) The bureau shall review the Right of Access Provider Contract to determine whether the provider may conduct a right of access program.

(b) The bureau may request additional information from the provider to determine whether the provider may conduct a right of access program.

(c) If the bureau determines that a provider is qualified to conduct a right of access program, it shall notify the provider in writing.

(d) If the bureau determines the provider is not qualified to conduct a right of access program, it shall notify the provider of the bureau's decision in writing.

R722-900-8. Audits.

(1)(a) All agencies and entities shall submit to audits conducted by the bureau.

(b) Upon request, an agency and entity shall complete the Pre-audit Request within 30 days from the date it is sent by the bureau.

(c) An agency and entity shall complete the Audit Survey within 30 days from the date it is sent out by the bureau.

(d) The bureau shall review the information submitted by the agency and entity to determine if the agency and entity is in compliance with applicable state and federal statutes, rules, and regulations.

(e) The bureau shall notify the agency and entity of the audit results in writing and give the agency, entity, or provider an opportunity to rectify any issues it found during the audit.

(f) The bureau may suspend or revoke an agency's access to UCJIS or an entity's access to criminal background check information if it fails to comply with the audit or rectify issues found during the audit.

R722-900-9. Misuse.

(1) Anyone who has reason to believe that records have been misused may submit a written complaint to the bureau.

(2)(a) The bureau shall conduct a review of its records to determine if there is any evidence to support the complaint.

(b) If the bureau finds evidence indicating records may have been accessed, used, disclosed, or disseminated, the bureau shall notify the agency TAC or entity point of contact and request that an internal review be conducted.

(3) The agency or entity shall be responsible for conducting an internal review to determine if there has been misuse of a record and submit its findings to the bureau within 30 days.

(4)(a) If the agency or entity determines there was misuse, the agency or entity shall submit a corrective action plan to the bureau.

(b) The bureau shall review the corrective action plan to determine if the action taken by the agency or entity was sufficient to address the misuse.

(5) If the bureau finds that an agency, entity, TAC, user, non-user, or employee of an agency or entity misused records, the bureau may:

(a) suspend or revoke the access of the agency, entity, TAC, user, non-user, or employee of an agency or entity; and

(b) refer the matter to the appropriate law enforcement agency for investigation and prosecution.

(6) The bureau may suspend or revoke access to records by an agency, entity, TAC, user, non-user, or employee of an agency or entity if the agency, entity, TAC, user, non-user, or employee of an agency or entity fails to comply with any terms of the signed agreement.

R722-900-10. Appeal.

(1)(a) An agency or entity denied access to records may appeal the bureau's decision by sending a written request for review to the bureau within 30 days of the date of the denial of access.

(b) An agency or entity may appeal the bureau's decision to deny a TAC, user, or non-user access to records by sending a written request for review to the bureau within 30 days of the date of the denial of access.

(2) A request for review shall include:

(a) a description of the grounds for review; and

(b) supporting documentation.

(3)(a) The bureau director or the director's designee shall review the request for review and issue a written decision within 30 days from the date of the appeal.

(b) If the bureau's decision to deny an agency or entity is upheld, the bureau shall notify the agency or entity of the right to appeal to the district court by complying with the requirements in Section 63G-4-402.

(c) If the bureau's decision to deny a TAC, user, or non-user is upheld, there shall be no further right of appeal.

Notice of Continuation April 10, 2013

53-10-108

R722. Public Safety, Criminal Investigations and Technical Services, Criminal Identification.**R722-910. Non-Reportable Traffic Offenses.****R722-910-1. Purpose.**

The purpose of this rule is to establish procedures regarding the collection and dissemination of non-reportable traffic offenses.

R722-910-2. Authority.

This rule is authorized by Subsection 53-10-104(13).

R722-910-3. Definitions.

(1) Terms used in this rule are defined in Section 53-10-102.

(2) In addition:

(a) "traffic offense" has the same meaning as defined in Subsection 77-40-102(10).

R722-910-4. Dissemination of Criminal History Record Information.

(1) The division shall collect and disseminate criminal history record information in accordance with Utah Code Ann. Section 53-10-101 et seq., except when it is information corresponding to a non-reportable traffic offense as defined in Subsection 77-40-102(11).

(2) A law enforcement agency is not required to submit fingerprints in connection with any offense that meets the definition of a non-reportable traffic offense as provided in Section 53-10-207.

KEY: criminal offenses, fingerprints, non-reportable offenses**December 22, 2015****53-10-104(13)****53-10-102****77-40-102(11)**

R884. Tax Commission, Property Tax.**R884-24P. Property Tax.****R884-24P-5. Abatement or Deferral of Property Taxes of Indigent Persons Pursuant to Utah Code Ann. Sections 59-2-1107 through 59-2-1109 and 59-2-1202(5).**

A. "Household income" includes net rents, interest, retirement income, welfare, social security, and all other sources of cash income.

B. Absence from the residence due to vacation, confinement to hospital, or other similar temporary situation shall not be deducted from the ten-month residency requirement of Section 59-2-1109(3)(a)(ii).

C. Written notification shall be given to any applicant whose application for abatement or deferral is denied.

R884-24P-7. Assessment of Mining Properties Pursuant to Utah Code Ann. Section 59-2-201.**A. Definitions.**

1. "Allowable costs" means those costs reasonably and necessarily incurred to own and operate a productive mining property and bring the minerals or finished product to the customary or implied point of sale.

a) Allowable costs include: salaries and wages, payroll taxes, employee benefits, workers compensation insurance, parts and supplies, maintenance and repairs, equipment rental, tools, power, fuels, utilities, water, freight, engineering, drilling, sampling and assaying, accounting and legal, management, insurance, taxes (including severance, property, sales/use, and federal and state income taxes), exempt royalties, waste disposal, actual or accrued environmental cleanup, reclamation and remediation, changes in working capital (other than those caused by increases or decreases in product inventory or other nontaxable items), and other miscellaneous costs.

b) For purposes of the discounted cash flow method, allowable costs shall include expected future capital expenditures in addition to those items outlined in A.1.a).

c) For purposes of the capitalized net revenue method, allowable costs shall include straight-line depreciation of capital expenditures in addition to those items outlined in A.1.a).

d) Allowable costs does not include interest, depletion, depreciation other than allowed in A.1.c), amortization, corporate overhead other than allowed in A.1.a), or any expenses not related to the ownership or operation of the mining property being valued.

e) To determine applicable federal and state income taxes, straight line depreciation, cost depletion, and amortization shall be used.

2. "Asset value" means the value arrived at using generally accepted cost approaches to value.

3. "Capital expenditure" means the cost of acquiring property, plant, and equipment used in the productive mining property operation and includes:

- a) purchase price of an asset and its components;
- b) transportation costs;
- c) installation charges and construction costs; and
- d) sales tax.

4. "Constant or real dollar basis" means cash flows or net revenues used in the discounted cash flow or capitalized net revenue methods, respectively, prepared on a basis where inflation or deflation are adjusted back to the lien date. For this purpose, inflation or deflation shall be determined using the gross domestic product deflator produced by the Congressional Budget Office, or long-term inflation forecasts produced by reputable analysts, other similar sources, or any combination thereof.

5. "Discount rate" means the rate that reflects the current yield requirements of investors purchasing comparable properties in the mining industry, taking into account the

industry's current and projected market, financial, and economic conditions.

6. "Economic production" means the ability of the mining property to profitably produce and sell product, even if that ability is not being utilized.

7. "Exempt royalties" means royalties paid to this state or its political subdivisions, an agency of the federal government, or an Indian tribe.

8. "Expected annual production" means the economic production from a mine for each future year as estimated by an analysis of the life-of-mine mining plan for the property.

9. "Fair market value" is as defined in Section 59-2-102.

10. "Federal and state income taxes" mean regular taxes based on income computed using the marginal federal and state income tax rates for each applicable year.

11. "Implied point of sale" means the point where the minerals or finished product change hands in the normal course of business.

12. "Net cash flow" for the discounted cash flow method means, for each future year, the expected product price multiplied by the expected annual production that is anticipated to be sold or self-consumed, plus related revenue cash flows, minus allowable costs.

13. "Net revenue" for the capitalized net revenue method means, for any of the immediately preceding five years, the actual receipts from the sale of minerals (or if self-consumed, the value of the self-consumed minerals), plus actual related revenue cash flows, minus allowable costs.

14. "Non-operating mining property" means a mine that has not produced in the previous calendar year and is not currently capable of economic production, or land held under a mineral lease not reasonably necessary in the actual mining and extraction process in the current mine plan.

15. "Productive mining property" means the property of a mine that is either actively producing or currently capable of having economic production. Productive mining property includes all taxable interests in real property, improvements and tangible personal property upon or appurtenant to a mine that are used for that mine in exploration, development, engineering, mining, crushing or concentrating, processing, smelting, refining, reducing, leaching, roasting, other processes used in the separation or extraction of the product from the ore or minerals and the processing thereof, loading for shipment, marketing and sales, environmental clean-up, reclamation and remediation, general and administrative operations, or transporting the finished product or minerals to the customary point of sale or to the implied point of sale in the case of self-consumed minerals.

16. "Product price" for each mineral means the price that is most representative of the price expected to be received for the mineral in future periods.

a) Product price is determined using one or more of the following approaches:

(1) an analysis of average actual sales prices per unit of production for the minerals sold by the taxpayer for up to five years preceding the lien date; or,

(2) an analysis of the average posted prices for the minerals, if valid posted prices exist, for up to five calendar years preceding the lien date; or,

(3) the average annual forecast prices for each of up to five years succeeding the lien date for the minerals sold by the taxpayer and one average forecast price for all years thereafter for those same minerals, obtained from reputable forecasters, mutually agreed upon between the Property Tax Division and the taxpayer.

b) If self-consumed, the product price will be determined by one of the following two methods:

(1) Representative unit sales price of like minerals. The representative unit sales price is determined from:

- (a) actual sales of like mineral by the taxpayer;
- (b) actual sales of like mineral by other taxpayers; or
- (c) posted prices of like mineral; or

(2) If a representative unit sales price of like minerals is unavailable, an imputed product price for the self-consumed minerals may be developed by dividing the total allowable costs by one minus the taxpayer's discount rate to adjust to a cost that includes profit, and dividing the resulting figure by the number of units mined.

17. "Related revenue cash flows" mean non-product related cash flows related to the ownership or operation of the mining property being valued. Examples of related revenue cash flows include royalties and proceeds from the sale of mining equipment.

18. "Self consumed minerals" means the minerals produced from the mining property that the mining entity consumes or utilizes for the manufacture or construction of other goods and services.

19. "Straight line depreciation" means depreciation computed using the straight line method applicable in calculating the regular federal tax. For this purpose, the applicable recovery period shall be seven years for depreciable tangible personal mining property and depreciable tangible personal property appurtenant to a mine, and 39 years for depreciable real mining property and depreciable real property appurtenant to a mine.

B. Valuation.

1. The discounted cash flow method is the preferred method of valuing productive mining properties. Under this method the taxable value of the mine shall be determined by:

- a) discounting the future net cash flows for the remaining life of the mine to their present value as of the lien date; and
- b) subtracting from that present value the fair market value, as of the lien date, of licensed vehicles and nontaxable items.

2. The mining company shall provide to the Property Tax Division an estimate of future cash flows for the remaining life of the mine. These future cash flows shall be prepared on a constant or real dollar basis and shall be based on factors including the life-of-mine mining plan for proven and probable reserves, existing plant in place, capital projects underway, capital projects approved by the mining company board of directors, and capital necessary for sustaining operations. All factors included in the future cash flows, or which should be included in the future cash flows, shall be subject to verification and review for reasonableness by the Property Tax Division.

3. If the taxpayer does not furnish the information necessary to determine a value using the discounted cash flow method, the Property Tax Division may use the capitalized net revenue method. This method is outlined as follows:

- a) Determine annual net revenue, both net losses and net gains, from the productive mining property for each of the immediate past five years, or years in operation, if less than five years. Each year's net revenue shall be adjusted to a constant or real dollar basis.

- b) Determine the average annual net revenue by summing the values obtained in B.3.a) and dividing by the number of operative years, five or less.

- c) Divide the average annual net revenue by the discount rate to determine the fair market value of the entire productive mining property.

- d) Subtract from the fair market value of the entire productive mining property the fair market value, as of the lien date, of licensed vehicles and nontaxable items, to determine the taxable value of the productive mining property.

4. The discount rate shall be determined by the Property Tax Division.

- a) The discount rate shall be determined using the weighted average cost of capital method, a survey of reputable mining industry analysts, any other accepted methodology, or

any combination thereof.

- b) If using the weighted average cost of capital method, the Property Tax Division shall include an after-tax cost of debt and of equity. The cost of debt will consider market yields. The cost of equity shall be determined by the capital asset pricing model, arbitrage pricing model, risk premium model, discounted cash flow model, a survey of reputable mining industry analysts, any other accepted methodology, or a combination thereof.

5. Where the discount rate is derived through the use of publicly available information of other companies, the Property Tax Division shall select companies that are comparable to the productive mining property. In making this selection and in determining the discount rate, the Property Tax Division shall consider criteria that includes size, profitability, risk, diversification, or growth opportunities.

6. A non-operating mine will be valued at fair market value consistent with other taxable property.

7. If, in the opinion of the Property Tax Division, these methods are not reasonable to determine the fair market value, the Property Tax Division may use other valuation methods to estimate the fair market value of a mining property.

8. The fair market value of a productive mining property may not be less than the fair market value of the land, improvements, and tangible personal property upon or appurtenant to the mining property. The mine value shall include all equipment, improvements and real estate upon or appurtenant to the mine. All other tangible property not appurtenant to the mining property will be separately valued at fair market value.

9. Where the fair market value of assets upon or appurtenant to the mining property is determined under the cost method, the Property Tax Division shall use the replacement cost new less depreciation approach. This approach shall consider the cost to acquire or build an asset with like utility at current prices using modern design and materials, adjusted for loss in value due to physical deterioration or obsolescence for technical, functional and economic factors.

C. When the fair market value of a productive mining property in more than one tax area exceeds the asset value, the fair market value will be divided into two components and apportioned as follows:

- 1. Asset value that includes machinery and equipment, improvements, and land surface values will be apportioned to the tax areas where the assets are located.

- 2. The fair market value less the asset value will give an income increment of value. The income increment will be apportioned as follows:

- a) Divide the asset value by the fair market value to determine a quotient. Multiply the quotient by the income increment of value. This value will be apportioned to each tax area based on the percentage of the total asset value in that tax area.

- b) The remainder of the income increment will be apportioned to the tax areas based on the percentage of the known mineral reserves according to the mine plan.

D. The provisions of this rule shall be implemented and become binding on taxpayers beginning January 1, 1998.

R884-24P-10. Taxation of Underground Rights in Land That Contains Deposits of Oil or Gas Pursuant to Utah Code Ann. Sections 59-2-201 and 59-2-210.

A. Definitions.

1. "Person" is as defined in Section 68-3-12.

2. "Working interest owner" means the owner of an interest in oil, gas, or other hydrocarbon substances burdened with a share of the expenses of developing and operating the property.

3. "Unit operator" means a person who operates all producing wells in a unit.

4. "Independent operator" means a person operating an oil or gas producing property not in a unit.

5. One person can, at the same time, be a unit operator, a working interest owner, and an independent operator and must comply with all requirements of this rule based upon the person's status in the respective situations.

6. "Expected annual production" means the future economic production of an oil and gas property as estimated by the Property Tax Division using decline curve analysis. Expected annual production does not include production used on the same well, lease, or unit for the purpose of repressuring or pressure maintenance.

7. "Product price" means:

a) Oil: The weighted average posted price for the calendar year preceding January 1, specific for the field in which the well is operating as designated by the Division of Oil, Gas, and Mining. The weighted average posted price is determined by weighing each individual posted price based on the number of days it was posted during the year, adjusting for gravity, transportation, escalation, or deescalation.

b) Gas:

(1) If sold under contract, the price shall be the stated price as of January 1, adjusted for escalation and deescalation.

(2) If sold on the spot market or to a direct end-user, the price shall be the average price received for the 12-month period immediately preceding January 1, adjusted for escalation and deescalation.

8. "Future net revenue" means annual revenues less costs of the working interests and royalty interest.

9. "Revenue" means expected annual gross revenue, calculated by multiplying the product price by expected annual production for the remaining economic life of the property.

10. "Costs" means expected annual allowable costs applied against revenue of cost-bearing interests:

a) Examples of allowable costs include management salaries; labor; payroll taxes and benefits; workers' compensation insurance; general insurance; taxes (excluding income and property taxes); supplies and tools; power; maintenance and repairs; office; accounting; engineering; treatment; legal fees; transportation; miscellaneous; capital expenditures; and the imputed cost of self consumed product.

b) Interest, depreciation, or any expense not directly related to the unit will shall not be included as allowable costs.

11. "Production asset" means any asset located at the well site that is used to bring oil or gas products to a point of sale or transfer of ownership.

B. The discount rate shall be determined by the Property Tax Division using methods such as the weighted cost of capital method.

1. The cost of debt shall consider market yields. The cost of equity shall be determined by the capital asset pricing model, risk premium model, discounted cash flow model, a combination thereof, or any other accepted methodology.

2. The discount rate shall reflect the current yield requirements of investors purchasing similar properties, taking into consideration income, income taxes, risk, expenses, inflation, and physical and locational characteristics.

3. The discount rate shall contain the same elements as the expected income stream.

C. Assessment Procedures.

1. Underground rights in lands containing deposits of oil or gas and the related tangible property shall be assessed by the Property Tax Division in the name of the unit operator, the independent operator, or other person as the facts may warrant.

2. The taxable value of underground oil and gas rights shall be determined by discounting future net revenues to their present value as of the lien date of the assessment year and then subtracting the value of applicable exempt federal, state, and Indian royalty interests.

3. The reasonable taxable value of productive underground oil and gas rights shall be determined by the methods described in C.2. of this rule or such other valuation method that the Tax Commission believes to be reasonably determinative of the property's fair market value.

4. The value of the production assets shall be considered in the value of the oil and gas reserves as determined in C.2. above. Any other tangible property shall be separately valued at fair market value by the Property Tax Division.

5. The minimum value of the property shall be the value of the production assets.

D. Collection by Operator.

1. The unit operator may request the Property Tax Division to separately list the value of the working interest, and the value of the royalty interest on the Assessment Record. When such a request is made, the unit operator is responsible to provide the Property Tax Division with the necessary information needed to compile this list. The unit operator may make a reasonable estimate of the ad valorem tax liability for a given period and may withhold funds from amounts due to royalty. Withheld funds shall be sufficient to ensure payment of the ad valorem tax on each fractional interest according to the estimate made.

a) If a unit operating agreement exists between the unit operator and the fractional working interest owners, the unit operator may withhold or collect the tax according to the terms of that agreement.

b) In any case, the unit operator and the fractional interest owner may make agreements or arrangements for withholding or otherwise collecting this tax. This may be done whether or not that practice is consistent with the preceding paragraphs so long as all requirements of the law are met. When a fractional interest owner has had funds withheld to cover the estimated ad valorem tax liability and the operator fails to remit such taxes to the county when due, the fractional interest owner shall be indemnified from any further ad valorem tax liability to the extent of the withholding.

c) The unit operator shall compare the amount withheld to the taxes actually due, and return any excess amount to the fractional interest owner within 60 days after the delinquent date of the tax. At the request of the fractional interest owner the excess may be retained by the unit operator and applied toward the fractional interest owner's tax liability for the subsequent year.

2. The penalty provided for in Section 59-2-210 is intended to ensure collection by the county of the entire tax due. Any unit operator who has paid this county imposed penalty, and thereafter collects from the fractional interest holders any part of their tax due, may retain those funds as reimbursement against the penalty paid.

3. Interest on delinquent taxes shall be assessed as set forth in Section 59-2-1331.

4. Each unit operator may be required to submit to the Property Tax Division a listing of all fractional interest owners and their interests upon specific request of the Property Tax Division. Working interest owners, upon request, shall be required to submit similar information to unit operators.

R884-24P-14. Valuation of Real Property Encumbered by Preservation Easements Pursuant to Utah Code Ann. Section 59-2-303.

(1) The assessor shall take into consideration any preservation easements attached to historically significant real property and structures when determining the property's value.

(2) After the preservation easement has been recorded with the county recorder, the property owner of record shall submit to the county assessor a notice of the preservation easement containing the following information:

(a) the property owner's name;

- (b) the address of the property; and
- (c) the serial number of the property.
- (3) The county assessor shall review the property and incorporate any value change due to the preservation easement in the following year's assessment roll.

R884-24P-16. Assessment of Interlocal Cooperation Act Project Entity Properties Pursuant to Utah Code Ann. Section 11-13-302.

- (1) Definitions:
 - (a) "Utah fair market value" means the fair market value of that portion of the property of a project entity located within Utah upon which the fee in lieu of ad valorem property tax may be calculated.
 - (b) "Fee" means the annual fee in lieu of ad valorem property tax payable by a project entity pursuant to Section 11-13-302.
 - (c) "Energy supplier" means an entity that purchases any capacity, service or other benefit of a project to provide electrical service.
 - (d) "Exempt energy supplier" means an energy supplier whose tangible property is exempted by Article XIII, Sec. 3 of the Constitution of Utah from the payment of ad valorem property tax.
 - (e) "Optimum operating capacity" means the capacity at which a project is capable of operating on a sustained basis taking into account its design, actual operating history, maintenance requirements, and similar information from comparable projects, if any. The determination of the projected and actual optimum operating capacities of a project shall recognize that projects are not normally operated on a sustained basis at 100 percent of their designed or actual capacities and that the optimum level for operating a project on a sustained basis may vary from project to project.
 - (f) "Property" means any electric generating facilities, transmission facilities, distribution facilities, fuel facilities, fuel transportation facilities, water facilities, land, water or other existing facilities or tangible property owned by a project entity and required for the project which, if owned by an entity required to pay ad valorem property taxes, would be subject to assessment for ad valorem tax purposes.
 - (g) "Sold," for the purpose of interpreting Subsection (4), means the first sale of the capacity, service, or other benefit produced by the project without regard to any subsequent sale, resale, or lay-off of that capacity, service, or other benefit.
 - (h) "Taxing jurisdiction" means a political subdivision of this state in which any portion of the project is located.
 - (i) All definitions contained in Section 11-13-103 apply to this rule.
- (2) The Tax Commission shall determine the fair market value of the property of each project entity. Fair market value shall be based upon standard appraisal theory and shall be determined by correlating estimates derived from the income and cost approaches to value described below.
 - (a) The income approach to value requires the imputation of an income stream and a capitalization rate. The income stream may be based on recognized indicators such as average income, weighted income, trended income, present value of future income streams, performance ratios, and discounted cash flows. The imputation of income stream and capitalization rate shall be derived from the data of other similarly situated companies. Similarity shall be based on factors such as location, fuel mix, customer mix, size and bond ratings. Estimates may also be imputed from industry data generally. Income data from similarly situated companies will be adjusted to reflect differences in governmental regulatory and tax policies.
 - (b) The cost approach to value shall consist of the total of the property's net book value of the project's property. This total

shall then be adjusted for obsolescence if any.

(c) In addition to, and not in lieu of, any adjustments for obsolescence made pursuant to Subsection (2)(b), a phase-in adjustment shall be made to the assessed valuation of any new project or expansion of an existing project on which construction commenced by a project entity after January 1, 1989 as follows:

(i) During the period the new project or expansion is valued as construction work in process, its assessed valuation shall be multiplied by the percentage calculated by dividing its projected production as of the projected date of completion of construction by its projected optimum operating capacity as of that date.

(ii) Once the new project or expansion ceases to be valued as construction work in progress, its assessed valuation shall be multiplied by the percentage calculated by dividing its actual production by its actual optimum operating capacity. After the new project or expansion has sustained actual production at its optimum operating capacity during any tax year, this percentage shall be deemed to be 100 percent for the remainder of its useful life.

(3) If portions of the property of the project entity are located in states in addition to Utah and those states do not apply a unit valuation approach to that property, the fair market value of the property allocable to Utah shall be determined by computing the cost approach to value on the basis of the net book value of the property located in Utah and imputing an estimated income stream based solely on the value of the Utah property as computed under the cost approach. The correlated value so determined shall be the Utah fair market value of the property.

(4) Before fixing and apportioning the Utah fair market value of the property to the respective taxing jurisdictions in which the property, or a portion thereof is located, the Utah fair market value of the property shall be reduced by the percentage of the capacity, service, or other benefit sold by the project entity to exempt energy suppliers.

(5) For purposes of calculating the amount of the fee payable under Section 11-13-302(3), the percentage of the project that is used to produce the capacity, service or other benefit sold shall be deemed to be 100 percent, subject to adjustments provided by this rule, from the date the project is determined to be commercially operational.

(6) In computing its tax rate pursuant to the formula specified in Section 59-2-924(2), each taxing jurisdiction in which the project property is located shall add to the amount of its budgeted property tax revenues the amount of any credit due to the project entity that year under Section 11-13-302(3), and shall divide the result by the sum of the taxable value of all property taxed, including the value of the project property apportioned to the jurisdiction, and further adjusted pursuant to the requirements of Section 59-2-924.

(7) Subsections (2)(a) and (2)(b) are retroactive to the lien date of January 1, 1984. Subsection (2)(c) is effective as of the lien date of January 1, 1989. The remainder of this rule is retroactive to the lien date of January 1, 1988.

R884-24P-19. Appraiser Designation Program Pursuant to Utah Code Ann. Sections 59-2-701 and 59-2-702.

(1) "State certified general appraiser," "state certified residential appraiser," "state licensed appraiser," and trainee are as defined in Section 61-2b-2.

(2) The ad valorem training and designation program consists of several courses and practica.

(a) Certain courses must be sanctioned by either the Appraiser Qualification Board of the Appraisal Foundation (AQB) or the Western States Association of Tax Administrators (WSATA).

(b) The courses comprising the basic designation program

are:

- (i) Course 101 - Basic Appraisal Principles;
- (ii) Course 103 - Uniform Standards of Professional Appraisal Practice (AQB);
- (iii) Course 501 - Assessment Practice in Utah;
- (iv) Course 502 - Mass Appraisal of Land;
- (v) Course 503 - Development and Use of Personal Property Schedules;
- (vi) Course 504 - Appraisal of Public Utilities and Railroads (WSATA); and
- (vii) Course 505 - Income Approach Application.

(3) Candidates must attend 90 percent of the classes in each course and pass the final examination for each course with a grade of 70 percent or more to be successful.

(4) There are four recognized ad valorem designations: ad valorem residential appraiser, ad valorem general real property appraiser, ad valorem personal property auditor/appraiser, and ad valorem centrally assessed valuation analyst.

(a) These designations are granted only to individuals employed in a county assessor office or the Property Tax Division, working as appraisers, review appraisers, valuation auditors, or analysts/administrators providing oversight and direction to appraisers and auditors.

(b) An assessor, county employee, or state employee must hold the appropriate designation to value property for ad valorem taxation purposes.

(5) Ad valorem residential appraiser.

(a) To qualify for this designation, an individual must:

- (i) successfully complete courses 501 and 502;
- (ii) successfully complete a comprehensive residential field practicum; and
- (iii) attain and maintain state licensed or state certified appraiser status.

(b) Upon designation, the appraiser may value residential, vacant, and agricultural property for ad valorem taxation purposes.

(6) Ad valorem general real property appraiser.

(a) In order to qualify for this designation, an individual must:

- (i) successfully complete courses 501, 502, and 505;
- (ii) successfully complete a comprehensive field practicum including residential and commercial properties; and
- (iii) attain and maintain state certified appraiser status.

(b) Upon designation, the appraiser may value all types of locally assessed real property for ad valorem taxation purposes.

(7) Ad valorem personal property auditor/appraiser.

(a) To qualify for this designation, an individual must:

- (i) successfully complete courses 101, 103, 501, and 503; and

(ii) successfully complete a comprehensive auditing practicum.

(b) Upon designation, the auditor/appraiser may value locally assessed personal property for ad valorem taxation purposes.

(8) Ad valorem centrally assessed valuation analyst.

(a) In order to qualify for this designation, an individual must:

- (i) successfully complete courses 501 and 504;
- (ii) successfully complete a comprehensive valuation practicum; and
- (iii) attain and maintain state licensed or state certified appraiser status.

(b) Upon designation, the analyst may value centrally assessed property for ad valorem taxation purposes.

(9) If a candidate fails to receive a passing grade on a final examination, two re-examinations are allowed. If the re-examinations are not successful, the individual must retake the failed course. The cost to retake the failed course will not be borne by the Tax Commission.

(10) A practicum involves the appraisal or audit of selected properties. The candidate's supervisor must formally request that the Property Tax Division administer a practicum.

(a) Emphasis is placed on those types of properties the candidate will most likely encounter on the job.

(b) The practicum will be administered by a designated appraiser assigned from the Property Tax Division.

(11) An appraiser trainee referred to in Section 59-2-701 shall be designated an ad valorem associate if the appraiser trainee:

(a) has completed all education and practicum requirements for designation under Subsections (5), (6), or (8); and

(b) has not completed the non-education requirements for licensure or certification under Title 61, Chapter 2b, Real Estate Appraiser Licensing and Certification.

(12) An individual holding a specified designation can qualify for other designations by meeting the additional requirements under Subsections (5), (6), (7), or (8).

(13)(a) Maintaining designated status for individuals designated under Subsection (7) requires completion of 14 hours of Tax Commission approved classroom work every two years.

(b) Maintaining designated status for individuals designated under Subsections (5), (6), and (8) requires maintaining their appraisal license or certification under Title 61, Chapter 2b, Real Estate Appraiser Licensing and Certification.

(14) Upon termination of employment from any Utah assessment jurisdiction, or if the individual no longer works primarily as an appraiser, review appraiser, valuation auditor, or analyst/administrator in appraisal matters, designation is automatically revoked.

(a) Ad valorem designation status may be reinstated if the individual secures employment in any Utah assessment jurisdiction within four years from the prior termination.

(b) If more than four years elapse between termination and rehire, and:

(i) the individual has been employed in a closely allied field, then the individual may challenge the course examinations. Upon successfully challenging all required course examinations, the prior designation status will be reinstated; or

(ii) if the individual has not been employed in real estate valuation or a closely allied field, the individual must retake all required courses and pass the final examinations with a score of 70 percent or more.

(15) All appraisal work performed by Tax Commission designated appraisers shall meet the standards set forth in section 61-2b-27.

(16) If appropriate Tax Commission designations are not held by assessor's office personnel, the appraisal work must be contracted out to qualified private appraisers. An assessor's office may elect to contract out appraisal work to qualified private appraisers even if personnel with the appropriate designation are available in the office. If appraisal work is contracted out, the following requirements must be met:

(a) The private sector appraisers performing the contracted work must hold the state certified residential appraiser or state certified general appraiser license issued by the Division of Real Estate of the Utah Department of Commerce. Only state certified general appraisers may appraise nonresidential properties.

(b) All appraisal work shall meet the standards set forth in Section 61-2b-27.

(17) The completion and delivery of the assessment roll required under Section 59-2-311 is an administrative function of the elected assessor.

(a) There are no specific licensure, certification, or educational requirements related to this function.

(b) An elected assessor may complete and deliver the assessment roll as long as the valuations and appraisals included in the assessment roll were completed by persons having the required designations.

R884-24P-20. Construction Work in Progress Pursuant to Utah Constitution Art. XIII, Section 2 and Utah Code Ann. Sections 59-2-201 and 59-2-301.

A. For purposes of this rule:

1. Construction work in progress means improvements as defined in Section 59-2-102, and personal property as defined in Section 59-2-102, not functionally complete as defined in A.6.

2. Project means any undertaking involving construction, expansion or modernization.

3. "Construction" means:

- a) creation of a new facility;
- b) acquisition of personal property; or
- c) any alteration to the real property of an existing facility other than normal repairs or maintenance.

4. Expansion means an increase in production or capacity as a result of the project.

5. Modernization means a change or contrast in character or quality resulting from the introduction of improved techniques, methods or products.

6. Functionally complete means capable of providing economic benefit to the owner through fulfillment of the purpose for which it was constructed. In the case of a cost-regulated utility, a project shall be deemed to be functionally complete when the operating property associated with the project has been capitalized on the books and is part of the rate base of that utility.

7. Allocable preconstruction costs means expenditures associated with the planning and preparation for the construction of a project. To be classified as an allocable preconstruction cost, an expenditure must be capitalized.

8. Cost regulated utility means a power company, oil and gas pipeline company, gas distribution company or telecommunication company whose earnings are determined by a rate of return applied to rate base. Rate of return and rate base are set and approved by a state or federal regulatory commission.

9. Residential means single-family residences and duplex apartments.

10. Unit method of appraisal means valuation of the various physical components of an integrated enterprise as a single going concern. The unit method may employ one or more of the following approaches to value: the income approach, the cost approach, and the stock and debt approach.

B. All construction work in progress shall be valued at "full cash value" as described in this rule.

C. Discount Rates

For purposes of this rule, discount rates used in valuing all projects shall be determined by the Tax Commission, and shall be consistent with market, financial and economic conditions.

D. Appraisal of Allocable Preconstruction Costs.

1. If requested by the taxpayer, preconstruction costs associated with properties, other than residential properties, may be allocated to the value of the project in relation to the relative amount of total expenditures made on the project by the lien date. Allocation will be allowed only if the following conditions are satisfied by January 30 of the tax year for which the request is sought:

a) a detailed list of preconstruction cost data is supplied to the responsible agency;

b) the percent of completion of the project and the preconstruction cost data are certified by the taxpayer as to their accuracy.

2. The preconstruction costs allocated pursuant to D.1. of

this rule shall be discounted using the appropriate rate determined in C. The discounted allocated value shall either be added to the values of properties other than residential properties determined under E.1. or shall be added to the values determined under the various approaches used in the unit method of valuation determined under F.

3. The preconstruction costs allocated under D. are subject to audit for four years. If adjustments are necessary after examination of the records, those adjustments will be classified as property escaping assessment.

E. Appraisal of Properties not Valued under the Unit Method.

1. The full cash value, projected upon completion, of all properties valued under this section, with the exception of residential properties, shall be reduced by the value of the allocable preconstruction costs determined D. This reduced full cash value shall be referred to as the "adjusted full cash value."

2. On or before January 1 of each tax year, each county assessor and the Tax Commission shall determine, for projects not valued by the unit method and which fall under their respective areas of appraisal responsibility, the following:

a) The full cash value of the project expected upon completion.

b) The expected date of functional completion of the project currently under construction.

(1) The expected date of functional completion shall be determined by the county assessor for locally assessed properties and by the Tax Commission for centrally-assessed properties.

c) The percent of the project completed as of the lien date.

(1) Determination of percent of completion for residential properties shall be based on the following percentage of completion:

(a) 10 - Excavation-foundation

(b) 30 - Rough lumber, rough labor

(c) 50 - Roofing, rough plumbing, rough electrical, heating

(d) 65 - Insulation, drywall, exterior finish

(e) 75 - Finish lumber, finish labor, painting

(f) 90 - Cabinets, cabinet tops, tile, finish plumbing, finish electrical

(g) 100 - Floor covering, appliances, exterior concrete, misc.

(2) In the case of all other projects under construction and valued under this section the percent of completion shall be determined by the county assessor for locally assessed properties and by the Tax Commission for centrally-assessed properties.

3. Upon determination of the adjusted full cash value for nonresidential projects under construction or the full cash value expected upon completion of residential projects under construction, the expected date of completion, and the percent of the project completed, the assessor shall do the following:

a) multiply the percent of the residential project completed by the total full cash value of the residential project expected upon completion; or in the case of nonresidential projects,

b) multiply the percent of the nonresidential project completed by the adjusted full cash value of the nonresidential project;

c) adjust the resulting product of E.3.a) or E.3.b) for the expected time of completion using the discount rate determined under C.

F. Appraisal of Properties Valued Under the Unit Method of Appraisal.

1. No adjustments under this rule shall be made to the income indicator of value for a project under construction that is owned by a cost-regulated utility when the project is allowed in rate base.

2. The full cash value of a project under construction as of January 1 of the tax year, shall be determined by adjusting the

cost and income approaches as follows:

a) Adjustments to reflect the time value of money in appraising construction work in progress valued under the cost and income approaches shall be made for each approach as follows:

(1) Each company shall report the expected completion dates and costs of the projects. A project expected to be completed during the tax year for which the valuation is being determined shall be considered completed on January 1 or July 1, whichever is closest to the expected completion date. The Tax Commission shall determine the expected completion date for any project whose completion is scheduled during a tax year subsequent to the tax year for which the valuation is being made.

(2) If requested by the company, the value of allocable preconstruction costs determined in D. shall then be subtracted from the total cost of each project. The resulting sum shall be referred to as the adjusted cost value of the project.

(3) The adjusted cost value for each of the future years prior to functional completion shall be discounted to reflect the present value of the project under construction. The discount rate shall be determined under C.

(4) The discounted adjusted cost value shall then be added to the values determined under the income approach and cost approach.

b) No adjustment will be made to reflect the time value of money for a project valued under the stock and debt approach to value.

G. This rule shall take effect for the tax year 1985.

R884-24P-24. Form for Notice of Property Valuation and Tax Changes Pursuant to Utah Code Ann. Sections 59-2-918.5 through 59-2-924.

(1) The county auditor must notify all real property owners of property valuation and tax changes on the Notice of Property Valuation and Tax Changes form.

(a) If a county desires to use a modified version of the Notice of Property Valuation and Tax Changes, a copy of the proposed modification must be submitted for approval to the Property Tax Division of the Tax Commission no later than March 1.

(i) Within 15 days of receipt, the Property Tax Division will issue a written decision, including justifications, on the use of the modified Notice of Property Valuation and Tax Changes.

(ii) If a county is not satisfied with the decision, it may petition for a hearing before the Tax Commission as provided in R861-1A-22.

(b) The Notice of Property Valuation and Tax Changes, however modified, must contain the same information as the unmodified version. A property description may be included at the option of the county.

(2) The Notice of Property Valuation and Tax Changes must be completed by the county auditor in its entirety, except in the following circumstances:

(a) New property is created by a new legal description; or

(b) The status of the improvements on the property has changed.

(c) In instances where partial completion is allowed, the term nonapplicable will be entered in the appropriate sections of the Notice of Property Valuation and Tax Changes.

(d) If the county auditor determines that conditions other than those outlined in this section merit deletion, the auditor may enter the term "nonapplicable" in appropriate sections of the Notice of Property Valuation and Tax Changes only after receiving approval from the Property Tax Division in the manner described in Subsection (1).

(3) Real estate assessed under the Farmland Assessment Act of 1969 must be reported at full market value, with the value based upon Farmland Assessment Act rates shown

parenthetically.

(4)(a) All completion dates specified for the disclosure of property tax information must be strictly observed.

(b) Requests for deviation from the statutory completion dates must be submitted in writing on or before June 1, and receive the approval of the Property Tax Division in the manner described in Subsection (1).

(5) If the cost of public notice required under Section 59-2-919 is greater than one percent of the property tax revenues to be received, an entity may combine its advertisement with other entities, or use direct mail notification.

(6) Calculation of the amount and percentage increase in property tax revenues required by Section 59-2-919 shall be computed by comparing property taxes levied for the current year with property taxes budgeted the prior year, without adjusting for revenues attributable to new growth.

(7) If a taxing district has not completed the tax rate setting process as prescribed in Sections 59-2-919 and 59-2-920 by August 17, the county auditor must seek approval from the Tax Commission to use the certified rate in calculating taxes levied.

(8) The value of property subject to the uniform fee under Sections 59-2-405 through 59-2-405.3 is excluded from taxable value for purposes of calculating new growth, the certified tax rate, and the proposed tax rate.

(9) The value and taxes of property subject to the uniform fee under Sections 59-2-405 through 59-2-405.3 are excluded when calculating the percentage of property taxes collected as provided in Section 59-2-924.

(10) The following formulas and definitions shall be used in determining new growth:

(a) Actual new growth shall be computed as follows:

(i) the taxable value of property assessed by the commission and locally assessed real property for the current year adjusted for redevelopment minus year-end taxable value of property assessed by the commission and locally assessed real property for the previous year adjusted for redevelopment; then

(ii) plus or minus the difference between the taxable value of locally assessed personal property for the prior year adjusted for redevelopment and the year-end taxable value of locally assessed personal property for the year that is two years prior to the current year adjusted for redevelopment; then

(iii) plus or minus changes in value as a result of factoring; then

(iv) plus or minus changes in value as a result of reappraisal; then

(v) plus or minus any change in value resulting from a legislative mandate or court order.

(b) Net annexation value is the taxable value for the current year adjusted for redevelopment of all properties annexed into an entity during the previous calendar year minus the taxable value for the previous year adjusted for redevelopment for all properties annexed out of the entity during the previous calendar year.

(c) New growth is equal to zero for an entity with:

(i) an actual new growth value less than zero; and

(ii) a net annexation value greater than or equal to zero.

(d) New growth is equal to actual new growth for:

(i) an entity with an actual new growth value greater than or equal to zero; or

(ii) an entity with:

(A) an actual new growth value less than zero; and

(B) the actual new growth value is greater than or equal to the net annexation value.

(e) New growth is equal to the net annexation value for an entity with:

(i) a net annexation value less than zero; and

(ii) the actual new growth value is less than the net annexation value.

(f) Adjusted new growth equals new growth multiplied by the mean collection rate for the previous five years.

(11)(a) For purposes of determining the certified tax rate, ad valorem property tax revenues budgeted by a taxing entity for the prior year are calculated by:

(i) increasing or decreasing the adjustable taxable value from the prior year Report 697 by the average of the percentage net change in the value of taxable property for the equalization period for the three calendar years immediately preceding the current calendar year; and

(ii) multiplying the result obtained in Subsection (11)(a)(i) by:

(A) the percentage of property taxes collected for the five calendar years immediately preceding the current calendar year; and

(B) the prior year approved tax rate.

(b) If a taxing entity levied the prior year approved tax rate, the budgeted revenues determined under Subsection (11)(a) are reflected in the budgeted revenue column of the prior year Report 693.

(12) Entities required to set levies for more than one fund must compute an aggregate certified rate. The aggregate certified rate is the sum of the certified rates for individual funds for which separate levies are required by law. The aggregate certified rate computation applies where:

(a) the valuation bases for the funds are contained within identical geographic boundaries; and

(b) the funds are under the levy and budget setting authority of the same governmental entity.

(13) For purposes of determining the certified tax rate of a municipality incorporated on or after July 1, 1996, the levy imposed for municipal-type services or general county purposes shall be the certified tax rate for municipal-type services or general county purposes, as applicable.

(14) No new entity, including a new city, may have a certified tax rate or levy a tax for any particular year unless that entity existed on the first day of that calendar year.

R884-24P-27. Standards for Assessment Level and Uniformity of Performance Pursuant to Utah Code Ann. Sections 59-2-704 and 59-2-704.5.

(1) Definitions.

(a) "Coefficient of dispersion (COD)" means the average deviation of a group of assessment ratios taken around the median and expressed as a percent of that measure.

(b) "Coefficient of variation (COV)" means the standard deviation expressed as a percentage of the mean.

(c) "Division" means the Property Tax Division of the commission.

(d) "Nonparametric" means data samples that are not normally distributed.

(e) "Parametric" means data samples that are normally distributed.

(f) "Urban counties" means counties classified as first or second class counties pursuant to Section 17-50-501.

(2) The commission adopts the following standards of assessment performance.

(a) For assessment level in each property class, subclass, and geographical area in each county, the measure of central tendency shall meet one of the following measures.

(i) The measure of central tendency shall be within 10 percent of the legal level of assessment.

(ii) The 95 percent confidence interval of the measure of central tendency shall contain the legal level of assessment.

(b) For uniformity of the property assessments in each class of property for which a detailed review is conducted during the current year, the measure of dispersion shall be within the following limits.

(i) In urban counties:

(A) a COD of 15 percent or less for primary residential property, and 20 percent or less for commercial property, vacant land, and secondary residential property; and

(B) a COV of 19 percent or less for primary residential property, and 25 percent or less for commercial property, vacant land, and secondary residential property.

(ii) In rural counties:

(A) a COD of 20 percent or less for primary residential property, and 25 percent or less for commercial property, vacant land, and secondary residential property; and

(B) a COV of 25 percent or less for primary residential property, and 31 percent or less for commercial property, vacant land, and secondary residential property.

(iii) For a rural or small jurisdiction with limited development, or for a jurisdiction with a depressed market, the county assessor may petition the division for a five percentage point increase in the COD or COV for one year only. After sufficient examination, the division may determine that a one-year expansion of the COD or COV is appropriate.

(c) Statistical measures.

(i) The measure of central tendency shall be the mean for parametric samples and the median for nonparametric samples.

(ii) The measure of dispersion shall be the COV for parametric samples and the COD for nonparametric samples.

(iii) To achieve statistical accuracy in determining assessment level under Subsection (2)(a) and uniformity under Subsection (2)(b) for any property class, subclass, or geographical area, the minimum sample size shall consist of 10 or more ratios.

(3) Each year the division shall conduct and publish an assessment-to-sale ratio study to determine if each county complies with the standards in Subsection (2).

(a) To meet the minimum sample size, the study period may be extended.

(b) A smaller sample size may be used if:

(i) that sample size is at least 10 percent of the class or subclass population; or

(ii) both the division and the county agree that the sample may produce statistics that imply corrective action appropriate to the class or subclass of property.

(c) If the division, after consultation with the counties, determines that the sample size does not produce reliable statistical data, an alternate performance evaluation may be conducted, which may result in corrective action. The alternate performance evaluation shall include review and analysis of the following:

(i) the county's procedures for collection and use of market data, including sales, income, rental, expense, vacancy rates, and capitalization rates;

(ii) the county-wide land, residential, and commercial valuation guidelines and their associated procedures for maintaining current market values;

(iii) the accuracy and uniformity of the county's individual property data through a field audit of randomly selected properties; and

(iv) the county's level of personnel training, ratio of appraisers to parcels, level of funding, and other workload and resource considerations.

(d) All input to the sample used to measure performance shall be completed by March 31 of each study year.

(e) The division shall conduct a preliminary annual assessment-to-sale ratio study by April 30 of the study year, allowing counties to apply adjustments to their tax roll prior to the May 22 deadline.

(f) The division shall complete the final study immediately following the closing of the tax roll on May 22.

(4) The division shall order corrective action if the results of the final study do not meet the standards set forth in Subsection (2).

(a) Assessment level adjustments, or factor orders, shall be calculated by dividing the legal level of assessment by one of the following:

(i) the measure of central tendency, if the uniformity of the ratios meets the standards outlined in Subsection (2)(b); or

(ii) the 95 percent confidence interval limit nearest the legal level of assessment, if the uniformity of the ratios does not meet the standards outlined in Subsection (2)(b).

(b) Uniformity adjustments or other corrective action shall be ordered if the property fails to meet the standards outlined in Subsection (2)(b). (c) A corrective action order may contain language requiring a county to create, modify, or follow its five-year plan for a detailed review of property characteristics.

(d) All corrective action orders shall be issued by June 10 of the study year, or within five working days after the completion of the final study, whichever is later.

(5) The commission adopts the following procedures to insure compliance and facilitate implementation of ordered corrective action.

(a) Prior to the filing of an appeal, the division shall retain authority to correct errors and, with agreement of the affected county, issue amended orders or stipulate with the affected county to any appropriate alternative action without commission approval. Any stipulation by the division subsequent to an appeal is subject to commission approval.

(b) A county receiving a corrective action order resulting from this rule may file and appeal with the commission pursuant to rule R861-1A-11.

(c) A corrective action order will become the final commission order if the county does not appeal in a timely manner, or does not prevail in the appeals process.

(d) The division may assist local jurisdictions to ensure implementation of any corrective action orders by the following deadlines.

(i) Factor orders shall be implemented in the current study year prior to the mailing of valuation notices.

(ii) Other corrective action shall be implemented prior to May 22 of the year following the study year.

(e) The division shall complete audits to determine compliance with corrective action orders as soon after the deadlines set forth in Subsection (5)(d) as practical. The division shall review the results of the compliance audit with the county and make any necessary adjustments to the compliance audit within 15 days of initiating the audit. These adjustments shall be limited to the analysis performed during the compliance audit and may not include review of the data used to arrive at the underlying factor order. After any adjustments, the compliance audit will then be given to the commission for any necessary action.

(f) The county shall be informed of any adjustment required as a result of the compliance audit.

R884-24P-28. Reporting Requirements For Leased or Rented Personal Property Pursuant to Utah Code Ann. Section 59-2-306.

(1) The procedure set forth herein is required in reporting heavy equipment leased or rented during the tax year.

(2) The owner of leased or rented heavy equipment shall file annual reports with the commission, either on forms provided by the commission or electronically, for the periods January 1 through June 30, and July 1 through December 31 of each year. The reports shall contain the following information:

(a) a description of the leased or rented equipment;

(b) the year of manufacture and acquisition cost;

(c) a listing, by month, of the counties where the equipment has situs; and

(d) any other information required.

(3) For purposes of this rule, situs is established when leased or rented equipment is kept in an area for thirty days.

Once situs is established, any portion of thirty days during which that equipment stays in that area shall be counted as a full month of situs. In no case may situs exceed twelve months for any year.

(4)(a) The completed report shall be submitted to the Property Tax Division of the commission within thirty days after each reporting period.

(b) Noncompliance will require accelerated reporting.

R884-24P-29. Taxable Household Furnishings Pursuant to Utah Code Ann. Section 59-2-1113.

(1) Except as provided in Section 59-2-1115, household furnishings, furniture, and equipment are subject to property taxation if:

(a) the owner of the dwelling unit commonly receives legal consideration for its use, whether in the form of rent, exchange, or lease payments; or

(b) the dwelling unit is held out as available for the rent, lease, or use by others.

(2) Household furnishings, furniture, and equipment that meet the definition of qualifying exempt primary residential rental personal property in Section 59-2-102:

(a) qualify for the primary residential exemption under Section 59-2-103; and

(b) are valued for tax under this chapter by:

(i) calculating the value of the personal property using the tables in Tax Commission rule R884-24P-33; and

(ii) multiplying the value calculated under Subsection (2)(b)(i) by 0.55.

R884-24P-32. Leasehold Improvements Pursuant to Utah Code Ann. Section 59-2-303.

A. The value of leasehold improvements shall be included in the value of the underlying real property and assessed to the owner of the underlying real property.

B. The combined valuation of leasehold improvements and underlying real property required in A. shall satisfy the requirements of Section 59-2-103(1).

C. The provisions of this rule shall not apply if the underlying real property is owned by an entity exempt from tax under Section 59-2-1101.

D. The provisions of this rule shall be implemented and become binding on taxpayers beginning January 1, 2000.

R884-24P-33. 2016 Personal Property Valuation Guides and Schedules Pursuant to Utah Code Ann. Section 59-2-301.

(1) Definitions.

(a)(i) "Acquisition cost" does not include indirect costs such as debugging, licensing fees and permits, insurance, or security.

(ii) Acquisition cost may correspond to the cost new for new property, or cost used for used property.

(b)(i) "Actual cost" includes the value of components necessary to complete the vehicle, such as tanks, mixers, special containers, passenger compartments, special axles, installation, engineering, erection, or assembly costs.

(ii) Actual cost does not include sales or excise taxes, maintenance contracts, registration and license fees, dealer charges, tire tax, freight, or shipping costs.

(c) "Cost new" means the actual cost of the property when purchased new.

(i) Except as otherwise provided in this rule, the Tax Commission and assessors shall rely on the following sources to determine cost new:

(A) documented actual cost of the new or used vehicle; or

(B) recognized publications that provide a method for approximating cost new for new or used vehicles.

(ii) For the following property purchased used, the taxing authority may determine cost new by dividing the property's

actual cost by the percent good factor for that class:

- (A) class 6 heavy and medium duty trucks;
- (B) class 13 heavy equipment;
- (C) class 14 motor homes;
- (D) class 17 vessels equal to or greater than 31 feet in length; and
- (E) class 21 commercial trailers.

(d) For purposes of Sections 59-2-108 and 59-2-1115, "item of taxable tangible personal property" means a piece of equipment, machinery, furniture, or other piece of tangible personal property that is functioning at its highest and best use for the purpose it was designed and constructed and is generally capable of performing that function without being combined with other items of personal property. An item of taxable tangible personal property is not an individual component part of a piece of machinery or equipment, but the piece of machinery or equipment. For example, a fully functioning computer is an item of taxable tangible personal property, but the motherboard, hard drive, tower, or sound card are not.

(e) "Percent good" means an estimate of value, expressed as a percentage, based on a property's acquisition cost or cost new, adjusted for depreciation and appreciation of all kinds.

(i) The percent good factor is applied against the acquisition cost or the cost new to derive taxable value for the property.

(ii) Percent good schedules are derived from an analysis of the Internal Revenue Service Class Life, the Marshall and Swift Cost index, other data sources or research, and vehicle valuation guides such as Penton Price Digests.

(2) Each year the Property Tax Division shall update and publish percent good schedules for use in computing personal property valuation.

(a) Proposed schedules shall be transmitted to county assessors and interested parties for comment before adoption.

(b) A public comment period will be scheduled each year and a public hearing will be scheduled if requested by ten or more interested parties or at the discretion of the Commission.

(c) County assessors may deviate from the schedules when warranted by specific conditions affecting an item of personal property. When a deviation will affect an entire class or type of personal property, a written report, substantiating the changes with verifiable data, must be presented to the Commission. Alternative schedules may not be used without prior written approval of the Commission.

(d) A party may request a deviation from the value established by the schedule for a specific item of property if the use of the schedule does not result in the fair market value for the property at the retail level of trade on the lien date, including any relevant installation and assemblage value.

(3) The provisions of this rule do not apply to:

(a) a vehicle subject to the age-based uniform fee under Section 59-2-405.1;

(b) the following personal property subject to the age-based uniform fee under Section 59-2-405.2:

- (i) an all-terrain vehicle;
- (ii) a camper;
- (iii) an other motorcycle;
- (iv) an other trailer;
- (v) a personal watercraft;
- (vi) a small motor vehicle;
- (vii) a snowmobile;
- (viii) a street motorcycle;
- (ix) a tent trailer;
- (x) a travel trailer; and
- (xi) a vessel, including an outboard motor of the vessel, that is less than 31 feet in length and

(c) an aircraft subject to the uniform statewide fee under Section 59-2-404.

(4) Other taxable personal property that is not included in

the listed classes includes:

(a) Supplies on hand as of January 1 at 12:00 noon, including office supplies, shipping supplies, maintenance supplies, replacement parts, lubricating oils, fuel and consumable items not held for sale in the ordinary course of business. Supplies are assessed at total cost, including freight-in.

(b) Equipment leased or rented from inventory is subject to ad valorem tax. Refer to the appropriate property class schedule to determine taxable value.

(c) Property held for rent or lease is taxable, and is not exempt as inventory. For entities primarily engaged in rent-to-own, inventory on hand at January 1 is exempt and property out on rent-to-own contracts is taxable.

(5) Personal property valuation schedules may not be appealed to, or amended by, county boards of equalization.

(6) All taxable personal property, other than personal property subject to an age-based uniform fee under Section 59-2-405.1 or 59-2-405.2, or a uniform statewide fee under Section 59-2-404, is classified by expected economic life as follows:

(a) Class 1 - Short Life Property. Property in this class has a typical life of more than one year and less than four years. It is fungible in that it is difficult to determine the age of an item retired from service.

(i) Examples of property in the class include:

- (A) barricades/warning signs;
- (B) library materials;
- (C) patterns, jigs and dies;
- (D) pots, pans, and utensils;
- (E) canned computer software;
- (F) hotel linen;
- (G) wood and pallets;
- (H) video tapes, compact discs, and DVDs; and
- (I) uniforms.

(ii) With the exception of video tapes, compact discs, and DVDs, taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(iii) A licensee of canned computer software shall use one of the following substitutes for acquisition cost of canned computer software if no acquisition cost for the canned computer software is stated:

- (A) retail price of the canned computer software;
- (B) if a retail price is unavailable, and the license is a nonrenewable single year license agreement, the total sum of expected payments during that 12-month period; or
- (C) if the licensing agreement is a renewable agreement or is a multiple year agreement, the present value of all expected licensing fees paid pursuant to the agreement.

(iv) Video tapes, compact discs, and DVDs are valued at \$15.00 per tape or disc for the first year and \$3.00 per tape or disc thereafter.

TABLE 1

Year of Acquisition	Percent Good of Acquisition Cost

14	40%
13 and prior	10%

(b) Class 2 - Computer Integrated Machinery.

(i) Machinery shall be classified as computer integrated machinery if all of the following conditions are met:

(A) The equipment is sold as a single unit. If the invoice breaks out the computer separately from the machine, the computer must be valued as Class 12 property and the machine as Class 8 property.

(B) The machine cannot operate without the computer and the computer cannot perform functions outside the machine.

(C) The machine can perform multiple functions and is

controlled by a programmable central processing unit.

(D) The total cost of the machine and computer combined is depreciated as a unit for income tax purposes.

(E) The capabilities of the machine cannot be expanded by substituting a more complex computer for the original.

(ii) Examples of property in this class include:

(A) CNC mills;

(B) CNC lathes;

(C) high-tech medical and dental equipment such as MRI equipment, CAT scanners, and mammography units.

(iii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(c) Class 3 - Short Life Trade Fixtures. Property in this class generally consists of electronic types of equipment and includes property subject to rapid functional and economic obsolescence or severe wear and tear.

(i) Examples of property in this class include:

(A) office machines;

(B) alarm systems;

(C) shopping carts;

(D) ATM machines;

(E) small equipment rentals;

(F) rent-to-own merchandise;

(G) telephone equipment and systems;

(H) music systems;

(I) vending machines;

(J) video game machines; and

(K) cash registers.

(ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(d) Class 5 - Long Life Trade Fixtures. Class 5 property is subject to functional obsolescence in the form of style changes.

(i) Examples of property in this class include:

(A) furniture;

(B) bars and sinks;

(C) booths, tables and chairs;

(D) beauty and barber shop fixtures;

(E) cabinets and shelves;

(F) displays, cases and racks;

(G) office furniture;

(H) theater seats;

(I) water slides; and

(J) signs, mechanical and electrical.

(ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(e) Class 6 - Heavy and Medium Duty Trucks.

(i) Examples of property in this class include:

(A) heavy duty trucks;

(B) medium duty trucks;

(C) crane trucks;

(D) concrete pump trucks; and

(E) trucks with well-boring rigs.

(ii) Taxable value is calculated by applying the percent good factor against the cost new.

(iii) Cost new of vehicles in this class is defined as follows:

(A) the documented actual cost of the vehicle for new vehicles; or

(B) 75 percent of the manufacturer's suggested retail price.

(iv) For state assessed vehicles, cost new shall include the value of attached equipment.

(v) The 2016 percent good applies to 2016 models purchased in 2015.

(vi) Trucks weighing two tons or more have a residual taxable value of \$1,750.

(f) Class 7 - Medical and Dental Equipment. Class 7 property is subject to a high degree of technological development by the health industry.

(i) Examples of property in this class include:

(A) medical and dental equipment and instruments;

(B) exam tables and chairs;

(C) microscopes; and

(D) optical equipment.

(ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(g) Class 8 - Machinery and Equipment. Property in this class is subject to considerable functional and economic obsolescence created by competition as technologically advanced and more efficient equipment becomes available.

(i) Examples of property in this class include:

- (A) manufacturing machinery;
- (B) amusement rides;
- (C) bakery equipment;
- (D) distillery equipment;
- (E) refrigeration equipment;
- (F) laundry and dry cleaning equipment;
- (G) machine shop equipment;
- (H) processing equipment;
- (I) auto service and repair equipment;
- (J) mining equipment;
- (K) ski lift machinery;
- (L) printing equipment;
- (M) bottling or cannery equipment;
- (N) packaging equipment; and
- (O) pollution control equipment.

(ii) Except as provided in Subsection (6)(g)(iii), taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(iii)(A) Notwithstanding Subsection (6)(g)(ii), the taxable value of the following oil refinery pollution control equipment required by the federal Clean Air Act shall be calculated pursuant to Subsection (6)(g)(iii)(B):

- (I) VGO (Vacuum Gas Oil) reactor;
- (II) HDS (Diesel Hydrotreater) reactor;
- (III) VGO compressor;
- (IV) VGO furnace;
- (V) VGO and HDS high pressure exchangers;
- (VI) VGO, SRU (Sulfur Recovery Unit), SWS (Sour Water Stripper), and TGU; (Tail Gas Unit) low pressure exchangers;
- (VII) VGO, amine, SWS, and HDS separators and drums;
- (VIII) VGO and tank pumps;
- (IX) TGU modules; and
- (X) VGO tank and air coolers.

(B) The taxable value of the oil refinery pollution control equipment described in Subsection (6)(g)(iii)(A) shall be calculated by:

- (I) applying the percent good factor in Table 8 against the acquisition cost of the property; and
- (II) multiplying the product described in Subsection (6)(g)(iii)(B)(I) by 50%.

(h) Class 9 - Off-Highway Vehicles.

(i) Because Section 59-2-405.2 subjects off-highway vehicles to an age-based uniform fee, a percent good schedule is not necessary.

(i) Class 10 - Railroad Cars. The Class 10 schedule was developed to value the property of railroad car companies. Functional and economic obsolescence is recognized in the

developing technology of the shipping industry. Heavy wear and tear is also a factor in valuing this class of property.

(i) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(j) Class 11 - Street Motorcycles.

(i) Because Section 59-2-405.2 subjects street motorcycles to an age-based uniform fee, a percent good schedule is not necessary.

(k) Class 12 - Computer Hardware.

(i) Examples of property in this class include:

- (A) data processing equipment;
- (B) personal computers;
- (C) main frame computers;
- (D) computer equipment peripherals;
- (E) cad/cam systems; and
- (F) copiers.

(ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(n) Class 15 - Semiconductor Manufacturing Equipment. Class 15 applies only to equipment used in the production of semiconductor products. Equipment used in the semiconductor manufacturing industry is subject to significant economic and functional obsolescence due to rapidly changing technology and economic conditions.

(i) Examples of property in this class include:

- (A) crystal growing equipment;
- (B) die assembly equipment;
- (C) wire bonding equipment;
- (D) encapsulation equipment;
- (E) semiconductor test equipment;
- (F) clean room equipment;
- (G) chemical and gas systems related to semiconductor manufacturing;
- (H) deionized water systems;
- (I) electrical systems; and
- (J) photo mask and wafer manufacturing dedicated to semiconductor production.

(ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(o) Class 16 - Long-Life Property. Class 16 property has a long physical life with little obsolescence.

(i) Examples of property in this class include:

- (A) billboards;
- (B) sign towers;
- (C) radio towers;
- (D) ski lift and tram towers;
- (E) non-farm grain elevators;
- (F) bulk storage tanks;
- (G) underground fiber optic cable; and
- (H) solar panels and supporting equipment.

(ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(p) Class 17 - Vessels Equal to or Greater Than 31 Feet in Length.

(i) Examples of property in this class include:

- (A) houseboats equal to or greater than 31 feet in length;
- (B) sailboats equal to or greater than 31 feet in length; and
- (C) yachts equal to or greater than 31 feet in length.

(ii) A vessel, including an outboard motor of the vessel, under 31 feet in length:

- (A) is not included in Class 17;
- (B) may not be valued using Table 17; and
- (C) is subject to an age-based uniform fee under Section 59-2-405.2.

(iii) Taxable value is calculated by applying the percent good factor against the cost new of the property.

(iv) The Tax Commission and assessors shall rely on the following sources to determine cost new for property in this class:

- (A) the following publications or valuation methods:
 - (I) the manufacturer's suggested retail price listed in the ABOS Marine Blue Book;
 - (II) for property not listed in the ABOS Marine Blue Book but listed in the NADA Marine Appraisal Guide, the NADA average value for the property divided by the percent good factor; or
 - (III) for property not listed in the ABOS Marine Blue Book or the NADA Appraisal Guide:
 - (aa) the manufacturer's suggested retail price for comparable property; or
 - (bb) the cost new established for that property by a documented valuation source; or
- (B) the documented actual cost of new or used property in this class.

(v) The 2016 percent good applies to 2016 models purchased in 2015.

(vi) Property in this class has a residual taxable value of \$1,000.

- (q) Class 17a - Vessels Less Than 31 Feet in Length
 - (i) Because Section 59-2-405.2 subjects vessels less than 31 feet in length to an age-based uniform fee, a percent good schedule is not necessary.
- (r) Class 18 - Travel Trailers and Class 18a - Tent Trailers/Truck Campers.
 - (i) Because Section 59-2-405.2 subjects travel trailers and tent trailers/truck campers to an age-based uniform fee, a percent good schedule is not necessary.
- (s) Class 20 - Petroleum and Natural Gas Exploration and Production Equipment. Class 20 property is subject to significant functional and economic obsolescence due to the volatile nature of the petroleum industry.
 - (i) Examples of property in this class include:
 - (A) oil and gas exploration equipment;
 - (B) distillation equipment;
 - (C) wellhead assemblies;
 - (D) holding and storage facilities;
 - (E) drill rigs;
 - (F) reinjection equipment;
 - (G) metering devices;
 - (H) cracking equipment;
 - (I) well-site generators, transformers, and power lines;
 - (J) equipment sheds;
 - (K) pumps;
 - (L) radio telemetry units; and
 - (M) support and control equipment.
 - (ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

- (t) Class 21 - Commercial Trailers.
 - (i) Examples of property in this class include:
 - (A) dry freight van trailers;
 - (B) refrigerated van trailers;
 - (C) flat bed trailers;
 - (D) dump trailers;
 - (E) livestock trailers; and
 - (F) tank trailers.
 - (ii) Taxable value is calculated by applying the percent good factor against the cost new of the property. For state assessed vehicles, cost new shall include the value of attached equipment.
 - (iii) The 2016 percent good applies to 2016 models

purchased in 2015.

- (iv) Commercial trailers have a residual taxable value of \$1,000.

- (u) Class 21a - Other Trailers (Non-Commercial).
 - (i) Because Section 59-2-405.2 subjects this class of trailers to an age-based uniform fee, a percent good schedule is not necessary.
- (v) Class 22 - Passenger Cars, Light Trucks/Utility Vehicles, and Vans.
 - (i) Class 22 vehicles fall within four subcategories: domestic passenger cars, foreign passenger cars, light trucks, including utility vehicles, and vans.
 - (ii) Because Section 59-2-405.1 subjects Class 22 property to an age-based uniform fee, a percent good schedule is not necessary.
 - (w) Class 22a - Small Motor Vehicles.
 - (i) Because Section 59-2-405.2 subjects small motor vehicles to an age-based uniform fee, a percent good schedule is not necessary.
 - (x) Class 23 - Aircraft Required to be Registered With the State.
 - (i) Because Section 59-2-404 subjects aircraft required to be registered with the state to a statewide uniform fee, a percent good schedule is not necessary.
 - (y) Class 24 - Leasehold Improvements on Exempt Real Property.
 - (i) The Class 24 schedule is to be used only for those leasehold improvements where the underlying real property is owned by an entity exempt from property tax under Section 59-2-1101. See Tax Commission rule R884-24P-32. Leasehold improvements include:
 - (A) walls and partitions;
 - (B) plumbing and roughed-in fixtures;
 - (C) floor coverings other than carpet;
 - (D) store fronts;
 - (E) decoration;
 - (F) wiring;
 - (G) suspended or acoustical ceilings;
 - (H) heating and cooling systems; and
 - (I) iron or millwork trim.
 - (ii) Taxable value is calculated by applying the percent good factor against the cost of acquisition, including installation.
 - (iii) The Class 3 schedule is used to value short life leasehold improvements.

(z) Class 25 - Aircraft Parts Manufacturing Tools and Dies. Property in this class is generally subject to rapid physical, functional, and economic obsolescence due to rapid technological and economic shifts in the airline parts manufacturing industry. Heavy wear and tear is also a factor in valuing this class of property.

- (i) Examples of property in this class include:
 - (A) aircraft parts manufacturing jigs and dies;
 - (B) aircraft parts manufacturing molds;
 - (C) aircraft parts manufacturing patterns;
 - (D) aircraft parts manufacturing taps and gauges; and
 - (E) aircraft parts manufacturing test equipment.

(ii) Taxable value is calculated by applying the percent good factor against the acquisition cost of the property.

(cc) Class 28 - Noncapitalized Personal Property. Property shall be classified as noncapitalized personal property if the following conditions are met:

- (i) the property is an item of taxable tangible personal property with an acquisition cost of \$1,000 or less; and
- (ii) the property is eligible as a deductible expense under Section 162 or Section 179, Internal Revenue Code, in the year of acquisition, regardless of whether the deduction is actually claimed.

The provisions of this rule shall be implemented and become binding on taxpayers beginning January 1, 2016.

R884-24P-35. Annual Statement for Certain Exempt Uses of Property Pursuant to Utah Code Ann. Section 59-2-1102.

(1) The purpose of this rule is to provide guidance to property owners required to file an annual statement under Section 59-2-1102 in order to claim a property tax exemption under Subsection 59-2-1101(3)(a)(iv) or (v).

(2) The annual statement filed pursuant to Section 59-2-1102 shall contain the following information for the specific property for which an exemption is sought:

- (a) the owner of record of the property;
- (b) the property parcel, account, or serial number;
- (c) the location of the property;
- (d) the tax year in which the exemption was originally granted;
- (e) a description of any change in the use of the real or personal property since January 1 of the prior year;
- (f) the name and address of any person or organization conducting a business for profit on the property;
- (g) the name and address of any organization that uses the real or personal property and pays a fee for that use that is greater than the cost of maintenance and utilities associated with the property;
- (h) a description of any personal property leased by the owner of record for which an exemption is claimed;
- (i) the name and address of the lessor of property described in Subsection (2)(h);
- (j) the signature of the owner of record or the owner's authorized representative; and
- (k) any other information the county may require.

- (3) The annual statement shall be filed:
 - (a) with the county legislative body in the county in which the property is located;
 - (b) on or before March 1; and
 - (c) using:
 - (i) Tax Commission form PT-21, Annual Statement for Continued Property Tax Exemption; or
 - (ii) a form that contains the information required under Subsection (2).

R884-24P-36. Contents of Real Property Tax Notice Pursuant to Utah Code Ann. Section 59-2-1317.

A. In addition to the information required by Section 59-2-1317, the tax notice for real property shall specify the following:

1. the property identification number;
2. the appraised value of the property and, if applicable, any adjustment for residential exemptions expressed in terms of taxable value;
3. if applicable, tax relief for taxpayers eligible for blind, veteran, or poor abatement or the circuit breaker, which shall be shown as credits to total taxes levied; and
4. itemized tax rate information for each taxing entity and total tax rate.

R884-24P-37. Separate Values of Land and Improvements Pursuant to Utah Code Ann. Sections 59-2-301 and 59-2-305.

A. The county assessor shall maintain an appraisal record of all real property subject to assessment by the county. The record shall include the following information:

1. owner of the property;
2. property identification number;
3. description and location of the property; and
4. full market value of the property.

B. Real property appraisal records shall show separately the value of the land and the value of any improvements.

R884-24P-38. Nonoperating Railroad Properties Pursuant to Utah Code Ann. Section 59-2-201.

(1)(a) "Railroad right of way" (RR-ROW) means a strip of land upon which a railroad company constructs the road bed.

(b) RR-ROW within incorporated towns and cities shall consist of 50 feet on each side of the main line main track, branch line main track or main spur track. Variations to the 50-foot standard shall be approved on an individual basis.

(c) RR-ROW outside incorporated towns and cities shall consist of the actual right-of-way owned if not in excess of 100 feet on each side of the center line of the main line main track, branch line main track, or main spur track. In cases where unusual conditions exist, such as mountain cuts, fills, etc., and more than 100 feet on either side of the main track is required for ROW and where small parcels of land are otherwise required for ROW purposes, the necessary additional area shall be reported as RR-ROW.

(2) Assessment of nonoperating railroad properties. Railroad property formerly assessed by the unitary method that has been determined to be nonoperating, and that is not necessary to the conduct of the business, shall be assessed separately by the local county assessor.

(3) Assessment procedures.

(a) Properties charged to nonoperating accounts are reviewed by the Property Tax Division, and if taxable, are assessed and placed on the local county assessment rolls separately from the operating properties.

(b) RR-ROW is considered operating and necessary to the conduct and contributing to the income of the business. Any revenue derived from leasing of property within the RR-ROW is considered railroad operating revenues.

(c) Real property outside of the RR-ROW that is necessary to the conduct of the railroad operation is considered part of the unitary value. Some examples are:

- (i) company homes occupied by superintendents and other employees on 24-hour call;
- (ii) storage facilities for railroad operations;
- (iii) communication facilities; and
- (iv) spur tracks outside of RR-ROW.

(d) Abandoned RR-ROW is considered nonoperating and shall be reported as such by the railroad companies.

(e) Real property outside of the RR-ROW that is not necessary to the conduct of the railroad operations is classified as nonoperating and therefore assessed by the local county assessor. Some examples are:

- (i) land leased to service station operations;
 - (ii) grocery stores;
 - (iii) apartments;
 - (iv) residences; and
 - (v) agricultural uses.
- (f) RR-ROW obtained by government grant or act of Congress is deemed operating property.

(4) Notice of Determination. It is the responsibility of the Property Tax Division to provide a notice of determination to the owner of the railroad property and the assessor of the county where the railroad property is located immediately after such determination of operating or nonoperating status has been made. If there is no appeal to the notice of determination, the Property Tax Division shall notify the assessor of the county where the property is located so that the property may be placed on the roll for local assessment.

(5) Appeals. Any interested party who wishes to contest the determination of operating or nonoperating property may do so by filing a request for agency action within ten days of the notice of determination of operating or nonoperating properties. Request for agency action may be made pursuant to Title 63G, Chapter 4.

R884-24P-40. Exemption of Parsonages, Rectories, Monasteries, Homes and Residences Pursuant to Utah Code Annotated 59-2-1101(d) and Article XIII, Section 2 of the Utah Constitution.

A. Parsonages, rectories, monasteries, homes and residences if used exclusively for religious purposes, are exempt from property taxes if they meet all of the following requirements:

1. The land and building are owned by a religious organization which has qualified with the Internal Revenue Service as a Section 501(c)(3) organization and which organization continues to meet the requirements of that section.

2. The building is occupied only by persons whose full time efforts are devoted to the religious organization and the immediate families of such persons.

3. The religious organization, and not the individuals who occupy the premises, pay all payments, utilities, insurance, repairs, and all other costs and expenses related to the care and maintenance of the premises and facilities.

B. The exemption for one person and the family of such person is limited to the real estate that is reasonable for the residence of the family and which remains actively devoted exclusively to the religious purposes. The exemption for more than one person, such as a monastery, is limited to that amount of real estate actually devoted exclusively to religious purposes.

C. Vacant land which is not actively used by the religious organization, is not deemed to be devoted exclusively to religious purposes, and is therefore not exempt from property taxes.

1. Vacant land which is held for future development or utilization by the religious organization is not deemed to be devoted exclusively to religious purposes and therefore not tax exempt.

2. Vacant land is tax exempt after construction commences or a building permit is issued for construction of a structure or other improvements used exclusively for religious purposes.

R884-24P-42. Farmland Assessment Audits and Personal Property Audits Pursuant to Utah Code Ann. Subsection 59-2-508, and Section 59-2-705.

(1) Upon completion of commission audits of personal property accounts or land subject to the Farmland Assessment Act, the following procedures shall be implemented:

(a) If an audit reveals an incorrect assignment of property, or an increase or decrease in value, the county assessor shall correct the assessment on the assessment roll and the tax roll.

(b) A revised Notice of Property Valuation and Tax Changes or tax notice or both shall be mailed to the taxpayer for the current year and any previous years affected.

(c) The appropriate tax rate for each year shall be applied when computing taxes due for previous years.

(2) Assessors shall not alter results of an audit without first submitting the changes to the commission for review and approval.

(3) The commission shall review assessor compliance with this rule. Noncompliance may result in an order for corrective action.

R884-24P-44. Farm Machinery and Equipment Exemption Pursuant to Utah Code Ann. Sections 59-2-102 and 59-2-1101.

A. The use of the machinery and equipment, whether by the claimant or a lessee, shall determine the exemption.

1. For purposes of this rule, the term owner includes a purchaser under an installment purchase contract or capitalized lease where ownership passes to the purchaser at the end of the contract without the exercise of an option on behalf of the purchaser or seller.

B. Farm machinery and equipment is used primarily for agricultural purposes if it is used primarily for the production or harvesting of agricultural products.

C. The following machinery and equipment is used primarily for the production or harvesting of agricultural products:

1. Machinery and equipment used on the farm for storage, cooling, or freezing of fruits or vegetables;

2. Except as provided in C.3., machinery and equipment used in fruit or vegetable growing operations if the machinery and equipment does not physically alter the fruit or vegetables; and

3. Machinery and equipment that physically alters the form of fruits or vegetables if the operations performed by the machinery or equipment are reasonable and necessary in the preparation of the fruit or vegetables for wholesale marketing.

D. Machinery and equipment used for processing of agricultural products are not exempt.

R884-24P-49. Calculating the Utah Apportioned Value of a Rail Car Fleet Pursuant to Utah Code Ann. Section 59-2-201.

A. Definitions.

1. "Average market value per rail car" means the fleet rail car market value divided by the number of rail cars in the fleet.

2. "Fleet rail car market value" means the sum of:

a)(1) the yearly acquisition costs of the fleet's rail cars;

(2) multiplied by the appropriate percent good factors contained in Class 10 of R884-24P- 33, Personal Property Valuation Guides and Schedules; and

b) the sum of betterments by year.

(1) Except as provided in A.2.b)(2), the sum of betterments by year shall be depreciated on a 14-year straight line method.

(2) Notwithstanding the provisions of A.2.b)(1), betterments shall have a residual value of two percent.

3. "In-service rail cars" means the number of rail cars in the fleet, adjusted for out-of- service rail cars.

4. a) "Out-of-service rail cars" means rail cars:

(1) out-of-service for a period of more than ten consecutive hours; or

(2) in storage.

b) Rail cars cease to be out-of-service once repaired or removed from storage.

c) Out-of-service rail cars do not include rail cars idled for less than ten consecutive hours due to light repairs or routine maintenance.

5. "System car miles" means both loaded and empty miles

accumulated in the U.S., Canada, and Mexico during the prior calendar year by all rail cars in the fleet.

6. "Utah car miles" mean both loaded and empty miles accumulated within Utah during the prior calendar year by all rail cars in the fleet.

7. "Utah percent of system factor" means the Utah car miles divided by the system car miles.

B. The provisions of this rule apply only to private rail car companies.

C. To receive an adjustment for out-of-service rail cars, the rail car company must report the number of out-of-service days to the commission for each of the company's rail car fleets.

D. The out-of-service adjustment is calculated as follows.

1. Divide the out-of-service days by 365 to obtain the out-of-service rail car equivalent.

2. Subtract the out-of-service rail car equivalent calculated in D.1. from the number of rail cars in the fleet.

E. The taxable value for each rail car fleet apportioned to Utah, for which the Utah percent of system factor is more than 50 percent, shall be determined by multiplying the Utah percent of system factor by the fleet rail car market value.

F. The taxable value for each rail car company apportioned to Utah, for which the Utah percent of system factor is less than or equal to 50 percent, shall be determined in the following manner.

1. Calculate the number of fleet rail cars allocated to Utah under the Utah percent of system factor. The steps for this calculation are as follows.

a) Multiply the Utah percent of system factor by the in-service rail cars in the fleet.

b) Multiply the product obtained in F.1.a) by 50 percent.

2. Calculate the number of fleet rail cars allocated to Utah under the time speed factor. The steps for this calculation are as follows.

a) Divide the fleet's Utah car miles by the average rail car miles traveled in Utah per year. The Commission has determined that the average rail car miles traveled in Utah per year shall equal 200,000 miles.

b) Multiply the quotient obtained in F.2.a) by the percent of in-service rail cars in the fleet.

c) Multiply the product obtained in F.2.b) by 50 percent.

3. Add the number of fleet rail cars allocated to Utah under the Utah percent of system factor, calculated in F.1.b), and the number of fleet rail cars allocated to Utah under the time speed factor, calculated in F.2.c), and multiply that sum by the average market value per rail car.

R884-24P-50. Apportioning the Utah Proportion of Commercial Aircraft Valuations Pursuant to Utah Code Ann. Section 59-2-201.

A. Definitions.

1. "Commercial air carrier" means any air charter service, air contract service or airline as defined by Section 59-2-102.

2. "Ground time" means the time period beginning at the time an aircraft lands and ending at the time an aircraft takes off.

B. The commission shall apportion to a tax area the assessment of the mobile flight equipment owned by a commercial air carrier in the proportion that the ground time in the tax area bears to the total ground time in the state.

C. The provisions of this rule shall be implemented and become binding on taxpayers beginning with the 1999 calendar year.

R884-24P-52. Criteria for Determining Primary Residence Pursuant to Utah Code Ann. Sections 59-2-102, 59-2-103, and 59-2-103.5.

(1) "Household" is as defined in Section 59-2-102.

(2) "Primary residence" means the location where domicile has been established.

(3) Except as provided in Subsections (4) and (6)(c) and (f), the residential exemption provided under Section 59-2-103 is limited to one primary residence per household.

(4) An owner of multiple properties may receive the residential exemption on all properties for which the property is the primary residence of the tenant.

(5) Factors or objective evidence determinative of domicile include:

(a) whether or not the individual voted in the place he claims to be domiciled;

(b) the length of any continuous residency in the location claimed as domicile;

(c) the nature and quality of the living accommodations that an individual has in the location claimed as domicile as opposed to any other location;

(d) the presence of family members in a given location;

(e) the place of residency of the individual's spouse or the state of any divorce of the individual and his spouse;

(f) the physical location of the individual's place of business or sources of income;

(g) the use of local bank facilities or foreign bank institutions;

(h) the location of registration of vehicles, boats, and RVs;

(i) membership in clubs, churches, and other social organizations;

(j) the addresses used by the individual on such things as:

(i) telephone listings;

(ii) mail;

(iii) state and federal tax returns;

(iv) listings in official government publications or other correspondence;

(v) driver's license;

(vi) voter registration; and

(vii) tax rolls;

(k) location of public schools attended by the individual or the individual's dependents;

(l) the nature and payment of taxes in other states;

(m) declarations of the individual:

(i) communicated to third parties;

(ii) contained in deeds;

(iii) contained in insurance policies;

(iv) contained in wills;

(v) contained in letters;

(vi) contained in registers;

(vii) contained in mortgages; and

(viii) contained in leases.

(n) the exercise of civil or political rights in a given location;

(o) any failure to obtain permits and licenses normally required of a resident;

(p) the purchase of a burial plot in a particular location;

(q) the acquisition of a new residence in a different location.

(6) Administration of the Residential Exemption.

(a) Except as provided in Subsections (6)(b), (d), and (e), the first one acre of land per residential unit shall receive the residential exemption.

(b) If a parcel has high density multiple residential units, such as an apartment complex or a mobile home park, the amount of land, up to the first one acre per residential unit, eligible to receive the residential exemption shall be determined by the use of the land. Land actively used for residential purposes qualifies for the exemption.

(c) If the county assessor determines that a property under construction will qualify as a primary residence upon completion, the property shall qualify for the residential exemption while under construction.

(d) A property assessed under the Farmland Assessment Act shall receive the residential exemption only for the

homesite.

(e) A property with multiple uses, such as residential and commercial, shall receive the residential exemption only for the percentage of the property that is used as a primary residence.

(f) If the county assessor determines that an unoccupied property will qualify as a primary residence when it is occupied, the property shall qualify for the residential exemption while unoccupied.

(g)(i) An application for the residential exemption required by an ordinance enacted under Section 59-2-103.5 shall contain the following information for the specific property for which the exemption is requested:

(A) the owner of record of the property;

(B) the property parcel number;

(C) the location of the property;

(D) the basis of the owner's knowledge of the use of the property;

(E) a description of the use of the property;

(F) evidence of the domicile of the inhabitants of the property; and

(G) the signature of all owners of the property certifying that the property is residential property.

(ii) The application under Subsection (6)(g)(i) shall be:

(A) on a form provided by the county; or

(B) in a writing that contains all of the information listed in Subsection (6)(g)(i).

R884-24P-53. 2016 Valuation Guides for Valuation of Land Subject to the Farmland Assessment Act Pursuant to Utah Code Ann. Section 59-2-515.

(1) Each year the Property Tax Division shall update and publish schedules to determine the taxable value for land subject to the Farmland Assessment Act on a per acre basis.

(a) The schedules shall be based on the productivity of the various types of agricultural land as determined through crop budgets and net rents.

(b) Proposed schedules shall be transmitted by the Property Tax Division to county assessors for comment before adoption.

(c) County assessors may not deviate from the schedules.

(d) Not all types of agricultural land exist in every county. If no taxable value is shown for a particular county in one of the tables, that classification of agricultural land does not exist in that county.

(2) All property qualifying for agricultural use assessment pursuant to Section 59-2-503 shall be assessed on a per acre basis as follows:

(a) Irrigated farmland shall be assessed under the following classifications.

(i) Irrigated I. The following counties shall assess Irrigated I property based upon the per acre values listed below:

TABLE 1
Irrigated I

1)	Box Elder	789
2)	Cache	681
3)	Carbon	511
4)	Davis	839
5)	Emery	487
6)	Iron	777
7)	Kane	410

(f) Land classified as nonproductive shall be assessed as follows on a per acre basis:

TABLE 13
Nonproductive Land

Nonproductive Land	
1) All Counties	5

R884-24P-55. Counties to Establish Ordinance for Tax Sale Procedures Pursuant to Utah Code Ann. Section 59-2-1351.1.

A. "Collusive bidding" means any agreement or understanding reached by two or more parties that in any way alters the bids the parties would otherwise offer absent the agreement or understanding.

B. Each county shall establish a written ordinance for real property tax sale procedures.

C. The written ordinance required under B. shall be displayed in a public place and shall be available to all interested parties.

D. The tax sale ordinance shall address, as a minimum, the following issues:

1. bidder registration procedures;
2. redemption rights and procedures;
3. prohibition of collusive bidding;
4. conflict of interest prohibitions and disclosure requirements;
5. criteria for accepting or rejecting bids;
6. sale ratification procedures;
7. criteria for granting bidder preference;
8. procedures for recording tax deeds;
9. payments methods and procedures;
10. procedures for contesting bids and sales;
11. criteria for striking properties to the county;
12. procedures for disclosing properties withdrawn from the sale for reasons other than redemption; and
13. disclaimers by the county with respect to sale procedures and actions.

R884-24P-56. Assessment, Collection, and Apportionment of Property Tax on Commercial Transportation Property Pursuant to Utah Code Ann. Sections 41-1a-301 and 59-2-801.

A. For purposes of Section 59-2-801, the previous year's statewide rate shall be calculated as follows:

1. Each county's overall tax rate is multiplied by the county's percent of total lane miles of principal routes.
2. The values obtained in A.1. for each county are summed to arrive at the statewide rate.

B. The assessment of vehicles apportioned under Section

41-1a-301 shall be apportioned at the same percentage ratio that has been filed with the Motor Vehicle Division of the State Tax Commission for determining the proration of registration fees.

C. For purposes of Section 59-2-801(2), principal route means lane miles of interstate highways and clover leaves, U.S. highways, and state highways extending through each county as determined by the Commission from current state Geographic Information System databases.

R884-24P-57. Judgment Levies Pursuant to Utah Code Ann. Sections 59-2-918.5, 59-2-924, 59-2-1328, and 59-2-1330.

(1) Definitions.

(a) "Issued" means the date on which the judgment is signed.

(b) "2.5% of the total ad valorem property taxes collected by the taxing entity in the previous fiscal year" includes any revenues collected by a judgment levy imposed in the prior year.

(2) A taxing entity's share of a judgment or order shall include the taxing entity's share of any interest that must be paid with the judgment or order.

(3) The judgment levy public hearing required by Section 59-2-918.5 shall be held as follows:

(a) For taxing entities operating under a July 1 through June 30 fiscal year, the public hearing shall be held at least 10 days after the Notice of Property Valuation and Tax Changes is mailed.

(b) For taxing entities operating under a January 1 through December 31 fiscal year:

(i) for judgments issued from the prior June 1 through December 15, the public hearing shall be held at the same time as the hearing at which the annual budget is adopted;

(ii) for judgments issued from the prior December 16 through May 31, the public hearing shall be held at least 10 days after the Notice of Property Valuation and Tax Changes is mailed.

(c) If the taxing entity is required to hold a hearing under Section 59-2-919, the judgment levy hearing required by Subsections (3)(a) and (3)(b)(ii) shall be held at the same time as the hearing required under Section 59-2-919.

(4) If the Section 59-2-918.5 advertisement is combined with the Section 59-2-919 advertisement, the combined advertisement shall aggregate the general tax increase and judgment levy information.

(5) In the case of taxing entities operating under a January 1 through December 31 fiscal year, the advertisement for judgments issued from the previous December 16 through May 31 shall include any judgments issued from the previous June 1 through December 15 that the taxing entity advertised and budgeted for at its December budget hearing.

(6) All taxing entities imposing a judgment levy shall file with the commission a signed statement certifying that all judgments for which the judgment levy is imposed have met the statutory requirements for imposition of a judgment levy.

(a) The signed statement shall contain the following information for each judgment included in the judgment levy:

- (i) the name of the taxpayer awarded the judgment;
- (ii) the appeal number of the judgment; and
- (iii) the taxing entity's pro rata share of the judgment.

(b) Along with the signed statement, the taxing entity must provide the commission the following:

- (i) a copy of all judgment levy newspaper advertisements required;
- (ii) the dates all required judgment levy advertisements were published in the newspaper;
- (iii) a copy of the final resolution imposing the judgment levy;
- (iv) a copy of the Notice of Property Valuation and Tax Changes, if required; and
- (v) any other information required by the commission.

(7) The provisions of House Bill 268, Truth in Taxation - Judgment Levy (1999 General Session), do not apply to judgments issued prior to January 1, 1999.

R884-24P-58. One-Time Decrease in Certified Rate Based on Estimated County Option Sales Tax Pursuant to Utah Code Ann. Section 59-2-924.

A. The estimated sales tax revenue to be distributed to a county under Section 59-12-1102 shall be determined based on the following formula:

1. sharedown of the commission's sales tax econometric model based on historic patterns, weighted 40 percent;
2. time series models, weighted 40 percent; and
3. growth rate of actual taxable sales occurring from January 1 through March 31 of the year a tax is initially imposed under Title 59, Chapter 12, Part 11, County Option Sales and Use Tax, weighted 20 percent.

R884-24P-59. One-Time Decrease in Certified Rate Based on Estimated Additional Resort Communities Sales Tax Pursuant to Utah Code Ann. Section 59-2-924.

A. The estimated additional resort communities sales tax revenue to be distributed to a municipality under Section 59-12-402 shall be determined based on the following formula:

1. time series model, econometric model, or simple average, based upon the availability of and variation in the data, weighted 75 percent; and
2. growth rate of actual taxable sales occurring from January 1 through March 31 of the year a tax is initially imposed under Section 59-12-402, weighted 25 percent.

R884-24P-60. Age-Based Uniform Fee on Tangible Personal Property Required to be Registered with the State Pursuant to Utah Code Ann. Section 59-2-405.1.

A. For purposes of Section 59-2-405.1, "motor vehicle" is as defined in Section 41-1a-102, except that motor vehicle does not include motorcycles as defined in Section 41-1a-102.

B. The uniform fee established in Section 59-2-405.1 is levied against motor vehicles and state-assessed commercial vehicles classified under Class 22 - Passenger Cars, Light Trucks/Utility Vehicles, and Vans, in Tax Commission rule R884-24P-33.

C. Personal property subject to the uniform fee imposed in Section 59-2-405 is not subject to the Section 59-2-405.1 uniform fee.

D. The following classes of personal property are not subject to the Section 59-2-405.1 uniform fee, but remain subject to the ad valorem property tax:

1. vintage vehicles;
2. state-assessed commercial vehicles not classified under Class 22 - Passenger Cars, Light Trucks/Utility Vehicles, and Vans;
3. any personal property that is neither required to be registered nor exempt from the ad valorem property tax;
4. mobile and manufactured homes;
5. machinery or equipment that can function only when attached to or used in conjunction with motor vehicles or state-assessed commercial vehicles.

E. The age of a motor vehicle or state-assessed commercial vehicle, for purposes of Section 59-2-405.1, shall be determined by subtracting the vehicle model year from the current calendar year.

F. The only Section 59-2-405.1 uniform fee due upon registration or renewal of registration is the uniform fee calculated based on the age of the vehicle under E. on the first day of the registration period for which the registrant:

1. in the case of an original registration, registers the vehicle; or
2. in the case of a renewal of registration, renews the

registration of the vehicle in accordance with Section 41-1a-216.

G. Centrally assessed taxpayers shall use the following formula to determine the value of locally assessed motor vehicles that may be deducted from the allocated unit valuation:

1. Divide the system value by the book value to determine the market to book ratio.
2. Multiply the market to book ratio by the book value of motor vehicles registered in Utah and subject to Section 59-2-405.1 to determine the value of motor vehicles that may be subtracted from the allocated unit value.

H. The motor vehicle of a nonresident member of the armed forces stationed in Utah may be registered in Utah without payment of the Section 59-2-405.1 uniform fee.

I. A motor vehicle belonging to a Utah resident member of the armed forces stationed in another state is not subject to the Section 59-2-405.1 uniform fee at the time of registration or renewal of registration as long as the motor vehicle is kept in the other state.

J. The situs of a motor vehicle or state-assessed commercial vehicle subject to the Section 59-2-405.1 uniform fee is determined in accordance with Section 59-2-104. Situs of purchased motor vehicles or state-assessed commercial vehicles shall be the tax area of the purchaser's domicile, unless the motor vehicle or state-assessed commercial vehicle will be kept in a tax area other than the tax area of the purchaser's domicile for more than six months of the year.

1. If an assessor discovers a motor vehicle or state-assessed commercial vehicle that is kept in the assessor's county but registered in another, the assessor may submit an affidavit along with evidence that the vehicle is kept in that county to the assessor of the county in which the vehicle is registered. Upon agreement, the assessor of the county of registration shall forward the fee collected to the county of situs within 30 working days.

2. If the owner of a motor vehicle or state-assessed commercial vehicle registered in Utah is domiciled outside of Utah, the taxable situs of the vehicle is presumed to be the county in which the uniform fee was paid, unless an assessor's affidavit establishes otherwise.

3. The Tax Commission shall, on an annual basis, provide each county assessor information indicating all motor vehicles and state-assessed commercial vehicles subject to state registration and their corresponding taxable situs.

4. Section 59-2-405.1 uniform fees received by a county that require distribution to a purchaser's domicile outside of that county shall be deposited into an account established by the Commission, pursuant to procedures prescribed by the Commission.

5. Section 59-2-405.1 uniform fees received by the Commission pursuant to J.4. shall be distributed to the appropriate county at least monthly.

K. The blind exemption provided in Section 59-2-1106 is applicable to the Section 59-2-405.1 uniform fee.

L. The veteran's exemption provided in Section 59-2-1104 is applicable to the Section 59-2-405.1 uniform fee.

M. The value of motor vehicles and state-assessed commercial vehicles to be considered part of the tax base for purposes of determining debt limitations pursuant to Article XIII, Section 14 of the Utah Constitution, shall be determined by dividing the Section 59-2-405.1 uniform fee collected by .015.

N. The provisions of this rule shall be implemented and become binding on taxpayers beginning January 1, 1999.

R884-24P-61. 1.5 Percent Uniform Fee on Tangible Personal Property Required to be Registered with the State Pursuant to Utah Code Ann. Section 59-2-405.

A. Definitions.

1. For purposes of Section 59-2-405, "motor vehicle" is as defined in Section 41-1a-102, except that motor vehicle does not include motorcycles as defined in Section 41-1a-102.

2. "Recreational vehicle" means a vehicular unit other than a mobile home, primarily designed as a temporary dwelling for travel, recreational, or vacation use, which is either self-propelled or pulled by another vehicle.

a) Recreational vehicle includes a travel trailer, a camping trailer, a motor home, and a fifth wheel trailer.

b) Recreational vehicle does not include a van unless specifically designed or modified for use as a temporary dwelling.

B. The uniform fee established in Section 59-2-405 is levied against the following types of personal property, unless specifically excluded by Section 59-2-405:

1. motor vehicles that are not classified under Class 22 - Passenger Cars, Light Trucks/Utility Vehicles, and Vans, in Tax Commission rule R884-24P-33;

2. watercraft required to be registered with the state;

3. recreational vehicles required to be registered with the state; and

4. all other tangible personal property required to be registered with the state before it is used on a public highway, on a public waterway, on public land, or in the air.

C. The following classes of personal property are not subject to the Section 59-2-405 uniform fee, but remain subject to the ad valorem property tax:

1. vintage vehicles;

2. state-assessed commercial vehicles not classified under Class 22 - Passenger Cars, Light Trucks/Utility Vehicles, and Vans;

3. any personal property that is neither required to be registered nor exempt from the ad valorem property tax;

4. machinery or equipment that can function only when attached to or used in conjunction with motor vehicles.

D. The fair market value of tangible personal property subject to the Section 59-2-405 uniform fee is based on depreciated cost new as established in Tax Commission rule R884-24P-33, "Personal Property Valuation Guides and Schedules," published annually by the Tax Commission.

E. Centrally assessed taxpayers shall use the following formula to determine the value of locally assessed personal property that may be deducted from the allocated unit valuation:

1. Divide the system value by the book value to determine the market to book ratio.

2. Multiply the market to book ratio by the book value of personal property registered in Utah and subject to Section 59-2-405 to determine the value of personal property that may be subtracted from the allocated unit value.

F. If a property's valuation is appealed to the county board of equalization under Section 59-2-1005, the property shall become subject to a total revaluation. All adjustments are made on the basis of their effect on the property's average retail value as of the January 1 lien date and according to Tax Commission rule R884-24P-33.

G. The county assessor may change the fair market value of any individual item of personal property in his jurisdiction for any of the following reasons:

1. The manufacturer's suggested retail price ("MSRP") or the cost new was not included on the state printout, computer tape, or registration card;

2. The MSRP or cost new listed on the state records was inaccurate; or

3. In the assessor's judgment, an MSRP or cost new adjustment made as a result of a property owner's informal request will continue year to year on a percentage basis.

H. If the personal property is of a type subject to annual registration, the Section 59-2-405 uniform fee is due at the time the registration is due. If the personal property is not registered

during the year, the owner remains liable for payment of the Section 59-2-405 uniform fee to the county assessor.

1. No additional uniform fee may be levied upon personal property transferred during a calendar year if the Section 59-2-405 uniform fee has been paid for that calendar year.

2. If the personal property is of a type registered for periods in excess of one year, the Section 59-2-405 uniform fee shall be due annually.

3. The personal property of a nonresident member of the armed forces stationed in Utah may be registered in Utah without payment of the Section 59-2-405 uniform fee.

4. Personal property belonging to a Utah resident member of the armed forces stationed in another state is not subject to the Section 59-2-405 uniform fee as long as the personal property is kept in another state.

5. Noncommercial trailers weighing 750 pounds or less are not subject to the Section 59-2-405 uniform fee or ad valorem property tax but may be registered at the request of the owner.

I. If the personal property is of a type subject to annual registration, registration of that personal property may not be completed unless the Section 59-2-405 uniform fee has been paid, even if the taxpayer is appealing the uniform fee valuation. Delinquent fees may be assessed in accordance with Sections 59-2-217 and 59-2-309 as a condition precedent to registration.

J. The situs of personal property subject to the Section 59-2-405 uniform fee is determined in accordance with Section 59-2-104. Situs of purchased personal property shall be the tax area of the purchaser's domicile, unless the personal property will be kept in a tax area other than the tax area of the purchaser's domicile for more than six months of the year.

1. If an assessor discovers personal property that is kept in the assessor's county but registered in another, the assessor may submit an affidavit along with evidence that the property is kept in that county to the assessor of the county in which the personal property is registered. Upon agreement, the assessor of the county of registration shall forward the fee collected to the county of situs within 30 working days.

2. If the owner of personal property registered in Utah is domiciled outside of Utah, the taxable situs of the property is presumed to be the county in which the uniform fee was paid, unless an assessor's affidavit establishes otherwise.

3. The Tax Commission shall, on an annual basis, provide each county assessor information indicating all personal property subject to state registration and its corresponding taxable situs.

4. Section 59-2-405 uniform fees received by a county that require distribution to a purchaser's domicile outside of that county shall be deposited into an account established by the Commission, pursuant to procedures prescribed by the Commission.

5. Section 59-2-405 uniform fees received by the Commission pursuant to J.4. shall be distributed to the appropriate county at least monthly.

K. The blind exemption provided in Section 59-2-1106 is applicable to the Section 59-2-405 uniform fee.

L. The veteran's exemption provided in Section 59-2-1104 is applicable to the Section 59-2-405 uniform fee.

M. The provisions of this rule shall be implemented and become binding on taxpayers beginning January 1, 1999.

R884-24P-62. Valuation of State Assessed Unitary Properties Pursuant to Utah Code Ann. Section 59-2-201.

(1) Purpose. The purpose of this rule is to:

(a) specify consistent mass appraisal methodologies to be used by the Property Tax Division (Division) in the valuation of tangible property assessable by the Commission; and

(b) identify preferred valuation methodologies to be considered by any party making an appraisal of an individual unitary property.

(2) Definitions:

(a) "Cost regulated utility" means any public utility assessable by the Commission whose allowed revenues are determined by a rate of return applied to a rate base set by a state or federal regulatory commission.

(b) "Fair market value" means the amount at which property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of the relevant facts. Fair market value reflects the value of property at its highest and best use, subject to regulatory constraints.

(c) "Rate base" means the aggregate account balances reported as such by the cost regulated utility to the applicable state or federal regulatory commission.

(d) "Unitary property" means operating property that is assessed by the Commission pursuant to Section 59-2-201(1)(a) through (c).

(i) Unitary properties include:

(A) all property that operates as a unit across county lines, if the values must be apportioned among more than one county or state; and

(B) all property of public utilities as defined in Section 59-2-102.

(ii) These properties, some of which may be cost regulated utilities, are defined under one of the following categories.

(A) "Telecommunication properties" include the operating property of local exchange carriers, local access providers, long distance carriers, cellular telephone or personal communication service (PCS) providers and pagers, and other similar properties.

(B) "Energy properties" include the operating property of natural gas pipelines, natural gas distribution companies, liquid petroleum products pipelines, and electric corporations, including electric generation, transmission, and distribution companies, and other similar entities.

(C) "Transportation properties" include the operating property of all airlines, air charter services, air contract services, including major and small passenger carriers and major and small air freighters, long haul and short line railroads, and other similar properties.

(3) All tangible operating property owned, leased, or used by unitary companies is subject to assessment and taxation according to its fair market value as of January 1, and as provided in Utah Constitution Article XIII, Section 2. Intangible property as defined under Section 59-2-102 is not subject to assessment and taxation.

(4) General Valuation Principles. Unitary properties shall be assessed at fair market value based on generally accepted appraisal theory as provided under this rule.

(a) The assemblage or enhanced value attributable to the tangible property should be included in the assessed value. See *Beaver County v. WilTel, Inc.*, 995 P.2d 602 (Utah 2000). The value attributable to intangible property must, when possible, be identified and removed from value when using any valuation method and before that value is used in the reconciliation process.

(b) The preferred methods to determine fair market value are the cost approach and a yield capitalization income indicator as set forth in Subsection (5).

(i) Other generally accepted appraisal methods may also be used when it can be demonstrated that such methods are necessary to more accurately estimate fair market value.

(ii) Direct capitalization and the stock and debt method typically capture the value of intangible property at higher levels than other methods. To the extent intangible property cannot be identified and removed, relatively less weight shall be given to such methods in the reconciliation process, as set forth in Subsection (5)(d).

(iii) Preferred valuation methods as set forth in this rule are, unless otherwise stated, rebuttable presumptions,

established for purposes of consistency in mass appraisal. Any party challenging a preferred valuation method must demonstrate, by a preponderance of evidence, that the proposed alternative establishes a more accurate estimate of fair market value.

(c) Non-operating Property. Property that is not necessary to the operation of unitary properties and is assessed by a local county assessor, and property separately assessed by the Division, such as registered motor vehicles, shall be removed from the correlated unit value or from the state allocated value.

(5) Appraisal Methodologies.

(a) Cost Approach. Cost is relevant to value under the principle of substitution, which states that no prudent investor would pay more for a property than the cost to construct a substitute property of equal desirability and utility without undue delay. A cost indicator may be developed under one or more of the following methods: replacement cost new less depreciation (RCNLD), reproduction cost less depreciation (reproduction cost), and historic cost less depreciation (HCLD).

(i) "Depreciation" is the loss in value from any cause. Different professions recognize two distinct definitions or types of depreciation.

(A) Accounting. Depreciation, often called "book" or "accumulated" depreciation, is calculated according to generally accepted accounting principles or regulatory guidelines. It is the amount of capital investment written off on a firm's accounting records in order to allocate the original or historic cost of an asset over its life. Book depreciation is typically applied to historic cost to derive HCLD.

(B) Appraisal. Depreciation, sometimes referred to as "accrued" depreciation, is the difference between the market value of an improvement and its cost new. Depreciation is typically applied to replacement or reproduction cost, but should be applied to historic cost if market conditions so indicate. There are three types of depreciation:

(I) Physical deterioration results from regular use and normal aging, which includes wear and tear, decay, and the impact of the elements.

(II) Functional obsolescence is caused by internal property characteristics or flaws in the structure, design, or materials that diminish the utility of an improvement.

(III) External, or economic, obsolescence is an impairment of an improvement due to negative influences from outside the boundaries of the property, and is generally incurable. These influences usually cannot be controlled by the property owner or user.

(ii) Replacement cost is the estimated cost to construct, at current prices, a property with utility equivalent to that being appraised, using modern materials, current technology and current standards, design, and layout. The use of replacement cost instead of reproduction cost eliminates the need to estimate some forms of functional obsolescence.

(iii) Reproduction cost is the estimated cost to construct, at current prices, an exact duplicate or replica of the property being assessed, using the same materials, construction standards, design, layout and quality of workmanship, and embodying any functional obsolescence.

(iv) Historic cost is the original construction or acquisition cost as recorded on a firm's accounting records. Depending upon the industry, it may be appropriate to trend HCLD to current costs. Only trending indexes commonly recognized by the specific industry may be used to adjust HCLD.

(v) RCNLD may be impractical to implement; therefore the preferred cost indicator of value in a mass appraisal environment for unitary property is HCLD. A party may challenge the use of HCLD by proposing a different cost indicator that establishes a more accurate cost estimate of value.

(b) Income Capitalization Approach. Under the principle of anticipation, benefits from income in the future may be

capitalized into an estimate of present value.

(i) Yield Capitalization. The yield capitalization formula is $CF/(k-g)$, where "CF" is a single year's normalized cash flow, "k" is the nominal, risk adjusted discount or yield rate, and "g" is the expected growth rate of the cash flow.

(A) Cash flow is restricted to the operating property in existence on the lien date, together with any replacements intended to maintain, but not expand or modify, existing capacity or function. Cash flow is calculated as net operating income (NOI) plus non-cash charges (e.g., depreciation and deferred income taxes), less capital expenditures and additions to working capital necessary to achieve the expected growth "g". Information necessary for the Division to calculate the cash flow shall be summarized and submitted to the Division by March 1 on a form provided by the Division.

(I) NOI is defined as net income plus interest.

(II) Capital expenditures should include only those necessary to replace or maintain existing plant and should not include any expenditure intended primarily for expansion or productivity and capacity enhancements.

(III) Cash flow is to be projected for the year immediately following the lien date, and may be estimated by reviewing historic cash flows, forecasting future cash flows, or a combination of both.

(Aa) If cash flows for a subsidiary company are not available or are not allocated on the parent company's cash flow statements, a method of allocating total cash flows must be developed based on sales, fixed assets, or other reasonable criteria. The subsidiary's total is divided by the parent's total to derive the allocation percentage to estimate the subsidiary's cash flow.

(Bb) If the subject company does not provide the Commission with its most recent cash flow statements by March 1 of the assessment year, the Division may estimate cash flow using the best information available.

(B) The discount rate (k) shall be based upon a weighted average cost of capital (WACC) considering current market debt rates and equity yields. WACC should reflect a typical capital structure for comparable companies within the industry.

(I) The cost of debt should reflect the current market rate (yield to maturity) of debt with the same credit rating as the subject company.

(II) The cost of equity is estimated using standard methods such as the capital asset pricing model (CAPM), the Risk Premium and Dividend Growth models, or other recognized models.

(Aa) The CAPM is the preferred method to estimate the cost of equity. More than one method may be used to correlate a cost of equity, but only if the CAPM method is weighted at least 50% in the correlation.

(Bb) The CAPM formula is $k(e) = R(f) + (\text{Beta} \times \text{Risk Premium})$, where $k(e)$ is the cost of equity and $R(f)$ is the risk free rate.

(Cc) The risk free rate shall be the current market rate on 20-year Treasury bonds.

(Dd) The beta should reflect an average or value-weighted average of comparable companies and should be drawn consistently from Value Line or an equivalent source. The beta of the specific assessed property should also be considered.

(Ee) The risk premium shall be the arithmetic average of the spread between the return on stocks and the income return on long term bonds for the entire historical period contained in the Ibbotson Yearbook published immediately following the lien date.

(C) The growth rate "g" is the expected future growth of the cash flow attributable to assets in place on the lien date, and any future replacement assets.

(I) If insufficient information is available to the Division, either from public sources or from the taxpayer, to determine a

rate, "g" will be the expected inflationary rate in the Gross Domestic Product Price Deflator obtained in Value Line. The growth rate and the methodology used to produce it shall be disclosed in a capitalization rate study published by the Commission by February 15 of the assessment year.

(ii) A discounted cash flow (DCF) method may be impractical to implement in a mass appraisal environment, but may be used when reliable cash flow estimates can be established.

(A) A DCF model should incorporate for the terminal year, and to the extent possible for the holding period, growth and discount rate assumptions that would be used in the yield capitalization method defined under Subsection (5)(b)(i).

(B) Forecasted growth may be used where unusual income patterns are attributed to

(I) unused capacity;

(II) economic conditions; or

(III) similar circumstances.

(C) Growth may not be attributed to assets not in place as of the lien date.

(iii) Direct Capitalization is an income technique that converts an estimate of a single year's income expectancy into an indication of value in one direct step, either by dividing the normalized income estimate by a capitalization rate or by multiplying the normalized income estimate by an income factor.

(c) Market or Sales Comparison Approach. The market value of property is directly related to the prices of comparable, competitive properties. The market approach is estimated by comparing the subject property to similar properties that have recently sold.

(I) Sales of comparable property must, to the extent possible, be adjusted for elements of comparison, including market conditions, financing, location, physical characteristics, and economic characteristics. When considering the sales of stock, business enterprises, or other properties that include intangible assets, adjustments must be made for those intangibles.

(II) Because sales of unitary properties are infrequent, a stock and debt indicator may be viewed as a surrogate for the market approach. The stock and debt method is based on the accounting principle which holds that the market value of assets equal the market value of liabilities plus shareholder's equity.

(d) Reconciliation. When reconciling value indicators into a final estimate of value, the appraiser shall take into consideration the availability, quantity, and quality of data, as well as the strength and weaknesses of each value indicator. Weighting percentages used to correlate the value approaches will generally vary by industry, and may vary by company if evidence exists to support a different weighting. The Division must disclose in writing the weighting percentages used in the reconciliation for the final assessment. Any departure from the prior year's weighting must be explained in writing.

(6) Property Specific Considerations. Because of unique characteristics of properties and industries, modifications or alternatives to the general value indicators may be required for specific industries.

(a) Cost Regulated Utilities.

(i) HCLD is the preferred cost indicator of value for cost regulated utilities because it represents an approximation of the basis upon which the investor can earn a return. HCLD is calculated by taking the historic cost less depreciation as reflected in the utility's net plant accounts, and then:

(A) subtracting intangible property;

(B) subtracting any items not included in the utility's rate base (e.g., deferred income taxes and, if appropriate, acquisition adjustments); and

(C) adding any taxable items not included in the utility's net plant account or rate base.

(ii) Deferred Income Taxes, also referred to as DFIT, is an accounting entry that reflects the difference between the use of accelerated depreciation for income tax purposes and the use of straight-line depreciation for financial statements. For traditional rate base regulated companies, regulators generally exclude deferred income taxes from rate base, recognizing it as ratepayer contributed capital. Where rate base is reduced by deferred income taxes for rate base regulated companies, they shall be removed from HCLD.

(iii) Items excluded from rate base under Subsections (6)(a)(i)(A) or (B) should not be subtracted from HCLD to the extent it can be shown that regulators would likely permit the rate base of a potential purchaser to include a premium over existing rate base.

(b)(i) Railroads.

(ii) The cost indicator should generally be given little or no weight because there is no observable relationship between cost and fair market value.

(c) Airlines, air charter services, and air contract services.

(i) For purposes of this Subsection (6)(c):

(A) "aircraft pricing guide" means a nationally recognized publication that assigns value estimates for individual commercial aircraft that are in average condition typical for their type and vintage, and identified by year, make and model;

(B) "airline" means an:

(I) airline under Section 59-2-102;

(II) air charter service under Section 59-2-102; and

(III) air contract service under Section 59-2-102;

(C) "airline market indicator" means an estimate of value based on an aircraft pricing guide; and

(D) "non-mobile flight equipment" means all operating property of an airline, air charter service, or air contract service that is not within the definition of mobile flight equipment under Section 59-2-102.

(ii) In situations where the use of preferred methods for determining fair market value under Subsection (5) does not produce a reasonable estimate of the fair market value of the property of an airline operating as a unit, an airline market indicator published in an aircraft pricing guide, and adjusted as provided in Subsections (6)(c)(ii)(A) and (6)(c)(ii)(B), may be used to estimate the fair market value of the airline property.

(A)(I) In order to reflect the value of a fleet of aircraft as part of an operating unit, an aircraft market indicator shall include a fleet adjustment or equivalent valuation for a fleet.

(II) If a fleet adjustment is provided in an aircraft pricing guide, the adjustment under Subsection (6)(c)(ii)(A)(I) shall follow the directions in that guide. If no fleet adjustment is provided in an aircraft pricing guide, the standard adjustment under Subsection (6)(c)(ii)(A)(I) shall be 20 percent from a wholesale value or equivalent level of value as published in the guide.

(B) Non-mobile flight equipment shall be valued using the cost approach under Subsection (5)(a) or the market or sales comparison approach under Subsection (5)(c), and added to the value of the fleet.

(iii) An income capitalization approach under Subsection (5)(b) shall incorporate the information available to make an estimate of future cash flows.

(iv)(A) When an aircraft market indicator under Subsection (6)(c)(ii) is used to estimate the fair market value of an airline, the Division shall:

(I) calculate the fair market value of the airline using the preferred methods under Subsection (5);

(II) retain the calculations under Subsection (6)(c)(iv)(A)(I) in the work files maintained by the Division; and

(III) include the amounts calculated under Subsection (6)(c)(iv)(A)(I) in any appraisal report that is produced in association with an assessment issued by the Division.

(B) When an aircraft market indicator under Subsection

(6)(c)(ii) is used, the Division shall justify in any appraisal report issued with an assessment why the preferred methods under Subsection (5) were not used.

(v)(A) When the preferred methods under Subsection (5) are used to estimate the fair market value of an airline, the Division shall:

(I) calculate an aircraft market indicator under Subsection (6)(c)(ii);

(II) retain the calculations under Subsection (6)(c)(v)(A)(I) in the work files maintained by the Division; and

(III) include the amounts calculated under Subsection (6)(c)(v)(A)(I) in any appraisal report that is produced in association with an assessment issued by the Division.

(B) Value estimates from an aircraft pricing guide under Subsection (6)(c)(i)(A) along with the valuation of non-mobile flight equipment under Subsection (6)(c)(ii)(B) shall, when possible, also be included in an assessment or appraisal report for purposes of comparison.

(C) Reasons for not including a value estimate required under Subsection (6)(c)(v)(B) include:

(I) failure to file a return; or

(II) failure to identify specific aircraft.

R884-24P-63. Performance Standards and Training Requirements Pursuant to Utah Code Ann. Section 59-2-406.

A. The party contracting to perform services shall develop a written customer service performance plan within 60 days after the contract for performance of services is signed.

1. The customer service performance plan shall address:

a) procedures the contracting party will follow to minimize the time a customer waits in line; and

b) the manner in which the contracting party will promote alternative methods of registration.

2. The party contracting to perform services shall provide a copy of its customer service performance plan to the party for whom it provides services.

3. The party for whom the services are provided may, no more often than semiannually, audit the contracting party's performance based on its customer service performance plan, and may report the results of the audit to the county commission or the state tax commissioners, as applicable.

B. Each county office contracting to perform services shall conduct initial training of its new employees.

C. The Tax Commission shall provide regularly scheduled training for all county offices contracting to perform motor vehicle functions.

R884-24P-64. Determination and Application of Taxable Value for Purposes of the Property Tax Exemptions for Veterans With a Disability and the Blind Pursuant to Utah Code Ann. Sections 59-2-1104 and 59-2-1106.

For purposes of Sections 59-2-1104 and 59-2-1106, the taxable value of tangible personal property subject to a uniform fee under Sections 59-2-405.1 or 59-2-405.2 shall be calculated by dividing the uniform fee the tangible personal property is subject to by .015.

R884-24P-65. Assessment of Transitory Personal Property Pursuant to Utah Code Ann. Section 59-2-402.

A. "Transitory personal property" means tangible personal property that is used or operated primarily at a location other than a fixed place of business of the property owner or lessee.

B. Transitory personal property in the state on January 1 shall be assessed at 100 percent of fair market value.

C. Transitory personal property that is not in the state on January 1 is subject to a proportional assessment when it has been in the state for 90 consecutive days in a calendar year.

1. The determination of whether transitory personal property has been in the state for 90 consecutive days shall

include the days the property is outside the state if, within 10 days of its removal from the state, the property is:

- a) brought back into the state; or
- b) substituted with transitory personal property that performs the same function.

D. Once transitory personal property satisfies the conditions under C., tax shall be proportionally assessed for the period:

1. beginning on the first day of the month in which the property was brought into Utah; and
2. for the number of months remaining in the calendar year.

E. An owner of taxable transitory personal property who removes the property from the state prior to December and who qualifies for a refund of taxes assessed and paid, shall receive a refund based on the number of months remaining in the calendar year at the time the property is removed from the state and for which the tax has been paid.

1. The refund provisions of this subsection apply to transitory personal property taxes assessed under B. and C.

2. For purposes of determining the refund under this subsection, any portion of a month remaining shall be counted as a full month.

F. If tax has been paid for transitory personal property and that property is subsequently moved to another county in Utah:

1. No additional assessment may be imposed by any county to which the property is subsequently moved; and
2. No portion of the assessed tax may be transferred to the subsequent county.

R884-24P-66. County Board of Equalization Procedures and Appeals Pursuant to Utah Code Ann. Sections 59-2-1001 and 59-2-1004.

(1)(a) "Factual error" means an error that is:
(i) objectively verifiable without the exercise of discretion, opinion, or judgment;

(ii) demonstrated by clear and convincing evidence; and
(iii) agreed upon by the taxpayer and the assessor.

(b) Factual error includes:
(i) a mistake in the description of the size, use, or ownership of a property;

(ii) a clerical or typographical error in reporting or entering the data used to establish valuation or equalization;

(iii) an error in the classification of a property that is eligible for a property tax exemption under:

- (A) Section 59-2-103; or
- (B) Title 59, Chapter 2, Part 11;
- (iv) an error in the classification of a property that is eligible for assessment under Title 59, Chapter 2, Part 5;

(v) valuation of a property that is not in existence on the lien date; and

(vi) a valuation of a property assessed more than once, or by the wrong assessing authority.

(c) Factual error does not include:
(i) an alternative approach to value;
(ii) a change in a factor or variable used in an approach to value; or
(iii) any other adjustment to a valuation methodology.

(2) To achieve standing with the county board of equalization and have a decision rendered on the merits of the case, the taxpayer shall provide the following minimum information to the county board of equalization:

- (a) the name and address of the property owner;
- (b) the identification number, location, and description of the property;
- (c) the value placed on the property by the assessor;
- (d) the taxpayer's estimate of the fair market value of the property;
- (e) evidence or documentation that supports the taxpayer's

claim for relief; and

(f) the taxpayer's signature.

(3) If the evidence or documentation required under Subsection (2)(e) is not attached, the county will notify the taxpayer in writing of the defect in the claim and permit at least ten calendar days to cure the defect before dismissing the matter for lack of sufficient evidence to support the claim for relief.

(4) If the taxpayer appears before the county board of equalization and fails to produce the evidence or documentation described under Subsection (2)(e) and the county has notified the taxpayer under Subsection (3), the county may dismiss the matter for lack of evidence to support a claim for relief.

(5) If the information required under Subsection (2) is supplied, the county board of equalization shall render a decision on the merits of the case.

(6) The county board of equalization may dismiss an appeal for lack of jurisdiction when the claimant limits arguments to issues not under the jurisdiction of the county board of equalization.

(7) The county board of equalization shall prepare and maintain a record of the appeal.

(a) For appeals concerning property value, the record shall include:

(i) the name and address of the property owner;
(ii) the identification number, location, and description of the property;

(iii) the value placed on the property by the assessor;
(iv) the basis for appeal stated in the taxpayer's appeal;

(v) facts and issues raised in the hearing before the county board that are not clearly evident from the assessor's records; and

(vi) the decision of the county board of equalization and the reasons for the decision.

(b) The record may be included in the minutes of the hearing before the county board of equalization.

(8)(a) The county board of equalization shall notify the taxpayer in writing of its decision.

(b) The notice required under Subsection (8)(a) shall include:

- (i) the name and address of the property owner;
- (ii) the identification number of the property;
- (iii) the date the notice was sent;
- (iv) a notice of appeal rights to the commission; and
- (v) a statement of the decision of the county board of equalization; or

(vi) a copy of the decision of the county board of equalization.

[[(9) A county shall maintain a copy of a notice sent to a taxpayer under Subsection (8).

(10) If a decision affects the exempt status of a property, the county board of equalization shall prepare its decision in writing, stating the reasons and statutory basis for the decision.

(11) Decisions by the county board of equalization are final orders on the merits.

(12) Except as provided in Subsection (14), a county board of equalization shall accept an application to appeal the valuation or equalization of a property owner's real property that is filed after the time period prescribed by Section 59-2-1004(2)(a) if any of the following conditions apply:

(a) During the period prescribed by Section 59-2-1004(2)(a), the property owner was incapable of filing an appeal as a result of a medical emergency to the property owner or an immediate family member of the property owner, and no co-owner of the property was capable of filing an appeal.

(b) During the period prescribed by Section 59-2-1004(2)(a), the property owner or an immediate family member of the property owner died, and no co-owner of the property was capable of filing an appeal.

(c) The county did not comply with the notification

requirements of Section 59-2-919.1.

(d) A factual error is discovered in the county records pertaining to the subject property.

(e) The property owner was unable to file an appeal within the time period prescribed by Section 59-2-1004(2)(a) because of extraordinary and unanticipated circumstances that occurred during the period prescribed by Section 59-2-1004(2)(a), and no co-owner of the property was capable of filing an appeal.

(13) Appeals accepted under Subsection (12)(d) shall be limited to correction of the factual error and any resulting changes to the property's valuation.

(14) The provisions of Subsection (12) apply only to appeals filed for a tax year for which the treasurer has not made a final annual settlement under Section 59-2-1365.

(15) The provisions of this rule apply only to appeals to the county board of equalization. For information regarding appeals of county board of equalization decisions to the Commission, please see Section 59-2-1006 and R861-1A-9.

R884-24P-67. Information Required for Valuation of Low-Income Housing Pursuant to Utah Code Ann. Sections 59-2-102 and 59-2-301.3.

(1) The purpose of this rule is to provide an annual reporting mechanism to assist county assessors in gathering data necessary for accurate valuation of low-income housing projects.

(2) The Utah Housing Corporation shall provide the following information that it has obtained from the owner of a low-income housing project to the commission:

(a) for each low-income housing project in the state that is eligible for a low-income housing tax credit:

(i) the Utah Housing Corporation project identification number;

(ii) the project name;

(iii) the project address;

(iv) the city in which the project is located;

(v) the county in which the project is located;

(vi) the building identification number assigned by the Internal Revenue Service for each building included in the project;

(vii) the building address for each building included in the project;

(viii) the total apartment units included in the project;

(ix) the total apartment units in the project that are eligible for low-income housing tax credits;

(x) the period of time for which the project is subject to rent restrictions under an agreement described in Subsection (2)(b);

(xi) whether the project is:

(A) the rehabilitation of an existing building; or

(B) new construction;

(xii) the date on which the project was placed in service;

(xiii) the total square feet of the buildings included in the project;

(xiv) the maximum annual federal low-income housing tax credits for which the project is eligible;

(xv) the maximum annual state low-income housing tax credits for which the project is eligible; and

(xvi) for each apartment unit included in the project:

(A) the number of bedrooms in the apartment unit;

(B) the size of the apartment unit in square feet; and

(C) any rent limitation to which the apartment unit is subject; and

(b) a recorded copy of the agreement entered into by the Utah Housing Corporation and the property owner for the low-income housing project; and

(c) construction cost certifications for the project received from the low-income housing project owner.

(3) The Utah Housing Corporation shall provide the

commission the information under Subsection (2) by January 31 of the year following the year in which a project is placed into service.

R884-24P-68. Property Tax Exemption for Taxable Tangible Personal Property With a Total Aggregate Fair Market Value That is At or Below the Statutorily Prescribed Amount Pursuant to Utah Code Ann. Section 59-2-1115.

(1) The purpose of this rule is to provide for the administration of the property tax exemption for a taxpayer whose taxable tangible personal property has a total aggregate fair market value that is at or below the statutorily prescribed amount.

(a) Total aggregate fair market value is determined by aggregating the fair market value of all taxable tangible personal property owned by a taxpayer within a county.

(b) If taxable tangible personal property is required to be apportioned among counties, the determination of whether taxable tangible personal property has a total aggregate fair market value that is at or below the statutorily prescribed amount shall be made after apportionment.

(2) A taxpayer shall apply for the exemption provided under Section 59-2-1115:

(a) if the county assessor has requested a signed statement from the taxpayer under Section 59-2-306, within the time frame set forth under Section 59-2-306 for filing the signed statement; or

(b) if the county assessor has not requested a signed statement from the taxpayer under Section 59-2-306, within 30 days from the day the taxpayer is requested to indicate whether the taxpayer has taxable tangible personal property in the county that is at or below the statutorily prescribed amount.

R884-24P-70. Real Property Appraisal Requirements for County Assessors Pursuant to Utah Code Ann. Sections 59-2-303.1 and 59-2-919.1.

(1) Definitions.

(a) "Accepted valuation methodologies" means those methodologies approved or endorsed in the Standard on Mass Appraisal of Real Property and the Standard on Automated Valuation Models published by the International Association of Assessing Officers (IAAO).

(b) "Database," as referenced in Section 59-2-303.1(6), means an electronic storage of data using computer hardware and software that is relational, secure and archival, and adheres to generally accepted information technology standards of practice.

(2) County mass appraisal systems, as defined in Section 59-2-303.1, shall use accepted valuation methodologies to perform the annual update of all residential parcels.

(3)(a) A detailed review of property characteristics shall include a sufficient inspection to determine any changes to real property due to:

(i) new construction, additions, remodels, demolitions, land segregations, changes in use, or other changes of a similar nature; and

(ii) a change in condition or effective age.

(b)(i) A detailed review of property characteristics shall be made in accordance with the IAAO Standard on Mass Appraisal of Real Property.

(ii) When using aerial photography, including oblique aerial photography, the date of the photographic flight is the property review date for purposes of Section 59-2-303.1.

(4) The last property review date to be included in the county's computer system shall include the actual day, month, and year that the last detailed review of a property's characteristics was conducted.

(5) The last property review date to be included on the notice shall include at least the actual year or tax year that the

last detailed review of a property's characteristics was conducted. The month and day of the review may also be included on the notice at the discretion of the county assessor and auditor.

(6)(a) The five-year plan shall detail the current year plus four subsequent years into the future. The plan shall define the properties being reviewed for each of the five years by one or more of the following:

- (i) class;
- (ii) property type;
- (iii) geographic location; and
- (iv) age.

(b) The five-year plan shall also include parcel counts for each defined property group.

R884-24P-71. Agreements with Commercial or Industrial Taxpayers for Equal Property Tax Payments Pursuant to Utah Code Ann. Section 59-2-1308.5.

(1) An agreement with a commercial or industrial taxpayer for equal property tax payments under Section 59-2-1308.5 is effective:

(a) the current calendar year, if the agreement is agreed to by all parties on or before May 31; or

(b) the subsequent calendar year, if the agreement is agreed to by all parties after May 31.

(2) An agreement under Subsection (1) affects only those taxing entities that are a party to the agreement.

(3) The commission shall ensure that an agreement under Subsection (1) does not affect the calculation of the certified tax rate by adjusting the formula under Section 59-2-924 so that the collection ratio for each taxpayer that is a party to the agreement is based on the amount that would have been collected according to the same valuation and assessment methodologies that would have been applied in the absence of the agreement.

R884-24P-72. State Farmland Evaluation Advisory Committee Procedures Pursuant to Utah Code Ann. Section 59-2-514.

(1) "Committee" means the State Farmland Evaluation Advisory Committee established in Section 59-2-514.

(2) The committee is subject to Title 52, Chapter 4, Open and Public Meetings Act.

(3) A committee member may participate electronically in a meeting open to the public under Section 52-4-207 if:

(a) the agenda posted for the meeting establishes one or more anchor locations for the meeting where the public may attend;

(b) at least one committee member is at an anchor location; and

(c) all of the committee members may be heard by any person attending an anchor location.

R895. Technology Services, Administration.**R895-5. Acquisition of Information Technology.****R895-5-1. Purpose.**

The purpose of this rule is to identify the standards under which an agency of the executive branch must obtain approval from the Chief Information Officer before acquiring information technology and technology related services.

R895-5-2. Authority.

The rule is issued by the Chief Information Officer under the authority of Sections 63F-1-205 and 63F-1-206 of the Utah Technology Governance Act, and Section 63G-3-201 of the Utah Rulemaking Act, Utah Code.

R895-5-3. Scope of Application.

All agencies of the Executive Branch of State government, including its administrative sub-units, except the State Board of Education, the Board of Regents and institutions of higher education, and elective constitutional offices, are to be included within the scope of this rule.

R895-5-4. Definitions.

(1) "Hardware" means physical technology (i.e., equipment) used to process, manage, store, transmit, receive, or deliver information. This term also includes telephony products.

(2) "Small technology purchases" means a purchase, lease, or rental of hardware, software, and/or technology services that is estimated to be less than \$50,000.

(3) "Software" means non-physical technology used to process, manage, store, transmit, receive, or deliver information. The term also includes all supporting documentation, media on which the software may be contained or stored, related materials, modifications, versions, upgrades, enhancements, updates, or replacements.

(4) "Technology services" means all the services, functions, and activities that facilitate the design, implementation, creation, or use of software, hardware, or telephony products. The term includes data acquisition, seat management, staffing augmentation, training, maintenance, and subscription services.

R895-5-5. Purchase of Hardware, Software, and Technology Services.

(1) The Chief Information Officer (CIO) shall exercise general supervision and control over the purchase of all hardware, software, and technology services.

(2) The CIO may delegate the authority to make small technology purchases. The delegation shall be in writing and may be limited as directed by the CIO.

(3) Purchase requirements for hardware, software, and technology services shall not be artificially divided so as to constitute a small technology purchase under this rule.

R895-5-6. Rule Compliance Management.

The CIO may monitor compliance of this rule within the State Executive Branch, and report any findings or violations of this rule to an agency's Executive Director or designee. A State Executive Branch agency's Executive Director, or designee, upon becoming aware of a violation of this rule shall provide the CIO a report of action(s) taken in response to violation of this rule.
