

R23. Administrative Services, Facilities Construction and Management.**R23-7. State Construction Contracts and Drug and Alcohol Testing.****R23-7-1. Purpose.**

The purpose of this rule is to comply with the provisions of Section 63G-6a-1303 of the Utah Procurement Code.

R23-7-2. Authority.

This rule is authorized under Subsection 63A-5-103(1)(e), which directs the Utah State Building Board to make rules necessary for the discharge of the duties of the Division of Facilities Construction and Management as well as Subsection 63G-6a-1303(4) of the Utah Procurement Code.

R23-7-3. Definitions.

(1) The following definitions of Section 63G-6-604 shall apply to any term used in this Rule R23-7:

(a) "Contractor" means a person who is or may be awarded a state construction contract.

(b) "Covered individual" means an individual who:

(i) on behalf of a contractor or subcontractor provides services directly related to design or construction under a state construction contract; and

(ii) is in a safety sensitive position, including a design position that has responsibilities that directly affect the safety of an improvement to real property that is the subject of a state construction contract.

(c) "Drug and alcohol testing policy" means a policy under which a contractor or subcontractor tests a covered individual to establish, maintain, or enforce the prohibition of:

(i) the manufacture, distribution, dispensing, possession, or use of drugs or alcohol, except the medically prescribed possession and use of a drug; or

(ii) the impairment of judgment or physical abilities due to the use of drugs or alcohol.

(d) "Random testing" means that a covered individual is subject to periodic testing for drugs and alcohol:

(i) in accordance with a drug and alcohol testing policy; and

(ii) on the basis of a random selection process.

(e) "State Executive Entity" means a state executive branch:

(i) department;

(ii) division including the Division of Facilities Construction and Management;

(iii) agency;

(iv) board;

(v) commission;

(vi) council;

(vii) committee;

(viii) institution; or

(ix) a state institution of higher education, as defined under Section 53B-3-102.

(f) "State construction contract" means a contract for design or construction entered into by the Division.

(g)(i) "Subcontractor" means a person under contract with a contractor or another subcontractor to provide services or labor for design or construction.

(ii) "Subcontractor" includes a trade contractor or specialty contractor.

(iii) "Subcontractor" does not include a supplier who provides only materials, equipment, or supplies to a contractor or subcontractor.

(2) In addition:

(a) "Board" means the State Building Board established pursuant to Section 63A-5-101.

(b) "Director" means the Director of the Division, including, unless otherwise stated, the Director's duly authorized

designee.

(c) "Division" means the Division of Facilities Construction and Management established pursuant to Section 63A-5-201 as well as entities entering into state construction contracts under delegation authority by the Board or Director.

R23-7-4. Applicability.

(1) Except as provided in Rule R23-7-5, on and after July 1, 2010, the Division may not enter into a state construction contract (includes a contract for design or construction) unless the state construction contract requires that the contractor (including designer) demonstrate to the Division that the Contractor:

(a) has and will maintain a drug and alcohol testing policy during the period of the state construction contract that applies to the covered individuals hired by the contractor;

(b) posts in one or more conspicuous places notice to covered individuals hired by the contractor that the contractor has the drug and alcohol testing policy described in Rule R23-7-4(1)(a);

(c) subjects the covered individuals to random testing under the drug and alcohol testing policy described in Subsection R23-7-4(1)(a) if at any time during the period of the state construction contract there are ten or more individuals who are covered individuals hired by the contractor; and

(d) requires that as a condition of contracting with the contractor, a subcontractor:

(i) has and will maintain a drug and alcohol testing policy during the period of the state construction contract that applies to the covered individuals hired by the subcontractor;

(ii) posts in one or more conspicuous places notice to covered individuals hired by the subcontractor that the subcontractor has the drug and alcohol testing policy described in Rule R23-7-4(d)(i); and

(iii) subjects the covered individuals hired by the subcontractor to random testing under the drug and alcohol testing policy described in Rule R23-7-4(d)(i) if at any time during the period of the state construction contract there are 10 or more individuals who are covered individuals hired by the subcontractor.

(2) A contractor shall demonstrate to the Division under Rule R23-7-4(1) above, by a provision in the contract where the contractor acknowledges this Rule R23-7 and agrees to comply with all aspects of this Rule R23-7 and that the contractor require this compliance by a subcontractor, which includes consultants under contract with the designer.

(2)(a) Except as otherwise provided in this Rule R23-7-4(2), if a contractor or subcontractor fails to comply with Rule R23-7-4(1), the contractor or subcontractor may be suspended or debarred in accordance with the Utah Procurement Code, Title 63G, Chapter 6a, Utah Code.

(b) On and after July 1, 2010, the Division shall include in a state construction contract a reference to this Rule R23-7.

(c)(i) A contractor is not subject to penalties for the failure of a subcontractor to comply with Rule R23-7-4(1).

(ii) A subcontractor is not subject to penalties for the failure of a contractor to comply with Rule R23-7-4(1).

(3)(a) The requirements and procedures a contractor shall follow to comply with Subsection R23-7-4(1) is that the contractor, by executing the construction contract with the Division, is deemed to certify to the Division that the contractor, and all subcontractors under the contractor that are subject to Rule R23-7-4(1), shall comply with all provisions of this Rule R23-7 as well as Section 63G-6a-1303 of the Utah Procurement Code.

(b) A contractor or subcontractor may be suspended or debarred in accordance with the applicable Utah statutes and rules, if the contractor or subcontractor violates a provision of Section 63G-6a-1303 of the Utah Procurement Code or this

Rule. The contractor or subcontractor shall be provided reasonable notice and opportunity to cure a violation of 63G-6a-1303 of the Utah Procurement Code or this Rule before suspension or debarment of the contractor or subcontractor in light of the circumstances of the state construction contract or the violation.

(4) The failure of a contractor or subcontractor to meet the requirements of Subsection R23-7-4(1):

(a) may not be the basis for a protest or other action from a prospective bidder, offeror, or contractor under Part 17, Procurement Appeals Board, or Part 18, Appeals to Court and Court Proceedings; and

(b) may not be used by a state executive entity, a prospective bidder, an offeror, a contractor, or a subcontractor as a basis for an action that would suspend, disrupt, or terminate the design or construction under a state construction contract.

(5)(a) After the Division enters into a state construction contract in compliance with Section 63G-6a-1303, the state (including the Division) is not required to audit, monitor, or take any other action to ensure compliance with Section 63G-6a-1303.

(b) The state is not liable in any action related to Section 63G-6a-1303 and this Rule R23-7, including not being liable in relation to:

(i) a contractor or subcontractor having or not having a drug and alcohol testing policy;

(ii) failure to test for a drug or alcohol under a contractor's or subcontractor's drug and alcohol testing policy;

(iii) the requirements of a contractor's or subcontractor's drug and alcohol testing policy;

(iv) a contractor's or subcontractor's implementation of a drug and alcohol testing policy, including procedures for:

(A) collection of a sample;

(B) testing of a sample;

(C) evaluation of a test; or

(D) disciplinary or rehabilitative action on the basis of a test result;

(v) an individual being under the influence of drugs or alcohol; or

(vi) an individual under the influence of drugs or alcohol harming another person or causing property damage.

R23-7-5. Non-applicability.

(1) This Rule R23-7 and Section 63G-6a-1303 does not apply if the State Executive Entity (including the Division) determines that the application of this Rule R23-7 or Section 63G-6a-1303 would severely disrupt the operation of a procurement unit to the detriment of the procurement unit or the general public, including:

(a) jeopardizing the receipt of federal funds;

(b) causing the state construction contract to be a sole source contract; or

(c) causing the state construction contract to be an emergency procurement.

R23-7-6. Not Limit Other Lawful Policies.

(1) If a contractor or subcontractor meets the requirements of Section 63G-6a-1303 and this Rule R23-7, Section 63G-6a-1303 and this Rule R23-7 may not be construed to restrict the contractor's or subcontractor's ability to impose or implement an otherwise lawful provision as part of a drug and alcohol testing policy.

December 11, 2015 63G-6
Notice of Continuation June 30, 2015**

R23. Administrative Services, Facilities Construction and Management.

R23-32. Rules of Procedure for Conduct of Utah State Building Board Meetings.

R23-32-1. Purpose.

The purpose of this Rule R23-32 is to establish procedures for the conduct of Utah State Building Board meetings and to assist the public and anyone wishing to address the Building Board, whether in person or by other established means.

R23-32-2. Authority.

This Rule R23-32 is authorized under Subsection 63A-5-102(2) which directs that the Building Board "adopt rules of procedure for the conduct of its meetings." The Building Board has administrative rulemaking authority under Subsection 63A-5-103(1)(e).

R23-32-3. Definitions.

(1) "Attendance" means that person attending a Board meeting, either in person or through electronic means as authorized by this Rule.

(2) "Board" means the Utah State Building Board established under Title 63A, Chapter 5, Utah Code.

(3) "Chair" means the person appointed as Chair of the Board by the Governor pursuant to Title 63A, Chapter 5, Utah Code.

(4) "Director" means the Director of the Division of Facilities Construction and Management or duly authorized designee.

(5) "Division" means the Division of Facilities Construction and Management.

(6) "Electronic meeting" is as defined in Section 52-4-103.

(7) "GOPB Official" means the Director of the Governor's Office of Planning and Budget or duly authorized designee.

(8) "Open and Public Meetings Laws" means those laws provided by Title 52, Chapter 4, Utah Code.

(9) "Presiding Officer" means the Chair. The Chair may choose, either because of unavailability or other reason, an alternate Presiding Officer.

R23-32-4. Composition of Board.

(1) The Board consists of eight members, seven of whom are voting members appointed by the Governor for terms of four years.

(2) The GOPB Official is a nonvoting member of the Board. As a nonvoting member, the GOPB official shall not be considered as part of the quorum requirement for Board determinations. The GOPB Official shall advise the Presiding Officer of any designee appointed prior to any meeting that the designee will be attending.

R23-32-5. Calling for Meetings.

The Chair or any three voting members may call meetings of the Board. The Executive Director of the Department of Administrative Services, Director or GOPB Official may also call for a meeting upon consent of the Chair.

R23-32-6. Compliance with Open and Public Meeting Laws.

All meetings of the Board shall be conducted in accordance with the Open and Public Meetings Laws. All meetings are open to the public unless closed in whole or in part pursuant to the requirements of the Open and Public Meeting Laws.

R23-32-7. Presiding Officer and Basic Responsibilities.

(1) The Chair shall be the Presiding Officer at all Board meetings when present in person or through electronic means.

(2) The Chair may choose, either because of unavailability or other reason, an alternate Presiding Officer.

(3) The Presiding Officer shall be able to make motions

and have a vote on each matter before the Board. The Presiding Officer may second motions.

(4) Unless otherwise directed by vote of the Board, the Presiding Officer shall be responsible for the operation of the meeting, shall have control over the items on the agenda, the order of the agenda, time limits that are needed, and other matters that relate to the orderly running of the meeting.

R23-32-8. Administrative and Staff Services.

The Department of Administrative Services shall provide administrative and staff services to enable the Board to exercise its powers and discharge its duties, and shall provide necessary space and equipment for the Board.

R23-32-9. Meetings.

Meetings shall generally be held on the first Wednesday of the month at 9:00 a.m. at the Utah State Capitol in Salt Lake City, Utah. During Legislative Sessions, the Chair and Director may determine another location. The date, time and location may also be modified by the Chair and Director at any time when it is in the interest of the Board and the public.

R23-32-10. Notice and Agenda.

(1) Notice shall be given of all meetings in accordance with the Open and Public Meeting Laws.

(2) The Director and Presiding Officer shall confer a reasonable time prior to any Board meeting as to the items to be on the agenda. The Presiding Officer shall ultimately determine the matters to be on the agenda, unless a vote of the Board has been undertaken to direct an item to be placed on the agenda. Board members may also contact the Chair about any request for agenda items.

(3) The order of business shall be in the order placed on the agenda, unless the Presiding Officer or vote of the Board alters the order of business and there is no prejudice to interested persons that may have intended to attend the meeting.

(4) Members of the Board, the Division, governmental agencies and the public may submit a request to the Secretary to the Board that an item be placed on the agenda subject to review and approval by the Presiding Officer.

(5) Each agenda shall have an item on it regarding whether there are any matters to be placed on a future agenda.

R23-32-11. Attendance, Quorum and Voting.

(1) The quorum requirement for the Board is set forth in Utah Code Annotated Title 63A, Chapter 5.

(2) For any determination of the Board, it must be approved by a majority vote of those voting members present and it must receive an affirmative vote from at least three members.

(3) Voting shall be expressed publicly when called for by the Presiding Officer. An affirmative vote shall be recorded for all Board members present that neither vote negatively nor specifically abstain. The number of affirmative, negative and abstaining votes shall be announced by the Presiding Officer, and the specific members of such votes shall be recorded by the Secretary.

(4) Members must be in attendance, including by electronic means in accordance with this Rule, in order to vote.

R23-32-12. Motions, Second to a Motion, Discussion, Continuances and Resolutions.

(1) The GOPB Official may make and second motions, but shall not vote on any motion.

(2) Items may be continued to any subsequent meeting by vote of the Board.

(3) A second to a motion is required prior to discussion by Board members.

(4) After a motion is seconded, the Presiding Officer shall

ask for discussion of the matter. The Presiding Officer shall call upon those that request to discuss the matter. The Presiding Officer retains the authority to place reasonable restrictions on the discussion that assure that the discussion is orderly and relevant to the motion. After the discussion, or if no Board member desires to discuss the matter, the Board shall proceed to vote on the matter without the need for a formal call to question.

(5) The Board may enact resolutions as are appropriate under their authority.

R23-32-13. Committees.

The Board may appoint committees to investigate or report on any matter which is of concern to the Board.

R23-32-14. Order at Meetings.

(1) The Presiding Officer shall preserve order and decorum at all meetings of the Board and shall determine questions of order, which may be subject to a vote of the Board.

(2) A person or persons creating a disturbance or otherwise obstructing the orderly process of a Board meeting may be ordered to be ejected from the meeting.

R23-32-15. Robert's Rules of Order.

All matters not covered by this Rule R23-32 shall be determined by either Robert's Rules of Order, latest published edition, an abbreviated edition of Robert's Rules of Order as determined by the Presiding Officer; or with abbreviated procedures as determined by the Presiding Officer.

R23-32-16. Electronic Meetings.

(1) Purpose. Section 52-4-207 requires any public body that convenes or conducts an electronic meeting to adopt a rule governing the use of electronic meetings. This Rule R23-32-15 establishes procedures for conducting Board meetings by electronic means.

(2) Procedure. The following provisions govern any meeting at which one or more Board members appear electronically pursuant to Section 52-4-207:

(a) If one or more members of the Board desire to participate electronically, such member(s) shall contact the Director. The Director shall assess the practicality of facility requirements needed to conduct the meeting electronically in a manner that allows for the attendance, participation and monitoring as required by this Rule. If it is practical, the Presiding Officer shall determine whether to allow for such electronic participation, and the public notice of the meeting shall so indicate. In addition, the notice shall specify the anchor location where the members of the Board not participating electronically will be meeting and where interested persons and the public may attend, monitor, and participate in the open portions of the meeting.

(b) Notice of the meeting and the agenda shall be posted at the anchor location and be provided in accordance with the Open and Public Meetings Laws.

(c) Notice of the possibility of an electronic meeting shall be given to the Board members at least 24 hours before the meeting. In addition, the notice shall describe how a Board member may participate in the meeting electronically.

(d) When notice is given of the possibility of a Board member appearing electronically, any Board member may do so and any voting Board member, whether at the anchor location or participating electronically, shall be counted as present for purposes of a quorum and may fully participate and vote. At the commencement of the meeting, or at such time as any Board member initially appears electronically, the Presiding Officer shall identify for the record all those who are appearing electronically. Votes by members of the Board who are not at the anchor location of the meeting shall be confirmed by the Presiding Officer.

(e) The anchor location is the physical location from which the electronic meeting originates or from which the participants are connected. The anchor location shall be identified in the public notice for the meeting. Unless otherwise designated in the notice, the anchor location shall be a room in the Utah State Capitol Hill Complex where the Board would normally meet if the Board was not holding an electronic meeting.

(f) The anchor location will have space and facilities so that interested persons and the public may attend, monitor and participate in the open portions of the meeting, as appropriate.

R23-32-17. Suspension of the Rules.

By a vote of the Board, and to the extent allowed by law, any requirement of this Rule R23-32 may be suspended when necessary to better serve the public in the conduct of a Board meeting.

KEY: Building Board, conduct, meeting procedures

December 11, 2015

63A-5-102(2)

63A-5-103(1)(e)

R25. Administrative Services, Finance.

R25-7. Travel-Related Reimbursements for State Employees.

R25-7-1. Purpose.

The purpose of this rule is to establish procedures to be followed by departments to pay travel-related reimbursements to state employees.

R25-7-2. Authority and Exemptions.

This rule is established pursuant to:

(1) Section 63A-3-107, which authorizes the Division of Finance to make rules governing in-state and out-of-state travel expenses; and

(2) Section 63A-3-106, which authorizes the Division of Finance to make rules governing meeting per diem and travel expenses for board members attending official meetings.

R25-7-3. Definitions.

(1) "Agency" means any department, division, commission, council, board, bureau, committee, office, or other administrative subunit of state government.

(2) "Board" means a board, commission, council, committee, task force, or similar body established to perform a governmental function.

(3) "Department" means all executive departments of state government.

(4) "Finance" means the Division of Finance.

(5) "Home-Base" means the location the employee leaves from and/or returns to.

(6) "Per diem" means an allowance paid daily.

(7) "Policy" means the policies and procedures of the Division of Finance, as published in the "Accounting Policies and Procedures."

(8) "Rate" means an amount of money.

(9) "Reimbursement" means money paid to compensate an employee for money spent.

(10) "State employee" means any person who is paid on the state payroll system.

R25-7-4. Eligible Expenses.

(1) Reimbursements are intended to cover all normal areas of expense.

(2) Requests for reimbursement must be accompanied by original receipts for all expenses except those for which flat allowance amounts are established.

R25-7-5. Approvals.

(1) For insurance purposes, all state business travel, whether reimbursed by the state or not, must have prior approval by an appropriate authority. This also includes non-state employees where the state is paying for the travel expenses.

(2) Both in-state and out-of-state travel must be approved by the Executive Director or designee. The approval of in-state travel reimbursement forms may be considered as documentation of prior approval for in-state travel. Prior approval for out-of-state travel should be documented on form FI5 - "Request for Out-of-State Travel Authorization".

(3) Exceptions to the prior approval for out-of-state travel must be justified in the comments section of the Request for Out-of-State Travel Authorization, form FI 5, or on an attachment, and must be approved by the Department Director or the designee.

(4) The Department Director, the Executive Director, or the designee must approve all travel to out-of-state functions where more than two employees from the same department are attending the same function at the same time.

R25-7-6. Reimbursement for Meals.

(1) State employees who travel on state business may be

eligible for a meal reimbursement.

(2) The reimbursement will include tax, tips, and other expenses associated with the meal.

(3) Allowances for in-state travel differ from those for out-of-state travel.

(a) The daily travel meal allowance for in-state travel is \$40.00 and is computed according to the rates listed in the following table.

TABLE 1

In-State Travel Meal Allowances

Meals	Rate
Breakfast	\$10.00
Lunch	\$14.00
Dinner	\$16.00
Total	\$40.00

(b) The daily travel meal allowance for out-of-state travel is \$46.00 and is computed according to the rates listed in the following table.

TABLE 2

Out-of-State Travel Meal Allowances

Meals	Rate
Breakfast	\$10.00
Lunch	\$14.00
Dinner	\$22.00
Total	\$46.00

(4) When traveling to a Tier I premium location (Atlanta, Anchorage, Baltimore, Boston, Chicago, Hawaii, New York City, San Francisco, Seattle, and Washington, DC), the traveler may choose to accept the per diem rate for out-of-state travel or to be reimbursed at the actual meal cost, with original receipts, up to \$65 per day.

When traveling to a Tier II premium location (Austin, Dallas, Houston, Los Angeles, Orlando, and San Diego), the traveler may choose to accept the per diem rate for out-of-state travel or to be reimbursed at the actual meal cost, with original receipts, up to \$56 per day.

(a) The traveler will qualify for premium rates on the day the travel begins and/or the day the travel ends only if the trip is of sufficient duration to qualify for all meals on that day.

(b) Complimentary meals of a hotel, motel and/or association and meals included in registration costs are deducted from the premium location allowance as follows:

Tier I Location

(i) If breakfast is provided deduct \$15, leaving a premium allowance for lunch and dinner of actual up to \$50.

(ii) If lunch is provided deduct \$20, leaving a premium allowance for breakfast and dinner of actual up to \$45.

(iii) If dinner is provided deduct \$30, leaving a premium allowance for breakfast and lunch of actual up to \$35.

Tier II Location

(i) If breakfast is provided deduct \$13, leaving a premium allowance for lunch and dinner of actual up to \$43.

(ii) If lunch is provided deduct \$17, leaving a premium allowance for breakfast and dinner of actual up to \$39.

(iii) If dinner is provided deduct \$26, leaving a premium allowance for breakfast and lunch of actual up to \$30.

(c) The traveler must use the same method of reimbursement for an entire day.

(d) Actual meal cost includes tips.

(e) Alcoholic beverages are not reimbursable.

(5) When traveling in foreign countries, the traveler may choose to accept the per diem rate for out-of-state travel or to be reimbursed the actual meal cost, with original receipts, not to exceed the United States Department of State Meal and

Incidental Expenses (M and IE) rate for their location.

(a) The traveler may combine the reimbursement methods during a trip; however, they must use the same method of reimbursement for an entire day.

(b) Actual meal cost includes tips.

(c) Alcoholic beverages are not reimbursable.

(6) The meal reimbursement calculation is comprised of three parts:

(a) The day the travel begins. The traveler's entitlement is determined by the time of day the traveler leaves their home base (the location the employee leaves from and/or returns to), as illustrated in the following table.

TABLE 3
The Day Travel Begins

1st Quarter a.m.	2nd Quarter a.m.	3rd Quarter p.m.	4th Quarter p.m.
12:00-5:59	6:00-11:59	12:00-5:59	6:00-11:59
*B, L, D	*L, D	*D	*no meals
In-State \$40.00	\$30.00	\$16.00	\$0
Out-of-State \$46.00	\$36.00	\$22.00	\$0

*B = Breakfast, L = Lunch, D = Dinner

(b) The days at the location.

(i) Complimentary meals of a hotel, motel, and/or association and meals included in the registration cost are deducted from the total daily meal allowance. However, continental breakfasts will not reduce the meal allowance. Please Note: For breakfast, if a hot food item is offered, it is considered a complimentary meal, no matter how it is categorized by the hotel/conference facility. The meal is considered a "continental breakfast" if no hot food items are offered.

(ii) Meals provided on airlines will not reduce the meal allowance.

(c) The day the travel ends. The meal reimbursement the traveler is entitled to is determined by the time of day the traveler returns to their home base, as illustrated in the following table.

TABLE 4
The Day Travel Ends

1st Quarter a.m.	2nd Quarter a.m.	3rd Quarter p.m.	4th Quarter p.m.
12:00-5:59	6:00-11:59	12:00-5:59	6:00-11:59
*no meals	*B	*B, L	*B, L, D
In-State \$0	\$10.00	\$24.00	\$40.00
Out-of-State \$0	\$10.00	\$24.00	\$46.00

*B = Breakfast, L = Lunch, D = Dinner

(7) An employee may be authorized by the Department Director or designee to receive a taxable meal allowance when the employee's destination is at least 100 miles from their home base and the employee does not stay overnight.

(a) Breakfast is paid when the employee leaves their home base before 6:00 a.m.

(b) Lunch is paid when the trip meets one of the following requirements:

(i) The employee is on an officially approved trip that warrants entitlement to breakfast and dinner.

(ii) The employee leaves their home base before 10 a.m. and returns after 2 p.m.

(iii) The Department Director provides prior written approval based on circumstances.

(c) Dinner is paid when the employee leaves their home base and returns at 6 p.m. or later.

(d) The allowance is not considered an absolute right of

the employee and is authorized at the discretion of the Department Director or designee.

R25-7-7. Meals for Statutory Non-Salaried State Boards.

(1) When a board meets and conducts business activities during mealtime, the cost of meals may be charged as public expense.

(2) Where salaried employees of the State of Utah or other advisors or consultants must, of necessity, attend such a meeting in order to permit the board to carry on its business, the meals of such employees, advisors, or consultants may also be paid. In determining whether or not the presence of such employees, advisors, or consultants is necessary, the boards are requested to restrict the attendance of such employees, advisors, or consultants to those absolutely necessary at such mealtime meetings.

R25-7-8. Reimbursement for Lodging.

State employees who travel on state business may be eligible for a lodging reimbursement.

(1) For stays at a conference hotel, the state will reimburse the actual cost plus tax for both in-state and out-of-state travel. The traveler must include the conference registration brochure with the Travel Reimbursement Request, form FI 51A or FI 51B.

(2) For in-state lodging at a non-conference hotel, the state will reimburse the actual cost up to \$70 per night for single occupancy plus tax except as noted in the table below:

TABLE 5
Cities with Differing Rates

Blanding	\$75.00 plus tax
Bluff	\$80.00 plus tax
Brigham City	\$75.00 plus tax
Bryce Canyon City	\$75.00 plus tax
Cedar City	\$75.00 plus tax
Ephraim	\$75.00 plus tax
Farlington	\$85.00 plus tax
Fillmore	\$75.00 plus tax
Garden City	\$80.00 plus tax
Green River	\$85.00 plus tax
Kanab	\$80.00 plus tax
Layton	\$80.00 plus tax
Logan	\$80.00 plus tax
Moab	\$100.00 plus tax
Monticello	\$80.00 plus tax
Ogden	\$80.00 plus tax
Park City/Heber City/Midway	\$90.00 plus tax
Price	\$75.00 plus tax
Provo/Orem/Lehi/American Fork	
Springville	\$85.00 plus tax
Salt Lake City Metropolitan Area (Draper to Centerville), Tooele	\$100.00 plus tax
St. George/Washington/Springdale	
Hurricane	\$80.00 plus tax
Torrey	\$80.00 plus tax
Tremonton	\$90.00 plus tax
Vernal/Roosevelt/Ballard/Naples	\$95.00 plus tax
All Other Utah Cities	\$70.00 plus tax

(3) State employees traveling less than 50 miles from their home base are not entitled to lodging reimbursement. Miles are calculated from either the departure home-base or from the destination to the traveler's home-base. The traveler may leave from one home-base and return to a different home-base. For example, if the traveler leaves from their residence, then the home-base for departure calculations is their residence. If the traveler returns to where they normally work (ie. Cannon Health Building), then the home-base for arrival calculations is the Cannon Health Building.

(a) In some cases, agencies must use judgement to determine a traveler's home-base. The following are some things to consider when determining a traveler's home-base.

(i) Is the destination less than 50 miles from the traveler's home or normal work location? If the destination is less than 50

miles from either the traveler's home or from their normal work location, then generally the employee should not be reimbursed for lodging.

(ii) Is there a valid business reason for the traveler to go to the office (or to some other location) before driving to the destination?

(iii) Is the traveler required to work at the destination the next day?

(iv) Is the traveler going directly home after the trip, or is there a valid business reason for the traveler to first go to the office (or to some other location)?

(iv) Even if "it is not specifically against policy", would the lodging be considered necessary, reasonable and in the best interest of the State?

(4) When the State of Utah pays for a person from out-of-state to travel to Utah, the in-state lodging per diem rates will apply.

(5) For out-of-state travel stays at a non-conference hotel, the state will reimburse the actual cost per night plus tax, not to exceed the federal lodging rate for the location. These reservations must be made through the State Travel Office.

(6) The state will reimburse the actual cost per night plus tax for in-state or out-of-state travel stays where the department/traveler makes reservations through the State Travel Office.

(7) Lodging is reimbursed at the rates listed in Table 5 for single occupancy only. For double state employee occupancy, add \$20, for triple state employee occupancy, add \$40, for quadruple state employee occupancy, add \$60.

(8) Exceptions will be allowed for unusual circumstances when approved in writing by the Department Director or designee prior to the trip.

(a) For out-of-state travel, the approval may be on the form FI 5.

(b) Attach the written approval to the Travel Reimbursement Request, form FI 51B or FI 51D.

(9) A proper receipt for lodging accommodations must accompany each request for reimbursement.

(a) The tissue copy of the charge receipt is not acceptable.

(b) A proper receipt is a copy of the registration form generally used by motels and hotels which includes the following information: name of motel/hotel, street address, town and state, telephone number, current date, name of person/persons staying at the motel/hotel, date(s) of occupancy, amount and date paid, signature of agent, number in the party, and (single, double, triple, or quadruple occupancy).

(10) When lodging is required, travelers should stay at the lodging facility nearest to the meeting/training/work location where state lodging per diem rates are accepted in order to minimize transportation costs.

(11) Travelers may also elect to stay with friends or relatives or use their personal campers or trailer homes instead of staying in a hotel.

(a) With proof of staying overnight away from home on approved state business, the traveler will be reimbursed the following:

(i) \$25 per night with no receipts required or

(ii) Actual cost up to \$40 per night with a signed receipt from a facility such as a campground or trailer park, not from a private residence.

(12) Travelers who are on assignment away from their home base for longer than 90 days will be reimbursed as follows:

(a) First 30 days - follow regular rules for lodging and meals. Lodging receipt is required.

(b) After 30 days - \$46 per day for lodging and meals. No receipt is required.

State employees who travel on state business may be eligible for a reimbursement for incidental expenses.

(1) Travelers will be reimbursed for actual out-of-pocket costs for incidental items such as baggage tips, transportation costs, maid service, and bellman.

(a) Tips for doormen and meals are not reimbursable.

(b) No other gratuities will be reimbursed.

(c) Include an original receipt for each individual incidental item above \$19.99.

(2) The state will reimburse incidental ground transportation and parking expenses.

(a) Travelers shall document all official business use of taxi, bus, parking, and other ground transportation including dates, destinations, parking locations, receipts, and amounts.

(b) Personal use of such transportation to restaurants is not reimbursable.

(c) The maximum that airport parking will be reimbursed is the economy lot parking rate at the airport they are flying out of. A receipt is required for amounts of \$20 or more.

(3) Registration should be paid in advance on a state warrant or with a state purchase card.

(a) A copy of the approved FI 5 form must be included with the Payment Voucher for out-of-state registrations.

(b) If a traveler must pay the registration when they arrive, the agency is expected to process a Payment Voucher and have the traveler take the state warrant with them.

(4) Telephone calls related to state business are reimbursed at the actual cost.

(a) The traveler shall list the amount of these calls separately on the Travel Reimbursement Request, form FI 51A or FI 51B.

(b) The traveler must provide an original lodging receipt or original personal phone bill showing the phone number called and the dollar amount for business telephone calls and personal telephone calls.

(5) Allowances for personal telephone calls made while out of town on state business overnight may be based on the number of nights away from home. The traveler must provide an original lodging receipt or original personal phone bill showing the phone number called and the dollar amount for personal telephone calls.

(a) Four nights or less - actual amount up to \$2.50 per night.

(b) Five to eleven nights - actual amount up to \$20.00

(c) Twelve nights to thirty nights - actual amount up to \$30.00

(d) More than thirty days - start over

(6) Actual laundry expenses up to \$18.00 per week will be allowed for trips in excess of six consecutive nights, beginning after the sixth night out.

(a) The traveler must provide receipts for the laundry expense.

(b) For use of coin-operated laundry facilities, the traveler must provide a list of dates, locations, and amounts.

(7) An amount of \$5 per day will be allowed for travelers away in excess of six consecutive nights beginning after the sixth night out.

(a) This amount covers miscellaneous incidentals not covered in this rule.

(b) This allowance is not available for travelers going to conferences.

(8) Travel on a Weekend during Trips of More Than 10 Nights' Duration - A department may provide for employees to return home on a weekend when a trip extends longer than ten nights. Reimbursements may be given for costs allowed by these policies.

R25-7-9. Reimbursement for Incidentals.

R25-7-10. Reimbursement for Transportation.

State employees who travel on state business may be

eligible for a transportation reimbursement.

(1) Air transportation is limited to Air Coach or Excursion class. Priority seating charges will not be reimbursed unless preapproved by the department director or designee.

(a) All reservations (in-state and out-of-state) should be made through the State Travel Office for the least expensive air fare available at the time reservations are made.

(b) Only one change fee per trip will be reimbursed.

(c) The explanation for the change and any other exception to this rule must be given and approved by the Department Director or designee.

(d) In order to preserve insurance coverage and because of federal security regulations, travelers must fly on tickets in their names only.

(2) Travelers may be reimbursed for mileage to and from the airport and long-term parking or away-from-the-airport parking.

(a) The maximum reimbursement for parking, whether travelers park at the airport or away from the airport, is the economy lot parking rate at the airport they are flying out of.

(b) The parking receipt must be included with the Travel Reimbursement Request, form FI 51A or FI 51B for amounts of \$20 or more.

(c) Travelers may be reimbursed for mileage to and from the airport to allow someone to drop them off and to pick them up.

(3) Travelers may use private vehicles with approval from the Department Director or designee.

(a) Only one person in a vehicle may receive the reimbursement, regardless of the number of people in the vehicle.

(b) Reimbursement for a private vehicle will be at the rate of 38 cents per mile or 56 cents per mile if a state vehicle is not available to the employee.

(i) To determine which rate to use, the traveler must first determine if their department has an agency vehicle (long-term leased vehicle from Fleet Operations) that meets their needs and is reasonably available for the trip (does not apply to special purpose vehicles). If reasonably available, the employee should use an agency vehicle. If an agency vehicle that meets their needs is not reasonably available, the agency may approve the traveler to use either a daily pool fleet vehicle or a private vehicle. If a daily pool fleet vehicle is not reasonably available, the traveler may be reimbursed at 56 cents per mile.

(ii) If a trip is estimated to average 100 miles or more per day, the agency should approve the traveler to rent a daily pool fleet vehicle if one is reasonably available. Doing so will cost less than if the traveler takes a private vehicle. If the agency approves the traveler to take a private vehicle, the employee will be reimbursed at the lower rate of 38 cents per mile.

(c) Agencies may establish a reimbursement rate that is more restrictive than the rate established in this Section.

(d) Exceptions must be approved in writing by the Director of Finance.

(e) Mileage will be computed using Mapquest or other generally accepted map/route planning website, or from the latest official state road map and will be limited to the most economical, usually traveled routes.

(f) If the traveler uses a private vehicle on official state business and is reimbursed for mileage, parking charges may be reimbursed as an incidental expense.

(g) An approved Private Vehicle Usage Report, form FI 40, should be included with the department's payroll documentation reporting miles driven on state business during the payroll period.

(h) Departments may allow mileage reimbursement on an approved Travel Reimbursement Request, form FI 51A or FI 51B, if other costs associated with the trip are to be reimbursed at the same time.

(4) A traveler may choose to drive instead of flying if preapproved by the Department Director or designee.

(a) If the traveler drives a state-owned vehicle, the traveler may be reimbursed for meals and lodging for a reasonable amount of travel time; however, the total cost of the trip must not exceed the equivalent cost of the airline trip. The traveler may also be reimbursed for incidental expenses such as toll fees and parking fees.

(b) If the traveler drives a privately-owned vehicle, reimbursement will be at the rate of 38 cents per mile or the airplane fare, whichever is less, unless otherwise approved by the Department Director or designee.

(i) The lowest fare available within 30 days prior to the departure date will be used when calculating the cost of travel for comparison to private vehicle cost.

(ii) An itinerary printout which is available through the State Travel Office is required when the traveler is taking a private vehicle.

(iii) The traveler may be reimbursed for meals and lodging for a reasonable amount of travel time; however, the total cost of the trip must not exceed the equivalent cost of an airline trip.

(iv) If the traveler uses a private vehicle on official state business and is reimbursed for mileage, parking charges may be reimbursed as an incidental expense.

(c) When submitting the reimbursement form, attach a schedule comparing the cost of driving with the cost of flying. The schedule should show that the total cost of the trip driving was less than or equal to the total cost of the trip flying.

(d) If the travel time taken for driving during the employee's normal work week is greater than that which would have occurred had the employee flown, the excess time used will be taken as annual leave and deducted on the Time and Attendance System.

(5) Use of rental vehicles must be approved in writing in advance by the Department Director or designee.

(a) An exception to advance approval of the use of rental vehicles shall be fully explained in writing with the request for reimbursement and approved by the Department Director or designee.

(b) Detailed explanation is required if a rental vehicle is requested for a traveler staying at a conference hotel.

(c) When making rental car arrangements through the State Travel Office, reserve the vehicle you need. Upgrades in size or model made when picking up the rental vehicle will not be reimbursed.

(i) State employees should rent vehicles to be used for state business in their own names, using the state contract so they will have full coverage under the state's liability insurance.

(ii) Rental vehicle reservations not made through the State Travel Office must be approved in advance by the Department Director or designee.

(iii) The traveler will be reimbursed the actual rate charged by the rental agency.

(iv) The traveler must have approval for a rental car in order to be reimbursed for rental car parking.

(6) Travel by private airplane must be approved in advance by the Department Director or designee.

(a) The pilot must certify to the Department Director or designee that the pilot is certified to fly the plane being used for state business.

(b) If the plane is owned by the pilot/employee, the pilot must certify the existence of at least \$500,000 of liability insurance coverage.

(c) If the plane is a rental, the pilot must provide written certification from the rental agency that the insurance covers the traveler and the state as insured. The insurance must be adequate to cover any physical damage to the plane and at least \$500,000 for liability coverage.

(d) Reimbursement will be made at 56 cents per mile.

(e) Mileage calculation is based on air mileage and is limited to the most economical, usually-traveled route.

(7) Travel by private motorcycle must be approved prior to the trip by the Department Director or designee. Travel will be reimbursed at 20 cents per mile.

(8) A car allowance may be allowed in lieu of mileage reimbursement in certain cases. Prior written approval from the Department Director, the Executive Director of the Department of Administrative Services, and the Governor is required.

63A-3-107

Notice of Continuation April 15, 2013

63A-3-106

R33. Administrative Services, Purchasing and General Services.**R33-4. General Procurement Provisions, Prequalifications, Specifications, and Small Purchases.****R33-4-101. Prequalification of Potential Vendors.**

General procurement provisions, including prequalification of potential vendors, approved vendor lists, and small purchases shall be conducted in accordance with the requirements set forth in Sections 63G-6a-402 through 408. All definitions in the Utah Procurement Code shall apply to this Rule unless otherwise specified in this Rule. This administrative rule provides additional requirements and procedures and must be used in conjunction with the Procurement Code.

R33-4-101a. Vendors with Exclusive Authorization to Bid.

(1) The requirements of this rule shall only apply when a procurement unit issues a prequalification for potential vendors as set forth in Utah Code 63G-6a-403 for all qualified, responsive and responsible vendors with an exclusive dealership, franchise, distributorship, or other arrangement, from a manufacturer identifying the vendor as the only one authorized to submit bids or quotes for the specified procurement item within the State of Utah or a region within the State of Utah.

(a) Under the provisions of this rule, no vendor described in (1) may be excluded from the list of prequalified vendors, unless a determination is made by the procurement unit that a vendor is not qualified, responsive or responsible.

(b) The request for statements of qualifications shall indicate that all vendors on the prequalified vendor list will be invited to submit bids or quotes.

(2) After the prequalified list has been compiled, a procurement unit may award a contract by obtaining bids or quotes from all vendors on the prequalified list taking into consideration a best value analysis that includes, as applicable:

- (a) cost;
- (b) compatibility with existing equipment, technology, software, accessories, replacement parts, or service;
- (c) training, knowledge and experience of employees of the procurement unit and of the vendors;
- (d) past performance of vendors and pertaining to the procurement item being purchased;
- (e) the costs associated with transitioning from an existing procurement item to a new procurement item; or
- (f) other factors determined in writing by the chief procurement officer or head of a procurement unit with independent procurement authority.

(3) Procurement units must follow the requirements in R33-4-110 when obtaining quotes and the requirements in Part 6 of the Utah Procurement Code when obtaining bids.

(4) An exception to the requirements of this rule may be authorized by the chief procurement officer or head of a procurement unit with independent procurement authority.

R33-4-102. Thresholds for Approved Vendor Lists.

(1) Public entities may establish approved vendor lists in accordance with the requirements of Sections 63G-6a-403 and 63G-6a-404.

(a) Contracts or purchases from an approved vendor list may not exceed the following thresholds:

- (i) Construction Projects: \$2,500,000 per contract, for direct construction costs, including design and allowable furniture or equipment costs, awarded using an invitation for bids or a request for proposals;
- (ii) Professional and General Services, including architectural and engineering services: \$100,000; and
- (iii) Information Technology: \$500,000

(b) Thresholds for other approved vendor lists may be established by the Chief Procurement Officer, or as applicable, the head of a procurement unit with independent procurement

authority.

R33-4-103. Specifications.

(1) Public entities shall include in solicitation documents specifications for the procurement item(s).

(2) Specifications shall be drafted with the objective of clearly describing the procurement unit's requirements and encouraging competition.

(a) Specifications shall emphasize the functional or performance criteria necessary to meet the needs of the procurement unit.

(3) Persons with a conflict of interest, or who anticipate responding to the proposal for which the specifications are written, may not participate in writing specifications. Procurement units may retain the services of a person to assist in writing specifications, scopes of work, requirements, qualifications, or other components of a solicitation. However the person assisting in writing specifications shall not, at any time during the procurement process, be employed in any capacity by, nor have an ownership interest in, an individual, public or private corporation, governmental entity, partnership, or unincorporated association bidding on or submitting a proposal in response to the solicitation.

(a) Rule R33-4-104(3) does not apply to the following:

- (i) a design build construction project; and
- (ii) other procurements determined in writing by the chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority.

(b) Violations of this Rule R33-4-104(3) may result in:

- (i) the bidder or offeror being declared ineligible for award of the contract;
- (ii) the solicitation being canceled;
- (iii) termination of an awarded contract; or
- (iv) any other action determined to be appropriate by the chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority.

(4) Brand Name or Equal Specifications.

(a) Brand name or equal specifications may be used when:

- (i) "or equivalent" reference is included in the specification; and,
- (ii) as many other brand names as practicable are also included in the specification.

(b) Brand name or equal specifications shall include a description of the particular design and functional or performance characteristics which are required. Specifications unique to the brands shall be described in sufficient detail that another person can respond with an equivalent brand.

(c) When a manufacturer's specification is used in a solicitation, the solicitation shall state the minimum acceptable requirements of an equivalent. When practicable, the procurement unit shall name at least three manufacturer's specifications.

(5) Brand Name Sole Source Requirements.

(a) If only one brand can meet the requirement, the procurement unit shall conduct the procurement in accordance with 63G-6a-802 and shall solicit from as many providers of the brand as practicable; and.

(b) If there is only one provider that can meet the requirement, the procurement unit shall conduct the procurement in accordance with Section 63G-6a-802.

R33-4-104. Small Purchases.

Small purchases shall be conducted in accordance with the requirements set forth in Section 63G-6a-408. This administrative rule provides additional requirements and procedures and must be used in conjunction with the Procurement Code.

(1) "Small Purchase" means a procurement conducted by a procurement unit that does not require the use of a standard

procurement process.

(2) Small Purchase thresholds:

(a) The "Individual Procurement" threshold is a maximum amount of \$1,000 for a procurement item;

(i) For individual procurement item(s) costing up to \$1,000, an entity subject to these rules may select the best source by direct award and without seeking competitive bids or quotes.

(b) The single procurement aggregate threshold is a maximum amount of \$5,000 for multiple procurement item(s) purchased from one source at one time; and

(c) The annual cumulative threshold from the same source is a maximum amount of \$50,000.

(3) Whenever practicable, the Division of Purchasing and General Services and entities subject to these rules shall use a rotation system or other system designed to allow for competition when using the small purchases process.

R33-4-105. Small Purchases Threshold for Design Professional Services.

(1) The small purchase threshold for design professional services is a maximum amount of \$100,000.

(2) Design professional services may be procured up to a maximum of \$100,000, by direct negotiation after reviewing the qualifications of a minimum of three design professional firms.

(3) Procurement units that are subject to these rules shall include minimum specifications when using the small purchase threshold for design professional services.

(4) Executive Branch procurement units, to the extent they do not have independent procurement authority, shall involve the Division of Purchasing in the qualification process described under Section 63G-6a-403, the approved vendor list process described under Section 63G-6a-404, and the evaluation and fee negotiation process described in Part 15 of the Utah Procurement Code in the procurement of design professional services.

(5) A procurement unit using this rule must comply with the following:

(a) Utah Code 63G-6a-408 (8) -- Prohibition against dividing a procurement into one or more smaller procurements;

(b) Utah Code 63G-6a, Part 24 -- Unlawful Conduct and Penalties;

(c) R33-24-104 -- Socialization with Vendors and Contractors;

(d) R33-24-105 -- Financial Conflict of Interests Prohibited;

(e) R33-24-106 -- Personal Relationship, Favoritism, or Bias Participation Prohibitions; and

(f) All other applicable laws and rules.

R33-4-106. Small Purchases Threshold for Construction Projects.

(1) The small construction project threshold is a maximum of \$2,500,000 for direct construction costs, including design and allowable furniture or equipment costs;

(2) Procurement units subject to these rules shall include minimum specifications when using the small purchases threshold for construction projects.

(3) Executive Branch procurement units, to the extent they do not have independent procurement authority, shall involve the Division of Purchasing in the qualification process described under Section 63G-6a-403, the approved vendor list process described under Section 63G-6a-404, and the obtaining of quotes, bids or proposals in the procurement of small construction projects.

(4) The chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority, may procure small construction projects up to a maximum of \$25,000 by direct award without seeking

competitive bids or quotes after documenting that all building code approvals, licensing requirements, permitting and other construction related requirements are met. The awarded contractor must certify that it is capable of meeting the minimum specifications of the project.

(5) The chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority, may procure small construction projects costing more than \$25,000 up to a maximum of \$100,000 by obtaining a minimum of two competitive quotes that include minimum specifications and shall award to the contractor with the lowest quote that meets the specifications after documenting that all applicable building code approvals, licensing requirements, permitting and other construction related requirements are met.

(6) Under this Rule, the chief procurement officer or head of a procurement unit with independent procurement authority shall procure small construction projects costing more than \$100,000 up to a maximum of \$2.5 million through a two-stage process. Stage one, qualify vendors under Section 63G-6a-403 and develop an Approved Vendor List under Section 63G-6a-404. Stage two, issue to all vendors, qualified and approved in stage one, an invitation for bids or request for proposals and use the procedures set forth therein to award a contract.

(7) A procurement unit using this rule must comply with the following:

(a) Utah Code 63G-6a-408 (8) -- Prohibition against dividing a procurement into one or more smaller procurements;

(b) Utah Code 63G-6a, Part 24 -- Unlawful Conduct and Penalties;

(c) R33-24-104 -- Socialization with Vendors and Contractors;

(d) R33-24-105 -- Financial Conflict of Interests Prohibited;

(e) R33-24-106 -- Personal Relationship, Favoritism, or Bias Participation Prohibitions; and

(f) All other applicable laws and rules.

R33-4-107. Quotes for Small Purchases from \$1,001 to \$50,000.

(1) For procurement item(s) where the cost is greater than \$1,000 but up to a maximum of \$5,000, an entity subject to these rules shall obtain a minimum of two competitive quotes that include minimum specifications and shall purchase the procurement item from the responsible vendor offering the lowest quote that meets the specifications.

(2) For procurement item(s) where the cost is greater than \$5,000 up to a maximum of \$50,000, a procurement unit with independent procurement authority that is subject to these rules or the Division of Purchasing and General Services on behalf of an executive branch procurement unit without independent procurement authority, as applicable, shall obtain a minimum of two competitive quotes that include minimum specifications and shall purchase the procurement item from the responsible vendor offering the lowest quote that meets the specifications.

(3) For procurement item(s) costing over \$50,000, a procurement unit with independent procurement authority that is subject to these rules or the Division of Purchasing and General Services on behalf of an executive branch procurement unit without independent procurement authority, as applicable, shall conduct an invitation for bids or other procurement process outlined in the Utah Procurement Code.

(4) Limited Purchasing Delegation for Small Purchases. The Division of Purchasing and General Services may delegate limited purchasing authority for small purchases costing more than \$5,000 up to a maximum of \$50,000, to an executive branch procurement unit provided that the executive branch procurement unit enters into an agreement with the Division outlining the duties and responsibilities of the unit to comply with applicable laws, rules, policies and other requirements of

the Division.

(5) The names of the vendors offering quotations and bids and the date and amount of each quotation or bid shall be recorded and maintained as a governmental record.

(6) A procurement unit using this rule must comply with the following:

- (a) Utah Code 63G-6a-408 (8) -- Prohibition against dividing a procurement into one or more smaller procurements;
- (b) Utah Code 63G-6a, Part 24 -- Unlawful Conduct and Penalties;
- (c) R33-24-104 -- Socialization with Vendors and Contractors;
- (d) R33-24-105 -- Financial Conflict of Interests Prohibited;
- (e) R33-24-106 -- Personal Relationship, Favoritism, or Bias Participation Prohibitions; and
- (f) All other applicable laws and rules.

R33-4-108. Small Purchases of Professional Service Providers and Consultants.

(1) The small purchase threshold for professional service providers and consultants is a maximum amount of \$100,000.

(2) After reviewing the qualifications of a minimum of two professional service providers or consultants, the chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority, may obtain professional services or consulting services:

- (a) up to a maximum of \$50,000 by direct negotiation; or
- (b) over \$50,000 up to a maximum of \$100,000 by obtaining a minimum of two quotes.

(3) Executive Branch procurement units, to the extent they do not have independent procurement authority, shall involve the Division of Purchasing at the beginning of the quote or solicitation process, in the procurement of professional services or consulting services.

(4) A procurement unit using this rule must comply with the following:

- (a) Utah Code 63G-6a-408 (8) -- Prohibition against dividing a procurement into one or more smaller procurements;
- (b) Utah Code 63G-6a, Part 24 -- Unlawful Conduct and Penalties;
- (c) R33-24-104 -- Socialization with Vendors and Contractors;
- (d) R33-24-105 -- Financial Conflict of Interests Prohibited;
- (e) R33-24-106 -- Personal Relationship, Favoritism, or Bias Participation Prohibitions;
- (f) R33-4-103(3) -- Persons with a conflict of interest, or who anticipate responding to the proposal for which the specifications are written, may not participate in writing specifications; and
- (g) All other applicable laws and rules.

R33-4-109. Procedures When Two Bids, Quotes, or Statement of Qualifications Cannot Be Obtained.

(1) The requirement that a procurement unit obtain a minimum of two bids, quotes, or statements of qualifications is waived when only one vendor submits a bid, provides a quote, or submits a statement of qualifications under the following circumstances:

(a) A solicitation meeting the public notice requirements of Utah Code 63G-6a-406 results in only one vendor willing to bid, provide quotes, or submit a statement of qualifications;

(b) Vendors on a multiple award contract, prequalification, or approved vendor list fail to bid, provide quotes, or submit statements of qualifications; or

(c) A procurement unit makes a reasonable effort to invite all known vendors to bid, provide quotes, or submit statements of qualifications and all but one of the invited vendors contacted

fail to bid, provide quotes, or submit statements of qualifications.

(i) Reasonable effort shall mean:

(A) Public notice under Utah Code 63G-6a-406;

(B) An electronic or manual search for vendors within the specific industry, fails to identify any vendors willing to submit bids or provide quotes;

(C) Contacting industry-specific associations or manufacturers for the names of vendors within that industry; or

(D) A determination by the chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority that a reasonable effort has been made.

(2) Before accepting a bid or quote from only one vendor, the chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority, shall consider:

(a) whether pricing is fair and reasonable as set forth in R33-6-109(1);

(b) canceling the procurement as set forth in R33-9-103; and

(c) bid security requirement as set forth in R33-11-202.

(3) The chief procurement officer, or as applicable, the head of a procurement unit with independent procurement authority, shall maintain records documenting the circumstances and reasons why fewer than two bids, quotes, or statements of qualifications were obtained.

R33-4-110. Use of Electronic, Telephone, or Written Quotes.

(1) Quote means an informal purchasing process which solicits pricing information from several sources.

(2) Quotation means a statement of price, terms of sale, and description of goods or services offered by a vendor to a procurement unit; and

(a) A quotation is nonbinding and does not obligate a procurement unit to make a purchase or a vendor to make a sale.

(3) Electronic quote means a price quotation provided by a vendor through electronic means such as the internet, online sources, email, an interactive web-based market center, or other technology.

(4) A procurement unit may use electronic, telephone, or written quotes to obtain pricing and other information for a procurement item within the small purchase or approved vendor threshold limits established by rule provided:

(a) Quotations are for the same procurement item, including terms of sale, description, and quantity of goods or services;

(b) It is disclosed to the vendor that the quote is for a governmental entity and an inquiry is made as to whether the vendor is willing to provide a price discount to a governmental entity; and

(c) The procurement unit maintains a public record that includes:

(i) The name of each vendor supplying a quotation; and

(ii) The amount of each vendor's quotation.

(5) An executive branch procurement unit, subject to this rule:

(a) May obtain electronic, telephone, or written quotations for a procurement item costing less than \$5,000;

(b) Shall send a request to obtain quotations for a procurement item costing more than \$5,000 to the division of state purchasing;

(i) The division shall obtain quotations for executive branch procurement units for procurement items costing more than \$5,000; and

(c) May not obtain quotations for a procurement item available on state contract unless otherwise specified in the terms of a solicitation or contract or authorized by rule or statute.

Notice of Continuation July 8, 2014

R33. Administrative Services, Purchasing and General Services.**R33-7. Request for Proposals.****R33-7-101. Conducting the Request for Proposals Standard Procurement Process.**

Request for Proposals shall be conducted in accordance with the requirements set forth in Sections 63G-6a-701 through 63G-6a-711, Utah Procurement Code. All definitions in the Utah Procurement Code shall apply to this Rule unless otherwise specified in this Rule. This administrative rule provides additional requirements and procedures and must be used in conjunction with the Procurement Code.

R33-7-102. Content of the Request for Proposals.

(1) In addition to the requirements set forth under Section 63G-6a-703, the request for proposals solicitation shall include:

- (a) a description of the format that offerors are to use when submitting a proposal including any required forms; and
 - (b) instructions for submitting price.
- (2) The conducting procurement unit is responsible for all content contained in the request for proposals solicitation documents, including:
- (a) reviewing all schedules, dates, and timeframes;
 - (b) approving content of attachments;
 - (c) providing the issuing procurement unit with redacted documents, as applicable;
 - (d) assuring that information contained in the solicitation documents is public information; and
 - (e) understanding the scope of work, all evaluation criteria, requirements, factors, and formulas to be used in determining the scoring of proposals; and
 - (f) for executive branch procurement units the requirements of Section 63G-6a-402(6).

R33-7-103. Multiple Stage RFP Process.

(1) In addition to the requirements set forth under Section 63G-6a-710, the multiple stage request for proposals solicitation shall include:

- (a) a description of the stages and the criteria and scoring that will be used to evaluate proposals at each stage; and
- (b) the methodology used to determine which proposals shall be disqualified from additional stages.

R33-7-104. Exceptions to Terms and Conditions Published in the RFP.

(1) Offerors requesting exceptions and/or additions to the Standard Terms and Conditions published in the RFP must include the exceptions and/or additions with the proposal response.

(2) Exceptions and/or additions submitted after the date and time for receipt of proposals will not be considered unless there is only one offeror that responds to the RFP, the exceptions and/or additions have been approved by the Attorney General's Office or other applicable legal counsel, and it is determined by the head of the issuing procurement unit that it is not beneficial to the procurement unit to republish the solicitation.

(3) Offerors may not submit requests for exceptions and/or additions by reference to a vendor's website or URL

(4) A procurement unit may refuse to negotiate exceptions and/or additions:

- (a) that are determined to be excessive;
- (b) that are inconsistent with similar contracts of the procurement unit;
- (c) to warranties, insurance, indemnification provisions that are necessary to protect the procurement unit after consultation with the Attorney General's Office or other applicable legal counsel;
- (d) where the solicitation specifically prohibits exceptions

and/or additions; or

(e) that are not in the best interest of the procurement unit.

(5) If negotiations are permitted, a procurement unit may negotiate exceptions and/or additions with offerors, beginning in order with the offeror submitting the fewest exceptions and/or additions to the offeror submitting the greatest number of exceptions and/or additions. Contracts may become effective as negotiations are completed.

(6) If, in the negotiations of exceptions and/or additions with a particular offeror, an agreement is not reached, after a reasonable amount of time, as determined by the procurement unit, the negotiations may be terminated and a contract not awarded to that offeror and the procurement unit may move to the next eligible offeror.

R33-7-105. Protected Records.

(1)(a) The following are protected records and may be redacted by the vendor subject to the procedures described below in accordance with the Governmental Records Access and Management Act (GRAMA) Title 63G, Chapter 2 of the Utah Code. (a) Trade Secrets, as defined in Section 13-24-2 of the Utah Code.

(b) Commercial information or non-individual financial information subject to the provisions of Section 63G-2-305(2).

(c) Other Protected Records under GRAMA.

(2) Process For Requesting Non-Disclosure. Any person requesting that a record be protected shall include with the proposal or submitted document:

(a) a written indication of which provisions of the proposal or submitted document are claimed to be considered for business confidentiality or protected (including trade secrets or other reasons for non-disclosure under GRAMA); and

(b) a concise statement of the reasons supporting each claimed provision of business confidentiality or protected.

R33-7-106. Notification.

(1) A person who complies with Rule R33-7-105 shall be notified by the procurement unit prior to the public release of any information for which a claim of confidentiality has been asserted.

(2) Except as provided by court order, the procurement unit to whom the request for a record is made under GRAMA, may not disclose a record claimed to be protected under Rule R33-7-105 but which the procurement unit or State Records Committee determines should be disclosed until the period in which to bring an appeal expires or the end of the appeals process, including judicial appeal, is reached. This Rule R33-7-106 does not apply where the claimant, after notice, has waived the claim by not appealing or intervening before the State Records Committee. To the extent allowed by law, the parties to a dispute regarding the release of a record may agree in writing to an alternative dispute resolution process.

(3) Any allowed disclosure of public records submitted in the request for proposal process will be made only after the selection of the successful offeror(s) has been made public in compliance with Section 63G-6a-709.5.

R33-7-107. Process for Submitting Proposals with Protected Business Confidential Information.

(1) If an offeror submits a proposal that contains information claimed to be business confidential or protected information, the offeror must submit two separate proposals:

(a) One redacted version for public release, with all protected business confidential information either blacked-out or removed, clearly marked as "Redacted Version"; and

(b) One non-redacted version for evaluation purposes clearly marked as "Protected Business Confidential."

(i) Pricing may not be classified as business confidential and will be considered public information.

(ii) An entire proposal may not be designated as "PROTECTED", "CONFIDENTIAL" or "PROPRIETARY" and shall be considered non-responsive unless the offeror removes the designation.

R33-7-201. Pre-Proposal Conferences and Site Visits.

(1) Mandatory pre-proposal conferences and site visits may be held to explain the procurement requirements in accordance with the following:

(a) Except as authorized in writing by the chief procurement officer or the head of a procurement unit with independent procurement authority, pre-proposal conferences and site visits must require mandatory attendance by all offerors.

(b) Except as authorized in writing by the chief procurement officer or the head of a procurement unit with independent procurement authority, pre-proposal conferences and site visits allowing optional attendance by offerors are not permitted.

(c) A pre-proposal conference may be attended via the following:

- (i) attendance in person;
- (ii) teleconference participation;
- (iii) webinar participation;

(iv) participation through other electronic media approved by the chief procurement officer or head of a procurement unit with independent procurement authority.

(d) Mandatory site visits must be attended in person.

(e) All pre-proposal conferences and site visits must be attended by an authorized representative of the person or vendor submitting a proposal and as may be further specified in the procurement documents.

(f) The solicitation must state that failure to attend a mandatory pre-proposal conference shall result in the disqualification of any offeror that does not have an authorized representative attend the entire duration of the mandatory pre-proposal conference.

(g) The solicitation must state that failure to attend a mandatory site visit shall result in the disqualification of any offeror that does not have an authorized representative attend the entire duration of the mandatory site visit.

(h) At the discretion of the conducting procurement unit, audio or video recordings of pre-proposal conferences and site visits may be used.

(i) Listening to or viewing audio or video recordings of a mandatory pre-proposal conference or site visit may not be substituted for attendance. If the chief procurement officer or the head of a procurement unit with independent procurement authority grants an exception to the mandatory requirement in writing, the procurement unit may require all offerors that do not have an authorize representative in attendance for the entire pre-proposal conference or site visit to review any audio or video recording made.

(2)(a) If a pre-proposal conference or site visit is held, the conducting procurement unit shall maintain:

(i) an attendance log including the name of each attendee, the entity the attendee is representing, and the attendee's contact information;

(ii) minutes of the pre-proposal conference or site visit; and

(iii) copies of any documents distributed by the conducting procurement unit to the attendees at the pre-proposal conference or site visit.

(b) The issuing procurement unit shall publish as an addendum to the solicitation:

- (i) the attendance log;
- (ii) minutes of the pre-proposal conference or site visit;
- (iii) copies of any documents distributed to attendees at the pre-proposal conference or site visit; and
- (iv) any verbal modifications made to any of the

solicitation documents. All verbal modifications to the solicitation documents shall be reduced to writing.

R33-7-301. Addenda to Request for Proposals.

Addenda to the Request for Proposals may be made for the purpose of:

- (a) making changes to:
 - (i) the scope of work;
 - (ii) the schedule;
 - (iii) the qualification requirements;
 - (iv) the criteria;
 - (v) the weighting; or
 - (vi) other requirements of the Request for Proposal.
- (b) Addenda shall be published within a reasonable time

prior to the deadline that proposals are due, to allow prospective offerors to consider the addenda in preparing proposals. Publication at least 5 calendar days prior to the deadline that proposals are due shall be deemed a reasonable time. Minor addenda and urgent circumstances may require a shorter period of time.

(2) After the due date and time for submitting a response to Request for Proposals, at the discretion of the chief procurement officer or head of a procurement unit with independent procurement authority, addenda to the Request for Proposals may be limited to offerors that have submitted proposals, provided the addenda does not make a substantial change to the Request for Proposals that, in the opinion of the chief procurement officer or head of a procurement unit with independent procurement authority likely would have impacted the number of Offerors responding to the original publication of the Request for Proposals.

R33-7-401. Modification or Withdrawal of Proposal Prior to Deadline.

A proposal may be modified or withdrawn prior to the established due date and time for responding.

R33-7-402. Proposals and Modifications, Delivery and Time Requirements.

Except as provided in Rule R33-7-402(3), the following shall apply:

(1) proposals and modifications to a proposal submitted electronically or by physical delivery, after the established due date and time, will not be accepted for any reason.

(2) When submitting a proposal or modification to a proposal electronically, offerors must allow sufficient time to complete the online forms and upload documents. The solicitation will end at the closing time posted in the electronic system. If an offeror is in the middle of uploading a proposal when the closing time arrives, the system should stop the process and the proposal or modification to a proposal will not be accepted.

(3) When submitting a proposal or modification to a proposal by physical delivery (U.S. Mail, courier service, hand-delivery, or other physical means) offerors are solely responsible for meeting the deadline. Delays caused by a delivery service or other physical means will not be considered as an acceptable reason for a proposal or modification to a proposal being late.

(a) All proposals or modifications to proposals received by physical delivery will be date and time stamped by the procurement unit.

(4) To the extent that an error on the part of the procurement unit or an employee of a procurement unit results in a proposal or modification to a proposal not being received by the established due date and time, the proposal or modification to a proposal shall be accepted as being on time.

R33-7-403. Errors in Proposals.

The following shall apply to the correction or withdrawal

of an unintentionally erroneous proposal, or the cancellation of an award or contract that is based on an unintentionally erroneous proposal. A decision to permit the correction or withdrawal of a proposal or the cancellation of an award or a contract shall be supported in a written document, signed by the chief procurement officer or head of a procurement unit with independent procurement authority.

(1) Mistakes attributed to an offeror's error in judgment may not be corrected.

(2) Unintentional errors not attributed to an offeror's error in judgment may be corrected if it is in the best interest of the procurement unit and correcting the error maintains the fair treatment of other offerors.

(a) Examples include:

(i) missing signatures,

(ii) missing acknowledgement of an addendum;

(iii) missing copies of professional licenses, bonds, insurance certificates, provided that copies are submitted by the deadline established by the chief procurement officer or head of a procurement unit with independent procurement authority to correct this mistake;

(iv) typographical errors;

(v) mathematical errors not affecting the total proposed price; or

(vi) other errors deemed by the chief procurement officer or head of a procurement unit with independent procurement authority to be immaterial or inconsequential in nature.

(3) Unintentional errors discovered after the award of a contract may only be corrected if, after consultation with the chief procurement officer or head of a procurement unit with independent procurement authority and the attorney general's office or other applicable legal counsel, it is determined that the correction of the error does not violate the requirements of the Utah Procurement Code or these administrative rules.

R33-7-501. Evaluation of Proposals.

(1) The evaluation of proposals shall be conducted in accordance with Part 7 of the Utah Procurement Code.

(2) An evaluation committee may ask questions of offerors to clarify proposals provided the questions are submitted and answered in writing. The record of questions and answers shall be maintained in the file.

(3)(a) The evaluation of cost in an RFP shall be based on the entire term of the contract, excluding renewal periods.

(b) Unless an exception is authorized in writing by the chief procurement officer or head of a procurement unit with independent procurement authority, cost should not be divided or evaluated on any other basis than the entire term of the contract, excluding renewal periods.

(c) Whenever practicable, the evaluation of cost should include maintenance and service agreements, system upgrades, apparatuses, and other components associated with the procurement item.

R33-7-501a. Minimum Score Thresholds.

(1) An executive branch conducting procurement unit shall establish minimum score thresholds to advance proposals from one stage in the RFP process to the next, including contract award.

(2) Minimum score thresholds must be set forth in the RFP and clearly describe the minimum score threshold that proposals must achieve in order to advance to the next stage in the RFP process or to be awarded a contract.

(3)(a) Thresholds may be based on:

(i) Minimum scores for each evaluation category;

(ii) The total of each minimum score in each evaluation category based on the total points available; or

(iii) A combination of (i) and (ii).

(b) Thresholds may not be based on:

(i) A natural break in scores that was not defined and set forth in the RFP; or

(ii) A predetermined number of offerors.

R33-7-502. Correction or Withdrawal of Proposal.

(1) In the event an offeror submits a proposal that on its face appears to be impractical, unrealistic or otherwise in error, the chief procurement officer or head of a procurement unit with independent procurement authority may contact the offeror to either confirm the proposal, permit a correction of the proposal, or permit the withdrawal of the proposal, in accordance with Section 63G-6a-706.

(2) Offerors may not correct errors, deficiencies, or incomplete responses in a proposal that has been determined to be not responsible, not responsive, or that does not meet the mandatory minimum requirements stated in the request for proposals in accordance with Section 63G-6a-704.

R33-7-503. Interviews and Presentations.

(1) Interviews and presentations may be held as outlined in the RFP.

(2) Offerors invited to interviews or presentations shall be limited to those offerors meeting minimum requirements specified in the RFP.

(3) Representations made by the offeror during interviews or presentations shall become an addendum to the offeror's proposal and shall be documented. Representations must be consistent with the offeror's original proposal and may only be used for purposes of clarifying or filling in gaps in the offeror's proposal.

(4) The chief procurement officer or head of a procurement unit with independent procurement authority shall establish a date and time for the interviews or presentations and shall notify eligible offerors of the procedures. Interviews and presentations will be at the offeror's expense.

R33-7-601. Best and Final Offers.

Best and Final Offers shall be conducted in accordance with the requirements set forth in Section 63G-6a-707.5, or the Utah Procurement Code. This administrative rule provides additional requirements and procedures and must be used in conjunction with the Procurement Code.

(1) The best and final offers (BAFO) process is an optional step in the evaluation phase of the request for proposals process in which offerors are requested to modify their proposals.

(a) An evaluation committee may request best and final offers when:

(i) no single proposal addresses all the specifications;

(ii) all or a significant number of the proposals received are unclear and the evaluation committee requires further clarification;

(iii) additional information is needed in order for the evaluation committee to make a decision;

(iv) the differences between proposals in one or more categories are too slight to distinguish;

(v) all cost proposals are too high or over the budget;

(vi) multiple contract awards are necessary to achieve regional or statewide coverage for a procurement item under an RFP and there are insufficient cost proposals within the budget to award the number of contracts needed to provide regional or statewide coverage.

(2) Only offerors meeting the minimum qualifications or scores described in the RFP are eligible to respond to best and final offers.

(3) Proposal modifications submitted in response to a request for best and final offers may only address the specific issues and/or sections of the RFP described in the request for best and final offers.

(a) Offerors may not use the best and final offers process to correct deficiencies in their proposals not addressed in the request for best and final offers issued by the procurement unit.

(4) When a request for best and final offers is issued to reduce cost proposals, offerors shall submit itemize cost proposals clearly indicating the tasks or scope reductions that can be accomplished to bring costs within the available budget.

(a) The cost information of one offeror may not be disclosed to competing offerors during the best and final offers process and further, such cost information shall not be shared with other offerors until the contract is awarded.

(b) A procurement unit shall ensure that auction tactics are not used in the discussion process, including discussing and comparing the costs and features of other proposals.

(5) The best and final offers process may not be conducted as part of the contract negotiation process. It may only be conducted during the evaluation phase of the RFP process.

(6) A procurement unit may not use the best and final offers process to allow offerors a second opportunity to respond to the entire request for proposals.

(7) If a proposal modification is made orally during the interview or presentation process, the modification must be confirmed in writing.

(8) A request for best and final offers issued by a procurement unit shall:

(a) comply with all public notice requirements provided in Section 63G-6a-406;

(b) include a deadline for submission that allows offerors a reasonable opportunity for the preparation and submission of their responses;

(c) indicate how proposal modifications in response to a request for best and final offers will be evaluated;

(9) If an offeror does not submit a best and final offer, its immediately previous proposal will be considered its best and final offer;

(10) Unsolicited best and final offers will not be accepted from offerors.

R33-7-701. Cost-benefit Analysis Exception: CM/GC.

(1) A cost-benefit analysis is not required if the contract is awarded solely on the qualifications of the construction manager/general contractor and the management fee described in Section 63G-6a-708 provided:

(a) a competitive process is maintained by the issuance of a request for proposals that requires the offeror to provide, at a minimum:

- (i) a management plan;
 - (ii) references;
 - (iii) statements of qualifications; and
 - (iv) a management fee.
- (b) the management fee contains only the following:
- (i) preconstruction phase services;
 - (ii) monthly supervision fees for the construction phase;

and

- (iii) overhead and profit for the construction phase.

(c) the evaluation committee may, as described in the solicitation, weight and score the management fee as a fixed rate or a fixed percentage of the estimated contract value.

(d) the contract awarded must be in the best interest of the procurement unit.

R33-7-701a. Cost-Benefit Analysis.

(1) A cost-benefit analysis conducted under Utah Code 63G-6a-708 shall be based on the entire term of the contract, excluding any renewal periods.

R33-7-702. Only One Proposal Received.

(1) If only one proposal is received in response to a request for proposals, the evaluation committee shall score the

proposal and:

(a) conduct a review to determine if:

(i) the proposal meets the minimum requirements;

(ii) pricing and terms are reasonable as set forth in R33-12-603 and R33-12-604; and

(iii) the proposal is in the best interest of the procurement unit.

(b) if the evaluation committee determines the proposal meets the minimum requirements, pricing and terms are reasonable, and the proposal is in the best interest of the procurement unit, the procurement unit shall issue a justification statement as set forth in 63G-6a-708 and may make an award.

(c) If an award is not made, the procurement unit may either cancel the procurement or resolicit for the purpose of obtaining additional proposals.

R33-7-703. Evaluation Committee Procedures for Scoring Criteria Other Than Cost.

(1)(a) In accordance with Utah Code 63G-6a-704, the conducting procurement unit shall conduct an initial review of any applicable pass/fail minimum requirements set forth in the RFP to determine whether proposals are responsive and responsible or in violation of the Utah Procurement Code prior to submitting proposals to the evaluation committee. Examples of pass/fail minimum requirements include:

- (i) Timeliness of receipt of proposals
- (ii) Qualifications;
- (iii) Certifications;
- (iv) Licensing;
- (v) Experience;
- (vi) Compliance with State or Federal regulations;
- (vii) Services provided;
- (viii) Product availability;
- (ix) Equipment;
- (x) Other pass/fail minimum requirements set forth in the RFP.

RFP.

(b) The evaluation committee may not evaluate proposals deemed non-responsive, nonresponsible or disqualified for violations of the Utah Procurement Code under (1)(a).

(c) In accordance with Utah Code 63G-6a-704, an evaluation committee may, after the initial pass/fail review by the conducting procurement unit or at any time during the RFP process, reject a proposal if it is determined that the person submitting the proposal is not responsible or the proposal is not responsive.

(2) In accordance with Utah Code 63G-6a-707, the evaluation committee shall evaluate each responsive and responsible proposal that has not been disqualified from consideration under the provisions of this chapter, using the criteria described in the request for proposals using the following procedures:

(a) Prior to the scoring of proposals, a procurement officer from the issuing procurement unit will meet with the evaluation committee and any staff that will have access to the proposals to:

(i) discuss the evaluation and scoring process to ensure that each committee member has a clear understanding of the scoring process and how points will be assigned;

(ii) discuss requirements regarding conflicts of interests, the appearance of impropriety, and the importance of confidentiality;

(iv) discuss the scoring sheet and evaluation criteria set forth in the RFP; and

(v) provide a copy of Administrative Rule R33-7-703 to the evaluation committee and any staff that will have access to the proposals.

(b) Once the proposals have been received and it is clear which offerors are involved in the RFP process, all members of the evaluation committee must sign a written statement

certifying that they do not have a conflict of interest as set forth in Utah Code 63G-6a-707 and administrative rule R33-24-107

(3) Unless an exception is authorized by the head of the issuing procurement unit, in order to avoid cost influencing the evaluation committee's scoring of non-price criteria, in accordance with Utah Code 63G-6a-707, costs may not be revealed to the evaluation committee until after the committee has finalized its scoring on all other technical non-price criteria in the RFP.

(4) After receipt of proposals, each committee member shall independently, as described in R33-7-705, read and score each proposal based on the technical non-price criteria set forth in the RFP to assess the completeness, quality, and desirability of each proposal.

(a) proposals must be evaluated solely on the stated criteria listed in the RFP.

(i) past performance ratings and references may be considered if listed as evaluation criteria in the RFP;

(ii) personal bias based on prior experience with a procurement item or the offeror cannot be considered in scoring proposals, except as provided in the RFP;

(iii) personal favoritism for a vendor or bias against a vendor cannot be considered in scoring proposals; and

(iv) subsections (ii) and (iii) shall not be construed to prevent a committee member from having a bias based on their review of a proposal in regard to the criteria in the solicitation. Evaluators are encouraged to request technical support from the conducting procurement unit or the issuing procurement unit when conducting their independent assessments and scoring.

(b) any request for technical support shall be submitted in writing to the conducting procurement unit or the issuing procurement unit.

(c) After the proposals have been evaluated and scored by individual committee members, the entire committee shall meet to discuss the proposals, if applicable conduct interviews, resolve any factual disagreements, and arrive at the final scoring. All committee members must be present to take any official action.

(i) If a committee member does not attend an evaluation committee meeting, the member shall be removed from the evaluation committee and the remainder of the committee may proceed with the evaluation, provided there are at least three evaluation committee members remaining.

(d) During committee discussions, each member may change their initial scoring. If additional information or clarification is needed from an offeror, the committee may, with approval by the issuing procurement unit, request information or clarification from an offeror. Such request will only be approved if it can be done in a manner that is fair to all offerors.

(e) At any time during the evaluation process, the evaluation committee may, with the approval of the issuing procurement unit, request best and final offers from responsible and responsive offerors and evaluate those offers in accordance with Utah Code 63G-6a-708 and Administrative Rule R33-7-601.

(5) The evaluation committee may tally the final scores for criteria other than cost to arrive at a consensus score by the following methods:

(a) total of all of the points given by individual committee members; or

(b) an average of the individual scores.

(c) The evaluation committee shall turn in a completed sheet, signed and dated by each evaluation committee member.

(6) The evaluation committee shall submit its final recommended scores for all criteria other than cost to the issuing procurement unit.

(7) The issuing procurement unit shall follow the procedures set forth in Utah Code 63G-6a-707(5) pertaining to the following:

(a) reviewing the evaluation committee's final recommended scores for each proposal for all criteria other than cost;

(b) scoring cost based on the applicable scoring formula; and

(c) calculating the total combined score for each responsive and responsible proposal.

(8) The evaluation committee and the conducting procurement unit shall prepare the cost justification statement and any applicable cost-benefit analysis in accordance with Utah Code 63G-6a-708.

(9) The issuing procurement unit's role as a non-voting member of the evaluation committee will be to facilitate the evaluation process within the guidelines of the Utah procurement code and administrative rule.

(10) The issuing procurement unit may replace any member on the committee or reconstitute the committee in any way the issuing procurement unit deems appropriate to cure any impropriety. If the impropriety cannot be cured by replacing a member, then a new committee may be appointed or the procurement cancelled.

R33-7-704. Scoring of Evaluation Criteria, Other Than Cost, for Proposals Meeting Mandatory Minimum Requirements.

(1) The scoring of evaluation criteria, other than cost, for proposals meeting the mandatory minimum requirements in an RFP shall be based on a one through five point scoring system.

(2) Points shall be awarded to each applicable evaluation category as set forth in the RFP, including but not limited to:

(a) Technical specifications;

(b) Qualifications and experience;

(c) Programming;

(d) Design;

(e) Time, manner, or schedule of delivery;

(f) Quality or suitability for a particular purpose;

(g) Financial solvency;

(h) Management and methodological plan; and

(i) Other requirements specified in the RFP.

(3) Scoring Methodology:

(a) Five points (Excellent): The proposal addresses and exceeds all of the requirements described in the RFP;

(b) Four points (Very Good): The proposal addresses all of the requirements described in the RFP and, in some respects, exceeds them;

(c) Three points (Good): The proposal addresses all of the requirements described in the RFP in a satisfactory manner;

(d) Two points (Fair): The proposal addresses the requirements described in the RFP in an unsatisfactory manner; or

(e) One point (Poor): The proposal fails to address the requirements described in the RFP or it addresses the requirements inaccurately or poorly.

R33-7-705. Evaluation Committee Members Required to Exercise Independent Judgment.

(1)(a) Evaluators are required to exercise independent judgment in a manner that is not dependent on anyone else's opinions or wishes.

(b) Evaluators must not allow their scoring to be inappropriately influenced by another person's wishes that additional or fewer points be awarded to a particular offeror.

(c) Evaluators may seek to increase their knowledge before scoring by asking questions and seeking appropriate information from the conducting procurement unit or issuing procurement unit. Otherwise, evaluators should not discuss proposals or the scoring of proposals with other persons not on the evaluation committee.

(2)(a) The exercise of independent judgment applies not

only to possible inappropriate influences from outside the evaluation committee, but also to inappropriate influences from within the committee. It is acceptable for there to be discussion and debate within the committee regarding how well a proposal meets the evaluation criteria. However, open discussion and debate may not lead to coercion or intimidation on the part of one committee member to influence the scoring of another committee member.

(b) Evaluators may not act on their own or in concert with another evaluation committee member to inappropriately steer an award to a favored vendor or to disfavor a particular vendor.

(c) Evaluators are required to report any attempts by others to improperly influence their scoring to favor or disfavor a particular offeror.

(d) If an evaluator feels that the evaluator's independence has been compromised, the evaluator must recuse himself or herself from the evaluation process.

R33-7-802. Publicizing Awards.

(1) In addition to the requirements of Section 63G-6a-709.5, the following shall be disclosed after receipt of a GRAMA request and payment of any lawfully enacted and applicable fees:

(a) the contract(s) entered into as a result of the selection and the successful proposal(s), except for those portions that are to be non-disclosed under Rule R33-7-105;

(b) the unsuccessful proposals, except for those portions that are to be non-disclosed under Rule R33-7-105;

(c) the rankings of the proposals;

(d) the names of the members of any selection committee (reviewing authority);

(e) the final scores used by the selection committee to make the selection, except that the names of the individual scorers shall not be associated with their individual scores or rankings.

(f) the written justification statement supporting the selection, except for those portions that are to be non-disclosed under Rule R33-7-105.

(2) After due consideration and public input, the following has been determined by the Procurement Policy Board to impair governmental procurement proceedings or give an unfair advantage to any person proposing to enter into a contract or agreement with a governmental entity, and will not be disclosed by the governmental entity at any time to the public including under any GRAMA request:

(a) the names of individual scorers/evaluators in relation to their individual scores or rankings;

(b) any individual scorer's/evaluator's notes, drafts, and working documents;

(c) non-public financial statements; and

(d) past performance and reference information, which is not provided by the offeror and which is obtained as a result of the efforts of the governmental entity. To the extent such past performance or reference information is included in the written justification statement; it is subject to public disclosure.

Notice of Continuation July 8, 2014

R33. Administrative Services, Purchasing and General Services.**R33-13. General Construction Provisions.****R33-13-101. Purpose.**

The purpose of this rule is to comply with the provisions of Sections 63G-6a-1302 and 1303 of the Utah Procurement Code. All definitions in the Utah Procurement Code shall apply to this Rule unless otherwise specified in this Rule. This administrative rule provides additional requirements and procedures and must be used in conjunction with the Utah Procurement Code.

R33-13-201. Construction Management Rule.

As required by Section 63G-6a-1302, this rule contains provisions applicable to:

- (1) selecting the appropriate method of management for construction contracts;
- (2) documenting the selection of a particular method of construction contract management; and
- (3) the selection of a construction manager/general contractor.

R33-13-202. Application.

The provisions of Rules R33-13-201 through R33-13-205 shall apply to all procurements of construction. Rule R33-4-106 establishes the requirements and thresholds for small construction projects. Construction procurement bid security and bonding requirements are contained in Part 11 of the Utah Procurement Code and Rule R33-11.

R33-13-203. Methods of Construction Contract Management.

(1) This section contains provisions applicable to the selection of the appropriate type of construction contract management.

(2) It is intended that the chief procurement officer or head of a procurement unit with independent procurement authority have sufficient flexibility in formulating the construction contract management method for a particular project to fulfill the needs of the procurement unit. The methods for achieving the purposes set forth in this rule are not to be construed as an exclusive list.

(3) Before choosing the construction contracting method to use, a careful assessment must be made by the chief procurement officer or head of a procurement unit with independent procurement authority of requirements the project shall consider, at a minimum, the following factors:

- (a) when the project must be ready to be occupied;
- (b) the type of project, for example, housing, offices, labs, heavy or specialized construction;
- (c) the extent to which the requirements of the procurement unit and the way in which they are to be met are known;
- (d) the location of the project;
- (e) the size, scope, complexity, and economics of the project;
- (f) the amount and type of financing available for the project, including whether the budget is fixed or what the source of funding is, for example, general or special appropriation, federal assistance moneys, general obligation bonds or revenue bonds, lapsing/nonlapsing status and legislative intent language;
- (g) the availability, qualification, and experience of the procurement unit's personnel to be assigned to the project and how much time the procurement unit's personnel can devote to the project;
- (h) the availability, qualifications and experience of outside consultants and contractors to complete the project under the various methods being considered;
- (i) the results achieved on similar projects in the past and

the methods used; and

(j) the comparative advantages and disadvantages of the construction contracting method and how they might be adapted or combined to fulfill the needs of the procuring agencies.

(5) The following descriptions are provided for the more common construction contracting management methods which may be used by the procurement unit. The methods described are not all mutually exclusive and may be combined on a project. These descriptions are not intended to be fixed in respect to all construction projects. In each project, these descriptions may be adapted to fit the circumstances of that project.

(a) Single Prime (General) Contractor. The single prime contractor method is typified by one business, acting as a general contractor, contracting with the procurement unit to timely complete an entire construction project in accordance with drawings and specifications provided by the procurement unit. Generally the drawings and specifications are prepared by an architectural or engineering firm under contract with the procurement unit. Further, while the general contractor may take responsibility for successful completion of the project, much of the work may be performed by specialty contractors with whom the prime contractor has entered into subcontracts.

(b) Multiple Price Contractors. Under the multiple prime contractor method, the procurement unit contracts directly with a number of general contractors or specialty contractors to complete portions of the project in accordance with the procurement unit's drawings and specifications. The procurement unit may have primary responsibility for successful completion of the entire project, or the contracts may provide that one or more of the multiple prime contractors has this responsibility.

(c) Design-Build. In a design-build project, an entity, often a team of a general contractor and a designer, contract directly with a procurement unit to meet the procurement unit's requirements as described in a set of performance specifications and/or a program. Design responsibility and construction responsibility both rest with the design-build contractor. This method can include instances where the design-build contractor supplies the site as part of the package.

(d) Construction Manager Not at Risk. A construction manager is a person experienced in construction that has the ability to evaluate and to implement drawings and specifications as they affect time, cost, and quality of construction and the ability to coordinate the construction of the project, including the administration of change orders as well as other responsibilities as described in the contract.

(e) Construction Manager/General Contractor (Construction Manager at Risk). The procurement unit may contract with the construction manager early in a project to assist in the development of a cost effective design. In a Construction Manager/General Contractor (CM/GC) method, the CM/GC becomes the general contractor and is at risk for all the responsibilities of a general contractor for the project, including meeting the specifications, complying with applicable laws, rules and regulations, that the project will be completed on time and will not exceed a specified maximum price.

R33-13-204. Selection of Construction Method Documentation.

The chief procurement officer or head of a procurement unit with independent procurement authority shall include in the contract file a written statement describing the facts that led to the selection of a particular method of construction contract management for each project.

R33-13-205. Special Provisions Regarding Construction Manager/General Contractor.

- (1) In the selection of a construction manager/general

contractor, a standard procurement process as defined in Section 63G-6a-103 may be used or an exception allowed under Part 8 of the Utah Procurement Code.

(2) When the CM/GC enters into any subcontract that was not specifically included in the construction manager/general contractor's cost proposal, the CM/GC shall procure the subcontractor(s) by using a standard procurement process as defined in Section 63G-6a-103 of the Utah Procurement Code or an exception to the requirement to use a standard procurement process, described in Part 8 of the Utah Procurement Code.

(3)(a) As used in this Rule R33-13-205 (6), "management fee" includes only the following fees of the CM/GC:

- (i) preconstruction phase services;
- (ii) monthly supervision fees for the construction phase; and
- (iii) overhead and profit for the construction phase.

(b) When selecting a CM/GC for a construction project, the evaluation committee:

(i) may score a CM/GC based upon criteria contained in the solicitation, including qualifications, performance ratings, references, management plan, certifications, and other project specific criteria described in the solicitation;

(ii) may, as described in the solicitation, weight and score the management fee as a fixed rate or as a fixed percentage of the estimated contract value;

(iii) may, at any time after the opening of the responses to the request for proposals, have access to, and consider, the management fee proposed by the offerors; and

(iv) except as provided in Section 63G-6a-707, may not know or have access to any other information relating to the cost of construction submitted by the offerors, until after the evaluation committee submits its final recommended scores on all other criteria to the issuing procurement unit.

R33-13-301. Drug and Alcohol Testing Required for State Contracts: Definitions.

(1) The following definitions shall apply to any term used in Rules R-13-301 through R33-13-304:

(a) "Contractor" means a person who is or may be awarded a state construction contract.

(b) "Covered individual" means an individual who:

(i) on behalf of a contractor or subcontractor provides services directly related to design or construction under a state construction contract; and

(ii) is in a safety sensitive position, including a design position, that has responsibilities that directly affect the safety of an improvement to real property that is the subject of a state construction contract.

(c) "Drug and alcohol testing policy" means a policy under which a contractor or subcontractor tests a covered individual to establish, maintain, or enforce the prohibition of:

(i) the manufacture, distribution, dispensing, possession, or use of drugs or alcohol, except the medically prescribed possession and use of a drug; or

(ii) the impairment of judgment or physical abilities due to the use of drugs or alcohol.

(d) "Random testing" means that a covered individual is subject to periodic testing for drugs and alcohol:

(i) in accordance with a drug and alcohol testing policy; and

(ii) on the basis of a random selection process.

(e) For purposes of Subsection R33-13-302(5), "state" includes any of the following of the state:

- (i) a department;
- (ii) a division;
- (iii) an agency;
- (iv) a board including the Procurement Policy Board;
- (v) a commission;

(vi) a council;

(vii) a committee; and

(viii) an institution, including a state institution of higher education, as defined under Section 53B-3-102.

(f) "State construction contract" means a contract for design or construction entered into by a state public procurement unit that is subject to this Rule R33-13-302 through R33-13-304.

(g)(i) "Subcontractor" means a person under contract with a contractor or another subcontractor to provide services or labor for design or construction.

(ii) "Subcontractor" includes a trade contractor or specialty contractor.

(iii) "Subcontractor" does not include a supplier who provides only materials, equipment, or supplies to a contractor or subcontractor.

(2) In addition:

(a) "Board" means the Procurement Policy Board created under provisions of the Utah Procurement Code.

(b) "State Public Procurement Unit" means a State of Utah public procurement unit that is subject to Section 63G-6a-1303.

(c) "State" as used throughout this Rule R33-13-302 through R33-13-304 means the State of Utah except that it also includes those entities described in Subsection R33-13-302(1)(e) as the term "state" is used in Subsection R33-13-302(5).

R33-13-302. Drug and Alcohol Testing.

(1) Except as provided in Section R33-13-303, on and after July 1, 2010, a State Public Procurement Unit may not enter into a state construction contract (includes a contract for design or construction) unless the state construction contract requires the following:

(a) A contractor shall demonstrate to the State Public Procurement Unit that the contractor:

(i) has and will maintain a drug and alcohol testing policy during the period of the state construction contract that applies to the covered individuals hired by the contractor;

(ii) posts in one or more conspicuous places notice to covered individuals hired by the contractor that the contractor has the drug and alcohol testing policy described in Subsection R33-13-302(1)(a)(i); and

(iii) subjects the covered individuals to random testing under the drug and alcohol testing policy described in Subsection R33-13-302(1)(a)(i) if at any time during the period of the state construction contract there are ten or more individuals who are covered individuals hired by the contractor.

(b) A contractor shall demonstrate to the State Public Procurement Unit, which shall be demonstrated by a provision in the contract where the contractor acknowledges these Rules R-33-13-302 through 304 and agrees to comply with all aspects of these Rules R-33-13-302 through 304, that the contractor requires that as a condition of contracting with the contractor, a subcontractor, which includes consultants under contract with the designer:

(i) has and will maintain a drug and alcohol testing policy during the period of the state construction contract that applies to the covered individuals hired by the subcontractor;

(ii) posts in one or more conspicuous places notice to covered individuals hired by the subcontractor that the subcontractor has the drug and alcohol testing policy described in Subsection R33-13-302(1)(b)(i); and

(iii) subjects the covered individuals hired by the subcontractor to random testing under the drug and alcohol testing policy described in Subsection R33-13-302(1)(b)(i) if at any time during the period of the state construction contract there are ten or more individuals who are covered individuals hired by the subcontractor.

(2)(a) Except as otherwise provided in this Subsection

R33-13-302(2), if a contractor or subcontractor fails to comply with Subsection R33-13-302(1), the contractor or subcontractor may be suspended or debarred in accordance with these Rules R33-13-302 through R33-13-304.

(b) On and after July 1, 2010, a State Public Procurement Unit shall include in a state construction contract a reference to these Rules R33-13-302 through R33-13-304.

(c)(i) A contractor is not subject to penalties for the failure of a subcontractor to comply with Subsection R33-13-302(1).

(ii) A subcontractor is not subject to penalties for the failure of a contractor to comply with Subsection R33-13-302(1).

(3)(a) The requirements and procedures a contractor shall follow to comply with Subsection R33-13-302(1) is that the contractor, by executing the construction contract with the State Public Procurement Unit, is deemed to certify to the State Public Procurement Unit that the contractor, and all subcontractors under the contractor that are subject to Subsection R33-13-302(1), shall comply with all provisions of these Rules R33-13-302 through R33-13-304 as well as Section 63G-6a-1303; and that the contractor shall on a semi-annual basis throughout the term of the contract, report to the State Public Procurement Unit in writing information that indicates compliance with the provisions of these Rules R33-13-302 through R33-13-304 and Section 63G-6a-1303.

(b) A contractor or subcontractor may be suspended or debarred in accordance with the applicable Utah statutes and rules, if the contractor or subcontractor violates a provision of Section 63G-6a-1303. The contractor or subcontractor shall be provided reasonable notice and opportunity to cure a violation of Sections 63G-6a-1303 before suspension or debarment of the contractor or subcontractor in light of the circumstances of the state construction contract or the violation. The greater the risk to person(s) or property as a result of noncompliance, the shorter this notice and opportunity to cure shall be, including the possibility that the notice may provide for immediate compliance if necessary to protect person(s) or property.

(4) The failure of a contractor or subcontractor to meet the requirements of Subsection R33-13-302(1):

(a) may not be the basis for a protest or other action from a prospective bidder, offeror, or contractor under the Utah Procurement Code; and

(b) may not be used by a State Public Procurement Unit, a prospective bidder, an offeror, a contractor, or a subcontractor as a basis for an action that would suspend, disrupt, or terminate the design or construction under a state construction contract.

(5)(a) After a State Public Procurement Unit enters into a state construction contract in compliance with Section 63G-6a-1303, the state is not required to audit, monitor, or take any other action to ensure compliance with Section 63G-6a-1303.

(b) The state is not liable in any action related to Section 63G-6a-1303 and these Rules R33-13-302 through R33-13-304, including not being liable in relation to:

(i) a contractor or subcontractor having or not having a drug and alcohol testing policy;

(ii) failure to test for a drug or alcohol under a contractor's or subcontractor's drug and alcohol testing policy;

(iii) the requirements of a contractor's or subcontractor's drug and alcohol testing policy;

(iv) a contractor's or subcontractor's implementation of a drug and alcohol testing policy, including procedures for:

(A) collection of a sample;

(B) testing of a sample;

(C) evaluation of a test; or

(D) disciplinary or rehabilitative action on the basis of a test result;

(v) an individual being under the influence of drugs or alcohol; or

(vi) an individual under the influence of drugs or alcohol

harming another person or causing property damage.

R33-13-303. Non-applicability.

(1) These Rules R33-13-302 through R33-13-304 and Section 63G-6a-1303 does not apply if the State Public Procurement Unit determines that the application of these Rules R33-13-302 through R33-13-304 or Section 63G-6a-1303 would severely disrupt the operation of a state agency to the detriment of the state agency or the general public, including:

(a) jeopardizing the receipt of federal funds;

(b) the state construction contract being a sole source contract; or

(c) the state construction contract being an emergency procurement.

R33-13-304. Not Limit Other Lawful Policies.

If a contractor or subcontractor meets the requirements of Section 63G-6a-1303 and these Rules R33-13-302 through R33-13-304, this Rule R33-13 may not be construed to restrict the contractor's or subcontractor's ability to impose or implement an otherwise lawful provision as part of a drug and alcohol testing policy.

**KEY: construction management, general construction provisions, drug and alcohol testing, state contracts
July 8, 2014 63G-6a**

R33. Administrative Services, Purchasing and General Services.**R33-26. State Surplus Property.****R33-26-101. State Surplus Property - General.**

This rule sets forth policies and procedures which govern the acquisition and disposition of state and federal surplus property, and vehicles. It applies to all state and local public agencies and eligible non-profit educational and health institutions when dealing with federal surplus property. It also applies to all state agencies unless specifically exempted by law and to the general public when dealing with state surplus property.

R33-26-102. Requirements.

Under the provisions of Section 63A, Chapter 2, Section 103, the Division of Purchasing and General Services shall manage and administer the State's surplus property program, including:

- (1) The federal surplus property program as the Utah State Agency for Surplus Property and in compliance with 41 CFR 102-37 and Public Law 94-519 through a State Plan of Operation. The standards and procedures governing the contract between the state and the federal government are contained in the Plan of Operation.
- (2) The disposition of state owned surplus property, including vehicles and non-vehicle surplus property.
- (3) Information technology equipment.

R33-26-103. Definitions.

- (1) Terms used in the Surplus Property Rules are defined in Section 63A-2-101.5.
- (2) In addition:
 - (a) "All-terrain type I vehicle" means any motor vehicle 52 inches or less in width, having an unladen dry weight of 1,500 pounds or less, traveling on three or more low pressure tires, having a seat designed to be straddled by the operator, and designed for or capable of travel over unimproved terrain;
 - (b) "All-terrain type II vehicle" means any other motor vehicle, not defined in Subsection (2), (11), or (22), designed for or capable of travel over unimproved terrain and includes a class A side-by-side vehicle. "All-terrain type II vehicle" does not include golf carts, any vehicle designed to carry a person with a disability, any vehicle not specifically designed for recreational use, or farm tractors as defined under Section 41-1a-102.
- (3) "Aircraft" means any contrivance now known or in the future invented, used, or designed for navigation of or flight in the air.
- (4) "Bundled sale" means the act of packaging or grouping multiple State surplus property items together for the purpose of offering those items for sale in a single transaction in which the buyer receives all surplus property items bundled together and sold in the transaction.
- (5) "Camper" means any structure designed, used, and maintained primarily to be mounted on or affixed to a motor vehicle that contains a floor and is designed to provide a mobile dwelling, sleeping place, commercial space, or facilities for human habitation or for camping.
- (6) "Disposition" means the act of selling, disposing, or transferring state-owned vehicle and non-vehicle property, declared to be surplus property, to the care, custody, or possession of another person.
- (7) "Division" means the Division of Purchasing and General Services within the Department of Administrative Services created under Section 63A-2-101.
- (8) "Farm tractor" means every motor vehicle designed and used primarily as a farm implement for drawing plows, mowing machines, and other implements of husbandry.
- (9) "Motorboat" means any vessel propelled by machinery,

whether or not the machinery is the principal source of propulsion.

(10) "Motorcycle" means a motor vehicle having a saddle for the use of the rider and designed to travel on not more than three wheels in contact with the ground.

(11) "Motor vehicle" means a self-propelled vehicle intended primarily for use and operation on the highways.

(12) "Off-highway vehicle" means any snowmobile, all-terrain type I vehicle, all-terrain type II vehicle, or motorcycle.

(13) As used in this section "Personal handheld electronic device":

(a) means an electronic device that is designed for personal handheld use and permits the user to store or access information, the primary value of which is specific to the user of the device; and,

(b) includes a mobile phone, pocket personal computer, personal digital assistant, wireless, or similar device.

(14) "Personal Watercraft" means a motorboat that is:

(a) less than 16 feet in length;

(b) propelled by a water jet pump; and

(c) designed to be operated by a person sitting, standing or kneeling on the vessel, rather than sitting or standing inside the vessel.

(15)(a) "Pickup truck" means a two-axle motor vehicle with motive power manufactured, remanufactured, or materially altered to provide an open cargo area.

(b) "Pickup truck" includes motor vehicles with the open cargo area covered with a camper, camper shell, tarp, removable tarp, or similar structure.

(16) "Reconstructed vehicle" means every vehicle type required to be registered in this state that is materially altered from its original construction by the removal, addition, or substitution of essential parts, new or used.

(17)(a) "Recreational vehicle" means a vehicular unit other than a mobile home, primarily designed as a temporary dwelling for travel, recreational, or vacation use, that is either self-propelled or pulled by another vehicle.

(b) "Recreational vehicle" includes:

(i) a travel trailer;

(ii) a camping trailer;

(iii) a motor home;

(iv) a fifth wheel trailer; and

(v) a van.

(18) "Road tractor" means every motor vehicle designed and used for drawing other vehicles and constructed so it does not carry and load either independently or any part of the weight of a vehicle or load this is drawn.

(19) "Sailboat" means any vessel having one or more sails and propelled by wind.

(20) "Semitrailer" means every vehicle without motive power designed for carrying persons or property and for being drawn by a motor vehicle and constructed so that some part of its weight and its load rests or is carried by another vehicle.

(21)(a) "Special mobile equipment" means every vehicle:

(i) not designed or used primarily for the transportation of persons or property;

(ii) not designed to operate in traffic; and

(iii) only incidentally operated or moved over the highways.

(b) "special mobile equipment" includes:

(i) farm tractors;

(ii) on or off-road motorized construction or maintenance equipment including backhoes, bulldozers, compactors, graders, loaders, road rollers, tractors, and trenchers;

(iii) ditch-digging apparatus; and

(iv) forklifts, warehouse equipment, golf carts, electric carts, etc.

(22) "Trailer" means a vehicle without motive power designed for carrying persons or property and for being drawn

by a motor vehicle and constructed so that no part of its weight rests upon the towing vehicle.

(23) "Travel trailer," "camping trailer," or "fifth wheel trailer" means a portable vehicle without motive power, designed as a temporary dwelling for travel, recreational, or vacation use that does not require a special highway movement permit when drawn by a self-propelled motor vehicle.

(24) "Truck tractor" means a motor vehicle designed and used primarily for drawing other vehicles and not constructed to carry a load other than a part of the weight of the vehicle and load that is drawn.

(25) "USASP" means Utah State Agency for Surplus Property.

(26) "Vehicle" means:

(a) as defined in Rule R33-25-103:

- (i) all-terrain vehicle type I and II,
- (ii) aircraft,
- (iii) camper,
- (iv) farm tractor,
- (v) motor boat,
- (vi) motorcycle,
- (vii) motor vehicle,
- (viii) off highway vehicle,
- (ix) personal watercraft,
- (x) pickup truck,
- (xi) reconstructed vehicle,
- (xii) recreational vehicle,
- (xiii) road tractor,
- (xiv) sailboat,
- (xv) semitrailer,
- (xvi) special mobile equipment,
- (xvii) trailer,
- (xviii) travel trailer,
- (xix) truck tractor,
- (xx) vessel; and

(27) "Vessel" means every type of watercraft, other than a seaplane on the water, used or capable of being used as a means of transportation on water.

R33-26-201. Non-vehicle Disposition Procedures.

(1) State-owned non-vehicle personal property shall not be destroyed, sold, transferred, traded-in, traded, discarded, donated or otherwise disposed of unless the procedures set forth in this Rule are followed.

(2) This rule applies to and includes any residue that may be remaining from agency cannibalization of property.

(3) When a department or agency of state government determines that state-owned non-vehicle personal property is in excess to current needs, it will:

(a) transfer the non-vehicle surplus property directly to another department or agency of the state without involvement of the division; or

(b) notify state surplus property that the department or agency has surplus property.

R33-26-202. Disposal of State-Owned Surplus Electronic Data Devices.

(1) For the purpose of this rule, Electronic Data Device means an electronic device capable of downloading, storing or transferring State-owned data. Electronic Data Devices include:

- (a) Computers;
- (b) Tablets (iPads, Surface Pro, Google Nexus, Samsung Galaxy, etc.);
- (c) Smart phones;
- (d) Personal Digital Assistants (PDAs);
- (e) Digital copiers and multifunction printers;
- (f) Flash drives and other portable data storage devices;

and

- (g) Other similar devices.

(2) The State has determined that the security risk of a potential data breach resulting from the improper disposal or sale of an electronic data device, as defined in this rule, outweigh the potential revenue that may be received by the State from the sale of an electronic data device deemed surplus property. Therefore, the State has adopted this Administrative Rule regarding the proper disposal of State-owned surplus electronic data devices:

(a) Each State agency shall ensure that all surplus State-owned electronic data devices are disposed of in accordance with the following procedures.

(b) Surplus State-owned electronic devices defined under this Rule may not be sold or gifted via on-line auction or any other means.

(c) Surplus State-owned electronic data devices must be disposed of through the vendor under contract with the State, unless a separate contractual agreement has been entered into with the manufacturer or supplier of the device for proper destruction and disposal.

(d) The Division of Purchasing shall enter into a contract with a vendor for the destruction and proper disposal of all State-owned surplus electronic data devices.

(e) Proper disposal includes:

(i) Recycling components and parts after the State-owned electronic data device has been destroyed to the point that State-owned data cannot be retrieved;

(ii) Disposal in a landfill approved for electronic waste after the State-owned electronic data device has been destroyed to the point that State-owned data cannot be retrieved; or

(iii) Computers, digital copiers and multifunction printers that have had the hard drive destroyed may be resold by the contractor.

(f) State agencies shall request assistance from the Department of Technology Services (DTS) to destroy the hard drives of computers and other State-owned surplus electronic data devices purchased through DTS prior to the agency transferring the devices to the vendor under contract with the State.

(g) State agencies shall contact the vendor under contract with the State to destroy and properly dispose of all other State-owned surplus electronic data communication devices.

R33-26-203. Information Technology Equipment.

(1) Subject to Subsections R33-26-202(1) and (2), State-owned information technology equipment may be transferred directly to public institutions, such as schools and libraries, by the owning agency, contingent upon certification and approval from the Department of Technology Services that all State-owned data has been removed from the equipment.

(2) Subject to Subsections R33-26-202(1) and (2), pursuant to the provisions of Section 63A-2-407, state-owned information technology equipment may be transferred directly to non-profit entities for distribution to, and use by, persons with a disability as defined in Subsection 62A-5-101(9). However, interagency transfers shall have priority over transfers under this subsection.

(3) Prior to submitting information technology equipment to the state surplus property contractor, another department or agency, or donating it directly to public institutions or non-profit entities, agencies shall comply with the provisions of Section R33-26-202.

(4) Subject to Subsections R33-26-202(1) and (2), except as it relates to a vehicle or federal surplus property, the transfer of surplus property from one agency directly to another does not require approval by the division, the director of the division, or any other person.

R33-26-204. Federal Surplus Property.

(1) Federal Surplus Property is not available for sale to the

general public. Donation of federal surplus property shall be administered in accordance with the procedures identified in the State Plan of Operation for the Federal Property Assistance Program.

(2) Public auctions of federal surplus property are authorized under certain circumstances and conditions. The division shall coordinate such auctions when deemed necessary or appropriate. Federal surplus property auctions are primarily conducted online, but are regulated and accomplished by the U.S. General Services Administration.

R33-26-205. Related Party Transactions.

(1) The division has a duty to the public to ensure that State-owned surplus property is disposed of in accordance with Section 63A-2. A conflict of interest may exist or appear to exist when a related party attempts to purchase surplus property.

(2) A related party is defined as someone who may fit into any of the following categories pertaining to the surplus property in question:

- (a) has purchasing authority;
- (b) has maintenance authority;
- (c) has disposition or signature authority;
- (d) has authority regarding the disposal price;
- (e) has access to restricted information; and
- (f) has perceived to be a related party using other criteria which may prohibit independence.

R33-26-206. Priorities.

(1) Public agencies are given priority for the purchase of state-owned surplus property.

(2) Property that is determined by the Division to be unique, in short supply or in high demand by public agencies may be held for a period of up to 30 days before being offered for sale to the general public by surplus property.

(3) For this Rule, the entities listed below, in priority order, are considered to be public agencies:

- (a) state Agencies;
- (b) state Universities, Colleges, and Community Colleges;
- (c) other tax supported educational agencies or political subdivisions in the State of Utah including cities, towns, counties and local law enforcement agencies;
- (d) other tax supported educational entities; then
- (e) non-profit health and educational institutions.

(4) State-owned personal property that is not purchased by or transferred to public agencies may be offered for public sale.

(5) The division shall make the determination as to whether property is subject to hold period. The decision shall consider the following:

- (a) the cost to the state;
- (b) the potential liability to the state;
- (c) the overall best interest of the state.

R33-26-301. Accounting and Reimbursement Procedures.

(1) The division will record and maintain records of all transactions related to the acquisition and sale of all state and federal surplus property.

(2) The division may maintain a federal working capital reserve not to exceed one year's operating expenses. In the event the division accumulates funds in excess of the allowable working capital reserve, they will reduce the Retained Earnings balance accordingly. The only exception is where the division is accumulating excess funds in anticipation of the purchase of new facilities or capital items. Prior to the accumulation of excess funds, the division must obtain the written approval of the Executive Director of the Department of Administrative Services.

R33-26-302. Reimbursement.

(1) Reimbursement to state agencies from the sale of their

vehicles and non-vehicle items will be made through the Division of Finance on interagency transfers or warrant requests. The division is authorized to deduct operating costs from the selling price of all vehicles and non-vehicle items. In all cases property will be priced to sale for fair market value. Items that are not marketable for whatever reason may be discounted in price or disposed of by abandonment, donation, or sold as scrap.

(2) Payment for vehicles, non-vehicle items, information technology equipment, federal surplus property, and personal handheld devices shall be as follows:

(a) payment received from public purchasers may be in the form of cash and/or certified funds, authorized bank financial cards, and personal checks. Personal checks may not be accepted for amounts exceeding \$100. Two-party checks shall not be accepted;

(b) payment received from governmental entities, school districts, special districts, and higher education institutions shall be in the form of agency or subdivision check or purchasing card;

(c) payment made by governmental entities, school districts, special districts, and higher education institutions shall be at the time of purchase and prior to removal of the property purchased; or

(d) the division director or designee may make exceptions to the payment provisions of this rule for good cause. A good cause exception requires a weighing of:

- (i) the cost to the state;
- (ii) the potential liability to the state; and
- (iii) the overall best interest of the state.

(3) The division shall initiate formal collection procedures in the event that a check from the general public, state subdivisions, or other agencies is returned to the division for "insufficient funds":

(a) in the event that a check is returned to the division is returned for "insufficient fund," the division may:

(i) prohibit the debtor from making any future purchases from the division until the debt is paid in full; and

(ii) have the division accountant send a certified letter to the debtor stating that the debtor has 15 days to pay the full amount owed with cash or certified funds, including any and all additional fees associated with the collection process, such as returned check fees; and if the balance is not paid within the 15 day period, the matter will be referred to the Office of State Debt Collection for formal collection proceedings.

(b) debts for which payments have not been received in full within the 15 day period referred to above, shall be assigned to the Office of State Debt Collection in accordance with statute.

R33-26-401. Public Sale of State-Owned Vehicles.

(1) State-owned excess vehicles may be purchased at any time by the general public, subject to any holding period that may be assigned by the division and subject to the division's operating days and hours.

(2) Federal surplus property auctions to the general public may be accomplished on occasions and subject to the limitations as indicated previously.

(3) The frequency of public auctions, for either State-owned vehicles or federal surplus property will be regulated by current law as applicable, the volume of items held in inventory by the division, and the profitability of conducting auctions versus other approaches to disposing of surplus property.

(4) State-owned vehicles available for sale may not have any ancillary or component parts or equipment removed, destroyed, or detached, from the vehicle prior to sale without the approval of the division.

(5) State agencies are prohibited from removing ancillary or component parts or equipment from vehicles intended for

surplus unless:

- (a) the state agency intends on using the ancillary or component parts or equipment on other agency vehicles;
- (b) the state agency in possession of the vehicle intends to transfer the ancillary or component parts or equipment to another state agency; or
- (c) the state agency has obtained prior approval from the division to remove ancillary or component parts or equipment from the vehicle intended for surplus.

R33-26-601. Utah State Agency for Surplus Property Adjudicative Proceedings.

As required by the Utah Administrative Procedures Act, this Rule provides the procedures for adjudicating disputes brought before the division under the authority granted by Section 63A-2-401 and Section 63G-4, et seq.

R33-26-602. Proceedings to Be Informal.

All matters over which the division has jurisdiction including bid validity determination and sales issues, which are subject to Title 63G, Chapter 4, will be informal in nature for purposes of adjudication. The Director of the Division of Purchasing and General Services or his designee will be the presiding officer.

R33-26-603. Procedures Governing Informal Adjudicatory Proceedings.

- (1) No response need be filed to the notice of agency action or request for agency action.
- (2) The division may hold a hearing at the discretion of the director of the Division of Purchasing and General Services or his designee unless a hearing is required by statute. A request for hearing must be made within ten days after receipt of the notice of agency action or request for agency action.
- (3) Only the parties named in the notice of agency action or request for agency action will be permitted to testify, present evidence and comment on the issues.
- (4) A hearing will be held only after timely notice of the hearing has been given.
- (5) No discovery, either compulsory or voluntary, will be permitted except that all parties to the action shall have access to information and materials not restricted by law.
- (6) No person may intervene in an agency action unless federal statute or rule requires the agency to permit intervention.
- (7) Any hearing held under this rule is open to all parties.
- (8) Within thirty days after the close of any hearing, the director of the Division of Purchasing and General Services or his designee shall issue a written decision stating the decision, the reasons for the decision, time limits for filing an appeal with the director of the superior agency, notice of right of judicial review, and the time limits for filing an appeal to the appropriate district court.
- (9) The decision rendered by the Director of the Division of Purchasing and General Services or his designee shall be based on the facts in the division file and if a hearing is held, the facts based on evidence presented at the hearing.
- (10) The agency shall notify the parties of the agency order by promptly mailing a copy thereof to each at the address indicated in the file.
- (11) Whether a hearing is held or not, an order issued under the provisions of this rule shall be the final order and then may be appealed to the appropriate district court.

R33-26-701. Disposition of State Surplus Property.

- (1) The Division shall administer the disposition of State surplus property through the following methods:
 - (a) Online auction;
 - (b) Live auction;
 - (c) Pick up, sale, and disposal;

- (d) Disposal;
- (e) Destruction;
- (f) Direct sale to the public; or
- (g) Another method approved by the Director of the Division.
- (2) State agencies shall complete an SP-1 Form and electronically transmit it to State Surplus Property
 - (a) Completion of Form SP-1 meets the requirements set forth in Utah Code 63A-2-401(7) for a state agency to declare State property as surplus.
 - (b) The SP-1 Form may be accessed at <http://purchasing.utah.gov/stateagencylinks.html>.
 - (c) Information required on SP-1 Form
 - (A) a minimum of two digital photographs for each State surplus property item being listed for sale
 - (B) a brief description of the State surplus property item detailing its condition
 - (C) an estimate of the State surplus property's value
 - (D) the location of the State surplus property; and
 - (E) the contact information of the person assigned by the state agency to assist the public with the transaction.
 - (3) Online auction shall be the primary method used for the disposition of non-vehicle state surplus property.
 - (a) Online auctions shall be administered by State Surplus Property.
 - (b) Each state agency will be responsible for
 - (i) Storing State surplus property on site until the online auction has been completed and the State surplus property is
 - (A) picked up by the person to whom the item has been sold to via online auction
 - (B) disposed of or donated by the state agency
 - (C) picked up by the vendor under contract with State Surplus Property; or
 - (D) picked up by a local vendor under contract with the state agency;
 - (ii) Assigning an employee of the agency to assist the public with the online auction including:
 - (A) answering questions about the State surplus property item
 - (B) providing directions
 - (C) scheduling the pickup
 - (D) other miscellaneous tasks; and
 - (iii) Developing internal policies regarding employees
 - (A) assisting the public with lifting and transporting State surplus property items
 - (B) transporting State surplus property items with a minimal value of less than \$100 to charities for donation
 - (C) receiving State surplus property items with a minimal value of less than \$100 as a donation by the state agency
 - (c) A state agency may seek an exception from the requirement to dispose of surplus property through online auction in accordance with Utah Code 63A-2-401(3).
 - (i) State agencies that are granted an exception must
 - (A) complete an SP-1 Form and transmit it to State Surplus Property; and
 - (B) coordinate with State Surplus Property to schedule a date and time for State surplus property items to be picked.
 - (4) The Division shall administer the disposition of surplus state owned vehicles through any method identified in R33-26-701(1).
 - (a) Surplus vehicles may be sold at the agency location or delivered to State Surplus Property for disposition.
 - (5)(a) For agencies along the Wasatch Front, State Surplus Property will contract with a vendor to pick up State surplus property items with a minimal value of less than \$100 that cannot be disposed of by a state agency as waste in the trash, donated to a charity, or donated to an employee of the state agency.
 - (b) For agencies with offices outside the Wasatch Front,

the agency may contract with a local vendor using the Small Purchase set forth in Utah Code 63G-6a-408 and Administrative Rule R33-4-104 to dispose of State surplus property items with a minimal value of less than \$100 that cannot be disposed of by a state agency as waste in the trash, donated to a charity, or donated to an employee of the state agency.

R33-26-801. Donation, Disposal, or Destruction of State Surplus Property.

(1)(a) State surplus property with a minimal value of less than \$100 may be disposed of as waste by a state agency in accordance with Utah Code 63A-2-411.

(b) State surplus property items that do not appreciate in value, with an initial purchase price of less than \$100 or deemed to be valued at less than \$100 by the State Surplus Property manager:

(i) may be disposed of as waste by a state agency by the means described in Utah Code 63A-2-411(3); or

(ii) State surplus Property items with a minimal value may be packaged together and sold as a bundled sale.

**KEY: government purchasing, procurement rules, state surplus property, general procurement provisions
December 23, 2015 63A-2**

R68. Agriculture and Food, Plant Industry.

R68-8. Utah Seed Law.

R68-8-1. Authority.

Promulgated under authority of Sections 4-2-2, 4-16-3 and 4-17-3.

R68-8-2. Noxious Weed Seeds and Weed Seed Restrictions.

It shall be unlawful for any person, firm, or corporation to sell, offer, or expose for sale or distribute in the State of Utah any agricultural, vegetable, flower, tree and shrub seeds, or seeds for sprouting for seeding purposes which:

A. Contain, either in part or in whole, any prohibited noxious weed seeds.

1. "Prohibited" noxious weed seeds are the seeds of any plant determined by Utah Commissioner of Agriculture and Food to be injurious to public health, crops, livestock, land, or other property and which is especially troublesome and difficult to control.

2. Utah prohibited noxious weed seeds are as follows:

TABLE	
Bermudagrass (Except in Washington County)	<i>Cynodon dactylon</i> (L.) Pers.
Bindweed (Wild Morning-glory)	<i>Convolvulus</i> spp.
Black henbane	<i>Hyoscyamus niger</i> (L.)
Broad-leaved Peppergrass (Tall Whitetop)	<i>Lepidium latifolium</i> L.
Canada Thistle	<i>Cirsium arvense</i> (L.) Scop.
Dalmation Toadflax	<i>Linaria dalmatica</i> (L.) Miller
Diffuse Knapweed	<i>Centaurea diffusa</i> (Lam.)
Hoary cress	<i>Cardaria</i> spp.
Houndstongue	<i>Cynoglossum officinale</i> (L.)
Dyers Woad	<i>Isatis Tinctoria</i> L.
Oxeye daisy	<i>Chrysanthemum leucanthemum</i> (L.) including but not limited to Johnson Grass (<i>Sorghum halepense</i> (L.) Pers.) and <i>Sorghum Alnum</i> (<i>Sorghum alnum</i> , Parodi).
Perennial Sorghum spp.	<i>Conium maculatum</i> (L.)
Poison Hemlock	<i>Euphorbia esula</i> L.
Leafy Spurge	<i>Taeniatherum caput-medusae</i> (L.) Nevski)
Medusahead	<i>Carduus nutans</i> L.
Musk Thistle	<i>Lythrum salicaria</i> L.
Purple Loosestrife	<i>Agropyron repens</i> (L.) Beauv.
Quackgrass	<i>Centaurea repens</i> L.
Russian Knapweed	<i>Tamarix ramosissima</i> Ledeb.
SaltCedar (Tamarix)	<i>Onopordum acanthium</i> L.
Scotch Thistle (Cotton Thistle)	<i>Centaurea maculosa</i> Lam.
Spotted Knapweed	<i>Centaurea virgata</i> Lam. Ssp. <i>squarrosa</i> Gugle.
Squarrose Knapweed	<i>Hypericum perforatum</i> (L.)
St. Johnswort, common	<i>potentilla recta</i> L.
Sulfur cinquefoil	<i>Centaurea solstitialis</i> L.
Yellow Starthistle	<i>Linaria vulgaris</i> (Mill.)
Yellow toadflax	

B. Contain any restricted weed seeds in excess of allowable amounts:

1. The following weed seeds shall be allowed in all crop seed, but shall be restricted not to exceed a maximum of 27 such seeds per pound, either as a single species or in combination:

TABLE	
Dodder	<i>Cuscuta</i> spp.
Halogeton	<i>Halogeton glomeratus</i> (M. Bieb.)
Jointed goatgrass	<i>Aegilops cylindrica</i> (Host.)

Poverty Weed
Wild Oats

Iva axillaris Pursh.
Avena fatua L.

2. The following maximum percentage of weed seeds by weight shall be allowed:

a. Two percent (2.0%) of Cheat (*Bromus secalinus*), Chess (*Bromus brizaformis*), (*B. commutatus*), (*B. mollis*), Japanese Brome (*Bromus japonicus*) and Downy Brome (*Bromus tectorum*) either as a single species or in combination in grass seeds.

b. One percent (1.0%) of any weed seeds not listed in 2.a. above in grass, flower, tree and shrub seeds.

c. One half of one percent (0.50%) in all other kinds or types of seeds.

R68-8-3. Special Labeling Provisions.

A. Prepackaged containers must be labeled in accordance with requirements applying to the specific kind(s) of seed in said prepackaged container as provided by Section 4-16-4.

B. Seed weighed from bulk containers, including jars, cans, bins, etc., in the presence of the customer and sold in quantities of five pounds or less will be exempt from the full labeling provisions; provided, that the container from which the seed is taken is fully and properly labeled in accordance with the provisions of the law and regulations thereunder. Labels on such seed containers must be attached thereto and must be kept in a conspicuous place. The name and address of the supplier or vendor must be plainly printed on all lots of seed sold from bulk containers along with the required labeling and name of substance used in treatment, if any. If the seed was treated, the appropriate treatment labeling must be on both the master container from which the seed is weighed and on each receiving container. The vendor must also mark on any receiving container, when requested by the purchaser, any additional labeling information required by the laws and regulations thereunder.

C. If responsibility is accepted therefore, it shall be permissible under the law for the local merchant or distributor of seed in this State to adopt and use the analysis furnished by the original seller to remain attached to the proper container of such seed for a period not to exceed nine calendar months for vegetable, flower, tree, and shrub seeds and eighteen calendar months for agricultural seeds or in the case of hermetically sealed seed, thirty-six calendar months, after which time said local dealer or distributor must retest or have retested any remaining seed in his possession, remove the original analysis label and attach a new analysis label or place an appropriately printed permanently adhering sticker on the original label bearing the lot number, percent of germination and date of test.

D. Any vegetable or flower seeds in packets or containers of one pound or less and preplanted containers offered, exposed for sale, or distributed in the State of Utah, must be labeled with the date of test or the current calendar year for which the seed is packed.

R68-8-4. Treated Seed - Use of Highly Toxic, Moderately Toxic, and Low Toxicity Substances and Labeling of Containers.

Any agricultural, vegetable, flower, or tree and shrub seed or mixture thereof that has been treated, shall be labeled in type no smaller than eight point to indicate that such seed has been treated and to show the name of any substance or a description of any process (other than application of a substance) used to treat such seed. The label shall contain the required information in any form that is clearly legible and complies with Section 4-16-5, Federal Laws which apply, and the following paragraphs of this regulation which are subsequently applicable. The information may be on the seed analysis tag, on a separate tag, or printed on each container in a conspicuous manner.

A. Names of Substances.

1. The required name of the substance used in treatment shall be the commonly accepted coined, chemical (generic), or abbreviated chemical name. Commonly accepted coined names are not private trademarks and are available for use by the public and are commonly recognized as names of particular substances.

2. Examples of commonly accepted chemical (generic) names are: blue-stone, calcium carbonate, cuprous oxide, zinc hydroxide, hexachlorobenzene and ethyl mercury acetate. The terms "mercury" or "mercurial" may be used to represent all types of mercurial compounds. Examples of commonly accepted abbreviated chemical names are BHC (1,2,3,4,5,6, Hexachloroclohexane) and DDT (Dichloro diphenyl trichloroethane).

B. Treatment Coloring.

Any substance which is toxic in nature used in the treatment of seed shall be distinctly colored so as to be readily discernible.

C. Labeling.

Containers of treated seed shall, in addition to the name of the treatment substance used be labeled in accordance with Subsection R68-8-4(C), and shall bear appropriate signal words and warning statements required according to the relative toxicity of the chemical(s) applied. In addition, all seed treated with a chemical seed treatment shall bear the statement, "Keep out of Reach of Children."

1. Labeling Seed Treated with Highly Toxic Substances.

a. Seed treated with a chemical substance, designated by the Environmental Protection Agency or the Commissioner as a highly toxic substance, shall be labeled to conspicuously show the words, "TREATED SEED," together with the name of the substance. Example: "THIS SEED TREATED WITH (name of substance)," or "(name of substance) TREATED". The labeling shall also bear in red coloring the signal words, "DANGER-POISON," and a representation of a skull and crossbones at least twice the size of the type used for the name of the substance. The label shall also include in red letters additional precautionary statements stating hazards to humans and other vertebrate animals, special steps or procedures which should be taken to avoid poisoning, and wording to inform physicians of proper treatment for poisoning.

b. All bags, sacks, or other containers of seed which have been or are being used to contain seeds treated with "highly toxic" substances, shall be identified with the words "DANGER POISON," and a representation of a skull and crossbones. The printing shall be directly printed or impregnated on or into the containers, or applied by other means approved by the department, as to be permanent. Any such container in which seed treated with highly toxic substances has been contained, except for future similar use for seed, shall not again be used to contain any food, feed, or agricultural products, without the prior written approval of the department.

2. Labeling Seed Treated with Moderately Toxic Substances.

Seed treated with a chemical substance designated as moderately toxic, shall be labeled with the words, "TREATED SEED," together with the name of the substance. Examples: "THIS SEED TREATED WITH (name of substance)" or "(name of substance) TREATED." The label shall also bear the signal word, "WARNING". Additional precautionary statements describing hazards to humans and other vertebrate animals, and special handling procedures to avoid poisoning shall also appear in the labeling.

3. Labeling Seed Treated with Low Toxicity Substances.

Seed treated with a chemical designated as low toxicity, or comparatively free from danger shall be labeled with the words, "TREATED SEED" together with the name of the substance. Example: "THIS SEED IS TREATED (name of substance)", or "(name of substance) TREATED." The label shall also bear the signal word, "CAUTION". Additional precautionary statements

describing hazards to humans and other vertebrate animals, and special handling procedures to avoid poisoning shall also appear in the labeling.

4. Effective Warning.

Any words or terms used on the label which tend to reduce the effectiveness of the warning statements required by section 4-16-5 and this regulation are construed to be misleading.

5. Bulk Seed.

In the case of seed in bulk, the information required on the labels of packaged seed shall appear on the invoice or other records accompanying and pertaining to such seed.

D. Treatment by Custom Applicators.

The provisions of this regulation shall apply to seed which has been treated by custom applicators, or in a custom manner, even though the transfer of ownership is not intended on said seed.

E. Changes in Federal Law.

The kinds of chemicals declared highly toxic, moderately toxic, or low toxicity and their approved uses on seed must of necessity be in conformity with applicable federal laws and regulations. If at any time the federal government prohibits the use of such substances on seed or makes other changes affecting seed then the provisions of this regulation are considered to be modified to the extent necessary to conform to such federal laws and regulations.

R68-8-5. Inoculated Seed.

The term "inoculant" means a commercial preparation containing nitrogen-fixing bacteria applied to seed. Seed claimed to be inoculated shall be labeled to show the month and year beyond which the inoculant on the seed is no longer claimed to be effective.

R68-8-6. Weight or Seed Count Requirements.

Net weight on all containers is required except that preplanted containers, mats, tapes, or other planting devices shall state the minimum number of seeds in the container. All weight labeling shall be consistent with the requirements of the Weights and Measures Law and rules. Under appropriate circumstances when a seed tag is used, the weight information may appear on the seed tag rather than on the seed bag. The term "weight" shall be understood and construed to mean the net weight of the commodity.

R68-8-7. Labeling of Agricultural Seed Varieties.

A. The following kinds of agricultural seeds shall be labeled to show the variety name or the words, "Variety Not Stated."

- Alfalfa
- Bahiagrass
- Beans, field
- Beets, field
- Brome, smooth
- Broomcorn
- Clover, crimson
- Clover, red
- Clover, white
- Corn, field
- Corn, pop
- Cotton
- Cowpea
- Crambe
- Fescue, tall
- Flax
- Lespedeza, striate
- Millet, foxtail
- Millet, pearl
- Oat
- Pea, field

Peanut
 Rice
 Rye
 Safflower
 Sorghum
 Sorghum-Sudangrass
 Sudangrass hybrid
 Soybean
 Sudangrass
 Sunflower
 Tobacco
 Trefoil, birdsfoot
 B. The following kinds of agriculture seeds shall be labeled to show the variety name:
 Barley
 Triticale
 Wheat, Common
 Wheat, durum
 C. When two or more varieties are present in excess of five percent and are named on the label, the name of each variety shall be accompanied by the percentage of each.

R68-8-8. Labeling of Lawn Seed Mixtures.

A. Format. When labeling lawn and turf seed mixtures as provided by Section 4-16-4, the following format shall be used:

TABLE	
PURE SEED	GERMINATION
Grass Seed Mixture Lot 77-7	
42.20% Kentucky Bluegrass	80%
28.37% Annual Ryegrass	85%
11.90% Creeping Red Fescue	85%
5.43% White Dutch Clover	75%
HARD SEED	10%
.50% Weed Seed Tested: July 1979	
1.60% Other crop seed	
10.00% Inert matter	
Noxious weed seed-none	
John Doe Seed Company, Inc.	
1977 Bell Street, Salt Lake City, Utah 84000	
Net Weight: 5 pounds	

B. Agricultural seed other than seed required to be named on the label shall be designated as "other crop seed" or "crop seed." If a mixture contains no crop seed, the statement "contains no other crop seed," may be used.

C. The headings "pure seed" and "germination" or "germ," shall be used in the proper place.

D. The word "mixed" or "mixture" shall be stated with the name of the mixture.

R68-8-9. Vegetable Seeds and Minimum Germination Standards.

A. Vegetable seeds are the seeds of the following, and the minimum germination standards are as indicated:

KIND	MINIMUM PERCENT GERMINATION STANDARD
Artichoke--Cynara scolymus	60
Asparagus--Asparagus officinalis	70*
Bean, garden--Phaseolus vulgaris	70*
Bean, asparagus--Vigna sequipedalis	75*
Bean, lima--Phaseolus lunatus var. macrocarpus	70*
Bean, runner--Phaseolus coccineus	75
Beet--Beta vulgaris	65
Broadbean--Vicia fava	75
Broccoli--Brassica oleracea var. botrytis	75

Brussels sprouts--Brassica oleracea var. gemmifera	70
Burdock, great--Arctium lappa	60
Cabbage--Brassica oleracea var. capitata	75
Cabbage, Chinese--Brassica Pekinensis	75
Cabbage, tronchuda--Brassica oleracea var. tronchuda	75
Cantalope (see Muskmelon)	
Cardoon--Cynara cardunculus	60
Carrot--Daucus carota	55
Cauliflower--Brassica oleracea var. botrytis	75
Celery and celeriac--Apium graveolens var. dulce and repaceum	55
Chard, Swiss--Beta vulgaris var. cicla	65
Chicory--Cichorium intybus	65
Chives--Allium schoenoprasum	50
Citron--Citrullus lanatus var. citroides	65
Collards--Brassica oleracea var. acephala	80
Corn, Sweet--Zea mays	75
Cornsalad (Fetticus--Valerianella locusta)	70
Cowpea--Vigna sinensis	75
Cress, garden--Lepidium sativum	75
Cress, Upland--Barbarea verna	60
Cress, Water--Rorippa nasturtium-acquaticum	40
Cucumber--Cucumis sativus	80
Dandelion--Taraxacum officinalis	60
Eggplant--Solanum melongena	60
Endive--Cichorium endivia	70
Herbs--(all kinds and varieties not listed)	50
Kale--Brassica spp.	75
Kohlrabi--Brassica oleracea var. gongylodes	75
Leek--Allium porrum	60
Lettuce--Lactuca sativa	80
Muskmelon (Cantalope)--Cucumis melo	75
Mustard, India--Brassica juncea	75
Mustard, spinach--Brassica perviridis	75
Okra--Hibiscus esculentus	50
Onion--Allium cepa	70
Onion, Welsh--Allium fistulosum	70
Pak-choi--Brassica chinensis	75
Parsley--Petroselinum crispum	60
Parsnip--Pastinaca sativa	60
Pea, garden--Pisum sativum	80*
Pepper--Capsicum spp.	55
Pumpkin--Cacurbita pepo	75
Radish--Raphanus sativus	75
Rhubard--Rheum rhaponticum	60
Rutabaga--Brassica napus var. napobrassica	75
Salsify--Tragapogon porrifolius	75
Sorrel--Rumex spp	65
Soybean--Glycine max. L.	75
Spinach--Spinacia oleracea	60
Spinach, New Zealand--Tetragonia expansa	40
Squash--Cucurbita pepo	75
Tomato--Lycopersicon esculentum	75
Tomato, husk--Physalis spp	50
Turnip--Brassica rapa	80
Watermelon--Citrullus vulgaris	70

*Including hard seeds

R68-8-10. Flower Seeds and Minimum Germination Standards.

The kinds of flower seeds listed below are those for which standard testing procedures have been prescribed and which are therefore required to be labeled in accordance with the germination labeling provisions of Section 4-16-4. The percentage listed opposite each kind is the germination standard for that kind. For the kinds marked with an asterisk, this percentage is the total percentage of germination and percentage of hard seed.

KIND	MINIMUM GERMINATION STANDARDS
Archillea (The Pearl)--Achillea ptarmica	50
African daisy--Dimorphotheca aurantiaca	55
African Violet--Saintpaulia spp	30
Ageratum--Ageratum mexicanum	60
Agrostemma (rose campion)--Agrostemma coronaria	65
Alyssum--Alyssum compactum, A.	60

maritimum, A. procumbens, A. saxatile		Sweet Wivelsfield--Dianthus allwoodi	60
Amaranthus--Amaranthus spp.	65	Didiscus (blue lace flower)--Didiscus coerulea	65
Anagalis (pimpernel)--Anagalis arvensis, Anagalis coerulea, Anagalis grandiflora	60	Doronicum (leopard's bane)--Doronicum caucasicum	60
Anemone--Anemone coronaria, A. pulsatilla	55	Dracena--Cracena indivisa	55
Angel's trumpet--Datura arborea	60	Dragon Tree--Dracaena Draco	40
Arabis--Arabis alpina	60	English daisy--Bellis perennis	55
Arctotis (African lilac daisy)-- Arctotis grandis	45	Flax, Golden--Linum flavum, Flowering flax L. grandiflorum, perennial flax L. perenne	60
Armeria--Armeria formosa	55	Flowering Maple--Abutilon spp.	35
Asparagus, fern--Asparagus plumosus	50	Foxglove--Digitalis spp	60
Asparagus, sprenger--Asparagus sprengeri	55	Gaillardia, annual--Gaillardia pulchella, G. picta; perennial G. grandiflora	45
Aster, China--Callistephus chinensis, except Pompom, Powderpuff and Princess types	55	Gerbera (transvaal daisy)--Gerbera jamesoni	60
Aster, China--Callistephus chinensis, Pompom, Powderpuff and Princess types.	50	Geum--Geum spp	65
Aubrietia--Aubrietia deltoides	45	Gilia--Gilia spp	65
Baby Smilax--Asparagus asparagoides	25	Gloriosa daisy (rudbeckia) Echinacea purpurea and Rudbeckia hirta	60
Balsam--Impatiens balsamina	70	Gloxinia--Sinningia speciosa	40
Begonia--(Begonia fibrous rooted)	60	Godetia--Godetia amonea, G. grandiflora	65
Begonia--(Begonia tuberous rooted)	50	Gourds: Yellow flowered--Cucurbita pepo; White flowered Lagenaria sisceraria; Dishcloth-Luffa cylindrica	70
Bells of Ireland--Moluccella laevis	60	Gypsophila, annual Baby's breath-- Gypsophila elegans; perennial Baby's breath-G. paniculata, G. pacifica, G. repens	40
Brachycome (swan river daisy)-- Brachycome iberidifolia	60	Helenium--Helenium autumnale	60
Browallia--Browallia elata and B speciosa	65	Helichrysum--Helichrysum monstrosum	55
Bupththalmum (willowleaf oxeye)-- Bupththalmum salicifolium	60	Heliopsis--Heliopsis scabra	35
Calceolaria--Calceolaria spp	60	Heliotrope--Heliotropium spp	60
Calendula--Calendula officinalis	65	Helipeterum (Acroclinium)--Helipeterum roseum	65
California Poppy--Eschscholtzia californica	65	Hesperis (sweet rocket)--Hesperis matronalis	65*
Calliopsis--Coreopsis bicolor, C. drummondii, C. elegans	60	Hollyhock--Althea rosea	60
Campanula:	60	Hunnemannia (Mexican tulip poppy)-- Hunnemannia fumariaefolia	70*
Cantebury bells--Campanula medium	60	Hyacinth bean--Dolichos loblax	55
Cup and Saucer bellflower--Campanula calycanthema	60	Impatiens--Impatiens holstii, I. sultani	75*
Carpathian bellflower--Campanula carpatica	50	Ipomea: Cypress vine--Ipomea quamoclit; Moonflower--I. noctiflora; Morning glories, Cardinal climber, Hearts and Honey vine--Ipomea spp	70
Peach bellflower--Campanula persicifolia	50	Jerusalem cross (Maltese cross)-- Lychnis chalconica	70
Candytuft, annual--Iberis amara, I. umbellata	65	Job's tears--Ciox lacryma-jobi	55
Candytuft, perennial--Iberis gibraltarica I. sempervirens	60	Kochia (Mexican fire bush)--Kochia chilidsii	60
Caster bean--Ricinus communis	65	Larkspur, annual--Delphinium ajacia	35
Cathedral bells--Cobaea scandens	65	Lantana--Lantana camara, L. hybrida	50
Celosis--Celosia argentea	65	Lilium (regal lily)--Lilium regale	65
Centaurea: Basketflower--Centaurea americana, Cornflower--C. cyanus, Dusty Miller--C. candidissima, Royal centaurea C. imperialis, Sweet Sultan--C. moschata, Velvet centaurea C. gymnocarpa	60	Linaria--Linaria spp	65
Cerastium (snow in summer)--Cerastium biebersteini and C. tomentosum	55	Lobelia--Lobelia erinus	65
Chinese forget-me-not--Cynoglossum amabile	40	Lunaria, honesty--Lunaria annua	65*
Chrysanthemum, annual--Chrysanthemum carinatum, C. coronarium, C. segetum	60	Lupine--Lupinus spp	65
Cineraria--Senecio cruentus	65	Marigold--Tagetes spp	60
Clarkia--Clarkia elegans	65	Marvel of Peru (Four-O'clock)-- Mirabilis jalapa	60
Cleome--Cleome gigantea	65	Matricaria (feverfew)--Matricaria spp	55
Coleus--Coleus blumei	50	Migonette--Reseda odorata	50
Columbine--Aquilegia spp	55	Myosotis--Myosotis alpestris, M. oblongata, M. pulastris	60
Coral Bells--Heuchera sanquinea	40	Nasturtium--Tropeolum spp	65
Coreopsis, perennial--Coreopsis lanceolata	75	Nemesia--Nemesia spp	70
Corn, Ornamental--Zea Mays	65	Nemophila--Nemophila insignis	60
Cosmos: Sensation, Mammoth and Crested type--Cosmos bipinnatus; Klondyke type--C. sulphureus	50	Nemophila, spotted--Nemophila maculata	65
Crossandra--Crossandra infundibuliformis	55	Nicotiana--Nicotiana affinis, N. sanderdae, N. sylvestris	55
Dahlia--Dahlia spp	45	Nierembergia--Nierembergia spp	55
Daylily--Hemerocallis spp.	55	Nigella--Nigella damascena	60
Delphinium, perennial; Belladonna and Bellamosum types: Cardinal larkspur--Delphinium cardinale; Chinesis types; Pacific Giant, Gold Medal and other hybrids of D. elatum	60	Pansy--Viola tricolor	60
Dianthus:	60	Penstemon--Penstemon barbatus, P. grandiflorus, P. laevigatus, P. pupescens	45
Carnation--Dianthus caryophyllus	70	Petunia--Petunia spp	65
China pinks--Dianthus chinensis, Heddewigi, Heddensis	60	Phacelia--Phacelia campanularia, P. minor, P. tanacetifolia	55
Grass pinks--Dianthus plumarius	60	Phlox, annual--Phlox drummondii all types and varieties	60
Maiden pinks--Dianthus deltoides	60	Physalis--Physalis spp	60
Sweet William--Dianthus barbatus	70	Plantycodon (balloon flower)-- Platycodon grandiflorum	50
		Plumbago, cape--Plumbago capensis	40
		Ponytail--Beaucarnea recurvata	

Poppy: Shirley poppy-- <i>Papaver rhoeas</i> , Iceland poppy <i>P. nudicaule</i> , Oriental poppy- <i>P. orientale</i> , Tulip poppy <i>P. glaucum</i>	60
Portulaca-- <i>Portulaca grandiflora</i>	65
Primula (primrose)-- <i>Primula</i> spp	50
Pyrethrum (painted daisy)-- <i>Pyrethrum coccineum</i>	60
Salpiglossis-- <i>Salpiglossis gloxinaeflora</i> , <i>S. sinuata</i>	60
Salvia--Scarlet Sage-- <i>Salvia splendens</i> , Mealycup Sage (blue bedder)-- <i>Salvia farinacea</i>	50
Saponaria-- <i>Saponaria ocymoides</i> , <i>S. vaccaria</i>	60
Scabiosa, annual-- <i>Scabiosa atropurpurea</i>	50
Scabiosa, perennial-- <i>Scabiosa caucasica</i>	40
Scizanthus-- <i>Scizanthus</i> spp	60
Sensitive plant (mimosa)-- <i>Mimosa pudica</i>	65*
Shasta Daisy-- <i>Chrysanthemum maximum</i> , <i>C. leucanthemum</i>	65
Silk Oak-- <i>Grevillea Robusta</i>	25
Snapdragon-- <i>Antirrhinum</i> spp	55
Solanum-- <i>Solanum</i> spp	60
Statice-- <i>Statice sinuata</i> <i>S. suworowii</i> (flower heads)	50
Stocks: Common-- <i>Matthiola incana</i> , Evening Scented-- <i>Matthiola bicornis</i>	65
Sunflower-- <i>Helianthus</i> spp	65
Sunrose-- <i>Helianthemum</i> spp	30
Sweet pea, annual and perennial other than dwarf bush-- <i>Lathyrus odoratus</i> , <i>L. latifolius</i>	75*
Sweet pea, dwarf bush-- <i>Lathyrus odoratus</i>	65*
Tahoka daisy-- <i>Machacantha tanacetifolia</i>	60
Thunbergia-- <i>Thunbergia alata</i>	60
Torch flower-- <i>Tithonia speciosa</i>	70
Torenia (wishbone flower)-- <i>Torenia fourieri</i>	70
Tritoma-- <i>Kniphofia</i> spp	65
Verbena, annual-- <i>Verbena hybrida</i>	35
Vinca (periwinkle)-- <i>Vinca rosea</i>	60
Viola-- <i>Viola carnuta</i>	55
Virginian stocks-- <i>Malcolmia maritima</i>	65
Wallflower-- <i>Cheiranthus allioni</i> , <i>C. cheiri</i>	65
Yucca (Adamsneedle)-- <i>Yucca filamentosa</i>	50
Zinnia (except linearis and creeping)-- <i>Zinnia augustifolia</i> , <i>Z. elegans</i> , <i>Z. grandiflora</i> , <i>Z. gracillima</i> , <i>Z. haageana</i> , <i>Z. multiflora</i> , <i>Z. pumila</i>	65
Zinnia, linearis and creeping-- <i>Zinnia linearis</i> , <i>Sanvitalia procumbens</i>	50
All other kinds	50

* Including hard seeds

R68-8-11. Labeling of Flower Seeds.

Flower seeds shall be labeled with the name of the kind and variety or a statement of type and performance characteristics as prescribed by Section 4-16-4.

A. Seeds of Plants Grown Primarily for Their Blooms.

1. Single Name. Seeds of a single name variety shall be labeled to show the kind and variety name. For example: "Marigold, Butterball."

2. Single Type and Color. Seeds of a single type and color for which there is no special variety name shall be labeled to show either the type of plant or the type of color of bloom. For example: "Scabiosa, Tall, Large Flowered, Double, Pink."

3. Assortment of Colors. Seeds consisting of an assortment of mixture of colors or varieties of a single kind shall be labeled to show the kind name, the type of plant, and the types of bloom. In addition, it shall be clearly indicated that the seed is mixed or assorted. An example of labeling such a mixture or assortment is-"Marigold, Dwarf, Double French, Mixed colors."

4. Assortment of Kinds. Seeds consisting of an assortment of mixture of kinds shall be labeled to clearly indicate that the seed is assorted or mixed and the specific use of the assortment of mixture shall be indicated. For example: "Cut Flower Mixture," or "Rock Garden Mixture." Such statements as "Wild Flower Mixture," "General Purpose Mixture," "Wonder

Mixture," or any other statement which fails to indicate the specific use of the seed shall not meet the requirements of this provision unless the specific use of the mixture is also stated.

B. Seeds of Plants Grown for Ornamental Purposes Other Than Their Blooms. Seeds of plants grown for ornamental purposes other than their blooms shall be labeled to show the kind and variety, or the kind together with a descriptive statement concerning the ornamental part of the plant. For example: "Ornamental Gourds, Small Fruited, Mixed."

R68-8-12. Application of Germination Standards to Mixtures of Kinds of Flower Seeds.

A mixture of kinds of flower seeds will be considered to be below standard if the germination of any kind or combination of kinds constituting 25 % or more of the mixture by number is below standard for the kind or kinds.

R68-8-13. Tree and Shrub Seed Labeling.

The information in the following example shall be used for all tree and shrub seeds for which standard testing procedures are prescribed.

TABLE

Common Name:	Lot#:
Genus:	Species:
Origin: State: County:	Elevation:
Date Collected or Tested: Month: Year:	
Pure Seed: % Weed Seed: %	Inert Matter:
Other crop seed: % Germination: %	Hard Seed:
Net Weight:	
Name:	
Address:	

If the kind of seed to be labeled is not one for which standard testing procedures are prescribed, the information on germination and hard seeds may be omitted from the example shown above.

R68-8-14. Hermetically Sealed Seed Containers.

The 36-month provision on the date of test in Section 4-16-5 will apply to hermetically sealed agricultural and vegetable seed when the following conditions have been met:

A. The seed was packaged within nine months after harvest.

B. The container used does not allow water vapor penetration through any wall, including the seals, greater than 0.05 grams of water per 24 hours per 100 square inches of surface at 100 degrees F. with a relative humidity on one side of 90 percent and on the other side 0 percent. Water vapor penetration (WVP) is measured by the standards adopted by the U. S. Bureau of Standards as: $WVP = \frac{gm\ H_2O}{24\ hr./100\ sq.\ in./100\ degrees\ F./90\% RHV. 0\%RH}$

C. The seed in the container does not exceed the percentage of moisture, on a wet weight basis, as listed below:

TABLE

1. AGRICULTURAL SEEDS	PERCENT
Beet, field	7.5
Beet, sugar	7.5
Bluegrass, Kentucky	6.0
Clover, Crimson	8.0
Fescue, Red	8.0
Ryegrass perennial	8.0
All other agricultural seed	6.0
Mixtures of above	8.0
2. VEGETABLE SEEDS	PERCENT
Bean, garden	7.0
Bean, lima	7.0
Beet	7.5
Broccoli	5.0
Brussel sprouts	5.0
Cabbage	5.0

Carrots	7.0
Cauliflower	5.0
Celeriac	7.0
Celery	7.0
Chard, Swiss	7.5
Chinese cabbage	5.0
Chives	6.5
Collards	5.0
Corn, sweet	8.0
Cucumber	6.0
Eggplant	6.0
Kale	5.0
Kohlrabi	5.0
Leek	6.5
Lettuce	5.5
Muskmelon	6.0
Mustard, India	5.0
Onion	6.5
Onion, Welsh	6.5
Parsley	6.0
Parsnip	6.0
Pea	7.0
Pepper	4.5
Pumpkin	6.0
Radish	5.0
Rutabaga	5.0
Spinach	8.0
Squash	6.0
Tomato	5.5
Turnip	5.0
Watermelon	6.5
All other vegetable seed	6.0

D. The container is conspicuously labeled in not less than eight point type to indicate:

1. That the container is hermetically sealed.
2. That the seed has been preconditioned as to moisture content, and
3. The calendar month and year in which the germination test was completed.

E. The percentage of germination of the vegetable seed at the time of packaging was equal to or above the standards specified in Section R68-8-9.

R68-8-15. Rules for Seed Testing.

Rules for testing seeds shall be the same as those found in the current "Rules For Testing Seeds" recommended by the Association of Official Seed Analysts. For seeds not listed in the "Rules for Testing Seed," procedures for testing shall be determined by the State Seed Analyst based upon the most authoritative seed testing information available. For seed not listed in the "Rules for Testing Seeds," procedures for testing shall be determined by the State Seed Analyst based upon the most authoritative seed testing information available. Utah Department of Agriculture and Food has a copy of the "Rules for Testing Seeds", on file in the Seed Laboratory.

R68-8-16. Labeling of Chemical Tests for Viability (Tetrazolium).

The results of tetrazolium tests performed in accordance with the current "Rules For Testing Seeds" of the Association of Official Seed Analysts shall be recognized for labeling purposes.

R68-8-17. Labeling of Seed Distributed to Wholesalers.

A wholesaler, whose predominant business is to supply seed to other distributors rather than to consumers, shall label seed as follows:

A. Containers. If the seed is in containers, the information required in Section 4-16-4 need not be shown on each container provided, that:

1. The lot designation is shown on an attached label or by stenciling or printing on container.
2. The required information for labeling accompanies such shipment.

B. Bulk. In the case of seed in bulk, the information required in Section 4-16-4 shall appear in the invoice or other records accompanying and pertaining to such seed.

R68-8-18. Inspector's Duties.

It shall be the duty of the District Agricultural Inspectors, either in person or by deputy, to quarantine any lots of seed which contain weed seeds in violation of current regulations of the Department of Agriculture and Food. Such seed may be recleaned under the supervision of any official representative of the Utah State Department of Agriculture and Food, and if found to meet the requirements of the current regulations of the Department of Agriculture and Food with respect to weed seed content, the same may be released for distribution, otherwise, such seed will be destroyed. It shall be the duty of the District Agricultural Inspectors, either in person or by deputy, to quarantine any lots of seed which do not comply with the labeling provisions of Section 4-16-4, and Section R68-8. Such seeds shall remain quarantined and shall not be offered for sale until they are properly labeled to meet the above requirements.

R68-8-19. Sampling.

A. General Procedure

1. In order to secure a representative sample, equal portions shall be taken from evenly distributed parts of the quantity of seed or screenings to be sampled. Access shall be had to all parts of that quantity.

2. For free-flowing seed in bags or bulk, a probe or trier shall be used. For small free-flowing seed in bags, a probe or trier long enough to sample all portions of the bag shall be used.

3. Non-free-flowing seed, such as certain grass seed, uncleaned seed, or screenings which are difficult to sample with a probe or trier, shall be sampled by thrusting the hand into the bulk and withdrawing representative portions.

4. The portions shall be combined into a composite sample or samples.

5. As the seed or screening is sampled, each portion shall be examined and whenever there appears to be lack of uniformity, additional samples shall be taken to show such lack of uniformity as may exist.

B. Bulk. Bulk seeds or screenings shall be sampled by inserting a probe or thrusting the hand into the bulk, as circumstances require, to obtain a composite sample of at least as many cores or handfuls of seed or screenings as if the same quantity were in bags of an ordinary size. The cores or handfuls of seed which comprise the composite sample shall be taken from well distributed points throughout the bulk.

C. Bags.

1. In quantities of six bags or less, each bag shall be sampled.

2. In quantities of more than six bags, five bags plus at least 10% of the number of bags in the lot shall be sampled, rounding numbers with decimals to the nearest whole number. Regardless of the lot size, it is not necessary to sample more than thirty bags. Example:

TABLE

No. Bags in Lot	7	10	23	50	100	200	300	400
No. Bags to Sample	6	6	7	10	15	25	30	30

3. Samples shall be drawn from unopened bags except under circumstances where the identity of the seed has been preserved.

D. Small Containers. Seed in small containers shall be sampled by taking the entire unopened containers in sufficient number to supply a minimum size sample as required in Subsection R68-8-19(E). The contents of a single container or the combined contents of multiple containers of the same lot shall be considered representative of the entire lot of seed sampled.

E. Size of Samples. The following are minimum weights of samples of seed to be submitted for analysis, test, or examination:

1. Grass seed not otherwise mentioned, white or alsike clover, or seeds not larger than these - two ounces (approximately 55 grams).

2. Alfalfa, bromegrasses, crimson or red clover, flax, lespedezas, millet, rape, ryegrass or seeds of similar size - five ounces (approximately 150 grams).

3. Proso, sudangrass, or seeds of similar size - one pound. (Approximately 500 grams).

4. Cereals, sorghums, vetches or seeds of similar or larger size - two pounds (approximately 1000 grams).

5. Vegetable and flower seed - at least 400 seeds per sample.

6. Tree and shrub seed - at least 600 seeds per sample for germination purposes. If a purity or noxious-weed seed examination is required, the amount of sample shall be at least the size of that required for seeds of similar size in Subsections R68-8-19(E)(1), (2), (3), and (4).

7. Screenings - two quarts.

R68-8-20. Records.

The term "Complete Records," as it pertains to Section 4-16-11, shall be construed to mean information which relates to origin, germination, purity, variety, and treatment of each lot of seed transported or delivered for transportation within this State. Such information shall include seed samples and records of declaration, labels, purchases, sales, cleaning, bulking, handling, storage, analysis, tests, and examinations. The complete record kept by each person for each lot of seed consists of the information pertaining to his own transactions and the information received from others pertaining to their transactions with respect to each lot of seed.

R68-8-21. Advertising.

The name of a kind or kind and variety of seed and any descriptive terms pertaining thereto shall be correctly represented in any advertisement of seed.

A. Name of Kind or Kind and Variety. The representation of the name of a kind or kind and variety of seed in any advertisement subject to the act shall be confirmed to the name of the kind or kind and variety determined in accordance with Section 4-16-2 associated with words or terms that create a misleading impression as to the history or characteristics of the kind or kind and variety. Descriptive terms and firm names may be used in kind and variety names; provided, that the descriptive terms or firm names are a part of the kind or variety of seed; for example, Stringless Green Pod, Detroit Dark Red, Black Seed Simpson, and Henderson Bush Lima. Seed shall not be designated as hybrid seed in any advertisement subject to the act unless it comes within the definition of "Hybrid" in Section 4-16-2.

B. Characteristics of Kind or Variety. Terms descriptive as to color, shape, size, habit of growth, disease resistance, or other characteristics of the kind or variety, may be associated with the name of the kind or variety; provided, that it is done in a manner which clearly indicates the descriptive term is not part of the name of the kind or variety; for example, Oshkosh pepper (yellow) Copenhagen Market (round head) cabbage, and Kentucky Wonder pole bean.

C. Description of Quality and Origin. Terms descriptive of quality or origin and terms descriptive of the basis for representations made may be associated with the name of the kind or variety of seed; provided, that the terms are clearly identified as being other than part of the name of the kind or variety; for example: Blue Tag Gem Barley, Idaho Origin Alfalfa, and Grower's Affidavit of Variety Atlas Sorghum.

D. Description of Manner of Production or Processing. Terms descriptive of the manner or method of production or processing the seed may be associated with the name of the kind or variety of seed, providing such terms are not misleading.

E. Separation of Brand Names from Kind and Variety Names. Brand names and terms taken from trademarks may be associated with the name of the kind and variety or mixtures of kinds or blends of varieties of seed as an indication of source; provided, that the terms are clearly indicated as being other than part of the name of the kind and variety, mixture or blend. For example: Valley Brand Blend 15 Alfalfa, or River Brand Golden Cross Corn.

R68-8-22. Seed Screenings.

It shall be unlawful for any person, company, or corporation to sell, offer for sale, barter, give away, or otherwise dispose of any screenings containing more than 6 whole prohibited noxious weed seeds per pound and/or more than 27 whole restricted weed seeds per pound; except that screenings containing such seeds may be moved or sold to a mill or plant for processing in such a manner which will reduce the number of whole weed seeds to within the above stated tolerances. Each container or shipment of screenings shall be labeled with the words "Screenings for Processing - Not For Seeding or Feeding" and with the name and address of the consignor and consignee.

R68-8-23. Fees For Testing Services.

Charges for testing samples, representing seed sold or offered for sale in Utah, or other services performed by the state seed laboratory, shall be determined by the department pursuant to Subsection 4-2-2(2). A current listing of approved fees may be obtained upon request from Utah State Department of Agriculture and Food.

R81. Alcoholic Beverage Control, Administration.**R81-2. State Stores.****R81-2-1. Reserved.**

Reserved.

R81-2-2. Liquor Returns, Refunds and Exchanges.

(1) Purpose. This rule establishes guidelines for accepting liquor returns, refunds and exchanges.

(2) Application of Rule.

(a) Unsaleable Product. Unsaleable product includes product that is spoiled, leaking, contains foreign matter, or is otherwise defective. The department will accept for refund or exchange liquor merchandise that is unsaleable subject to the following conditions and restrictions:

(i) Returns of unsaleable merchandise are subject to approval by the store manager to verify that the product is indeed defective.

(ii) The product must be returned within a reasonable time of the date of purchase. Discontinued products may not be returned. Vintages of wine that are not currently being retailed by the department may not be returned.

(iii) No refunds shall be given for wines returned due to spoilage such as corkiness, oxidation, and secondary fermentation, or due to the customer's unfamiliarity with the characteristics of the product. Such wines may only be exchanged for another bottle of the same product. Wine will not be accepted for refund or exchange if the return is a result of improper extraction of the cork.

(b) Saleable Product. Store managers are authorized to accept saleable returned merchandise from licensees, single event permit holders, convention groups, and individual customers, subject to the following conditions and restrictions:

(i) Returns of saleable merchandise are subject to approval by the store manager. The customer may receive a refund or exchange of product for the return. Large returns will be accepted from licensees, single event permittees, convention groups and other organizations only if prior arrangements have been made with the store manager.

(ii) Returns should be made within a reasonable amount of time from the date of purchase, and all returned merchandise must be in good condition. Returns of \$50.00 or more shall not be accepted without a receipt. Therefore, it is necessary for cashiers to print a receipt for all purchases of \$50.00 or more. Signs should be posted at each cash register informing customers of this requirement. Merchandise shall be refunded at the price paid by the customer, or the current price, whichever is lower.

(iii) Wine and beer, due to their perishable nature and susceptibility to temperature changes, should be accepted back with caution. These products can only be returned if the store manager has personal knowledge of how they have been handled and stored.

(iv) If the total amount of the return is more than \$500 the store manager shall fill out a A Returned Merchandise Acknowledgment Receipt (LQ-45), and submit a copy to the office. A refund check will be processed at the office and mailed to the customer. Customers need to be informed that it generally takes three to six weeks to process payment.

(v) If the total value of the returned merchandise is more than \$1,000, a 10% restocking fee shall be charged on the total amount.

(c) Unreturnable Products. The following items may not be returned:

(i) All limited item wines - wines that are available in very limited quantities.

(ii) Any products that have been chilled, over-heated, or label-damaged.

(iii) Outdated (not listed on the department's product/price list) and discontinued products.

(iv) Merchandise purchased by catering services.

(d) A cash register return receipt shall be completed for each product return. The following information must be on the receipt: the customer's name, address, telephone number, driver's license number, and signature. The cashier must attach the receipt to the cash register closing report.

R81-2-3. Warning Sign.

All state stores shall display in a prominent place a "warning sign" as defined in R81-1-2.

R81-2-4. Identification Guidelines to Purchase Liquor.

The department accepts only four forms of identification to establish proof of age for the purchase of liquor by customers:

(1) A current valid driver's license that includes date of birth and has a picture affixed and is issued in this state under Title 53, Chapter 3, Uniform Driver License Act, or in accordance with the laws of another state;

(2) A current valid identification card that includes date of birth and has a picture affixed issued by this state under Title 53, Chapter 3, Part 8, Identification Card Act, or issued by another state that is substantially similar to this state's identification card;

(3) A current valid military identification card that includes date of birth and has a picture affixed; or

(4) A current valid passport.

If a person's age is still in question after presenting proof of age, the department may require the person to also sign a "statement of age" form as provided in 32B-1-405. The form shall be filed alphabetically by the close of the business day, and shall be maintained on file for a period of three years.

R81-2-5. Advertising.

The advertising or promotion of liquor products within state stores is prohibited. An employee may inform the customer as to the characteristics of a particular brand or type of liquor, provided the information is linked to a comparison with other brands or types.

R81-2-6. Refusal of Service.

An employee of the store may refuse to sell liquor to any person whom the employee has reason to believe is purchasing or attempting to purchase liquor in violation of Utah Alcoholic Beverage Control laws. The employee may also detain the person and hold the person's form of identification in a reasonable manner and for a reasonable length of time for the purpose of informing a peace officer of a suspected violation.

R81-2-7. Minors on Premises.

No person under the age of 21 years may enter a state liquor store unless accompanied by a parent, legal guardian, or spouse that is 21 years of age or older. Signs notifying the public of this rule shall be posted in a prominent place on the doors or windows of the state liquor store.

R81-2-8. Payment for Liquor.

(1) Accepting Licensee Payments: Pursuant to 32B-5-303(1)(c), this rule requires that payments collected from licensees for the purchase of liquor come from the licensee and authorizes the agency to make internal department policies in accordance with 32B-2-206(1), (2) and (5) for the acceptance of payments for liquor.

R81-2-9. Reserved.

Reserved.

R81-2-10. State Store Hours.

(1) Authority and purpose: As authorized by 32B-2-503(5)(b), this rule establishes the days and hours for state

stores operations.

(2) Authorized days of operation: State stores may not operate on any day prohibited by 32B-2-503(5)(a).

(3) Authorized hours of operation: Pursuant to 32B-2-202(1) (b) and (k) and in accordance 32B-2-206(1) and(2), this rule authorizes the director to set hours of operations for each state store and establish internal department policies for sales during operational hours based on the following factors.

- (a) the locality of the store;
- (b) tourist traffic;
- (c) demographics;
- (d) population to be served;
- (e) customer demand in the area;
- (f) whether the store is designed for licensee sales; and
- (g) budgetary constraints.

R81-2-11. Industry Members in State Stores.

An industry member, as defined in 32B-4-702, shall be limited to the customer areas of a state store except as follows:

(1) An industry member may be allowed in the storage area of a state store with the approval of the store manager for the limited purpose of stocking the industry member's own products; and

(2) An industry member may be allowed in the office or other suitable area of a state store with the approval of the store manager for the purpose of discussing the industry member's products.

R81-2-12. Store Site Selection.

This rule is promulgated pursuant to Section 32B-2-202(1)(c)(ii) which requires that criteria and procedures be established for determining the location of a state store: Prior to the commission establishing a new state store, the Operations and Procurement Subcommittee will determine the feasibility of a new site, weigh options and consider the investigation and recommendation of the department as outlined in 32B-2-502 then make its recommendation to the commission.

 - (e) Part 5, Discovery - Formal Proceedings (R151-4-501 through R151-4-516);
 - (f) Part 6, Depositions - Formal Proceedings (R151-4-601 through R151-4-611);
 - (g) Part 7, Hearings (R151-4-701 through R151-4-712);
 - (h) Part 8, Orders (R151-4-801 through R151-4-803); and
 - (i) Part 9, Agency Review and Judicial Review (R151-4-901 through R151-4-907).

R151-4-102. Definitions.

In addition to the definitions in Title 63G, Chapter 4, Administrative Procedures Act, as used in this rule (R151-4):

- (1) "Agency head" means the executive director of the department or the director of a division.
- (2) "Applicant" means a person who submits an application.
- (3) "Application" means a request for:
 - (a) licensure;
 - (b) certification;
 - (c) registration;
 - (d) permit; or
 - (e) other right or authority granted by the department.
- (4) "Department" means:
 - (a) the Utah Department of Commerce; or
 - (b) a division of the department.
- (5) "Division" means a division of the department.
- (6) "Electronic" means a:
 - (a) facsimile transmission; or
 - (b) PDF file attached to an email.
- (7) "Intervenor" means a person permitted to intervene in an adjudicative proceeding before the department.
- (8) "Motion" means a request for any action or relief in an adjudicative proceeding.
- (9) "Party in interest:"
 - (a) includes:
 - (i) a party;
 - (ii) a relative of a party; or
 - (iii) an individual with a financial interest in the outcome of the proceeding; and
 - (b) does not include:
 - (i) a party's counsel; or
 - (ii) an employee of a party's counsel.
- (10) "Petition" means the charging document setting forth:
 - (a) statement of jurisdiction;
 - (b) statement of one or more allegations;
 - (c) statement of legal authority; and
 - (d) request for relief.
- (11) "Pleadings" include the following along with any response:
 - (a) notice of agency action or request for agency action;
 - (b) the petition, motions, briefs or other documents filed by the parties to an adjudicative proceeding;
 - (c) a request for agency review or agency reconsideration;
 - (d) motions, briefs or other documents filed by the parties on agency review; and

- (e) a response submitted to a pleading.

R151-4-103. Authority.

This rule (R151-4) is adopted under Subsection 63G-4-102(6) and Section 13-1-6 to define, clarify, or establish the procedures that govern adjudicative proceedings before the department.

R151-4-104. Supplementing Provisions.

Any provision of this rule (R151-4) may be supplemented by a division rule unless expressly prohibited by this rule.

R151-4-105. Purpose and Scope.

(1) This rule (R151-4) is intended to secure the just, speedy, and economical determination of all issues presented in adjudicative proceedings before the department.

(2) In the event of a conflict between this rule and a statute, the statute governs.

R151-4-106. Utah Rules of Civil Procedure.

The Utah Rules of Civil Procedure and related case law are persuasive authority in this rule (R151-4), but may not, except as otherwise provided by Title 63G, Chapter 4, Administrative Procedures Act or by this rule, be considered controlling authority.

R151-4-107. Computation of Time.

- (1) Periods of time in department proceedings shall:
 - (a) exclude the first day of the act, event, or default from which the time begins to run; and
 - (b) include the last day unless it is a Saturday, Sunday, or legal holiday, in which event the period runs until the end of the next day that is not a Saturday, Sunday, or legal holiday.
- (2) When a period of time is less than seven days, Saturdays, Sundays, and legal holidays are excluded.
 - (3)(a)(i) When a period of time runs after the service of a document by mail, three days shall be added to the end of the prescribed period.
 - (ii) Except as provided in R151-4-107(1)(b), these three days include Saturdays, Sundays, and legal holidays.
 - (b) No additional time is provided if service is accomplished by electronic means.
 - (4) Subsection (3) does not apply to a request for agency review filing made pursuant to Subsection R151-4-901(1).

R151-4-108. Timeliness of Administrative Proceedings.

In both informal and formal proceedings, the hearing date shall be scheduled to provide for the hearing to be concluded not more than 180 calendar days after the day on which:

- (1) the notice of agency action is issued; or
- (2) the initial decision with respect to a request for agency action is issued.

R151-4-109. Extension of Time and Continuance of Hearing.

(1) When ruling on a motion or request for extension of time or continuance of a hearing, the presiding officer shall consider:

- (a) whether there is good cause for granting the extension or continuance;
- (b) the number of extensions or continuances the requesting party has already received;
- (c) whether the extension or continuance will work a significant hardship upon the other party;
- (d) whether the extension or continuance will be prejudicial to the health, safety or welfare of the public; and
- (e) whether the other party objects to the extension or continuance.

(2)(a) Except as provided in R151-4-109(2)(b), an

extension of a time period or a continuance of a hearing may not result in the hearing being concluded more than 240 calendar days after the day on which:

(i) the notice of agency action was issued; or
(ii) the initial decision with respect to a request for agency action was issued.

(b) Notwithstanding R151-4-109(2)(a), an extension of a time period or a continuance may exceed the time restriction in R151-4-109(2)(a) only if:

(i)(A) a party provides an affidavit or certificate signed by a licensed physician verifying that an illness of the party, the party's counsel, or a necessary witness precludes the presence of the party, the party's counsel, or a necessary witness at the hearing;

(B) counsel for a party withdraws shortly before the final hearing, unless the presiding officer finds the withdrawal was for the purpose of delaying the hearing, in which case the hearing will go forward with or without counsel;

(C) a parallel criminal proceeding or investigation exists based on facts at issue in the administrative proceeding, in which case the continuance must address the expiration of the continuance upon the conclusion of the criminal proceeding; or

(D) the board or commission designated to act as the fact-finder at hearing is unavailable to meet on a date that:

(I) allows the parties a reasonable period of time for discovery, motion practice, or hearing preparation; and

(II) falls within the 240-day deadline for resolution; and
(ii) the presiding officer finds that injustice would result from failing to grant the extension or continuance.

(c)(i) If the presiding officer considers that extenuating circumstances not contemplated in R151-4-109(2)(b) justify a continuance beyond the 240-day deadline, the presiding officer shall file a written request for continuance with the Executive Director.

(ii) A party may not directly petition the Executive Director for a continuance.

(iii) The Executive Director's decision on the presiding officer's request for continuance shall be issued on an interlocutory basis, not subject to a request for reconsideration or judicial review until after a final order on the merits is issued.

(d) The failure to conclude a hearing within the required time period is not a basis for dismissal.

(3) The presiding officer may not grant an extension of time or continuance that is not authorized by statute or rule.

R151-4-110. Representation of Parties.

(1) A party may:

(a) be represented by counsel who is an active member of a state bar if counsel submits a written notice of appearance;

(b) represent oneself individually; or

(c) if not an individual, represent itself through an officer or employee.

(2) Counsel licensed by the bar of a state other than Utah shall submit a certificate of good standing from the relevant state bar.

R151-4-111. Review of Emergency Orders.

Unless otherwise provided by statute or rule:

(1)(a) A division shall schedule a hearing to determine whether an emergency order should be affirmed, set aside, or modified based on the standards in Section 63G-4-502 if:

(i) the division has previously:

(A) commenced an emergency adjudicative proceeding in the matter; and

(B) issued an order in accordance with Section 63G-4-502 that results in a continued impairment of the affected party's rights or legal interests; and

(ii) the affected party timely submits a written request for a hearing.

(b) A hearing under this rule (R151-4-111) shall be conducted in conformity with Section 63G-4-206.

(2)(a) Upon request for a hearing under this rule, the Division shall conduct a hearing as soon as reasonably practical but not later than 20 days from the receipt of a written request unless the Division and the party requesting the hearing agree in writing to conduct the hearing at a later date.

(b) The Division has the burden of proof to establish, by a preponderance of the evidence, that the requirements of Section 63G-4-502 have been met.

(3)(a) Except as otherwise provided by statute, the division director or designee shall select an individual or body of individuals to act as presiding officer at the hearing.

(b) An individual who directly participated in issuing the emergency order may not act as the presiding officer.

(4)(a) Within 15 calendar days after the day on which the hearing to consider the emergency order concludes, the presiding officer shall issue an order in accordance with Section 63G-4-208.

(b) The order of the presiding officer is subject to agency review.

R151-4-112. Declaratory Orders.

(1)(a) A petition for the issuance of a declaratory order under Section 63G-4-503 shall be filed with the agency head who has primary jurisdiction to enforce or implement the statute, rule, or order for which a declaratory order is sought.

(b) The petition shall:

(i) set forth:

(A) the question to be answered;

(B) the facts and circumstances related to the question;

(C) the statute, rule, or order to be applied to the question;

and

(D) whether oral argument is sought in conjunction with the petition; and

(ii) comply with Part 2, Pleadings.

(2)(a) If the agency head issues a declaratory order without setting the matter for an adjudicative proceeding, the order shall be based on:

(i) a review of the petition;

(ii) oral argument, if any;

(iii) laws and rules applicable to the petition;

(iv) applicable records maintained by the department; and

(v) other relevant information reasonably available to the department.

(b) If the agency head sets the matter for an adjudicative proceeding, the department shall issue a notice of adjudicative proceeding under Subsection 63G-4-201(2)(a).

(3) The department may not issue a declaratory order in any of the following classes of circumstances:

(a) questions involving circumstances set forth in Subsection 63G-4-503(3)(a)(ii) or (3)(b);

(b) questions that are not within the jurisdiction of the department;

(c) questions that have been addressed by the department in an order, rule, or policy;

(d) questions that can be addressed by informal advice;

(e) questions that are addressed by statute;

(f) questions that would be more properly addressed by statute or rule;

(g) questions that arise out of pending or anticipated litigation in a civil, criminal, or administrative forum; or

(h) questions that are irrelevant, insignificant, meaningless, or spurious.

(4) The recipient of a declaratory order may request agency review.

R151-4-113. Record of an Adjudicative Proceeding.

The record of an adjudicative proceeding includes:

- (1) the pleadings and exhibits filed by the parties;
- (2) the recording of a hearing;
- (3) a transcript of a hearing; and
- (4) orders or other documents issued:
 - (a) by a presiding officer; or
 - (b) on agency review or reconsideration.

R151-4-114. Informal Adjudicative Proceedings in General.

(1) Any provision of R151-4 that is specific to a formal adjudicative proceeding is not mandatory for an informal adjudicative proceeding.

(2) By rule or order a division may apply a provision applicable to a formal adjudicative proceeding to an informal adjudicative proceeding, except that a provision relating to discovery, including depositions, may not be applied to an informal adjudicative proceeding.

R151-4-201. Docket Number and Title.

(1) The department shall assign a docket number to each notice of agency action and, where appropriate, to each request for agency action.

(2) At a minimum the docket number shall consist of:

- (a) a letter code identifying where the matter originated, as follows:
 - (i) CORP-Corporations;
 - (ii) CP-Consumer Protection;
 - (iii) DOPL-Occupational and Professional Licensing, including additional designations that division may implement for diversion, lien recovery fund, or other programs;
 - (iv) NAFA-New Automobile Franchise Act;
 - (v) PVFA-Powersport Vehicle Franchise Act;
 - (vi) RE-Real Estate;
 - (vii) AP-Real Estate Appraisers;
 - (viii) MG-Mortgage; and
 - (ix) SD-Securities;

(b) a numerical code indicating the calendar year the matter arises; and

(c) another number indicating chronological position among notices of agency action or requests for agency action filed during the year.

(3) The department shall give each adjudicative proceeding a title in substantially the following form:

TABLE I

BEFORE THE (DIVISION)
OF THE DEPARTMENT OF COMMERCE
OF THE STATE OF UTAH

In the Matter of (the application, petition or license of John Doe)	(Notice of Agency Action) (Request for Agency Action) No. AA-2000-001
--	---

R151-4-202. Content and Size of Pleadings.

Pleadings shall:

- (1) be double-spaced, typewritten, and presented on standard 8 1/2 x 11 inch white paper; and
- (2) contain:
 - (a) a clear and concise statement of the allegations or facts relied upon as the basis for the pleading; and
 - (b) an appropriate request for relief when relief is sought.

R151-4-203. Signing of Pleadings.

(1) Pleadings shall be signed by the party or the party's representative and shall show the signer's address.

(2) The signature is a certification that:

- (a) the signer has read the pleading; and
- (b) to the best of the signer's knowledge and belief, there is good ground to support the pleading.

R151-4-204. Amendments to Pleadings.

(1)(a) A party may amend a pleading once as a matter of course at any time before a responsive pleading is served.

(b) A party that does not qualify to amend a pleading under (1)(a) may amend a pleading only by leave of the presiding officer or by written consent of the adverse party.

(2) A party shall respond to an amended pleading within the later of:

(a) the time remaining for response to the original pleading; or

(b) ten days after service of the amended pleading.

(3) Defects in a pleading that do not affect substantial rights of a party need not be amended and shall be disregarded.

R151-4-205. Response to a Notice of Agency Action.

(1) A respondent in a formal adjudicative proceeding shall file a response to the notice of agency action.

(2)(a) A respondent in an informal adjudicative proceeding may file a response to a notice of agency action.

(b) The presiding officer may, by a written order, require a respondent in an informal adjudicative proceeding to submit a response.

(3) Unless a different date is established by law or rule the following shall be filed within 30 days after the mailing date of the notice:

(a) a response to a notice of agency action; or

(b) a notice of receipt of request for agency action.

R151-4-301. General Provisions.

(1) A party may file a motion that is relevant and timely.

(2) All motions shall be filed in writing unless the necessity for a motion arises at a hearing and could not have been anticipated prior to the hearing.

(3) Subsection 63G-4-102(4)(b) may not be construed to prohibit a presiding officer from granting a timely motion to dismiss for

(a) failure to prosecute;

(b) failure to comply with this rule (R151-4), except where this rule expressly provides that a matter is not a basis for dismissal;

(c) failure to establish a claim upon which relief may be granted; or

(d) other good cause basis.

R151-4-302. Motion to Dismiss.

(1) A motion to dismiss on a ground described in Rule 12(b)(1) through (7) of the Utah Rules of Civil Procedure shall be filed prior to filing a responsive pleading.

(2) In a case that is under agency review:

(a) A motion to dismiss may be brought for:

(i) failure to comply with a jurisdictional deadline;

(ii) failure to file a hearing transcript; or

(iii) failure to file a required memorandum.

(b) A motion to dismiss may not be brought on an allegation or argument as to:

(i) the sufficiency of a pleading or a memorandum in support thereof;

(ii) the sufficiency of the evidence; or

(iii) any other issue that requires substantive analysis.

R151-4-303. Memoranda and Affidavits.

(1) The presiding officer shall permit and may require memoranda and affidavits in support of, or in response to, a motion.

(2) Unless otherwise governed by a scheduling order issued by the presiding officer:

(a) memoranda or affidavits in support of a motion shall be filed concurrently with the motion;

(b) memoranda or affidavits in response to a motion shall be filed no later than 10 days after service of the motion; and

(c) a final reply shall be filed no later than five days after service of the response.

R151-4-304. Oral Argument.

(1) The presiding officer may permit or require oral argument on a motion.

(2) Oral argument on a motion shall be scheduled to take place no more than 10 days after the last day on which the party:

(a) who did not make the motion could have filed a response if that party does not file a response; or

(b) the party who made the motion:

(i) replies to the opposing party's response to the motion;

or

(ii) could have replied to the opposing party's response to the motion.

R151-4-305. Ruling on a Motion.

(1) The presiding officer shall verbally rule on a motion at the conclusion of oral argument whenever possible.

(2) When a presiding officer verbally rules on a motion, the presiding officer shall issue a written ruling within 30 calendar days after the day on which the presiding officer makes the verbal ruling.

(3) If the presiding officer does not verbally rule on a motion at the conclusion of oral argument, the presiding officer shall issue a written ruling on the motion no more than 30 calendar days after:

(a) oral argument; or

(b) if there is no oral argument, the final submission on the motion as outlined in R151-4-304(2).

(4) The failure of the presiding officer to comply with the requirements of R151-4-305:

(a) is not a basis for dismissal of the matter; and

(b) may not be considered an automatic denial or grant of the motion.

R151-4-306. Motion to Recuse or Disqualify a Board or Commission Member.

(1)(a) A motion to recuse or disqualify a Board or Commission member must be filed no later than 14 days prior to the scheduled hearing before the Board or Commission and may include affidavits supporting the basis for the motion. Service of such motion to the opposing party shall be by electronic mail, facsimile or overnight mail.

(b) A response to a motion to recuse or disqualify a Board or Commission member is permitted but not mandatory. Any response shall be filed no later than seven days before the scheduled hearing. Service of a response to the opposing party shall be by electronic mail, facsimile or overnight mail.

(c) No reply is permitted.

(2)(a) The decision on a motion to recuse or disqualify a Board or Commission member shall be made by the Board or Commission member the motion seeks to recuse or disqualify. A written decision is not necessary.

(b) At the beginning of the scheduled hearing, the Board or Commission member shall state on the record his or her decision. The Board or Commission member may choose to notify the presiding officer of his or her decision prior to the hearing, and the presiding officer shall then state the decision on the record.

(c) The Board or Commission member may ask the advice of the other members at the beginning of a scheduled hearing, but the Board or Commission member shall not be bound by any such advice.

(d) The Division, presiding officer, or filing party may not subject the Board or Commission member to questioning or examination on the motion.

(e) The Division or presiding officer may not reverse a recusal or disqualification decision made by a Board or

Commission member.

(f) Like all interlocutory matters, a decision on a motion to recuse or disqualify a Board or Commission member is not subject to an interlocutory appeal or agency review.

(3) This rule does not apply to any adjudicative proceedings under the New Automobile Franchise Act, Utah Code Ann. Sections 13-14-101 et seq., or the Powersport Vehicle Franchise Act, Utah Code Ann. Sections 13-35-101 et seq.

(4) A Board or Commission member may recuse him or herself at any time regardless of whether a party has filed a motion to recuse or disqualify the Board or Commission member.

R151-4-401. Filing.

(1)(a) Pleadings shall be filed with:

(i) the department or division in which the adjudicative proceeding is being conducted, which maintains the official file; and

(ii) any administrative law judge who is conducting all or part of the adjudicative proceeding.

(b) The filing of discovery documents is governed by R151-4-512.

(2)(a) A filing may be accomplished by:

(i) hand delivery of a paper copy, pursuant to Subsection (2)(b)(i);

(ii) first class or certified mail, postage pre-paid, of a paper copy, pursuant to Subsection (2)(b)(i);

(iii) fax, pursuant to Subsection (2)(b)(ii); or

(iv) attachment to electronic mail, pursuant to Subsection (2)(b)(iii).

(b)(i) A filing by hand delivery or first class or certified mail is complete when it is received and date stamped by the department or division, as applicable, or the administrative law judge who is assigned to act as the presiding officer in the case. If delivery to the department or division occurs on a different day than does delivery to the administrative law judge, the earlier date stamp shall constitute the date of filing.

(ii) A filing by fax is complete upon transmission if:

(A) compliant with Subsection (1);

(B) completed and received during the department's operating hours, 8 a.m. to 5 p.m. Mountain Time (Standard or Daylight Savings, as applicable), on days other than Saturdays, Sundays, or state or federal holidays; and

(C) the recipient receives all pages of the document transmitted.

(iii) A filing by attachment to electronic mail is complete upon transmission if:

(A) the requirements of Subsection (2)(b)(ii) are met; and

(B) the party filing the document:

(I) also mails the document to the department or division and the administrative law judge the same day, as evidenced by a postmark; or

(II) prior to any applicable filing deadline, is expressly excused by the presiding officer from mailing the document.

(d) The burden is on the party filing the document to ensure that a filing is properly completed.

(e) All filings made on agency review shall be provided in paper copy.

R151-4-402. Service.

(1)(a) Pleadings filed by the parties and documents issued by the presiding officer shall be concurrently served on all parties.

(b) The party who files a pleading is responsible for service of the pleading.

(c) The presiding officer who issues a document is responsible for service of the document.

(2)(a) Service may be made:

- (i) on a person upon whom a summons may be served pursuant to the Utah Rules of Civil Procedure; and
- (ii) personally or on the agent of the person being served.
- (b) If a party is represented by an attorney, service shall be made on the attorney.
- (3)(a) Service may be accomplished by hand delivery of a paper copy, by mail of a paper copy to the last known address of the intended recipient, or by attachment to electronic mail.
 - (b) Service by hand delivery is complete upon delivery to:
 - (i) the person who is required to be served;
 - (ii) any individual who is employed by, and physically present at, the business office of the person who is required to be served; or
 - (iii) a mailbox or dropbox that is:
 - (A) assigned to the person who is required to be served; and
 - (B) physically located at the person's place of business.
 - (c) Service by mail is complete upon mailing, as evidenced by a postmark.
 - (d) Service by attachment to electronic mail is complete on transmission if transmission is completed during normal business hours, 8 a.m. to 5 p.m. on days other than Saturdays, Sundays, and state and federal holidays, at the place receiving the service; otherwise, service is complete on the next business day.
- (4) There shall appear on all documents required to be served a certificate of service in substantially the following form:

TABLE II

CERTIFICATE OF SERVICE

I certify that I have this day served the foregoing document on the parties of record in this proceeding set forth below (by delivering a copy thereof in person) (by mailing a copy thereof, properly addressed by first class mail with postage prepaid, to) (by electronic means to):

(Name(s) of parties of record)
 (Address(es))
 Dated this (day) day of (month), (year).

(Signature)
 (Name and Title)

R151-4-501. Applicability.

- (1) This part (R151-4-501 to -516) applies only to formal adjudicative proceedings.
- (2) Discovery is prohibited in informal adjudicative proceedings.

R151-4-502. Scope of Discovery.

- (1) Parties may obtain discovery regarding a matter that:
 - (a) is not privileged;
 - (b) is relevant to the subject matter involved in the proceeding; and
 - (c) relates to a claim or defense:
 - (i)(A) of the party seeking discovery; or
 - (B) of another party;
 - (ii) that is set forth in a pleading; and
 - (iii) that is brought pursuant to a statement of fact, information, or belief.
- (2)(a) Subject to R151-4-502(3) and R151-4-504, a party may obtain discovery of documents and tangible things otherwise discoverable under R151-4-502(1) and prepared in anticipation of litigation or for hearing by or for another party or by or for that party's representative, including the party's attorney, consultant, insurer or other agent, only on a showing that the party seeking discovery:
 - (i) has substantial need of the materials in the preparation of the case; and
 - (ii) is unable without undue hardship to obtain the

- substantial equivalent of the materials by other means.
- (b) In ordering discovery of materials described in R151-4-502(2)(a), the presiding officer shall protect against disclosure of the mental impressions, conclusions, opinions, or legal theories of an attorney of a party.
- (3) Discovery of facts known and opinions held by experts, otherwise discoverable under R151-4-502(1) and acquired or developed in anticipation of litigation or for hearing, may be obtained only through the disclosures required by R151-4-504.

R151-4-503. Disclosures Required by Prehearing Order.

- (1) In the prehearing order the presiding officer may require each party to disclose in writing:
 - (a)(i) the name and, if known, the address and telephone number of each individual likely to have discoverable information supporting the party's claims or defenses; and
 - (ii) identification of the topic(s) addressed in the information maintained by each individual; and
 - (b)(i) a copy of all discoverable documents, data compilations, and tangible things that:
 - (A) are in the party's possession, custody, or control; and
 - (B) support the party's claims or defenses; or
 - (ii)(A) a description, by category and location, of the tangible things identified in R151-4-503(1)(b)(i); and
 - (B) reasonable access.
 - (2)(a) The order may not require disclosure of expert testimony, which is governed by R151-4-504.
 - (b) The order shall not require the disclosure of information regarding persons or things intended to be used solely for impeachment.
 - (3)(a) Each party shall make the disclosures required by R151-4-503(1) within 14 days after the prehearing order is issued.
 - (b) A party joined after the prehearing conference shall make these disclosures within 30 days after being served.
 - (c) A party shall make initial disclosures based on the information then reasonably available and is not excused from making disclosures because:
 - (i) the party has not fully completed the investigation of the case;
 - (ii) the party challenges the sufficiency of another party's disclosures; or
 - (iii) another party has not made disclosures.
 - (4) Disclosures required under R151-4-503 shall be made in writing, signed, and served.

R151-4-504. Disclosures Otherwise Required.

- (1)(a) A party shall:
 - (i) disclose in writing the name, address and telephone number of any person who might be called as an expert witness at the hearing; and
 - (ii) provide a written report pursuant to the requirements for disclosure of expert testimony of Rule 26 of the Utah Rules of Civil Procedure.
- (b) Unless otherwise stipulated in writing by the parties or ordered in writing by the presiding officer, the disclosures required by R151-4-504(1) shall be made:
 - (i) within 30 days after the deadline for completion of discovery; or
 - (ii) if the evidence is intended solely to contradict or rebut evidence on the same subject matter identified by another party under R151-4-504(1)(a), within 60 days after the disclosure made by the other party.
- (c) If either party fails to file its disclosure within the time frames in R151-4-504(1), the presiding officer:
 - (i) shall exclude the expert testimony from the proceeding; and
 - (ii) may not continue the hearing to allow additional time

for the disclosures.

(2)(a) In addition to the disclosures required by R151-4-504(1), a party shall disclose information regarding evidence the party may present at hearing other than solely for impeachment purposes pursuant to the pretrial disclosures provisions of Rule 26 of the Utah Rules of Civil Procedure.

(b)(i) The disclosures required by R151-4-504(2) shall be made at least 45 days before the hearing.

(ii) Within 14 days after service of the disclosures a party may serve and file an objection to the:

- (A) use of a deposition designated by another party; and
- (B) admissibility of materials identified under R151-4-504(2)(a).

(iii) An objection not timely made is waived.

R151-4-505. Other Discovery Methods.

Parties may obtain discovery by one or more of the following methods:

- (1) depositions upon oral examination;
- (2) production of documents or things;
- (3) permission to enter upon land or other property for inspection and other purposes; and
- (4) physical and mental examinations.

R151-4-506. Limits on Use of Discovery.

The frequency and extent of discovery shall be limited by the presiding officer regardless of whether either party files a motion to limit discovery if:

(1) the discovery sought is unreasonably cumulative, duplicative, or is obtainable from some other source that is:

- (a) more convenient;
- (b) less burdensome; or
- (c) less expensive;

(2) the party seeking discovery has had ample opportunity by discovery in the action to obtain the information sought; or

(3) the discovery is unduly burdensome or expensive, taking into account:

- (a) the needs of the case;
- (b) the amount in controversy;
- (c) limitations on the parties' resources; and
- (d) the importance of the issues at stake in the litigation.

R151-4-507. Protective Orders.

(1) Upon motion by a party or by the person from whom discovery is sought the presiding officer may make an order that justice requires to protect a party or person from annoyance, embarrassment, oppression, or undue burden or expense, including one or more of the following:

- (a) that the discovery not be had;
- (b) that the discovery may be had only on specified terms and conditions, including a designation of the time or place;
- (c) that the discovery may be had only by a method of discovery other than that selected by the party seeking discovery;
- (d) that certain matters not be inquired into, or that the scope of the discovery be limited to certain matters;
- (e) that discovery be conducted with no one present except persons designated by the presiding officer;
- (f) that a deposition after being sealed be opened only by order of the presiding officer;
- (g) that a trade secret or other confidential research, development, or commercial information not be disclosed or be disclosed only in a designated way; or
- (h) that the parties simultaneously file specified documents or information enclosed in sealed envelopes to be opened as directed by the presiding officer.

(2) If the motion for a protective order is denied in whole or in part, the presiding officer may order that a party or person provide or permit discovery.

R151-4-508. Timing, Completion, and Sequence of Discovery.

(1) Parties are encouraged to initiate appropriate discovery procedures in advance of the prehearing conference so that discovery disputes can be addressed at that conference to the extent possible.

(2)(a) All discovery, except for prehearing disclosures governed by R151-4-504, shall be completed within 120 calendar days after the day on which:

- (i) the notice of agency action was issued; or
- (ii) the initial decision with respect to a request for agency action was issued.

(b) Factors the presiding officer shall consider in determining whether to shorten this time period include:

(i) whether a party's interests will be prejudiced if the time period is not shortened;

(ii) whether the relative simplicity or nonexistence of factual issues justifies a shortening of discovery time; and

(iii) whether the health, safety or welfare of the public will be prejudiced if the time period is not shortened.

(c) Factors the presiding officer shall consider in determining whether a party has demonstrated good cause to extend this time period include, in addition to those set forth in R151-4-109:

(i) whether the complexity of the case warrants additional discovery time; and

(ii) whether that party has made reasonable and prudent use of the discovery time that has already been available to the party since the proceeding commenced.

(d) Notwithstanding R151-4-508(2)(c), the presiding officer may not extend discovery in a way that prevents the hearing from taking place within the time frames established in R151-4-108.

(3)(a) Unless the presiding officer orders otherwise for the convenience of parties and witnesses, and except as otherwise provided by this rule (R151-4), discovery methods may be used in any sequence.

(b) The fact that a party is conducting discovery shall not operate to delay another party's discovery.

R151-4-509. Supplemented Disclosures and Amended Responses.

(1) A party who has made a disclosure or responded to a request for discovery with a response that was complete when made shall supplement the disclosure or amend the response to include subsequent information if:

- (a) ordered by the presiding officer; or
- (b) a circumstance described in R151-4-509(2) or (3) exists.

(2)(a) A party shall supplement disclosures if:

(i) the party learns that in some material respect the information disclosed is incomplete or incorrect; and

(ii) the additional or corrective information has not otherwise been made known to the other parties during the discovery process or in writing.

(b) With respect to testimony of an expert from whom a report is required under R151-4-504:

(i) the duty extends to information contained in the report; and

(ii) additions or other changes to this information shall be disclosed by the time the party's disclosures under R151-4-504 are due.

(3) A party shall amend a prior response to a request for production:

(a) within a reasonable time after the party learns that the response is in some material respect incomplete or incorrect; and

(b) if the additional or corrective information has not otherwise been made known to the other parties during the

discovery process or in writing.

R151-4-510. Prehearing Conference - Scheduling the Hearing Date.

(1) Each notice of agency action or initial decision with respect to a request for agency action:

(a) shall contain the time, date, and location of a prehearing conference, which shall be at least 45 calendar days but not more than 60 calendar days after the date of the notice of agency action or initial decision with respect to a request for agency action;

(b) shall contain a clear notice that failure to respond within 30 calendar days may result in:

- (i) cancellation of the prehearing conference; and
- (ii) a default order; and

(c) may contain the date, consistent with R151-4-108, of the scheduled hearing.

(2)(a) The prehearing conference may be in person or telephonic.

(b) All parties, or their counsel, shall participate in the conference.

(c) The conference shall include discussion and scheduling of discovery, prehearing motions, and other necessary matters.

(3) During the prehearing conference, the presiding officer shall issue a verbal order, and shall issue a written order to the same effect within 2 business days after the conference is concluded, which shall address each of the following:

(a) if necessary, scheduling an additional prehearing conference;

(b) setting a deadline for the filing of all prehearing motions and cross-motions, including motions for summary judgment, which deadline shall allow for all motions to be submitted and ruled on prior to the hearing date;

(c) modifying, if appropriate, a deadline for disclosures;

(d) resolving discovery issues;

(e) establishing a schedule for briefing, discovery needs, expert witness reports, witness and exhibit lists, objections, and other necessary or appropriate prehearing matters;

(f) if not already scheduled, scheduling a hearing date in compliance with R151-4-108; and

(g) dealing with other necessary matters.

(4) A party joined after the prehearing conference is bound by the order issued as a result of that conference unless the order is modified in writing pursuant to a stipulation or motion.

(5)(a) Notwithstanding any other rule, the presiding officer shall schedule all prehearing matters consistent with R151-4-108.

(b) The presiding officer may:

(i) adjust time frames as necessary to accommodate R151-4-108; and

(ii) schedule appropriate prehearing matters to occur concurrently.

R151-4-511. Signing of Disclosures, Discovery Requests, Responses, and Objections.

(1)(a) Every disclosure shall:

(i) be signed by:

(A) at least one attorney of record; or

(B) the party if not represented; and

(ii) include the mailing address of the signer.

(b) The signature of the attorney or party constitutes a certification that to the best of the signer's knowledge, information, and belief, formed after a reasonable inquiry, the disclosure is complete and correct as of the time it was made.

(2)(a) Every request for discovery or response or objection to discovery shall:

(i) be signed by:

(A) at least one attorney of record; or

(B) the party if not represented; and

(ii) include the mailing address of the signer.

(b) The signature of the attorney or party constitutes a certification that the signer has read the request, response, or objection, and that to the best of the signer's knowledge, information, and belief formed after a reasonable inquiry it is:

(i) consistent with this rule (R151-4) and warranted by existing law or a good faith argument for the extension, modification, or reversal of existing law;

(ii) not interposed for an improper purpose, such as to harass or to cause unnecessary delay or needless increase in the cost of litigation; and

(iii) not unreasonable or unduly burdensome or expensive, given the needs of the case, the discovery already had in the case, and the importance of the issues at stake in the proceeding.

(3)(a) If a request, response, or objection is not signed, it shall be stricken unless it is signed promptly after the omission is called to the attention of the party making the request, response or objection.

(b) A party is not obligated to take an action with respect to a request, response, or objection until it is signed.

R151-4-512. Filing of Discovery Requests or Disclosures.

(1) Unless otherwise ordered by the presiding officer:

(a) a party may not file a request for or response to discovery, but shall file only the original certificate of service stating that the request or response has been served on the other parties and the date of service;

(b) a party may not file any of the disclosures required by the prehearing order or any of the expert witness disclosures required by R151-4-504, but shall file only the original certificate of service stating that the disclosures have been served on the other parties and the date of service;

(c) except as may be required by Rule 30 of the Utah Rules of Civil Procedure, depositions shall not be filed; and

(d) a party shall file the disclosures required by R151-4-504.

(2) A party filing a motion for a protective order or a motion for an order compelling discovery shall attach to the motion a copy of the request or response at issue.

R151-4-513. Subpoenas.

(1) Each subpoena:

(a) shall be issued and signed by the presiding officer;

(b) shall state the title of the action;

(c) shall command each person to whom it is directed to attend and give testimony at a hearing or deposition at a time and place specified;

(d) may command the person to whom it is directed to produce designated books, papers, or tangible things, and in the case of a subpoena for a deposition, may permit inspection and copying of the items; and

(e) shall limit its designation of books, papers, or tangible things to matters properly within the scope of discoverable information.

(2) A subpoenaed individual shall receive the fee for attendance and mileage reimbursement required by law.

(3)(a) A subpoena commanding a person to appear at a hearing or a deposition in Utah may be served at any place in Utah.

(b) A person who resides in Utah may be required to appear at a deposition:

(i) in the county where the person resides, is employed, or transacts business in person; or

(ii) at any reasonable location as the presiding officer may order.

(c) A person who does not reside in this state may be required to appear at a deposition:

(i) in the county in Utah where the person is served with a subpoena; or

(ii) at any reasonable location as the presiding officer may order.

(4) A subpoena shall be served in accordance with the requirements of the jurisdiction in which service is made.

(5) Upon a motion made promptly to quash or modify a subpoena, but no later than the time specified in the subpoena for compliance, the presiding officer may:

(a) quash or modify the subpoena, if it is shown to be unreasonable and oppressive; or

(b) conditionally deny the motion with the denial conditioned on the payment of the reasonable cost of producing the requested materials by the person on whose behalf the subpoena is issued.

(6)(a) In the case of a subpoena requiring the production of books, papers, or other tangible things at a deposition, the person to whom the subpoena is directed may, within 10 days after service or on or before the time specified in the subpoena for compliance if the time is less than 10 days after service, serve on the attorney designated in the subpoena a written objection to production, inspection, or copying of any of the designated materials.

(b) If this objection is made, the party serving the subpoena is not entitled to production, inspection, or copying of the materials except pursuant to a further order of the presiding officer who issued the subpoena.

R151-4-514. Production of Documents and Things and Entry Upon Land for Inspection and Other Purposes.

(1) Upon approval by the presiding officer, a party may serve on another party a request:

(a) to produce and permit the party making the request to:

(i) inspect and copy a data compilation from which information can be obtained and translated into a reasonably usable form; or

(ii) inspect and copy, test, or sample a document or tangible thing that:

(A) constitutes or contains matters within the scope of R151-4-502(1); and

(B) are in the possession, custody or control of the party upon whom the request is served; or

(b) to permit, within the scope of R151-4-502(1), entry on designated land, property, object, or operation in the possession or control of the party upon whom the request is served for the purpose of inspection, measuring, surveying, photographing, testing, or sampling.

(2)(a) Before permitting a party to serve a request for production of documents, the presiding officer must first find that the requesting party has demonstrated the records have not already been provided.

(b) After approval by the presiding officer, the request may be served on a party.

(c) The request shall:

(i) set forth the items to be inspected either by individual item or by category;

(ii) describe each item and category with particularity; and

(iii) specify a reasonable time, place, and manner of making the inspection and performing the related acts.

(d)(i) The party upon whom the request is served shall serve a written response within 20 days after service of the request unless the presiding officer allows a shorter or longer time in a written order.

(ii) The response shall state, with respect to each specific item or category:

(A) that inspection and related activities will be permitted as requested; or

(B) an objection.

(iii) The party submitting the request may move for an order under R151-4-516 with respect to any:

(A) objection;

(B) failure to respond to any part of the request; or

(C) failure to permit inspection as requested.

(e) A party who produces documents for inspection shall:

(i) produce them as they are kept in the usual course of business; or

(ii) organize and label them to correspond with the categories in the request.

R151-4-515. Physical and Mental Examination of Persons.

(1)(a) When the mental or physical condition, including the blood group, of a party or of a person in the custody or under the legal control of a party is in controversy, the presiding officer may order the party or person to:

(i) submit to a physical or mental examination by a physician; or

(ii) produce for examination the person in the party's custody or legal control.

(b) The order:

(i) may be made only on motion for good cause shown and upon notice to the person to be examined and to all parties; and

(ii) shall specify:

(A) the time, place, manner, conditions, and scope of the examination; and

(B) the person or persons by whom it is to be made.

(2)(a)(i) If requested by the party against whom an order is made under this rule or the person examined, the party causing the examination to be made shall deliver to the requester a copy of a detailed written report of the examining physician including findings, diagnoses, conclusions, test results, and reports of any earlier examination of the same condition.

(ii)(A) After delivery, the party causing the examination is entitled, on request, to receive from the party against whom the order is made a like report of an examination, previously or thereafter made, of the same condition unless, in the case of an examination of a person not a party, the party shows that the party is unable to obtain it.

(B) The presiding officer on motion may order a party to deliver a report, and if a physician fails or refuses to make a report, the presiding officer may exclude the physician's testimony at the hearing.

(b) By requesting and obtaining an examination report or by taking the deposition of the examiner, the party examined waives any privilege regarding the testimony of every other person who has examined or may thereafter examine the party for the same mental or physical condition.

(c) R151-4-515(2):

(i) applies to examination made by agreement of the parties unless the agreement expressly provides otherwise; and

(ii) does not preclude discovery of a report of an examining physician or the taking of a deposition of the physician under any other rule.

R151-4-516. Motion to Compel Discovery - Sanctions.

(1)(a) The discovering party may move for an order compelling discovery if:

(i) a party fails to make disclosures required by a prehearing order;

(ii) a party fails to make the disclosures required by R151-4-504;

(iii) a deponent fails to answer a question;

(iv) a corporation or other entity named as a deponent fails to designate an individual to testify pursuant to Rule 30 of the Utah Rules of Civil Procedure; or

(v) a party, in response to a request for inspection under R151-4-514, fails to respond that inspection will be permitted as requested or fails to permit inspection as requested.

(b) When taking a deposition, the proponent of the question may complete or adjourn the examination before

applying for an order.

(c) If the presiding officer denies the motion in whole or in part, the presiding officer may make a protective order that otherwise would be authorized by R151-4-507.

(d) An evasive or incomplete answer is treated as a failure to answer.

(2)(a) If a party or other person fails to comply with an order compelling discovery:

(i) the department may seek civil enforcement in the district court under Section 63G-4-501; or

(ii) the presiding officer may, for good cause, issue an order:

(A) that the related matters and facts shall be taken to be established;

(B) refusing to allow the disobedient party to support or oppose designated claims or defenses; or

(C) prohibiting the disobedient party from introducing designated matters in evidence;

(D) striking out pleadings or portions of pleadings;

(E) dismissing the proceeding or a portion of the proceeding; or

(F) rendering a judgment by default against the disobedient party.

R151-4-601. Applicability - Scope.

(1)(a) This part (R151-4-601 to -611) applies only to formal adjudicative proceedings.

(b) Discovery is prohibited in informal adjudicative proceedings.

(2)(a) Only as provided in this part and with a written order of the presiding officer, a party may take the testimony by deposition upon oral examination of certain persons, including parties, who have knowledge of facts relevant to the claims or defenses of a party in the proceeding.

(b) The attendance of witnesses may be compelled by subpoena.

(c) A party may not depose an expert witness.

R151-4-602. General Provisions - Persons who may be Deposed.

(1) Before a party may request leave to take a person's deposition, the party must first make diligent efforts to obtain discovery from that person by means of an informal interview.

(2) A party may not be granted leave to take a deposition unless the party, upon motion, demonstrates to the satisfaction of the presiding officer that the person has knowledge of facts relevant to the claims or defenses of a party in the proceeding and:

(a) has refused a reasonable request by the moving party for an informal interview;

(b) after having notice of at least two reasonable requests by that party for an informal interview, has failed to respond to those requests;

(c) has refused to answer reasonable questions propounded to him by that party in an informal interview; or

(d) will be unavailable to testify at the hearing.

(3) In deciding whether to grant the motion, the presiding officer shall consider the probative value the testimony is likely to have in the proceeding.

(4) The moving party has the burden of demonstrating the need for a deposition.

R151-4-603. Notice of Deposition - Requirements.

(1)(a) A party permitted to take a deposition shall give notice pursuant to the notice requirements of Rule 30 of the Utah Rules of Civil Procedure.

(2)(a) The parties may stipulate in writing or, upon motion, the presiding officer may order in writing that the testimony at a deposition be recorded by means other than stenographic

means.

(b) The stipulation or order:

(i) shall designate the person before whom the deposition shall be taken;

(ii) shall designate the manner of recording, preserving and filing the deposition; and

(iii) may include other provisions to assure the recorded testimony will be accurate and trustworthy.

(c) A party may arrange to have a transcript made at the party's own expense.

(d) A deposition recorded by means other than stenographic means shall set forth in writing:

(i) any objections;

(ii) any changes made by the witness;

(iii) the signature of the witness identifying the deposition as the witness's own or the statement of the court reporter required if the witness does not sign; and

(iv) any certification required by Rule 30 of the Utah Rules of Civil Procedure.

(3) The notice to a party deponent may be accompanied by a request in compliance with R151-4-514 for the production of documents and tangible things at the deposition.

(4) Rule 30(b)(6) of the Utah Rules of Civil Procedure shall apply where a deponent is:

(a) a public or private corporation;

(b) a partnership;

(c) an association; or

(d) a government agency.

(5) The parties may stipulate in writing or, upon motion, the presiding officer may order a deposition be taken by telephone.

R151-4-604. Examination and Cross-Examination.

(1) Examination and cross-examination of witnesses may proceed as permitted at a hearing under the Utah Administrative Procedures Act and pursuant to Rule 30 of the Utah Rules of Civil Procedure.

R151-4-605. Motion to Terminate or Limit Examination.

(1) The presiding officer may order the court reporter conducting the examination to end the deposition or may limit the scope and manner of taking the deposition pursuant to Rule 30 of the Utah Rules of Civil Procedure.

R151-4-606. Submission to Witness - Changes - Signing.

A deposition shall be submitted to the witness, changed, and signed pursuant to Rule 30 of the Utah Rules of Civil Procedure.

R151-4-607. Certification - Delivery - Exhibits.

(1) The transcript or recording of a deposition shall be certified and delivered pursuant to Rule 30 of the Utah Rules of Civil Procedure.

(2) Exhibits shall be marked for identification, inspected, copied, and delivered pursuant to Rule 30 of the Utah Rules of Civil Procedure.

R151-4-608. Persons Before Whom Depositions May Be Taken.

Depositions shall be taken before a certified court reporter holding a current and active license under Utah Code Title 58, Chapter 74, Certified Court Reporters Licensing Act.

R151-4-609. Use of Depositions.

(1) Pursuant to the other provisions of R151-4-609, a part of a deposition, if admissible under the rules of evidence applied as though the witness were present and testifying, may be used against a party who:

(a) was present or represented at the taking of the

deposition; or

- (b) had reasonable notice of the deposition.
- (2) A party may use a deposition:
 - (a) to contradict or impeach the testimony of the deponent as a witness; or
 - (b) for another purpose permitted by the Utah Rules of Evidence.
 - (3) An adverse party may use a deposition for any purpose.
 - (4) A party may use the deposition of a witness, whether or not a party, for any purpose if the presiding officer finds that:
 - (a) the witness is dead;
 - (b) the witness is more than 100 miles from the hearing, unless it appears the absence of the witness was procured by the party offering the deposition;
 - (c) the witness is unable to attend or testify because of age, illness, infirmity, or imprisonment; or
 - (d) the party offering the deposition has been unable to procure the attendance of the witness by subpoena.
 - (5) If part of a deposition is offered in evidence by a party, an adverse party may require introduction of any other part which ought, in fairness, to be considered with the part introduced.
 - (6) A deposition lawfully taken and filed in a court or another agency within Utah may be used as if originally taken in the pending proceeding.
 - (7) A deposition previously taken may otherwise be used as permitted by the Utah Rules of Evidence.

R151-4-610. Objections to Admissibility.

A party may object at a hearing to receiving in evidence any part of a deposition for a reason that would require the exclusion of the evidence if the witness were present and testifying.

R151-4-611. Effect of Errors and Irregularities in Depositions.

- (1) An error or irregularity in the notice for taking a deposition is waived unless a party promptly serves a written objection on the party giving the notice.
- (2) Objection to taking a deposition because of disqualification of the court reporter before whom it is to be taken is waived unless made before the taking of the deposition begins or as soon thereafter as the disqualification becomes known or could be discovered with reasonable diligence.
- (3) An objection to the competency of a witness or to the competency, relevancy, or materiality of testimony is not waived by failure to make it before or during the taking of the deposition, unless the basis of the objection is one that could have been obviated or removed if presented at that time.
- (4) An error or irregularity occurring at the oral examination in the manner of taking the deposition, in the form of the questions or answers, in the oath or affirmation, or in the conduct of parties, and an error that might be obviated, removed, or cured if promptly presented, is waived unless an objection is made at the taking of the deposition.
- (5) An error or irregularity in the manner in which the testimony is transcribed or the deposition is prepared, signed, certified, sealed, endorsed, transmitted, filed, or otherwise dealt with is waived unless a motion to suppress is made with reasonable promptness after the defect is, or with due diligence should have been, discovered.

R151-4-701. Hearings Required or Permitted.

A hearing shall be held in an adjudicative proceedings in which a hearing is:

- (1) required by statute or rule and not waived by the parties; or
- (2) permitted by statute or rule and timely requested.

R151-4-702. Time to Request Permissive Hearing.

A request for a hearing permitted by statute or rule must be received no later than:

- (1) the time period for filing a response to a notice of agency action if a response is required or permitted;
- (2) twenty days following the issuance of a notice of agency action if a response is not required or permitted; or
- (3) the filing of the request for agency action.

R151-4-703. Hearings Open to Public - Exceptions.

(1) A hearing in an adjudicative proceeding is open to the public unless closed by:

- (a) the presiding officer conducting the hearing, pursuant to Title 63G, Chapter 4, the Administrative Procedures Act; or
- (b) a presiding officer who is a public body, pursuant to Title 52, Chapter 4, the Open and Public Meetings Act.
- (2)(a) The deliberative process of an adjudicative proceeding is a quasi-judicial function exempt from the Open and Public Meetings Act.
- (b) Deliberations are closed to the public.

R151-4-704. Bifurcation of Hearing.

The presiding officer may, for good cause, order a hearing bifurcated into a findings phase and a sanctions phase.

R151-4-705. Order of Presentation in Hearings.

The order of presentation of evidence in hearings in formal adjudicative proceedings shall be as follows:

- (1) opening statement of the party with the burden of proof;
- (2) opening statement of the opposing party, unless the party reserves the opening statement until the presentation of its case-in-chief;
- (3) case-in-chief of the party with the burden of proof and cross examination of witnesses by opposing party;
- (4) case-in-chief of the opposing party and cross examination of witnesses by the party with the burden of proof;
- (5) if the presiding officer finds it to be necessary, rebuttal evidence by the party which has the burden of proof;
- (6) if the presiding officer finds it to be necessary, rebuttal evidence by the opposing party;
- (7) closing argument by the party with the burden of proof;
- (8) closing argument by the opposing party; and
- (9) final argument by the party with the burden of proof.

R151-4-706. Testimony Under Oath.

Testimony presented at a hearing shall be given under oath administered by the presiding officer and under penalty of perjury.

R151-4-707. Electronic Testimony.

(1) As used in this section (R151-4-707), electronic testimony includes testimony by telephone or by other audio or video conferencing technology.

(2)(a) Electronic testimony is permissible in a formal proceeding only:

- (i) on the consent of all parties; or
- (ii) if warranted by exigent circumstances.
- (b) Expenses to produce in-person testimony do not constitute an exigent circumstance in a formal proceeding. (c) Electronic testimony generally is permissible in an informal proceeding on the request of a party.
- (3)(a) When electronic testimony is to be presented, the presiding officer shall require identification of the witness.
- (b) The presiding officer shall provide safeguards to:
 - (i) assure the witness does not refer to documents improperly; and
 - (ii) reduce the possibility the witness may be coached or

influenced during the testimony.

R151-4-708. Standard of Proof.

Unless otherwise provided by statute or a rule applicable to a specific proceeding, the standard of proof in a proceeding under this rule (R151-4), whether initiated by a notice of agency action or request for agency action, is a preponderance of the evidence.

R151-4-709. Burden of Proof.

Unless otherwise provided by statute:

(1) the department has the burden of proof in a proceeding initiated by a notice of agency action; and

(2) the party who seeks action from the department has the burden of proof in a proceeding initiated by a request for agency action.

R151-4-710. Default Orders.

(1) The presiding officer may enter a default order under Section 63G-4-209, with or without a motion from a party.

(2) If a basis exists for a default order, the order may enter without notice to the defaulting party or a hearing.

(3) A default order is not required to be accompanied by a separate order.

R151-4-711. Record of Hearing.

(1) The presiding officer shall make a record of all prehearing conferences and hearings.

(2)(a) The presiding officer shall make the record of a hearing in a formal proceeding by means of:

(i) a certified court reporter licensed under Title 58, Chapter 74, Certified Court Reporters Licensing Act; or

(ii) a digital audio or video recording in a commonly used file format.

(b) The presiding officer shall make record of a hearing in an informal proceeding by:

(i) a method required for a formal proceeding; or

(ii) minutes or an order prepared or adopted by the presiding officer.

(3) A hearing in an adjudicative proceeding shall be recorded at the expense of the department.

(4)(a) If a party is required by R151-4-902 to obtain a transcript of a hearing for agency review, the party must ensure that the record is transcribed:

(i) in a formal adjudicative proceeding, by a certified court reporter; or

(ii) in an informal adjudicative proceeding, by:

(A) a certified court reporter; or

(B) a person who is not a party in interest.

(b) Where a transcript is prepared by someone other than a certified court reporter, a party shall file an affidavit of the transcriber stating under penalty of perjury that the transcript is a correct and accurate transcription of the hearing record.

(c) Pages and lines in a transcript shall be numbered for referencing purposes.

(d) The party requesting the transcript shall bear the cost of the transcription.

(5) The original transcript of a record of a hearing shall be filed with the presiding officer.

R151-4-712. Fees.

(1)(a) Witnesses appearing on the demand or at the request of a party may receive payment from that party of:

(i) \$18.50 for each day in attendance; and

(ii) if traveling more than 50 miles to attend and return from the hearing, 25 cents per mile for each mile actually and necessarily traveled.

(b) A witness subpoenaed by a party other than the department may:

(i) demand one day's witness fee and mileage in advance; and

(ii) be excused from appearance unless the fee is provided.

(2) Interpreters and translators may receive compensation for their services.

(3) An officer or employee of the United States, the State of Utah, or a county, incorporated city, or town within the State of Utah, may not receive a witness fee unless the officer or employee is required to testify at a time other than during normal working hours.

(4) A witness may not receive fees in more than one adjudicative proceeding on the same day.

R151-4-801. Requirements and Timeliness.

(1) For default orders and orders issued subsequent to a default order, the requirements of Subsections 63G-4-203(1)(i)(iii) and (iv) and 63G-4-208(1)(e),(f) and (g) are satisfied if the order includes a notice of the right to seek to set aside the order as provided in Subsection 63G-4-209(3).

(2) Except as provided in Sections 63G-4-502 and R151-4-111, the presiding officer shall issue an order within 45 calendar days after the day on which the hearing concludes.

(3) If the presiding officer permits the filing of post-hearing documents, that filing shall be scheduled in a way that allows the presiding officer to issue an order within 45 calendar days after the day on which the hearing concludes.

(4) The failure of the presiding officer to comply with the requirements of this section (R151-4-801):

(a) is not a basis for dismissal of the matter; and

(b) may not be considered an automatic denial or grant of a motion.

R151-4-802. Effective Date.

The effective date of an order is 30 calendar days after its issuance unless otherwise provided in the order.

R151-4-803. Clerical Mistakes.

(1) The department may correct clerical mistakes in orders or other parts of the record and errors arising from oversight or omission on:

(a) its own initiative; or

(b) the motion of a party.

(2) Mistakes described in this section (R151-4-803) may be corrected:

(a) at any time prior to the docketing of a petition for judicial review; or

(b) as governed by Rule 11(h) of the Utah Rules of Appellate Procedure.

R151-4-901. Availability of Agency Review and Reconsideration.

(1)(a) Except as otherwise provided in Subsection 63G-4-209(3)(c), an aggrieved party may obtain agency review of a final order by filing a request with the executive director within 30 calendar days after the issuance of the order.

(b) This 30-day deadline is jurisdictional. The three-day mailing rule in Section 151-4-107(3) does not apply and does not extend the jurisdictional deadline.

(2)(a) Agency review is not available for an order or decision entered by:

(i) the Utah Motor Vehicle Franchise Advisory Board; or

(ii) the Utah Powersport Vehicle Franchise Advisory Board.

(b) Agency review is not available for an order or decision entered by the Division of Occupational and Professional Licensing for:

(i) Prelitigation proceedings under Title 78B, Chapter 3, the Utah Health Care Malpractice Act;

(ii) a request for modification of a disciplinary order; or

(iii) a request under Section 58-1-404(4) for entry into the Diversion Program.

(c) Agency review is not available for an order or decision entered by the Division of Corporations and Commercial Code for:

- (i) refusal to file a document under the Utah Revised Business Corporations Act pursuant to Section 16-10a-126;
- (ii) revocation of a foreign corporation's authority to transact business pursuant to Section 16-10a-1532;
- (iii) refusal to file a document under the Utah Revised Limited Liability Company Act pursuant to Section 48-2c-211; or
- (iv) revocation of a foreign limited liability company's authority to transact business pursuant to Section 48-2c-1614.

(d)(i) A party may request agency reconsideration pursuant to Section 63G-4-302 for an order or decision exempt from agency review under R151-4-901(2)(a), (2)(b)(ii), and (2)(c).

(ii) Pursuant to Subsections 58-1-404(4)(d) and 78B-3-416(1)(c), agency reconsideration is not available for an order or decision exempt from agency review under R151-4-901(2)(b)(i) and (2)(b)(iii).

R151-4-902. Request for Agency Review - Transcript of Hearing - Service.

(1) A request for agency review shall:

(a) comply with Subsection 63G-4-301(1)(b) and this section (R151-4-902); and

(b) include a copy of the order that is the subject of the request.

(2) A party requesting agency review shall set forth any factual or legal basis in support of that request, including adequate supporting arguments and citation to:

- (a) appropriate legal authority; and
- (b) the relevant portions of the record.

(3)(a) If a party challenges a finding of fact, the party must demonstrate, based on the entire record, that the finding is not supported by substantial evidence.

(b) A party challenging a finding of fact bears the burden to:

- (i) marshal or gather all the evidence in support of the finding; and
- (ii) show that despite that evidence, the finding is not supported by substantial evidence.

(c) The failure to marshal the evidence permits the executive director to accept a division's findings of fact as conclusive.

(d) A party challenging a legal conclusion must support the argument with citation to:

- (i) relevant authority; and
- (ii) the portions of the record relevant to the issue.

(4)(a) If the grounds for agency review include a challenge to a determination of fact or conclusion of law as unsupported by or contrary to the evidence, the party seeking agency review shall order and cause a transcript of the record relevant to the finding or conclusion to be prepared.

(b) When a transcript is required, the party seeking review shall:

- (i) certify that the transcript has been ordered;
- (ii) notify the department when the transcript will be available; and
- (iii) file the transcript with the executive director in accordance with the time frame stated in the certification regarding transcript.

(c) The party seeking agency review bears the cost of the transcript.

(5) Grounds for agency review that include any legal argument must be supported by specific citations to the transcript of the proceeding, indicating when the argument was raised and preserved in the proceeding. Examples of legal

argument include but are not limited to:

- (a) an objection to a ruling of the presiding officer;
- (b) an argument regarding one or more procedures attendant to the proceeding; or
- (c) an argument as to the legal validity, including the Constitutionality, of a statute or rule.

(6)(a) A party seeking agency review shall, in the manner described in R151-4-401 and -402, file and serve on all parties copies of correspondence, pleadings, and other submissions.

(b) If an attorney enters an appearance on behalf of a party, service shall be made on the attorney instead of the party.

(7) Failure to comply with this section (R151-4-902) may result in dismissal of the request for agency review.

R151-4-903. Stay Pending Agency Review.

(1)(a) With a timely filing of a request for agency review, the party seeking review may request that the effective date of the order subject to review be stayed pending the completion of review.

(b) If a stay is not timely requested and subsequently granted, the order subject to review shall take effect according to its terms.

(2)(a) The division that issued the order subject to review may oppose a request for a stay in writing within ten days from the date the stay is requested.

(b) Failure to oppose a timely request for a stay shall result in an order granting the stay unless the department determines that a stay would not be in the best interest of the public.

(c) If a division opposes a motion for a stay, the department may permit a final response by the party requesting the stay.

(d) The department may enter an interim order granting a stay pending a decision on the motion for a stay.

(3)(a) In determining whether to grant a request for a stay, the department shall review the division's findings of fact, conclusions of law and order to determine whether granting a stay would, or might reasonably be expected to, pose a significant threat to the public health, safety and welfare.

- (b) The department may issue:
- (i) an order granting the motion for a stay;
 - (ii) a conditional stay imposing terms, conditions or restrictions on a party pending agency review;
 - (iii) a partial stay; or
 - (iv) an order denying the motion for a stay.

R151-4-904. Agency Review - Memoranda.

(1)(a) The department may order or permit the parties to file memoranda to assist in conducting agency review.

- (b) Memoranda shall comply with:
- (i) this rule (R151-4); and
 - (ii) a scheduling order entered by the department.

(2)(a) If a transcript is not necessary to conduct agency review, a memorandum supporting a request for agency review shall be concurrently filed with the request.

(b) If a transcript is necessary to conduct agency review, a supporting memorandum shall be filed no later than 15 days after the filing of the transcript with the department.

(3)(a) A response to a request for agency review and a memorandum supporting that response shall be filed no later than 30 days after the service of the memoranda supporting the request.

(b) A final reply memorandum shall be filed no later than 10 days after the service of a response to the request for agency review.

(4) If agency review involves more than two parties the department shall conduct a telephonic scheduling conference to address briefing deadlines.

R151-4-905. Agency Review - Standards of Review.

In both formal and informal adjudicative proceedings, the standards for agency review correspond to the standards for judicial review of formal adjudicative proceedings under Subsection 63G-4-403(4).

R151-4-906. Agency Review - Type of Relief - Order on Review.

(1) The type of relief available on agency review shall be the same as the type of relief available on judicial review under Subsection 63G-4-404(1)(b).

(2) The order on review constitutes final agency action for purposes of Subsection 63G-4-401(1).

R151-4-907. Stay Pending Judicial Review.

(1) A party seeking judicial review of an order may file with the executive director a motion for a stay of the order pending judicial review. The motion for a stay shall be filed with the executive director on the same date that a timely petition for judicial review is filed with the court.

(2) Unless otherwise provided by statute, a motion for a stay of an order pending judicial review shall include:

(a) a statement of the reasons for the relief requested;

(b) a statement of the facts relied upon;

(c) affidavits or other sworn statements if the facts are subject to dispute;

(d) relevant portions of the record of the adjudicative proceeding and agency review;

(e) a memorandum of law identifying the issues to be presented on appeal and supporting the aggrieved party's position that those issues raise a substantial question of law or fact reasonably likely to result in reversal, remand for a new hearing, or relief from the order entered;

(f) clear and convincing evidence that if the requested stay is not granted, the aggrieved party will suffer irreparable injury;

(g) clear and convincing evidence that if the requested stay is granted, it will not substantially harm other parties to the proceeding; and

(h) clear and convincing evidence that if the requested stay is granted, the aggrieved party will not pose a significant danger to public health, safety and welfare.

(3)(a) The division that issued the order subject to review may oppose a motion for a stay in writing within ten days from the date that the motion is filed.

(b) Failure to oppose a timely motion under this Section shall result in an order granting the stay unless the executive director determines that a stay would not be in the public interest.

(c) If a division opposes a motion for a stay, the executive director may permit a final response by the party filing the motion.

(4) The executive director may grant a motion for a stay of an order pending judicial review if all of the criteria in R151-4-907 are met.

63G-4-102(6)**

R156. Commerce, Occupational and Professional Licensing.**R156-5a. Podiatric Physician Licensing Act Rule.****R156-5a-101. Title.**

This rule is known as the "Podiatric Physician Licensing Act Rule".

R156-5a-102. Definitions.

In addition to the definitions in Title 58, Chapters 1 and 5a, as used in Title 58, Chapters 1 and 5a or this rule:

(1) "Recognized residency program" as used in Subsection 58-5a-302(5) means a residency program that is accredited by the Council on Podiatric Medical Education.

(2) "Recognized school" as used in Subsection 58-5a-306(2) means a school that is accredited by the Council on Podiatric Medical Education.

R156-5a-103. Authority - Purpose.

This rule is adopted by the division under the authority of Subsection 58-1-106(1)(a) to enable the division to administer Title 58, Chapter 5a.

R156-5a-104. Organization - Relationship to Rule R156-1.

The organization of this rule and its relationship to Rule R156-1 is as described in Section R156-1-107.

R156-5a-302a. Qualifications for Licensure - Education Requirements.

In accordance with Subsections 58-1-203(1) and 58-1-301(3), the postgraduate training requirements for licensure in Section 58-5a-302 is defined, clarified, or established as requiring each applicant to have successfully completed at least 12 months of postgraduate training in a residency program that was accredited by the Council on Podiatric Medical Education of the American Podiatric Medical Association at the time the applicant received that training.

R156-5a-302b. Qualifications for Licensure - Examination Requirements.

(1) In accordance with Subsection 58-1-203(1) and 58-1-301(3), the examination requirements for licensure in Section 58-5a-302 are established as follows:

(a) the National Board of Podiatric Medical Examiners examination (NBPME); or

(b) the Podiatric Medicine Licensing examination (PMLexis); and

(c) the Utah Podiatric law examination.

(2) To be eligible to sit for the NBPME or PMLexis, an applicant must submit the following to the Division:

(a) an application for licensure as a podiatric physician;

(b) licensing application fee;

(c) a transcript indicating completion of an approved podiatric program; and

(d) a copy of the test application submitted to NBPME or PMLexis.

R156-5a-302c. Qualifications for Licensure - Training Requirements.

(1) In accordance with Subsection 58-5a-103(3)(b)(iii), acceptable documentation that the podiatric physician has completed training and experience in standard or advanced midfoot, rearfoot, and ankle procedures, shall consist of verification from the American Board of Foot and Ankle Surgery that the applicant is currently board qualified.

(2) In accordance with Subsection 58-5a-103(3)(c)(iii), acceptable documentation that the podiatric physician has completed training and experience in standard or advanced midfoot, rearfoot, and ankle procedures, shall consist of verification of a fellowship in foot and ankle surgery from a program approved, at the time of completion, by the Council on

Podiatric Medical Education.

R156-5a-303. Renewal Cycle - Procedures.

(1) In accordance with Subsection 58-1-308(1)(a), the renewal date for the two-year renewal cycle applicable to licensees under Title 58, Chapter 5a is established by rule in Section R156-1-308a.

(2) Renewal procedures shall be in accordance with Section R156-1-308c.

R156-5a-304. Continuing Education.

(1) There is hereby established a continuing professional education requirement for all individuals licensed under Title 58, Chapter 5a.

(2) During each two year period commencing on September 30 of each even numbered year, a licensee shall be required to complete not less than 40 hours of qualified professional education directly related to the licensee's professional clinical practice.

(3) The required number of hours of professional education for an individual who first becomes licensed during the two year period shall be decreased in a pro-rata amount equal to any part of that two year period year preceding the date on which that individual first became licensed.

(4) Qualified professional education under this section shall:

(a) have an identifiable clear statement of purpose and defined objective for the educational program directly related to the practice of a podiatric physician;

(b) be relevant to the licensee's professional practice;

(c) be presented in a competent, well organized, and sequential manner consistent with the stated purpose and objective of the program;

(d) be prepared and presented by individuals who are qualified by education, training, and experience;

(e) have associated with it a competent method of registration of individuals who actually completed the professional education program and records of that registration and completion are available for review; and

(f) be sponsored or approved by a combination of the following:

(i) one of the organizations listed in Subsection 58-5a-304(3);

(ii) the American Podiatric Medical Association; or

(iii) the Division of Occupational and Professional Licensing.

(5) Credit for professional education shall be recognized in accordance with the following:

(a) unlimited hours shall be recognized for professional education completed in blocks of time of not less than one hour in formally established classroom courses, seminars, or conferences;

(b) a maximum of 40 hours per two year period may be recognized for teaching in a college or university or teaching qualified professional education courses in the field of podiatry;

(c) a maximum of ten hours per two year period may be recognized for clinical readings directly related to practice as a podiatric physician; and

(d) a maximum of six hours of continuing education may come from the Division of Occupational and Professional Licensing.

(6) A licensee shall be responsible for maintaining competent records of completed qualified professional education for a period of four years after close of the two year period to which the records pertain. It is the responsibility of the licensee to maintain such information with respect to qualified professional education to demonstrate it meets the requirements under this section.

(7) If properly documented that a licensee is engaged in

full time activities or is subjected to circumstances which prevent that licensee from meeting the continuing professional education requirements established under this section, the licensee may be excused from the requirement for a period of up to three years; however, it is the responsibility of the licensee to document the reasons and justify why the requirement could not be met.

R156-5a-305. Radiology Course for Unlicensed Podiatric Assistants.

In accordance with Subsection 58-54-4.3(3), radiology courses for an unlicensed person performing services under the supervision of a podiatric physician shall include radiology theory consisting of the following:

- (1) orientation of radiation technology;
- (2) terminology;
- (3) radiographic podiatric anatomy and pathology (cursory);
- (4) radiation physics (basic);
- (5) radiation protection to patient and operator;
- (6) radiation biology including interaction of ionizing radiation on cells, tissues and matter;
- (7) factors influencing biological response to cells and tissues to ionizing radiation and cumulative effects of x-radiation;
- (8) external radiographic techniques;
- (9) processing techniques including proper disposal of chemicals; and
- (10) infection control in podiatric radiology.

R156. Commerce, Occupational and Professional Licensing.**R156-31b. Nurse Practice Act Rule.****R156-31b-101. Title.**

This rule is known as the "Nurse Practice Act Rule".

R156-31b-102. Definitions.

In addition to the definitions in Title 58, Chapters 1 and 31b, as defined or used in this rule:

(1) "Accreditation" means formal recognition and approval of a nurse education program by an accrediting body for nursing education that is approved by the United States Department of Education.

(2) "Administering" means the direct application of a prescription drug or device, whether by injection, inhalation, ingestion, or by any other means, to the body of a human patient or research subject by another person.

(3) "APRN" means advanced practice registered nurse.

(4) "APRN-CRNA" means advanced practice registered nurse with registered nurse anesthetist certification.

(5) "Approved continuing education" means:

(a) continuing education that has been approved by a nationally or internationally recognized approver of professional continuing education for health-related industries;

(b) nursing education courses offered by an approved education program as defined in Subsection R156-31b-102(7);

(c) health-related coursework taken from an educational institution accredited by a regional or national institutional accrediting body recognized by the U.S. Department of Education; and

(d) training or educational presentations offered by the Division.

(6) "Approved education program" means any nursing education program that meets the standards established in Section 58-31b-601 or Section R156-31b-602.

(7) "CGFNS" means the Commission on Graduates of Foreign Nursing Schools.

(8) "Comprehensive nursing assessment" means:

(a) conducting extensive initial and ongoing data collection:

(i) for individuals, families, groups or communities; and

(ii) addressing anticipated changes in patient conditions as well as emergent changes in patient health status;

(b) recognizing alterations to previous patient conditions;

(c) synthesizing the biological, psychological, spiritual, and social aspects of the patient's condition;

(d) evaluating the impact of nursing care; and

(e) using data generated from the assessments conducted pursuant to this Subsection (a) through (d) to:

(i) make independent decisions regarding patient health care needs;

(ii) plan nursing interventions;

(iii) evaluate any possible need for different interventions;

and

(iv) evaluate any possible need to communicate and consult with other health team members.

(9) "Contact hour" in the context of continuing education means 60 minutes, which may include a 10-minute break.

(10) "Delegate" means:

(a) to transfer to another nurse the authority to perform a selected nursing task in a selected situation;

(b) in the course of practice of an APRN who specializes in psychiatric mental health nursing, to transfer to any individual licensed as a mental health therapist selected psychiatric APRN supervisory clinical experiences within generally-accepted industry standards; or

(c) to transfer to an unlicensed person the authority to perform a task that, according to generally-accepted industry standards or law, does not require a nursing assessment as defined in Sections R156-31b-102(8) and (14).

(11) "Delegatee" means one or more persons assigned by a delegator to act on the delegator's behalf.

(12) "Delegator" means a person who assigns to another the authority to perform a task on behalf of the person.

(13)(a) "Disruptive behavior" means conduct, whether verbal or physical, that:

(i) is demeaning, outrageous, or malicious;

(ii) occurs during the process of delivering patient care; and

(iii) places a patient at risk.

(b) "Disruptive behavior" does not include criticism that is offered in good faith with the aim of improving patient care.

(14) "Focused nursing assessment" means an appraisal of a patient's status and situation at hand, including:

(a) verification and evaluation of orders; and

(b) assessment of:

(i) the patient's nursing care needs;

(ii) the complexity and frequency of the required nursing care;

(iii) the stability of the patient; and

(iv) the availability and accessibility of resources, including appropriate equipment, adequate supplies, and other appropriate health care personnel to meet the patient's nursing care needs.

(15) "Foreign nurse education program" means any program that originates or occurs outside of the United States.

(16) "Individualized healthcare plan" or "IHP" means a written document that outlines the provision of student healthcare services intended to achieve specific student outcomes.

(17) "Licensure by equivalency" applies only to the licensed practical nurse and may be warranted if the person seeking licensure:

(a) has, within the two-year period preceding the date of application, successfully completed course work in a Utah-based registered nurse program that meets the criteria established in Sections 58-31b-601 and R156-31b-602; or

(b)(i) is currently enrolled in an accredited Utah-based registered nurse education program; and

(ii) has completed course work that is certified by the education program provider as being equivalent to the course work of an ACEN-accredited practical nursing program, as verified by the nursing education program director or administrator.

(18) "LPN" means licensed practical nurse.

(19) "MAC" means medication aide certified.

(20) "Medication" means any prescription or nonprescription drug as defined in Subsections 58-17b-102(4), (37) or (61) of the Pharmacy Practice Act.

(21) "NCLEX" means the National Council Licensure Examination of the National Council of State Boards of Nursing.

(22) "Non-approved education program" means any nurse prelicensing course of study that does not meet the criteria of Section 58-31b-601, including a foreign nurse education program.

(23) "Nurse" means:

(a) an individual licensed under Title 58, Chapter 31b as:

(i) a licensed practical nurse;

(ii) a registered nurse;

(iii) an advanced practice registered nurse; or

(iv) an advanced practice registered nurse-certified registered nurse anesthetist; or

(b) a certified nurse midwife licensed under Title 58, Chapter 44a.

(24) "Other specified health care professionals," as used in Subsection 58-31b-102(15), means an individual, in addition to a registered nurse or a licensed physician, who is permitted to direct the tasks of a licensed practical nurse, and includes:

- (a) an advanced practice registered nurse;
- (b) a certified nurse midwife;
- (c) a chiropractic physician;
- (d) a dentist;
- (e) an osteopathic physician;
- (f) a physician assistant;
- (g) a podiatric physician;
- (h) an optometrist;
- (i) a naturopathic physician; or
- (j) a mental health therapist as defined in Subsection 58-60-102(5).

(25) "Patient" means one or more individuals:

- (a) who receive medical and/or nursing care; and
- (b) to whom a licensee owes a duty of care.

(26) "Patient surrogate" means an individual who has legal authority to act on behalf of a patient when the patient is unable to act or make decisions unaided, including:

- (a) a parent;
- (b) a foster parent;
- (c) a legal guardian; or
- (d) a person legally designated as the patient's attorney-in-fact.

(27) "PN" means an unlicensed practical nurse.

(28) "Psychiatric mental health nursing specialty" means an expertise in psychiatric mental health, whether as a clinical nurse specialist or nurse practitioner licensed as an APRN.

(29) "Practitioner" means a person authorized by law to prescribe treatment, medication, or medical devices.

(30) "RN" means a registered nurse.

(31) "School" means any private or public institution of primary or secondary education, including a charter school, preschool, kindergarten, or special education program.

(32) "Supervision" is as defined in Subsection R156-1-102a(4).

(33) "Unprofessional conduct" as defined in Title 58, Chapters 1 and 31b is further defined in Section R156-31b-502.

R156-31b-103. Authority -- Purpose.

This rule is adopted by the Division under the authority of Subsection 58-1-106(1)(a) to enable the Division to administer Title 58, Chapter 31b.

R156-31b-104. Organization -- Relationship to Rule R156-1.

The organization of this rule and its relationship to Rule R156-1 is as described in Section R156-1-107.

R156-31b-201. Board of Nursing -- Membership.

In accordance with Subsection 58-31b-201(1), the Board membership shall comprise:

- (1) one licensed practical nurse;
- (2) two advanced practice registered nurses, at least one of whom is an APRN-CRNA;
- (3) four RNs;
- (4) two additional members licensed either as RNs or APRNs who are actively involved in nursing education; and
- (5) two public members.

R156-31b-202. Advisory Peer Education Committee Created -- Membership - Duties.

(1) In accordance with Subsection 58-1-203(1)(f), there is created the Advisory Peer Education Committee.

(2) The duties and responsibilities of the Advisory Peer Education Committee are to:

- (a) review applications for approval of nursing education programs;
- (b) monitor a nursing education program that is approved for a limited time under Section R156-31b-602 as it progresses toward accreditation; and
- (c) advise the Division as to nursing education issues.

(3) The composition of the Advisory Peer Education Committee shall be:

(a) seven RNs or APRNs actively involved in nursing education, including at least one representative from public, private, and proprietary nursing programs; and

(b) any member of the Board who wishes to serve on the committee.

R156-31b-301. License Classifications -- Professional Upgrade.

Upon issuance by the Division of an increased scope of practice license:

- (1) the increased licensure supersedes the lesser license;
- (2) the lesser license is automatically expired; and
- (3) the licensee shall immediately destroy any print or physical copy of the lesser license.

R156-31b-301a. LPN License -- Education, Examination, and Experience Requirements.

(1) An applicant who has never obtained a license in any state or country shall:

- (a) demonstrate that the applicant:
 - (i) has successfully completed a PN prelicensing education program that meets the requirements of Section 58-31b-601;
 - (ii) has successfully completed a PN prelicensing education program that is equivalent to an approved program under Section 58-31b-601; or
 - (iii)(A) is enrolled in an RN prelicensing education program that meets the requirements of Section 58-31b-601; and

(B) has completed coursework that is equivalent to the coursework of an accredited practical nurse program;

(b) pass the NCLEX-PN examination pursuant to Section R156-31b-301e; and

(c) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

(2) An applicant who holds a current LPN license issued by another country or state shall:

- (a) demonstrate that the license issued by the other jurisdiction is active and in good standing as of the date of application;
- (b) demonstrate that the PN prelicensing education completed by the applicant:

(i) is equivalent to PN prelicensing education approved in Utah as of the date of the applicant's graduation; and

(ii) if a foreign education program, meets all requirements outlined in Section R156-31b-301d;

(c) pass the NCLEX-PN examination pursuant to Section R156-31b-301e; and

(d) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

(3) An applicant who holds a current LPN license in an interstate compact state shall apply for a license within 90 days of establishing residency in Utah and complete all requirements pursuant to R156-31b-301a(2).

(4) An applicant who has been licensed previously in Utah, but whose license has expired or lapsed, shall:

(a) if the applicant has not practiced as a nurse for up to five years, document current compliance with the continuing competency requirements as established in Subsection R156-31b-303(3);

(b) if the applicant has not practiced as a nurse for more than five years but less than eight years:

(i) pass the NCLEX-PN examination within 60 days following the date of application; or

(ii) successfully complete an approved re-entry program;

(c) if the applicant has not practiced as a nurse for more than eight years but less than 10 years:

(i) successfully complete an approved re-entry program;

and

(ii) pass the NCLEX-PN examination within 60 days following the date of application; or

(d) if the applicant has not practiced as a nurse for 10 years or more, comply with this Subsection (1).

(5) An applicant who has been licensed in another state or country, but whose license has expired or lapsed, shall:

(a) comply with this Subsection (2)(b); and

(b) comply with this Subsection (4) as applicable; and

(c) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

R156-31b-301b. RN License -- Education, Examination, and Experience Requirements.

(1) An applicant who has never obtained a license in any state or country shall:

(a) demonstrate that the applicant has successfully completed an RN prelicensing education program that:

(i) meets the requirements of Section 58-31b-601; or

(ii) is equivalent to an approved program under Section 58-31b-601;

(b) pass the NCLEX-RN examination pursuant to Section R156-31b-301e; and

(c) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

(2) An applicant who holds a current RN license issued by another country or state shall:

(a) demonstrate that the license issued by the other jurisdiction is current, active, and in good standing as of the date of application;

(b)(i) demonstrate that the applicant has graduated from an RN prelicensing education program; and

(ii) if a foreign education program, demonstrate that the program meets all requirements outlined in Section R156-31b-301d;

(c) pass the NCLEX-RN examination pursuant to Section R156-31b-301e; and

(d) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

(3) An applicant who holds a current RN license in an interstate compact state shall apply for a license within 90 days of establishing residency in Utah and complete all requirements pursuant to R156-31b-301b(2).

(4) An applicant who has been licensed previously in Utah, but whose license has expired or lapsed, shall:

(a) if the applicant has not practiced as a nurse for up to five years, document current compliance with the continuing competency requirements as established in Subsection R156-31b-303(3);

(b) if the applicant has not practiced as a nurse for more than five years but less than eight years:

(i) pass the NCLEX-RN examination within 60 days following the date of application; or

(ii) successfully complete an approved re-entry program;

(c) if the applicant has not practiced as a nurse for more than eight years but less than 10 years:

(i) successfully complete an approved re-entry program; and

(ii) pass the NCLEX-RN examination within 60 days following the date of application; or

(d) if the applicant has not practiced as a nurse for 10 years or more, comply with this Subsection (1).

(5) An applicant who has been licensed in another state or country, but whose license has expired or lapsed, shall:

(a) comply with this Subsection (2)(b);

(b) comply with this Subsection (4) as applicable; and

(c) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

R156-31b-301c. APRN License -- Education, Examination, and Experience Requirements.

(1) An applicant who is not currently and validly licensed as an APRN in any state or country shall:

(a) demonstrate that the applicant holds a current, active RN license in good standing;

(b) demonstrate that the applicant has successfully completed an APRN prelicensing education program that meets the requirements of Subsection 58-31b-601(1) and Subsection 58-31b-302(4)(e);

(c) pass a national certification examination consistent with the applicant's educational specialty, pursuant to Section R156-31b-301e, and administered by one of the following credentialing bodies:

(i) the American Nurses Credentialing Center Certification;

(ii) the Pediatric Nursing Certification Board;

(iii) the American Association of Nurse Practitioners;

(iv) the National Certification Corporation for the Obstetric, Gynecologic and Neonatal Nursing Specialties;

(v) the American Midwifery Certification Board, Inc.; or

(vi) the National Board of Certification and Recertification for Nurse Anesthetists;

(d) if the applicant specializes in psychiatric mental health nursing, demonstrate that the requirements outlined in this Subsection (2) are met; and

(e) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

(2) Requirements for APRN Specializing in Psychiatric Mental Health Nursing:

(a) In accordance with Subsection 58-31b-302(4)(g), the supervised clinical practice in mental health therapy and psychiatric and mental health nursing shall consist of a minimum of 4,000 hours of psychiatric mental health nursing education and clinical practice, including mental health therapy, as follows.

(i) 1,000 hours shall be credited for completion of clinical experience in an approved education program in psychiatric mental health nursing.

(ii) The remaining 3,000 hours shall:

(A) be completed after passing the applicable national certification examination and within five years of graduation from an accredited master's or doctoral level educational program;

(B) include a minimum of 1,000 hours of mental health therapy practice; and

(C) include at least 2,000 clinical practice hours that are completed under the supervision of:

(I) an APRN specializing in psychiatric mental health nursing; or

(II) a licensed mental health therapist as delegated by the supervising APRN.

(b) An applicant who obtains all or part of the clinical practice hours outside of Utah may receive credit for that experience by demonstrating that the training completed is equivalent in all respects to the training required under this Subsection (2)(a).

(c)(i) An approved supervisor shall verify practice as a licensee engaged in the practice of mental health therapy for not less than 4,000 hours in a period of not less than two years.

(ii) Duties and responsibilities of a supervisor include:

(A) being independent from control by the supervisee such that the ability of the supervisor to supervise and direct the practice of the supervisee is not compromised;

(B) supervising not more than three supervisees unless otherwise approved by the Division in collaboration with the Board; and

(C) submitting appropriate documentation to the Division with respect to all work completed by the supervisee, including

the supervisor's evaluation of the supervisee's competence to practice.

(3) An applicant who holds a current APRN license issued by another state or country shall:

(a) demonstrate that the license issued by the other state or country is current, active, and in good standing as of the date of application;

(b) demonstrate that the APRN prelicensing education completed by the applicant:

(i) if completed on or after January 1, 1987:

(A) is equivalent to APRN prelicensing education approved in Utah as of the date of the applicant's graduation; or

(B) constitutes a bachelor degree in nursing; and

(ii) if a foreign education program, meets all requirements outlined in Section R156-31b-301d;

(c) if the applicant specializes in psychiatric mental health nursing, demonstrate that the applicant has successfully engaged in active practice in psychiatric mental health nursing for not less than 4,000 hours in the three-year period immediately preceding the date of application; and

(d) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

(4) An applicant who has been licensed previously in Utah, but whose license has expired, lapsed, or been on inactive status, shall:

(a) demonstrate current certification in the individual's specialty area; and

(b) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

(5) An applicant who has been licensed previously in another state or country, but whose license has expired or lapsed, shall:

(a) comply with this Subsection (3)(b);

(b) demonstrate that the applicant is currently certified in the individual's specialty area; and

(c) submit to a criminal background check pursuant to Subsection 58-31b-302(5) and Section R156-31b-301g.

R156-31b-301d. Foreign Education Programs.

An applicant whose prelicensing education was completed through a foreign program that does not meet the requirements of Section 58-31b-601, shall demonstrate:

(1)(a) that all three components of the CGFNS certification process and the credentials evaluation service professional report have been completed so as to demonstrate that the courses completed are substantially equivalent to coursework of approved education programs as of the date of the applicant's graduation;

(b) that at least one of the following practice requirements has been met within the five-year period preceding the date of application:

(i) the applicant has practiced as a licensed nurse for a minimum of 960 hours in a state or territory of the United States;

(ii) the applicant has completed a Board-approved refresher course;

(iii) the applicant has obtained an advanced (master's or doctorate) nursing degree; or

(iv) the applicant has qualified for and obtained a license upgrade (LPN to RN or RN to APRN); and

(c) that the applicant has achieved a passing score on an approved English proficiency test prior to the date of application; or

(2)(a) that the applicant practiced as a licensed nurse for 6,000 hours in another state or territory of the United States during the five-year period immediately preceding the date of application; and

(b) that the applicant has achieved a passing score on an approved English proficiency test prior to the date of

application.

R156-31b-301e. Examination Requirements.

(1)(a) An applicant for licensure as an LPN, RN, or APRN shall pass the applicable licensure or certification examination within five years of the applicant's date of graduation from the nurse education program, except as provided in Subsection (1)(b).

(b) An individual specializing in psychiatric mental health nursing shall complete the applicable certification examination prior to beginning the 3,000 hours of required psychiatric clinical and mental health therapy practice.

(c) An individual who does not pass the applicable licensure or certification examination pursuant to this Subsection (1)(a) or (b) as applicable shall complete another approved nursing education program before again attempting to pass the licensure or certification examination.

(2) An applicant for certification as an MAC shall pass the NCSBN Medication Aide Certification Examination (MACE) within one year of completing the approved training program.

(3) The examinations required under these rules are national examinations and cannot be challenged before the Division.

R156-31b-301f. Licensing Fees.

An applicant for licensure shall pay the applicable nonrefundable application fee before the application may be considered by the Division or Board.

R156-31b-301g. Criminal Background Checks.

A criminal background check conducted during the application process is considered current and acceptable for that specific application only.

R156-31b-303. LPN, RN, and APRN License Renewal - Professional Downgrade - Continuing Education.

(1) In accordance with Subsection 58-1-308(1), the renewal date for the two-year renewal cycle applicable to licensees under Title 58, Chapter 31b, is established by rule in Section R156-1-308a.

(2) Renewal procedures shall be in accordance with Section R156-1-308c.

(3) Each applicant for renewal shall comply with the following continuing competency requirements:

(a) An LPN or RN shall complete one of the following during the two-year period immediately preceding the date of application for renewal:

(i) licensed practice for not less than 400 hours;

(ii) licensed practice for not less than 200 hours and completion of 15 contact hours of approved continuing education; or

(iii) completion of 30 contact hours of approved continuing education hours.

(b) An APRN shall comply with the following:

(i)(A) be currently certified or recertified in the licensee's specialty area of practice; or

(B) if licensed prior to July 1, 1992, complete 30 hours of approved continuing education and 400 hours of practice; and

(ii) if authorized to prescribe controlled substances, comply with Section R156-37-402 and Section 58-37-6.5.

(c) An MAC shall complete eight contact hours of approved continuing education related to medications or medication administration during the two-year period immediately preceding the application for renewal.

(4) A licensee who wishes to downgrade the license in conjunction with a renewal or reinstatement application shall:

(a) comply with the competency requirements of this Subsection (3)(a);

(b) pay all required fees, including any applicable late

fees;

(c) submit a completed renewal or reinstatement form as applicable to the license desired; and

(d) complete and sign a license surrender document as provided by the Division.

(5) A licensee who obtained a license downgrade may apply for license upgrade by:

(i) submitting the appropriate application for licensure complete with all supporting documents as required of an individual making an initial application for license demonstrating the applicant meets all current qualifications for licensure;

(ii) meeting the continuing competency requirements of this Subsection (3); and

(iii) paying the established license fee for a new applicant for licensure.

R156-31b-309. APRN Intern License.

(1) An individual who has completed all requirements outlined in Subsection R156-31b-301c(1) except the certification examination requirement may apply for an APRN intern license.

(2) In accordance with Section 58-31b-306, and unless this Subsection (3) or (4) applies, an intern license expires the earlier of:

(a) 180 days from the date of issuance;

(b) 30 days after the Division receives notice pursuant to this Subsection (4) that the applicant has failed the specialty certification examination; or

(c) upon issuance of an APRN license.

(3) The Division in collaboration with the Board may extend the term of any intern license upon a showing of extraordinary circumstances beyond the control of the applicant.

(5) It is the professional responsibility of an APRN intern:

(a) to inform the Division of examination results within ten calendar days of receipt; and

(b) to cause the examination agency to send the examination results directly to the Division.

R156-31b-402. Administrative Penalties.

In accordance with Sections 58-1-501, 58-31b-501, 58-31b-502, 58-31b-801 and R156-31b-502 and Subsection 58-31b-102(1), and unless otherwise ordered by the presiding officer, the following fine schedule shall apply to a nurse or MAC.

(1) Initial and second offenses.

(a) Using a protected title, name, or initials, if the user is not properly licensed under this chapter, in violation of Subsection 58-31b-501(1):

initial offense: \$500 - \$4,000

second offense: \$4,000 - \$8,000

(b) Using any name, title, or initials that would cause a reasonable person to believe the user is licensed or certified under this chapter if the user is not properly licensed or certified under this chapter, in violation of Subsection 58-31b-501(2):

initial offense: \$500 - \$4,000

second offense: \$4,000 - \$8,000

(c) Conducting a nursing education program in the state for the purpose of qualifying individuals to meet requirements for licensure under this chapter without the program having been approved under Section 58-31b-601 or Subsection R156-31b-602, in violation of Subsection 58-31b-501(3):

initial offense: \$2,000 - \$7,500

second offense: \$7,500 - \$9,500

(d) Practicing or engaging in, representing oneself to be practicing or engaging in, or attempting to practice or engage in the practice of nursing, if the person is not licensed to do so or exempted from licensure under Utah Code 58-31b et seq. or restricted from doing so by a suspended, revoked, restricted,

temporary, probationary, or inactive license, or in violation of restrictions that have been placed on a license, in violation of Subsection 58-1-501(1)(a):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(e) Impersonating another licensee, or practicing an occupation or profession under a false or assumed name, in violation of Subsection 58-1-501(1)(b):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(f) Knowingly employing a person to practice or engage in or attempt to practice or engage in the practice of nursing if the employee is not licensed to do so, in violation of Subsection 58-1-501(1)(c):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(g) Knowingly permitting the person's authority to engage in the practice of nursing to be used by another person, in violation of Subsection 58-1-501(1)(d):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(h) Obtaining a passing score on a licensure examination, applying for or obtaining a license, or otherwise dealing with the Division or Board through the use of fraud, forgery, intentional deception, misrepresentation, misstatement, or omission, in violation of Subsection 58-1-501(1)(e):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(i) Issuing, or aiding and abetting in the issuance of, an order or prescription for a drug or device to a person located in this state without prescriptive authority conferred by a license, or by an exception to licensure; or with prescriptive authority conferred by an exception or a multistate practice privilege, if the prescription was issued without first obtaining information, in the usual course of professional practice, that is sufficient to establish a diagnosis, to identify underlying conditions and to identify contraindications to the proposed treatment, in violation of Subsection 58-1-501(1)(f)(i):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(j) Violating or aiding or abetting any other person to violate any statute, rule, or order regulating the practice of nursing, in violation of Subsection 58-1-501(2)(a):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(k) Violating, or aiding or abetting any other person to violate any generally accepted professional or ethical standard applicable to the practice of nursing, in violation of Subsection 58-1-501(2)(b):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(l) Engaging in conduct that results in conviction or a plea of nolo contendere which is held in abeyance pending the successful completion of probation with respect to a crime of moral turpitude or any other crime that, when considered with the functions and duties of the practice of nursing, bears a reasonable relationship to the licensee's or applicant's ability to safely or competently practice the profession, in violation of Subsection 58-1-501(2)(c):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(m) Engaging in conduct that results in disciplinary action, including reprimand, censure, diversion, probation, suspension, or revocation, by any other licensing or regulatory authority having jurisdiction over the licensee or applicant in the profession of nursing if the conduct would, in the state of Utah, constitute grounds for denial of licensure or disciplinary proceedings under Section 58-1-401, in violation of Subsection 58-1-501(2)(d):

- initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (n) Engaging in conduct, including the use of intoxicants, drugs, narcotics, or similar chemicals, to the extent that the conduct does, or might reasonably be considered to, impair the ability of the licensee or applicant to safely engage in practice of the nursing profession, in violation of Subsection 58-1-501(2)(e):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (o) Practicing or attempting to practice the profession of nursing despite being physically or mentally unfit to do so, in violation of Subsection 58-1-501(2)(f):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (p) Practicing or attempting to practice the profession of nursing through gross incompetence, gross negligence, or a pattern of incompetency or negligence, in violation of Subsection 58-1-501(2)(g):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (q) Practicing or attempting to practice the profession of nursing by any form of action or communication which is false, misleading, deceptive, or fraudulent, in violation of Subsection 58-1-501(2)(h):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (r) Practicing or attempting to practice the profession of nursing beyond the individual's scope of competency, abilities, or education, in violation of Subsection 58-1-501(2)(i):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (s) Practicing or attempting to practice the profession of nursing beyond the scope of licensure, in violation of Subsection 58-1-501(2)(j):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (t) Verbally, physically, mentally, or sexually abusing or exploiting any person through conduct connected with the licensee's practice in the profession of nursing or otherwise facilitated by the licensee's license, in violation of Subsection 58-1-501(2)(k):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (u) Acting as a supervisor without meeting the qualification requirements for that position that are defined by statute or under these rules, in violation of Subsection 58-1-502(2)(l):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (v) Issuing, or aiding and abetting in the issuance of, an order or prescription for a drug or device without first obtaining information in the usual course of professional practice, that is sufficient to establish a diagnosis, to identify conditions, and to identify contraindications to the proposed treatment; or with prescriptive authority conferred by an exception issued under this title, or a multistate practice privilege recognized under this title, if the prescription was issued without first obtaining information, in the usual course of professional practice, that is sufficient to establish a diagnosis, to identify underlying conditions, and to identify contraindications to the proposed treatment, in violation of Subsection 58-1-501(2)(m):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (w) Failing to safeguard a patient's right to privacy as to the patient's person, condition, diagnosis, personal effects, or any other matter about which the licensee is privileged to know because of the licensee's or person with a certification's position, in violation of Subsection 58-31b-502(1):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (x) Failing to provide nursing service in a manner that demonstrates respect for the patient's human dignity and unique personal character and needs without regard to the patient's race, religion, ethnic background, socioeconomic status, age, gender, or nature of the patient's health problem, in violation of Subsection 58-31b-502(2):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (y) Engaging in sexual relations with a patient, in violation of Subsection 58-31b-502(3):
initial offense: \$4,000 - \$8,000
second offense: \$8,000 - \$10,000
- (z) Exploiting or using information about a patient or exploiting the professional relationship by use of knowledge of the patient obtained while practicing the occupation or profession, in violation of Subsection 58-31b-502(4):
initial offense: \$2,000 - \$5,000
second offense: \$5,000 - \$10,000
- (aa) Unlawfully obtaining, possessing, or using any prescription drug or illicit drug, in violation of Subsection 58-31b-502(5):
initial offense: \$1,000 - \$5,000
second offense: \$5,000 - \$10,000
- (bb) Unauthorized taking or personal use of nursing supplies from an employer, in violation of Subsection 58-31b-502(6):
initial offense: \$1,000 - \$5,000
second offense: \$5,000 - \$10,000
- (cc) Unauthorized taking or personal use of a patient's personal property, in violation of Subsection 58-31b-502(7):
initial offense: \$1,000 - \$5,000
second offense: \$5,000 - \$10,000
- (dd) Knowingly entering into any medical record any false or misleading information or altering a medical record in any way for the purpose of concealing an act, omission, or record of events, medical condition, or any circumstance related to the patient and the medical or nursing care provided, in violation of Subsection 58-31b-502(8):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (ee) Unlawful or inappropriate delegation of nursing care, in violation of Subsection 58-31b-502(9):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (ff) Failing to exercise appropriate supervision of persons providing patient care services under supervision of the licensed nurse, in violation of Subsection 58-31b-502(10):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (gg) Employing or aiding and abetting the employment of unqualified or unlicensed person to practice as a nurse or MAC, in violation of Subsection 58-31b-502(11):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (hh) Failing to file or record any medical report as required by law, impeding or obstructing the filing or recording of such a report, or inducing another to fail to file or record such a report, in violation of Subsection 58-31b-502(12):
initial offense: \$500 - \$5,000
second offense: \$5,000 - \$10,000
- (ii) Breaching a statutory, common law, regulatory, or ethical requirement of confidentiality with respect to a person who is a patient, in violation of Subsection 58-31b-502(13):
initial offense: \$1,000 - \$5,000
second offense: \$5,000 - \$10,000
- (jj) Failing to pay a penalty imposed by the Division, in violation of Subsection 58-31b-502(14): double the original

penalty amount up to \$20,000

(kk) Prescribing a schedule II-III controlled substance without a consulting physician or outside of a consultation and referral plan, in violation of Subsection 58-31b-502(15):

initial offense: \$1,000 - \$5,000

second offense: \$5,000 - \$10,000

(ll) Failing to confine practice within the limits of competency, in violation of Section 58-31b-801:

initial offense: \$1,000 - \$5,000

second offense: \$5,000 - \$10,000

(mm) Engaging in any other conduct which constitutes unprofessional or unlawful conduct, in violation of Subsection 58-1-501(1) or (2):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(nn) Engaging in a sexual relationship with a patient surrogate concurrent with the professional relationship, in violation of Subsection R156-31b-502(1)(e):

initial offense: \$1,000 - \$5,000

second offense: \$5,000 - \$10,000

(oo) Failing to destroy a license that has expired due to the issuance and receipt of an increased scope of practice license, in violation of Subsection R156-31b-502(1)(a):

initial offense: \$500 - \$4,000

second offense: \$4,000 - \$8,000

(pp) Knowingly accepting or retaining a license that has been issued pursuant to a mistake or on the basis of erroneous information, in violation of Subsection R156-31b-502(1)(b):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(qq) Engaging in practice in a disruptive manner, in violation of Subsection R156-31b-502(1)(f):

initial offense: \$500 - \$5,000

second offense: \$5,000 - \$10,000

(rr) Violating the term of an order governing a license, in violation of Subsection 58-1-501(2)(o):

initial offense: \$250 - \$4,000

second offense: \$4,000 - \$8,000

(2) Subsequent offenses. Sanctions for an offense subsequent to the second offense, shall be \$10,000 or \$2,000 per day.

R156-31b-502. Unprofessional Conduct.

(1) "Unprofessional conduct" includes:

(a) failing to destroy a license that has expired due to the issuance and receipt of an increased scope of practice license;

(b) knowingly accepting or retaining a license that has been issued pursuant to a mistake or on the basis of erroneous information;

(c) as to an RN or LPN, issuing a prescription for a prescription drug to a patient except in accordance with the provisions of Section 58-17b-620, or as may be otherwise legally permissible;

(d) failing as the nurse accountable for directing nursing practice of an agency to verify any of the following:

(i) that standards of nursing practice are established and carried out;

(ii) that safe and effective nursing care is provided to patients;

(iii) that guidelines exist for the organizational management and management of human resources needed for safe and effective nursing care to be provided to patients; or

(iv) that the nurses employed by the agency have the knowledge, skills, ability and current competence to carry out the requirements of their jobs;

(e) engaging in sexual contact with a patient surrogate concurrent with the nurse/patient relationship unless the nurse affirmatively shows by clear and convincing evidence that the contact:

(i) did not result in any form of abuse or exploitation of the surrogate or patient; and

(ii) did not adversely alter or affect in any way:

(A) the nurse's professional judgment in treating the patient;

(B) the nature of the nurse's relationship with the surrogate; or

(C) the nature of the nurse's relationship with the patient;

(f) engaging in disruptive behavior in the practice of nursing;

(g) prescribing to oneself any controlled substance drug, in violation of Subsection R156-37-501(1)(a); and

(h) violating any federal or state law relating to controlled substances, including self-administering any controlled substance which is not lawfully prescribed by another licensed practitioner having authority to prescribe the drug, in violation of Section R156-37-502.

(2) In accordance with a prescribing practitioner's order and an IHP, a registered nurse who, in reliance on a school's policies or the delegation rule as provided in Sections R156-31b-701 and R156-31b-701a, delegates or trains an unlicensed assistive person to administer medications under Sections 53A-11-601, R156-31b-701 and R156-31b-701a, shall not be considered to have engaged in unprofessional conduct for inappropriate delegation.

R156-31b-602. Requirements for Limited-time Approval of Non-accredited Nursing Education Programs.

(1)(a) Pursuant to Subsection 58-31b-601(2), a nursing education program may, prior to obtaining an accreditation described in Subsection 58-31b-601(1), qualify for a limited time as an approved education program if the program provider demonstrates to the satisfaction of the Board that the program:

(i) has established a timeline which allows for the initial accreditation visit to occur before the first students graduate;

(ii) understands the accreditation standards of its selected accrediting body as demonstrated in a written report which includes plans and processes consistent with the accrediting body for:

(A) curricular organization and delivery method;

(B) student learning outcomes;

(C) student support;

(D) program administration and organization;

(E) learning environment and facilities;

(F) clinical learning and placements; and

(G) faculty and nurse administrator qualifications;

(iii) clearly informs students and potential students about its accreditation status and the potential implications for future practice; and

(b) If the program provider is seeking accreditation from an accrediting body for nursing education as defined in Subsection R156-31b-102(1), the limited-time approval shall expire after 12 months unless Subsection (2) applies.

(c) If the program provider is seeking accreditation from the COA, the limited-time approval shall expire at the end of the COA initial review process unless this Subsection (2) applies.

(2)(a) A program that is granted limited-time approval pursuant to this Subsection (1) shall retain that approval if, during the applicable time period outlined in Subsection (1) it achieves candidate, applicant, or initial status with an accrediting body for nursing education that is approved by the United States Department of Education.

(b) A program that meets the qualifications described in this Subsection (2)(a) shall retain its limited-time approval until such time as the accrediting body makes a final determination on the program's application for accreditation.

(c) A program shall achieve full accreditation within five years of receiving candidate, applicant, or review status with the approved accrediting body.

(3) The provider of a program that receives limited-time approval pursuant to this Subsection (1) and (2) shall, pursuant to this Subsection (4), disclose to each student who enrolls:

(a) that program accreditation is pending;

(b) that any education completed prior to the accrediting body's final determination will satisfy, at least in part, state requirements for prelicensing education; and

(c) that, if the program fails to achieve accreditation, any student who has not yet graduated will be unable to complete a nurse prelicensing education program through the provider.

(4) The disclosure required by this Subsection (3) shall:

(a) be signed by each student who enrolls with the provider; and

(b) at a minimum, state the following: "The nursing program in which you are enrolling has not yet been accredited. The program is being reviewed by the (accrediting body). Any education you complete prior to a final determination by the (accrediting body) will satisfy associated state requirements for licensure. However, if the (accrediting body) ultimately determines that the program does not qualify for accreditation, you will need to transfer into a different program in order to complete your nurse prelicensing education. There is no guarantee that another institution will accept you as a transfer student. If you are accepted, there is no guarantee that the institution you attend will accept the education you have completed at (name of institution providing disclosure) for credit toward graduation."

(5) If an accredited program receives notice or determines that its accreditation status is in jeopardy, the institution offering the program shall:

(a) immediately notify the Board of its accreditation status;

(b) immediately and verifiably notify all enrolled students in writing of the program's accreditation status, including:

(i) the estimated date on which the accrediting body will make its final determination as to the program's accreditation; and

(ii) the potential impact of a program's accreditation status on the graduate's ability to secure licensure and employment or transfer academic credits to another institution in the future; and

(c) attempt negotiations with other academic institutions to establish a transfer articulation agreement.

(6) If a program fails to achieve accreditation or loses its accreditation, the institution offering the program shall:

(a) submit a written report to the Board within ten days of receiving formal notification from the accrediting body;

(b) meet with the Board as soon as practicable after receiving formal notification from the accrediting body to discuss programmatic options including:

(i) an appeal of the accrediting body's action;

(ii) a one-time reapplication with an approved accrediting body for applicant or candidate status with an onsite evaluation by the accrediting body to be completed within three years of the date the accreditation was lost;

(iii) a one-time reapplication for limited-time program approval pursuant to Subsections R156-31b-602(1) through (4); or

(iv) written plans to close the program and cease operations.

(7) A program that has exhausted all limited-time approval options shall submit written plans to cease enrollment and close the program.

R156-31b-603. Education Providers -- Requirements for Ongoing Communication with the Board.

An education program that has achieved limited-time approval of its program(s) shall provide to the Board:

(1) a Board-approved annual report by December 31 of each calendar year; and

(2) copies of any correspondence between the program

provider and the accrediting body within 30 days of receipt or submission of the correspondence.

R156-31b-609. Standards for Out-of-State Programs Providing Clinical Experiences in Utah.

A nursing education program provider located in another state that desires to place nursing students in Utah agencies or institutions for clinical or practica experiences shall, prior to placing a student, demonstrate to the satisfaction of the Division and Board that the program:

(1) is approved by the home state Board of Nursing;

(2) is accredited by an accrediting body for nursing education that is approved by the United States Department of Education;

(3) has faculty who:

(a) are employed by the nursing education program;

(b) meet the requirements to be a faculty member as established by the accrediting body and the home state's Board of Nursing;

(c) are licensed in good standing in Utah or a Compact state if supervising face-to-face clinical or practica experiences; and

(d) are affiliated with an institution of higher education; and

(4) has a plan for selection and supervision of:

(a) faculty or preceptor; and

(b) the clinical activity, including:

(i) the selection of an appropriate clinical location, and

(ii) ensuring that each preceptor is licensed in good standing in Utah or a Compact state;

(5) maintains its accreditation with an accrediting body for nursing education that is approved by the United States Department of Education; and

(a) reports any changes in its accreditation status to the Utah Board of Nursing in a timely manner;

(6) submits an annual report to the Utah Board of Nursing by August 1 of each year; and

(a) includes in the annual report:

(i) an overview of the number of students placed in Utah facilities;

(ii) an attestation that all face-to-face clinical faculty and preceptors used by the program are licensed in good standing in Utah or a Compact state; and

(iii) a verification that it is currently accredited, in good standing, with its accrediting body.

R156-31b-701. Delegation of Nursing Tasks in a Non-school Setting.

In accordance with Subsection 58-31b-102(14)(g), the delegation of nursing tasks is further defined, clarified, or established as follows:

(1)(a) The delegator retains accountability for the appropriate delegation of tasks and for the nursing care of the patient.

(b) The delegator may not delegate to unlicensed assistive personnel, including a physician's medical assistant, any task requiring the specialized knowledge, judgment, or skill of a licensed nurse.

(c) Before determining which, if any, nursing tasks may be delegated, the delegator shall make a focused nursing assessment of the circumstances.

(d) A delegator may not delegate a task that is:

(i) outside the area of the delegator's responsibility;

(ii) outside the delegator's personal knowledge, skills, or ability; or

(iii) beyond the ability or competence of the delegatee to perform:

(A) as personally known by the delegator; and

(B) as evaluated according to generally accepted nursing

practice standards of health, safety, and reasonable prudence.

(e) In delegating a nursing task, the delegator shall:

(i) provide instruction and direction necessary to allow the delegatee to safely perform the specific task;

(ii) provide ongoing appropriate supervision and evaluation of the delegatee who is performing the task;

(iii) explain the delegation to ensure that the delegatee understands which patient is to be treated, and according to what time frame;

(iv) instruct the delegatee how to intervene in any foreseeable risks that may be associated with the delegated task;

(v) if the delegated task is to be performed more than once, establish a system for ongoing monitoring of the delegatee; and

(vi)(A) evaluate the following factors to determine the degree of supervision required to ensure safe care:

(I) the stability and condition of the patient;

(II) the training, capability, and willingness of the delegatee to perform the delegated task;

(III) the nature of the task being delegated, including the complexity, irreversibility, predictability of outcome, and potential for harm inherent in the task;

(IV) the proximity and availability to the delegatee of the delegator or other qualified nurse during the time(s) when the task will be performed; and

(V) any immediate risk to the patient if the task is not carried out; and

(B) ensure that the delegator or another qualified nurse is readily available either in person or by telecommunication to:

(I) evaluate the patient's health status;

(II) evaluate the performance of the delegated task;

(III) determine whether goals are being met; and

(IV) determine the appropriateness of continuing delegation of the task.

(2) Nursing tasks that may be delegated shall meet the following criteria as applied to each specific patient situation:

(a) be considered routine care for the specific patient;

(b) pose little potential hazard for the patient;

(c) be generally expected to produce a predictable outcome for the patient;

(d) be administered according to a previously developed plan of care; and

(e) be limited to those tasks that do not inherently involve nursing judgment that cannot be separated from the procedure.

(3) If the nurse, upon review of the patient's condition, the complexity of the task, the ability of the proposed delegatee, and other criteria established in this Subsection, determines that the proposed delegatee cannot safely provide the requisite care, the nurse shall not delegate the task to such proposed delegatee.

(4) A delegatee may not:

(a) further delegate to another person any task delegated to the individual by the delegator; or

(b) expand the scope of the delegated task without the express permission of the delegator.

(5) Tasks that, according to the internal policies or practices of a medical facility, are required or allowed to be performed by an unlicensed person shall not be deemed to have been delegated by a licensee.

R156-31b-701a. Delegation of Tasks in a School Setting.

In addition to the delegation rule found in Section R156-31b-701, the delegation of tasks in a school setting is further defined, clarified, or established as follows:

(1) Before a registered nurse may delegate a task that is required to be performed within a school setting, the registered nurse shall:

(a) develop, in conjunction with the applicable student, parent(s) or parent surrogate(s), educator(s), and healthcare provider(s) an IHP; and

(b) ensure that the IHP is available to school personnel.

(2) Any task being delegated by a registered nurse shall be identified within the patient's current IHP.

(3)(a) A registered nurse shall personally train any unlicensed person who will be delegated the task of administering routine medication(s), as defined in Subsection 58-31b-102(17), to a student.

(b) The training required under this Subsection (3)(a) shall be performed at least annually.

(c) A registered nurse may not delegate to an unlicensed person the administration of any medication:

(i) with known, frequent side effects that can be life threatening;

(ii) that requires the student's vital signs or oxygen saturation to be monitored before, during or after administration of the drug;

(iii) that is being administered as a first dose:

(A) of a new medication; or

(B) after a dosage change; or

(iv) that requires nursing assessment or judgment prior to or immediately after administration.

(d) In addition to delegating other tasks pursuant to this rule, a registered nurse may delegate to an unlicensed person who has been properly trained regarding a diabetic student's IHP:

(i) the administration of a scheduled dose of insulin; and

(ii) the administration of glucagon in an emergency situation, as prescribed by the practitioner's order or specified in the IHP.

R156-31b-703a. Standards of Professional Accountability.

The following standards apply equally to the LPN, RN, and APRN licenses. In demonstrating professional accountability, a licensee shall:

(1) practice within the legal boundaries that apply to nursing;

(2) comply with all applicable statutes and rules;

(3) demonstrate honesty and integrity in nursing practice;

(4) base nursing decisions on nursing knowledge and skills, and the needs of patients;

(5) seek clarification of orders when needed;

(6) obtain orientation/training competency when encountering new equipment and technology or unfamiliar care situations;

(7) demonstrate attentiveness in delivering nursing care;

(8) implement patient care, including medication administration, properly and in a timely manner;

(9) document all care provided;

(10) communicate to other health team members relevant and timely patient information, including:

(a) patient status and progress;

(b) patient response or lack of response to therapies;

(c) significant changes in patient condition; and

(d) patient needs;

(11) take preventive measures to protect patient, others, and self;

(12) respect patients' rights, concerns, decisions, and dignity;

(13) promote a safe patient environment;

(14) maintain appropriate professional boundaries;

(15) contribute to the implementation of an integrated health care plan;

(16) respect patient property and the property of others;

(17) protect confidential information unless obligated by law to disclose the information;

(18) accept responsibility for individual nursing actions, competence, decisions, and behavior in the course of nursing practice; and

(19) maintain continued competence through ongoing learning and application of knowledge in each patient's interest.

R156-31b-703b. Scope of Nursing Practice Implementation.

- (1) LPN. An LPN shall be expected to:
- (a) conduct a focused nursing assessment;
 - (b) plan for and implement nursing care within limits of competency;
 - (c) conduct patient surveillance and monitoring;
 - (d) assist in identifying patient needs;
 - (e) assist in evaluating nursing care;
 - (f) participate in nursing management by:
 - (i) assigning appropriate nursing activities to other LPNs;
 - (ii) delegating care for stable patients to unlicensed assistive personnel in accordance with these rules and applicable statutes;
 - (iii) observing nursing measures and providing feedback to nursing managers; and
 - (iv) observing and communicating outcomes of delegated and assigned tasks; and
 - (g) serve as faculty in area(s) of competence.
- (2) RN. An RN shall be expected to:
- (a) interpret patient data, whether obtained through a focused nursing assessment or otherwise, to:
 - (i) complete a comprehensive nursing assessment; and
 - (ii) determine whether, and according to what timeframe, another medical professional, a patient's family member, or any other person should be apprised of a patient's nursing needs;
 - (b) detect faulty or missing patient information;
 - (c) apply nursing knowledge effectively in the synthesis of the biological, psychological, spiritual, and social aspects of the patient's condition;
 - (d) utilize broad and complete analyses to plan strategies of nursing care and nursing interventions that are integrated within each patient's overall health care plan or IHP;
 - (e) demonstrate appropriate decision making, critical thinking, and clinical judgment to make independent nursing decisions and to identify health care needs;
 - (f) correctly identify changes in each patient's health status;
 - (g) comprehend clinical implications of patient signs, symptoms, and changes as part of ongoing or emergent situations;
 - (h) critically evaluate the impact of nursing care, the patient's response to therapy, and the need for alternative interventions;
 - (i) intervene on behalf of a patient when problems are identified so as to revise a care plan as needed;
 - (j) appropriately advocate for patients by:
 - (i) respecting patients' rights, concerns, decisions, and dignity;
 - (ii) identifying patient needs;
 - (iii) attending to patient concerns or requests; and
 - (iv) promoting a safe and therapeutic environment by:
 - (A) providing appropriate monitoring and surveillance of the care environment;
 - (B) identifying unsafe care situations; and
 - (C) correcting problems or referring problems to appropriate management level when needed;
 - (k) communicate with other health team members regarding patient choices, concerns, and special needs, including:
 - (i) patient status and progress;
 - (ii) patient response or lack of response to therapies; and
 - (iii) significant changes in patient condition;
 - (l) demonstrate the ability to responsibly organize, manage, and supervise the practice of nursing by:
 - (i) delegating tasks in accordance with these rules and applicable statutes; and
 - (ii) matching patient needs with personnel qualifications, available resources, and appropriate supervision;
 - (m) teach and counsel patient families regarding an

applicable health care regimen, including general information about health and medical conditions, specific procedures, wellness, and prevention;

- (n) if acting as a chief administrative nurse:
 - (i) ensure that organizational policies, procedures, and standards of nursing practice are developed, kept current, and implemented to promote safe and effective nursing care;
 - (ii)(A) assess the knowledge, skills, and abilities of nursing staff and assistive personnel; and
 - (B) ensure all personnel are assigned to nursing positions appropriate to their determined competence and licensure/certification/registration level; and
 - (iii) ensure that thorough and accurate documentation of personnel records, staff development, quality assurance, and other aspects of the nursing organization are maintained;
- (o) if employed by a department of health:
 - (i) implement standing orders and protocols; and
 - (ii) complete and provide to a patient prescriptions that have been prepared and signed by a physician in accordance with the provisions of Section 58-17b-620;
- (p) serve as faculty in area(s) of competence; and
- (q) perform any task within the scope of practice of an LPN.

(3) APRN.

- (a) An APRN who chooses to change or expand from a primary focus of practice shall, at the request of the Division, document competency within that expanded practice based on education, experience, and certification. The burden to demonstrate competency rests upon the licensee.
- (b) An individual licensed as an APRN may practice within the scope of practice of an RN and an LPN.
- (c) An individual licensed in good standing in Utah as an APRN and residing in this state may practice as an RN in any Compact state.

R156-31b-801. Medication Aide Certified -- Formulary and Protocols.

In accordance with Subsection 58-31b-102(12)(b)(i), the formulary and protocols for an MAC to administer routine medications are as follows.

- (1) Under the supervision of a licensed nurse, an MAC may:
- (a) administer over-the-counter medication;
 - (b) administer prescription medications:
 - (i) if expressly instructed to do so by the supervising nurse; and
 - (ii) via approved routes as listed in Subsection 58-31b-102(17)(b);
 - (c) turn oxygen on and off at a predetermined, established flow rate;
 - (d) destroy medications per facility policy;
 - (e) assist a patient with self administration; and
 - (f) account for controlled substances with another MAC or nurse physically present.
- (2) An MAC may not administer medication via the following routes:
- (a) central lines;
 - (b) colostomy;
 - (c) intramuscular;
 - (d) subcutaneous;
 - (e) intrathecal;
 - (f) intravenous;
 - (g) nasogastric;
 - (h) nonmetered inhaler;
 - (i) intradermal;
 - (j) urethral;
 - (k) epidural;
 - (l) endotracheal; or
 - (m) gastronomy or jejunostomy tubes.

(3) An MAC may not administer the following kinds of medications:

- (a) barium and other diagnostic contrast;
- (b) chemotherapeutic agents except oral maintenance chemotherapy;
- (c) medication pumps including client controlled analgesia; and
- (d) nitroglycerin paste.

(4) An MAC may not:

- (a) administer any medication that requires nursing assessment or judgment prior to administration, through ongoing evaluation, or during follow-up;
- (b) receive written or verbal patient orders from a licensed practitioner;
- (c) transcribe orders from the medical record;
- (d) conduct patient or resident assessments or evaluations;
- (e) engage in patient or resident teaching activities regarding medications unless expressly instructed to do so by the supervising nurse;
- (f) calculate drug doses, or administer any medication that requires a medication calculation to determine the appropriate dose;

(g) administer the first dose of a new medication or a dosage change, unless expressly instructed to do so by the supervising nurse; or

(h) account for controlled substances, unless assisted by another MAC or a nurse who is physically present.

(5) In accordance with Section R156-31b-701, a nurse may refuse to delegate to an MAC the administration of medications to a specific patient or in a specific situation.

(6)(a) A nurse practicing in a facility that is required to provide nursing services 24 hours per day shall not supervise more than two MACs per shift.

(b) A nurse providing nursing services in a facility that is not required to provide nursing services 24 hours per day may supervise as many as four MACs per shift.

R156-31b-802. Medication Aide Certified -- Approval of Training Programs.

In accordance with Subsection 58-31b-601(3), the minimum standards for an MAC training program to be approved by the Division in collaboration with the Board and the process to obtain approval are established as follows.

(1) All training programs shall be approved by the Division in collaboration with the Board and shall obtain approval prior to the program being implemented.

(2) Training programs may be offered by an educational institution, a health care facility, or a health care association.

(3) The program shall consist of at least:

(a) 60 clock hours of didactic (classroom) training that is consistent with the model curriculum set forth in Section R156-31b-803; and

(b) 40 hours of practical training within a long-term care facility.

(4) The classroom instructor shall:

(a)(i) have a current, active, LPN, RN, or APRN license in good standing or a multistate privilege to practice nursing in Utah; and

(ii) have at least one year of clinical experience; or

(b)(i) be an approved certified nurse aide (CNA) instructor who has completed a "Train the Trainer" program recognized by the Utah Nursing Assistant Registry; and

(ii) have at least one year of clinical experience.

(5)(a) The on-site practical training experience instructor shall meet the following criteria:

(i)(A) have a current, active, LPN, RN or APRN license in good standing or a multistate privilege to practice nursing in Utah; and

(B) have at least one year of clinical experience; or

(ii)(A) be an approved certified nurse aide (CNA) instructor who has completed a "Train the Trainer" program recognized by the Utah Nursing Assistant Registry; and

(B) have at least one year of clinical experience.

(b) The practical training instructor-to-student ratio shall be no greater than:

(i) 1:2 if the instructor is working with individual students to administer medications; or

(ii) 1:6 if the instructor is supervising students who are working one-on-one with medication nurses to administer medications in clinical facilities.

(c) The on-site practical training experience instructor shall be on site and available at all times if the student is not being directly supervised by a licensed nurse during the practical training experience.

(6) An entity seeking approval to provide an MAC training program shall:

(a) submit to the Division a complete application form prescribed by the Division;

(b) provide evidence of adequate and appropriate trainers and resources to provide the training program, including a well-stocked clinical skills lab or the equivalent;

(c) submit to the Division a copy of the proposed training curriculum and an attestation that the proposed curriculum is consistent with the model curriculum referenced in Section R156-31b-803;

(d) document minimal admission requirements, which shall include:

(i) an earned high school diploma, successful passage of the general educational development (GED) test, or equivalent education as approved by the Board;

(ii) current certification as a nursing aide, in good standing, from the Utah Nursing Assistant Registry;

(iii) at least 2,000 hours of experience completed:

(A) as a certified nurse aide working in a long-term care setting; and

(B) within the two-year period preceding the date of application to the training program; and

(iv) current cardiopulmonary resuscitation (CPR) certification.

R156-31b-803. Medication Aide Certified -- Model Curriculum.

A school that offers a medication aide certification program shall follow the "Medication Assistant-Certified (MA-C) Model Curriculum" adopted by the National Council of State Boards of Nursing's Delegate Assembly on August 9, 2007, which is hereby adopted and incorporated by reference.

58-1-106(1)(a)

58-1-202(1)(a)

**R156. Commerce, Occupational and Professional Licensing.
R156-40. Recreational Therapy Practice Act Rule.
R156-40-101. Title.**

This rule is known as the "Recreational Therapy Practice Act Rule".

R156-40-102. Definitions.

In addition to the definitions in Title 58, Chapters 1 and 40, as used in Title 58, Chapters 1 and 40 or this rule:

(1) "Approved graduate degree", as used in Subsection 58-40-302(2)(a), means an earned graduate (Masters, Ed.D., or Ph.D.) degree in recreational therapy or a graduate degree with an approved emphasis in recreational therapy, which includes:

(a) a minimum of nine semester hours or 12 quarter hours of upper division or graduate level course work in therapeutic recreation and/or recreational therapy;

(b) a minimum of 18 semester hours or 24 quarter hours of supportive coursework as outlined by the January 2014 NCTRC Certification Standards, Part I, which are incorporated by reference; and

(c) an approved practicum that:

(i) includes field placement experience in recreational therapy services that:

(A) uses the therapeutic recreation process as defined in the January 2011 NCTRC National Job Analysis, which is incorporated by reference; and

(B) is under the supervision of an onsite field placement supervisor who:

(I) is licensed in Utah as a TRS or MTRS; and

(II) is nationally certified by NCTRC as a CTRS; and

(ii) if the practicum is conducted outside Utah, is verified on an official university transcript.

(2) "Approved emphasis, option, or concentration in therapeutic recreation or recreational therapy", as used in Subsection 58-40-302(3)(a)(ii), means an emphasis, option or concentration posted on the transcript that meets the January 2014 NCTRC Certification Standards, Part I, which are incorporated by reference, including:

(a) a minimum of 18 semester or 24 quarter hours of therapeutic recreation and general recreation content coursework with no less than a minimum of 12 semester or 16 quarter hours in therapeutic recreation, consisting of a minimum of four three-credit hour courses;

(b) a total of 18 semester or 24 quarter hours of support coursework with a minimum of:

(i) three semester hours or three quarter hours coursework in the content area of anatomy and physiology;

(ii) three semester hours or three quarter hours coursework in the content area of abnormal psychology; and

(iii) three semester hours or three quarter hours coursework in the content area of human growth and development across the lifespan. The remaining semester hours or quarter hours of coursework must be fulfilled in the content area of "human service" as defined by the NCTRC; and

(c) field placement experience in therapeutic recreation services that:

(i) uses the therapeutic recreation process as defined in the January 2011 NCTRC National Job Analysis, which is incorporated by reference;

(ii) is under the supervision of an academic supervisor and an onsite field placement supervisor, each of whom:

(A) is state licensed as a TRS or MTRS;

(B) is nationally certified by NCTRC as a CTRS; and

(C) meets the standards for field placement supervision; and

(iii) if the practicum is conducted outside Utah, is verified on an official university transcript.

(3) "Consultation", as used in Subsection 58-40-601(3)(a)(ii), is defined in Subsection R156-40-302f.

(4) "CTRS" means a person certified as a Certified Therapeutic Recreation Specialist by the NCTRC.

(5) "Full-time, on-site", as used in Subsections 58-40-601(3)(a) and (b), means an individual who is employed on the premises with the hiring agency for a minimum of 30 hours per week.

(6) "Maintain the ongoing documentation", as used in Subsection 58-40-601(3)(b), means:

(a) documenting the ongoing treatment or intervention provided to clients according to the treatment plan; and

(b) providing review of patient status according to federal, state, and agency regulations.

(7) "MTRS" means a person licensed as a master therapeutic recreation specialist.

(8) "NCTRC" means the National Council for Therapeutic Recreation Certification.

(9) "Supervision", as used in Section 58-40-601, means that a person who is employed full-time and on-site as a TRS or MTRS by a recreational therapy services provider is responsible to ensure that the supervised TRT implements the treatment plan as established by the supervisor.

(10) "Supervision of a temporary TRS", as used in Subsection R156-40-302f(1)(d), means that the TRS or MTRS supervisor:

(a) is responsible for the recreational therapy interventions provided by the temporary TRS; and

(b) will be required to review and approve the treatment plans as well as any modifications to the treatment plans as evidenced by the signature of the TRS or MTRS in the treatment plan.

(11) "TRS" means a person licensed as a therapeutic recreation specialist.

(12) "TRT" means a person licensed as a therapeutic recreation technician.

(13) "Written plan of operation", as used in Subsection 58-40-102(6)(b)(viii), means a comprehensive management plan that outlines recreational therapy services that, at a minimum, includes:

(a) vision and mission statement;

(b) policy and procedures;

(c) assessment protocol;

(d) treatment and/or intervention plan;

(e) scope of care; and

(f) personnel management.

(14) "Unprofessional conduct" is defined in Title 58, Chapters 1 and 40.

R156-40-103. Authority - Purpose.

This rule is adopted by the division under the authority of Subsection 58-1-106(1)(a) to enable the division to administer Title 58, Chapter 40.

R156-40-104. Organization - Relationship to Rule R156-1.

The organization of this rule and its relationship to Rule R156-1 is as described in Section R156-1-107.

R156-40-302a. Qualifications for Licensure - Education Requirements.

In accordance with Section 58-40-302, the educational requirements for licensure include:

(1) An MTRS applicant shall:

(a) complete an approved graduate degree as defined in R156-40-102(1);

(b) have a current NCTRC certification as a CTRS or a current license as a TRS; and

(c) document completion of the education and 4000 hours of paid experience while nationally certified as a CTRS or licensed as a TRS.

(2) A TRS applicant shall:

(a) have a current NCTRC certification as a CTRS; and
 (b) document completion of the education and practicum requirements for licensure as a TRS on an official university transcript.

(3) A TRT applicant shall:

(a) have an approved educational course in therapeutic recreation taught by an MTRS, as required by Subsection 58-40-302(4)(b)(i), which shall consist of 90 hours of structured education under the instruction and direction of a licensed MTRS, or if completed out of state, under the direction of a nationally certified CTRS, which includes:

(i) theories and concepts of recreational therapy;
 (ii) the therapeutic recreation process;
 (iii) characteristics of illness and disability and their effects on leisure;
 (iv) medical and psychiatric terminology including psychiatric, pharmacology, gerontology, and abbreviations;
 (v) ethics;
 (vi) role and function of other health and human service professionals, including: agencies, medical specialists and allied health professionals; and
 (vii) health and safety; and

(b) complete a two-hour pre-licensure course, as required by Subsection 58-40-302(4)(e), which shall meet the requirements of this Subsection.

(i) The course provider shall be one of the following:

(A) a recognized accredited college or university;
 (B) a county, state, or federal agency; or
 (C) a professional association, society or organization representing a licensed profession.

(ii) The content of the course shall be relevant to recreational therapy and include one or more of the following subject areas:

(A) suicide concepts and facts;
 (B) suicide risk assessment, crisis intervention, and first aid;
 (C) evidence-based intervention for suicide risk;
 (D) continuity of care and follow-up services for suicide risk; or
 (E) therapeutic alliances for intervention in suicide risk.

(iii) Each hour of education shall consist of 50 minutes of education in the form of classroom lectures and discussion, workshops, webinars, online self-paced modules, case study review, or simulations.

(iv) A course provider shall document and verify attendance and completion.

(v) An applicant for licensure is responsible for submitting evidence of course completion to the Division as a prerequisite for licensure.

R156-40-302b. Qualifications for Licensure - Experience Requirements.

In accordance with Section 58-40-302, the experience requirements for licensure include:

(1) An MTRS is required to complete 4000 hours of paid experience, as required by Subsection 58-40-302(2)(b), which means an individual must either work as a TRS in Utah in a paid position practicing recreational therapy or work outside of Utah as a CTRS in a paid position practicing recreational therapy.

(2) A TRS is required to complete an approved practicum, as required by Subsection 58-40-302(3)(b), which means a practicum verified on the degree transcript.

(3) A TRT is required to complete an approved practicum, as required by Subsection 58-40-302(4)(c), which means 125 hours of field work experience to be completed over a duration of not more than nine months under the direction of a licensed TRS or MTRS supervisor or consultant, that includes:

(a) a minimum of 20 hours of direct face to face supervision of programming, documentation and treatment

intervention by the TRS or MTRS supervisor or consultant;

(b) training in recreational therapy or therapeutic recreation process as defined in Subsection 58-40-102(5) and (6);

(c) interdisciplinary contact;
 (d) administration contact; and
 (e) community relations.

R156-40-302c. Qualifications for Licensure - Examination Requirements.

In accordance with Subsections 58-40-302(2)(c), (3)(c) and (4)(d), applicants for licensure shall pass the following examinations:

(1) Applicants for licensure as a TRS or MTRS shall pass the NCTRC certification examination as evidenced by a current NCTRC certification as an CTRS.

(2) Applicants for licensure as a TRT shall pass the Therapeutic Recreation Technician Theory Examination with a minimum score of 70%.

(3) Applicants for licensure as a TRT who fail the Therapeutic Recreation Technician Theory Examination three consecutive times must repeat the educational coursework.

R156-40-302d. Time Limitation for TRT applicants.

(1) In accordance with Subsection 58-40-302(4) and Sections R156-40-302a, R156-40-302b and R156-40-302c, a TRT applicant shall pass the examinations and apply for licensure after completion of the 125 practicum hours required under Subsection R156-40-302b(3) and must do so within the same nine month period referred to in that Subsection.

(2) A TRT applicant who does not complete the education, practicum and examinations within nine months is not eligible to be employed as a TRT in a therapeutic recreation department.

(3) A TRT student who does not seek licensure within two years after completion of the education course shall retake the education, practicum and pass the examination prior to applying for licensure.

R156-40-302e. Qualifications for Supervision.

"Supervision of a therapeutic recreation technician", as used in Subsection 58-40-601(3)(a)(i), means that the TRS or MTRS supervisor is employed full-time and onsite in the same hospital, clinic, or facility as the person being supervised and is responsible for:

(1) providing "general supervision" as defined by Subsection R156-1-102(4)(c);

(2) ensuring that recreation therapy services are provided according to the Recreational Therapy Practice Act, standards of the profession, administrative and governing regulations;

(3) providing training, clinical guidance and evaluation; and

(4) demonstrating, as evidenced by the signature of the TRS or MTRS in the patient chart, review and evaluation of ongoing documentation.

R156-40-302f. Qualifications for Consultation.

"Consultation of a therapeutic recreation technician", as used in Subsection 58-40-601(3)(a)(ii) means that the MTRS consultant, contracted by the agency is responsible for:

(1) providing "general supervision" as defined in Subsection R156-1-102(4)(c);

(2) performing the assessment as described in Subsection 58-40-102(2)(a)(ii);

(3) prescribing, creating or modifying the treatment or intervention plans to be performed by the TRT as determined by the assessment;

(4) observing, evaluating and documenting that the recreation therapy services are being conducted according to administrative and governing regulations;

(5) observing, evaluating and documenting adherence to the standards of practice of the recreational therapy profession; and

(6) demonstrating adherence, as evidenced by the signature of the MTRS in the patient chart, reviews and evaluation of ongoing regulatory documentation.

R156-40-302g. Qualifications for Temporary License as a TRS - Supervision Required.

(1) In accordance with Section 58-1-303, an applicant for temporary licensure as a TRS shall:

(a) submit an application for temporary license in the form prescribed by the division which includes a verification that the applicant has registered and been approved to take the next available NCTRC examination;

(b) pay a fee determined by the department under Section 63J-1-504;

(c) meet all the requirements for licensure, except passing the NCTRC examination; and

(d) practice recreational therapy under the supervision of a Utah licensed TRS or MTRS as defined in Subsection R156-40-102(8).

(2) The temporary license shall be issued for a period not to exceed 120 days to allow the applicant to pass the NCTRC examination.

(3) The temporary license will not be renewed or extended for any purpose.

R156-40-303. Renewal Cycle - Procedures.

(1) In accordance with Subsection 58-1-308(1), the renewal date for the two-year renewal cycle applicable to licenses under Title 58, Chapter 40 is established by rule in Section R156-1-308a(1).

(2) Renewal procedures shall be in accordance with Section R156-1-308c.

R156-40-304. Continuing Education.

In accordance with Section 58-40-304, qualified continuing education requirements are established as follows:

(1) All licensed MTRS, TRS, and TRT's shall complete 20 hours of qualified continuing education including two hours of suicide prevention training that meets the requirements of this section.

(2) Qualified continuing education hours for licensees who have not been licensed for the entire two-year period will be prorated from the date of licensure.

(3) Continuing education under this section shall:

(a) be relevant to the licensee's professional practice;

(b) be prepared and presented by individuals who are qualified by education, training and experience to provide recreational therapy continuing education; and

(c) have a method of verification of attendance and completion.

(4) The suicide prevention training shall include one or more of the following subject areas:

(a) suicide concepts and facts;

(b) suicide risk assessment, crisis intervention, and first aid;

(c) evidence-based intervention for suicide risk;

(d) continuity of care and follow-up services for suicide risk; or

(e) therapeutic alliances for intervention in suicide risk.

(5) Credit for continuing education shall be recognized in accordance with the following:

(a) unlimited hours shall be recognized for continuing education completed in blocks of time of not less than 50 minutes in formally established classroom courses, seminars, lectures, conferences or training sessions which meet the criteria listed in Subsection (3) above, and which are approved by,

conducted by, or under the sponsorship of:

(i) the Division of Occupational and Professional Licensing;

(ii) recognized universities and colleges; or

(iii) professional associations, societies and organizations representing a licensed profession whose program objectives relate to the practice of recreational therapy;

(b) a maximum of ten hours per two-year period may be recognized for teaching continuing education courses relevant to recreational therapy;

(c) a maximum of 12 hours per two-year period may be recognized for continuing education that is provided via the internet and/or webinar which provides a certificate of completion;

(d) a maximum of six hours per two-year period may be recognized for continuing education provided by the Division of Occupational and Professional Licensing;

(e) a maximum of four hours per two-year period may be recognized for CPR and first aid certification through a live course, not online; and

(f) a maximum of six hours per two-year period may be recognized for publications in an article, journal, newsletter or other professional publications.

(6) If properly documented that a licensee is subject to circumstances which prevent that licensee from meeting the continuing education requirements established under this section, the licensee may be excused from the requirement for a period of up to three years. However it is the responsibility of the licensee to document the reasons and justify why the requirement could not be met.

(7) A licensee shall be responsible for maintaining competent records of completed qualified continuing education for a period of six years and if requested, demonstrate the licensee meets requirements under this section.

R156-40-502. Unprofessional Conduct.

Unprofessional conduct includes:

(1) failing to establish and maintain professional boundaries with a patient or former patient;

(2) exploiting a current and/or former patient for personal gain;

(3) failing as a TRS/MTRS to ensure the student TRT completes the minimum required education and experience prior to working with patients;

(4) failing as a TRS/MTRS to ensure the student TRT is competent to provide recreational therapy services when signing the education and experience verification; and

(5) failing to abide by the provisions of the American Therapeutic Recreation Association (ATRA) Code of Ethics, November 2009, which is incorporated by reference.

**R156. Commerce, Occupational and Professional Licensing.
R156-69. Dentist and Dental Hygienist Practice Act Rule.
R156-69-101. Title.**

This rule is known as the "Dentist and Dental Hygienist Practice Act Rule."

R156-69-102. Definitions.

In addition to the definitions in Title 58, Chapters 1 and 69, as used in Title 58, Chapters 1 and 69 or this rule:

- (1) "ACLS" means Advanced Cardiac Life Support.
- (2) "ADA" means the American Dental Association.
- (3) "ADA CERP" means American Dental Association Continuing Education Recognition Program.
- (4) "Advertising or otherwise holding oneself out to the public as a dentist" means representing or promoting oneself as a dentist through any of the following or similar methods:
 - (a) business names;
 - (b) business signs;
 - (c) door or window lettering;
 - (d) business cards;
 - (e) letterhead;
 - (f) business announcements;
 - (g) flyers;
 - (h) mailers;
 - (i) promotions;
 - (j) advertisements;
 - (k) radio or television commercials;
 - (l) listings in printed or online telephone directories; or
 - (m) any other type of advertisement or promotional communication.
- (5) "BCLS" means Basic Cardiac Life Support.
- (6) "ADHA" means the American Dental Hygienists' Association.
- (7) "CPR" means cardiopulmonary resuscitation.
- (8) "CRDTS" means the Central Regional Dental Testing Service, Inc.
- (9) "Competency" means displaying special skill or knowledge derived from training and experience.
- (10) "Conscious sedation" means a minimally depressed level of consciousness that retains the patient's ability to independently and continuously maintain an airway and respond appropriately to physical stimulation and verbal command, produced by a pharmacologic or non-pharmacologic method, or a combination thereof.
- (11) "DANB" means the Dental Assisting National Board, Inc.
- (12) "Deep sedation" means a controlled state of depressed consciousness, accompanied by partial loss of protective reflexes, including inability to respond purposefully to verbal command, produced by a pharmacologic or non-pharmacologic method, or combination thereof.
- (13) "General anesthesia" means a controlled state of unconsciousness accompanied by partial or complete loss of protective reflexes, including inability to independently maintain an airway and respond purposefully to physical stimulation or verbal command, produced by a pharmacologic or non-pharmacologic method or a combination thereof.
- (14) "NERB" means Northeast Regional Board of Dental Examiners, Inc.
- (15) "PALS" means Pediatric Advanced Life Support.
- (16) "Practice of dentistry" in regard to administering anesthesia is further defined as follows:
 - (a) a Class I permit allows for local anesthesia which is the elimination of sensation, especially pain, in one part of the body by the topical application or regional injection of a drug;
 - (b) a Class II permit allows for minimal sedation which is a minimally depressed level of consciousness induced by nitrous oxide, or by a pharmacological method, or by both, that retains the patient's ability to independently and consciously maintain

an airway and respond normally to tactile stimulation and verbal command. Although cognitive function and coordination may be modestly impaired, ventilatory and cardiovascular functions are unaffected;

(c) a Class III permit allows for moderate sedation in which a drug induced depression of consciousness occurs during which a patient responds purposefully to verbal commands, either alone or accompanied by light tactile stimulation. No interventions are required to maintain a patient's airway, and spontaneous ventilation is adequate. Cardiovascular function is usually maintained; and

(d) a Class IV permit allows for deep sedation in which a drug induced depression of consciousness occurs from which a patient cannot be easily aroused but respond purposefully following repeated or painful stimulation. The ability to independently maintain ventilatory function may be impaired. A patient may require assistance in maintaining an airway and spontaneous ventilation may be inadequate. Cardiovascular function is usually maintained.

(17) "Prominent disclaimer" means a disclaimer as described in and as required by Subsection R156-69-502(2)(ii) that:

(a) if in writing, is in the same size of lettering as the largest lettering otherwise contained in an advertisement, publication, or other communication in which the disclaimer appears; or

(b) if not in writing, is in the same volume and speed as the slowest speed and highest volume otherwise included in a radio or television commercial or other oral advertisement or promotion in which the disclaimer appears.

(18) "Specialty area" means an area of dentistry proposed in a formal application by a sponsoring organization to the Council on Dental Education and Licensure and formally approved by the ADA as meeting the "Requirements for Recognition of Dental Specialists". Specialty areas include the following:

- (a) orthodontics;
 - (b) oral and maxillofacial surgery;
 - (c) oral and maxillofacial pathology;
 - (d) pediatric dentistry;
 - (e) periodontics;
 - (f) endodontics;
 - (g) prosthodontics;
 - (h) dental public health; and
 - (i) oral and maxillofacial radiology.
- (19) "SRTA" means Southern Regional Testing Agency, Inc.

(20) "Unprofessional conduct," as defined in Title 58 Chapters 1 and 69, is further defined, in accordance with Subsection 58-1-203(1)(e), in Section R156-69-502.

- (21) "UDA" means Utah Dental Association.
- (22) "UDHA" means Utah Dental Hygienists' Association.
- (23) "WREB" means the Western Regional Examining Board.

R156-69-103. Authority - Purpose.

This rule is adopted by the Division under the authority of Subsection 58-1-106(1)(a) to enable the Division to administer Title 58, Chapter 69.

R156-69-104. Organization - Relationship to Rule R156-1.

The organization of this rule and its relationship to Rule R156-1 is as described in Section R156-1-107.

R156-69-201. Classifications of Anesthesia and Analgesia Permits - Dentist.

In accordance with Subsection 58-69-301(4)(a), a dentist may be issued an anesthesia and analgesia permit in the following classifications:

- (1) class I permit;
- (2) class II permit;
- (3) class III permit; and
- (4) class IV permit.

R156-69-202. Qualifications for Anesthesia and Analgesia Permits - Dentist.

In accordance with Subsection 58-69-301(4)(b), the qualifications for anesthesia and analgesia permits are:

- (1) for a class I permit:
 - (a) current licensure as a dentist in Utah; and
 - (b) documentation of current CPR or BCLS certification;
- (2) for a class II permit:
 - (a) current licensure as a dentist in Utah;
 - (b) documentation of current BCLS certification;
 - (c) evidence of successful completion of training in the administration of nitrous oxide and pharmacological methods of conscious sedation that:
 - (i) conforms to the Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students, published by the American Dental Association, October 2007, which is incorporated by reference; or
 - (ii) is the substantial equivalent of Subsection (2)(c)(i) provided in a continuing education format offered by an American Dental Association accredited school; and
 - (d) certification that the applicant will comply with the scope of practice as set forth in Subsection R156-69-601(2);
- (3) for a class III permit:
 - (a) compliance with Subsections (1)(a) and (2) above;
 - (b) evidence of current Advanced Cardiac Life Support (ACLS) certification;
 - (c) evidence of holding a current Utah controlled substance license in good standing and a current Drug Enforcement Administration (DEA) Registration in good standing;
 - (d) evidence of successful completion of:
 - (i)(A) a comprehensive predoctoral or post doctoral training in the administration of conscious sedation that conforms to the Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students, published by the American Dental Association, October 2007, including a letter from the course director documenting competency in performing conscious sedation; and
 - (B) 60 hours of didactic education in sedation and successful completion of 20 cases; or
 - (ii) the substantial equivalent of Subsection (3)(d)(i) provided in a continuing education format offered by an American Dental Association accredited school; and
 - (e) certification that the applicant will comply the scope of practice as set forth in Subsection R156-69-601(3); and
- (4) for a class IV permit:
 - (a) compliance with Subsections (1), (2), and (3) above;
 - (b) evidence of current ACLS certification;
 - (c) evidence of having successfully completed advanced training in the administration of general anesthesia and deep sedation consisting of not less than one year in a program which conforms to the Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students, published by the American Dental Association, October 2007, and a letter from the course director documenting competency in performing general anesthesia and deep sedation;
 - (d) documentation of successful completion of advanced training in obtaining a health history, performing a physical examination and diagnosis of a patient consistent with the administration of general anesthesia or deep sedation; and
 - (e) certification that the applicant will comply with the scope of practice as set forth in Subsection R156-69-601(4).

R156-69-203. Classification of Anesthesia and Analgesia

Permits - Dental Hygienist.

In accordance with Subsection 58-69-301(4)(a), a dental hygienist may be issued an anesthesia and analgesia permit in the classification of local anesthesia.

R156-69-204. Qualifications for Anesthesia and Analgesia Permits - Dental Hygienist.

In accordance with Subsection 58-69-301(4)(b), the qualifications for a local anesthesia permit are the following:

- (1) current Utah licensure as a dental hygienist or documentation of meeting all requirements for licensure as a dental hygienist;
- (2) successful completion of a program of training in the administration of local anesthetics that:
 - (i) is accredited by the Commission on Dental Accreditation of the ADA; or
 - (ii) is the substantial equivalent of Subsection (2)(i) provided in a continuing education format offered by an American Dental Association accredited school; and
- (3)(a) a passing score on the WREB, NERB, SRTA, or CRDTS anesthesia examination; or
- (b) documentation of having a current, active license to administer local anesthesia in another state in the United States; and
- (4) documentation of current CPR or BCLS certification.

R156-69-302b. Qualifications for Licensure - Examination Requirements - Dentist.

In accordance with Subsections 58-69-302(1)(f) and (g), the examination requirements for licensure as a dentist include the periodontics section and are established as the following:

- (1) the WREB examination with a passing score as established by the WREB;
- (2) the NERB examination with a passing score as established by the NERB;
- (3) the SRTA examination with a passing score as established by the SRTA; or
- (4) the CRDTS examination with a passing score as established by the CRDTS.

R156-69-302c. Qualifications for Licensure - Examination Requirements - Dental Hygienist.

In accordance with Subsections 58-69-302(3)(f) and (g), the examination requirements for licensure as a dental hygienist are established as the following:

- (1) the WREB examination with a passing score as established by the WREB;
- (2) the NERB examination with a passing score as established by the NERB;
- (3) the SRTA examination with a passing score as established by the SRTA; or
- (4) the CRDTS examination with a passing score as established by the CRDTS.

R156-69-303. Renewal Cycle - Procedures.

(1) In accordance with Subsection 58-1-308(1), the renewal date for the two-year renewal cycle applicable to licensees under Title 58, Chapter 69, is established by rule in Section R156-1-308a.

(2) Renewal procedures shall be in accordance with Section R156-1-308c.

R156-69-304a. Continuing Education - Dentist and Dental Hygienist.

In accordance with Section 58-69-304, qualified continuing professional education requirements are established as the following:

- (1) All licensed dentists and dental hygienists shall complete 30 hours of qualified continuing professional

education during each two year period of licensure.

(2) Qualified continuing professional education hours for licensees who have not been licensed for the entire two year period will be prorated from the date of licensure.

(3) Continuing education under this section shall:

- (a) be relevant to the licensee's professional practice;
- (b) be prepared and presented by individuals who are qualified by education, training and experience to provide dental and dental hygiene continuing education; and
- (c) have a method of verification of attendance and completion.

(4) Credit for continuing education shall be recognized in accordance with the following:

(a) unlimited hours shall be recognized for continuing education completed in blocks of time of not less than 50 minutes in formally established classroom courses, seminars, lectures, conferences, or training sessions which meet the criteria listed in Subsection (3) above, and which are approved by, conducted by or under sponsorship of:

(i) the Division of Occupational and Professional Licensing;

(ii) recognized universities and colleges;

(iii) professional associations, societies and organizations representing a licensed profession whose program objectives relate to the practice of dentistry and dental hygiene; or

(iv) ADA or any subgroup thereof, the ADHA or any subgroup thereof, an accredited dental, dental hygiene or dental postgraduate program, a government agency, a recognized health care professional association or a peer study club;

(b) a maximum of ten hours per two year period may be recognized for teaching continuing education relevant to dentistry and dental hygiene;

(c) a maximum of 15 hours per two year period may be recognized for continuing education that is provided via Internet or through home study which provides an examination and a completion certificate;

(d) a maximum of six hours per two year period may be recognized for continuing education provided by the Division of Occupational and Professional Licensing; and

(e) qualified continuing professional education may include up to three hours in practice and office management.

(5) If properly documented that a licensee is engaged in full time activities or is subjected to circumstances which prevent that licensee from meeting the continuing education requirements established under this section, the licensee may be excused from the requirement for a period of up to three years. However, it is the responsibility of the licensee to document the reasons and justify why the requirement could not be met.

(6) Hours for recertification in CPR, BCLS, ACLS and PALS do not count as continuing education.

(7) A licensee shall be responsible for maintaining competent records of completed qualified continuing professional education for a period of four years after close of the two year period to which the records pertain. It is the responsibility of the licensee to maintain such information with respect to qualified continuing professional education to demonstrate it meets the requirements under this section.

R156-69-502. Unprofessional Conduct.

"Unprofessional Conduct" includes the following:

(1) failing to provide continuous in-operative observation by a trained dental patient care staff member for any patient under nitrous oxide administration;

(2) advertising or otherwise holding oneself out to the public as a dentist or dental group that practices in a specialty area unless:

(i) each dentist has successfully completed an advanced educational program accredited by the ADA's Commission on Dental Accreditation (or its equivalent if completed prior to

1967) of two or more years in length, as specified by the Council on Dental Education and Licensure;

(ii) as specified in Subsection 58-69-502(2)(b), the advertisement or other method of holding oneself out to the public as a dentist or dental group includes a prominent disclaimer that the dentist or dentists performing services are licensed as general dentists or that the specialty services will be provided by a general dentist;

(iii) the advertisement or other method of holding oneself out to the public as a dentist or dental group that practices in a specialty area includes a prominent disclaimer that the dentist or dentists performing services is a specialist, but not qualified as a specialist in the specialty area being advertised; or

(iv) otherwise advertising in a specialty area by representing that a dentist has attained any education, training or certification in the specialty area when the dentist has not met the criteria;

(3) advertising in any form that is misleading, deceptive, or false; including the display of any credential, education, or training that is inaccurate, or the making of any unsubstantiated claim of superiority in training, skill, experience, or any other quantifiable aspect;

(4) prescribing treatments and medications outside the scope of dentistry;

(5) prescribing for oneself any Schedule II or III controlled substance;

(6) engaging in practice as a dentist or dental hygienist without prominently displaying a copy of the current Utah license;

(7) failing to personally maintain current CPR or BCLS certification, or employing patient care staff who fail to maintain current CPR or BCLS certification;

(8) providing consulting or other dental services under anonymity;

(9) engaging in unethical or illegal billing practices or fraud, including:

(a) reporting an incorrect treatment date for the purpose of obtaining payment;

(b) reporting charges for services not rendered;

(c) incorrectly reporting services rendered for the purpose of obtaining payment;

(d) generally representing a charge to a third party that is different from that charged to the patient;

(10) failing to establish and maintain appropriate dental records;

(11) failing to maintain patient records for a period of seven years;

(12) failing to provide copies of x-rays, reports or records to a patient or the patient's designee upon written request and payment of a nominal fee for copies regardless of the payment status of the services reflected in the record; and

(13) failing to submit a complete report to the Division within 30 calendar days concerning an incident, in which any anesthetic or sedative drug was administered to any patient, which resulted in, either directly or indirectly, the death or adverse event resulting in patient admission to a hospital.

R156-69-601. Scope of Practice - Anesthesia and Analgesia Permits.

In accordance with Subsection 58-69-301(4)(a), the scope of practice permitted under each classification of anesthesia and analgesia permit includes the following:

(1) A dentist with a class I permit:

(a) may administer or supervise the administration of any legal form of non-drug induced conscious sedation or drug induced conscious sedation except:

(i) the administration of inhalation agents including nitrous oxide; and

(ii) the administration of any drug for sedation by any

parenteral route; and

(b) shall maintain and ensure that all patient care staff maintain current CPR certification.

(2) A dentist with a class II permit:

(a) may administer or supervise the administration of nitrous oxide induced conscious sedation in addition to the privileges granted to one holding a Class I permit; and

(b) shall ensure that:

(i) every patient under nitrous oxide administration is under continuous in-operative observation by a member of the dental patient care staff;

(ii) nitrous oxide and oxygen flow rates and sedation duration and clearing times are appropriately documented in patient records;

(iii) reasonable and prudent controls are in place and followed in regard to nitrous oxide to ensure the health and safety of patients, dental office personnel, and the general public;

(iv) the dental facility is equipped with adequate and appropriate equipment, in good working order, to assess vital signs; and

(v) equipment used in the administration of nitrous oxide has a scavenging system and that all gas delivery units have an oxygen fail-safe system.

(3) A dentist with a class III permit:

(a) may administer or supervise the administration of parenteral conscious sedation in addition to the privileges granted one holding a Class I and Class II permit; and

(b) shall ensure that:

(i) the dental facility has adequate and appropriate monitoring equipment, including pulse oximetry, current emergency drugs, and equipment capable of delivering oxygen under positive pressure;

(ii) the patient's heart rate, blood pressure, respirations and responsiveness are checked at specific intervals during the anesthesia and recovery period and that these observations are appropriately recorded in the patient record;

(iii) the dental facility is equipped to treat emergencies providing immediate access to advanced airway equipment, and resuscitation medications;

(iv) the above equipment is inspected annually by a certified technician and is calibrated and in good working order;

(v) inhalation agents' flow rates and sedation duration and clearing times are appropriately documented in patient records; and

(vi) a minimum of two persons, with one person constantly monitoring the patient, are present during the administration of parenteral conscious sedation as follows:

(A) an operating permittee dentist and a BCLS certified assistant trained and qualified to monitor appropriate and required physiologic parameters;

(B) an operating dentist and a permittee dentist; or

(C) an operating permittee dentist and another licensed professional qualified to administer this class of anesthesia.

(4) A dentist with a class IV permit;

(a) may administer or supervise the administration of general anesthesia or deep sedation in addition to the privileges granted one holding a class I, II and III permit; and

(b) shall ensure that:

(i) the dental facility is equipped with precordial stethoscope for continuous monitoring of cardiac function and respiratory work, electrocardiographic monitoring and pulse oximetry, means of monitoring blood pressure, and temperature monitoring; the preceding or equivalent monitoring of the patient will be used for all patients during all general anesthesia or deep sedation procedures; in addition, temperature monitoring will be used for children;

(ii) the dental facility is equipped to treat emergencies providing immediate access to advanced airway equipment,

resuscitation medications, and defibrillator;

(iii) the above equipment is inspected annually by a certified technician and is calibrated and in good working order; and

(iv) three qualified and appropriately trained individuals are present during the administration of general anesthesia or deep sedation as follows:

(A) an operating dentist holding a permit under this classification, an anesthesia assistant trained to observe and monitor the patient using the equipment required above, and an individual to assist the operating dentist;

(B) an operating dentist, an assistant to the dentist and a dentist holding a permit under this classification; or

(C) another licensed professional qualified to administer this class of anesthesia and an individual to assist the operating dentist.

(5) Any dentist administering any anesthesia to a patient which results in, either directly or indirectly, the death or adverse event resulting in hospitalization of a patient shall submit a complete report of the incident to the Board within 30 days.

R156-69-602. Practice of Dental Hygiene.

In accordance with Subsection 58-69-102(7)(a)(ix), other practices of dental hygiene include performing laser bleaching and laser periodontal debridement.

R156-69-603. Use of Unlicensed Individuals as Dental Assistants.

In accordance with Section 58-69-803, the standards regulating the use of unlicensed individuals as dental assistants are that an unlicensed individual shall not, under any circumstance:

(1) render definitive treatment diagnosis;

(2) place, condense, carve, finish or polish restorative materials, or perform final cementation;

(3) cut hard or soft tissue or extract teeth;

(4) remove stains, deposits, or accretions, except as is incidental to polishing teeth coronally with a rubber cup;

(5) initially introduce nitrous oxide and oxygen to a patient for the purpose of establishing and recording a safe plane of analgesia for the patient, except under the direct supervision of a licensed dentist;

(6) remove bonded materials from the teeth with a rotary dental instrument or use any rotary dental instrument within the oral cavity except to polish teeth coronally with a rubber cup;

(7) take jaw registrations or oral impressions for supplying artificial teeth as substitutes for natural teeth, except for diagnostic or opposing models for the fabrication of temporary or provisional restorations or appliances;

(8) correct or attempt to correct the malposition or malocclusion of teeth, or make an adjustment that will result in the movement of teeth upon an appliance which is worn in the mouth;

(9) perform sub-gingival instrumentation;

(10) render decisions concerning the use of drugs, their dosage or prescription;

(11) expose radiographs without meeting the following criteria:

(a) completing a dental assisting course accredited by the ADA Commission on Dental Accreditation; or

(b) passing one of the following examinations:

(i) the DANB Radiation Health and Safety Examination (RHS); or

(ii) a radiology exam approved by the Board that meets the criteria established in Section R156-69-604; or

(12) work without a current CPR or BCLS certification.

R156-69-604. Radiology Course for Unlicensed Individuals

as Dental Assistants.

In accordance with Section 58-69-803 and Subsection 58-54-4.3(2), the radiology course in Subsection R156-69-603(11) shall include radiology theory consisting of:

- (1) orientation to radiation technology;
- (2) terminology;
- (3) radiographic dental anatomy and pathology (cursory);
- (4) radiation physics (basic);
- (5) radiation protection to patient and operator;
- (6) radiation biology including interaction of ionizing radiation on cells, tissues and matter;
- (7) factors influencing biological response to cells and tissues to ionizing radiation and cumulative effects of x-radiation;
- (8) intraoral and extraoral radiographic techniques;
- (9) processing techniques including proper disposal of chemicals; and
- (10) infection control in dental radiology.

R162. Commerce, Real Estate.**R162-2f. Real Estate Licensing and Practices Rules.****R162-2f-101. Title and Authority.**

(1) This chapter is known as the "Real Estate Licensing and Practices Rules."

(2) The authority to establish rules for real estate licensing and practices is granted by Section 61-2f-103.

(3) The authority to establish rules governing undivided fractionalized long-term estates is granted by Section 61-2f-307.

(4) The authority to collect fees is granted by Section 61-2f-105.

R162-2f-102. Definitions.

(1) "Active license" means a license granted to an applicant who:

(a) qualifies for licensure under Section 61-2f-203 and these rules;

(b) pays all applicable nonrefundable license fees; and
(c) affiliates with a principal brokerage.

(2) "Advertising" means solicitation through:

- (a) newspaper;
- (b) magazine;
- (c) Internet;
- (d) e-mail;
- (e) radio;
- (f) television;
- (g) direct mail promotions;
- (h) business cards;
- (i) door hangers;
- (j) signs; or
- (k) any other medium.

(3) "Affiliate":

(a) when used in reference to licensure, means to form, for the purpose of providing a real estate service, an employment or non-employment association with another individual or entity licensed or registered under Title 61, Chapter 2f et seq. and these rules; and

(b) when used in reference to an undivided fractionalize long-term estate, means an individual or entity that directly or indirectly, through one or more intermediaries, controls or is controlled by, or is under common control with, a specified individual or entity.

(4) "Branch broker" means an associate broker who manages a branch office under the supervision of the principal broker.

(5) "Branch office" means a principal broker's real estate brokerage office other than the principal broker's main office.

(6) "Brokerage" means a real estate sales or a property management company.

(7) "Brokerage record" means any record related to the business of a principal broker, including:

- (a) record of an offer to purchase real estate;
- (b) record of a real estate transaction, regardless of whether the transaction closed;
- (c) licensing records;
- (d) banking and other financial records;
- (e) independent contractor agreements;
- (f) trust account records, including:
 - (i) deposit records in the form of a duplicate deposit slip, deposit advice, or equivalent document; and
 - (ii) conveyance records in the form of a check image, wire transfer verification, or equivalent document; and
- (g) records of the brokerage's contractual obligations.

(8) "Business day" is defined in Subsection 61-2f-102(3).

(9) "Certification" means authorization from the division to:

- (a) establish and operate a school that provides courses approved for prelicensing education or continuing education; or
- (b) function as an instructor for courses approved for

prelicensing education or continuing education.

(10) "Commission" means the Utah Real Estate Commission.

(11) "Continuing education" means professional education required as a condition of renewal in accordance with Section R162-2f-204 and may be either:

(a) core: topics identified in Subsection R162-2f-206c(5)(c); or

(b) elective: topics identified in Subsection R162-2f-206c(5)(e).

(12) "Correspondence course" means a self-paced real estate course that:

- (a) is not distance or traditional education; and
- (b) fails to meet real estate educational course certification standards because:
 - (i) it is primarily student initiated; and
 - (ii) the interaction between the instructor and student lacks substance and/or is irregular.

(13) "Day" means calendar day unless specified as "business day."

(14)(a) "Distance education" means education in which the instruction does not take place in a traditional classroom setting, but occurs through other interactive instructional methods where teacher and student are separated by distance and sometimes by time, including the following:

- (i) computer conferencing;
- (ii) satellite teleconferencing;
- (iii) interactive audio;
- (iv) interactive computer software;
- (v) Internet-based instruction; and
- (vi) other interactive online courses.

(b) "Distance education" does not include home study and correspondence courses.

(15) "Division" means the Utah Division of Real Estate.

(16) "Double contract" means executing two or more purchase agreements, one of which is not made known to the prospective lender or loan funding entity.

(17) "Expired license" means a license that is not renewed pursuant to Section 61-2f-204 and Section R162-2f-204 by:

(a) the close of business on the expiration date, if the expiration date falls on a day when the division is open for business; or

(b) the next business day following the expiration date, if the expiration date falls on a day when the division is closed.

(18) "Guaranteed sales plan" means:

(a) a plan in which a seller's real estate is guaranteed to be sold; or

(b) a plan whereby a licensee or anyone affiliated with a licensee agrees to purchase a seller's real estate if it is not purchased by a third party:

- (i) in the specified period of a listing; or
- (ii) within some other specified period of time.

(19) "Inactive license" means a license that has been issued pursuant to Sections R162-2f-202a through 202c or renewed pursuant to Section R162-2f-204, but that may not be used to conduct the business of real estate because the license holder is not affiliated with a principal broker. Pursuant to Section R162-2f-203, a license may be inactivated:

- (a) voluntarily, with the assent of the license holder; or
- (b) involuntarily, without the assent of the license holder.

(20) "Informed consent" means written authorization, obtained from both principals to a single transaction, to allow a licensee to act as a limited agent.

(21) "Limited agency" means the representation of all principals in the same transaction to negotiate a mutually acceptable agreement:

- (a) subject to the terms of a limited agency agreement; and
- (b) with the informed consent of all principals to the transaction.

(22) "Net listing" means a listing agreement under which the real estate commission is the difference between the actual selling price of the property and a minimum selling price as set by the seller.

(23)(a) "Non-certified education" means a continuing education course offered outside of Utah, but for which a licensee may apply for credit pursuant to Subsection R162-2f-206c(1)(b).

(b) "Non-certified education" does not include:

- (i) home study courses; or
- (ii) correspondence courses.

(24) "Nonresident applicant" means a person:

(a) whose primary residence is not in Utah; and
 (b) who qualifies under Title 61, Chapter 2f et seq. and these rules for licensure as a principal broker, associate broker, or sales agent.

(25) "Principal brokerage" means the main real estate or property management office of a principal broker.

(26) "Principal" in a transaction means an individual who is represented by a licensee and may be:

- (a) the buyer or lessee;
- (b) an individual having an ownership interest in the property;
- (c) an individual having an ownership interest in the entity that is the buyer, seller, lessor, or lessee; or
- (d) an individual who is an officer, director, partner, member, or employee of the entity that is the buyer, seller, lessor, or lessee.

(27) "Provider" means an individual or business that is approved by the division to offer continuing education.

(28) "Property management" is defined in Subsection 61-2f-102(19).

(29) "Registration" means authorization from the division to engage in the business of real estate as:

- (a) a corporation;
- (b) a partnership;
- (c) a limited liability company;
- (d) an association;
- (e) a dba;
- (f) a professional corporation;
- (g) a sole proprietorship; or
- (h) another legal entity of a real estate brokerage.

(30) "Reinstatement" is defined in Subsection 61-2f-102(22).

(31) "Reissuance" is defined in Subsection 61-2f-102(23).

(32) The acronym RELMS means "real estate licensing and management system," which is the online database through which licensees shall submit licensing information to the division.

(33) "Renewal" is defined in Subsection 61-2f-102(24).

(34) "Residential property" means real property consisting of, or improved by, a single-family one- to four-unit dwelling.

(35) "School" means:

(a) any college or university accredited by a regional accrediting agency that is recognized by the United States Department of Education;

(b) any community college or vocational-technical school;

(c) any local real estate organization that has been approved by the division as a school; or

(d) any proprietary real estate school.

(36) "Sponsor" means the party that is the seller of an undivided fractionalized long-term estate.

(37) "Third party service provider" means an individual or entity that provides a service necessary to the closing of a specific transaction and includes:

- (a) mortgage brokers;
- (b) mortgage lenders;
- (c) loan originators;
- (d) title service providers;

(e) attorneys;

(f) appraisers;

(g) providers of document preparation services;

(h) providers of credit reports;

(i) property condition inspectors;

(j) settlement agents;

(k) real estate brokers;

(l) marketing agents;

(m) insurance providers; and

(n) providers of any other services for which a principal or investor will be charged.

(38) "Traditional education" means education in which instruction takes place between an instructor and students where all are physically present in the same classroom.

(39) "Undivided fractionalized long-term estate" is defined in Subsection 61-2f-102(26).

R162-2f-105. Fees.

Any fee collected by the division is nonrefundable.

R162-2f-201. Qualification for Licensure.

(1) Character. Pursuant to Subsection 61-2f-203(1)(c), an applicant for licensure as a sales agent, associate broker, or principal broker shall evidence honesty, integrity, truthfulness, and reputation.

(a) An applicant shall be denied a license for:

(i) a felony that resulted in:

(A) a conviction occurring within the five years preceding the date of application;

(B) a plea agreement occurring within the five years preceding the date of application; or

(C) a jail or prison term with a release date falling within the five years preceding the date of application; or

(ii) a misdemeanor involving fraud, misrepresentation, theft, or dishonesty that resulted in:

(A) a conviction occurring within the three years preceding the date of application; or

(B) a jail or prison term with a release date falling within the three years preceding the date of application.

(b) An applicant may be denied a license or issued a restricted license for incidents in the applicant's past that reflect negatively on the applicant's honesty, integrity, truthfulness, and reputation. In evaluating an applicant for these qualities, the division and commission may consider:

(i) criminal convictions or plea agreements other than those specified in this Subsection (1)(a);

(ii) past acts related to honesty or truthfulness, with particular consideration given to any such acts involving the business of real estate, that would be grounds under Utah law for sanctioning an existing license;

(iii) civil judgments in lawsuits brought on grounds of fraud, misrepresentation, or deceit;

(iv) court findings of fraudulent or deceitful activity;

(v) evidence of non-compliance with court orders or conditions of sentencing; and

(vi) evidence of non-compliance with:

(A) terms of a diversion agreement not yet closed and dismissed;

(B) a probation agreement; or

(C) a plea in abeyance.

(c)(i) An applicant who, as of the date of application, is serving probation or parole for a crime that contains an element of violence or physical coercion shall, in order to submit a complete application, provide for the commission's review current documentation from two licensed therapists, approved by the division, stating that the applicant does not pose an ongoing threat to the public.

(ii) For purposes of applying this rule, crimes that contain an element of violence or physical coercion include, but are not

limited to, the following:

- (A) assault, including domestic violence;
- (B) rape;
- (C) sex abuse of a child;
- (D) sodomy on a child;
- (E) battery;
- (F) interruption of a communication device;
- (G) vandalism;
- (H) robbery;
- (I) criminal trespass;
- (J) breaking and entering;
- (K) kidnapping;
- (L) sexual solicitation or enticement;
- (M) manslaughter; and
- (N) homicide.

(iii) Information and documents submitted in compliance with this Subsection (1)(c) shall be reviewed by the commission, which may exercise discretion in determining whether the applicant qualifies for licensure.

(2) Competency. In evaluating an applicant for competency, the division and commission may consider evidence including:

- (a) civil judgments, with particular consideration given to any such judgments involving the business of real estate;
 - (b) failure to satisfy a civil judgment that has not been discharged in bankruptcy;
 - (c) suspension or revocation of a professional license;
 - (d) sanctions placed on a professional license; and
 - (e) investigations conducted by regulatory agencies relative to a professional license.
- (3) Age. An applicant shall be at least 18 years of age.
- (4) Minimum education. An applicant shall have:
- (a) a high school diploma;
 - (b) a GED; or
 - (c) equivalent education as approved by the commission.

R162-2f-202a. Sales Agent Licensing Fees and Procedures.

(1) To obtain a Utah license to practice as a sales agent, an individual who is not currently and actively licensed in any state shall:

- (a) evidence honesty, integrity, truthfulness, and reputation pursuant to Subsection R162-2f-201(1);
- (b) evidence competency to transact the business of real estate pursuant to Subsection R162-2f-201(2);
- (c)(i) successfully complete 120 hours of approved preclicensing education;
- (ii) evidence current membership in the Utah State Bar; or
- (iii) apply to the division for waiver of all or part of the education requirement by virtue of:
 - (A) completing equivalent education as part of a college undergraduate or postgraduate degree program, regardless of the date of the degree; or
 - (B) completing other equivalent real estate education within the 12-month period prior to the date of application;
- (d)(i) apply with a testing service designated by the division to sit for the licensing examination; and
- (ii) pay a nonrefundable examination fee to the testing center;
- (e) pursuant to this Subsection (3)(a), take and pass both the state and national components of the licensing examination;
- (f) pursuant to this Subsection (3)(b), submit to the division an application for licensure including:
 - (i) documentation indicating successful completion of the required preclicensing education;
 - (ii) a report of the examination showing a passing score for each component of the examination; and
 - (iii) the applicant's business, home, and e-mail addresses;
 - (g) if applying for an active license, affiliate with a principal broker; and

(h) pay the nonrefundable fees required for licensure, including the nonrefundable fee required under Section 61-2f-505 for the Real Estate Education, Research, and Recovery Fund.

(2) To obtain a Utah license to practice as a sales agent, an individual who is currently and actively licensed in another state shall:

- (a) evidence honesty, integrity, truthfulness, and reputation pursuant to Subsection R162-2f-201(1);
- (b) evidence competency to transact the business of real estate pursuant to Subsection R162-2f-201(2);
- (c)(i) successfully complete 120 hours of approved preclicensing education;
- (ii) evidence current membership in the Utah State Bar; or
- (iii) apply to the division for waiver of all or part of the education requirement by virtue of:
 - (A) completing equivalent education as part of a college undergraduate or postgraduate degree program, regardless of the date of the degree;
 - (B) completing other equivalent real estate education within the 12-month period prior to the date of application; or
 - (C) having been licensed in a state that has substantially equivalent preclicensing education requirements;
- (d)(i) apply with a testing service designated by the division to sit for the licensing examination; and
- (ii) pay a nonrefundable examination fee to the testing center;
- (e)(i) pursuant to this Subsection (3)(a), take and pass both the state and national components of the licensing examination; or

(ii) if actively licensed during the two years immediately preceding the date of application in a state that has substantially equivalent licensing examination requirements:

- (A) take and pass the state component of the licensing examination; and
- (B) apply to the division for a waiver of the national component of the licensing examination;
- (f) pursuant to this Subsection (3)(b), submit to the division an application for licensure including:
 - (i) documentation indicating successful completion of the required preclicensing education;
 - (ii) a report of the examination showing a passing score for each component of the examination; and
 - (iii) the applicant's business, home, and e-mail addresses;
 - (g) provide from any state where licensed;
 - (i) a written record of the applicant's license history; and
 - (ii) complete documentation of any disciplinary action taken against the applicant's license;
 - (h) if applying for an active license, affiliate with a principal broker; and

(i) pay the nonrefundable fees required for licensure, including the nonrefundable fee required under Section 61-2f-505 for the Real Estate Education, Research, and Recovery Fund.

(3) Deadlines.

- (a) If an individual passes one test component but fails the other, the individual shall retake and pass the failed component:
 - (i) within six months of the date on which the individual achieves a passing score on the passed component; and
 - (ii) within 12 months of the date on which the individual completes the preclicensing education.
- (b) An application for licensure shall be submitted:
 - (i) within 90 days of the date on which the individual achieves passing scores on both examination components; and
 - (ii) within 12 months of the date on which the individual completes the preclicensing education.
- (c) If any deadline in this Section R162-2f-202a falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

R162-2f-202b. Principal Broker Licensing Fees and Procedures.

(1) To obtain a Utah license to practice as a principal broker, an individual shall:

(a) evidence honesty, integrity, truthfulness, and reputation pursuant to Subsection R162-2f-201(1);

(b) evidence competency to transact the business of real estate pursuant to Subsection R162-2f-201(2);

(c)(i) successfully complete 120 hours of approved prelicensing education, including:

(A) 45 hours of broker principles;

(B) 45 hours of broker practices; and

(C) 30 hours of Utah law and testing; or

(ii) apply to the division for waiver of all or part of the education requirement by virtue of:

(A) completing equivalent education as part of a college undergraduate or postgraduate degree program, regardless of the date of the degree; or

(B) completing other equivalent real estate education within the 12-month period prior to the date of application;

(d)(i) apply with a testing service designated by the division to sit for the licensing examination; and

(ii) pay a nonrefundable examination fee to the testing center;

(e) pursuant to this Subsection (3)(a), take and pass both the state and national components of the licensing examination;

(f)(i) unless Subsection (2)(a) applies, evidence the individual's having, within the five-year period preceding the date of application either:

(A) three years full-time, licensed, active real estate experience; or

(B) two years full-time, licensed, active, real estate experience and one year full-time professional real estate experience from the optional experience table in Appendix 3; and

(ii) evidence having accumulated, within the five-year period preceding the date of application, a total of at least 60 documented experience points complying with R162-2f-401a, as follows:

(A) 45 to 60 points pursuant to the experience points tables found in Appendices 1 and 2, of which a maximum of 25 points may have been accumulated from the "All other property management" subsections of Appendix 2; and

(B) 0 to 15 points pursuant to the experience point table found in Appendix 3; and

(iii) a minimum of one-half of the experience points from Tables 1 and 2 must derive from transactions of properties located in the state of Utah;

(iii) if an individual submits evidence of experience points for transactions involving a team or group, experience points are limited to those transactions for which the individual is named in any written agency agreements and purchase and/or lease contracts and the applicable experience points will be divided proportionally among the licensees identified in the agency agreements and and/or lease contracts;

(g) pursuant to this Subsection (3)(b), submit to the division an application for licensure including:

(i) documentation indicating successful completion of the approved broker prelicensing education;

(ii) a report of the examination showing a passing score for each component of the examination; and

(iii) the applicant's business, home, and e-mail addresses;

(h) provide from any state where licensed as a real estate agent or broker:

(i) a written record of the applicant's license history; and

(ii) complete documentation of any disciplinary action taken against the applicant's license;

(i) if applying for an active license, affiliate with a registered company;

(j) pay the nonrefundable fees required for licensure, including the nonrefundable fee required under Section 61-2f-505 for the Real Estate Education, Research, and Recovery Fund; and

(k) establish real estate and property management trust accounts, as applicable pursuant to Section R162-2f-403, that:

(i) contain the term "real estate trust account" or "property management trust account", as applicable, in the account name; and

(ii) are separate from any operating account(s) of the registered entity for which the individual will serve as a broker; and

(l) identify the location(s) where brokerage records will be kept.

(2)(a) If an individual applies under this Subsection R162-2f-202b within two years of allowing a principal broker license to expire, the experience required under Subsection (1)(f) shall be accumulated within the seven-year period preceding the date of application.

(b) Pursuant to Section R162-2f-407, an individual whose application is denied by the division for failure to meet experience requirements under this Subsection (1)(f) may bring the application before the commission.

(3) Deadlines.

(a) If an individual passes one test component but fails the other, the individual shall retake and pass the failed component:

(i) within six months of the date on which the individual achieves a passing score on the passed component; and

(ii) within 12 months of the date on which the individual completes the prelicensing education.

(b) An application for licensure shall be submitted:

(i) within 90 days of the date on which the individual achieves passing scores on both examination components; and

(ii) within 12 months of the date on which the individual completes the prelicensing education.

(c) If any deadline in this Section R162-2f-202b falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

(4) Restriction. A principal broker license may not be granted to an applicant whose sales agent license is on suspension or probation at the time of application.

(5) Dual broker licenses.

(a)(i) A person who holds or obtains a dual broker license under this Subsection may function as the principal broker of a property management company that is a separate entity from the person's real estate brokerage.

(ii) A dual broker may not conduct real estate sales activities from the separate property management company.

(iii) A principal broker may conduct property management activities from the person's real estate brokerage:

(A) without holding a dual broker license; and

(B) in accordance with Subsections R162-2f-401j and R162-2f-403a-403c;

(b) A dual broker who wishes to consolidate real estate and property management operations into a single brokerage may:

(i) at the broker's request, convert the dual broker license to a principal broker license; and

(ii)(A) convert the property management company to a branch office of the real estate brokerage, including the assignment of a branch broker and using the same name as the real estate brokerage; or

(B) close the separate property management company.

(c) As of May 8, 2013:

(i) the Division shall:

(A) cease issuing property management principal broker (PMPB) licenses;

(B) cease issuing property management company (MN) registrations except as to a second company registered under a

dual broker license;

(C) convert any property management principal broker (PMPB) license to a real estate principal broker (PB) license; and

(D) as to any property management company (MN) registration that is not a second company under a dual broker license, convert the registration to a real estate brokerage (CN) registration; and

(ii) it shall be permissible to conduct real estate sales activities under any company registration that is converted pursuant to this Subsection (5)(c)(i)(C).

R162-2f-202c. Associate Broker Licensing Fees and Procedures.

To obtain a Utah license to practice as an associate broker, an individual shall:

(1) comply with Subsections R162-2f-202b(1)(a) through (j); and

(2) if applying for an active license, affiliate with a principal broker.

R162-2f-203. Inactivation and Activation.

(1) Inactivation.

(a) To voluntarily inactivate the license of a sales agent or an associate broker, the holder of the license shall complete and submit a change form through RELMS pursuant to Section R162-2f-207.

(b) To voluntarily inactivate a principal broker license, the principal broker shall:

(i) prior to inactivating the license:

(A) give written notice to each licensee affiliated with the principal broker of the date on which the principal broker proposes to inactivate the license; and

(B) provide to the division evidence that the licensee has complied with this Subsection (1)(b)(i)(A); and

(ii) complete and submit a change form through RELMS pursuant to Section R162-2f-207.

(c) The license of a sales agent or associate broker is involuntarily inactivated upon:

(i) termination of the licensee's affiliation with a principal broker;

(ii) expiration, suspension, revocation, inactivation, or termination of the license of the principal broker with whom the sales agent or associate broker is affiliated; or

(iii) inactivation or termination of the registration of the entity with which the licensee's principal broker is affiliated.

(d) The registration of an entity is involuntarily inactivated upon:

(i) termination of the entity's affiliation with a principal broker; or

(ii) expiration, suspension, revocation, inactivation, or termination of the license of the principal broker with whom the entity is affiliated.

(e) The license of a principal broker is involuntarily inactivated upon termination of the licensee's affiliation with a registered entity.

(f) If the division or commission orders that a principal broker's license is to be suspended or revoked:

(i) the order shall state the effective date of the suspension or revocation; and

(ii) prior to the effective date, the entity shall:

(A)(I) affiliate with a new principal broker; and

(II) submit change forms through RELMS to affiliate each licensee with the new principal broker; or

(B)(I) provide written notice to each licensee affiliated with the principal broker of the pending suspension or revocation; and

(II) comply with Subsection R162-2f-207(3)(c)(ii)(B).

(2) Activation.

(a) To activate a license, the holder of the inactive license shall:

(i) complete and submit a change card through RELMS pursuant to Section R162-2f-207;

(ii) submit proof of:

(A) having been issued an active license at the time of last renewal;

(B) having completed, within the one-year period preceding the date on which the licensee requests activation, 18 hours of continuing education, including nine hours of core topics; or

(C) having passed the licensing examination within the six-month period prior to the date on which the licensee requests activation;

(iii)(A) if applying to activate a sales agent or associate broker license, evidence affiliation with a principal broker; or

(B) if applying to activate a principal broker license, evidence affiliation with a registered entity; and

(iv) pay a non-refundable activation fee.

(b) A licensee who submits continuing education to activate a license may not use the same continuing education to renew the license at the time of the licensee's next renewal.

R162-2f-204. License Renewal.

(1) Renewal period and deadlines.

(a) A license issued under these rules is valid for a period of two years from the date of licensure.

(b) By the 15th day of the month of expiration, an applicant for renewal shall submit to the division proof of having completed all continuing education required under this Subsection (2)(b).

(c) In order to renew on time without incurring a late fee:

(i) an individual who is required to submit a renewal application through the online RELMS system shall complete the online process, including the completion and banking of continuing education credits, by the license expiration date; and

(ii) an individual whose circumstances require a "yes" answer to a disclosure question on the renewal application shall submit a paper renewal:

(A) by the license expiration date, if that date falls on a day when the division is open for business; or

(B) on the next business day following the license expiration date, if that date falls on a day when the division is closed for business.

(2) Qualification for renewal.

(a) Character and competency.

(i) An individual applying for a renewed license shall evidence that the individual maintains character and competency as required for initial licensure.

(ii) An individual applying for a renewed license may not have:

(A) a felony conviction since the last date of licensure; or

(B) a finding of fraud, misrepresentation, or deceit entered against the applicant, related to activities requiring a real estate license, by a court of competent jurisdiction or a government agency since the last date of licensure, unless the finding was explicitly considered by the division in a previous application.

(b) Continuing education.

(i) To renew at the end of the first renewal cycle, an individual shall complete:

(A) the 12-hour new sales agent course certified by the division; and

(B) an additional six non-duplicative hours of continuing education:

(I) certified by the division as either core or elective; or

(II) acceptable to the division pursuant to this Subsection (2)(b)(ii)(B).

(ii) To renew at the end of a renewal cycle subsequent to the first renewal, an individual shall:

(A) complete 18 non-duplicative hours of continuing education:

(I) certified by the division;

(II) including at least nine non-duplicative hours of core curriculum; and

(III) taken during the previous license period; or

(B) apply to the division for a waiver of all or part of the required continuing education hours by virtue of having completed non-certified courses that:

(I) were not required under Subsection R162-2f-206c(1)(a) to be certified; and

(II) meet the continuing education objectives listed in Subsection R162-2f-206c(2)(f).

(iii)(A) Completed continuing education courses will be credited to an individual when the hours are uploaded by the course provider pursuant to Subsection R162-2f-401d(1)(k).

(B) If a provider fails to upload course completion information within the ten-day period specified in Subsection R162-2f-401d(1)(k), an individual who attended the course may obtain credit by:

(I) filing a complaint against the provider; and

(II) submitting the course completion certificate to the division.

(c) Principal broker. In addition to meeting the requirements of this Subsection (2)(a) and (b), an individual applying to renew a principal broker license shall certify that:

(i) the business name under which the individual operates is current and in good standing with the Division of Corporations and Commercial Code; and

(ii) the trust account maintained by the principal broker is current and in compliance with Section R162-2f-403.

(3) Renewal and reinstatement procedures.

(a) To renew a license, an applicant shall, prior to the expiration of the license:

(i) submit the forms required by the division, including proof of having completed continuing education pursuant to this Subsection (2)(b); and

(ii) pay a nonrefundable renewal fee.

(b) To reinstate an expired license, an applicant shall, according to deadlines set forth in Subsections 61-2f-204(2)(b) - (d):

(i) submit all forms required by the division, including proof of having completed continuing education pursuant to Subsection 61-2f-204(2); and

(ii) pay a nonrefundable reinstatement fee.

(4) Transition to online renewal. An individual licensee shall submit an application for renewal through the online RELMS system unless the individual's circumstances require a "yes" answer in response to a disclosure question.

R162-2f-205. Registration of Entity.

(1) A principal broker may not conduct business through an entity, including a branch office, dba, or separate property management company, without first registering the entity with the division.

(2) Exemptions. The following locations may be used to conduct real estate business without being registered as branch offices:

(a) a model home;

(b) a project sales office; and

(c) a facility established for twelve months or less as a temporary site for marketing activity, such as an exhibit booth.

(3) To register an entity with the division, a principal broker shall:

(a) evidence that the name of the entity is registered with the Division of Corporations;

(b) certify that the entity is affiliated with a principal broker who:

(i) is authorized to use the entity name; and

(ii) will actively supervise the activities of all sales agents, associate brokers, branch brokers, and unlicensed staff;

(c) if registering a branch office, identify the branch broker who will actively supervise all licensees and unlicensed staff working from the branch office;

(d) submit an application that includes:

(i) the physical address of the entity;

(ii) if the entity is a branch office, the name and license number of the branch broker;

(iii) the names of associate brokers and sales agents assigned to the entity; and

(iv) the location and account number of any real estate and property management trust account(s) in which funds received at the registered location will be deposited;

(e) inform the division of:

(i) the location and account number of any operating account(s) used by the registered entity; and

(ii) the location where brokerage records will be kept; and

(f) pay a nonrefundable application fee.

(4) Restrictions.

(a)(i) The division shall not register an entity proposing to use a business name that:

(A) is likely to mislead the public into thinking that the entity is not a real estate brokerage or property management company;

(B) closely resembles the name of another registered entity; or

(C) the division determines might otherwise be confusing or misleading to the public.

(ii) Approval by the division of an entity's business name does not ensure or grant to the entity a legal right to use or operate under that name.

(b) A branch office shall operate under the same business name as the principal brokerage.

(c) An entity may not designate a post office box as its business address, but may designate a post office box as a mailing address.

(d) All trust accounts and operating accounts used by a registered entity shall be maintained in a bank or credit union located in the state of Utah.

(5) Registration not transferable.

(a) A registered entity shall not transfer the registration to any other person.

(b) A registered entity shall not allow an unlicensed person to use the entity's registration to perform work for which licensure is required.

(c) If a change in corporate structure of a registered entity creates a separate and unique legal entity, that entity shall obtain a unique registration, and shall not operate under an existing registration.

(d) The dissolution of a corporation, partnership, limited liability company, association, or other entity registered with the division terminates the registration.

R162-2f-206a. Certification of Real Estate School.

(1) Prior to offering real estate prelicensing or continuing education, a school shall:

(a) first, obtain division approval of the school name; and

(b) second, certify the school with the division pursuant to this Subsection (2).

(2) To certify, a school applicant shall, at least 90 days prior to teaching any course, prepare and supply the following information to the division:

(a) contact information, including:

(i) name, phone number, email address, and address of the physical facility;

(ii) name, phone number, email address, and address of each school director;

(iii) name, phone number, email address, and address of

each school owner; and

(iv) an e-mail address where correspondence will be received by the school;

(b) evidence that the school directors and owners meet the character requirements outlined in Subsection R162-2f-201(1) and the competency requirements outlined in Subsection R162-2f-201(2);

(c) evidence that the school name, as approved by the division pursuant to this Subsection (1)(a), is registered with the Division of Corporations and Commercial Code as a real estate education provider;

(d) school description, including:

(i) type of school; and

(ii) description of the school's physical facilities;

(e) list of courses to be offered, including the following:

(i) a statement of whether each course is a prelicensing or continuing education course; and

(ii) as to a continuing education course, whether it is designed to qualify as fulfilling all or part of the core curriculum requirement for new agents;

(f) list of the instructor(s), including any guest lecturer(s), who will be teaching each course;

(g) proof that each instructor is:

(i) certified by the division;

(ii) qualified as a guest lecturer by having:

(A) requisite expertise in the field; and

(B) approval from the division; or

(iii) exempt from certification under Subsection R162-2f-206d(4);

(h) schedule of courses offered, including the days, times, and locations of classes;

(i) statement of attendance requirements as provided to students;

(j) refund policy as provided to students;

(k) disclaimer as provided to students and as specified in Subsection (3)(c);

(l) criminal history disclosure statement as provided to students and as specified in Subsection (3)(d);

(m) disclosure, as specified in Subsection (3)(e), of any possibility of obtaining an education waiver;

(n) course completion policy, as provided to students, describing the length of time allowed for completion and detailed requirements; and

(o) any other information the division requires.

(3) Minimum standards.

(a) The course schedule may not provide or allow for more than eight credit hours per student per day.

(b) The attendance statement shall require that each student attend at least 90% of the scheduled class periods, excluding breaks.

(c) The disclaimer shall adhere to the following requirements:

(i) be typed in all capital letters at least 1/4 inch high; and

(ii) state the following language: "Any student attending (school name) is under no obligation to affiliate with any of the real estate brokerages that may be soliciting for licensees at this school."

(d) The criminal history disclosure statement shall:

(i) be provided to each student prior to the school accepting payment; and

(ii) clearly inform the student that upon application with the division, the student will be required to:

(A) accurately disclose the student's criminal history according to the licensing questionnaire provided by the division;

(B) submit fingerprint cards to the division and consent to a criminal background check; and

(C) provide to the division complete court documentation relative to any criminal proceeding that the applicant is required

to disclose;

(iii) clearly inform the student that the division will consider the applicant's criminal history pursuant to Subsection 61-2f-204(1)(e) and Subsection R162-2f-201(1) in making a decision on the application; and

(iv) include a section for the student's attestation that the student has read and understood the disclosure.

(e) The education waiver disclosure shall adhere to the following requirements:

(i) disclose to students the requirements for obtaining an education waiver while they are still eligible for a full refund;

(ii) be typed in all capital letters at least 1/4 inch high;

(iii) inform the students that the division grants education waivers for qualified individuals; and

(iv) state the following language: "A student accepted or enrolled for education hours cannot later reduce those hours by applying for an education waiver. An education waiver must be obtained before a student enrolls and is accepted by a school for education hours."

(f) Within 15 days after the occurrence of any material change in the information outlined in this Subsection (2)(a), the school shall provide, to the division's education staff, written notice of the change.

(4)(a) A school certification expires 24 months from the date of issuance and must be renewed before the expiration date in order to remain active.

(b) To renew a school certification, an applicant shall:

(i) complete a renewal application as provided by the division; and

(ii) pay a nonrefundable renewal fee.

(c) To reinstate an expired school certification within 30 days following the expiration date, a person shall:

(i) comply with all requirements for a timely renewal; and

(ii) pay a nonrefundable late fee.

(d) To reinstate an expired school certification after 30 days and within six months following the expiration date, a person shall:

(i) comply with all requirements for a timely renewal; and

(ii) pay a non-refundable reinstatement fee.

(e) A certification that is expired for more than six months may not be reinstated. To obtain a certification, a person must apply as a new applicant.

(f) If a deadline specified in this Subsection (4) falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

R162-2f-206b. Certification Prelicensing Course.

(1) To certify a prelicensing course for traditional education, a person shall, no later than 30 days prior to the date on which the course is proposed to begin, provide the following to the division:

(a) comprehensive course outline including:

(i) description of the course, including a statement of whether the course is designed for:

(A) sales agents; or

(B) brokers;

(ii) number of class periods spent on each subject area;

(iii) minimum of three to five learning objectives for every three hours of class time; and

(iv) reference to the course outline approved by the commission for each topic;

(b) number of quizzes and examinations;

(c) grading system, including methods of testing and standards of grading;

(d)(i) a copy of at least two final examinations to be used in the course;

(ii) the answer key(s) used to determine if a student has passed the exam; and

(iii) an explanation of procedure if the student fails the

final examination and thereby fails the course; and

(e) a list of the titles, authors and publishers of all required textbooks.

(2) To certify a prelicensing course for distance education, a person shall, no later than 60 days prior to the date on which the course is proposed to begin, provide the following to the division:

- (a) all items listed in this Subsection (1);
- (b) description of each method of course delivery;
- (c) description of any media to be used;
- (d) course access for the division using the same delivery methods and media that will be provided to the students;
- (e) description of specific and regularly scheduled interactive events included in the course and appropriate to the delivery method that will contribute to the students' achievement of the stated learning objectives;
- (f) description of how the students' achievement of the stated learning objectives will be measured at regular intervals;
- (g) description of how and when certified prelicensing instructors will be available to answer student questions;
- (h) attestation from the school director of the availability and adequacy of the equipment, software, and other technologies needed to achieve the course's instructional claims; and

(i) a description of the complaint process to resolve student grievances.

(3) Minimum standards. A prelicensing course shall:

- (a) address each topic required by the course outline as approved by the commission;
 - (b) meet the minimum hourly requirement as established by Subsection 61-2f-203(1)(d)(i) and these rules;
 - (c) limit the credit that students may earn to no more than eight credit hours per day;
 - (d) be taught in an appropriate classroom facility unless approved for distance education;
 - (e) allow a maximum of 10% of the required class time for testing, including:
 - (i) practice tests; and
 - (ii) a final examination;
 - (f) use only texts, workbooks, and supplemental materials that are appropriate and current in their application to the required course outline; and
 - (g) reflect the current statutes and rules of the division.
- (4) A prelicensing course certification expires at the same time as the school certification and is renewed automatically when the school certification is renewed.

R162-2f-206c. Certification of Continuing Education Course.

(1)(a) The division may not award continuing education credit for a course that is advertised in Utah to real estate licensees unless the course is certified prior to its being taught.

(b) A licensee who completes a course that is not required to be certified pursuant to this Subsection (1)(a), and who believes that the course satisfies the objectives of continuing education pursuant to this Subsection (2)(f), may apply to the division for an award of continuing education credit after successfully completing the course.

(2) To certify a continuing education course for traditional education, a person shall, no later than 30 days prior to the date on which the course is proposed to begin, provide the following to the division:

- (a) name and contact information of the course provider;
- (b) name and contact information of the entity through which the course will be provided;
- (c) description of the physical facility where the course will be taught;
- (d) course title;
- (e) number of credit hours;

(f) statement defining how the course will meet the objectives of continuing education by increasing the participant's:

- (i) knowledge;
 - (ii) professionalism; and
 - (iii) ability to protect and serve the public;
- (g) course outline including a description of the subject matter covered in each 15-minute segment;
- (h) a minimum of three learning objectives for every three hours of class time;
- (i) name and certification number of each certified instructor who will teach the course;
 - (j) copies of all materials to be distributed to participants;
 - (k) signed statement in which the course provider and instructor(s):
 - (i) agree not to market personal sales products;
 - (ii) allow the division or its representative to audit the course on an unannounced basis; and
 - (iii) agree to upload, within ten business days after the end of a course offering, to the database specified by the division, the following:
 - (A) course name;
 - (B) course certificate number assigned by the division;
 - (C) date(s) the course was taught;
 - (D) number of credit hours; and
 - (E) names and license numbers of all students receiving continuing education credit;

- (l) procedure for pre-registration;
- (m) tuition or registration fee;
- (n) cancellation and refund policy;
- (o) procedure for taking and maintaining control of attendance during class time;
- (p) sample of the completion certificate;
- (q) nonrefundable fee for certification as required by the division; and
- (r) any other information the division requires.

(3) To certify a continuing education course for distance education, a person shall:

- (a) comply with this Subsection (2);
- (b) submit to the division a complete description of all course delivery methods and all media to be used;
- (c) provide course access for the division using the same delivery methods and media that will be provided to the students;
- (d) describe specific frequent and periodic interactive events included in the course and appropriate to the delivery method that will contribute to the students' achievement of the stated learning objectives and encourage student participation;
- (e) describe how and when certified instructors will be available to answer student questions; and
- (f) provide an attestation from the sponsor of the availability and adequacy of the equipment, software, and other technologies needed to achieve the course's instructional claims.

(4) Minimum standards.

(a) Except for distance education courses, all courses shall be taught in an appropriate classroom facility and not in a private residence.

(b) The minimum length of a course shall be one credit hour.

(c) Except for online courses, the procedure for taking attendance shall be more extensive than having the student sign a class roll.

(d) The completion certificate shall allow for entry of the following information:

- (i) licensee's name;
- (ii) type of license;
- (iii) license number;
- (iv) date of course;
- (v) name of the course provider;

- (vi) course title;
 - (vii) number of credit hours awarded;
 - (viii) course certification number;
 - (ix) course certification expiration date;
 - (x) signature of the course sponsor; and
 - (xi) signature of the licensee.
- (5) Certification procedures.
- (a) Upon receipt of a complete application for certification of a continuing education course, the division shall, at its own discretion, determine whether a course qualifies for certification.
- (b) Upon determining that a course qualifies for certification, the division shall determine whether the content satisfies core or elective requirements.
- (c) Core topics include the following:
- (i) state approved forms and contracts;
 - (ii) other industry used forms or contracts;
 - (iii) ethics;
 - (iv) agency;
 - (v) short sales or sales of bank-owned property;
 - (vi) environmental hazards;
 - (vii) property management;
 - (viii) prevention of real estate and mortgage fraud;
 - (ix) federal and state real estate laws;
 - (x) division administrative rules;
 - (xi) broker trust accounts; and
 - (xii) water law, rights and transfer.
- (d) If a course regarding an industry used form or contract is approved by the division as a core course, the provider of the course shall:
- (i) obtain authorization to use the form(s) or contract(s) taught in the course;
 - (ii) obtain permission for licensees to subsequently use the form(s) or contract(s) taught in the course; and
 - (iii) if applicable, arrange for the owner of each form or contract to make it available to licensees for a reasonable fee.
- (e) Elective topics include the following:
- (i) real estate financing, including mortgages and other financing techniques;
 - (ii) real estate investments;
 - (iii) real estate market measures and evaluation;
 - (iv) real estate appraising;
 - (v) market analysis;
 - (vi) measurement of homes or buildings;
 - (vii) accounting and taxation as applied to real property;
 - (viii) estate building and portfolio management for clients;
 - (ix) settlement statements;
 - (x) real estate mathematics;
 - (xi) real estate law;
 - (xii) contract law;
 - (xiii) agency and subagency;
 - (xiv) real estate securities and syndications;
 - (xv) regulation and management of timeshares, condominiums, and cooperatives;
 - (xvi) resort and recreational properties;
 - (xvii) farm and ranch properties;
 - (xviii) real property exchanging;
 - (xix) legislative issues that influence real estate practice;
 - (xx) real estate license law;
 - (xxi) division administrative rules;
 - (xxii) land development;
 - (xxiii) land use;
 - (xxiv) planning and zoning;
 - (xxv) construction;
 - (xxvi) energy conservation in buildings;
 - (xxvii) water rights;
 - (xxviii) landlord/tenant relationships;
 - (xxix) property disclosure forms;
 - (xxx) Americans with Disabilities Act;
 - (xxx1) fair housing;
 - (xxxii) affirmative marketing;
 - (xxxiii) commercial real estate;
 - (xxxiv) tenancy in common;
 - (xxxv) professional development;
 - (xxxvi) business success;
 - (xxxvii) customer relation skills;
 - (xxxviii) sales promotion, including:
 - (A) salesmanship;
 - (B) negotiation;
 - (C) sales psychology;
 - (D) marketing techniques related to real estate knowledge;
 - (E) servicing clients; and
 - (F) communication skills;
 - (xxxix) personal and property protection for licensees and their clients;
 - (xl) any topic that focuses on real estate concepts, principles, or industry practices or procedures, if the topic enhances licensee professional skills and thereby advances public protection and safety;
 - (xli) any other topic that directly relates to the real estate brokerage practice and directly contributes to the objective of continuing education; and
 - (xlii) technology courses that utilize the majority of the time instructing students how the technology:
 - (A) directly benefits the consumer; or
 - (B) enables the licensee to be more proficient in performing the licensee's agency responsibilities.
- (f) Unacceptable topics include the following:
- (i) offerings in mechanical office and business skills, including:
 - (A) typing;
 - (B) speed reading;
 - (C) memory improvement;
 - (D) language report writing;
 - (E) advertising; and
 - (F) technology courses with a principal focus on technology operation, software design, or software use;
 - (ii) physical well-being, including:
 - (A) personal motivation;
 - (B) stress management; and
 - (C) dress-for-success;
 - (iii) meetings held in conjunction with the general business of the licensee and the licensee's broker, employer, or trade organization, including:
 - (A) sales meetings;
 - (B) in-house staff meetings or training meetings; and
 - (C) member orientations for professional organizations;
 - (iv) courses in wealth creation or retirement planning for licensees; and
 - (v) courses that are specifically designed for exam preparation.
- (g) If an application for certification of a continuing education course is denied by the division, the person making application may appeal to the commission.
- (6)(a) A continuing education course certification expires 24 months from the date of issuance and must be renewed before the expiration date in order to remain active.
- (b) To renew a continuing education course certification, an applicant shall:
- (i) complete a renewal application as provided by the division; and
 - (ii) pay a nonrefundable renewal fee.
- (c) To reinstate an expired continuing education course certification within 30 days following the expiration date, a person shall:
- (i) comply with all requirements for a timely renewal; and
 - (ii) pay a nonrefundable late fee.
- (d) To reinstate an expired continuing education course certification after 30 days and within six months following the

expiration date, a person shall:

- (i) comply with all requirements for a timely renewal; and
- (ii) pay a non-refundable reinstatement fee.

(e) A certification that is expired for more than six months may not be reinstated. To obtain a certification, a person must apply as a new applicant.

(f) If a deadline specified in this Subsection (6) falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

R162-2f-206d. Certification of Prelicensing Course Instructor.

(1) An instructor shall certify with the division prior to teaching a prelicensing course.

(2) To certify, an applicant shall provide, within the 30-day period prior to the date on which the applicant proposes to begin instruction:

(a) evidence that the applicant meets the character requirements of Subsection R162-2f-201(1) and the competency requirements of Subsection R162-2f-201(2);

(b) evidence of having graduated from high school or achieved an equivalent education;

(c) evidence that the applicant understands the real estate industry through:

(i) a minimum of five years of full-time experience as a real estate licensee;

(ii) post-graduate education related to the course subject;

or

(iii) demonstrated expertise on the subject proposed to be taught;

(d) evidence of ability to teach through:

(i) a minimum of 12 months of full-time teaching experience;

(ii) part-time teaching experience equivalent to 12 months of full-time teaching experience; or

(iii) attendance at a division instructor development workshop totaling at least two days in length;

(e) evidence of having passed an examination:

(i) designed to test the knowledge of the subject matter proposed to be taught;

(ii) with a score of 80% or more correct responses, and;

(iii) within the six-month period preceding the date of application;

(f) name and certification number of the certified prelicensing school for which the applicant will work;

(g) a signed statement agreeing to allow the instructor's courses to be randomly audited on an unannounced basis by the division or its representative;

(h) a signed statement agreeing not to market personal sales products;

(i) any other information the division requires;

(j) an application fee; and

(k) course-specific requirements as follows:

(i) sales agent prelicensing course: evidence of being a licensed sales agent or broker; and

(ii) broker prelicensing course: evidence of being a licensed associate broker, branch broker, or principal broker.

(3) An applicant may certify to teach a subcourse of the broker prelicensing course by meeting the following requirements:

(a) Brokerage Management. An applicant shall:

(i) hold a current real estate broker license;

(ii) possess at least two years practical experience as an active real estate principal broker; and

(iii)(A) have experience managing a real estate office; or

(B) hold a certified residential broker or equivalent professional designation in real estate brokerage management.

(b) Advanced Real Estate Law. An applicant shall:

(i) hold a current real estate broker license;

(ii) evidence current membership in the Utah State Bar; or

(iii)(A) have graduated from an American Bar Association accredited law school; and

(B) have at least two years real estate law experience.

(c) Advanced Appraisal. An applicant shall hold:

(i) a current real estate broker license, or

(ii) a current appraiser license or certification from the division.

(d) Advanced Finance. An applicant shall:

(i) evidence at least two years practical experience in real estate finance; and

(ii)(A) hold a current real estate broker license;

(B) evidence having been associated with a lending institution as a loan officer; or

(C) hold a degree in finance.

(e) Advanced Property Management. An applicant shall hold a current real estate license and:

(i) evidence at least two years full-time experience as a property manager; or

(ii) hold a certified property manager or equivalent professional designation.

(4) A college or university may use any faculty member to teach an approved course provided the instructor demonstrates to the satisfaction of the division academic training or experience qualifying the faculty member to teach the course.

(5)(a) A prelicensing instructor certification expires 24 months from the date of issuance and must be renewed before the expiration date in order to remain active.

(b) To renew a prelicensing course instructor certification, an individual shall:

(i) submit all forms required by the division;

(ii) evidence having taught, within the two-year period prior to the date of application, a certified real estate course;

(iii) evidence having attended, within the two-year period prior to the date of application, an instructor development workshop sponsored by the division; and

(iv) pay a nonrefundable renewal fee.

(c) To reinstate an expired prelicensing course instructor certification within 30 days following the expiration date, a person shall:

(i) comply with all requirements for a timely renewal; and

(ii) pay a nonrefundable late fee.

(d) To reinstate an expired prelicensing course instructor certification after 30 days and within six months following the expiration date, a person shall:

(i) comply with all requirements for a timely renewal; and

(ii) pay a non-refundable reinstatement fee.

(e) A certification that is expired for more than six months may not be reinstated. To obtain a certification, a person must apply as a new applicant.

(f) If a deadline specified in this Subsection (5) falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

R162-2f-206e. Certification of Continuing Education Course Instructor.

(1) An instructor shall certify with the division before teaching a continuing education course.

(2) To certify, an applicant shall, within the 30-day period prior to the date on which the applicant proposes to begin instruction, provide the following:

(a) name and contact information of the applicant;

(b) evidence that the applicant meets the character requirements of Subsection R162-2f-201(1) and the competency requirements of Subsection R162-2f-201(2);

(c) evidence of having graduated from high school or achieved an equivalent education;

(d) evidence that the applicant understands the subject matter to be taught through:

- (i) a minimum of two years of full-time experience as a real estate licensee;
 - (ii) college-level education related to the course subject; or
 - (iii) demonstrated expertise on the subject proposed to be taught;
 - (e) evidence of ability to teach through:
 - (i) a minimum of 12 months of full-time teaching experience; or
 - (ii) part-time teaching experience equivalent to 12 months of full-time teaching experience;
 - (f) a signed statement agreeing to allow the instructor's courses to be randomly audited on an unannounced basis by the division or its representative;
 - (g) a signed statement agreeing not to market personal sales products;
 - (h) any other information the division requires; and
 - (i) a nonrefundable application fee.
- (3)(a) A continuing education course instructor certification expires 24 months from the date of issuance and must be renewed before the expiration date in order to remain active.
- (b) To renew a continuing education course instructor certification, a person shall:
 - (i) submit all forms required by the division;
 - (ii)(A) evidence having taught, within the previous renewal period, a minimum of 12 continuing education credit hours; or
 - (B) submit written explanation outlining:
 - (I) the reason for not having taught a minimum of 12 continuing education credit hours; and
 - (II) documentation to the division that the applicant maintains satisfactory expertise in the subject area proposed to be taught; and
 - (iii) pay a nonrefundable renewal fee.
 - (c) To reinstate an expired continuing education instructor certification within 30 days following the expiration date, a person shall:
 - (i) comply with all requirements for a timely renewal; and
 - (ii) pay a nonrefundable late fee.
 - (d) To reinstate an expired continuing education instructor certification after 30 days and within six months following the expiration date, a person shall:
 - (i) comply with all requirements for a timely renewal; and
 - (ii) pay a non-refundable reinstatement fee.
 - (e) A certification that is expired for more than six months may not be reinstated. To obtain a certification, a person must apply as a new applicant.
 - (f) If a deadline specified in this Subsection (3) falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

R162-2f-207. Reporting a Change of Information.

- (1) Individual notification requirements.
 - (a) An individual licensed as a sales agent, associate broker, or principal broker shall report the following to the division:
 - (i) change in licensee's name; and
 - (ii) change in licensee's business, home, e-mail, or mailing address.
 - (b) In addition to complying with this Subsection (1)(a):
 - (i) an individual licensed as a sales agent or associate broker shall report to the division a change in affiliation with a principal broker; and
 - (ii) an individual licensed as a principal broker shall report to the division:
 - (A) termination of a sales agent, associate broker, or branch broker, if the change is not reported pursuant to this Subsection (1)(b)(i);
 - (B) change in assignment of branch broker; and

- (C) termination of the principal broker's affiliation with an entity.
- (2) Entity notification requirements. A registered entity shall report the following to the division:
 - (a) change in entity's name;
 - (b) change in entity's affiliation with a principal broker;
 - (c) change in corporate structure;
 - (d) dissolution of corporation; and
 - (e) change of location where brokerage records are kept.
- (3) Notification procedures.
 - (a) Name. To report a change in name, a person shall submit to the division a paper change form and:
 - (i) if the person is an individual, attach to it official documentation such as a:
 - (A) marriage certificate;
 - (B) divorce decree;
 - (C) court order; or
 - (D) driver license; and
 - (ii) if the person is an entity:
 - (A) obtain prior approval from the division of the new entity name; and
 - (B) attach to the change form proof that the new name as approved by the division pursuant to this Subsection (3)(a)(ii)(A) is registered with, and approved by, the Division of Corporations.
 - (b) Address. To report a change in address, a person shall enter the change into RELMS.
 - (c) Affiliation.
 - (i) To terminate an affiliation between an individual and a principal broker, a person shall submit a change form through RELMS to inactivate or transfer the individual's license; and
 - (A)(I) obtain the electronic affirmation of the other party to the terminated affiliation; or
 - (II) comply with this Subsection (4); and
 - (B) if a sales agent, associate broker, or branch broker simultaneously establishes an affiliation with a new principal broker, obtain the electronic affirmation of the new principal broker on a change form.
 - (ii) To terminate an affiliation between a principal broker and an entity:
 - (A) the principal broker shall submit a paper change form to the division to inactivate or transfer the principal broker's license; and
 - (B) if the entity does not simultaneously affiliate with a new principal broker, the entity shall:
 - (I) cease operations;
 - (II) submit to the division a paper company/branch change form to inactivate the entity registration;
 - (III) submit change forms through RELMS to inactivate the license of any licensee affiliated with the entity;
 - (IV) advise the division as to the location where records will be stored;
 - (V) notify each listing and management client that the entity is no longer in business and that the client may enter into a new listing or management agreement with a different brokerage;
 - (VI) notify each party and cooperating broker to any existing contracts; and
 - (VII) retain money held in trust under the control of a signer on the trust account, or an administrator or executor, until all parties to each transaction agree in writing to the disposition or until a court of competent jurisdiction issues an order relative to the disposition.
 - (iii) Branch broker. To change an assignment of branch broker, a principal broker shall submit a paper change form to the division.
 - (d) Corporate structure.
 - (i) To report a change in corporate structure of a registered entity, the affiliated principal broker shall:

(A) if the change does not involve a new business license, or a new registration with the Utah Division of Corporations and Commercial Code, submit a letter to the division, fully explaining the change; and

(B) if the change involves a new business license or a new registration with the Utah Division of Corporations and Commercial Code for a purpose other than a company name change, obtain a new registration.

(ii) To report the dissolution of an entity registered with the division, a person shall comply with this Subsection (3)(c)(ii)(B).

(e) Brokerage records. To report a change in the location where brokerage records are kept, the principal broker of the registered entity shall submit to the division a letter on brokerage letterhead.

(4) Unavailability of individual. If an individual is unavailable to sign or electronically affirm a change form, the person responsible to report the change may do so by:

(a) sending a letter by certified mail to the last known address of the individual to notify that individual of the change; and

(b) as applicable:

(i) entering the certified mail reference number into the appropriate field on the electronic change form; or

(ii) providing to the division a copy of the certified mail receipt.

(5) Fees. The division may require a notification submitted pursuant to this subsection to be accompanied by a nonrefundable change fee.

(6) Deadlines.

(a) A change in affiliation shall be reported to the division before the change is made.

(b) A change in branch manager shall be reported to the division at the time the change is made.

(c) Any other change shall be reported to the division within ten business days of the change taking effect.

(d) As to a change that requires submission of a paper form or document, if the deadline specified in this Section R162-2f-207 falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

(7) Effective date. A change reported in compliance with this Section R162-2f-207 becomes effective with the division the day on which the properly executed change form is received by the division.

R162-2f-307. Undivided Fractionalized Long-Term Estate.

(1) A real estate licensee who markets an undivided fractionalized long-term estate shall:

(a) obtain from the sponsor written disclosures pursuant to this Subsection (2) regarding the sponsor and each affiliate; and

(b) provide the disclosures to purchasers prior to closing so as to allow adequate review by the purchaser.

(2) Required disclosures.

(a) Disclosure as to the sponsor and the sponsor's affiliates, including the following:

(i) current certified financial statements;

(ii) current credit reports;

(iii) information concerning any bankruptcies or civil lawsuits;

(iv) proposed use of purchaser proceeds;

(v)(A) if applicable, financial statements of the master lease tenant, audited according to generally accepted accounting principles; and

(B) if the master lease tenant is an entity formed for the sole purpose of acting as the master lease tenant, audited financial statements of the owners of that entity;

(vi) statement as to whether the sponsor is an affiliate of a master lease tenant; and

(vii) statement as to whether any affiliate of the sponsor is:

(A) a third-party service provider; or

(B) a master lease tenant.

(b) Disclosure as to the real property in which the undivided fractionalized long-term estate is offered, including the following:

(i) material information concerning any leases or subleases affecting the real property;

(ii) material information concerning any environmental issues affecting the real property;

(iii) a preliminary title report on the real property;

(iv) if available, financial statements on any tenants for the life of the entity or the last five years, whichever is shorter;

(v) if applicable, rent rolls and operating history;

(vi) if applicable, loan documents;

(vii)(A) a tenants in common agreement; or

(B) any agreement that forms the substance of the undivided fractionalized long-term estate, including definition of the undivided fractionalized interest;

(viii) third party reports acquired by the sponsor;

(ix) a narrative appraisal report that:

(A) is effective no more than six months prior to the date the offer of sale is made; and

(B) includes, at a minimum:

(I) pictures;

(II) type of construction;

(III) age of building; and

(IV) site information such as improvements, parking, cross easements, site and location maps;

(x) material information concerning the market conditions for the property class; and

(xi) material information concerning the demographics of the general market area.

(c) Disclosure as to the asset managers and the property managers of the real property in which the undivided fractionalized long-term estate is offered, including the following:

(i) contact information for any existing or recommended asset managers and property managers;

(ii) description of any relationship between:

(A) the asset managers and the sponsor; and

(B) the property managers and the sponsor; and

(iii) copies of any existing:

(A) asset management agreements; and

(B) property management agreements.

(d) Disclosure as to potential tax consequences, including the following:

(i) a statement that there might be tax consequences for a failure to close on the purchase;

(ii) a statement that there might be risks involved in the purchase; and

(iii) a statement advising purchasers to consult with tax advisors and other professionals for advice concerning these matters.

(3) The division and commission shall consider any offering of a fractionalized undivided long-term estate in real property that complies with the Securities and Exchange Commission Regulation D, Rule 506, 17 C.F.R. Sec. 203.506 to be in compliance with these rules.

R162-2f-401a. Affirmative Duties Required of All Licensed Individuals.

An individual licensee shall:

(1) uphold the following fiduciary duties in the course of representing a principal:

(a) loyalty, which obligates the agent to place the best interests of the principal above all other interests, including the agent's own;

(b) obedience, which obligates the agent to obey all lawful

instructions from the principal;

(c) full disclosure, which obligates the agent to inform the principal of any material fact the agent learns about:

- (i) the other party; or
- (ii) the transaction;

(d) confidentiality, which prohibits the agent from disclosing, without permission, any information given to the agent by the principal that would likely weaken the principal's bargaining position if it were known, but excepting any known material fact concerning:

- (i) a defect in the property; or
 - (ii) the client's ability to perform on the contract;
- (e) reasonable care and diligence;

(f) holding safe and accounting for all money or property entrusted to the agent; and

(g) any additional duties created by the agency agreement;

(2) for the purpose of defining the scope of the individual's agency, execute a written agency agreement between the individual and the individual's principal, including:

- (a) seller(s) the individual represents;
- (b) buyer(s) the individual represents;

(c) buyer(s) and seller(s) the individual represents as a limited agent in the same transaction pursuant to this Subsection (4);

(d) the owner of a property for which the individual will provide property management services; and

(e) a tenant whom the individual represents;

(3) in order to represent both principals in a transaction as a limited agent, obtain informed consent by:

(a) clearly explaining in writing to both parties:

(i) that each is entitled to be represented by a separate agent;

(ii) the type(s) of information that will be held confidential;

(iii) the type(s) of information that will be disclosed; and

(iv) the circumstances under which the withholding of information would constitute a material misrepresentation regarding the property or regarding the abilities of the parties to fulfill their obligations;

(b) obtaining a written acknowledgment from each party affirming that the party waives the right to:

- (i) undivided loyalty;
- (ii) absolute confidentiality; and
- (iii) full disclosure from the licensee; and

(c) obtaining a written acknowledgment from each party affirming that the party understands that the licensee will act in a neutral capacity to advance the interests of each party;

(4) when acting under a limited agency agreement:

(a) act as a neutral third party; and

(b) uphold the following fiduciary duties to both parties:

(i) obedience, which obligates the limited agent to obey all lawful instructions from the parties, consistent with the agent's duty of neutrality;

(ii) reasonable care and diligence;

(iii) holding safe all money or property entrusted to the limited agent; and

(iv) any additional duties created by the agency agreement;

(5) prior to executing a binding agreement, disclose in writing to clients, agents for other parties, and unrepresented parties:

(a) the licensee's position as a principal in any transaction where the licensee operates either directly or indirectly to buy, sell, lease, or rent real property;

(b) the fact that the licensee holds a license with the division, whether the license status is active or inactive, in any circumstance where the licensee is a principal in an agreement to buy, sell, lease, or rent real property;

(c) the licensee's agency relationship(s);

(d)(i) the existence or possible existence of a due-on-sale

clause in an underlying encumbrance on real property; and

(ii) the potential consequences of selling or purchasing a property without obtaining the authorization of the holder of an underlying encumbrance;

(6) in order to offer any property for sale or lease, make reasonable efforts to verify the accuracy and content of the information and data to be used in the marketing of the property;

(7) in order to offer a residential property for sale, disclose the source on which the licensee relies for any square footage data that will be used in the marketing of the property:

(a) in the written agreement, executed with the seller, through which the licensee acquires the right to offer the property for sale; and

(b) in a written disclosure provided to the buyer, at the licensee's direction, at or before the deadline for the seller's disclosure per the contract for sale;

(8) upon initial contact with another agent in a transaction, disclose the agency relationship between the licensee and the client;

(9) when executing a binding agreement in a sales transaction, confirm the prior agency disclosure:

(a) in the currently approved Real Estate Purchase Contract; or

(b) in a separate provision with substantially similar language incorporated in or attached to the binding agreement;

(10) when executing a lease or rental agreement, confirm the prior agency disclosure by:

- (a) incorporating it into the agreement; or
- (b) attaching it as a separate document;

(11) when offering an inducement to a buyer who will not pay a real estate commission in a transaction:

(a) obtain authorization from the licensee's principal broker to offer the inducement;

(b) comply with all underwriting guidelines that apply to the loan for which the borrower has applied; and

(c) provide notice of the inducement, using any method or form, to:

(i) the principal broker of the seller's agent, if the seller paying a commission is represented; or

(ii) the seller, if the seller paying a commission is not represented;

(12) if the licensee desires to act as a sub-agent for the purpose of showing property owned by a seller who is under contract with another brokerage, prior to showing the seller's property:

(a) notify the listing brokerage that sub-agency is requested; and

(b) enter into a written agreement with the listing brokerage with which the seller has contracted:

- (i) consenting to the sub-agency; and
- (ii) defining the scope of the agency;

(c) obtain from the listing brokerage all available information about the property; and

(d) uphold the same fiduciary duties outlined in this Subsection (1);

(13) provide copies of a lease or purchase agreement, properly signed by all parties, to the party for whom the licensee acts as an agent;

(14)(a) in identifying the seller's brokerage in paragraph 5 of the approved Real Estate Purchase Contract, use:

- (i) the principal broker's individual name; or
- (ii) the principal broker's brokerage name; and

(b) personally fulfill the licensee's agency relationship with the client, notwithstanding the information used to complete paragraph 5;

(15) timely inform the licensee's principal broker or branch broker of real estate transactions in which:

(a) the licensee is involved as agent or principal;

(b) the licensee has received funds on behalf of the principal broker; or

(c) an offer has been written;

(16)(a) disclose in writing to all parties to a transaction any compensation in addition to any real estate commission that will be received in connection with a real estate transaction; and

(b) ensure that any such compensation is paid to the licensee's principal broker;

(17)(a) in negotiating and closing a transaction, a licensee may fill out those legal forms as provided for in Section 61-2f-306;

(18) use an approved addendum form to make a counteroffer or any other modification to a contract;

(19) in order to sign or initial a document on behalf of a principal in a sales transaction:

(a) obtain prior written authorization in the form of a power of attorney duly executed by the principal;

(b) retain in the file for the transaction a copy of said power of attorney;

(c) attach said power of attorney to any document signed or initialed by the individual on behalf of the principal;

(d) sign as follows: "(Principal's Name) by (Licensee's Name), Attorney-in-Fact;" and

(e) initial as follows: "(Principal's Initials) by (Licensee's Name), Attorney-in-Fact for (Principal's Name);"

(20) in order to sign or initial a document on behalf of a principal in a property management transaction:

(a) obtain prior written authorization executed by the principal which specifically identifies the actions that are authorized to be taken on behalf of the principal;

(b) retain in the file for the transaction a copy of the written authorization;

(c) sign as follows: "by (Licensee's Name), on behalf of Owner;" and

(d) initial as follows: "by (Licensee's initials), on behalf of Owner;"

(21) if employing an unlicensed individual to provide assistance in connection with real estate transactions, adhere to the provisions of Section R162-2f-401g;

(22) strictly adhere to advertising restrictions as outlined in Section R162-2f-401h;

(23) as to a guaranteed sales agreement, provide full disclosure regarding the guarantee by executing a written contract that contains:

(a) the conditions and other terms under which the property is guaranteed to be sold or purchased;

(b) the charges or other costs for the service or plan;

(c) the price for which the property will be sold or purchased; and

(d) the approximate net proceeds the seller may reasonably expect to receive;

(24) immediately deliver money received in a real estate transaction to the principal broker for deposit; and

(25) as contemplated by Subsection 61-2f-401(19), when notified by the division that information or documents are required for investigation purposes, respond with the required information or documents in full and within ten business days.

R162-2f-401b. Prohibited Conduct As Applicable to All Licensed Individuals.

An individual licensee may not:

(1) engage in any of the practices described in Section 61-2f-401 et seq., whether acting as agent or on the licensee's own account, in a manner that:

(a) fails to conform with accepted standards of the real estate sales, leasing, or management industries;

(b) could jeopardize the public health, safety, or welfare;

or

(c) violates any provision of Title 61, Chapter 2f et seq. or

the rules of this chapter;

(2) require parties to acknowledge receipt of a final copy of any document prepared by the licensee prior to all parties signing a contract evidencing agreement to the terms thereof;

(3) make a misrepresentation to the division:

(a) in an application for license renewal; or

(b) in an investigation.

(4)(a) propose, prepare, or cause to be prepared a document, agreement, settlement statement, or other device that the licensee knows or should know does not reflect the true terms of the transaction; or

(b) knowingly participate in a transaction in which such a false device is used;

(5) participate in a transaction in which a buyer enters into an agreement that:

(a) is not disclosed to the lender; and

(b) if disclosed, might have a material effect on the terms or the granting of the loan;

(6) use or propose the use of a double contract;

(7) place a sign on real property without the written consent of the property owner;

(8) take a net listing;

(9) sell listed properties other than through the listing broker;

(10) subject a principal to paying a double commission without the principal's informed consent;

(11) enter or attempt to enter into a concurrent agency representation when the licensee knows or should know that the principal has an existing agency representation agreement with another licensee;

(12) pay a finder's fee or give any valuable consideration to an unlicensed person or entity for referring a prospect, except that:

(a) a licensee may give a gift valued at \$150 or less to an individual in appreciation for an unsolicited referral of a prospect that results in a real estate transaction; and

(b) as to a property management transaction, a licensee may compensate an unlicensed employee or current tenant up to \$200 per lease for assistance in retaining an existing tenant or securing a new tenant;

(13) accept a referral fee from:

(a) a lender; or

(b) a mortgage broker;

(14) act as a real estate agent or broker in the same transaction in which the licensee also acts as a:

(a) mortgage loan originator, associate lending manager, or principal lending manager;

(b) appraiser or appraiser trainee;

(c) escrow agent; or

(d) provider of title services;

(15) act or attempt to act as a limited agent in any transaction in which:

(a) the licensee is a principal in the transaction; or

(b) any entity in which the licensee is an officer, director, partner, member, employee, or stockholder is a principal in the transaction;

(16) make a counteroffer by striking out, whitening out, substituting new language, or otherwise altering:

(a) the boilerplate provisions of the Real Estate Purchase Contract; or

(b) language that has been inserted to complete the blanks of the Real Estate Purchase Contract;

(17) advertise or offer to sell or lease property without the written consent of:

(a) the owner of the property; and

(b) if the property is currently listed, the listing broker;

(18) advertise or offer to sell or lease property at a lower price than that listed without the written consent of the seller or lessor;

(19) represent on any form or contract that the individual is holding client funds without actually receiving funds and securing them pursuant to Subsection R162-2f-401a(23);

(20) when acting as a limited agent, disclose any information given to the agent by either principal that would likely weaken that party's bargaining position if it were known, unless the licensee has permission from the principal to disclose the information;

(21) disclose, or make any use of, a short sale demand letter outside of the purchase transaction for which it is issued;

(22) in a short sale, have the seller sign a document allowing the licensee to lien the property; or

(23) charge any fee that represents the difference between:
(a) the total concessions authorized by a seller and the actual amount of the buyer's closing costs; or

(b) in a short sale, the sale price approved by the lender and the total amount required to clear encumbrances on title and close the transaction.

R162-2f-401c. Additional Provisions Applicable to Principal Brokers.

(1) A principal broker shall:

(a) strictly comply with the record retention and maintenance requirements of Subsection R162-2f-401k;

(b) provide to the person whom the principal broker represents in a real estate transaction:

(i) a detailed statement showing the current status of a transaction upon the earlier of:

(A) the expiration of 30 days after an offer has been made and accepted; or

(B) a buyer or seller making a demand for such statement; and

(ii) an updated transaction status statement at 30-day intervals thereafter until the transaction either closes or fails;

(c)(i) regardless of who closes a real estate transaction, ensure that final settlement statements are reviewed for content and accuracy at or before the time of closing by:

(A) the principal broker;

(B) an associate broker or branch broker affiliated with the principal broker; or

(C) the sales agent who is:

(I) affiliated with the principal broker; and

(II) representing the principal in the transaction; and

(ii) ensure the principals in each closed real estate transaction receive copies of all documents executed in the transaction closing;

(d) in order to assign all or part of the principal broker's compensation to an associate broker or sales agent in accordance with Section 61-2f-305, provide written instructions to the title insurance agent that include the following:

(i) an identification of the property involved in the real estate transaction;

(ii) an identification of the principal broker and sales agent or associate broker who will receive compensation in accordance with the written instructions;

(iii) a designation of the amount of compensation that will be received by both the principal broker and the sales agent or associate broker;

(iv) a prohibition against alteration of the written instructions by anyone other than the principal broker; and

(v) additional instructions at the discretion of the principal broker;

(e) obtain written consent from both the buyer and the seller before retaining any portion of an earnest money deposit being held by the principal broker;

(f) exercise active supervision over the conduct of all licensees and unlicensed staff employed by or affiliated with the principal broker, whether acting as:

(i) the principal broker for an entity; or

(ii) a branch broker;

(g) strictly adhere to the rules governing real estate auctions, as outlined in Section R162-2f-401i;

(h) strictly adhere to the rules governing property management, as outlined in Section R162-2f-401j;

(i)(i) except as provided in this Subsection (1)(i)(iii), within three business days of receiving a client's money in a real estate transaction, deposit the client's money into a trust account:

(A) maintained by the principal broker pursuant to Section R162-2f-403; or

(B) if the parties to the transaction agree in writing, maintained by:

(I) a title company pursuant to Section 31A-23a-406; or

(II) another authorized escrow entity; and

(ii) within three business days of receiving money from a client or a tenant in a property management transaction, deposit the money into a trust account maintained by the principal broker pursuant to Section R162-2f-403 or forward or deposit client or tenant money into an account maintained by the property owner;

(iii) a principal broker is not required to comply with this Subsection (1)(i)(i) or (ii) if:

(A) the contract or other written agreement states that the money is to be:

(I) held for a specific length of time; or

(II) as to a real estate transaction, deposited upon acceptance by the seller; or

(B) as to a real estate transaction, the Real Estate Purchase Contract or other written agreement states that a promissory note may be tendered in lieu of good funds and the promissory note:

(I) names the seller as payee; and

(II) is retained in the principal broker's file until closing;

(j)(i) maintain at the principal business location a complete record of all consideration received or escrowed for real estate and property management transactions; and

(ii) be personally responsible at all times for deposits held in the principal broker's trust account;

(k)(i)(A)(I) in a real estate transaction, assign a consecutive, sequential number to each offer; and

(II) assign a unique identification to each property management client; and

(B) include the transaction number or client identification, as applicable, on:

(I) trust account deposit records; and

(II) trust account checks or other equivalent records evidencing the transfer of trust funds;

(ii) maintain a separate transaction file for each offer in a real estate transaction, including a rejected offer, that involves funds tendered through the brokerage and deposited into a trust account;

(iii) maintain a record of each rejected offer in a real estate transaction that does not involve funds deposited to trust:

(A) in separate files; or

(B) in a single file holding all such offers; and

(l) if the principal broker assigns an affiliated associate broker or branch broker to assist the principal broker in accomplishing the affirmative duties outlined in this Subsection (1):

(i) actively supervise any such associate broker or branch broker; and

(ii) remain personally responsible and accountable for adequate supervision of all licensees and unlicensed staff affiliated with the principal broker.

(2) A principal broker shall not be deemed in violation of this Subsection (1)(f) where:

(a) an affiliated licensee or unlicensed staff member violates a provision of Title 61, Chapter 2f et seq. or the rules

promulgated thereunder;

(b) the supervising broker had in place at the time of the violation specific written policies or instructions to prevent such a violation;

(c) reasonable procedures were established by the broker to ensure that licensees receive adequate supervision and the broker has followed those procedures;

(d) upon learning of the violation, the broker attempted to prevent or mitigate the damage;

(e) the broker did not participate in the violation;

(f) the broker did not ratify the violation; and

(g) the broker did not attempt to avoid learning of the violation.

R162-2f-401d. School and Provider Conduct.

(1) Affirmative duties. A school's owner(s) and director(s) shall:

(a) within 15 days after the occurrence of any material change in the information provided to the division under Subsection R162-2f-206a(2)(a), give the division written notice of that change;

(b)(i) provide instructors of prelicensing courses with the state-approved course outline; and

(ii) ensure that any prelicensing course adheres to the topics mandated in the state-approved course outline;

(c) ensure that all instructors comply with Section R162-2f-401e.

(d) prior to accepting payment from a prospective student for a prelicensing education course:

(i) provide the criminal history disclosure statement described in Subsection R162-2f-206a(3)(d);

(ii) obtain the student's signature on the criminal history disclosure; and

(iii) have the enrollee verify that an education waiver has not been obtained from the division;

(e)(i) retain signed criminal history disclosures for a minimum of three years from the date of course completion; and

(ii) make the signed criminal history disclosures available for inspection by the division upon request;

(f) maintain for a minimum of three years after enrollment:

(i) the registration record of each student;

(ii) the attendance record of each student; and

(iii) any other prescribed information regarding the offering, including exam results, if any;

(g) ensure that course topics are taught only by:

(i) certified instructors; or

(ii) guest lecturers;

(h)(i) limit the use of approved guest lecturers to a total of 20% of the instructional hours per approved course; and

(ii) prior to using a guest lecturer to teach a portion of a course, document for the division the professional qualifications of the guest lecturer;

(i) furnish to the division an updated roster of the school's approved instructors and guest lecturers each time there is a change;

(j) within ten days of teaching a course, upload course completion information for any student who:

(i) successfully completes the course; and

(ii) provides an accurate name or license number within seven business days of attending the course;

(k) substantiate, upon request by the division, any claims made in advertising; and

(l) include in all advertising materials the continuing education course certification number issued by the division.

(2) Prohibited conduct. A school may not:

(a) award continuing education credit for a course that has not been certified by the division prior to its being taught;

(b) award continuing education credit to any student who fails to:

(i) attend a minimum of 90% of the required class time; or

(ii) pass a prelicense course final examination;

(c) accept a student for a reduced number of hours without first having a written statement from the division defining the exact number of hours the student must complete;

(d) allow a student to challenge by examination any course or part of a course in lieu of attendance;

(e) allow a course approved for traditional education to be:

(i) taught in a private residence; or

(ii) completed through home study;

(f) make a misrepresentation in advertising about any course of instruction;

(g) disseminate advertisements or public notices that disparage the dignity and integrity of the real estate profession;

(h) make disparaging remarks about a competitor's services or methods of operation;

(i) attempt by any means to obtain or use the questions on the prelicensing examinations unless the questions have been dropped from the current exam bank;

(j) give valuable consideration to a real estate brokerage or licensee for referring students to the school;

(k) accept valuable consideration from a real estate brokerage or licensee for referring students to the brokerage;

(l) allow real estate brokerages to solicit for agents at the school during class time, including the student break time;

(m) obligate or require students to attend any event in which a brokerage solicits for agents;

(n) award more than eight credit hours per day per student;

(o) award credit for an online course to a student who fails to complete the course within one year of the registration date;

(p) advertise or market a continuing education course that has not been:

(i) approved by the division; and

(ii) issued a current continuing education course certification number; or

(q) advertise, market, or promote a continuing education course with language indicating that division certification is pending or otherwise forthcoming.

R162-2f-401e. Instructor Conduct.

(1) Affirmative duties. An instructor shall:

(a) adhere to the approved outline for any course taught;

(b) comply with a division request for information within ten business days of the date of the request; and

(c) maintain a professional demeanor in all interactions with students.

(2) Prohibited conduct. An instructor may not:

(a) continue to teach any course after the instructor's certification has expired and without renewing the instructor's certification; or

(b) continue to teach any course after the course has expired and without renewing the course certification.

R162-2f-401f. Approved Forms.

The following standard forms are approved by the commission and the Office of the Attorney General for use by all licensees:

(1) August 27, 2008, Real Estate Purchase Contract;

(2) January 1, 1987, Uniform Real Estate Contract;

(3) October 1, 1983, All Inclusive Trust Deed;

(4) October 1, 1983, All Inclusive Promissory Note Secured by All Inclusive Trust Deed;

(5) August 5, 2003, Addendum to Real Estate Purchase Contract;

(6) August 27, 2008, Seller Financing Addendum to Real Estate Purchase Contract;

(7) January 1, 1999, Buyer Financial Information Sheet;

(8) August 27, 2008, FHA/VA Loan Addendum to Real Estate Purchase Contract;

(9) January 1, 1999, Assumption Addendum to Real Estate Purchase Contract;

(10) January 1, 1999, Lead-based Paint Addendum to Real Estate Purchase Contract; and

(11) January 1, 1999, Disclosure and Acknowledgment Regarding Lead-based Paint and/or Lead-based Paint Hazards.

R162-2f-401g. Use of Personal Assistants.

In order to employ an unlicensed individual to provide assistance in connection with real estate transactions, an individual licensee shall:

(1) obtain the permission of the licensee's principal broker before employing the individual;

(2) supervise the assistant to ensure that the duties of an unlicensed assistant are limited to those that do not require a real estate license, including the following:

(a) performing clerical duties, including making appointments for prospects to meet with real estate licensees, but only if the contact is initiated by the prospect and not by the unlicensed assistant;

(b) at an open house, distributing preprinted literature written by a licensee, where a licensee is present and the unlicensed person provides no additional information concerning the property or financing, and does not become involved in negotiating, offering, selling or completing contracts;

(c) acting only as a courier service in delivering documents, picking up keys, or similar services, so long as the courier does not engage in any discussion or completion of forms or documents;

(d) placing brokerage signs on listed properties;

(e) having keys made for listed properties; and

(f) securing public records from a county recorder's office, zoning office, sewer district, water district, or similar entity;

(3) compensate a personal assistant at a predetermined rate that is not:

(a) contingent upon the occurrence of real estate transactions; or

(b) determined through commission sharing or fee splitting; and

(4) prohibit the assistant from engaging in telephone solicitation or other activity calculated to result in securing prospects for real estate transactions, except as provided in this Subsection (2)(a).

R162-2f-401h. Requirements and Restrictions in Advertising.

(1) Advertising shall include the name of the real estate brokerage or, as applicable, the property management brokerage as shown on division records except where:

(a) a licensee advertises unlisted property in which the licensee has an ownership interest; and

(b) the advertisement identifies the licensee as "owner-agent" or "owner-broker."

(2) An advertisement that includes the name of an individual licensee shall also include the name of the licensee's brokerage in lettering that is at least one-half the size of the lettering identifying the individual licensee.

(3) An advertisement that includes a photograph of an individual who is not a licensee shall identify the individual's role in terms that make it clear that the individual is not licensed.

(4) An advertisement may not include artwork or text that states or implies that an individual has a position or status other than that of sales agent, associate broker, or principal broker affiliated with a brokerage.

(5) An advertising team, group, or other marketing entity that is not registered as a brokerage:

(a) shall, in all types of advertising, clearly:

(i) disclose that the team, group, or other marketing entity is not itself a brokerage; and

(ii) state the name of the registered brokerage with which the property being advertised is listed;

(b) shall, in any printed advertising material, clearly and conspicuously identify, in lettering that is at least one-half the size of the largest lettering used in the advertisement, the name of the registered brokerage with which the property being advertised is listed; and

(c) may not advertise as an "owner-agent" or "owner-broker."

(6)(a) A written advertisement of a guaranteed sales plan shall include, in print at least one-fourth as large as the largest print in the advertisement:

(i) a statement that costs and conditions may apply; and

(ii) information about how to contact the licensee offering the guarantee so as to obtain the disclosures required under Subsection R162-2f-401a(22).

(b) Any radio or television advertisement of a guaranteed sales plan shall include a conspicuous statement advising if any conditions and limitations apply.

R162-2f-401i. Standards for Real Estate Auctions.

A principal broker who contracts or in any manner affiliates with an auctioneer or auction company to sell at auction real property in this state shall:

(1) ensure that all aspects of the auction comply with the requirements of this section and all other laws otherwise applicable to real estate licensees in real estate transactions;

(2) ensure that advertising and promotional materials associated with an auction name the principal broker;

(3) attend and supervise the auction;

(4) ensure that any purchase agreement used at the auction is completed by an individual holding an active Utah real estate license and is filled out in compliance with Section 61-2f-306;

(5) ensure that any money deposited at the auction is placed in trust pursuant to Subsection R162-2f-401c(1)(i); and

(6) ensure that adequate arrangements are made for the closing of any real estate transaction arising out of the auction.

R162-2f-401j. Standards for Property Management.

(1) Property management performed by a real estate brokerage, or by licensees or unlicensed assistants affiliated with the brokerage, shall be done under the name of the brokerage as registered with the division unless the principal broker holds a dual broker license and obtains a separate registration pursuant to Section R162-2f-205 for a separate business name.

(2) In addition to fulfilling all duties related to supervision per Section 61-2f-401(12), the principal broker of a registered entity, and the branch broker of a registered branch, shall implement training to ensure that each sales agent, associate broker, and unlicensed employee who is affiliated with the licensee has the knowledge and skills necessary to perform assigned property management tasks within the boundaries of these rules, including this Subsection R162-2f-401j(3).

(3) An unlicensed individual employed by a real estate or property management company may perform the following services under the supervision of the principal broker without holding an active real estate license:

(a) providing a prospective tenant with access to a rental unit;

(b) providing secretarial, bookkeeping, maintenance, or rent collection services;

(c) quoting rent and lease terms as established or approved by the principal broker;

(d) completing pre-printed lease or rental agreements, except as to terms that may be determined through negotiation of the principals;

- (e) serving or receiving legal notices;
- (f) addressing tenant or neighbor complaints; and
- (g) inspecting units.

(4) Within 30 days of the termination of a contract with a property owner for property management services, the principal broker shall deliver all trust money to the property owner, the property owner's designated agent, or other party as designated under the contract with the property owner.

R162-2f-401k. Recordkeeping Requirements.

A principal broker shall:

(1) maintain and safeguard the following records to the extent they relate to the business of a principal broker:

- (a) all trust account records;
- (b) any document submitted by a licensee affiliated with the principal broker to a lender or underwriter as part of a real estate transaction;
- (c) any document signed by a seller or buyer with whom the principal broker or an affiliated licensee is required to have an agency agreement; and
- (d) any document created or executed by a licensee over whom the principal broker has supervisory responsibility pursuant to Subsection R162-2f-401c(1)(f);

(2) maintain the records identified in Subsection R162-2f-401k(1):

- (a)(i) physically:
 - (A) at the principal business location designated by the principal broker on division records; or
 - (B) where applicable, at a branch office as designated by the principal broker on division records; or
- (ii) electronically, in a storage system that complies with Title 46 Chapter 04, Utah Uniform Electronic Transactions Act; and

(b) for at least three calendar years following the year in which:

- (i) an offer is rejected; or
- (ii) the transaction either closes or fails;
- (3) upon request of the division, make any record identified in Subsection R162-2f-401k(1) available for inspection and copying by the division;
- (4) notify the division in writing within ten business days after terminating business operations as to where business records will be maintained; and
- (5) upon filing for brokerage bankruptcy, notify the division in writing of:
 - (a) the filing; and
 - (b) the current location of brokerage records.

R162-2f-402. Investigations.

The investigative and enforcement activities of the division shall include the following:

- (1) verifying information provided on new license applications and applications for license renewal;
- (2) evaluation and investigation of complaints;
- (3) auditing licensees' business records, including trust account records;
- (4) meeting with complainants, respondents, witnesses and attorneys;
- (5) making recommendations for dismissal or prosecution;
- (6) preparation of cases for formal or informal hearings, restraining orders, or injunctions;
- (7) working with the assistant attorney general and representatives of other state and federal agencies; and
- (8) entering into proposed stipulations for presentation to the commission and the director.

R162-2f-403a. Trust Accounts - General Provisions.

(1) A principal broker shall:

- (a)(i) if engaged in listing or selling real estate, maintain

at least one real estate trust account in a bank or credit union located within the state of Utah; and

(ii) if engaged in property management, refer to Subsection R162-2f-403b(3);

(b) at the time a trust account is established, notify the division in writing of:

- (i) the account number;
- (ii) the address of the bank or credit union where the account is located; and
- (iii) the type of activity for which the account is used.

(2) A trust account maintained by a principal broker shall be non-interest-bearing, unless:

- (a) the parties to the transaction agree in writing to deposit the funds in an interest-bearing account;
- (b) the parties to the transaction designate in writing the person to whom the interest will be paid upon completion or failure of the sale;
- (c) the person designated under this Subsection (2)(b):

(i) qualifies at the time of payment as a non-profit organization under Section 501(c)(3) of the Internal Revenue Code; and

(ii) operates exclusively to provide grants to affordable housing programs in Utah; and

(d) the affordable housing program that is the recipient of the grant under this Subsection (2)(c)(ii) qualifies at the time of payment as a non-profit organization under Section 501(c)(3) of the Internal Revenue Code.

(3) A principal broker may not deposit into the principal broker's real estate trust account funds received in connection with rental of tourist accommodations where the rental period is less than 30 consecutive days.

(4) Records of deposits to a trust account shall include:

- (a) transaction number or unique client identifier, as applicable pursuant to Subsection R162-2f-401c(1)(k);
- (b) identification of payee and payor;
- (c) amount of deposit;
- (d) location of property subject to the transaction; and
- (e) date and place of deposit.

(5) Any instrument by which funds are disbursed from a real estate or property management trust account shall include:

- (a) the business name of the registered entity;
- (b) the address of the registered entity;
- (c) clear identification of the trust account from which the disbursement is made, including:

- (i) account name; and
- (ii) account number;
- (iii) transaction number or unique client identification, as applicable, pursuant to Subsection R162-2f-401c(1)(k);
- (iv) date of disbursement;
- (v) clear identification of payee and payor;
- (vi) amount disbursed;
- (vii) notation identifying the purpose for disbursement;

and

- (viii) check number, wire transfer number, or equivalent bank or credit union instrument identification.

(6) Any instrument of conveyance that is voided shall be clearly marked with the term "void" and the original instrument retained pursuant to Subsection R162-2f-401k.

(7) If both parties to a contract make a written claim to money held in a principal broker's trust fund and the principal broker cannot determine from any signed agreement which party's claim is valid, the principal broker may:

- (a) interplead the funds into court and thereafter disburse:
 - (i) upon written authorization of the party who will not receive the funds; or

(ii) pursuant to the order of a court of competent jurisdiction; or

(b) within 15 days of receiving written notice that both parties claim the funds, refer the parties to mediation if:

(i) no party has filed a civil suit arising out of the transaction; and

(ii) the parties have contractually agreed to submit disputes arising out of their contract to mediation.

(8) If a principal broker is unable to disburse trust funds within five years after the failure of a transaction, the principal broker shall remit the funds to the State Treasurer's Office as unclaimed property pursuant to Title 67, Chapter 4a et seq.

(9) Trust account reconciliation. For each real estate or property management trust account operated by a registered entity, the principal broker of the entity shall:

(a) maintain a date-sequential record of all deposits to and disbursements from the account, including or cross-referenced to the information specified in Subsection R162-2f-401c(1)(k);

(b) maintain a current, running total of the balance contained in the trust account;

(c)(i) maintain records sufficient to detail the final disposition of all funds associated with each transaction; and

(ii) ensure that each closed transaction balances to zero;

(d) reconcile the brokerage trust account records with the bank or credit union records at least monthly; and

(e) upon request, make all trust account records available to the division for auditing or investigation.

(10) The principal broker shall notify the division within 30 days if:

(a) the principal broker receives, from a bank or credit union in which the principal broker maintains a real estate or property management trust account, documentation to evidence that the trust account is out of balance; and

(b) the imbalance cannot be cured within the 30-day notification period.

R162-2f-403b. Real Estate Trust Accounts.

(1) A real estate trust account shall be used for the purpose of securing client funds:

(a) deposited with the principal broker in connection with a real estate transaction regulated under Title 61, Chapter 2f et seq.;

(b) if the principal broker is also a builder or developer, deposited under a Real Estate Purchase Contract, construction contract, or other agreement that provides for the construction of a dwelling; and

(c) collected in the performance of property management duties, pursuant to this Subsection (3).

(2) A principal broker violates Subsection 61-2f-401(4)(B) if the principal broker deposits into the real estate trust account more than \$500 of the principal broker's own funds.

(3)(a) A principal broker who regularly engages in property management on behalf of seven or more individual units shall establish at least one property management trust account that is:

(i) separate from the real estate trust account; and

(ii) operated in accordance with Subsection R162-2f-403c.

(b) A principal broker who collects rents or otherwise manages property for no more than six individual units at any given time may use the real estate trust account to secure funds received in connection with the principal broker's property management activities.

(4) Unless otherwise agreed pursuant to this Subsection (5)(b), a principal broker may not pay a commission from the real estate trust account without first:

(a) obtaining written authorization from the buyer and seller, through contract or otherwise;

(b) closing or otherwise terminating the transaction;

(c) delivering the settlement statement to the buyer and seller;

(d) ensuring that the buyer or seller whom the principal broker represents has been paid the amount due as determined by the settlement statement;

(e) making a record of each disbursement; and

(f) depositing funds withdrawn as the principal broker's commission into the principal broker's operating account prior to further disbursing the money.

(5) A principal broker may disburse funds from a real estate trust account only in accordance with:

(a) specific language in the Real Estate Purchase Contract authorizing disbursement;

(b) other proper written authorization of the parties having an interest in the funds; or

(c) court order.

(6) A principal broker may not release for construction purposes those funds held as deposit money under an agreement that provides for the construction of a dwelling unless the purchaser authorizes such disbursement in writing.

(7) A principal broker may not release earnest money or other trust funds associated with a failed transaction unless:

(a) a condition in the Real Estate Purchase Contract authorizing disbursement has occurred; or

(b) the parties execute a separate signed agreement containing instructions and authorization for disbursement.

R162-2f-403c. Property Management Trust Accounts.

(1) As of January 1, 2014, a trust account that is used exclusively for property management purposes shall be used to secure the following:

(a) tenant security deposits;

(b) rents; and

(c) money tendered by a property owner as a reserve fund or for payment of unexpected expenses.

(2) A principal broker violates Subsection 61-2f-401(4)(B) if the principal broker deposits into a property management trust account any funds belonging to the principal broker without:

(a) maintaining records to clearly identify the total amount belonging to the principal broker; or

(b) performing a monthly line-item reconciliation of all deposits and withdrawals of funds belonging to the principal broker.

(3) A principal broker may disburse funds from a property management trust account only in accordance with:

(a) specific language in the property management contract or tenant lease agreement, as applicable, authorizing disbursement;

(b) other proper written authorization of the parties having an interest in the funds; or

(c) court order.

(4) A principal broker who transfers funds from a property management trust account for any purpose shall maintain records to clearly evidence that:

(a) prior to making the transfer, the principal broker verified the money as belonging to the property owner for whose benefit, or on whose instruction, the funds are transferred;

(b) any money transferred into an operating account as the principal broker's property management fee is earned according to the terms of the principal broker's contract with the property owner;

(c) any transfer for maintenance, repair, or similar purpose is:

(i) authorized according to the terms of the applicable property management contract, tenant lease agreement, or other instruction of the property owner; and

(ii) used strictly for the purpose for which the transfer is authorized, with any excess returned to the trust account.

R162-2f-407. Administrative Proceedings.

(1) An adjudicative proceeding conducted subsequent to the issuance of a cease and desist order shall be conducted as a formal adjudicative proceeding.

- (2) Other adjudicative proceedings.
 - (a) All adjudicative proceedings as to any matter not specifically designated as requiring a formal adjudicative proceeding shall be designated as either formal or informal in the division's notice of agency action or notice of proceeding, as applicable.
 - (b) A hearing shall be held in an informal adjudicative proceeding only if required or permitted by the Utah Real Estate Licensing and Practices Act or by these rules.
 - (3) Hearings required. A hearing before the commission shall be held in a proceeding:
 - (a) commenced by the division for disciplinary action pursuant to Section 61-2f-401 and Subsection 63G-4-201(2);
 - (b) to adjudicate an appeal from an automatic revocation under Subsection 61-2f-204(1)(e), if the appellant requests a hearing;
 - (c) appealing a division order denying or restricting a license; and
 - (d) when an application presents unusual circumstances, such that the division determines that the application should be heard by the commission.
 - (4) Procedures for hearings in informal adjudicative proceedings.
 - (a) The division director shall be the presiding officer for any informal adjudicative proceeding unless the matter has been delegated to a member of the commission or an administrative law judge.
 - (b) All informal adjudicative proceedings shall adhere to procedures as outlined in:
 - (i) Utah Administrative Procedures Act Title 63G, Chapter 4;
 - (ii) Utah Administrative Code Rule R151-4 et seq.; and
 - (iii) the rules promulgated by the division.
 - (c) Except as provided in this Subsection (5)(b), a party is not required to file a written answer to a notice of agency action from the division in an informal adjudicative proceeding.
 - (d) In any proceeding under this Subsection 407, the commission and the division may at their discretion delegate a hearing to an administrative law judge or request that an administrative law judge assist the commission and the division in conducting the hearing. Any delegation of a hearing to an administrative law judge shall be in writing.
 - (e) Upon the scheduling of a hearing by the division and at least 30 days prior to the hearing, the division shall, by first class postage-prepaid delivery, mail written notice of the date, time, and place scheduled for the hearing:
 - (i) to the respondent at the address last provided to the division pursuant to Section 61-2f-207; and
 - (ii) if the respondent is an actively licensed sales agent or associate broker, to the principal broker with whom the respondent is affiliated.
 - (f) Formal discovery is prohibited.
 - (g) The division may issue subpoenas or other orders to compel production of necessary and relevant evidence:
 - (i) on its own behalf; or
 - (ii) on behalf of a party where the party:
 - (A) makes a written request;
 - (B) assumes responsibility for effecting service of the subpoena; and
 - (C) bears the costs of the service, any witness fee, and any mileage to be paid to a witness.
 - (h) Upon ordering a licensee to appear for a hearing, the division shall provide to the licensee the information that the division will introduce at the hearing.
 - (i) The division shall adhere to Title 63G, Chapter 2, Government Records Access and Management Act in addressing a request for information obtained by the division through an investigation.
 - (j) The division may decline to provide a party with

- information that it has previously provided to that party.
 - (k) Intervention is prohibited.
 - (l) Hearings shall be open to all parties unless the presiding officer closes the hearing pursuant to:
 - (i) Title 63G, Chapter 4, the Utah Administrative Procedures Act; or
 - (ii) Title 52, Chapter 4, the Open and Public Meetings Act.
 - (m) Upon filing a proper entry of appearance with the division pursuant to Utah Administrative Code Section R151-4-110(1)(a), an attorney may represent a party.
 - (5) Additional procedures for informal disciplinary proceedings.
 - (a) The division shall commence a disciplinary proceeding by filing and serving on the respondent:
 - (i) a notice of agency action;
 - (ii) a petition setting forth the allegations made by the division;
 - (iii) a witness list, if applicable; and
 - (iv) an exhibit list, if applicable.
 - (b) Answer.
 - (i) At the time the petition is filed, the presiding officer, upon a determination of good cause, may require the respondent to file an answer to the petition by so ordering in the notice of agency action.
 - (ii) The respondent may file an answer, even if not ordered to do so in the notice of agency action.
 - (iii) Any answer shall be filed with the division within thirty days after the mailing date of the notice of agency action and petition.
 - (c) Witness and exhibit lists.
 - (i) Where applicable, the division shall provide its witness and exhibit lists to the respondent at the time it mails its notice of hearing.
 - (ii) The respondent shall provide its witness and exhibit lists to the division no later than thirty days after the mailing date of the division's notice of agency action and petition.
 - (iii) Any witness list shall contain:
 - (A) the name, address, and telephone number of each witness; and
 - (B) a summary of the testimony expected from the witness.
 - (iv) Any exhibit list:
 - (A) shall contain an identification of each document or other exhibit that the party intends to use at the hearing; and
 - (B) shall be accompanied by copies of the exhibits.
 - (d) Pre-hearing motions.
 - (i) Any pre-hearing motion permitted under the Administrative Procedures Act or the rules promulgated by the Department of Commerce shall be made in accordance with those rules.
 - (ii) The division director shall receive and rule upon any pre-hearing motions.
 - (6) Formal adjudicative proceedings shall be conducted pursuant to the Administrative Procedures Act and the rules promulgated by the Department of Commerce.

R162-2f-501. Appendices.

When calculating experience points from Tables 1 and 2, experience points are limited to points for those activities which require a real estate license and comply with R162-2f-401a. A minimum of one-half of the points in Tables 1 and 2 must derive from transactions of properties located in the state of Utah.

TABLE 1
APPENDIX 1 - REAL ESTATE SALES TRANSACTIONS
EXPERIENCE TABLE

RESIDENTIAL - points can be accumulated from either the selling or the listing side of a real estate closing:	
(a) One unit dwelling	2.5 points
(b) Two- to four-unit dwellings	5 points
(c) Apartments, 5 units or over	10 points

- (d) Improved lot 2 points
- (e) Vacant land/subdivision 10 points

R162. Commerce, Real Estate.**R162-57a. Timeshare and Camp Resort Rules.****R162-57a-1. Title and Authority.**

(1) This section shall be known as the "Timeshare and Camp Resort Rules."

(2) The authority to make rules for the timeshare and camp resort industries is granted to the division director by Section 57-19-3.

R162-57a-2. Definitions.

(1) "Affiliation" means an employment or independent contractor relationship between a salesperson and a developer.

(2) "Amendment" means a change to an original registration as to information submitted pursuant to Subsection R162-57a-5(3)(j)-(y).

(3) "Annual report" means information submitted to the division in order to renew a project registration, including the following:

(a) the number of intervals, memberships, or other interests sold since the registration was issued or last renewed;

(b) the total number of intervals, memberships, or other interests sold since the date of initial registration;

(c) the number of intervals, memberships, or other interests reacquired by foreclosure or similar proceeding that had previously been reported as sold;

(d) the total number of registered but unsold intervals, memberships, or other interests as of the date of the annual report; and

(e) the total number of intervals, memberships, or other interests that have been registered.

(4) The acronym "ATR" means ARELLO Timeshare Registry, which is the online database system through which developers may register projects with the division.

(5) "Business day" means a day other than a:

(a) Saturday;

(b) Sunday; or

(c) state or federal holiday.

(6) "Common promotional plan" means a plan whereby multiple timeshare or camp resort interests, whether in the same location or not, are advertised and/or offered for disposition without the ownership of the interests being differentiated or distinguished.

(7) "Common facilities" means areas and amenities within a project to which all purchasers share an equal right of access and use.

(8) "Consolidation" means the registration of additional interests in a project for which the director has previously issued a registration.

(9) "Day" means calendar day unless specified as "business day."

(10) "Direct sales presentation" means a meeting in which a salesperson provides information about project(s) or interest(s) to one or more prospective purchasers.

(11) "Entity" means:

(a) a corporation;

(b) a limited liability company;

(c) a partnership;

(d) a company;

(e) an association;

(f) a joint venture;

(g) a business trust;

(h) a trust; or

(i) another organization.

(12) "Expired registration" means a project or salesperson registration that may not be used to advertise, offer, or sell interests because the holder of the registration failed to renew it by or before the expiration date.

(13) "Notice of defect" means a written communication from the director informing an applicant that the applicant must

submit additional information to clarify, complete, or correct an application for:

(a) registration;

(b) consolidation; or

(c) renewal.

(14) "Person" means an individual or an entity.

(15) "Personal information" means data that may be used to identify or contact a prospective purchaser, including:

(a) name;

(b) home or business address;

(c) home, business, or cell telephone number; and

(d) e-mail address.

(16) "Prospective purchaser" means a person who:

(a) attends a sales presentation;

(b) communicates with a developer or salesperson in order to obtain information about a project;

(c) provides personal information to a developer or salesperson; or

(d) is solicited by a developer or salesperson through any type of advertisement.

(17) "Property report" means a document that includes:

(a) disclosures required pursuant to Section 57-19-11;

(b) a cover sheet as generated and provided by the division; and

(c) a receipt generated by the division.

(18) "Public offering statement" has the same meaning as "property report."

(19) "Registration" means:

(a) as to a project, division approval of the project as being suitable for the advertisement, offering, and sale of interests; and

(b) as to a salesperson, division approval for the salesperson to engage in the advertisement, offering, and sale of interests.

(20) "Reinstatement period" means a 30-day period following the expiration of registration during which a person may reinstate an expired registration by submitting all required renewal materials and paying applicable fees.

(21) The acronym "RELMS" means Real Estate License Management System, which is the online forum through which registered salespersons may submit forms and information to the division.

(22) "Renewal" means extending a registration for an additional period on or before the date the registration expires.

(23) "Supplement" means a change in the information submitted pursuant to Subsection R162-57a-5(3)(a)-(i).

(24) "Temporary permit" means authorization from the division for a developer to engage in the advertisement, offering, and sale of interests for a period not to exceed 30 days.

R162-57a-5. Project Registration.

(1) Registration required.

(a) A person may not engage in the advertisement, offering, or sale of interests unless:

(i) the project is properly registered with the division pursuant to Section 57-19 et seq. and these rules; and

(ii) each individual who will engage in offering or selling interests is registered as salesperson pursuant to Section 57-19 et seq. and these rules.

(b)(i) A project is not considered registered until the developer seeking registration obtains from the division:

(A) a complete property report, approved by the division; and

(B) an order of registration.

(ii) In accordance with Section 57-19-6, the division shall provide the developer a property report cover sheet and receipt if 30 business days after the date of application, the division has not:

(A) denied the application; or

(B) notified the applicant of a defect in the registration application.

(iii) A salesperson is not considered registered until the individual receives a registration from the division.

(c) Absent the issuance of a property report or registration, acceptance by the division of a registration fee does not authorize a person to engage in the advertisement, offering, or sale of interests.

(2) Registration procedure. A developer shall submit all information required under Subsection (3) to the division:

(a) through the ATR; or

(b) if the developer obtains advance permission from the division, directly to the division.

(3) Required Information. A developer shall submit to the division:

(a) property report pursuant to Section 57-19-11 and Subsection R162-57a-11;

(b) as to each officer, partner, director, and owner of the developer:

(i) as applicable, documentation of any disciplinary or adverse licensing action taken against a professional license held by the individual in any jurisdiction;

(ii)(A) a statement of the type and extent of any financial interest the individual has in the project; and

(B) an explanation of any options the individual may exercise to acquire additional financial interest in the project;

(iii) as applicable, court records from any criminal proceeding taken against the individual in any jurisdiction, regardless of whether the proceeding was resolved by:

(A) conviction;

(B) plea in abeyance;

(C) diversion agreement;

(D) sentence of confinement; or

(E) dismissal; and

(iv) as applicable, documentation of any bankruptcy filing

by:

(A) the individual; or

(B) an entity in which the individual has held:

(I) an ownership interest; or

(II) a position as a manager, officer, or director;

(c) evidence that the developer is registered in good standing with the Utah Division of Corporations;

(d) corporate resolution naming a resident agent to act on behalf of the developer;

(e) copy of the current articles of incorporation or other instrument creating the developer entity;

(f) copy of the current bylaws of the developer entity;

(g)(i) states or jurisdictions in which the developer has filed an application for registration or similar document;

(ii) copy of the property report or other disclosure document required to be given to purchasers by any jurisdiction in which the project is registered or the developer is otherwise authorized to advertise, offer, or sell interests;

(iii) full documentation of any adverse order, judgment, or decree entered in connection with the project by any regulatory authority in any jurisdiction;

(h) name of any salesperson who will offer or sell interests in the project;

(i) name of the individual who will be responsible for directly supervising the salesperson(s) offering or selling interests in the project;

(j) legal description of the property upon which the project is located;

(k) statement, generated or updated within the 30-day period preceding the date of application, of the condition of the title to the property upon which the project is located, including encumbrances;

(l)(i) copy of any instrument by which the developer acquired interest in the project; or

(ii) if the developer does not hold fee title to the property, evidence that the developer is legally entitled to use the property, as follows:

(A) if the property is situated within Utah:

(I) a title opinion from a title insurer licensed in Utah; or

(II) an opinion letter from an independent, third party attorney actively licensed in Utah;

(B) if the property is situated outside of Utah:

(I) a title opinion from a title insurer licensed where the property is situated; or

(II) an opinion letter from an independent, third party attorney who is actively licensed to practice in the jurisdiction where the property is situated; and

(C) if the property is located in a jurisdiction such as a foreign country where property title opinions are issued by parties other than title companies and attorneys, other evidence of title as specified and approved by the director;

(m) copy of any instrument creating a lien, easement, restriction, or other encumbrance affecting the project, including any recording data, but redacted as to the consideration paid upon acquisition of the project;

(n) statement of the zoning and other governmental regulations affecting the use of the project;

(o) existing and proposed taxes or special assessments that affect the project;

(p)(i) copies of the instruments that will be delivered to a purchaser to evidence the purchaser's interest in the project; and

(ii) copies of the contracts and other agreements that a purchaser will be required to agree to or sign;

(q) topographic map and accompanying statement describing the general topography and physical characteristics of the project, including:

(i) terrain;

(ii) soil conditions;

(iii) flood control; and

(iv) climate;

(r) copy of any:

(i) recorded declaration of condominium;

(ii) recorded covenants, conditions, and restrictions (CCRs); and

(iii) instrument governing the project and incorporating all covenants of the grantor or lessor;

(s) copy of any plan to create an association for project owners;

(t) narrative description of the promotional plan for the disposition of the project;

(u) statement disclosing any inducement that will be offered in connection with the advertisement, offering, or sale of interests in the project;

(v) map showing:

(i) the location of the interests and other improvements on the property;

(ii) the relation of the project to existing streets, roads, and other off-site improvements; and

(iii) the relation of the project to factors that might negatively impact the quiet enjoyment of an interest;

(w)(i) statement of improvements and amenities to be installed that have not been completed;

(ii) schedule for completion;

(iii) evidence that the developer has obtained all necessary permits; and

(iv) if the city or county in which the property is located does not require means of assurance that all improvements and amenities referred to in the application will be completed, copies of:

(A) escrow or trust agreements;

(B) performance bonds; or

(C) other documentation to evidence that adequate financing is available and arrangements have been made for the

installation of all streets, sewers, electricity, gas, water, telephone, drainage, and other improvements;

(x)(i) provisions for maintenance to both existing and planned improvements and amenities; and

(ii) estimated cost of such maintenance to purchasers;

(y) description of any corrective work that must be performed on or relating to the project before particular interests are suitable for use;

(z) completed application as required by the division; and
(aa) a nonrefundable registration fee.

(4) The director may waive production of an item required pursuant to Subsection (3) if the developer shows that the item is not necessary to fulfill the purposes of Section 56-19 et seq.

(5) Consolidation.

(a) An application for consolidation shall be prepared and submitted in the same format as an application for initial registration.

(b) Where there is no change in the information submitted by the developer for the initial registration, the documents required by Subsection (3) may be incorporated by reference to documents on file with the division.

(c) An incomplete application for consolidation shall be treated as provided in Subsection (6).

(d) New inventory added to a project through consolidation is subject to inspection by the division.

(6) Notice of defect.

(a) If an application is incomplete, or otherwise fails to comply with Section 57-19 et seq. or these rules, the director shall send a notice of defect to the developer or the developer's legal representative specifying:

(i) what additional information is required to cure the defect; and

(ii) the deadline by which the division must receive the additional information.

(b) After receipt of a notice of defect, the developer may not offer units to the public:

(i) until the defect is cured and a registration obtained; or

(ii) without obtaining a temporary permit pursuant to Section 57-19-6(3) and Subsection (8).

(c)(i) If the additional information is not received by the division by the deadline specified in the notice of defect, the director may deny the registration.

(ii) An order of denial may be appealed pursuant to Section 57-19-17.

(7) Standards for approval.

(a) The director may not approve an application for registration of a project unless:

(i) the documents submitted pursuant to Subsection (3) meet the requirements of Section 57-19 et seq. and these rules; and

(ii) the developer demonstrates the ability to convey or cause to be conveyed the interests offered for disposition.

(b) The division may not issue a project registration to a developer that has an officer, partner, director, or owner who has:

(i) been prosecuted for a felony that resulted in a:

(A) conviction within the five-year period preceding the date of application;

(B) plea agreement within the five-year period preceding the date of application; or

(C) jail or prison release date falling within the five-year period preceding the date of application; or

(ii) been prosecuted for a misdemeanor involving fraud, misrepresentation, theft, or dishonesty that resulted in a:

(A) conviction within the three-year period preceding the date of application; or

(B) jail or prison release date falling within the three-year period preceding the date of application.

(c) If the director determines that a registration application

and supporting documentation meet the criteria for registration, the division shall issue:

(i) an order of registration designating the form of the property report that the developer is required to provide to a prospective purchaser pursuant to Section 57-19-11;

(ii) a property report cover sheet, which the developer shall attach to the property report as its first page; and

(iii) a receipt for property report, which the developer shall attach to the property report as its last page.

(8) Temporary permit.

(a) To apply for a temporary permit, a person shall:

(i) make application by submitting a written request to the director;

(ii) comply with Section 57-19-6(3); and

(iii) pay all fees required for registration.

(b) A temporary permit issued by the director is valid for a period of 30 days from the date of issue.

(c) A temporary permit may not be renewed.

(9) Notification of changes.

(a) A developer whose project is registered under Section 57-19 et seq. shall report to the division within 10 business days any change in:

(i) the developer's contact information;

(ii) the disclosures required under Section 57-19-11;

(iii) the information provided under this Subsection (3), including changes in salespersons employed or contracted to advertise, offer, or sell interests in the project;

(iv)(A) the bankruptcy of an entity controlled or owned by the developer that engages in the advertisement, offering, or sale of interests; and

(B) if the developer is an individual, the filing of a personal bankruptcy;

(v) the suspension, revocation, surrender, cancellation, or denial or a professional license or professional registration issued to the developer, whether the license or registration is issued by this state or another jurisdiction;

(vi) the entry of a cease and desist order, a temporary or permanent injunction, or a regulatory action:

(A) against the developer by a court or a government agency; and

(B) based on:

(I) conduct or a practice involving the advertisement, offering, or sale of interests; or

(II) conduct involving fraud, misrepresentation, or deceit; and

(vii) a finding of fraud, misrepresentation, or deceit entered against the developer in a judicial or administrative proceeding instituted by a purchaser and arising out of or relating to:

(A) the advertising or sale of an interest;

(B) disclosures required under Section 57-19-11; or

(C) rescission rights.

(b) If a deadline for notification falls on a day when the division is closed for business, the deadline shall be extended to the next business day.

(10) Amendment and supplement to initial registration.

(a) To submit an amendment to a registration, a developer shall:

(i) complete an amendment filing through the ATR; or

(ii) obtain prior permission from the division to submit the information by mail.

(b) To submit a supplement to a registration, a developer shall:

(i) complete a courtesy filing through the ATR; or

(ii) obtain prior permission from the division to submit the information by mail.

(c) Pursuant to Section 57-19-8(4), the certification of a class in a class-action lawsuit against a developer on the basis of the developer's advertising, selling, or managing a project or

interest requires the filing of an amendment.

R162-57a-8. Restrictions on Proposed Advertising.

(1) Advertising that promotes gifts and other awards in connection with attending a sales presentation shall:

- (a) disclose any conditions precedent to the receipt of the gift or other award; and
- (b) if receipt of a specific advertised gift or other award is not guaranteed by virtue of attendance at the sales presentation, state the odds of any attendee's chance of receiving the gift or other award.

(2) A substitute gift, inducement, or award:

- (a) shall be equal in value or use to the gift, inducement, or award that was originally promised; and
- (b) may not burden the recipient with additional travel expense in order to receive the value of the gift, inducement, or award.

R162-57a-9. Renewal and Reinstatement of Project Registration.

(1) Project registration renewal. To renew a registration of a project, a person shall submit to the division, no later than the expiration date set forth on the order of registration:

- (a) an annual report;
 - (b)(i) an updated property report, with changes underlined in red; or
 - (ii) a statement that no changes have occurred in the property report that is on record with the division;
 - (c) a description of any change in the information provided in the application for registration;
 - (d) documentation of any judicial proceeding or regulatory investigation instituted by complaint of a purchaser against the developer and arising out of or relating to:
 - (i) the advertising or sale of an interest;
 - (ii) disclosures required under Section 57-19-11;
 - (iii) rescission rights;
 - (iv) fraud; or
 - (v) misrepresentation of interests represented by the registration; and
 - (e) a nonrefundable renewal fee.
- (2) Reinstatement.
- (a) To reinstate an expired project registration, a person shall submit to the division, no later than 30 calendar days following the expiration of the registration:
- (i) all materials required for a timely renewal; and
 - (ii) a nonrefundable late fee.
- (b) A registration that is expired more than 30 days may not be renewed or reinstated. To obtain a registration, a person shall apply as a new applicant.

R162-57a-11. Disclosure Required.

(1) The disclosures required by Section 57-19-11 and submitted to the division as part of the application for project registration shall be:

- (a)(i) reproduced on good quality white paper 8-1/2 by 11 inches in size;
 - (ii) typed in a font no smaller than 10-point type, except that financial statements or other statistical or tabular matter may be set in type as small as 8-point type; and
 - (iii) organized into reasonably short paragraphs or sections with appropriate captions or headings to identify each paragraph or section; or
 - (b) if acceptable to the director, approved by another state.
- (2)(a) Upon approving the developer's disclosures, the division shall supply to the developer:
- (i) a cover sheet, which the developer shall use as the first page of the property report; and
 - (ii) a receipt for property report, which the developer shall use as the last page of property report.

(b)(i) The developer shall provide a copy of the complete property report, reproduced in a manner that allows all text to remain visible and legible, not obscured by shading or watermarks, to each prospective purchaser prior to obtaining the prospective purchaser's signature on a contract for purchase of an interest.

(ii) The developer shall, in connection with an offer to sell an interest, provide a notice of the purchaser's right to cancel described in Section 57-19-12, reproduced in a manner that allows all text to remain visible and legible, not obscured by shading or watermarks, to each prospective purchaser:

(A) at the beginning of a direct sales presentation; or

(B) if the prospective purchaser does not attend a direct sales presentation, at the same time the developer obtains the prospective purchaser's personal information.

R162-57a-13. Unprofessional Conduct.

(1) Developer.

(a) Affirmative duties. A developer or an individual designated by the developer shall:

- (i) actively supervise project salesperson(s) to ensure compliance with Section 57-19 et seq. and these rules;
- (ii) provide the complete property report to each prospective purchaser pursuant to Subsection R162-57a-11(2)(b)(i);
- (iii) obtain a signed receipt for property report from a prospective purchaser prior to:
 - (A) executing a purchase agreement; or
 - (B) receiving any item of value toward the purchase of an interest; and
- (iv)(A) clearly inform a purchaser of the purchaser's right to rescind the agreement if, during the rescission period mandated by Section 57-19-12, the purchaser expresses a desire to terminate a contract or agreement entered into by the purchaser; and

(B) ensure compliance with this Subsection (iv)(A) by:

- (I) all subsidiaries of the developer;
- (II) all persons affiliated with the developer; and
- (III) all persons affiliated with a subsidiary of the developer.

(b) Prohibited conduct. A developer is subject to discipline if the developer or an affiliated person:

- (i) makes a misrepresentation or material omission in a document submitted to the division; or
 - (ii) fails to comply with an order of the division.
- (2) Salesperson. A salesperson shall comply with:
- (a) Section 57-19 et seq.;
 - (b) these rules; and
 - (c) this Subsection (1)(a)(ii)-(iv).

R162-57a-15. Application for Registration of Project Sales Persons.

(1) An individual applying for registration as a project salesperson shall provide the following information to the division:

- (a) identifying information, including:
 - (i) full legal name;
 - (ii) date of birth; and
 - (iii) social security number;
- (b) contact information, including:
 - (i) home address;
 - (ii) home telephone and cell telephone numbers;
 - (iii) mailing address;
 - (iv) e-mail address;
 - (v) sales office location and e-mail address;
 - (vi) sales office telephone number; and
 - (vii) name of developer or an individual designated by the developer who will supervise the applicant pursuant to Subsection R162-57a-13(1)(a).

(c)(i) disclosure as to whether the individual has ever been licensed or registered in a real estate-related profession; and

(ii) documentation of any adverse regulatory action on such license or registration, including:

- (A) denial;
- (B) restriction, including probation;
- (C) suspension;
- (D) revocation; or
- (E) fine;

(d) disclosure as to whether the individual has ever resigned or surrendered a real estate-related license or registration, or allowed such a license or registration to expire, while under investigation or while action was pending against the individual by a government agency;

(e) information as to any disciplinary action pending against the individual at the time of application by any real estate, professional, or occupational licensing agency;

(f) documentation of any criminal investigation proceeding against the individual at the time of application;

(g) complete documentation of any past criminal offense, including:

- (i) charge(s) filed;
- (ii) plea(s) entered;
- (iii) case disposition; and
- (iv) terms of sentencing;

(h) complete documentation of any past civil judgment entered against the person in a case brought on allegations involving fraud, misrepresentation, or deceit;

(i) completed five-year employment history form as provided by the division;

(j) affidavit stating whether the individual has ever been terminated from employment on an allegation of theft, fraud, or dishonesty; and

(k) a nonrefundable application fee.

(2) An application for registration as a project salesperson shall be signed by:

(a) the applicant; and

(b)(i) the developer with which the salesperson is affiliated; or

(ii) the developer's authorized representative pursuant to Subsection R162-57a-13(1)(a).

(3) Standards for approval. The director may not issue a salesperson registration to any individual who:

- (a) submits an incomplete application;
- (b) has been prosecuted for a felony that resulted in a:

(i) conviction within the five-year period preceding the date of application;

(ii) plea agreement within the five-year period preceding the date of application; or

(iii) jail or prison release date falling within the five-year period preceding the date of application; or

(c) has been prosecuted for a misdemeanor involving fraud, misrepresentation, theft, or dishonesty that resulted in a:

(i) conviction within the three-year period preceding the date of application; or

(ii) jail or prison release date falling within the three-year period preceding the date of application.

(4) Notification of changes.

(a) A registered salesperson shall inform the division within ten days of:

(i) any change in the individual's legal name;

(ii) any change in the individual's contact information pursuant to Subsection (1)(b);

(iii) as to a criminal offense, whether prosecuted in Utah or in another jurisdiction:

- (A) a conviction;
- (B) the entry of a plea in abeyance;
- (C) a diversion agreement; or
- (D) any other agreement under which a criminal charge is

held in suspense for a period of time.

(b) To notify the division of a name change, an individual shall:

- (i) complete and submit a paper change form; and
- (ii) attach to the form official documentation such as a:

- (A) marriage license;
- (B) divorce decree;
- (C) driver license; or
- (D) court order.

(c) To notify the division of a change in contact information, an individual shall submit a change form:

(i) by mail or fax, until such time as RELMS is configured to accommodate timeshare salespersons; and

(ii) through RELMS, once the system is configured to accommodate timeshare salespersons.

(d) To notify the division of proceedings in a criminal case, an individual shall:

(i) send to the division a cover letter explaining the circumstances under which charges were brought; and

(ii) attach all available documentation, including:

- (A) charging documents;
- (B) police reports; and
- (C) court dockets.

(5) Renewal and reinstatement.

(a) A salesperson registration expires two years following the date the registration is approved by the division.

(b) To renew a salesperson registration, an individual shall submit to the division, no later than the date on which the individual's registration expires:

(i) a completed renewal application as required by the division; and

(ii) a nonrefundable fee.

(c) To reinstate an expired salesperson registration, and individual shall submit to the division, no later than 30 days following the date on which the individual's registration expires:

- (i) all materials required for a timely renewal; and
- (ii) a nonrefundable late fee.

(d) An application that is expired more than 30 days may not be renewed. To obtain a registration, an individual shall apply as a new applicant.

R162-57a-17. Administrative Procedures.

The following matters shall be decided by the director through an informal adjudicative proceeding, with no hearing permitted:

- (1) issuance of an initial registration;
- (2) renewal or reinstatement of an existing registration;
- (3) denial of any application for registration; and
- (4) a request:

(a) to amend a property report;

(b) for consolidation of a registration;

(c) for waiver of, or exemption from, registration requirements; and

(d) for a temporary permit pending registration with the division.

R162-57a-26. Exemptions.

(1) The following sales are essentially noncommercial and, therefore, exempt from the requirements of Section 57-19, et seq. by operation of law:

(a) the bulk sale of interests by a developer to another person who will become the developer of the project;

(b) after a project has been sold out and its registration with the division has expired, the resale of interests that are foreclosed by the developer or the developer's successor-in-interest, so long as:

(i) no more than ten interests in the project are foreclosed and resold over the life of the project; and

(ii) the foreclosed interests are not offered with interests in

other projects as part of a common promotional plan;

(c) the resale by a lender of foreclosed interests, so long as the lender does not foreclose more than ten interests in the project over the life of the project;

(d) the sale, to a person who has previously purchased an interest in a project, of additional interests in the same project, provided that the person is timely provided with a valid property report at the time of the original purchase; and

(e) the sale of a purchaser's individual interest on a for-sale-by-owner basis.

(2)(a) A person who believes a sale not specifically delineated in Subsection (1) is essentially non-commercial shall apply to the division for an order of exemption.

(b) An exemption granted under this Subsection (2)(a) is valid for a period of one year and expires unless renewed through reapplication.

57-19-3

Notice of Continuation April 21, ~~2019~~ 57-19-5 through 57-19-26

R251. Corrections, Administration.**R251-702. Inmate Communication: Telephones.****R251-702-1. Authority and Purpose.**

(1) This rule is authorized by Sections 63G-3-201 and 64-13-10, of the Utah Code.

(2) The purpose of this rule is to provide the policy, procedures, and requirements for the use of and access to inmate communication systems in the Department's prison facilities.

R251-702-2. Definitions.

(1) "Collect" means a billing process which allows a call to be billed to the receiver of a call.

(2) "Department" means Utah Department of Corrections.

(3) "Emergency" means a death or life-threatening illness or accident of an immediate family member.

(4) "Legal call" means calls made to the courts, attorneys or other approved legal advisor.

(5) "Members" means Utah Department of Corrections employees.

R251-702-3. Policy.

It is the policy of the Department that:

(1) calls made on institutional telephones designated for general inmate use may be intercepted, tape-recorded and monitored;

(2) members shall not monitor inmate legal calls;

(3) inmates who intend to call an attorney shall notify members in order to obtain access to a telephone that will not be monitored;

(4) legal calls should not exceed thirty minutes;

(5) attorney/representatives desiring to speak with an inmate client may leave a message, and the inmate may be allowed to return the call using the legal access procedure outlined;

(6) inmates are not allowed to receive incoming calls; and

(7) inmate calls shall be billed collect except in a case of verifiable emergency.

KEY: corrections, inmates, prisons, telephones**June 6, 1997****64-13-10****Notice of Continuation December 4, 2015**

R251. Corrections, Administration.**R251-708. Perimeter Patrol.****R251-708-1. Authority and Purpose.**

(1) This rule is authorized under Sections 63G-3-201, 64-13-10 and 64-13-14, of the Utah Code.

(2) The purpose of this rule is to provide the Department's policies and procedures for perimeter patrol of prison facilities.

R251-708-2. Definitions.

"Contraband" means any material, substance or other item not approved by the Department administration to be in the possession of inmates.

"Perimeter patrols" means correctional officers assigned to observe and maintain security around the boundary of the prison.

"Prison" means Utah State Prison at Draper, Utah and Central Utah Correctional Facility at Gunnison, Utah.

R251-708-3. Policy.

(1) The Department shall maintain perimeter patrols to:

- (a) provide security;
- (b) prevent escape;
- (c) restrict access to Prison property;
- (d) control visitor traffic;
- (e) provide escape pursuit when necessary;
- (f) maintain order; and
- (g) prevent introduction of contraband.

(2) Perimeter patrols shall assist the facilitation of traffic through the secure perimeter at various access points by verifying the identity of persons at those points.

(3) Perimeter patrols shall:

- (a) respond to all persons including hunters, walkers, joggers, off-road vehicle riders, and other vehicles on prison property or immediately adjacent areas;
- (b) investigate any suspicious person or circumstance; and
- (c) arrest or cite violators when required.

(4) Perimeter patrols shall not allow non-prison personnel to wait in vehicles in parking lots or other areas of prison property.

(5) Perimeter patrols shall investigate unoccupied vehicles on or near the prison perimeter and may impound any vehicle which appears to present a security risk to the prison.

KEY: corrections, prisons, security measures**January 21, 1997****64-13-10****Notice of Continuation December 4, 2015****64-13-14**

R251. Corrections, Administration.**R251-711. Admission and Intake.****R251-711-1. Authority and Purpose.**

(1) This rule is authorized under Sections 63G-3-201, 64-13-10, 64-13-14, and 64-13-15, of the Utah Code.

(2) The purpose of this rule is to provide admission and intake policies applying to individuals committed to the Utah State Prison.

R251-711-2. Policy.

It is the policy of the Department that:

(1) persons committed to the Utah State Prison should be received at the Draper facility during the hours of 0700-1730 Monday through Friday, if possible;

(2) if it is not possible to deliver inmates to the Draper facility during the normal receiving hours, or if exigent circumstances are present, the Draper facility shall receive them at any time;

(3) for central and southern Utah commitments, male inmates should be received at the Central Utah Correctional facility during the hours of 0800-1700 Monday through Friday, if possible;

(4) if it is not possible to deliver male inmates to the Central Utah Correctional facility during the normal receiving hours, they may be taken to the Draper facility as described in (1) and (2) above;

(5) money and personal property shall be inventoried and receipted by the receiving and transporting officers in the presence of the inmate;

(6) inmates may release property for personal pickup by a relative or friend, or they may mail the property at their own expense; and

(7) if property has not been mailed out or picked up within 30 days, it shall be donated to a charitable organization.

R277. Education, Administration.**R277-404. Requirements for Assessments of Student Achievement.****R277-404-1. Authority and Purpose.**

(1) This rule is authorized by:
 (a) Utah Constitution Article X, Section 3, which vests general control and supervision of public education in the Board;

(b) Sections 53A-1-603 through 53A-1-611, which direct the Board to adopt rules for the maintenance and administration of U-PASS;

(c) Subsection 53A-15-1403(9)(b), which requires the Board to adopt rules to establish a statewide procedure for excusing a student from taking certain assessments; and

(d) Subsection 53A-1-401(3), which allows the Board to adopt rules in accordance with its responsibilities.

(2) The purpose of this rule is to:

(a) provide consistent definitions; and

(b) assign responsibilities and procedures for a Board developed and directed comprehensive assessment system for all students, as required by state and federal law.

R277-404-2. Definitions.

(1) "Benchmark reading assessment" means an assessment:

(a) determined by the Board for a student in grade 1 through 3; and

(b) administered to a student at the beginning, midpoint, and end of year.

(2)(a) "College readiness assessment" means an assessment adopted by the Board that includes a college admissions test that provides an assessment of language arts, mathematics, and science, that is most commonly used by local universities to assess student preparation for college.

(b) "College readiness assessment" may include:

(i) the Armed Services Vocational Aptitude Battery or ASVAB; and

(ii) a battery of assessments that is predictive of success in higher education.

(c) "College readiness assessment" includes the American College Testing exam or ACT.

(3) "English Learner" or "EL" student" means a student who is learning in English as a second language.

(4) "English language proficiency assessment" means an assessment:

(a) designated by the Superintendent; and

(b) designed to measure the acquisition of the academic English language for an English Learner student.

(5) "Family Educational Rights and Privacy Act of 1974" or "FERPA," 20 U.S.C. 1232g, means a federal law designed to protect the privacy of students' education records.

(6) "National Assessment of Education Progress" or "NAEP" means the national achievement assessment administered by the United States Department of Education to measure and track student academic progress.

(7) "Online writing assessment" means a Board-designated online assessment to measure writing performance for a student in grades 3 through 11.

(8) "Pre-post" means an assessment administered at the beginning of the school year and at the end of the school year to determine individual student growth in academic proficiency that has occurred during the school year.

(9) "State required assessment" means an assessment described in Subsection 53A-15-1403(9)(a).

(10) "Student Assessment of Growth and Excellence" or "SAGE" means a computer adaptive assessment for:

(a) English language arts grades 3 through 11;

(b) mathematics:

(i) grades 3 through 8; and

(ii) Secondary I, II, and III; and

(c) science:

(i) grades 4 through 8;

(ii) earth science;

(iii) biology;

(iv) physics; and

(v) chemistry.

(11) "Section 504 accommodation plan" means a plan:

(a) required by Section 504 of the Rehabilitation Act of 1973; and

(b) designed to accommodate an individual who has been determined, as a result of an evaluation, to have a physical or mental impairment that substantially limits one or more major life activities.

(12) "Summative adaptive assessment" means an assessment:

(a) administered upon completion of instruction to assess a student's achievement;

(b) administered online under the direct supervision of a licensed educator;

(c) designed to identify student achievement on the standards for the respective grade and course; and

(d) measure the full range of student ability by adapting to each student's responses, selecting more difficult questions when a student answers correctly and less difficult questions when a student answers incorrectly.

(13) "Utah alternate assessment" means:

(a) an assessment instrument designated by the Superintendent for a student in special education with a disability so severe the student is not able to participate in the components of U-PASS even with an assessment accommodation or modification; and

(b) measures progress on the Utah core instructional goals and objectives in the student's IEP.

(14) "Utah eTranscript and Record Exchange" or "UTREx" means a system that allows:

(a) an LEA and USOE to electronically exchange an individual detailed student record; and

(b) electronic transcripts to be sent to any post-secondary institution, private or public, in-state or out-of-state, that participates in the e-transcript service.

"Utah Performance Assessment System for Students" or "U-PASS" means:

(a) a summative adaptive assessment of a student in grades 3 through 12 in basic skills courses;

(b) an online writing assessment in grades 3 through 11, as part of SAGE;

(c) a college readiness assessment; and

(d) summative assessment of a student in grade 3 to measure reading grade level using grade 3 SAGE English Language Arts.

R277-404-3. Board Responsibilities.

(1) The Board's comprehensive assessment system for all students in grades K-12 includes:

(a) a summative adaptive assessment in:

(i) English language arts for grades 3 through 11;

(ii) mathematics for grades 3 through 8;

(iii) secondary math 1, 2, and 3;;

(iv) science for grades 4 through 8; and

(v) earth systems, biology, physics and chemistry;

(b) an online writing assessment for grades 3 through 11;

(c) pre-post kindergarten assessment for a kindergarten student as determined by the LEA;

(d) one benchmark reading assessment approved by the Board for students in grades 1 through 3 and administered to students at the beginning, midpoint and end of year;

(e) grade 3 end of year summative reading assessment using grade 3 SAGE English Language Arts;

(f) Utah's alternate assessment, for an eligible student with

a disability;

- (g) an English language proficiency assessment;
- (h) National Assessment of Educational Progress (NAEP);
- (i) college readiness assessment for:
 - (i) grade 11 and optional college; and
 - (ii) career readiness assessment in grade 8 or 9 and 10, as determined by the LEA; and

(j) reporting by the Superintendent of U-PASS results.

(2) The report required by Subsection (1)(j) shall include:

(a) student performance based on information that is disaggregated with respect to race, ethnicity, gender, English proficiency, eligibility for special education services, and free or reduced price school lunch status;

(b) security features to maintain the integrity of the system, including statewide uniform assessment dates, assessment administration protocols, and training; and

(c) summative adaptive assessment results disseminated by the Superintendent to an LEA, parent, and other, as appropriate, consistent with FERPA.

(3) The Board shall provide specific rules, administrative guidelines, timelines, procedures, and assessment ethics training and requirements for all required assessments.

R277-404-4. LEA Responsibilities.

(1) An LEA shall develop a comprehensive assessment system plan to include the assessments described in Subsection R277-404-3(1).

(2) The plan shall, at a minimum, include:

(a) professional development for an educator to fully implement the assessment system;

(b) training for an educator and an appropriate paraprofessional in the requirements of assessment administration ethics;

(c) training for an educator and an appropriate paraprofessional to utilize assessment results effectively to inform instruction; and

(d) adequate oversight of test administration to ensure compliance with Section 53A-1-603 as follows:

(i) an LEA or online provider shall test all enrolled students unless a student has a written parental excuse under Subsection 53A-15-1403(9);

(ii) a student participating in the Statewide Online Education Program is assessed consistent with Section 53A-15-1210; and

(iii) a third party vendor or contractor may not administer or supervise U-PASS.

(3) An LEA shall make all policies and procedures consistent with the law, Board rules for standardized assessment administration, and the USOE Testing Ethics Policy, approved by the Board August 8, 2014, incorporated by reference, and located at USOE, 250 East 500 South, Salt Lake City, or online at <http://www.schools.utah.gov/assessment/Directors/Resources.aspx>.

(4) At least once each school year, an LEA shall provide professional development for all educators, administrators, and standardized assessment administrators concerning guidelines and procedures for standardized assessment administration, including educator responsibility for assessment security and proper professional practices.

(5) LEA assessment staff shall use the USOE Testing Ethics Policy in providing training for all assessment administrators and proctors.

(6) An LEA may not release state assessment data publicly until authorized to do so by the Superintendent.

R277-404-5. School Responsibilities.

(1) An LEA, school, or educator may not use a student's score on a state required assessment to determine:

(a) the student's academic grade, or a portion of the student's academic grade, for the appropriate course; or

(b) whether the student may advance to the next grade level.

(2) An LEA and school shall require an educator and assessment administrator and proctor to individually sign the Testing Ethics signature page provided by USOE acknowledging or assuring that the educator administers assessments consistent with ethics and protocol requirements.

(3) All educators and assessment administrators shall conduct assessment preparation, supervise assessment administration, provide assessment results, and complete error resolution.

(4) All educators and assessment administrators and proctors shall securely handle and return all protected assessment materials, where instructed, in strict accordance with the procedures and directions specified in assessment administration manuals, LEA rules and policies, Board rules, USOE Testing Ethics Policy, and state applications of federal requirements for funding.

(5) A student's IEP, EL, or Section 504 accommodation plan team shall determine an individual student's participation in statewide assessments.

R277-404-6. Student and Parent Participation in Student Assessments in Public Schools; Parental Exclusion from Testing and Safe Harbor Provisions.

(1)(a) Parents are primarily responsible for their children's education and have the constitutional right to determine which aspects of public education, including assessment systems, in which their children participate.

(b) Parents may further exercise their inherent rights to exempt their children from a state required assessment without further consequence by an LEA.

(2) An LEA shall administer state required assessments to all students unless:

(a) the Utah alternate assessment is approved for specific students consistent with federal law and as specified in a student's IEP; or

(b) students are excused by a parent or guardian under Section 53A-15-1403(9) and as provided in this rule.

(3)(a) A parent may exercise the right to exempt their child from a state required assessment.

(b) Except as provided in Subsection (3)(c), upon exercising the right to exempt a child from a state required assessment under this provision, an LEA may not impose an adverse consequence on a child as a result of the exercise of rights under this provision.

(c) If a parent exempts the parent's child from the basic civics test required in Sections 53A-13-109.5 and R277-700-8, the parent's child is not exempt from the graduation requirement in Subsection 53A-13-109.5(2), and may not graduate without successfully completing the requirements of Sections 53A-13-109.5 and R277-700-8.

(4)(a) In order to exercise the right to exempt a child from a state required assessment under this provision and insure the protections of this provision, a parent shall:

(i) fill out:

(A) the Parental Exclusion from State Assessment Form provided on USOE's website; or

(B) an LEA specific form as described in Subsection (4)(b); and

(ii) submit the form:

(A) to the principal or LEA either by email, mail, or in person; and

(B) on an annual basis and at least one day prior to beginning of the assessment.

(b) An LEA may create an LEA specific form for a parent to fill out as described in Subsection (4)(a)(i)(B) if:

(i) the LEA includes a list of local LEA assessments that a parent may exempt the parent's student from as part of the LEA's specific form; and

(ii) the LEA's specific form includes all of the information described in the Parental Exclusion from State Assessment Form provided on USOE's website as described in Subsection (4)(a)(i)(A).

(5)(a) A teacher, principal, or other LEA administrator may contact a parent to verify that the parent submitted a parental exclusion form described in Subsection (4)(a)(i).

(b) An LEA may request, but may not require, a parent to meet with a teacher, principal, or other LEA administrator regarding the parent's request to exclude the parent's student from taking a state required assessment.

(6) School grading, teacher evaluations, and student progress reports or grades may not be negatively impacted by students excused from taking a state required assessment.

(7) Any assessment that is not a state required assessment, the administration of the assessments, and the consequence of taking or failing to take the assessments is governed by policy adopted by each LEA.

(8) An LEA shall provide a student's individual test results and scores to the student's parent or guardian upon request and consistent with the protection of student privacy.

(9) An LEA may not reward a student for taking a state required assessment.

R277-404-7. Public Education Employee Compliance with Assessment Requirements, Protocols, and Security.

(1) An educator, test administrator or proctor, administrator, or school employee may not:

(a) provide a student directly or indirectly with a specific question, answer, or the content of any specific item in a standardized assessment prior to assessment administration;

(b) download, copy, print, take a picture of, or make any facsimile of protected assessment material prior to, during, or after assessment administration without express permission of the Superintendent and an LEA administrator;

(c) change, alter, or amend any student online or paper response or any other standardized assessment material at any time in a way that alters the student's intended response;

(d) use any prior form of any standardized assessment, including pilot assessment materials, that the Superintendent has not released in assessment preparation without express permission of USOE and an LEA administrator;

(e) violate any specific assessment administrative procedure specified in the assessment administration manual, violate any state or LEA standardized assessment policy or procedure, or violate any procedure specified in USOE Testing Ethics Policy;

(f) fail to administer a state required assessment;

(g) fail to administer a state required assessment within the designated assessment window;

(h) submit falsified data;

(i) allow a student to copy, reproduce, or photograph an assessment item or component; or

(j) knowingly do anything that would affect the security, validity, or reliability of standardized assessment scores of any individual student, class, or school.

(2) A school employee shall promptly report an assessment violation or irregularity to a building administrator, an LEA superintendent or director, or USOE.

(3) An educator who violates this rule or an assessment protocol is subject to Utah Professional Practices Advisory Commission or Board disciplinary action consistent with R277-515.

(4) All assessment material, questions, and student responses for required assessments is designated protected, consistent with Section 63G-2-305, until released by the

Superintendent.

(5)(a) Each LEA shall ensure that all assessment content is secured so that only authorized personnel have access and that assessment materials are returned to USOE following testing, as required by the Superintendent.

(b) An individual educator or school employee may not retain or distribute test materials, in either paper or electronic form, for purposes inconsistent with ethical test administration or beyond the time period allowed for test administration.

R277-404-8. Time Periods for Assessment Administration.

(1) An LEA educator or trained employee shall administer assessments required under R277-404-3 consistent with the following schedule:

(a) all summative adaptive assessments, an online writing assessment, and a Utah alternative assessment for elementary and secondary, English language arts, math, science, within the Superintendent's annually designated assessment windows;

(b) English language proficiency assessment:

(i) annually to all English Learner students identified as Level 1 Entering, Level 2 Beginning, Level 3 Developing, Level 4 Expanding, or enrolled for the first time in the LEA at any time during the school year to show student progress; and

(ii) submit materials to the Superintendent's identified scoring provider for scanning and scoring on a schedule defined by the Superintendent;

(c) pre-post kindergarten assessment for a kindergarten student as determined by the LEA during assessment windows determined by the LEA;

(d) one benchmark reading assessment determined by the Board for grade 1, grade 2, and grade 3 students in the beginning, midpoint, and end of the school year

(e) grade 3 end of year summative reading assessment using grade 3 SAGE English Language Arts; and

(f) NAEP assessments determined and required annually by the United States Department of Education and administered to students as directed by United States Department of Education.

(2) An LEA educator or trained employee shall complete all required assessment procedures prior to the end of the assessment window defined by the Superintendent.

(3)(a) An LEA that has an alternative schedule shall submit an annual testing plan to the Superintendent by September 1 annually.

(b) The plan shall:

(i) set dates for summative adaptive assessment administration for courses taught face to face or online;

(ii) set dates to assess students at the point in the course where students have had approximately the same amount of instructional time as students on a traditional full year schedule; and

(iii) provide a course level assessment schedule to the Superintendent before instruction begins for the course.

R277-404-9. Data Exchanges.

(1) The USOE IT Section shall communicate regularly with an LEA regarding the required format for electronic submission of required data.

(2) An LEA shall update UTREx data using the processes and according to schedules determined by the Superintendent.

(3) An LEA shall ensure that any computer software for maintaining or submitting LEA data is compatible with data reporting requirements established in Rule R277-484.

(4) The Superintendent shall provide direction to an LEA detailing the data exchange requirements for each assessment.

(5) An LEA shall verify that it has satisfied all the requirements of the Superintendent's directions described in this section.

(6) Consistent with Utah law, the Superintendent shall

return assessment results from all required assessments to the school before the end of the school year.

**Notice of Continuation September 16, 2013 through 53A-1-611
53A-1-401(3)**

R277. Education, Administration.**R277-438. Dual Enrollment.****R277-438-1. Authority and Purpose.**

(1) This rule is authorized by:

(a) Utah Constitution Article X, Section 3, which vests general control and supervision of the public school system under the Board;

(b) Subsection 53A-1-402(1)(b), which directs the Board to establish rules and minimum standards for access to programs;

(c) Subsection 53A-1-401(3), which allows the Board to adopt rules in accordance with its responsibilities; and

(d) Section 53A-11-102.5, which governs dual enrollment.

(2) The purpose of this rule is to provide consistent statewide procedures and criteria for a home school and private school student's participation in a public school course, co-curricular activity, or program.

R277-438-2. Definitions.

(1) "Co-curricular activity" means a school district or school activity, course, or experience that includes a required regular school day component and an after school component, including a special program or activity such as a program for a gifted and talented student, a summer program, and a science or history fair.

(2) "Dual enrollment student" means a student who is enrolled simultaneously in:

(a) a private school or home school; and

(b) a public school.

(3) "Eligibility" means a student's fitness and availability to participate in a school course, activity, or program governed by this rule that is determined by a number of factors, including:

(a) residency;

(b) scholarship;

(c) age; and

(d) the number of semesters of participation in a particular course, activity, or program.

(4) "Full-time student" means a student earning the school district designated number and type of credits required for participation in a course, activity, or program in the school district in which the student's parent resides.

(5) "Home school" means a school in the state comprised of one or more students officially excused from compulsory public school attendance under Section 53A-11-102.

(6) "Private school" means a school in the state that:

(a) is maintained by a private individual or corporation;

(b) is maintained and operated at public expense;

(c) is generally supported, in part at least, by tuition fees or charges;

(d) operates as a substitute for, and gives the equivalent of, instruction required in a public school;

(e) employs a teacher able to provide the same quality of education as a public school teacher;

(f) is established to operate indefinitely and independently, not dependent upon age of the students available or upon individual family situations; and

(g) is licensed as a business by the Department of Commerce.

(7)(a) "Resident school" means a public school:

(i) that is under the control of a local school board elected under Title 20A, Chapter 14, Nomination and Election of State and Local School Boards; and

(ii) within whose boundaries a student's custodial parent resides.

(b) "Resident school" does not mean a charter school or online school.

(8) "Student participation fee" means a fee charged to all participating students by the resident school for enrollment in a course, program, or co-curricular school activity consistent with

Rule R277-407.

R277-438-3. Private and Home School Student Participation in a Public School Course, Co-curricular Activity, or Program.

(1) A student who is exempt from compulsory public school education by a local school board for instruction in a private or home school may enroll in the student's resident school as a dual enrollment student and participate in a course, co-curricular activity, or program at the student's resident school if the student takes courses comparable to resident school courses or earns credit under options outlined in Section R277-700-6 in at least as many of the designated courses as required by the local school board of a student for participation in the course, co-curricular activity, or program.

(2) A public school that is not the student's resident school may allow a private or home school student to enroll in the public school, including in a single course or program, as a dual enrollment student, at the discretion of the public school.

(3) A dual enrollment student is eligible to participate in a course, co-curricular activity, or program:

(a) consistent with the eligibility standards for a full-time student, including providing a report card and citizenship information to the resident school or other school described in Subsection (2) upon request;

(b) in accordance with Section 53A-11-102.5; and

(c) in accordance with the provisions of Subsection 53A-11-102.6(2)(d).

R277-438-4. Fees for Private and Home School Students.

A school or school district shall waive a student participation fee for a dual enrollment private or home school student if:

(1) the student is eligible; and

(2) the parent provides required documentation under Section 53A-12-103 and Rule R277-407, School Fees.

R277-438-5. Miscellaneous Issues.

(1) A dual enrollment student attending an activity or a portion of a school day under Section 53A-11-102.5 is subject to the same behavior and discipline rights and requirements of a full-time student.

(2) A dual enrollment student who attends an activity or a portion of the school day is subject to the administrative scheduling and teacher discretion of the public school.

(3)(a) A dual enrollment student with a disability may participate as a dual enrollment student consistent with law, this rule and 34 CFR 300.450 through 300.455.

(b) A public school that enrolls a dual enrollment student shall prepare an IEP for a student described in Subsection (3)(a) prior to the student's participation in dual enrollment using comparable procedures to those required for identifying and evaluating public school students.

(c) A student with a disability seeking dual enrollment is entitled to services for the time, or for the number of courses, the student is enrolled in the public school, based on the decision of the student's IEP team.

(d) Decisions about the scheduling and manner of services provided is the responsibility of the enrolling public school and school district personnel.

(e) A school or a school district is not prohibited from providing a service to a student who is not enrolled full time in excess of those required by this section.

R277. Education, Administration.**R277-494. Charter, Online, Home, and Private School Student Participation in Extracurricular or Co-curricular School Activities.****R277-494-1. Authority and Purpose.**

(1) This rule is authorized by:

(a) Utah Constitution Article X, Section 3, which vests general control and supervision of public education in the Board;

(b) Subsection 53A-1-401(3), which permits the Board to adopt rules in accordance with its responsibilities;

(c) Subsection 53A-1a-519(6)(a), which directs the Board to make rules establishing fees for a charter school student's participation in extracurricular or co-curricular activities at certain public schools; and

(d) Subsection 53A-2-214(6), which directs the Board to make rules establishing fees for an online student's participation in extracurricular or co-curricular activities at certain public schools.

(2) The purpose of this rule is to inform school districts, charter and online schools, and parents of:

(a) school participation fees; and

(b) state-determined requirements for a charter school or a public online school student to participate in an extracurricular activity at a student's boundary school.

R277-494-2. Definitions.

(1) "Activity fee" means a fee that:

(a) is approved by a local school board or public school;

(b) is charged to all students to participate in an activity sponsored by or through the public school; and

(c) entitles a public school student to:

(i) participate in a school activity;

(ii) try out for an extracurricular or co-curricular school activity;

(iii) receive transportation to an activity; and

(iv) attend a regularly scheduled public school activity.

(2) "Co-curricular activity" means a school district or school activity, course, or experience that includes a required regular school day component and an after school component, including a special program or activity such as a program for a gifted and talented student, a summer program, and a science or history fair.

(3) "Extracurricular activity" means an athletic program or activity sponsored by a public school and offered, competitively or otherwise, to a public school student outside of the regular school day or program.

(4) "Online school" means a formally constituted public school that offers full-time education delivered primarily over the internet.

(5) "Qualifying school" means:

(a) for purposes of a charter school student, a school described in Subsection 53A-1a-519(1);

(b) for purposes of an online school student, a school described in Subsection 53A-2-214(2); and

(c) for purposes of a private or home school student, a school described in Subsection 53A-11-102.6(2)(c).

(6) "School of enrollment" means the public school that maintains the student's cumulative file, enrollment information and transcript for purposes of high school graduation.

(7) "School participation fee" means the fee paid by the charter or online school to a qualifying school consistent with Subsections R277-494-3(2) or R277-494-4(2) for student participation in an extracurricular or co-curricular activity.

(8) "Student participation fee" means the fee charged to all participating students by a qualifying school for a designated extracurricular or co-curricular activity consistent with Rule R277-407.

R277-494-3. Charter and Online School Student Participation in Extracurricular Activities at Another Public School.

(1) A charter or online school student may participate in an extracurricular activity at a qualifying school if:

(a) the extracurricular activity is not offered by the student's charter or online school;

(b) the student satisfies:

(i) for a charter school student, the requirements of Subsection 53A-1a-519(3);

(ii) for an online school student, the requirements of Subsection 53A-2-214(3); and

(iii) the requirements of this rule;

(c) the student meets the qualifying school's standards and requirements; and

(d) the student's parent agrees to provide the student transportation to the qualifying school for the extracurricular activity.

(2)(a) A charter or online school of enrollment shall determine if the charter or online school will allow students to participate in extracurricular school activities at qualifying schools.

(b) If a charter or online school allows one student to participate in an extracurricular activity at a qualifying school, the charter or online school shall allow all interested students to participate.

(c) A charter or online school student's school of enrollment shall pay a school participation fee of \$75.00 per student to the qualifying school at which the charter or online school student desires to participate.

(d) Upon annual payment of the school participation fee, the student may participate in all extracurricular school activities at the school during the school year for which the student is qualified and eligible.

(e) A charter or online school of enrollment shall cooperate fully with all qualifying schools:

(i) regarding students' participation in try-outs, practices, pep rallies, team fund raising efforts, scheduled games, and required travel; and

(ii) by providing complete and prompt reports of student academic and citizenship progress or grades, upon request.

(3)(a) The school participation fee described in Subsection (2)(c) is in addition to:

(i) a student participation fee for a specific extracurricular activity; and

(ii) the activity fee charged to all students in a qualifying school to supplement a school activity as assessed by the school consistent with this rule.

(4) Except as provided in Subsection (6), a charter or online school student who participates in an extracurricular activity at a qualifying school shall pay a student participation fee or required activity fee to the qualifying school in accordance with deadlines set by the qualifying school.

(5) All fees, including school participation fees, student participation fees, and activity fees shall be paid prior to a charter or online school student's participation in an activity at the qualifying school.

(6) If a participating charter or online school student qualifies for a fee waiver, in accordance with Rule R277-470, the charter or online student's school of enrollment shall pay all waived student participation fees to the qualifying school prior to the student's participation in an activity at the qualifying school.

R277-494-4. Charter or Online School Student Participation in Co-curricular Activities.

(1)(a) A charter or online school student may participate in a co-curricular activity at a qualifying school if:

(i) the co-curricular activity is not offered by the student's

charter or online school;

(ii) the student satisfies:

(A) for a charter school student, the requirements of Subsection 53A-1a-519(3);

(B) for an online school student, the requirements of Subsection 53A-2-214(3); and

(C) the requirements of this rule;

(iii) the student meets the qualifying school's standards and requirements; and

(iv) the student's parent agrees to provide the student transportation to the qualifying school for the co-curricular activity.

(1)(b) A charter or online school may negotiate with a public school other than a school described in Subsection (1) to participate in a co-curricular activity at the other public school, including:

(i) a debate, drama, or choral program;

(ii) a specialized course or program offered during the regular school day; and

(iii) a school's sponsored enrichment program or activity.

(b) A student who participates in a co-curricular activity described in Subsection (1)(a) shall meet:

(i) the same attendance, discipline, and course requirements expected of the public school's full-time students;

(ii) for a charter school student, the requirements of Subsection 53A-1a-519(3); and

(iii) for an online school student, the requirements of Subsection 53A-2-214(3).

(2)(a) A charter or online school of enrollment shall determine if the school will allow students to participate in co-curricular school activities at qualifying schools.

(b) If a charter or online school allows one student to participate in a co-curricular activity at a qualifying school, the charter or online school shall allow all interested students to participate.

(c) A charter or online school student's school of enrollment shall pay a school participation fee of \$75.00 per student to the qualifying school at which the charter or online school student desires to participate.

(3) A charter or online school student participating under this rule shall meet all eligibility requirements and timelines of the public school.

R277-494-5. Private or Home School Student Participation in Extracurricular Activities.

(1) In accordance with Section 53A-11-102.6, a private or home school student may participate in an extracurricular activity at a qualifying school if:

(a) for a private school student, the extracurricular activity is not offered by the student's private school;

(b) the student satisfies the requirements of:

(i) Section 53A-11-102.6; and

(ii) this rule; and

(c) the student meets the qualifying school's standards and requirements.

(2) Except as provided in Subsection (3), a private or home school student shall pay a student participation fee or required activity fee to the qualifying school:

(a) before the student may participate in the extracurricular activity at the qualifying school; and

(b) in accordance with deadlines set by the qualifying school.

(3) If a private or home school student qualifies for a fee waiver in accordance with Rule R277-407, the qualifying school shall waive the student participation fee or required activity fee in accordance with the requirements of Rule R277-407, School Fees.

R277-494-6. Private or Home School Student Participation

in Co-curricular Activities.

A private or home school student may participate in a co-curricular activity at a public school in accordance with the dual enrollment provisions of rule R277-438.

53A-1-401(3)

53A-1a-519(5)

53A-2-214(6)

R277. Education, Administration.**R277-611. Certified Volunteer Instructors and Material Approval Requirements and Process for Firearm Safety in the Public Schools.****R277-611-1. Authority and Purpose.**

(1) This rule is authorized by:

(a) Utah Constitution Article X, Section 3, which vests general control and supervision over public education in the Board;

(b) Subsection 53A-13-106(5), which directs the Board to make rules specific to limited areas of firearm safety instruction in the public schools; and

(c) Subsection 53A-1-401(3), which allows the Board to adopt rules in accordance with its responsibilities.

(2) The purpose of this rule is to:

(a) provide a definition of certified volunteer for purposes of providing firearm safety training in a public school;

(b) direct LEAs to designate public school areas that may be used for firearm safety training for adults or students or both;

(c) direct a local board to review materials that may be used under the LEA's authority to teach firearm safety; and

(d) provide for voluntary firearm safety training of public school district employees or school community members or both on public school property at times determined by the local school board or local governing board.

R277-611-2. Definitions.

(1) "Certified volunteer" means an individual who:

(a) volunteers to teach an LEA employee or student in a public school about firearm safety; and

(b) is certified as required by Section R277-611-3.

(2) "Public school classroom or auditorium" means a classroom or auditorium in a public school:

(a) identified as available and appropriate; and

(b) designated by an LEA, superintendent, or director as available for firearm safety instruction.

R277-611-3. Certified Volunteers and Proof of Certification of Instructors.

(1)(a) An LEA may allow a volunteer who is certified by the Utah Bureau of Criminal Identification to teach firearm safety on public school property consistent with LEA policy and direction.

(b) A list of certified firearms instructors by county is available through the Utah Department of Public Safety.

(2) A certified volunteer shall provide documentation of required training to the designated school administrator prior to the advertisement or notice of available training.

(3) An individual who provides or participates in training to a public school age child on public school property shall:

(a) complete a fingerprint background check and submit to ongoing monitoring consistent with the requirements of Title 53A, Chapter 15, Part 15, Background Checks; and

(b) have the background check reviewed by an LEA administrator prior to instructing a public school age student.

(4) A volunteer is not certified under Subsection 53A-13-106(5)(d) by the LEA until the background check process is completed.

R277-611-4. School District Review of Firearm Safety Materials Used in Public Schools.

(1) A certified volunteer who is approved to provide instruction to a public school-age student or a public school employee shall submit material that the certified volunteer proposes to use in the instruction or training for review by the local school board or local governing board prior to the training.

(2) An LEA shall have adequate time to review the submitted material and approve or disapprove the material in a timely manner.

(3) An LEA shall use standards for review of materials that include:

(a) age-appropriateness of material for the LEA's audience;

(b) neither a bias against firearms nor a bias in favor of firearms;

(c) the selection and approval of material that would not personally enrich or benefit the certified volunteer; and

(d) other reasonable and objective standards that apply to the review of similar instructional material.

R277-611-5. Voluntary Training of Adults and Public Education Employees on Public School Property.

(1) An LEA may allow a community group to use public school property for voluntary firearm safety training for a public school employee or interested community member under conditions used to approve public school buildings for non-curriculum uses.

(2) An LEA shall give the greatest consideration to availability of space and the safety of school age children and school employees in the approval of a request to use public education property for voluntary firearm safety training and instruction.

R277-611-6. Use of Public School Property for Firearm Safety Instruction.

(1) An LEA may designate which classroom or auditorium or other appropriate public school area may be used for firearm safety training or instruction or both.

(2) An LEA shall give first priority to curriculum-related groups in allowing firearm safety instruction to be held on public school property.

(3) An LEA shall give the safety of all students and community patrons the greatest consideration in allowing for firearm safety instruction or training on public school property.

(4) If appropriate or necessary, at the LEA's discretion, the LEA may post notice in and around a public school area designated for firearm instruction and training.

(5) Live ammunition may not be brought on public school property as a part of firearm safety instruction.

53A-13-106(5)

53A-1-401(3)

R277. Education, Administration.**R277-726. Statewide Online Education Program.****R277-726-1. Definitions.**

A. "Actively participates" means the student actively participates as defined by the Provider.

B. "Board" means the Utah State Board of Education.

C. "Course completion" means that a student has completed a course with a passing grade and the Provider has transmitted the grade and credit to primary LEA of enrollment.

D. "Course Credit Acknowledgment (CCA)" means the agreement and registration record using the USOE provided Statewide Online Education Program form. The CCA shall be signed by the student, parent, designee of primary school of enrollment and qualified Provider.

E. "Eligible student" means a student enrolled in grades 9-12 in a public school, but does not include students enrolled in adult education programs.

F. "Enrollment confirmation" means the student initially registered and actively participated, as defined under R277-726-1A.

G. "Executed CCA" means that all parties have signed the CCA and the CCA has been received by the USOE. Following enrollment confirmation and participation, the USOE directs funds to Provider, consistent with Sections 53A-15-1206, 1206.5 and 1207.

H. "LEA" means a local education agency, including local school boards/public school districts, charter schools, and, for purposes of this rule, the Utah Schools for the Deaf and the Blind.

I. "Online course" means a course of instruction offered through the Statewide Online Education Program.

J. "Online course payment" means the amount withheld from the student's primary LEA and disbursed to the designated Provider following satisfaction of the requirements of the law, and as directed in Section 53A-15-1207.

K. "Online course provider (Provider)" means a district school, a charter school or an LEA program created for the purpose of serving Utah students grades 9-12 online.

L. "Primary LEA of enrollment" means the LEA in which an eligible student is enrolled for courses other than online courses offered through the Statewide Online Education Program.

M. "Primary school of enrollment" means a student's school of record, where the student takes the majority of his classes; and the school that maintains the student's cumulative file, enrollment information and transcript.

N. "SEOP" means student education occupation plan as defined in R277-700.

O. "Statewide assessment" means Criterion-Referenced tests or computer adaptive tests required under R277-404.

P. "Statewide Online Education Program (Program)" means courses offered to students under Section 53A-15-1201 through 53A-15-1217.

Q. "USOE" means the Utah State Office of Education.

R. "USOE course code" means a code for a designated subject matter course assigned by the USOE.

S. "Withdrawal from online course" means that a student withdraws or ceases participation in an online course as follows:

- (1) within 20 calendar days of the start date of the course, if the student enrolls on or before the start date;
- (2) within 20 calendar days of enrolling in a course, if the student enrolls after the start date; or
- (3) within 20 calendar days after the start date of the second .5 credit of a 1.0 credit course;
- (4) as the result of a student suspension from an online course following adequate documented due process by the Provider.

R277-726-2. Authority and Purpose.

A. This rule is authorized by Utah Constitution Article X, Section 3 which vests general control and supervision of public education in the Board, Section 53A-15-1210 which requires the Board to make rules providing for the administration of statewide assessments to students enrolled in online courses, Section 53A-15-1213 which requires the Board to make rules that establish a course credit acknowledgment form and procedures for completing and submitting the form to the Board, and Section 53A-1-401(3) which permits the Board to adopt rules in accordance with its responsibilities.

B. The purpose of this rule is to define necessary terms, provide and describe a Program registration agreement and provide other requirements for LEAs, the USOE, parents and students, and Providers for Program implementation and accountability.

R277-726-3. Course Credit Acknowledgment (CCA) Process.

A. A student, a student's parent or a Provider may initiate a CCA.

B. A counselor designated by the primary school of enrollment shall review the CCA to ensure consistency with graduation requirements, the student's SEOP, the student's Individualized Education Plan (IEP), the student's Section 504 plan, or the student's international baccalaureate program, if applicable. The primary school of enrollment shall return the CCA to the USOE within 72 business hours.

C. A Provider initiated CCA may be sent directly to the USOE if the course is consistent with the student's SEOP. The primary school of enrollment need not meet with the student or parent and shall be notified of such an enrollment by the USOE.

D. If the student has an IEP or a Section 504 plan, the primary LEA or school of enrollment shall forward the IEP or description of 504 accommodations to the Provider within 72 business hours of receiving notice from the USOE that the Provider has accepted the enrollment request.

E. The USOE shall develop and administer procedures for facilitation of the CCA that inform all appropriate parties.

R277-726-4. Eligible Student/Parent Rights and Responsibilities.

A. Eligible students may register for up to two Program credits in the 2012-2013 school year; however a student's primary LEA of enrollment or the Board may allow an eligible student to enroll in additional online courses consistent with Section 53A-15-1204 with documentation from the LEA.

B. A student enrolled in Program course(s) may earn no more credits in a year than the number of credits a student may earn by taking a full course load during the regular school day in the student's primary school of enrollment.

C. Eligible students may register for more than two online credits if the student's current SEOP indicates specifically that the student intends to complete high school graduation requirements and exit high school before the rest of the student's high school cohort and the student's schedule demonstrates progress toward early graduation.

D. Eligible students are expected to complete courses in which they enroll in a timely manner consistent with Section 53A-15-1206. If a student changes his enrollment for any reason, it is the student's/parent's responsibility to notify the Provider immediately.

E. Students should enroll in online courses, or declare an intention to enroll, during the high school course registration period designated by the LEA for regular course registration.

F. A student may alter a course schedule by dropping a traditional course and adding an online course by primary school of enrollment's same established deadline for dropping and adding traditional courses.

G. Notwithstanding this, an underenrolled student may

enroll in an online course at any time during a calendar year. If this occurs, the primary school of enrollment may immediately claim the student for the adjusted portion of enrollment.

R277-726-5. LEA Requirements and Responsibilities.

A. A primary school of enrollment shall facilitate student enrollment with any and all eligible Providers selected by eligible students consistent with course credit limits.

B. A primary school of enrollment or a Provider LEA shall use the CCA form, records and processes provided by the USOE for the Program. A school counselor or a Provider shall use a separate form for each course selected by parent/student.

C. A primary school or LEA of enrollment shall provide information about available online courses and programs in registration materials or through other reasonable communication and on the LEA's or school's website or using a link to the USOE's website.

D. A primary school of enrollment shall include a student's online courses in student's enrollment records and, upon course completion, include online course grades and credits on student transcripts.

R277-726-6. State Board of Education (Board) Requirements and Responsibilities.

A. The Board shall develop and provide a website for the Program that provides information required under Section 53A-15-1212 and other information as determined by the Board.

B. The Board shall direct Providers to administer state-designated assessments consistent with R277-404 and R277-473 for identified courses using LEA-adopted and state-approved assessments.

C. The Board may determine space available standards and appropriate course load standards for online courses consistent with Sections 53A-15-1006(2) and 53A-15-1208(3)(d). Course load standards may differ based on subject matter and differing accreditation standards.

D. The Board shall withhold funds from primary LEAs of enrollment and make payments to Providers consistent with Sections 53A-15-1206, 1206.5 and 1207.

E. The Board shall establish an appeals process for students who request more than two online courses in the 2011-2012 school year and who are first denied by their primary LEA or school of enrollment.

F. The Board may refuse to provide funds under a CCA if the Board finds that information has been submitted fraudulently or in violation of the law or Board requirements by any of the parties to a CCA.

G. The USOE or the Board's designee shall receive, investigate complaints and impose sanctions, if appropriate, regarding course integrity, financial mismanagement, enrollment fraud or inaccuracy, or violations of the law or this rule specific to the requirements and provisions of this Program.

H. If a Board investigation finds that a Provider has violated IDEA or Section 504 provisions for students taking online courses, the Provider shall compensate the student's primary LEA of enrollment for all costs related to compliance.

I. The USOE may audit, at the Board's sole discretion, an LEA's or Program participant's compliance with any requirement of state or federal law or Board rule under the Program. All participants shall provide timely access to all records, student information, financial data or other information requested by the Board, the Board's auditors, the Superintendent or the Superintendent's designee upon request.

J. The Board may impose penalties, withhold funds, or sanction Program participants for participants' failure to comply with reasonable requests for records or information.

K. All records related to the Program that do not disclose protected student information are public records and shall be available upon request under Section 63G-2-301 or 63G-2-305.

R277-726-7. Provider Requirements and Responsibilities.

A. Providers shall administer state-designated assessments as directed by the Board, including proctoring, consistent with Section 53A-15-1210 and R277-473. Providers shall pay administrative and proctoring costs for all state-designated assessments.

B. Providers shall provide parents/students with email and telephone contacts for the Provider during regular business hours in order to facilitate parent information.

C. Providers and third parties working with Providers shall satisfy all Board requirements for consistency with course curriculum, criminal background checks for Provider employees, documentation of student enrollment and participation and compliance with IDEA, Section 504, and requirements for ELL students for all eligible students.

D. Providers shall receive payments for students properly enrolled in the Program from the USOE consistent with Board procedures, timelines and Sections 53A-15-1206, 53A-15-1206.5, 53A-15-1207 and 53A-15-1208.

E. Providers may charge fees consistent with other secondary schools. If the Provider intends to charge fees, the Provider:

(1) shall notify the primary school of enrollment with whom the Provider has the CCA of the purpose for fees, amounts of fees, and provide timely notice to parents of required fees and fee waiver opportunities, and post fees on Provider website.

(2) shall be responsible for fee waivers for eligible students, including all materials for students designated fee waiver eligible by a student's primary school of enrollment.

F. Providers shall maintain student records and comply with the federal Family Educational Rights and Privacy Act, including protecting the confidentiality of student records and providing parents and eligible students access to records.

G. Except as provided in R277-726-8A, the Provider shall submit a student's credit and grade within 30 days after a student satisfactorily completes an online semester course to the USOE, primary school of enrollment, and parent(s).

H. Providers shall not withhold students' credits, grades, or transcripts from students, parents or students' schools of enrollment for any reason.

I. If a Provider desires to suspend a student from an online course for disciplinary reasons, the Provider is responsible for all student due process procedures, including the Individuals with Disabilities Education Act (IDEA) 20 U.S.C. 1400 and Section 504 of the Rehabilitation Act of 1973. If a student is suspended for more than 10 days, the Provider shall notify the USOE of a withdrawal.

J. Providers shall provide to the USOE a list of course options using the USOE-provided course codes (all courses shall be coded as semester courses). Course offerings shall be updated in January and August annually.

K. Providers shall serve all students on a first-come-first-served basis who desire to take courses and who are designated eligible by a primary school of enrollment if desired courses have space available.

L. Providers shall provide all records maintained as part of a public online school or program, including financial and enrollment records, and information for accountability and audit purposes upon request by the USOE, and the Provider's external auditor(s).

M. Providers shall maintain documentation of student work, including dates of submission, for Program audit purposes.

N. Providers are primarily responsible for complete and timely submissions of record changes to executed CCAs and submission of other reports and records as required by the USOE.

O. Providers shall inform students and parents of

expectations for active participation in course work.

P. LEAs may participate in the Program as Providers by offering schools or programs or both to Utah students in grades 9-12 who are not resident students of the LEA consistent with Section 53A-15-1205(3).

Q. Program schools or programs:

(1) shall be accredited by the Northwest Accreditation Commission consistent with R277-413;

(2) shall have a designated administrator who meets the requirements of Section 53A-6-110 or Section 53A-1a-512(5);

(3) shall ensure that students who qualify for fee waivers shall receive all services offered by and through the public schools consistent with Section 53A-12-103 and R277-407;

(4) shall maintain student records consistent with the federal Family Educational Rights and Privacy Act, 34 CFR Part 99; and

(5) shall offer course work aligned with Utah Core standards, course requirements, and the provisions of R277-700 and R277-404, and R277-473.

R. LEAs that offer online programs or schools as Providers under the Program:

(1) shall employ only licensed Utah educators as teachers;

(2) shall not employ individuals whose educator licenses have been suspended or revoked;

(3) shall require all employees to meet requirements of Section 53A-3-410 and R277-516 prior to the Provider offering services to students;

(4) shall only employ teachers who meet the requirements of R277-510, Educator Licensing - Highly Qualified Assignment;

(5) shall agree to administer and have the capacity to carry out state-designated assessments, including proctoring, consistent with Section 53A-15-1210(2), R277-404 and R277-473;

(6) shall provide services to students consistent with requirements of the IDEA, Section 504, and Title VI of the Civil Rights Act of 1964 for English Language Learners (ELL);

(7) shall maintain copies of all CCAs (for audit purposes);

(8) shall agree that funds shall be withheld by the USOE consistent with Section 53A-15-1206 and 1206.5. A Provider shall cooperate with the USOE in providing timely documentation of student participation, enrollment, and other additional data consistent with Board directives and procedures and as requested; and

(9) shall ensure that third parties assisting with LEA online schools or programs comply with R277-726-7R, R277-404 and R277-473.

S. Providers shall post all required information online on their individual websites including required assessment and accountability information.

R277-726-8. Other Information.

A. Primary schools of enrollment shall set reasonable timelines and standards and Providers shall adhere to timelines and standards for student grades and enrollment in online courses for purposes of:

(1) school awards and honors;

(2) Utah High School Activities Association participation; and

(3) high school graduation.

B. Withholding of the online course payment from a primary LEA of enrollment and payments to the eligible Provider shall occur at the nearest monthly transfer of funds subject to verification of information, in an amount consistent with and at the time a Provider qualifies to receive payment under Section 53A-15-1206(4).

C. The USOE shall pay the Provider consistent with Minimum School Program funding transfer schedules.

D. The Superintendent or the Superintendent's designee

may make decisions on questions or issues unresolved by Section 53A-15-1002 et seq. or R277-726 on a case-by-case basis. The Superintendent shall report decisions to the Board consistent with the purposes of the law and this rule.

R277. Education, Administration.**R277-921. Strengthening College and Career Readiness Program.****R277-921-1. Authority and Purpose.**

- (1) This rule is authorized by:
- (a) Utah Constitution Article X, Section 3, which vests the general control and supervision of the public education system in the Board;
 - (b) Subsection 53A-1-401(3), which authorizes the Board to adopt rules in accordance with its responsibilities; and
 - (c) Section 53A-15-1601, which requires the Board to make rules regarding the program.
- (2) The purpose of this rule is to establish:
- (a) procedures and criteria for applying for and awarding a grant; and
 - (b) reporting requirements for a grantee.

R277-921-2. Definitions.

- (1) "Certificate" means the certificate described in Subsection 53A-15-1601(3)(a) that a school counselor may receive through participation in the program.
- (2) "Grant" means payment of a course fee for a course required to earn the certificate.
- (3) "Program" means the Strengthening College and Career Readiness Program created in Section 53A-15-1601.
- (4) "School counselor" means a person who:
- (a) holds a Utah School Counselor License;
 - (b) has a master's degree or higher from an accredited institution;
 - (c) is an employee of an LEA who provides counseling and information to a student about an educational or career choice;
 - (d) has received an evaluation as effective or higher through the LEA's evaluation system; and
 - (e) is recommended to participate in the program by a supervisor.

R277-921-3. Grant Application.

- (1) An LEA may apply for a grant on behalf of a school counselor by submitting an application:
- (a) provided on USOE's website;
 - (b) to the Superintendent; and
 - (c) except as provided in Subsection (2), on or before June 30.
- (2) If the annual appropriation for the program exceeds the grant requests, the Superintendent may extend the deadline specified in Subsection (1)(c) by posting a new deadline on USOE's website.

R277-921-4. Procedure and Criteria for Awarding Grant.

- (1) If the grant applications exceed the annual appropriation for the program, the Superintendent shall give preference in awarding a grant to an applicant if:
- (a) the school where the school counselor works has a state approved Comprehensive Counseling and Guidance Program;
 - (b) the school where the school counselor works meets the school counselor-to-student ratio of 1:350, according to Rule R277-462; and
 - (c) the school counselor is licensed as a school counselor according to Rule R277-506.
- (2) A school counselor who fails to complete a course that is paid for by a grant shall repay the course fee to the Superintendent.

R277-921-5. Reporting Requirements for Grantee.

After completing the course work necessary to receive the certificate, the school counselor shall submit to the Superintendent:

- (1) an action plan to implement the skills developed

through earning the certificate to improve students' college and career readiness; and

- (2) an application that is provided on USOE's website to add the certificate to the school counselor's license.

R307. Environmental Quality, Air Quality.**R307-101. General Requirements.****R307-101-1. Foreword.**

Chapter 19-2 and the rules adopted by the Air Quality Board constitute the basis for control of air pollution sources in the state. These rules apply and will be enforced throughout the state, and are recommended for adoption in local jurisdictions where environmental specialists are available to cooperate in implementing rule requirements.

National Ambient Air Quality Standards (NAAQS), National Standards of Performance for New Stationary Sources (NSPS), National Prevention of Significant Deterioration of Air Quality (PSD) standards, and the National Emission Standards for Hazardous Air Pollutants (NESHAPS) apply throughout the nation and are legally enforceable in Utah.

R307-101-2. Definitions.

Except where specified in individual rules, definitions in R307-101-2 are applicable to all rules adopted by the Air Quality Board.

"Actual Emissions" means the actual rate of emissions of a pollutant from an emissions unit determined as follows:

(1) In general, actual emissions as of a particular date shall equal the average rate, in tons per year, at which the unit actually emitted the pollutant during a two-year period which precedes the particular date and which is representative of normal source operations. The director shall allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.

(2) The director may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(3) For any emission unit, other than an electric utility steam generating unit specified in (4), which has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

(4) For an electric utility steam generating unit (other than a new unit or the replacement of an existing unit) actual emissions of the unit following the physical or operational change shall equal the representative actual annual emissions of the unit, provided the source owner or operator maintains and submits to the director, on an annual basis for a period of 5 years from the date the unit resumes regular operation, information demonstrating that the physical or operational change did not result in an emissions increase. A longer period, not to exceed 10 years, may be required by the director if the director determines such a period to be more representative of normal source post-change operations.

"Acute Hazardous Air Pollutant" means any noncarcinogenic hazardous air pollutant for which a threshold limit value - ceiling (TLV-C) has been adopted by the American Conference of Governmental Industrial Hygienists (ACGIH) in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices, (2009)."

"Air pollutant" means a substance that qualifies as an air pollutant as defined in 42 U.S.C. Sec. 7602.

"Air Pollutant Source" means private and public sources of emissions of air pollutants.

"Air Pollution" means the presence of an air pollutant in the ambient air in such quantities and duration and under conditions and circumstances, that are injurious to human health or welfare, animal or plant life, or property, or would unreasonably interfere with the enjoyment of life or use of property as determined by the standards, rules and regulations adopted by the Air Quality Board (Section 19-2-104).

"Allowable Emissions" means the emission rate of a source

calculated using the maximum rated capacity of the source (unless the source is subject to enforceable limits which restrict the operating rate, or hours of operation, or both) and the emission limitation established pursuant to R307-401-8.

"Ambient Air" means that portion of the atmosphere, external to buildings, to which the general public has access. (Section 19-2-102(4)).

"Appropriate Authority" means the governing body of any city, town or county.

"Atmosphere" means the air that envelops or surrounds the earth and includes all space outside of buildings, stacks or exterior ducts.

"Authorized Local Authority" means a city, county, city-county or district health department; a city, county or combination fire department; or other local agency duly designated by appropriate authority, with approval of the state Department of Health; and other lawfully adopted ordinances, codes or regulations not in conflict therewith.

"Board" means Air Quality Board. See Section 19-2-102(8)(a).

"Breakdown" means any malfunction or procedural error, to include but not limited to any malfunction or procedural error during start-up and shutdown, which will result in the inoperability or sudden loss of performance of the control equipment or process equipment causing emissions in excess of those allowed by approval order or Title R307.

"BTU" means British Thermal Unit, the quantity of heat necessary to raise the temperature of one pound of water one degree Fahrenheit.

"Calibration Drift" means the change in the instrument meter readout over a stated period of time of normal continuous operation when the VOC concentration at the time of measurement is the same known upscale value.

"Carbon Adsorption System" means a device containing adsorbent material (e.g., activated carbon, aluminum, silica gel), an inlet and outlet for exhaust gases, and a system for the proper disposal or reuse of all VOC adsorbed.

"Carcinogenic Hazardous Air Pollutant" means any hazardous air pollutant that is classified as a known human carcinogen (A1) or suspected human carcinogen (A2) by the American Conference of Governmental Industrial Hygienists (ACGIH) in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices, (2009)."

"Chargeable Pollutant" means any regulated air pollutant except the following:

(1) Carbon monoxide;

(2) Any pollutant that is a regulated air pollutant solely because it is a Class I or II substance subject to a standard promulgated or established by Title VI of the Act, Stratospheric Ozone Protection;

(3) Any pollutant that is a regulated air pollutant solely because it is subject to a standard or regulation under Section 112(r) of the Act, Prevention of Accidental Releases.

"Chronic Hazardous Air Pollutant" means any noncarcinogenic hazardous air pollutant for which a threshold limit value - time weighted average (TLV-TWA) having no threshold limit value - ceiling (TLV-C) has been adopted by the American Conference of Governmental Industrial Hygienists (ACGIH) in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices, (2009)."

"Clean Air Act" means federal Clean Air Act as amended in 1990.

"Clean Coal Technology" means any technology, including technologies applied at the precombustion, combustion, or post combustion stage, at a new or existing facility which will achieve significant reductions in air emissions of sulfur dioxide or oxides of nitrogen associated with the utilization of coal in

the generation of electricity, or process steam which was not in widespread use as of November 15, 1990.

"Clean Coal Technology Demonstration Project" means a project using funds appropriated under the heading "Department of Energy-Clean Coal Technology," up to a total amount of \$2,500,000,000 for commercial demonstration of clean coal technology, or similar projects funded through appropriations for the Environmental Protection Agency. The Federal contribution for a qualifying project shall be at least 20 percent of the total cost of the demonstration project.

"Clearing Index" means an indicator of the predicted rate of clearance of ground level pollutants from a given area. This number is provided by the National Weather Service.

"Commence" as applied to construction of a major source or major modification means that the owner or operator has all necessary pre-construction approvals or permits and either has:

(1) Begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or

(2) Entered into binding agreements or contractual obligations, which cannot be canceled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

"Condensable PM2.5" means material that is vapor phase at stack conditions, but which condenses and/or reacts upon cooling and dilution in the ambient air to form solid or liquid particulate matter immediately after discharge from the stack.

"Compliance Schedule" means a schedule of events, by date, which will result in compliance with these regulations.

"Construction" means any physical change or change in the method of operation including fabrication, erection, installation, demolition, or modification of a source which would result in a change in actual emissions.

"Control Apparatus" means any device which prevents or controls the emission of any air pollutant directly or indirectly into the outdoor atmosphere.

"Department" means Utah State Department of Environmental Quality. See Section 19-1-103(1).

"Director" means the Director of the Division of Air Quality. See Section 19-1-103(1).

"Division" means the Division of Air Quality.

"Electric Utility Steam Generating Unit" means any steam electric generating unit that is constructed for the purpose of supplying more than one-third of its potential electric output capacity and more than 25 MW electrical output to any utility power distribution system for sale. Any steam supplied to a steam distribution system for the purpose of providing steam to a steam-electric generator that would produce electrical energy for sale is also considered in determining the electrical energy output capacity of the affected facility.

"Emission" means the act of discharge into the atmosphere of an air pollutant or an effluent which contains or may contain an air pollutant; or the effluent so discharged into the atmosphere.

"Emissions Information" means, with reference to any source operation, equipment or control apparatus:

(1) Information necessary to determine the identity, amount, frequency, concentration, or other characteristics related to air quality of any air pollutant which has been emitted by the source operation, equipment, or control apparatus;

(2) Information necessary to determine the identity, amount, frequency, concentration, or other characteristics (to the extent related to air quality) of any air pollutant which, under an applicable standard or limitation, the source operation was authorized to emit (including, to the extent necessary for such purposes, a description of the manner or rate of operation of the source operation), or any combination of the foregoing; and

(3) A general description of the location and/or nature of

the source operation to the extent necessary to identify the source operation and to distinguish it from other source operations (including, to the extent necessary for such purposes, a description of the device, installation, or operation constituting the source operation).

"Emission Limitation" means a requirement established by the Board, the director or the Administrator, EPA, which limits the quantity, rate or concentration of emission of air pollutants on a continuous emission reduction including any requirement relating to the operation or maintenance of a source to assure continuous emission reduction (Section 302(k)).

"Emissions Unit" means any part of a stationary source which emits or would have the potential to emit any pollutant subject to regulation under the Clean Air Act.

"Enforceable" means all limitations and conditions which are enforceable by the Administrator, including those requirements developed pursuant to 40 CFR Parts 60 and 61, requirements within the State Implementation Plan and R307, any permit requirements established pursuant to 40 CFR 52.21 or R307-401.

"EPA" means Environmental Protection Agency.

"EPA Method 9" means 40 CFR Part 60, Appendix A, Method 9, "Visual Determination of Opacity of Emissions from Stationary Sources," and Alternate 1, "Determination of the opacity of emissions from stationary sources remotely by LIDAR."

"Executive Director" means the Executive Director of the Utah Department of Environmental Quality. See Section 19-1-103(2).

"Existing Installation" means an installation, construction of which began prior to the effective date of any regulation having application to it.

"Facility" means machinery, equipment, structures of any part or accessories thereof, installed or acquired for the primary purpose of controlling or disposing of air pollution. It does not include an air conditioner, fan or other similar device for the comfort of personnel.

"Filterable PM2.5" means particles with an aerodynamic diameter equal to or less than 2.5 micrometers that are directly emitted by a source as a solid or liquid at stack or release conditions and can be captured on the filter of a stack test train.

"Fireplace" means all devices both masonry or factory built units (free standing fireplaces) with a hearth, fire chamber or similarly prepared device connected to a chimney which provides the operator with little control of combustion air, leaving its fire chamber fully or at least partially open to the room. Fireplaces include those devices with circulating systems, heat exchangers, or draft reducing doors with a net thermal efficiency of no greater than twenty percent and are used for aesthetic purposes.

"Fugitive Dust" means particulate, composed of soil and/or industrial particulates such as ash, coal, minerals, etc., which becomes airborne because of wind or mechanical disturbance of surfaces. Natural sources of dust and fugitive emissions are not fugitive dust within the meaning of this definition.

"Fugitive Emissions" means emissions from an installation or facility which are neither passed through an air cleaning device nor vented through a stack or could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Garbage" means all putrescible animal and vegetable matter resulting from the handling, preparation, cooking and consumption of food, including wastes attendant thereto.

"Gasoline" means any petroleum distillate, used as a fuel for internal combustion engines, having a Reid vapor pressure of 4 pounds or greater.

"Hazardous Air Pollutant (HAP)" means any pollutant listed by the EPA as a hazardous air pollutant in conformance with Section 112(b) of the Clean Air Act. A list of these

pollutants is available at the Division of Air Quality.

"Household Waste" means any solid or liquid material normally generated by the family in a residence in the course of ordinary day-to-day living, including but not limited to garbage, paper products, rags, leaves and garden trash.

"Incinerator" means a combustion apparatus designed for high temperature operation in which solid, semisolid, liquid, or gaseous combustible wastes are ignited and burned efficiently and from which the solid and gaseous residues contain little or no combustible material.

"Installation" means a discrete process with identifiable emissions which may be part of a larger industrial plant. Pollution equipment shall not be considered a separate installation or installations.

"LPG" means liquified petroleum gas such as propane or butane.

"Maintenance Area" means an area that is subject to the provisions of a maintenance plan that is included in the Utah state implementation plan, and that has been redesignated by EPA from nonattainment to attainment of any National Ambient Air Quality Standard.

(a) The following areas are considered maintenance areas for ozone:

- (i) Salt Lake County, effective August 18, 1997; and
- (ii) Davis County, effective August 18, 1997.

(b) The following areas are considered maintenance areas for carbon monoxide:

- (i) Salt Lake City, effective March 22, 1999;
- (ii) Ogden City, effective May 8, 2001; and
- (iii) Provo City, effective January 3, 2006.

(c) The following areas are considered maintenance areas for PM10:

(i) Salt Lake County, effective on the date that EPA approves the maintenance plan that was adopted by the Board on July 6, 2005; and

(ii) Utah County, effective on the date that EPA approves the maintenance plan that was adopted by the Board on July 6, 2005; and

(iii) Ogden City, effective on the date that EPA approves the maintenance plan that was adopted by the Board on July 6, 2005.

(d) The following area is considered a maintenance area for sulfur dioxide: all of Salt Lake County and the eastern portion of Tooele County above 5600 feet, effective on the date that EPA approves the maintenance plan that was adopted by the Board on January 5, 2005.

"Major Modification" means any physical change in or change in the method of operation of a major source that would result in a significant net emissions increase of any pollutant. A net emissions increase that is significant for volatile organic compounds shall be considered significant for ozone. Within Salt Lake and Davis Counties or any nonattainment area for ozone, a net emissions increase that is significant for nitrogen oxides shall be considered significant for ozone. Within areas of nonattainment for PM10, a significant net emission increase for any PM10 precursor is also a significant net emission increase for PM10. A physical change or change in the method of operation shall not include:

- (1) routine maintenance, repair and replacement;
- (2) use of an alternative fuel or raw material by reason of an order under section 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;
- (3) use of an alternative fuel by reason of an order or rule under section 125 of the federal Clean Air Act;
- (4) use of an alternative fuel at a steam generating unit to the extent that the fuel is generated from municipal solid waste;
- (5) use of an alternative fuel or raw material by a source:
 - (a) which the source was capable of accommodating before

January 6, 1975, unless such change would be prohibited under any enforceable permit condition; or

(b) which the source is otherwise approved to use;

(6) an increase in the hours of operation or in the production rate unless such change would be prohibited under any enforceable permit condition;

(7) any change in ownership at a source

(8) the addition, replacement or use of a pollution control project at an existing electric utility steam generating unit, unless the director determines that such addition, replacement, or use renders the unit less environmentally beneficial, or except:

(a) when the director has reason to believe that the pollution control project would result in a significant net increase in representative actual annual emissions of any criteria pollutant over levels used for that source in the most recent air quality impact analysis in the area conducted for the purpose of Title I of the Clean Air Act, if any, and

(b) the director determines that the increase will cause or contribute to a violation of any national ambient air quality standard or PSD increment, or visibility limitation.

(9) the installation, operation, cessation, or removal of a temporary clean coal technology demonstration project, provided that the project complies with:

(a) the Utah State Implementation Plan; and

(b) other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated.

"Major Source" means, to the extent provided by the federal Clean Air Act as applicable to R307:

(1) any stationary source of air pollutants which emits, or has the potential to emit, one hundred tons per year or more of any pollutant subject to regulation under the Clean Air Act; or

(a) any source located in a nonattainment area for carbon monoxide which emits, or has the potential to emit, carbon monoxide in the amounts outlined in Section 187 of the federal Clean Air Act with respect to the severity of the nonattainment area as outlined in Section 187 of the federal Clean Air Act; or

(b) any source located in Salt Lake or Davis Counties or in a nonattainment area for ozone which emits, or has the potential to emit, VOC or nitrogen oxides in the amounts outlined in Section 182 of the federal Clean Air Act with respect to the severity of the nonattainment area as outlined in Section 182 of the federal Clean Air Act; or

(c) any source located in a nonattainment area for PM10 which emits, or has the potential to emit, PM10 or any PM10 precursor in the amounts outlined in Section 189 of the federal Clean Air Act with respect to the severity of the nonattainment area as outlined in Section 189 of the federal Clean Air Act.

(2) any physical change that would occur at a source not qualifying under subpart 1 as a major source, if the change would constitute a major source by itself;

(3) the fugitive emissions and fugitive dust of a stationary source shall not be included in determining for any of the purposes of these R307 rules whether it is a major stationary source, unless the source belongs to one of the following categories of stationary sources:

(a) Coal cleaning plants (with thermal dryers);

(b) Kraft pulp mills;

(c) Portland cement plants;

(d) Primary zinc smelters;

(e) Iron and steel mills;

(f) Primary aluminum or reduction plants;

(g) Primary copper smelters;

(h) Municipal incinerators capable of charging more than 250 tons of refuse per day;

(i) Hydrofluoric, sulfuric, or nitric acid plants;

(j) Petroleum refineries;

(k) Lime plants;

(l) Phosphate rock processing plants;
 (m) Coke oven batteries;
 (n) Sulfur recovery plants;
 (o) Carbon black plants (furnace process);
 (p) Primary lead smelters;
 (q) Fuel conversion plants;
 (r) Sintering plants;
 (s) Secondary metal production plants;
 (t) Chemical process plants;
 (u) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British Thermal Units per hour heat input;

(v) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;

(w) Taconite ore processing plants;

(x) Glass fiber processing plants;

(y) Charcoal production plants;

(z) Fossil fuel-fired steam electric plants of more than 250 million British Thermal Units per hour heat input;

(aa) Any other stationary source category which, as of August 7, 1980, is being regulated under section 111 or 112 of the federal Clean Air Act.

"Modification" means any planned change in a source which results in a potential increase of emission.

"National Ambient Air Quality Standards (NAAQS)" means the allowable concentrations of air pollutants in the ambient air specified by the Federal Government (Title 40, Code of Federal Regulations, Part 50).

"Net Emissions Increase" means the amount by which the sum of the following exceeds zero:

(1) any increase in actual emissions from a particular physical change or change in method of operation at a source; and

(2) any other increases and decreases in actual emissions at the source that are contemporaneous with the particular change and are otherwise creditable. For purposes of determining a "net emissions increase":

(a) An increase or decrease in actual emissions is contemporaneous with the increase from the particular change only if it occurs between the date five years before construction on the particular change commences; and the date that the increase from the particular change occurs.

(b) An increase or decrease in actual emissions is creditable only if it has not been relied on in issuing a prior approval for the source which approval is in effect when the increase in actual emissions for the particular change occurs.

(c) An increase or decrease in actual emission of sulfur dioxide, nitrogen oxides or particulate matter which occurs before an applicable minor source baseline date is creditable only if it is required to be considered in calculating the amount of maximum allowable increases remaining available. With respect to particulate matter, only PM10 emissions will be used to evaluate this increase or decrease.

(d) An increase in actual emissions is creditable only to the extent that the new level of actual emissions exceeds the old level.

(e) A decrease in actual emissions is creditable only to the extent that:

(i) The old level of actual emissions or the old level of allowable emissions, whichever is lower, exceeds the new level of actual emissions;

(ii) It is enforceable at and after the time that actual construction on the particular change begins; and

(iii) It has approximately the same qualitative significance for public health and welfare as that attributed to the increase from the particular change.

(iv) It has not been relied on in issuing any permit under R307-401 nor has it been relied on in demonstrating attainment or reasonable further progress.

(f) An increase that results from a physical change at a source occurs when the emissions unit on which construction occurred becomes operational and begins to emit a particular pollutant. Any replacement unit that requires shakedown becomes operational only after a reasonable shakedown period, not to exceed 180 days.

"New Installation" means an installation, construction of which began after the effective date of any regulation having application to it.

"Nonattainment Area" means an area designated by the Environmental Protection Agency as nonattainment under Section 107, Clean Air Act for any National Ambient Air Quality Standard. The designations for Utah are listed in 40 CFR 81.345.

"Offset" means an amount of emission reduction, by a source, greater than the emission limitation imposed on such source by these regulations and/or the State Implementation Plan.

"Opacity" means the capacity to obstruct the transmission of light, expressed as percent.

"Open Burning" means any burning of combustible materials resulting in emission of products of combustion into ambient air without passage through a chimney or stack.

"Owner or Operator" means any person who owns, leases, controls, operates or supervises a facility, an emission source, or air pollution control equipment.

"PSD" Area means an area designated as attainment or unclassifiable under section 107(d)(1)(D) or (E) of the federal Clean Air Act.

"PM2.5" means particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers as measured by an EPA reference or equivalent method.

"PM2.5 Precursor" means any chemical compound or substance which, after it has been emitted into the atmosphere, undergoes chemical or physical changes that convert it into particulate matter, specifically PM2.5, and has been identified in the applicable implementation plan for PM2.5 as significant for the purpose of developing control measures. Specifically, PM2.5 precursors include SO₂, NO_x, and VOC.

"PM10" means particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers as measured by an EPA reference or equivalent method.

"PM10 Precursor" means any chemical compound or substance which, after it has been emitted into the atmosphere, undergoes chemical or physical changes that convert it into particulate matter, specifically PM10.

"Part 70 Source" means any source subject to the permitting requirements of R307-415.

"Person" means an individual, trust, firm, estate, company, corporation, partnership, association, state, state or federal agency or entity, municipality, commission, or political subdivision of a state. (Subsection 19-2-103(4)).

"Pollution Control Project" means any activity or project at an existing electric utility steam generating unit for purposes of reducing emissions from such unit. Such activities or projects are limited to:

(1) The installation of conventional or innovative pollution control technology, including but not limited to advanced flue gas desulfurization, sorbent injection for sulfur dioxide and nitrogen oxides controls and electrostatic precipitators;

(2) An activity or project to accommodate switching to a fuel which is less polluting than the fuel used prior to the activity or project, including, but not limited to natural gas or coal reburning, or the cofiring of natural gas and other fuels for the purpose of controlling emissions;

(3) A permanent clean coal technology demonstration project conducted under Title II, sec. 101(d) of the Further Continuing Appropriations Act of 1985 (sec. 5903(d) of title 42

of the United States Code), or subsequent appropriations, up to a total amount of \$2,500,000,000 for commercial demonstration of clean coal technology, or similar projects funded through appropriations for the Environmental Protection Agency; or

(4) A permanent clean coal technology demonstration project that constitutes a repowering project.

"Potential to Emit" means the maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

"Primary PM_{2.5}" means the sum of filterable PM_{2.5} and condensable PM_{2.5}.

"Process Level" means the operation of a source, specific to the kind or type of fuel, input material, or mode of operation.

"Process Rate" means the quantity per unit of time of any raw material or process intermediate consumed, or product generated, through the use of any equipment, source operation, or control apparatus. For a stationary internal combustion unit or any other fuel burning equipment, this term may be expressed as the quantity of fuel burned per unit of time.

"Reactivation of a Very Clean Coal-Fired Electric Utility Steam Generating Unit" means any physical change or change in the method of operation associated with the commencement of commercial operations by a coal-fired utility unit after a period of discontinued operation where the unit:

(1) Has not been in operation for the two-year period prior to the enactment of the Clean Air Act Amendments of 1990, and the emissions from such unit continue to be carried in the emission inventory at the time of enactment;

(2) Was equipped prior to shutdown with a continuous system of emissions control that achieves a removal efficiency for sulfur dioxide of no less than 85 percent and a removal efficiency for particulates of no less than 98 percent;

(3) Is equipped with low-NO_x burners prior to the time of commencement of operations following reactivation; and

(4) Is otherwise in compliance with the requirements of the Clean Air Act.

"Reasonable Further Progress" means annual incremental reductions in emission of an air pollutant which are sufficient to provide for attainment of the NAAQS by the date identified in the State Implementation Plan.

"Refuse" means solid wastes, such as garbage and trash.

"Regulated air pollutant" means any of the following:

(a) Nitrogen oxides or any volatile organic compound;

(b) Any pollutant for which a national ambient air quality standard has been promulgated;

(c) Any pollutant that is subject to any standard promulgated under Section 111 of the Act, Standards of Performance for New Stationary Sources;

(d) Any Class I or II substance subject to a standard promulgated under or established by Title VI of the Act, Stratospheric Ozone Protection;

(e) Any pollutant subject to a standard promulgated under Section 112, Hazardous Air Pollutants, or other requirements established under Section 112 of the Act, including Sections 112(g), (j), and (r) of the Act, including any of the following:

(i) Any pollutant subject to requirements under Section 112(j) of the Act, Equivalent Emission Limitation by Permit. If the Administrator fails to promulgate a standard by the date established pursuant to Section 112(e) of the Act, any pollutant for which a subject source would be major shall be considered to be regulated on the date 18 months after the applicable date established pursuant to Section 112(e) of the Act;

(ii) Any pollutant for which the requirements of Section

112(g)(2) of the Act (Construction, Reconstruction and Modification) have been met, but only with respect to the individual source subject to Section 112(g)(2) requirement.

"Repowering" means replacement of an existing coal-fired boiler with one of the following clean coal technologies: atmospheric or pressurized fluidized bed combustion, integrated gasification combined cycle, magnetohydrodynamics, direct and indirect coal-fired turbines, integrated gasification fuel cells, or as determined by the Administrator, in consultation with the Secretary of Energy, a derivative of one or more of these technologies, and any other technology capable of controlling multiple combustion emissions simultaneously with improved boiler or generation efficiency and with significantly greater waste reduction relative to the performance of technology in widespread commercial use as of November 15, 1990.

(1) Repowering shall also include any oil and/or gas-fired unit which has been awarded clean coal technology demonstration funding as of January 1, 1991, by the Department of Energy.

(2) The director shall give expedited consideration to permit applications for any source that satisfies the requirements of this definition and is granted an extension under section 409 of the Clean Air Act.

"Representative Actual Annual Emissions" means the average rate, in tons per year, at which the source is projected to emit a pollutant for the two-year period after a physical change or change in the method of operation of unit, (or a different consecutive two-year period within 10 years after that change, where the director determines that such period is more representative of source operations), considering the effect any such change will have on increasing or decreasing the hourly emissions rate and on projected capacity utilization. In projecting future emissions the director shall:

(1) Consider all relevant information, including but not limited to, historical operational data, the company's own representations, filings with the State of Federal regulatory authorities, and compliance plans under title IV of the Clean Air Act; and

(2) Exclude, in calculating any increase in emissions that results from the particular physical change or change in the method of operation at an electric utility steam generating unit, that portion of the unit's emissions following the change that could have been accommodated during the representative baseline period and is attributable to an increase in projected capacity utilization at the unit that is unrelated to the particular change, including any increased utilization due to the rate of electricity demand growth for the utility system as a whole.

"Residence" means a dwelling in which people live, including all ancillary buildings.

"Residential Solid Fuel Burning" device means any residential burning device except a fireplace connected to a chimney that burns solid fuel and is capable of, and intended for use as a space heater, domestic water heater, or indoor cooking appliance, and has an air-to-fuel ratio less than 35-to-1 as determined by the test procedures prescribed in 40 CFR 60.534. It must also have a useable firebox volume of less than 6.10 cubic meters or 20 cubic feet, a minimum burn rate less than 5 kilograms per hour or 11 pounds per hour as determined by test procedures prescribed in 40 CFR 60.534, and weigh less than 800 kilograms or 362.9 pounds. Appliances that are described as prefabricated fireplaces and are designed to accommodate doors or other accessories that would create the air starved operating conditions of a residential solid fuel burning device shall be considered as such. Fireplaces are not included in this definition for solid fuel burning devices.

"Road" means any public or private road.

"Salvage Operation" means any business, trade or industry engaged in whole or in part in salvaging or reclaiming any product or material, including but not limited to metals,

chemicals, shipping containers or drums.

"Secondary Emissions" means emissions which would occur as a result of the construction or operation of a major source or major modification, but do not come from the major source or major modification itself.

Secondary emissions must be specific, well defined, quantifiable, and impact the same general area as the source or modification which causes the secondary emissions. Secondary emissions include emissions from any off-site support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the major source or major modification. Secondary emissions do not include any emissions which come directly from a mobile source such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

Fugitive emissions and fugitive dust from the source or modification are not considered secondary emissions.

"Secondary PM2.5" means particles that form or grow in mass through chemical reactions in the ambient air well after dilution and condensation have occurred. Secondary PM2.5 is usually formed at some distance downwind from the source.

"Significant" means:

(1) In reference to a net emissions increase or the potential of a source to emit any of the following pollutants, a rate of emissions that would equal or exceed any of the following rates:

Carbon monoxide: 100 ton per year (tpy);

Nitrogen oxides: 40 tpy;

Sulfur dioxide: 40 tpy;

PM10: 15 tpy;

PM2.5: 10 tpy;

Particulate matter: 25 tpy;

Ozone: 40 tpy of volatile organic compounds;

Lead: 0.6 tpy.

"Solid Fuel" means wood, coal, and other similar organic material or combination of these materials.

"Solvent" means organic materials which are liquid at standard conditions (Standard Temperature and Pressure) and which are used as solvers, viscosity reducers, or cleaning agents.

"Source" means any structure, building, facility, or installation which emits or may emit any air pollutant subject to regulation under the Clean Air Act and which is located on one or more continuous or adjacent properties and which is under the control of the same person or persons under common control. A building, structure, facility, or installation means all of the pollutant-emitting activities which belong to the same industrial grouping. Pollutant-emitting activities shall be considered as part of the same industrial grouping if they belong to the same "Major Group" (i.e. which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement (US Government Printing Office stock numbers 4101-0065 and 003-005-00176-0, respectively).

"Stack" means any point in a source designed to emit solids, liquids, or gases into the air, including a pipe or duct but not including flares.

"Standards of Performance for New Stationary Sources" means the Federally established requirements for performance and record keeping (Title 40 Code of Federal Regulations, Part 60).

"State" means Utah State.

"Temporary" means not more than 180 calendar days.

"Temporary Clean Coal Technology Demonstration Project" means a clean coal technology demonstration project that is operated for a period of 5 years or less, and which complies with the Utah State Implementation Plan and other requirements necessary to attain and maintain the national ambient air quality standards during the project and after it is terminated.

"Threshold Limit Value - Ceiling (TLV-C)" means the airborne concentration of a substance which may not be exceeded, as adopted by the American Conference of Governmental Industrial Hygienists in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices, (2009)."

"Threshold Limit Value - Time Weighted Average (TLV-TWA)" means the time-weighted airborne concentration of a substance adopted by the American Conference of Governmental Industrial Hygienists in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices, (2009)."

"Total Suspended Particulate (TSP)" means minute separate particles of matter, collected by high volume sampler.

"Toxic Screening Level" means an ambient concentration of an air pollutant equal to a threshold limit value - ceiling (TLV-C) or threshold limit value-time weighted average (TLV-TWA) divided by a safety factor.

"Trash" means solids not considered to be highly flammable or explosive including, but not limited to clothing, rags, leather, plastic, rubber, floor coverings, excelsior, tree leaves, yard trimmings and other similar materials.

"Volatile Organic Compound (VOC)" means VOC as defined in 40 CFR 51.100(s), effective as of the date referenced in R307-101-3, is hereby adopted and incorporated by reference.

"Waste" means all solid, liquid or gaseous material, including, but not limited to, garbage, trash, household refuse, construction or demolition debris, or other refuse including that resulting from the prosecution of any business, trade or industry.

"Zero Drift" means the change in the instrument meter readout over a stated period of time of normal continuous operation when the VOC concentration at the time of measurement is zero.

R307-101-3. Version of Code of Federal Regulations Incorporated by Reference.

Except as specifically identified in an individual rule, the version of the Code of Federal Regulations (CFR) incorporated throughout R307 is dated July 1, 2014.

KEY: air pollution, definitions

Notice of Continuation May 8, 2014

19-2-104(1)(a)

R307. Environmental Quality, Air Quality.**R307-102. General Requirements: Broadly Applicable Requirements.****R307-102-1. Air Pollution Prohibited; Periodic Reports Required.**

(1) Emission of air pollutants in sufficient quantities to cause air pollution as defined in R307-101-2 is prohibited. The State statute provides for penalties up to \$50,000/day for violation of State statutes, regulations, rules or standards (See Section 19-2-115 for further details).

(2) Periodic Reports and Availability of Information. The owner or operator of any stationary air pollutant source in Utah shall furnish to the director the periodic reports required under Section 19-2-104(1)(c) and any other information as the director may deem necessary to determine whether the source is in compliance with Utah and Federal regulations and standards. The information thus obtained will be correlated with applicable emission standards or limitations and will be available to the public during normal business hours at the Division of Air Quality.

R307-102-2. Confidentiality of Information.

Any person submitting information pursuant to these regulations may request that such information be treated as a trade secret or on a confidential basis, in which case the director shall so treat such information. If no claim is made at the time of submission, the director may make the information available to the public without further notice. Information required to be disclosed to the public under State or Federal law may not be requested to be kept confidential. Justification supporting claims of confidentiality shall be provided at the time of submission on the information. Each page claimed "confidential" shall be marked "confidential business information" by the applicant and the confidential information on each page shall be clearly specified. Claims of confidentiality for the name and address of applicants for an approval order will be denied. Confidential information or any other information or report received by the director shall be available to EPA upon request and the person who submitted the information shall be notified simultaneously of its release to EPA.

R307-102-3. Reserved.

Reserved.

R307-102-4. Variances Authorized.

(1) Variance from these regulations may be granted by the Board as provided by law (See Section 19-2-113) unless prohibited by the Clean Air Act:

(a) to permit operation of an air pollution source for the time period involved in installing or constructing air pollution control equipment in accordance with a compliance schedule negotiated by the director and approved by the Board.

(b) to permit operation of an air pollution source where there is no practicable means known or available for adequate prevention, abatement or control of the air pollutants involved. Such a variance shall be only until the necessary means for prevention, abatement or control becomes known and available, subject to the use of substitute or alternate measures the Board may prescribe.

(c) to permit operation of an air pollution source where the control measures, because of their extent or cost, must be spread over a considerable period of time.

(2) Variance requests, as set forth in Section 19-2-113, may be submitted by the owner or operator who is in control of any plant, building, structure, establishment, process or equipment.

R307-102-5. No Reduction in Pay.

In accordance with paragraph 110(a)(6), Clean Air Act as amended August 1977, owners or operators may not temporarily reduce the pay of any employee by reason of the use of a supplemental or intermittent or other dispersion dependent control system for the purposes of meeting any air pollution requirement adopted pursuant to the Clean Air Act as amended August 1977.

R307-102-6. Emissions Standards.

Other provisions of R307 may require more stringent controls than listed herein, in which case those requirements must be met.

R307. Environmental Quality, Air Quality.**R307-110. General Requirements: State Implementation Plan.****R307-110-1. Incorporation by Reference.**

To meet requirements of the Federal Clean Air Act, the Utah State Implementation Plan (SIP) must be incorporated by reference into these rules. Copies of the SIP are available on the division's website.

R307-110-2. Section I, Legal Authority.

The Utah State Implementation Plan, Section I, Legal Authority, as most recently amended by the Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-3. Section II, Review of New and Modified Air Pollution Sources.

The Utah State Implementation Plan, Section II, Review of New and Modified Air Pollution Sources, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-4. Section III, Source Surveillance.

The Utah State Implementation Plan, Section III, Source Surveillance, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-5. Section IV, Ambient Air Monitoring Program.

The Utah State Implementation Plan, Section IV, Ambient Air Monitoring Program, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-6. Section V, Resources.

The Utah State Implementation Plan, Section V, Resources, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-7. Section VI, Intergovernmental Cooperation.

The Utah State Implementation Plan, Section VI, Intergovernmental Cooperation, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-8. Section VII, Prevention of Air Pollution Emergency Episodes.

The Utah State Implementation Plan, Section VII, Prevention of Air Pollution Emergency Episodes, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-9. Section VIII, Prevention of Significant Deterioration.

The Utah State Implementation Plan, Section VIII, Prevention of Significant Deterioration, as most recently amended by the Utah Air Quality Board on March 8, 2006, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-10. Section IX, Control Measures for Area and Point Sources, Part A, Fine Particulate Matter.

The Utah State Implementation Plan, Section IX, Control Measures for Area and Point Sources, Part A, Fine Particulate

Matter, as most recently amended by the Utah Air Quality Board on December 2, 2015, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-11. Section IX, Control Measures for Area and Point Sources, Part B, Sulfur Dioxide.

The Utah State Implementation Plan, Section IX, Control Measures for Area and Point Sources, Part B, Sulfur Dioxide, as most recently amended by the Utah Air Quality Board on January 5, 2005, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-12. Section IX, Control Measures for Area and Point Sources, Part C, Carbon Monoxide.

The Utah State Implementation Plan, Section IX, Control Measures for Area and Point Sources, Part C, Carbon Monoxide, as most recently amended by the Utah Air Quality Board on November 3, 2004, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-13. Section IX, Control Measures for Area and Point Sources, Part D, Ozone.

The Utah State Implementation Plan, Section IX, Control Measures for Area and Point Sources, Part D, Ozone, as most recently amended by the Utah Air Quality Board on January 3, 2007, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-14. Section IX, Control Measures for Area and Point Sources, Part E, Nitrogen Dioxide.

The Utah State Implementation Plan, Section IX, Control Measures for Area and Point Sources, Part E, Nitrogen Dioxide, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-15. Section IX, Control Measures for Area and Point Sources, Part F, Lead.

The Utah State Implementation Plan, Section IX, Control Measures for Area and Point Sources, Part F, Lead, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

Reserved.

R307-110-17. Section IX, Control Measures for Area and Point Sources, Part H, Emissions Limits.

The Utah State Implementation Plan, Section IX, Control Measures for Area and Point Sources, Part H, Emissions Limits, as most recently amended by the Utah Air Quality Board on December 2, 2015, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-18. Reserved.

Reserved.

R307-110-19. Section XI, Other Control Measures for Mobile Sources.

The Utah State Implementation Plan, Section XI, Other Control Measures for Mobile Sources, as most recently amended by the Utah Air Quality Board on February 9, 2000, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-20. Section XII, Transportation Conformity Consultation.

The Utah State Implementation Plan, Section XII,

Transportation Conformity Consultation, as most recently amended by the Utah Air Quality Board on May 2, 2007, pursuant to 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-21. Section XIII, Analysis of Plan Impact.

The Utah State Implementation Plan, Section XIII, Analysis of Plan Impact, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-22. Section XIV, Comprehensive Emission Inventory.

The Utah State Implementation Plan, Section XIV, Comprehensive Emission Inventory, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-23. Section XV, Utah Code Title 19, Chapter 2, Air Conservation Act.

Section XV of the Utah State Implementation Plan contains Utah Code Title 19, Chapter 2, Air Conservation Act.

R307-110-24. Section XVI, Public Notification.

The Utah State Implementation Plan, Section XVI, Public Notification, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-25. Section XVII, Visibility Protection.

The Utah State Implementation Plan, Section XVII, Visibility Protection, as most recently amended by the Utah Air Quality Board on March 26, 1993, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-26. Section XVIII, Demonstration of GEP Stack Height.

The Utah State Implementation Plan, Section XVIII, Demonstration of GEP Stack Height, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-27. Section XIX, Small Business Assistance Program.

The Utah State Implementation Plan, Section XIX, Small Business Assistance Program, as most recently amended by the Utah Air Quality Board on December 18, 1992, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-28. Regional Haze.

The Utah State Implementation Plan, Section XX, Regional Haze, as most recently amended by the Utah Air Quality Board on September xx, 2015, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-29. Section XXI, Diesel Inspection and Maintenance Program.

The Utah State Implementation Plan, Section XXI, Diesel Inspection and Maintenance Program, as most recently amended by the Utah Air Quality Board on July 12, 1995, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-30. Section XXII, General Conformity.

The Utah State Implementation Plan, Section XXII, General Conformity, as adopted by the Utah Air Quality Board on October 4, 1995, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-31. Section X, Vehicle Inspection and Maintenance Program, Part A, General Requirements and Applicability.

The Utah State Implementation Plan, Section X, Vehicle Inspection and Maintenance Program, Part A, General Requirements and Applicability, as most recently amended by the Utah Air Quality Board on December 5, 2012, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-32. Section X, Vehicle Inspection and Maintenance Program, Part B, Davis County.

The Utah State Implementation Plan, Section X, Vehicle Inspection and Maintenance Program, Part B, Davis County, as most recently amended by the Utah Air Quality Board on December 5, 2012, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-33. Section X, Vehicle Inspection and Maintenance Program, Part C, Salt Lake County.

The Utah State Implementation Plan, Section X, Vehicle Inspection and Maintenance Program, Part C, Salt Lake County, as most recently amended by the Utah Air Quality Board on October 6, 2004, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-34. Section X, Vehicle Inspection and Maintenance Program, Part D, Utah County.

The Utah State Implementation Plan, Section X, Vehicle Inspection and Maintenance Program, Part D, Utah County, as most recently amended by the Utah Air Quality Board on December 5, 2012, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-35. Section X, Vehicle Inspection and Maintenance Program, Part E, Weber County.

The Utah State Implementation Plan, Section X, Vehicle Inspection and Maintenance Program, Part E, Weber County, as most recently amended by the Utah Air Quality Board on December 5, 2012, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-36. Section X, Vehicle Inspection and Maintenance Program, Part F, Cache County.

The Utah State Implementation Plan, Section X, Vehicle Inspection and Maintenance Program, Part F, Cache County, as most recently adopted by the Utah Air Quality Board on November 6, 2013, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

R307-110-37. Section XXIII, Interstate Transport.

The Utah State Implementation Plan, Section XXIII, Interstate Transport, as most recently adopted by the Utah Air Quality Board on February 7, 2007, pursuant to Section 19-2-104, is hereby incorporated by reference and made a part of these rules.

December 3, 2015
Notice of Continuation February 1, 2012**

19-2-104

R307. Environmental Quality, Air Quality.**R307-150. Emission Inventories.****R307-150-1. Purpose and General Requirements.**

(1) The purpose of R307-150 is:

(a) to establish by rule the time frame, pollutants, and information that sources must include in inventory submittals; and

(b) to establish consistent reporting requirements for stationary sources in Utah to determine whether sulfur dioxide emissions remain below the sulfur dioxide milestones established in the State Implementation Plan for Regional Haze, section XX.E.1.a, incorporated by reference in R307-110-28.

(2) The requirements of R307-150 replace any annual inventory reporting requirements in approval orders or operating permits issued prior to December 4, 2003.

(3) Emission inventories shall be submitted on or before ninety days following the effective date of this rule and thereafter on or before April 15 of each year following the calendar year for which an inventory is required. The inventory shall be submitted in a format specified by the Division of Air Quality following consultation with each source.

(4) The executive secretary may require at any time a full or partial year inventory upon reasonable notice to affected sources when it is determined that the inventory is necessary to develop a state implementation plan, to assess whether there is a threat to public health or safety or the environment, or to determine whether the source is in compliance with R307.

(5) Recordkeeping Requirements.

(a) Each owner or operator of a stationary source subject to this rule shall maintain a copy of the emission inventory submitted to the Division of Air Quality and records indicating how the information submitted in the inventory was determined, including any calculations, data, measurements, and estimates used. The records under R307-150-4 shall be kept for ten years. Other records shall be kept for a period of at least five years from the due date of each inventory.

(b) The owner or operator of the stationary source shall make these records available for inspection by any representative of the Division of Air Quality during normal business hours.

R307-150-2. Definitions.

The following additional definitions apply to R307-150.

"Acute pollutant" means any noncarcinogenic air pollutant for which a threshold limit value - ceiling (TLV-C) has been adopted by the American Conference of Governmental Industrial Hygienists in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices," 2003 edition.

"Carcinogenic pollutant" means any air pollutant that is classified as a known human carcinogen (A1) or suspected human carcinogen (A2) by the American Conference of Governmental Industrial Hygienists in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices," 2003 edition.

"Chronic Pollutant" means any noncarcinogenic air pollutant for which a threshold limit value - time weighted average (TLV-TWA) having no threshold limit value - ceiling (TLV-C) has been adopted by the American Conference of Governmental Industrial Hygienists in its "Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices," 2003 edition.

"Dioxins" and "Furans" mean total tetra- through octachlorinated dibenzo-p-dioxins and dibenzofurans.

"Emissions unit" means emissions unit as defined in R307-415-3.

"Large Major Source" means a major source that emits or has the potential to emit 2500 tons or more per year of oxides of sulfur, oxides of nitrogen, or carbon monoxide, or that emits or

has the potential to emit 250 tons or more per year of PM₁₀, PM_{2.5}, volatile organic compounds, or ammonia.

"Lead" means elemental lead and the portion of its compounds measured as elemental lead.

"Major Source" means major source as defined in R307-415-3.

R307-150-3. Applicability.

(1) R307-150-4 applies to all stationary sources with actual emissions of 100 tons or more per year of sulfur dioxide in calendar year 2000 or any subsequent year unless exempted in (a) below. Sources subject to R307-150-4 may be subject to other sections of R307-150.

(a) A stationary source that meets the requirements of R307-150-3(1) that has permanently ceased operation is exempt from the requirements of R307-150-4 for all years during which the source did not operate at any time during the year.

(b) Except as provided in (a) above, any source that meets the criteria of R307-150-3(1) and that emits less than 100 tons per year of sulfur dioxide in any subsequent year shall remain subject to the requirements of R307-150-4 until 2018 or until the first control period under the Western Backstop Sulfur Dioxide Trading Program as established in R307-250-12(1)(a), whichever is earlier.

(2) R307-150-5 applies to large major sources.

(3) R307-150-6 applies to:

(a) each major source that is not a large major source;

(b) each source with the potential to emit 5 tons or more per year of lead; and

(c) each source not included in (2) or (3)(a) or (3)(b) above that is located in Davis, Salt Lake, Utah, or Weber Counties and that has the potential to emit 25 tons or more per year of any combination of oxides of nitrogen, oxides of sulfur and PM₁₀, or the potential to emit 10 tons or more per year of volatile organic compounds.

(4) R307-150-7 applies to Part 70 sources not included in (2) or (3) above.

R307-150-4. Sulfur Dioxide Milestone Inventory Requirements.

(1) Annual Sulfur Dioxide Emission Report.

(a) Sources identified in R307-150-3(1) shall submit an annual inventory of sulfur dioxide emissions beginning with calendar year 2003 for all emissions units including fugitive emissions.

(b) The inventory shall include the rate and period of emissions, excess or breakdown emissions, startup and shut down emissions, the specific emissions unit that is the source of the air pollution, type and efficiency of the air pollution control equipment, percent of sulfur content in fuel and how the percent is calculated, and other information necessary to quantify operation and emissions and to evaluate pollution control efficiency. The emissions of a pollutant shall be calculated using the source's actual operating hours, production rates, and types of materials processed, stored, or combusted during the inventoried time period.

(2) Each source subject to R307-150-4 that is also subject to 40 CFR Part 75 reporting requirements shall submit a summary report of annual sulfur dioxide emissions that were reported to the Environmental Protection Agency under 40 CFR Part 75 in lieu of the reporting requirements in (1) above.

(3) Changes in Emission Measurement Techniques. Each source subject to R307-150-4 that uses a different emission monitoring or calculation method than was used to report their sulfur dioxide emissions in 2006 under R307-150 or 40 CFR Part 75 shall adjust their reported emissions to be comparable to the emission monitoring or calculation method that was used in 2006. The calculations that are used to make this adjustment shall be included with the annual emission report.

R307-150-5. Sources Identified in R307-150-3(2), Large Major Source Inventory Requirements.

(1) Each large major source shall submit an emission inventory annually beginning with calendar year 2002. The inventory shall include PM10, PM2.5, oxides of sulfur, oxides of nitrogen, carbon monoxide, volatile organic compounds, and ammonia for all emissions units including fugitive emissions.

(2) For every third year beginning with 2005, the inventory shall also include all other chargeable pollutants and hazardous air pollutants not exempted in R307-150-8.

(3) For each pollutant specified in (1) or (2) above, the inventory shall include the rate and period of emissions, excess or breakdown emissions, startup and shut down emissions, the specific emissions unit that is the source of the air pollution, composition of air pollutant, type and efficiency of the air pollution control equipment, and other information necessary to quantify operation and emissions and to evaluate pollution control efficiency. The emissions of a pollutant shall be calculated using the source's actual operating hours, production rates, and types of materials processed, stored, or combusted during the inventoried time period.

Arsenic	0.21
Benzene	33.90
Beryllium	0.04
Ethylene oxide	38.23
Formaldehyde	5.83

(2) Hazardous air pollutants, except for dioxins or furans, are exempt from being reported if they are emitted in an amount less than the smaller of the following:

(a) 500 pounds per year; or
 (b) for acute pollutants, the applicable TLV-C expressed in milligrams per cubic meter and multiplied by 15.81 to obtain the pounds-per-year threshold; or

(c) for chronic pollutants, the applicable TLV-TWA expressed in milligrams per cubic meter and multiplied by 21.22 to obtain the pounds-per-year threshold; or

(d) for carcinogenic pollutants, the applicable TLV-C or TLV-TWA expressed in milligrams per cubic meter and multiplied by 7.07 to obtain the pounds-per-year threshold.

**KEY: air pollution, reports, inventories

 Notice of Continuation January 28, 2014**

R307-150-6. Sources Identified in R307-150-3(3).

(1) Each source identified in R307-150-3(3) shall submit an inventory every third year beginning with calendar year 2002 for all emissions units including fugitive emissions.

(a) The inventory shall include PM10, PM2.5, oxides of sulfur, oxides of nitrogen, carbon monoxide, volatile organic compounds, ammonia, other chargeable pollutants, and hazardous air pollutants not exempted in R307-150-8.

(b) For each pollutant, the inventory shall include the rate and period of emissions, excess or breakdown emissions, startup and shut down emissions, the specific emissions unit which is the source of the air pollution, composition of air pollutant, type and efficiency of the air pollution control equipment, and other information necessary to quantify operation and emissions and to evaluate pollution control efficiency. The emissions of a pollutant shall be calculated using the source's actual operating hours, production rates, and types of materials processed, stored, or combusted during the inventoried time period.

(2) Sources identified in R307-150-3(3) shall submit an inventory for each year after 2002 in which the total amount of PM10, oxides of sulfur, oxides of nitrogen, carbon monoxide, or volatile organic compounds increases or decreases by 40 tons or more per year from the most recently submitted inventory. For each pollutant, the inventory shall meet the requirements of R307-150-6(1)(a) and (b).

R307-150-7. Sources Identified in R307-150-3(4), Other Part 70 Sources.

(1) Sources identified in R307-150-3(4) shall submit the following emissions inventory every third year beginning with calendar year 2002 for all emission units including fugitive emissions.

(2) Sources identified in R307-150-3(4) shall submit an inventory for each year after 2002 in which the total amount of PM10, oxides of sulfur, oxides of nitrogen, carbon monoxide, or volatile organic compounds increases or decreases by 40 tons or more per year from the most recently submitted inventory.

(3) The emission inventory shall include individual pollutant totals of all chargeable pollutants not exempted in R307-150-8.

R307-150-8. Exempted Hazardous Air Pollutants.

(1) The following air pollutants are exempt from this rule if they are emitted in an amount less than that listed in Table 1.

TABLE 1

POLLUTANT Pounds/year

R307. Environmental Quality, Air Quality.**R307-201. Emission Standards: General Emission Standards.****R307-201-1. Purpose.**

R307-201 establishes emission standards for all areas of the state except for sources listed in section IX, Part H of the state implementation plan or located in a PM10 nonattainment or maintenance area.

R307-201-2. Applicability.

R307-201 applies statewide to any sources of emissions except for sources listed in section IX, Part H of the state implementation plan or located in a PM10 nonattainment or maintenance area.

R307-201-3. Visible Emissions Standards.

(1) Visible emissions from installations constructed on or before April 25, 1971, except diesel engines, shall be of a shade or density no darker than 40% opacity, except as otherwise provided in these rules.

(2) Visible emissions from installations constructed after April 25, 1971, except diesel engines shall be of a shade or density no darker than 20% opacity, except as otherwise provided in these rules.

(3) Visible emissions for all incinerators, no matter when constructed, shall be of shade or density no darker than 20% opacity.

(4) No owner or operator of a gasoline powered engine or vehicle shall allow, cause or permit visible emissions.

(5) Emissions from diesel engines, except locomotives, manufactured after January 1, 1973, shall be of a shade or density no darker than 20% opacity, except for starting motion no farther than 100 yards or for stationary operation not exceeding three minutes in any hour.

(6) Emissions from diesel engines manufactured before January 1, 1973, shall be of a shade or density no darker than 40% opacity, except for starting motion no farther than 100 yards or for stationary operation not exceeding three minutes in any hour.

(7) Visible emissions exceeding the opacity standards for short time periods as the result of initial warm-up, soot blowing, cleaning of grates, building of boiler fires, cooling, etc., caused by start-up or shutdown of a facility, installation or operation, or unavoidable combustion irregularities which do not exceed three minutes in length (unavoidable combustion irregularities which exceed three minutes in length must be handled in accordance with R307-107), shall not be deemed in violation provided that the director finds that adequate control technology has been applied. The owner or operator shall minimize visible and non-visible emissions during start-up or shutdown of a facility, installation, or operation through the use of adequate control technology and proper procedures.

(8) Compliance Method. Emissions shall be brought into compliance with these requirements by reduction of the total weight of pollutants discharged per unit of time rather than by dilution of emissions with clean air.

(9) Opacity Observation. Opacity observations of emissions from stationary sources shall be conducted in accordance with EPA Method 9. Opacity observers of mobile sources and intermittent sources shall use procedures similar to Method 9, but the requirement for observations to be made at 15 second intervals over a 6-minute period shall not apply.

R307-201-4. Automobile Emission Control Devices.

Any person owning or operating any motor vehicle or motor vehicle engine registered or principally operated in the State of Utah on which is installed or incorporated a system or device for the control of crankcase emissions or exhaust emissions in compliance with the Federal motor vehicle rules,

shall maintain the system or device in operable condition and shall use it at all times that the motor vehicle or motor vehicle engine is operated. No person shall remove or make inoperable the system or device or any part thereof, except for the purpose of installing another system or device, or part thereof, which is equally or more effective in reducing emissions from the vehicle to the atmosphere.

KEY: air pollution, PM10**December 15, 2015****Notice of Continuation February 5, 2015****19-2-101****19-2-104**

R307. Environmental Quality, Air Quality.**R307-206. Emission Standards: Abrasive Blasting.****R307-206-1. Purpose.**

R307-206 establishes work practice and emission standards for abrasive blasting operations for sources located statewide except for those sources listed in section IX, Part H of the state implementation plan or located in a PM10 nonattainment or maintenance area.

R307-206-2. Definitions.

(1) The following additional definitions apply to R307-206:

"Abrasive Blasting" means the operation of cleaning or preparing a surface by forcibly propelling a stream of abrasive material against the surface.

"Abrasive Blasting Equipment" means any equipment utilized in abrasive blasting operations.

"Confined Blasting" means any abrasive blasting conducted in an enclosure which significantly restricts air pollutants from being emitted to the ambient atmosphere, including but not limited to shrouds, tanks, drydocks, buildings and structures.

"Multiple Nozzles" means a group of two or more nozzles being used for abrasive cleaning of the same surface in such close proximity that their separate plumes are indistinguishable.

"Unconfined Blasting" means any abrasive blasting which is not confined blasting as defined above.

R307-206-3. Applicability.

R307-206 applies statewide to any abrasive blasting operation, except for any source that is listed in Section IX, Part H of the state implementation plan or that is located in a PM10 nonattainment or maintenance area.

R307-206-4. Visible Emission Standards.

Visible emissions from abrasive blasting operations shall not exceed 40% opacity, except for an aggregate period of three minutes in any one hour.

R307-206-5. Visible Emission Evaluation Techniques.

(1) Visible emissions shall be measured using EPA Method 9. Visible emissions from intermittent sources shall use procedures similar to Method 9, but the requirement for observations to be made at 15 second intervals over a six-minute period shall not apply.

(2) Visible emissions from unconfined blasting shall be measured at the densest point of the emission after a major portion of the spent abrasive has fallen out, at a point not less than five feet nor more than twenty-five feet from the impact surface from any single abrasive blasting nozzle.

(3) An unconfined blasting operation that uses multiple nozzles shall be considered a single source unless it can be demonstrated by the owner or operator that each nozzle, measured separately, meets the emission and performance standards provided in R307-206-2 through 4.

(4) Visible emissions from confined blasting shall be measured at the densest point after the air pollutant leaves the enclosure.

KEY: air pollution, abrasive blasting, PM10

December 15, 2015

19-2-104(1)(a)

Notice of Continuation February 5, 2015

R307. Environmental Quality, Air Quality.**R307-303. Commercial Cooking.****R307-303-1. Purpose.**

The purpose of this rule is to reduce volatile organic compound (VOC) and PM2.5 emissions from commercial cooking equipment.

R307-303-2. Applicability.

R307-303 shall apply to Box Elder, Cache, Davis, Salt Lake, Tooele, Utah and Weber counties.

R307-303-3. Definitions.

"Catalytic oxidizer" means an emission control device that employs a catalyst fixed onto a substrate to oxidize air pollutants in an exhaust stream.

"Chain-driven charbroiler" means a semi-enclosed charbroiler designed to mechanically move food on a grated grill through the broiler.

"Charbroiler" means a cooking device composed of a grated grill and a heat source, where food resting on the grated grill cooks as the food receives direct heat from the heat source or a radiant surface.

R307-303-4. Performance Standards and Recordkeeping.

(1) Owners or operators of all chain-driven charbroilers in food service establishments shall install, maintain and operate a catalytic oxidizer.

(2) Any emission control device installed and operated under this rule shall be operated, cleaned, and maintained in accordance with the manufacturer's specifications. Manufacturer specifications for all emission controls must be maintained onsite.

(3) The owner or operator shall maintain on the premises of the food service establishment records of each of the following:

- (a) The date of installation of the emission control device;
- (b) When applicable, the date of the catalyst replacement;

and

(c) For a minimum of five years, the date, time, and a brief description of all maintenance performed on the emission control device, including, but not limited to, preventative maintenance, breakdown repair, and cleaning.

(4) Opacity of exhaust stream shall not exceed 20% opacity using EPA Method 9.

**KEY: commercial cooking, charbroilers, PM2.5, VOC
December 15, 2015 19-2-101**

R307. Environmental Quality, Air Quality.**R307-305. Nonattainment and Maintenance Areas for PM10: Emission Standards.****R307-305-1. Purpose.**

This rule establishes emission standards and work practices for sources located in PM10 nonattainment and maintenance areas to meet the reasonably available control measures requirement in section 189(a)(1)(C) of the Act.

R307-305-2. Applicability.

The requirements of R307-305 apply to the owner or operator of any source that is listed in Section IX, Part H of the state implementation plan or located in a PM10 nonattainment or maintenance area.

R307-305-3. Visible Emissions.

(1) Visible emissions from existing installations except diesel engines shall be of a shade or density no darker than 20% opacity. Visible emissions shall be measured using EPA Method 9.

(2) No owner or operator of a gasoline engine or vehicle shall allow, cause or permit the emissions of visible pollutants.

(3) Emissions from diesel engines, except locomotives, shall be of a shade or density no darker than 20% opacity, except for starting motion no farther than 100 yards or for stationary operation not exceeding three minutes in any hour.

(4) Visible emissions exceeding the opacity standards for short time periods as the result of initial warm-up, soot blowing, cleaning of grates, building of boiler fires, cooling, etc., caused by start-up or shutdown of a facility, installation or operation, or unavoidable combustion irregularities which do not exceed three minutes in length (unavoidable combustion irregularities which exceed three minutes in length must be handled in accordance with R307-107), shall not be deemed in violation provided that the director finds that adequate control technology has been applied. The owner or operator shall minimize visible and non-visible emissions during start-up or shutdown of a facility, installation, or operation through the use of adequate control technology and proper procedures.

R307-305-4. Particulate Emission Limitations and Operating Parameters (PM10).

Any source with emission limits included in Section IX, Part H, of the Utah state implementation plan shall comply with those emission limitations and operating parameters. Specific limitations will be set by the director, through an approval order issued under R307-401, for installations within a source that do not have limitations specified in the state implementation plan.

R307-305-5. Compliance Testing (PM10).

Compliance testing for PM10, sulfur dioxide, and oxides of nitrogen emission limitations shall be done in accordance with Section IX, Part H of the state implementation plan. PM10 compliance shall be determined from the results of EPA test method 201 or 201a. A backhalf analysis shall be performed for inventory purposes for each PM10 compliance test in accordance with Method 202, or other appropriate EPA approved reference method.

R307-305-6. Automobile Emission Control Devices.

Any person owning or operating any motor vehicle or motor vehicle engine registered in the State of Utah on which is installed or incorporated a system or device for the control of crankcase emissions or exhaust emissions in compliance with the Federal motor vehicle rules, shall maintain the system or device in operable condition and shall use it at all times that the motor vehicle or motor vehicle engine is operated. No person shall remove or make inoperable within the State of Utah the system or device or any part thereof, except for the purpose of

installing another system or device, or part thereof, which is equally or more effective in reducing emissions from the vehicle to the atmosphere.

R307-305-7. Compliance Schedule for New Nonattainment Areas.

The provisions of R307-305 shall apply to the owner or operator of a source that is located in any new PM10 nonattainment area 180 days after the area is officially designated a nonattainment area for PM10 by the Environmental Protection Agency. Provisions of R307-201 shall continue to apply to the owner or operator of a source during this transition period.

**KEY: air pollution, particulate matter, PM10, PM 2.5
December 15, 2015 19-2-104(1)(a)
Notice of Continuation February 5, 2015**

R307. Environmental Quality, Air Quality.**R307-306. PM10 Nonattainment and Maintenance Areas: Abrasive Blasting.****R307-306-1. Purpose.**

This rule establishes requirements that apply to abrasive blasting operations in PM10 nonattainment and maintenance areas.

R307-306-2. Definitions.

The following additional definitions apply to R307-306.

"Abrasive Blasting" means the operation of cleaning or preparing a surface by forcibly propelling a stream of abrasive material against the surface.

"Abrasive Blasting Equipment" means any equipment used in abrasive blasting operations.

"Abrasives" means any material used in abrasive blasting operations including but not limited to sand, slag, steel shot, garnet or walnut shells.

"Confined Blasting" means any abrasive blasting conducted in an enclosure that significantly restricts air pollutants from being emitted to the ambient atmosphere, including but not limited to shrouds, tanks, drydocks, buildings and structures.

"Hydroblasting" means any abrasive blasting using high pressure liquid as the propelling force.

"Multiple Nozzles" means a group of two or more nozzles used for abrasive cleaning of the same surface in such close proximity that their separate plumes are indistinguishable.

"Unconfined Blasting" means any abrasive blasting that is not confined blasting as defined above.

"Wet Abrasive Blasting" means any abrasive blasting using compressed air as the propelling force and sufficient water to minimize the plume.

R307-306-3. Applicability.

R307-306 applies to any person who operates abrasive blasting equipment in a PM10 nonattainment or maintenance area, or to sources listed in Section IX, Part H of the state implementation plan.

R307-306-4. Visible Emission Standard.

(1) Except as provided in (2) below, visible emissions from abrasive blasting operations shall not exceed 20% opacity except for an aggregate period of three minutes in any one hour.

(2) If the abrasive blasting operation complies with the performance standards in R307-306-6, visible emissions from the operation shall not exceed 40% opacity, except for an aggregate period of 3 minutes in any one hour.

R307-306-5. Visible Emission Evaluation Techniques.

(1) Visible emissions shall be measured using EPA Method 9. Visible emissions from intermittent sources shall use procedures similar to Method 9, but the requirement for observations to be made at 15 second intervals over a six minute period shall not apply.

(2) Visible emissions from unconfined blasting shall be measured at the densest point of the emission after a major portion of the spent abrasive has fallen out at a point not less than five feet nor more than twenty-five feet from the impact surface from any single abrasive blasting nozzle.

(3) An unconfined blasting operation that uses multiple nozzles shall be considered a single source unless it can be demonstrated by the owner or operator that each nozzle, measured separately, meets the visible emission standards in R307-306-4.

(4) Emissions from confined blasting shall be measured at the densest point after the air pollutant leaves the enclosure.

R307-306-6. Performance Standards.

(1) To satisfy the requirements of R307-306-4(2), the

abrasive blasting operation shall use at least one of the following performance standards:

- (a) confined blasting;
- (b) wet abrasive blasting;
- (c) hydroblasting; or
- (d) unconfined blasting using abrasives as defined in (2) below.

(2) Abrasives.

(a) Abrasives used for dry unconfined blasting referenced in (1) above shall comply with the following performance standards:

(i) Before blasting, the abrasive shall not contain more than 1% by weight material passing a #70 U.S. Standard sieve.

(ii) After blasting the abrasive shall not contain more than 1.8% by weight material 5 microns or smaller.

(b) Abrasives reused for dry unconfined blasting are exempt from (a)(ii) above, but must conform with (a)(i) above.

(3) Abrasive Certification. Sources using the performance standard of (1)(d) above to meet the requirements of R307-306-4(2) must demonstrate they have obtained abrasives from a supplier who has certified (submitted test results) to the director at least annually that such abrasives meet the requirements of (2) above.

R307-306-7. Compliance Schedule.

The provisions of R307-306 shall apply in any new PM10 nonattainment area 180 days after the area is officially designated a nonattainment area for PM10 by the Environmental Protection Agency. Provisions of R307-206 shall continue to apply to the owner or operator of a source during this transition period.

KEY: air pollution, abrasive blasting, PM10

December 15, 2015

19-2-101(1)(a)

Notice of Continuation February 5, 2015

R307. Environmental Quality, Air Quality.**R307-401. Permit: New and Modified Sources.****R307-401-1. Purpose.**

This rule establishes the application and permitting requirements for new installations and modifications to existing installations throughout the State of Utah. Additional permitting requirements apply to larger installations or installations located in nonattainment or maintenance areas. These additional requirements can be found in R307-403, R307-405, R307-406, R307-420, and R307-421. Modeling requirements in R307-410 may also apply. Each of the permitting rules establishes independent requirements, and the owner or operator must comply with all of the requirements that apply to the installation. Exemptions under R307-401 do not affect applicability of the other permitting rules.

R307-401-2. Definitions.

(1) The following additional definitions apply to R307-401.

"Actual emissions" (a) means the actual rate of emissions of an air pollutant from an emissions unit, as determined in accordance with paragraphs (b) through (d) below.

(b) In general, actual emissions as of a particular date shall equal the average rate, in tons per year, at which the unit actually emitted the air pollutant during a consecutive 24-month period which precedes the particular date and which is representative of normal source operation. The director shall allow the use of a different time period upon a determination that it is more representative of normal source operation. Actual emissions shall be calculated using the unit's actual operating hours, production rates, and types of materials processed, stored, or combusted during the selected time period.

(c) The director may presume that source-specific allowable emissions for the unit are equivalent to the actual emissions of the unit.

(d) For any emissions unit that has not begun normal operations on the particular date, actual emissions shall equal the potential to emit of the unit on that date.

"Best available control technology" means an emissions limitation (including a visible emissions standard) based on the maximum degree of reduction for each air pollutant which would be emitted from any proposed stationary source or modification which the director, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning or treatment or innovative fuel combustion techniques for control of such pollutant. In no event shall application of best available control technology result in emissions of any pollutant which would exceed the emissions allowed by any applicable standard under 40 CFR parts 60 and 61. If the director determines that technological or economic limitations on the application of measurement methodology to a particular emissions unit would make the imposition of an emissions standard infeasible, a design, equipment, work practice, operational standard or combination thereof, may be prescribed instead to satisfy the requirement for the application of best available control technology. Such standard shall, to the degree possible, set forth the emissions reduction achievable by implementation of such design, equipment, work practice or operation, and shall provide for compliance by means which achieve equivalent results.

"Building, structure, facility, or installation" means all of the pollutant-emitting activities which belong to the same industrial grouping, are located on one or more contiguous or adjacent properties, and are under the control of the same person (or persons under common control) except the activities of any vessel. Pollutant-emitting activities shall be considered as part

of the same industrial grouping if they belong to the same Major Group (i.e., which have the same two-digit code) as described in the Standard Industrial Classification Manual, 1972, as amended by the 1977 Supplement (U.S. Government Printing Office stock numbers 4101-0066 and 003-005-00176-0, respectively).

"Construction" means any physical change or change in the method of operation (including fabrication, erection, installation, demolition, or modification of an emissions unit) that would result in a change in emissions.

"Emissions unit" means any part of a stationary source that emits or would have the potential to emit any air pollutant.

"Fugitive emissions" means those emissions which could not reasonably pass through a stack, chimney, vent, or other functionally equivalent opening.

"Indirect source" means a building, structure, facility or installation which attracts or may attract mobile source activity that results in emission of a pollutant for which there is a national standard.

"Potential to emit" means the maximum capacity of a stationary source to emit an air pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable. Secondary emissions do not count in determining the potential to emit of a stationary source.

"Secondary emissions" means emissions which occur as a result of the construction or operation of a major stationary source or major modification, but do not come from the major stationary source or major modification itself. Secondary emissions include emissions from any offsite support facility which would not be constructed or increase its emissions except as a result of the construction or operation of the major stationary source or major modification. Secondary emissions do not include any emissions which come directly from a mobile source, such as emissions from the tailpipe of a motor vehicle, from a train, or from a vessel.

"Stationary source" means any building, structure, facility, or installation which emits or may emit an air pollutant.

R307-401-3. Applicability.

(1) R307-401 applies to any person intending to:

(a) construct a new installation which will or might reasonably be expected to become a source or an indirect source of air pollution, or

(b) make modifications or relocate an existing installation which will or might reasonably be expected to increase the amount or change the effect of, or the character of, air pollutants discharged, so that such installation may be expected to become a source or indirect source of air pollution, or

(c) install a control apparatus or other equipment intended to control emissions of air pollutants.

(2) R307-403, R307-405 and R307-406 may establish additional permitting requirements for new or modified sources.

(a) Exemptions contained in R307-401 do not affect applicability or other requirements under R307-403, R307-405 or R307-406.

(b) Exemptions contained in R307-403, R307-405 or R307-406 do not affect applicability or other requirements under R307-401, unless specifically authorized in this rule.

R307-401-4. General Requirements.

The general requirements in (1) through (3) below apply to all new and modified installations, including installations that are exempt from the requirement to obtain an approval order.

(1) Any control apparatus installed on an installation shall

be adequately and properly maintained.

(2) If the director determines that an exempted installation is not meeting an approval order or State Implementation Plan limitation, is creating an adverse impact to the environment, or would be injurious to human health or welfare, then the director may require the owner or operator to submit a notice of intent and obtain an approval order in accordance with R307-401-5 through R307-401-8. The director will complete an appropriate analysis and evaluation in consultation with the owner or operator before determining that an approval order is required.

(3) Low Oxides of Nitrogen Burner Technology.

(a) Except as provided in (b) below, whenever existing fuel combustion burners are replaced, the owner or operator shall install low oxides of nitrogen burners or equivalent oxides of nitrogen controls, as determined by the director, unless such equipment is not physically practical or cost effective. The owner or operator shall submit a demonstration that the equipment is not physically practical or cost effective to the director for review and approval prior to beginning construction.

(b) The provisions of (a) above do not apply to non-commercial, residential buildings.

R307-401-5. Notice of Intent.

(1) Except as provided in R307-401-9 through R307-401-17, any person subject to R307-401 shall submit a notice of intent to the director and receive an approval order prior to initiation of construction, modification or relocation. The notice of intent shall be in a format specified by the director.

(2) The notice of intent shall include the following information:

(a) A description of the nature of the processes involved; the nature, procedures for handling and quantities of raw materials; the type and quantity of fuels employed; and the nature and quantity of finished product.

(b) Expected composition and physical characteristics of effluent stream both before and after treatment by any control apparatus, including emission rates, volume, temperature, air pollutant types, and concentration of air pollutants.

(c) Size, type and performance characteristics of any control apparatus.

(d) An analysis of best available control technology for the proposed source or modification. When determining best available control technology for a new or modified source in an ozone nonattainment or maintenance area that will emit volatile organic compounds or nitrogen oxides, the owner or operator of the source shall consider EPA Control Technique Guidance (CTG) documents and Alternative Control Technique documents that are applicable to the source. Best available control technology shall be at least as stringent as any published CTG that is applicable to the source.

(e) Location and elevation of the emission point and other factors relating to dispersion and diffusion of the air pollutant in relation to nearby structures and window openings, and other information necessary to appraise the possible effects of the effluent.

(f) The location of planned sampling points and the tests of the completed installation to be made by the owner or operator when necessary to ascertain compliance.

(g) The typical operating schedule.

(h) A schedule for construction.

(i) Any plans, specifications and related information that are in final form at the time of submission of notice of intent.

(j) Any additional information required by:

(i) R307-403, Permits: New and Modified Sources in Nonattainment Areas and Maintenance Areas;

(ii) R307-405, Permits: Major Sources in Attainment or Unclassified Areas (PSD);

(iii) R307-406, Visibility;

(iv) R307-410, Emissions Impact Analysis;

(v) R307-420, Permits: Ozone Offset Requirements in Davis and Salt Lake Counties; or

(vi) R307-421, Permits: PM10 Offset Requirements in Salt Lake County and Utah County.

(k) Any other information necessary to determine if the proposed source or modification will be in compliance with Title R307.

(3) Notwithstanding the exemption in R307-401-9 through 16, any person that is subject to R307-403, R307-405, or R307-406 shall submit a notice of intent to the director and receive an approval order prior to initiation of construction, modification, or relocation.

R307-401-6. Review Period.

(1) Completeness Determination. Within 30 days after receipt of a notice of intent, or any additional information necessary to the review, the director will advise the applicant of any deficiency in the notice of intent or the information submitted.

(2) Within 90 days of receipt of a complete application including all the information described in R307-401-5, the director will

(a) issue an approval order for the proposed construction, installation, modification, relocation, or establishment pursuant to the requirements of R307-401-8, or

(b) issue an order prohibiting the proposed construction, installation, modification, relocation or establishment if it is deemed that any part of the proposal is inadequate to meet the applicable requirements of R307.

(3) The review period under (2) above may be extended by up to three 30-day extensions if more time is needed to review the proposal.

R307-401-7. Public Notice.

(1) Issuing the Notice. Prior to issuing an approval or disapproval order, the director will advertise intent to approve or disapprove in a newspaper of general circulation in the locality of the proposed construction, installation, modification, relocation or establishment.

(2) Opportunity for Review and Comment.

(a) At least one location will be provided where the information submitted by the owner or operator, the director's analysis of the notice of intent proposal, and the proposed approval order conditions will be available for public inspection.

(b) Public Comment.

(i) A 30-day public comment period will be established.

(ii) A request to extend the length of the comment period, up to 30 days, may be submitted to the director within 15 days of the date the notice in R307-401-7(1) is published.

(iii) Public Hearing. A request for a hearing on the proposed approval or disapproval order may be submitted to the director within 15 days of the date the notice in R307-401-7(1) is published.

(iv) The hearing will be held in the area of the proposed construction, installation, modification, relocation or establishment.

(v) The public comment and hearing procedure shall not be required when an order is issued for the purpose of extending the time required by the director to review plans and specifications.

(3) The director will consider all comments received during the public comment period and at the public hearing and, if appropriate, will make changes to the proposal in response to comments before issuing an approval order or disapproval order.

R307-401-8. Approval Order.

(1) The director will issue an approval order if the

following conditions have been met:

(a) The degree of pollution control for emissions, to include fugitive emissions and fugitive dust, is at least best available control technology. When determining best available control technology for a new or modified source in an ozone nonattainment or maintenance area that will emit volatile organic compounds or nitrogen oxides, best available control technology shall be at least as stringent as any Control Technique Guidance document that has been published by EPA that is applicable to the source.

(b) The proposed installation will meet the applicable requirements of:

(i) R307-403, Permits: New and Modified Sources in Nonattainment Areas and Maintenance Areas;

(ii) R307-405, Permits: Major Sources in Attainment or Unclassified Areas (PSD);

(iii) R307-406, Visibility;

(iv) R307-410, Emissions Impact Analysis;

(v) R307-420, Permits: Ozone Offset Requirements in Davis and Salt Lake Counties;

(vi) R307-210, National Standards of Performance for New Stationary Sources;

(vii) National Primary and Secondary Ambient Air Quality Standards;

(viii) R307-214, National Emission Standards for Hazardous Air Pollutants;

(ix) R307-110, Utah State Implementation Plan; and

(x) all other provisions of R307.

(2) The approval order will require that all pollution control equipment be adequately and properly maintained.

(3) Receipt of an approval order does not relieve any owner or operator of the responsibility to comply with the provisions of R307 or the State Implementation Plan.

(4) To accommodate staged construction of a large source, the director may issue an order authorizing construction of an initial stage prior to receipt of detailed plans for the entire proposal provided that, through a review of general plans, engineering reports and other information the proposal is determined feasible by the director under the intent of R307. Subsequent detailed plans will then be processed as prescribed in this paragraph. For staged construction projects the previous determination under R307-401-8(1) and (2) will be reviewed and modified as appropriate at the earliest reasonable time prior to commencement of construction of each independent phase of the proposed source or modification.

(5) If the director determines that a proposed stationary source, modification or relocation does not meet the conditions established in (1) above, the director will not issue an approval order.

R307-401-9. Small Source Exemption.

(1) A small stationary source is exempted from the requirement to obtain an approval order in R307-401-5 through 8 if the following conditions are met.

(a) its actual emissions are less than 5 tons per year per air pollutant of any of the following air pollutants: sulfur dioxide, carbon monoxide, nitrogen oxides, PM₁₀, ozone, or volatile organic compounds;

(b) its actual emissions are less than 500 pounds per year of any hazardous air pollutant and less than 2000 pounds per year of any combination of hazardous air pollutants;

(c) its actual emissions are less than 500 pounds per year of any air pollutant not listed in (a) or (b) above and less than 2000 pounds per year of any combination of air pollutants not listed in (a) or (b) above.

(d) Air pollutants that are drawn from the environment through equipment in intake air and then are released back to the environment without chemical change, as well as carbon dioxide, nitrogen, oxygen, argon, neon, helium, krypton, xenon

should not be included in emission calculations when determining applicability under (a) through (c) above.

(2) The owner or operator of a source that is exempted from the requirement to obtain an approval order under (1) above shall no longer be exempt if actual emissions in any subsequent year exceed the emission thresholds in (1) above. The owner or operator shall submit a notice of intent under R307-401-5 no later than 180 days after the end of the calendar year in which the source exceeded the emission threshold.

(3) Small Source Exemption - Registration. The director will maintain a registry of sources that are claiming an exemption under R307-401-9. The owner or operator of a stationary source that is claiming an exemption under R307-401-9 may submit a written registration notice to the director. The notice shall include the following minimum information:

(a) identifying information, including company name and address, location of source, telephone number, and name of plant site manager or point of contact;

(b) a description of the nature of the processes involved, equipment, anticipated quantities of materials used, the type and quantity of fuel employed and nature and quantity of the finished product;

(c) identification of expected emissions;

(d) estimated annual emission rates;

(e) any control apparatus used; and

(f) typical operating schedule.

(4) An exemption under R307-401-9 does not affect the requirements of R307-401-17, Temporary Relocation.

(5) A stationary source that is not required to obtain a permit under R307-405 for greenhouse gases, as defined in R307-405-3(9)(a), is not required to obtain an approval order for greenhouse gases under R307-401. This exemption does not affect the requirement to obtain an approval order for any other air pollutant emitted by the stationary source.

R307-401-10. Source Category Exemptions.

The following source categories described in (1) through (5) below are exempted from the requirement to obtain an approval order. The general provisions in R307-401-4 shall apply to these sources.

(1) Fuel-burning equipment in which combustion takes place at no greater pressure than one inch of mercury above ambient pressure with a rated capacity of less than five million BTU per hour using no other fuel than natural gas or LPG or other mixed gas that meets the standards of gas distributed by a utility in accordance with the rules of the Public Service Commission of the State of Utah, unless there are emissions other than combustion products.

(2) Comfort heating equipment such as boilers, water heaters, air heaters and steam generators with a rated capacity of less than one million BTU per hour if fueled only by fuel oil numbers 1 - 6,

(3) Emergency heating equipment, using coal or wood for fuel, with a rated capacity less than 50,000 BTU per hour.

(4) Exhaust systems for controlling steam and heat that do not contain combustion products.

R307-401-11. Replacement-in-Kind Equipment.

(1) Applicability. Existing process equipment or pollution control equipment that is covered by an existing approval order or State Implementation Plan requirement may be replaced using the procedures in (2) below if:

(a) the potential to emit of the process equipment is the same or lower;

(b) the number of emission points or emitting units is the same or lower;

(c) no additional types of air pollutants are emitted as a result of the replacement;

(d) the process equipment or pollution control equipment

is identical to or functionally equivalent to the replaced equipment;

(e) the replacement does not change the basic design parameters of the process unit or pollution control equipment;

(f) the replaced process equipment or pollution control equipment is permanently removed from the stationary source, otherwise permanently disabled, or permanently barred from operation;

(g) the replacement process equipment or pollution control equipment does not trigger New Source Performance Standards or National Emissions Standards for Hazardous Air Pollutants under 42 U.S.C. 7411 or 7412; and

(h) the replacement of the control apparatus or process equipment does not violate any other provision of Title R307.

(2) Replacement-in-Kind Procedures.

(a) In lieu of filing a notice of intent under R307-401-5, the owner or operator of a stationary source shall submit a written notification to the director before replacing the equipment. The notification shall contain a description of the replacement-in-kind equipment, including the control capability of any control apparatus and a demonstration that the conditions of (1) above are met.

(b) If the replacement-in-kind meets the conditions of (1) above, the director will update the source's approval order and notify the owner or operator. Public review under R307-401-7 is not required for the update to the approval order.

(3) If the replaced process equipment or pollution control equipment is brought back into operation, it shall constitute a new emissions unit.

R307-401-12. Reduction in Air Pollutants.

(1) Applicability. The owner or operator of a stationary source of air pollutants that reduces or eliminates air pollutants is exempt from the requirement to submit a notice of intent and obtain an approval order prior to construction if:

(a) the project does not increase the potential to emit of any air pollutant or cause emissions of any new air pollutant, and

(b) the director is notified of the change and the reduction of air pollutants is made enforceable through an approval order in accordance with (2) below.

(2) Notification. The owner or operator shall submit a written description of the project to the director no later than 60 days after the changes are made. The director will update the source's approval order or issue a new approval order to include the project and to make the emission reductions enforceable. Public review under R307-401-7 is not required for the update to the approval order.

R307-401-13. Plantwide Applicability Limits.

A plantwide applicability limit under R307-405-21 does not exempt a stationary source from the requirements of R307-401.

R307-401-14. Used Oil Fuel Burned for Energy Recovery.

(1) Definitions.

"Boiler" means boiler as defined in R315-1-1(b).

"Used Oil" is defined as any oil that has been refined from crude oil, used, and, as a result of such use contaminated by physical or chemical impurities.

(2) Boilers burning used oil for energy recovery are exempted from the requirement to obtain an approval order in R307-401-5 through 8 if the following requirements are met:

(a) the heat input design is less than one million BTU/hr;

(b) contamination levels of all used oil to be burned do not exceed any of the following values:

(i) arsenic - 5 ppm by weight,

(ii) cadmium - 2 ppm by weight,

(iii) chromium - 10 ppm by weight,

(iv) lead - 100 ppm by weight,

(v) total halogens - 1,000 ppm by weight,

(vi) Sulfur - 0.50% by weight; and

(c) the flash point of all used oil to be burned is at least 100 degrees Fahrenheit.

(3) Testing. The owner or operator shall test each load of used oil received or generated as directed by the director to ensure it meets these requirements. Testing may be performed by the owner/operator or documented by test reports from the used fuel oil vendor. The flash point shall be measured using the appropriate ASTM method as required by the director. Records for used oil consumption and test reports are to be kept for all periods when fuel-burning equipment is in operation. The records shall be kept on site and made available to the director or the director's representative upon request. Records must be kept for a three-year period.

R307-401-15. Air Strippers and Soil Venting Projects.

(1) The owner or operator of an air stripper or soil venting system that is used to remediate contaminated groundwater or soil is exempt from the notice of intent and approval order requirements of R307-401-5 through 8 if the following conditions are met:

(a) the estimated total air emissions of volatile organic compounds from a given project are less than the de minimis emissions listed in R307-401-9(1)(a), and

(b) the level of any one hazardous air pollutant or any combination of hazardous air pollutants is below the levels listed in R307-410-5(1)(c)(i)(C).

(2) The owner or operator shall submit documentation that the project meets the exemption requirements in R307-401-15(1) to the director prior to beginning the remediation project.

(3) After beginning the soil remediation project, the owner or operator shall submit emissions information to the director to verify that the emission rates of the volatile organic compounds and hazardous air pollutants in R307-401-15(1) are not exceeded.

(a) Emissions estimates of volatile organic compounds shall be based on test data obtained in accordance with the test method in the EPA document SW-846, Test #8260c or 8261a, or the most recent EPA revision of either test method if approved by the director.

(b) Emissions estimates of hazardous air pollutants shall be based on test data obtained in accordance with the test method in EPA document SW-846, Test #8021B or the most recent EPA revision of the test method if approved by the director.

(c) Results of the test and calculated annual quantity of emissions of volatile organic compounds and hazardous air pollutants shall be submitted to the director within one month of sampling.

(d) The test samples shall be drawn on intervals of no less than twenty-eight days and no more than thirty-one days (i.e., monthly) for the first quarter, quarterly for the first year, and semi-annually thereafter or as determined necessary by the director.

(4) The following control devices do not require a notice of intent or approval order when used in relation to an air stripper or soil venting project exempted under R307-401-15:

(a) thermodestruction unit with a rated input capacity of less than five million BTU per hour using no other auxiliary fuel than natural gas or LPG, or

(b) carbon adsorption unit.

R307-401-16. De minimis Emissions From Soil Aeration Projects.

An owner or operator of a soil remediation project is not subject to the notice of intent and approval order requirements of R307-401-5 through 8 when soil aeration or land farming is

used to conduct a soil remediation, if the owner or operator submits the following information to the director prior to beginning the remediation project:

- (1) documentation that the estimated total air emissions of volatile organic compounds, using an appropriate sampling method, from the project are less than the de minimis emissions listed in R307-401-9(1)(a);
- (2) documentation that the levels of any one hazardous air pollutant or any combination of hazardous air pollutants are less than the levels in R307-410-5(1)(d); and
- (3) the location of the remediation and where the remediated material originated.

R307-401-17. Temporary Relocation.

The owner or operator of a stationary source previously approved under R307-401 may temporarily relocate and operate the stationary source at any site for up to 180 working days in any calendar year not to exceed 365 consecutive days, starting from the initial relocation date. The director will evaluate the expected emissions impact at the site and compliance with applicable Title R307 rules as the bases for determining if approval for temporary relocation may be granted. Records of the working days at each site, consecutive days at each site, and actual production rate shall be submitted to the director at the end of each 180 calendar days. These records shall also be kept on site by the owner or operator for the entire project, and be made available for review to the director as requested. R307-401-7, Public Notice, does not apply to temporary relocations under R307-401-17.

R307-401-18. Eighteen Month Review.

Approval orders issued by the director in accordance with the provisions of R307-401 will be reviewed eighteen months after the date of issuance to determine the status of construction, installation, modification, relocation or establishment. If a continuous program of construction, installation, modification, relocation or establishment is not proceeding, the director may revoke the approval order.

R307-401-19. General Approval Order.

(1) The director may issue a general approval order that would establish conditions for similar new or modified sources of the same type or for specific types of equipment. The general approval order may apply throughout the state or in a specific area.

(a) A major source or major modification as defined in R307-403, R307-405, or R307-420 for each respective area is not eligible for coverage under a general approval order.

(b) A source that is subject to the requirements of R307-403-5 is not eligible for coverage under a general approval order.

(c) A source that is subject to the requirements of R307-410-4 is not eligible for coverage under a general approval order unless a demonstration that meets the requirements of R307-410-4 was conducted.

(d) A source that is subject to the requirements of R307-410-5(1)(c)(ii) is not eligible for coverage under a general approval order unless a demonstration that meets the requirements of R307-410-5(1)(c)(ii) was conducted.

(e) A source that is subject to the requirements of R307-410-5(1)(c)(iii) is not eligible for coverage under a general approval order.

(2) A general approval order shall meet all applicable requirements of R307-401-8.

(3) The public notice requirements in R307-401-7 shall apply to a general approval order except that the director will advertise the notice of intent in a newspaper of statewide circulation.

(4) Application.

(a) After a general approval order has been issued, the owner or operator of a proposed new or modified source may apply to be covered under the conditions of the general approval order.

(b) The owner or operator shall submit the application on forms provided by the director in lieu of the notice of intent requirements in R307-401-5 for all equipment covered by the general approval order.

(c) The owner or operator may request that an existing, individual approval order for the source be revoked, and that it be covered by the general approval order.

(d) The owner or operator that has applied to be covered by a general approval order shall not initiate construction, modification, or relocation until the application has been approved by the director.

(5) Approval.

(a) The director will review the application and approve or deny the request based on criteria specified in the general approval order for that type of source. If approved, the director will issue an authorization to the applicant to operate under the general approval order.

(b) The public notice requirements in R307-401-7 do not apply to the approval of an application to be covered under the general approval order.

(c) The director will maintain a record of all stationary sources that are covered by a specific general approval order and this record will be available for public review.

(6) Exclusions and Revocation.

(a) The director may require any source that has applied for or is authorized by a general approval order to submit a notice of intent and obtain an individual approval order under R307-401-8. Cases where an individual approval order will be required include, but are not limited to, the following:

(i) the director determines that the source does not meet the criteria specified in the general approval order;

(ii) the director determines that the application for the general approval order did not contain all necessary information to evaluate applicability under the general approval order;

(iii) modifications were made to the source that were not authorized by the general approval order or an individual approval order;

(iv) the director determines the source may cause a violation of a national ambient air quality standard; or

(v) the director determines that one is required based on the compliance history and current compliance status of the source or applicant.

(b)(i) Any source authorized by a general approval order may request to be excluded from the coverage of the general approval order by submitting a notice of intent under R307-401-5 and receiving an individual approval order under R307-401-8.

(ii) When the director issues an individual approval order to a source subject to a general approval order, the applicability of the general approval order to the individual source is revoked on the effective date of the individual approval order.

(7) Modification of General Approval Order. The director may modify, replace, or discontinue the general approval order.

(a) Administrative corrections may be made to the existing version of the general approval order. These corrections are to correct typographical errors or similar minor administrative changes.

(b) All other modifications or the discontinuation of a general approval order shall not apply to any source authorized under previous versions of the general approval order unless the owner or operator submits an application to be covered under the new version of the general approval order. Modifications under R307-401-19(7)(b) shall meet the public notice requirements in R307-401-19(3).

(c) A general approval order shall be reviewed at least every three years. The review of the general approval order shall

follow the public notice requirements of R307-401-19(3).

(8) Modifications at a source covered by a general approval order. A source may make modifications only as authorized by the approved general approval order. Modifications outside the scope authorized by the approved general approval order shall require a new application for either an individual approval order under R307-401-8 or a general approval order under R307-401-19.

KEY: air pollution, permits, approval orders, greenhouse gases

December 15, 2015

19-2-104(3)(q)

Notice of Continuation June 6, 2012

19-2-108

R307. Environmental Quality, Air Quality.
R307-410. Permits: Emissions Impact Analysis.
R307-410-1. Purpose.

This rule establishes the procedures and requirements for evaluating the emissions impact of new or modified sources that require an approval order under R307-401 to ensure that the source will not interfere with the attainment or maintenance of any NAAQS. The rule also establishes the procedures and requirements for evaluating the emissions impact of hazardous air pollutants. The rule also establishes the procedures for establishing an emission rate based on the good engineering practice stack height as required by 40 CFR 51.118.

R307-410-2. Definitions.

(1) The following additional definitions apply to R307-410.

"Vertically Restricted Emissions Release" means the release of an air pollutant through a stack or opening whose flow is directed in a downward or horizontal direction due to the alignment of the opening or a physical obstruction placed beyond the opening, or at a height which is less than 1.3 times the height of an adjacent building or structure, as measured from ground level.

"Vertically Unrestricted Emissions Release" means the release of an air pollutant through a stack or opening whose flow is directed upward without any physical obstruction placed beyond the opening, and at a height which is at least 1.3 times the height of an adjacent building or structure, as measured from ground level.

(2) Except as provided in (3) below, the definitions of "stack", "stack in existence", "dispersion technique", "good engineering practice (GEP) stack height", "nearby", "excessive concentration", and "intermittent control system (ICS)" in 40 CFR 51.100(ff) through (kk) and (nn) are hereby incorporated by reference.

(3)(a) The terms "reviewing authority" and "authority administering the State implementation plan" shall mean the director.

(b) The reference to "40 CFR parts 51 and 52" in 40 CFR 51.100(ii)(2)(i) shall be changed to "R307-401, R307-403 and R307-405".

(c) The phrase "For sources subject to the prevention of significant deterioration program (40 CFR 51.166 and 52.21)" in 40 CFR 51.100(kk)(1) shall be replaced with the phrase "For sources subject to R307-401, R307-403, or R307-405".

R307-410-3. Use of Dispersion Models.

All estimates of ambient concentrations derived in meeting the requirements of R307 shall be based on appropriate air quality models, data bases, and other requirements specified in 40 CFR Part 51, Appendix W, (Guideline on Air Quality Models), effective July 1, 2005, which is hereby incorporated by reference. Where an air quality model specified in the Guideline on Air Quality Models or other EPA approved guidance documents is inappropriate, the director may authorize the modification of the model or substitution of another model. In meeting the requirements of federal law, any modification or substitution will be made only with the written approval of the Administrator, EPA.

R307-410-4. Modeling of Criteria Pollutant Impacts in Attainment Areas.

Prior to receiving an approval order under R307-401, a new source in an attainment area with a total controlled emission rate per pollutant greater than or equal to amounts specified in Table 1, or a modification to an existing source located in an attainment area which increases the total controlled emission rate per pollutant of the source in an amount greater than or equal to those specified in Table 1, shall conduct air

quality modeling, as identified in R307-410-3, to estimate the impact of the new or modified source on air quality unless previously performed air quality modeling for the source indicates that the addition of the proposed emissions increase would not violate a National Ambient Air Quality Standard, as determined by the director.

TABLE 1

POLLUTANT	EMISSIONS
sulfur dioxide	40 tons per year
oxides of nitrogen	40 tons per year
PM10 - fugitive emissions and fugitive dust	5 tons per year
PM10 - non-fugitive emissions or non-fugitive dust	15 tons per year
carbon monoxide	100 tons per year
Lead	0.6 tons per year

R307-410-5. Documentation of Ambient Air Impacts for Hazardous Air Pollutants.

(1) Prior to receiving an approval order under R307-401, a source shall provide documentation of increases in emissions of hazardous air pollutants as required under (c) below for all installations not exempt under (a) below.

(a) Exempted Installations.

(i) The requirements of R307-410-5 do not apply to installations which are subject to or are scheduled to be subject to an emission standard promulgated under 42 U.S.C. 7412 at the time a notice of intent is submitted, except as defined in (ii) below. This exemption does not affect requirements otherwise applicable to the source, including requirements under R307-401.

(ii) The director may, upon making a written determination that the delay in the implementation of an emission standard under R307-214-2, that incorporates 40 CFR Part 63, might reasonably be expected to pose an unacceptable risk to public health, require, on a case-by-case basis, notice of intent documentation of emissions consistent with (c) below.

(A) The director will notify the source in writing of the preliminary decision to require some or all of the documentation as listed in (c) below.

(B) The source may respond in writing within thirty days of receipt of the notice, or such longer period as the director approves.

(C) In making a final determination, the director will document objective bases for the determination, which may include public information and studies, documented public comment, the applicant's written response, the physical and chemical properties of emissions, and ambient monitoring data.

(b) Lead Compounds Exemption. The requirements of R307-410-5 do not apply to emissions of lead compounds. Lead compounds shall be evaluated pursuant to requirements of R307-410-4.

(c) Submittal Requirements.

(i) Each applicant's notice of intent shall include:

(A) the estimated maximum pounds per hour emission rate increase from each affected installation,

(B) the type of release, whether the release flow is vertically restricted or unrestricted, the maximum release duration in minutes per hour, the release height measured from the ground, the height of any adjacent building or structure, the shortest distance between the release point and any area defined as "ambient air" under 40 CFR 50.1(e), effective July 1, 2005, which is hereby incorporated by reference for each installation for which the source proposes an emissions increase,

(C) the emission threshold value, calculated to be the applicable threshold limit value - time weighted average (TLV-TWA) or the threshold limit value - ceiling (TLV-C) multiplied by the appropriate emission threshold factor listed in Table 2, except in the case of arsenic, benzene, beryllium, and ethylene oxide which shall be calculated using chronic emission

threshold factors, and formaldehyde, which shall be calculated using an acute emission threshold factor. For acute hazardous air pollutant releases having a duration period less than one hour, this maximum pounds per hour emission rate shall be consistent with an identical operating process having a continuous release for a one-hour period.

TABLE 2
EMISSION THRESHOLD FACTORS FOR HAZARDOUS AIR POLLUTANTS
(cubic meter pounds per milligram hour)

VERTICALLY-RESTRICTED AND FUGITIVE EMISSION RELEASE POINTS			
DISTANCE TO PROPERTY BOUNDARY	ACUTE	CHRONIC	CARCINOGENIC
20 Meters or less	0.038	0.051	0.017
21 - 50 Meters	0.051	0.066	0.022
51 - 100 Meters	0.092	0.123	0.041
Beyond 100 Meters	0.180	0.269	0.090

VERTICALLY-UNRESTRICTED EMISSION RELEASE POINTS			
DISTANCE TO PROPERTY BOUNDARY	ACUTE	CHRONIC	CARCINOGENIC
50 Meters or less	0.154	0.198	0.066
51 - 100 Meters	0.224	0.244	0.081
Beyond 100 Meters	0.310	0.368	0.123

(ii) A source with a proposed maximum pounds per hour emissions increase equal to or greater than the emissions threshold value shall include documentation of a comparison of the estimated ambient concentration of the proposed emissions with the applicable toxic screening level specified in (d) below.

(iii) A source with an estimated ambient concentration equal to or greater than the toxic screening level shall provide additional documentation regarding the impact of the proposed emissions. The director may require such documentation to include, but not be limited to:

(A) a description of symptoms and adverse health effects that can be caused by the hazardous air pollutant,

(B) the exposure conditions or dose that is sufficient to cause the adverse health effects,

(C) a description of the human population or other biological species which could be exposed to the estimated concentration,

(D) an evaluation of land use for the impacted areas,

(E) the environmental fate and persistency.

(d) Toxic Screening Levels and Averaging Periods.

(i) The toxic screening level for an acute hazardous air pollutant is 1/10th the value of the TLV-C, and the applicable averaging period shall be:

(A) one hour for emissions releases having a duration period of one hour or greater,

(B) one hour for emission releases having a duration period less than one hour if the emission rate used in the model is consistent with an identical operating process having a continuous release for a one-hour period or more, or

(C) the dispersion model's shortest averaging period when using an applicable model capable of estimating ambient concentrations for periods of less than one hour.

(ii) The toxic screening level for a chronic hazardous air pollutant is 1/30th the value of the TLV- TWA, and the applicable averaging period shall be 24 hours.

(iii) The toxic screening level for all carcinogenic hazardous air pollutants is 1/90 the value of the TLV-TWA, and the applicable averaging period shall be 24 hours, except in the case of formaldehyde which shall be evaluated consistent with (d)(i) above and arsenic, benzene, beryllium, and ethylene oxide which shall be evaluated consistent with (d)(ii) above.

R307-410-6. Stack Heights and Dispersion Techniques.

(1) The degree of emission limitation required of any source for control of any air pollutant to include determinations made under R307-401, R307-403 and R307-405, must not be

affected by so much of any source's stack height that exceeds good engineering practice or by any other dispersion technique except as provided in (2) below. This does not restrict, in any manner, the actual stack height of any source.

(2) The provisions in R307-410-6 shall not apply to:

(a) stack heights in existence, or dispersion techniques implemented on or before December 31, 1970, except where pollutants are being emitted from such stacks or using such dispersion techniques by sources which were constructed or reconstructed, or for which major modifications were carried out after December 31, 1970; or

(b) coal-fired steam electric generating units subject to the provisions of Section 118 of the Clean Air Act, which commenced operation before July 1, 1957, and whose stacks were constructed under a construction contract awarded before February 8, 1974.

(3) The director may require the source owner or operator to provide a demonstration that the source stack height meets good engineering practice as required by R307-410-6. The director shall notify the public of the availability of the demonstration as part of the public notice process required by R307-401-7, Public Notice.

KEY: air pollution, modeling, hazardous air pollutant, stack height

19-2-104

Notice of Continuation June 6, 2012

R307. Environmental Quality, Air Quality.**R307-415. Permits: Operating Permit Requirements.****R307-415-1. Purpose.**

Title V of the Clean Air Act (the Act) requires states to develop and implement a comprehensive air quality permitting program. Title V of the Act does not impose new substantive requirements. Title V does require that sources subject to R307-415 pay a fee and obtain a renewable operating permit that clarifies, in a single document, which requirements apply to a source and assures the source's compliance with those requirements. The purpose of R307-415 is to establish the procedures and elements of such a program.

R307-415-2. Authority.

(1) R307-415 is required by Title V of the Act and 40 Code of Federal Regulations (CFR) Part 70, and is adopted under the authority of Section 19-2-104.

(2) All references to 40 CFR in R307-415, except when otherwise specified, are effective as of the date referenced in R307-101-3.

R307-415-3. Definitions.

(1) The definitions contained in R307-101-2 apply throughout R307-415, except as specifically provided in (2).

(2) The following additional definitions apply to R307-415.

"Act" means the Clean Air Act, as amended, 42 U.S.C. 7401, et seq.

"Administrator" means the Administrator of EPA or his or her designee.

"Affected States" are all states:

(a) Whose air quality may be affected and that are contiguous to Utah; or

(b) That are within 50 miles of the permitted source.

"Applicable requirement" means all of the following as they apply to emissions units in a Part 70 source, including requirements that have been promulgated or approved by the Board or by the EPA through rulemaking at the time of permit issuance but have future-effective compliance dates:

(a) Any standard or other requirement provided for in the State Implementation Plan;

(b) Any term or condition of any approval order issued under R307-401;

(c) Any standard or other requirement under Section 111 of the Act, Standards of Performance for New Stationary Sources, including Section 111(d);

(d) Any standard or other requirement under Section 112 of the Act, Hazardous Air Pollutants, including any requirement concerning accident prevention under Section 112(r)(7) of the Act;

(e) Any standard or other requirement of the Acid Rain Program under Title IV of the Act or the regulations promulgated thereunder;

(f) Any requirements established pursuant to Section 504(b) of the Act, Monitoring and Analysis, or Section 114(a)(3) of the Act, Enhanced Monitoring and Compliance Certification;

(g) Any standard or other requirement governing solid waste incineration, under Section 129 of the Act;

(h) Any standard or other requirement for consumer and commercial products, under Section 183(e) of the Act;

(i) Any standard or other requirement of the regulations promulgated to protect stratospheric ozone under Title VI of the Act, unless the Administrator has determined that such requirements need not be contained in an operating permit;

(j) Any national ambient air quality standard or increment or visibility requirement under part C of Title I of the Act, but only as it would apply to temporary sources permitted pursuant to Section 504(e) of the Act;

(k) Any standard or other requirement under rules adopted by the Board.

"Area source" means any stationary source that is not a major source.

"Designated representative" shall have the meaning given to it in Section 402 of the Act and in 40 CFR Section 72.2, and applies only to Title IV affected sources.

"Draft permit" means the version of a permit for which the director offers public participation under R307-415-7i or affected State review under R307-415-8(2).

"Emissions allowable under the permit" means a federally-enforceable permit term or condition determined at issuance to be required by an applicable requirement that establishes an emissions limit, including a work practice standard, or a federally-enforceable emissions cap that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject.

"Emissions unit" means any part or activity of a stationary source that emits or has the potential to emit any regulated air pollutant or any hazardous air pollutant. This term is not meant to alter or affect the definition of the term "unit" for purposes of Title IV of the Act, Acid Deposition Control.

"Final permit" means the version of an operating permit issued by the director that has completed all review procedures required by R307-415-7a through 7i and R307-415-8.

"General permit" means an operating permit that meets the requirements of R307-415-6d.

"Hazardous Air Pollutant" means any pollutant listed by the Administrator as a hazardous air pollutant under Section 112(b) of the Act.

"Major source" means any stationary source (or any group of stationary sources that are located on one or more contiguous or adjacent properties, and are under common control of the same person (or persons under common control)) belonging to a single major industrial grouping and that are described in paragraphs (a), (b), or (c) of this definition. For the purposes of defining "major source," a stationary source or group of stationary sources shall be considered part of a single industrial grouping if all of the pollutant emitting activities at such source or group of sources on contiguous or adjacent properties belong to the same Major Group (all have the same two-digit code) as described in the Standard Industrial Classification Manual, 1987. Emissions resulting directly from an internal combustion engine for transportation purposes or from a non-road vehicle shall not be considered in determining whether a stationary source is a major source under this definition.

(a) A major source under Section 112 of the Act, Hazardous Air Pollutants, which is defined as: for pollutants other than radionuclides, any stationary source or group of stationary sources located within a contiguous area and under common control that emits or has the potential to emit, in the aggregate, ten tons per year or more of any hazardous air pollutant or 25 tons per year or more of any combination of such hazardous air pollutants. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or production well, with its associated equipment, and emissions from any pipeline compressor or pump station shall not be aggregated with emissions from other similar units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major sources.

(b) A major stationary source of air pollutants, as defined in Section 302 of the Act, that directly emits or has the potential to emit, 100 tons per year or more of any air pollutant subject to regulation, including any major source of fugitive emissions or fugitive dust of any such pollutant as determined by rule by the Administrator. The fugitive emissions or fugitive dust of a stationary source shall not be considered in determining whether it is a major stationary source for the purposes of Section 302(j)

of the Act, unless the source belongs to any one of the following categories of stationary source:

- (i) Coal cleaning plants with thermal dryers;
- (ii) Kraft pulp mills;
- (iii) Portland cement plants;
- (iv) Primary zinc smelters;
- (v) Iron and steel mills;
- (vi) Primary aluminum ore reduction plants;
- (vii) Primary copper smelters;
- (viii) Municipal incinerators capable of charging more than 250 tons of refuse per day;
- (ix) Hydrofluoric, sulfuric, or nitric acid plants;
- (x) Petroleum refineries;
- (xi) Lime plants;
- (xii) Phosphate rock processing plants;
- (xiii) Coke oven batteries;
- (xiv) Sulfur recovery plants;
- (xv) Carbon black plants, furnace process;
- (xvi) Primary lead smelters;
- (xvii) Fuel conversion plants;
- (xviii) Sintering plants;
- (xix) Secondary metal production plants;
- (xx) Chemical process plants;
- (xxi) Fossil-fuel boilers, or combination thereof, totaling more than 250 million British thermal units per hour heat input;
- (xxii) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;
- (xxiii) Taconite ore processing plants;
- (xxiv) Glass fiber processing plants;
- (xxv) Charcoal production plants;
- (xxvi) Fossil-fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input;
- (xxvii) Any other stationary source category, which as of August 7, 1980 is being regulated under Section 111 or Section 112 of the Act.

(c) A major stationary source as defined in part D of Title I of the Act, Plan Requirements for Nonattainment Areas, including:

- (i) For ozone nonattainment areas, sources with the potential to emit 100 tons per year or more of volatile organic compounds or oxides of nitrogen in areas classified as "marginal" or "moderate," 50 tons per year or more in areas classified as "serious," 25 tons per year or more in areas classified as "severe," and 10 tons per year or more in areas classified as "extreme"; except that the references in this paragraph to 100, 50, 25, and 10 tons per year of nitrogen oxides shall not apply with respect to any source for which the Administrator has made a finding, under Section 182(f)(1) or (2) of the Act, that requirements under Section 182(f) of the Act do not apply;
- (ii) For ozone transport regions established pursuant to Section 184 of the Act, sources with the potential to emit 50 tons per year or more of volatile organic compounds;
- (iii) For carbon monoxide nonattainment areas that are classified as "serious" and in which stationary sources contribute significantly to carbon monoxide levels as determined under rules issued by the Administrator, sources with the potential to emit 50 tons per year or more of carbon monoxide;
- (iv) For PM-10 particulate matter nonattainment areas classified as "serious," sources with the potential to emit 70 tons per year or more of PM-10 particulate matter.

"Non-Road Vehicle" means a vehicle that is powered by an internal combustion engine (including the fuel system), that is not a self-propelled vehicle designed for transporting persons or property on a street or highway or a vehicle used solely for competition, and is not subject to standards promulgated under Section 111 of the Act (New Source Performance Standards) or Section 202 of the Act (Motor Vehicle Emission Standards).

"Operating permit" or "permit," unless the context suggests

otherwise, means any permit or group of permits covering a Part 70 source that is issued, renewed, amended, or revised pursuant to these rules.

"Part 70 Source" means any source subject to the permitting requirements of R307-415, as provided in R307-415-4.

"Permit modification" means a revision to an operating permit that meets the requirements of R307-415-7f.

"Permit revision" means any permit modification or administrative permit amendment.

"Permit shield" means the permit shield as described in R307-415-6f.

"Proposed permit" means the version of a permit that the director proposes to issue and forwards to EPA for review in compliance with R307-415-8.

"Renewal" means the process by which a permit is reissued at the end of its term.

"Responsible official" means one of the following:

(a) For a corporation: a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or a duly authorized representative of such person if the representative is responsible for the overall operation of one or more manufacturing, production, or operating facilities applying for or subject to a permit and either:

(i) the operating facilities employ more than 250 persons or have gross annual sales or expenditures exceeding \$25 million in second quarter 1980 dollars; or

(ii) the delegation of authority to such representative is approved in advance by the director;

(b) For a partnership or sole proprietorship: a general partner or the proprietor, respectively;

(c) For a municipality, State, Federal, or other public agency: either a principal executive officer or ranking elected official. For the purposes of R307-415, a principal executive officer of a Federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency;

(d) For Title IV affected sources:

(i) The designated representative in so far as actions, standards, requirements, or prohibitions under Title IV of the Act, Acid Deposition Control, or the regulations promulgated thereunder are concerned;

(ii) The responsible official as defined above for any other purposes under R307-415.

"Stationary source" means any building, structure, facility, or installation that emits or may emit any regulated air pollutant or any hazardous air pollutant.

"Subject to regulation" means, for any air pollutant, that the pollutant is subject to either a provision in the Clean Air Act, or a nationally-applicable regulation codified by the Administrator in subchapter C of 40 CFR Chapter I, that requires actual control of the quantity of emissions of that pollutant, and that such a control requirement has taken effect and is operative to control, limit or restrict the quantity of emissions of that pollutant released from the regulated activity. Except that:

(a) "Greenhouse gases (GHGs)," the air pollutant defined in 40 CFR 86.1818-12(a) (Federal Register, Vol. 75, Page 25686) as the aggregate group of six greenhouse gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride, shall not be subject to regulation unless, as of July 1, 2011, the GHG emissions are at a stationary source emitting or having the potential to emit 100,000 tons per year (tpy) CO₂ equivalent emissions.

(b) The term "tpy CO₂ equivalent emissions (CO₂e)" shall represent an amount of GHGs emitted, and shall be computed by multiplying the mass amount of emissions (tpy), for each of

the six greenhouse gases in the pollutant GHGs, by the gas's associated global warming potential published at Table A-1 to subpart A of 40 CFR Part 98--Global Warming Potentials, that is hereby incorporated by reference (Federal Register, Vol. 74, Pages 56395-96), and summing the resultant value for each to compute a tpy CO₂e.

"Title IV Affected source" means a source that contains one or more affected units as defined in Section 402 of the Act and in 40 CFR, Part 72.

R307-415-4. Applicability.

(1) Part 70 sources. All of the following sources are subject to the permitting requirements of R307-415, and unless exempted under (2) below are required to submit an application for an operating permit:

(a) Any major source;

(b) Any source, including an area source, subject to a standard, limitation, or other requirement under Section 111 of the Act, Standards of Performance for New Stationary Sources;

(c) Any source, including an area source, subject to a standard or other requirement under Section 112 of the Act, Hazardous Air Pollutants, except that a source is not required to obtain a permit solely because it is subject to regulations or requirements under Section 112(r) of the Act, Prevention of Accidental Releases;

(d) Any Title IV affected source.

(2) Exemptions.

(a) All source categories that would be required to obtain an operating permit solely because they are subject to 40 CFR Part 60, Subpart AAA - Standards of Performance for New Residential Wood Heaters, are exempted from the requirement to obtain a permit.

(b) All source categories that would be required to obtain an operating permit solely because they are subject to 40 CFR Part 61, Subpart M - National Emission Standard for Hazardous Air Pollutants for Asbestos, Section 61.145, Standard for Demolition and Renovation, are exempted from the requirement to obtain a permit. For Part 70 sources, demolition and renovation activities within the source under 40 CFR 61.145 shall be treated as a separate source for the purpose of R307-415.

(c) An area source subject to a regulation under Section 111 or 112 of the Act (42 U.S.C. 7411 or 7412) promulgated after July 21, 1992 is exempt from the obligation to obtain a Part 70 permit if:

(i) the regulation specifically exempts the area source category from the obligation to obtain a Part 70 permit, and

(ii) the source is not required to obtain a permit under R307-415-4(1) for a reason other than its status as an area source under the Section 111 or 112 regulation containing the exemption.

(3) Emissions units and Part 70 sources.

(a) For major sources, the director shall include in the permit all applicable requirements for all relevant emissions units in the major source.

(b) For any area source subject to the operating permit program under R307-415-4(1), the director shall include in the permit all applicable requirements applicable to emissions units that cause the source to be subject to the operating permit program.

(4) Fugitive emissions. Fugitive emissions and fugitive dust from a Part 70 source shall be included in the permit application and the operating permit in the same manner as stack emissions, regardless of whether the source category in question is included in the list of source categories contained in the definition of major source.

(5) Control requirements. R307-415 does not establish any new control requirements beyond those established by applicable requirements, but may establish new monitoring,

recordkeeping, and reporting requirements.

(6) Synthetic minors. An existing source that wishes to avoid designation as a major Part 70 source under R307-415, must obtain federally-enforceable conditions which reduce the potential to emit, as defined in R307-101-2, to less than the level established for a major Part 70 source. Such federally-enforceable conditions may be obtained by applying for and receiving an approval order under R307-401. The approval order shall contain periodic monitoring, recordkeeping, and reporting requirements sufficient to verify continuing compliance with the conditions which would reduce the source's potential to emit.

R307-415-5a. Permit Applications: Duty to Apply.

For each Part 70 source, the owner or operator shall submit a timely and complete permit application. A pre-application conference may be held at the request of a Part 70 source or the director to assist a source in submitting a complete application.

(1) Timely application.

(a) Except as provided in the transition plan under (3) below, a timely application for a source applying for an operating permit for the first time is one that is submitted within 12 months after the source becomes subject to the permit program.

(b) Except as provided in the transition plan under (3) below, any Part 70 source required to meet the requirements under Section 112(g) of the Act, Hazardous Air Pollutant Modifications, or required to receive an approval order to construct a new source or modify an existing source under R307-401, shall file a complete application to obtain an operating permit or permit revision within 12 months after commencing operation of the newly constructed or modified source. Where an existing operating permit would prohibit such construction or change in operation, the source must obtain a permit revision before commencing operation.

(c) For purposes of permit renewal, a timely application is one that is submitted by the renewal date established in the permit. The director shall establish a renewal date for each permit that is at least six months and not greater than 18 months prior to the date of permit expiration. A source may submit a permit application early for any reason, including timing of other application requirements.

(2) Complete application.

(a) To be deemed complete, an application must provide all information sufficient to evaluate the subject source and its application and to determine all applicable requirements pursuant to R307-415-5c. Applications for permit revision need supply such information only if it is related to the proposed change. A responsible official shall certify the submitted information consistent with R307-415-5d.

(b) Unless the director notifies the source in writing within 60 days of receipt of the application that an application is not complete, such application shall be deemed to be complete. A completeness determination shall not be required for minor permit modifications. If, while processing an application that has been determined or deemed to be complete, the director determines that additional information is necessary to evaluate or take final action on that application, the director may request such information in writing and set a reasonable deadline for a response. The source's ability to operate without a permit, as set forth in R307-415-7b(2), shall be in effect from the date the application is determined or deemed to be complete until the final permit is issued, provided that the applicant submits any requested additional information by the deadline specified in writing by the director.

(3) Transition Plan. A timely application under the transition plan is an application that is submitted according to the following schedule:

(a) All Title IV affected sources shall submit an operating

permit application as well as an acid rain permit application in accordance with the date required by 40 CFR Part 72 effective April 11, 1995, Subpart C-Acid Rain Permit Applications;

(b) All major Part 70 sources operating as of July 10, 1995, except those described in (a) above, and all solid waste incineration units operating as of July 10, 1995, that are required to obtain an operating permit pursuant to 42 U.S.C. Sec. 7429(e) shall submit a permit application by October 10, 1995.

(c) Area sources.

(i) Except as provided in (c)(ii) and (c)(iii) below, each Part 70 source that is not a major source, a Title IV affected source, or a solid waste incineration unit required to obtain a permit pursuant to section 129(e) (42 U.S.C. 7429), is deferred from the obligation to submit an application until 12 months after the Administrator completes a rulemaking to determine how the program should be structured for area sources and the appropriateness of any permanent exemptions in addition to those provided in R307-415-4(2).

(ii) General Permits.

(A) The director shall develop general permits and application forms for area source categories.

(B) After a general permit has been issued for a source category, the director shall establish a due date for permit applications from all area sources in that source category.

(C) The director shall provide at least six months notice that the application is due for a source category.

(iii) Regulation-specific Requirements.

(A) If a regulation promulgated under Section 111 or 112 (42 U.S.C. 7411 or 7412) requires an area source category to submit an application for a Part 70 permit, each area source covered by the requirement must submit an application in accordance with the regulation.

(d) Extensions. The owner or operator of any Part 70 source may petition the director for an extension of the application due date for good cause. The due date for major Part 70 sources shall not be extended beyond July 10, 1996. The due date for an area source shall not be extended beyond twelve months after the due date in (c)(i) above.

(e) Application shield. If a source submits a timely and complete application under this transition plan, the application shield under R307-415-7b(2) shall apply to the source. If a source submits a timely application and is making sufficient progress toward correcting an application determined to be incomplete, the director may extend the application shield under R307-415-7b(2) to the source when the application is determined complete. The application shield shall not be extended to any major source that has not submitted a complete application by July 10, 1996, or to any area source that has not submitted a complete application within twelve months after the due date in (c)(i) above.

(4) Confidential information. Claims of confidentiality on information submitted to EPA may be made pursuant to applicable federal requirements. Claims of confidentiality on information submitted to the Department shall be made and governed according to Section 19-1-306. In the case where a source has submitted information to the Department under a claim of confidentiality that also must be submitted to the EPA, the director shall either submit the information to the EPA under Section 19-1-306, or require the source to submit a copy of such information directly to EPA.

(5) Late applications. An application submitted after the deadlines established in R307-415-5a shall be accepted for processing, but shall not be considered a timely application. Submitting an application shall not relieve a source of any enforcement actions resulting from submitting a late application.

R307-415-5b. Permit Applications: Duty to Supplement or Correct Application.

Any applicant who fails to submit any relevant facts or who

has submitted incorrect information in a permit application shall, upon becoming aware of such failure or incorrect submittal, promptly submit such supplementary facts or corrected information. In addition, an applicant shall provide additional information as necessary to address any requirements that become applicable to the source after the date it filed a complete application but prior to release of a draft permit.

R307-415-5c. Permit Applications: Standard Requirements.

Information as described below for each emissions unit at a Part 70 source shall be included in the application except for insignificant activities and emissions levels under R307-415-5e. The operating permit application shall include the elements specified below:

(1) Identifying information, including company name, company address, plant name and address if different from the company name and address, owner's name and agent, and telephone number and names of plant site manager or contact.

(2) A description of the source's processes and products by Standard Industrial Classification Code, including any associated with each alternate scenario identified by the source.

(3) The following emissions-related information:

(a) A permit application shall describe the potential to emit of all air pollutants for which the source is major, and the potential to emit of all regulated air pollutants and hazardous air pollutants from any emissions unit, except for insignificant activities and emissions under R307-415-5e. For emissions of hazardous air pollutants under 1,000 pounds per year, the following ranges may be used in the application: 1-10 pounds per year, 11-499 pounds per year, 500-999 pounds per year. The mid-point of the range shall be used to calculate the emission fee under R307-415-9 for hazardous air pollutants reported as a range.

(b) Identification and description of all points of emissions described in (a) above in sufficient detail to establish the basis for fees and applicability of applicable requirements.

(c) Emissions rates in tons per year and in such terms as are necessary to establish compliance with applicable requirements consistent with the applicable standard reference test method.

(d) The following information to the extent it is needed to determine or regulate emissions: fuels, fuel use, raw materials, production rates, and operating schedules.

(e) Identification and description of air pollution control equipment and compliance monitoring devices or activities.

(f) Limitations on source operation affecting emissions or any work practice standards, where applicable, for all regulated air pollutants and hazardous air pollutants at the Part 70 source.

(g) Other information required by any applicable requirement, including information related to stack height limitations developed pursuant to Section 123 of the Act.

(h) Calculations on which the information in items (a) through (g) above is based.

(4) The following air pollution control requirements:

(a) Citation and description of all applicable requirements, and

(b) Description of or reference to any applicable test method for determining compliance with each applicable requirement.

(5) Other specific information that may be necessary to implement and enforce applicable requirements or to determine the applicability of such requirements.

(6) An explanation of any proposed exemptions from otherwise applicable requirements.

(7) Additional information as determined to be necessary by the director to define alternative operating scenarios identified by the source pursuant to R307-415-6a(9) or to define permit terms and conditions implementing emission trading under R307-415-7d(1)(c) or R307-415-6a(10).

(8) A compliance plan for all Part 70 sources that contains all of the following:

(a) A description of the compliance status of the source with respect to all applicable requirements.

(b) A description as follows:

(i) For applicable requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis.

(iii) For requirements for which the source is not in compliance at the time of permit issuance, a narrative description of how the source will achieve compliance with such requirements.

(c) A compliance schedule as follows:

(i) For applicable requirements with which the source is in compliance, a statement that the source will continue to comply with such requirements.

(ii) For applicable requirements that will become effective during the permit term, a statement that the source will meet such requirements on a timely basis. A statement that the source will meet in a timely manner applicable requirements that become effective during the permit term shall satisfy this provision, unless a more detailed schedule is expressly required by the applicable requirement.

(iii) A schedule of compliance for sources that are not in compliance with all applicable requirements at the time of permit issuance. Such a schedule shall include a schedule of remedial measures, including an enforceable sequence of actions with milestones, leading to compliance with any applicable requirements for which the source will be in noncompliance at the time of permit issuance. This compliance schedule shall resemble and be at least as stringent as that contained in any judicial consent decree or administrative order to which the source is subject. Any such schedule of compliance shall be supplemental to, and shall not sanction noncompliance with, the applicable requirements on which it is based.

(d) A schedule for submission of certified progress reports every six months, or more frequently if specified by the underlying applicable requirement or by the director, for sources required to have a schedule of compliance to remedy a violation.

(e) The compliance plan content requirements specified in this paragraph shall apply and be included in the acid rain portion of a compliance plan for a Title IV affected source, except as specifically superseded by regulations promulgated under Title IV of the Act, Acid Deposition Control, with regard to the schedule and methods the source will use to achieve compliance with the acid rain emissions limitations.

(9) Requirements for compliance certification, including all of the following:

(a) A certification of compliance with all applicable requirements by a responsible official consistent with R307-415-5d and Section 114(a)(3) of the Act, Enhanced Monitoring and Compliance Certification.

(b) A statement of methods used for determining compliance, including a description of monitoring, recordkeeping, and reporting requirements and test method.

(c) A schedule for submission of compliance certifications during the permit term, to be submitted annually, or more frequently if specified by the underlying applicable requirement or by the director.

(d) A statement indicating the source's compliance status with any applicable enhanced monitoring and compliance certification requirements of the Act.

(10) Nationally-standardized forms for acid rain portions of permit applications and compliance plans, as required by regulations promulgated under Title IV of the Act, Acid Deposition Control.

R307-415-5d. Permit Applications: Certification.

Any application form, report, or compliance certification submitted pursuant to R307-415 shall contain certification by a responsible official of truth, accuracy, and completeness. This certification and any other certification required under R307-415 shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

R307-415-5e. Permit Applications: Insignificant Activities and Emissions.

An application may not omit information needed to determine the applicability of, or to impose, any applicable requirement, or to evaluate the fee amount required under R307-415-9. The following lists apply only to operating permit applications and do not affect the applicability of R307-415 to a source, do not affect the requirement that a source receive an approval order under R307-401, and do not relieve a source of the responsibility to comply with any applicable requirement.

(1) The following insignificant activities and emission levels are not required to be included in the permit application.

(a) Exhaust systems for controlling steam and heat that do not contain combustion products, except for systems that are subject to an emission standard under any applicable requirement.

(b) Air pollutants that are present in process water or non-contact cooling water as drawn from the environment or from municipal sources, or air pollutants that are present in compressed air or in ambient air, which may contain air pollution, used for combustion.

(c) Air conditioning or ventilating systems not designed to remove air pollutants generated by or released from other processes or equipment.

(d) Disturbance of surface areas for purposes of land development, not including mining operations or the disturbance of contaminated soil.

(e) Brazing, soldering, or welding operations.

(f) Aerosol can usage.

(g) Road and parking lot paving operations, not including asphalt, sand and gravel, and cement batch plants.

(h) Fire training activities that are not conducted at permanent fire training facilities.

(i) Landscaping, janitorial, and site housekeeping activities, including fugitive emissions from landscaping activities.

(j) Architectural painting.

(k) Office emissions, including cleaning, copying, and restrooms.

(l) Wet wash aggregate operations that are solely dedicated to this process.

(m) Air pollutants that are emitted from personal use by employees or other persons at the source, such as foods, drugs, or cosmetics.

(n) Air pollutants that are emitted by a laboratory at a facility under the supervision of a technically qualified individual as defined in 40 CFR 720.3(ee); however, this exclusion does not apply to specialty chemical production, pilot plant scale operations, or activities conducted outside the laboratory.

(o) Maintenance on petroleum liquid handling equipment such as pumps, valves, flanges, and similar pipeline devices and appurtenances when purged and isolated from normal operations.

(p) Portable steam cleaning equipment.

(q) Vents on sanitary sewer lines.

(r) Vents on tanks containing no volatile air pollutants, e.g., any petroleum liquid, not containing Hazardous Air Pollutants, with a Reid Vapor Pressure less than 0.05 psia.

(2) The following insignificant activities are exempted

because of size or production rate and a list of such insignificant activities must be included in the application. The director may require information to verify that the activity is insignificant.

(a) Emergency heating equipment, using coal, wood, kerosene, fuel oil, natural gas, or LPG for fuel, with a rated capacity less than 50,000 BTU per hour.

(b) Individual emissions units having the potential to emit less than one ton per year per pollutant of PM10 particulate matter, nitrogen oxides, sulfur dioxide, volatile organic compounds, or carbon monoxide, unless combined emissions from similar small emission units located within the same Part 70 source are greater than five tons per year of any one pollutant. This does not include emissions units that emit air pollutants other than PM10 particulate matter, nitrogen oxides, sulfur dioxide, volatile organic compounds, or carbon monoxide.

(c) Petroleum industry flares, not associated with refineries, combusting natural gas containing no hydrogen sulfide except in amounts less than 500 parts per million by weight, and having the potential to emit less than five tons per year per air pollutant.

(d) Road sweeping.

(e) Road salting and sanding.

(f) Unpaved public and private roads, except unpaved haul roads located within the boundaries of a stationary source. A haul road means any road normally used to transport people, livestock, product or material by any type of vehicle.

(g) Non-commercial automotive (car and truck) service stations dispensing less than 6,750 gal. of gasoline/month

(h) Hazardous Air Pollutants present at less than 1% concentration, or 0.1% for a carcinogen, in a mixture used at a rate of less than 50 tons per year, provided that a National Emission Standards for Hazardous Air Pollutants standard does not specify otherwise.

(i) Fuel-burning equipment, in which combustion takes place at no greater pressure than one inch of mercury above ambient pressure, with a rated capacity of less than five million BTU per hour using no other fuel than natural gas, or LPG or other mixed gas distributed by a public utility.

(j) Comfort heating equipment (i.e., boilers, water heaters, air heaters and steam generators) with a rated capacity of less than one million BTU per hour if fueled only by fuel oil numbers 1 - 6.

(3) Any person may petition the Board to add an activity or emission to the list of Insignificant Activities and Emissions which may be excluded from an operating permit application under (1) or (2) above upon a change in the rule and approval of the rule change by EPA. The petition shall include the following information:

(a) A complete description of the activity or emission to be added to the list.

(b) A complete description of all air pollutants that may be emitted by the activity or emission, including emission rate, air pollution control equipment, and calculations used to determine emissions.

(c) An explanation of why the activity or emission should be exempted from the application requirements for an operating permit.

(4) The director may determine on a case-by-case basis, insignificant activities and emissions for an individual Part 70 source that may be excluded from an application or that must be listed in the application, but do not require a detailed description. No activity with the potential to emit greater than two tons per year of any criteria pollutant, five tons of a combination of criteria pollutants, 500 pounds of any hazardous air pollutant or one ton of a combination of hazardous air pollutants shall be eligible to be determined an insignificant activity or emission under this subsection (4).

R307-415-6a. Permit Content: Standard Requirements.

Each permit issued under R307-415 shall include the following elements:

(1) Emission limitations and standards, including those operational requirements and limitations that assure compliance with all applicable requirements at the time of permit issuance;

(a) The permit shall specify and reference the origin of and authority for each term or condition, and identify any difference in form as compared to the applicable requirement upon which the term or condition is based.

(b) The permit shall state that, where an applicable requirement is more stringent than an applicable requirement of regulations promulgated under Title IV of the Act, Acid Deposition Control, both provisions shall be incorporated into the permit.

(c) If the State Implementation Plan allows a determination of an alternative emission limit at a Part 70 source, equivalent to that contained in the State Implementation Plan, to be made in the permit issuance, renewal, or significant modification process, and the director elects to use such process, any permit containing such equivalency determination shall contain provisions to ensure that any resulting emissions limit has been demonstrated to be quantifiable, accountable, enforceable, and based on replicable procedures.

(2) Permit duration. Except as provided by Section 19-2-109.1(3), the director shall issue permits for a fixed term of five years.

(3) Monitoring and related recordkeeping and reporting requirements.

(a) Each permit shall contain the following requirements with respect to monitoring:

(i) All monitoring and analysis procedures or test methods required under applicable monitoring and testing requirements, including 40 CFR Part 64 and any other procedures and methods that may be promulgated pursuant to sections 114(a)(3) or 504(b) of the Act. If more than one monitoring or testing requirement applies, the permit may specify a streamlined set of monitoring or testing provisions provided the specified monitoring or testing is adequate to assure compliance at least to the same extent as the monitoring or testing applicable requirements that are not included in the permit as a result of such streamlining;

(ii) Where the applicable requirement does not require periodic testing or instrumental or noninstrumental monitoring, which may consist of recordkeeping designed to serve as monitoring, periodic monitoring sufficient to yield reliable data from the relevant time period that are representative of the source's compliance with the permit, as reported pursuant to (3)(c) below. Such monitoring requirements shall assure use of terms, test methods, units, averaging periods, and other statistical conventions consistent with the applicable requirement. Recordkeeping provisions may be sufficient to meet the requirements of this paragraph;

(iii) As necessary, requirements concerning the use, maintenance, and, where appropriate, installation of monitoring equipment or methods.

(b) With respect to recordkeeping, the permit shall incorporate all applicable recordkeeping requirements and require, where applicable, the following:

(i) Records of required monitoring information that include the following:

(A) The date, place as defined in the permit, and time of sampling or measurements;

(B) The dates analyses were performed;

(C) The company or entity that performed the analyses;

(D) The analytical techniques or methods used;

(E) The results of such analyses;

(F) The operating conditions as existing at the time of sampling or measurement;

(ii) Retention of records of all required monitoring data and support information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Support information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by the permit.

(c) With respect to reporting, the permit shall incorporate all applicable reporting requirements and require all of the following:

(i) Submittal of reports of any required monitoring every six months, or more frequently if specified by the underlying applicable requirement or by the director. All instances of deviations from permit requirements must be clearly identified in such reports. All required reports must be certified by a responsible official consistent with R307-415-5d.

(ii) Prompt reporting of deviations from permit requirements including those attributable to upset conditions as defined in the permit, the probable cause of such deviations, and any corrective actions or preventive measures taken. The director shall define "prompt" in relation to the degree and type of deviation likely to occur and the applicable requirements. Deviations from permit requirements due to unavoidable breakdowns shall be reported according to the unavoidable breakdown provisions of R307-107. The director may establish more stringent reporting deadlines if required by the applicable requirement.

(d) Claims of confidentiality shall be governed by Section 19-1-306.

(4) Acid Rain Allowances. For Title IV affected sources, a permit condition prohibiting emissions exceeding any allowances that the source lawfully holds under Title IV of the Act or the regulations promulgated thereunder.

(a) No permit revision shall be required for increases in emissions that are authorized by allowances acquired pursuant to the Acid Rain Program, provided that such increases do not require a permit revision under any other applicable requirement.

(b) No limit shall be placed on the number of allowances held by the source. The source may not, however, use allowances as a defense to noncompliance with any other applicable requirement.

(c) Any such allowance shall be accounted for according to the procedures established in regulations promulgated under Title IV of the Act.

(5) A severability clause to ensure the continued validity of the various permit requirements in the event of a challenge to any portions of the permit.

(6) Standard provisions stating the following:

(a) The permittee must comply with all conditions of the operating permit. Any permit noncompliance constitutes a violation of the Air Conservation Act and is grounds for any of the following: enforcement action; permit termination; revocation and reissuance; modification; denial of a permit renewal application.

(b) Need to halt or reduce activity not a defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

(c) The permit may be modified, revoked, reopened, and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or of a notification of planned changes or anticipated noncompliance does not stay any permit condition, except as provided under R307-415-7f(1) for minor permit modifications.

(d) The permit does not convey any property rights of any sort, or any exclusive privilege.

(e) The permittee shall furnish to the director, within a reasonable time, any information that the director may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. Upon request, the permittee shall also furnish to the director copies of records required to be kept by the permit or, for information claimed to be confidential, the permittee may furnish such records directly to EPA along with a claim of confidentiality.

(7) Emission fee. A provision to ensure that a Part 70 source pays fees to the director consistent with R307-415-9.

(8) Emissions trading. A provision stating that no permit revision shall be required, under any approved economic incentives, marketable permits, emissions trading and other similar programs or processes for changes that are provided for in the permit.

(9) Alternate operating scenarios. Terms and conditions for reasonably anticipated operating scenarios identified by the source in its application as approved by the director. Such terms and conditions:

(a) Shall require the source, contemporaneously with making a change from one operating scenario to another, to record in a log at the permitted facility a record of the scenario under which it is operating;

(b) Shall extend the permit shield to all terms and conditions under each such operating scenario; and

(c) Must ensure that the terms and conditions of each such alternative scenario meet all applicable requirements and the requirements of R307-415.

(10) Emissions trading. Terms and conditions, if the permit applicant requests them, for the trading of emissions increases and decreases in the permitted facility, to the extent that the applicable requirements provide for trading such increases and decreases without a case-by-case approval of each emissions trade. Such terms and conditions:

(a) Shall include all terms required under R307-415-6a and 6c to determine compliance;

(b) Shall extend the permit shield to all terms and conditions that allow such increases and decreases in emissions; and

(c) Must meet all applicable requirements and requirements of R307-415.

R307-415-6b. Permit Content: Federally-Enforceable Requirements.

(1) All terms and conditions in an operating permit, including any provisions designed to limit a source's potential to emit, are enforceable by EPA and citizens under the Act.

(2) Notwithstanding (1) above, applicable requirements that are not required by the Act or implementing federal regulations shall be included in the permit but shall be specifically designated as being not federally enforceable under the Act and shall be designated as "state requirements." Terms and conditions so designated are not subject to the requirements of R307-415-7a through 7i and R307-415-8 that apply to permit review by EPA and affected states. The director shall determine which conditions are "state requirements" in each operating permit.

R307-415-6c. Permit Content: Compliance Requirements.

All operating permits shall contain all of the following elements with respect to compliance:

(1) Consistent with R307-415-6a(3), compliance certification, testing, monitoring, reporting, and recordkeeping requirements sufficient to assure compliance with the terms and conditions of the permit. Any document, including any report, required by an operating permit shall contain a certification by a responsible official that meets the requirements of R307-415-5d;

(2) Inspection and entry requirements that require that, upon presentation of credentials and other documents as may be required by law, the permittee shall allow the director or an authorized representative to perform any of the following:

(a) Enter upon the permittee's premises where a Part 70 source is located or emissions-related activity is conducted, or where records must be kept under the conditions of the permit;

(b) Have access to and copy, at reasonable times, any records that must be kept under the conditions of the permit;

(c) Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit;

(d) Sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the permit or applicable requirements;

(e) Claims of confidentiality on the information obtained during an inspection shall be made pursuant to Section 19-1-306;

(3) A schedule of compliance consistent with R307-415-5c(8);

(4) Progress reports consistent with an applicable schedule of compliance and R307-415-5c(8) to be submitted semiannually, or at a more frequent period if specified in the applicable requirement or by the director. Such progress reports shall contain all of the following:

(a) Dates for achieving the activities, milestones, or compliance required in the schedule of compliance, and dates when such activities, milestones or compliance were achieved;

(b) An explanation of why any dates in the schedule of compliance were not or will not be met, and any preventive or corrective measures adopted;

(5) Requirements for compliance certification with terms and conditions contained in the permit, including emission limitations, standards, or work practices. Permits shall include all of the following:

(a) Annual submission of compliance certification, or more frequently if specified in the applicable requirement or by the director;

(b) In accordance with R307-415-6a(3), a means for monitoring the compliance of the source with its emissions limitations, standards, and work practices;

(c) A requirement that the compliance certification include all of the following (provided that the identification of applicable information may reference the permit or previous reports, as applicable):

(i) The identification of each term or condition of the permit that is the basis of the certification;

(ii) The identification of the methods or other means used by the owner or operator for determining the compliance status with each term and condition during the certification period. Such methods and other means shall include, at a minimum, the methods and means required under R307-415-6a(3). If necessary, the owner or operator also shall identify any other material information that must be included in the certification to comply with section 113(c)(2) of the Act, which prohibits knowingly making a false certification or omitting material information;

(iii) The status of compliance with the terms and conditions of the permit for the period covered by the certification, including whether compliance during the period was continuous or intermittent. The certification shall be based on the method or means designated in (ii) above. The certification shall identify each deviation and take it into account in the compliance certification. The certification shall also identify as possible exceptions to compliance any periods during which compliance is required and in which an excursion or exceedance as defined under 40 CFR Part 64 occurred; and

(iv) Such other facts as the director may require to determine the compliance status of the source;

(d) A requirement that all compliance certifications be submitted to the EPA as well as to the director;

(e) Such additional requirements as may be specified pursuant to Section 114(a)(3) of the Act, Enhanced Monitoring and Compliance Certification, and Section 504(b) of the Act, Monitoring and Analysis;

(6) Such other provisions as the director may require.

R307-415-6d. Permit Content: General Permits.

(1) The director may, after notice and opportunity for public participation provided under R307-415-7i, issue a general permit covering numerous similar sources. Any general permit shall comply with all requirements applicable to other operating permits and shall identify criteria by which sources may qualify for the general permit. To sources that qualify, the director shall grant the conditions and terms of the general permit. Notwithstanding the permit shield, the source shall be subject to enforcement action for operation without an operating permit if the source is later determined not to qualify for the conditions and terms of the general permit. General permits shall not be issued for Title IV affected sources under the Acid Rain Program unless otherwise provided in regulations promulgated under Title IV of the Act.

(2) Part 70 sources that would qualify for a general permit must apply to the director for coverage under the terms of the general permit or must apply for an operating permit consistent with R307-415-5a through 5e. The director may, in the general permit, provide for applications which deviate from the requirements of R307-415-5a through 5e, provided that such applications meet the requirements of Title V of the Act, and include all information necessary to determine qualification for, and to assure compliance with, the general permit. Without repeating the public participation procedures required under R307-415-7i, the director may grant a source's request for authorization to operate under a general permit, but such a grant to a qualified source shall not be a final permit action until the requirements of R307-415-5a through 5e have been met.

R307-415-6e. Permit Content: Temporary Sources.

The owner or operator of a permitted source may temporarily relocate the source for a period not to exceed that allowed by R307-401-7. A permit modification is required to relocate the source for a period longer than that allowed by R307-401-7. No Title IV affected source may be permitted as a temporary source. Permits for temporary sources shall include all of the following:

(1) Conditions that will assure compliance with all applicable requirements at all authorized locations;

(2) Requirements that the owner or operator receive approval to relocate under R307-401-7 before operating at the new location;

(3) Conditions that assure compliance with all other provisions of R307-415.

R307-415-6f. Permit Content: Permit Shield.

(1) Except as provided in R307-415, the director shall include in each operating permit a permit shield provision stating that compliance with the conditions of the permit shall be deemed compliance with any applicable requirements as of the date of permit issuance, provided that:

(a) Such applicable requirements are included and are specifically identified in the permit; or

(b) The director, in acting on the permit application or revision, determines in writing that other requirements specifically identified are not applicable to the source, and the permit includes the determination or a concise summary thereof.

(2) An operating permit that does not expressly state that a permit shield exists shall be presumed not to provide such a shield.

(3) Nothing in this paragraph or in any operating permit shall alter or affect any of the following:

(a) The emergency provisions of Section 19-1-202 and Section 19-2-112, and the provisions of Section 303 of the Act, Emergency Orders, including the authority of the Administrator under that Section;

(b) The liability of an owner or operator of a source for any violation of applicable requirements under Section 19-2-107(2)(g) and Section 19-2-110 prior to or at the time of permit issuance;

(c) The applicable requirements of the Acid Rain Program, consistent with Section 408(a) of the Act;

(d) The ability of the director to obtain information from a source under Section 19-2-120, and the ability of EPA to obtain information from a source under Section 114 of the Act, Inspection, Monitoring, and Entry.

R307-415-6g. Permit Content: Emergency Provision.

(1) Emergency. An "emergency" is any situation arising from sudden and reasonably unforeseeable events beyond the control of the source, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the source to exceed a technology-based emission limitation under the permit, due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventative maintenance, careless or improper operation, or operator error.

(2) Effect of an emergency. An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions of (3) below are met.

(3) The affirmative defense of emergency shall be demonstrated through properly signed, contemporaneous operating logs, or other relevant evidence that:

(a) An emergency occurred and that the permittee can identify the causes of the emergency;

(b) The permitted facility was at the time being properly operated;

(c) During the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the emission standards, or other requirements in the permit; and

(d) The permittee submitted notice of the emergency to the director within two working days of the time when emission limitations were exceeded due to the emergency. This notice fulfills the requirement of R307-415-6a(3)(c)(ii). This notice must contain a description of the emergency, any steps taken to mitigate emissions, and corrective actions taken.

(4) In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.

(5) This provision is in addition to any emergency or upset provision contained in any applicable requirement.

R307-415-7a. Permit Issuance: Action on Application.

(1) A permit, permit modification, or renewal may be issued only if all of the following conditions have been met:

(a) The director has received a complete application for a permit, permit modification, or permit renewal, except that a complete application need not be received before issuance of a general permit;

(b) Except for modifications qualifying for minor permit modification procedures under R307-415-7f(1) and (2), the director has complied with the requirements for public participation under R307-415-7i;

(c) The director has complied with the requirements for notifying and responding to affected States under R307-415-8(2);

(d) The conditions of the permit provide for compliance with all applicable requirements and the requirements of R307-415;

(e) EPA has received a copy of the proposed permit and any notices required under R307-415-8(1) and (2), and has not objected to issuance of the permit under R307-415-8(3) within the time period specified therein.

(2) Except as provided under the initial transition plan provided for under R307-415-5a(3) or under regulations promulgated under Title IV of the Act for the permitting of Title IV affected sources under the Acid Rain Program, the director shall take final action on each permit application, including a request for permit modification or renewal, within 18 months after receiving a complete application.

(3) The director shall promptly provide notice to the applicant of whether the application is complete. Unless the director requests additional information or otherwise notifies the applicant of incompleteness within 60 days of receipt of an application, the application shall be deemed complete. A completeness determination shall not be required for minor permit modifications.

(4) The director shall provide a statement that sets forth the legal and factual basis for the draft permit conditions, including references to the applicable statutory or regulatory provisions. The director shall send this statement to EPA and to any other person who requests it.

(5) The submittal of a complete application shall not affect the requirement that any source have an approval order under R307-401.

R307-415-7b. Permit Issuance: Requirement for a Permit.

(1) Except as provided in R307-415-7d and R307-415-7f(1)(f) and 7f(2)(e), no Part 70 source may operate after the time that it is required to submit a timely and complete application, except in compliance with a permit issued under these rules.

(2) Application shield. If a Part 70 source submits a timely and complete application for permit issuance, including for renewal, the source's failure to have an operating permit is not a violation of R307-415 until the director takes final action on the permit application. This protection shall cease to apply if, subsequent to the completeness determination made pursuant to R307-415-7a(3), and as required by R307-415-5a(2), the applicant fails to submit by the deadline specified in writing by the director any additional information identified as being needed to process the application.

R307-415-7c. Permit Renewal and Expiration.

(1) Permits being renewed are subject to the same procedural requirements, including those for public participation, affected State and EPA review, that apply to initial permit issuance.

(2) Permit expiration terminates the source's right to operate unless a timely and complete renewal application has been submitted consistent with R307-415-7b and R307-415-5a(1)(c).

(3) If a timely and complete renewal application is submitted consistent with R307-415-7b and R307-415-5a(1)(c) and the director fails to issue or deny the renewal permit before the end of the term of the previous permit, then all of the terms and conditions of the permit, including the permit shield, shall remain in effect until renewal or denial.

R307-415-7d. Permit Revision: Changes That Do Not Require a Revision.

(1) Operational Flexibility.

(a) A Part 70 source may make changes that contravene an express permit term if all of the following conditions have been met:

(i) The source has obtained an approval order, or has met the exemption requirements under R307-401;

(ii) The change would not violate any applicable requirements or contravene any federally enforceable permit terms and conditions for monitoring, including test methods, recordkeeping, reporting, or compliance certification requirements;

(iii) The changes are not modifications under any provision of Title I of the Act; and the changes do not exceed the emissions allowable under the permit, whether expressed therein as a rate of emissions or in terms of total emissions.

(iv) For each such change, the source shall provide written notice to the director and send a copy of the notice to EPA at least seven days before implementing the proposed change. The seven-day requirement may be waived by the director in the case of an emergency. The written notification shall include a brief description of the change within the permitted facility, the date on which the change will occur, any change in emissions, and any permit term or condition that is no longer applicable as a result of the change. The permit shield shall not apply to these changes. The source, the EPA, and the director shall attach each such notice to their copy of the relevant permit.

(b) Emission trading under the State Implementation Plan. Permitted sources may trade increases and decreases in emissions in the permitted facility, where the State Implementation Plan provides for such emissions trades, without requiring a permit revision provided the change is not a modification under any provision of Title I of the Act, the change does not exceed the emissions allowable under the permit, and the source notifies the director and the EPA at least seven days in advance of the trade. This provision is available in those cases where the permit does not already provide for such emissions trading.

(i) The written notification required above shall include such information as may be required by the provision in the State Implementation Plan authorizing the emissions trade, including at a minimum, when the proposed change will occur, a description of each such change, any change in emissions, the permit requirements with which the source will comply using the emissions trading provisions of the State Implementation Plan, and the pollutants emitted subject to the emissions trade. The notice shall also refer to the provisions with which the source will comply in the State Implementation Plan and that provide for the emissions trade.

(ii) The permit shield shall not extend to any change made under this paragraph. Compliance with the permit requirements that the source will meet using the emissions trade shall be determined according to requirements of the State Implementation Plan authorizing the emissions trade.

(c) If a permit applicant requests it, the director shall issue permits that contain terms and conditions, including all terms required under R307-415-6a and 6c to determine compliance, allowing for the trading of emissions increases and decreases in the permitted facility solely for the purpose of complying with a federally-enforceable emissions cap that is established in the permit independent of otherwise applicable requirements. Such changes in emissions shall not be allowed if the change is a modification under any provision of Title I of the Act or the change would exceed the emissions allowable under the permit. The permit applicant shall include in its application proposed replicable procedures and permit terms that ensure the emissions trades are quantifiable and enforceable. The director shall not include in the emissions trading provisions any emissions units for which emissions are not quantifiable or for which there are no replicable procedures to enforce the emissions trades. The permit shall also require compliance with all applicable requirements, and shall require the source to notify the director and the EPA in writing at least seven days before making the emission trade.

(i) The written notification shall state when the change will occur and shall describe the changes in emissions that will result and how these increases and decreases in emissions will comply with the terms and conditions of the permit.

(ii) The permit shield shall extend to terms and conditions that allow such increases and decreases in emissions.

(2) Off-permit changes. A Part 70 source may make changes that are not addressed or prohibited by the permit without a permit revision, unless such changes are subject to any requirements under Title IV of the Act or are modifications under any provision of Title I of the Act.

(a) Each such change shall meet all applicable requirements and shall not violate any existing permit term or condition.

(b) Sources must provide contemporaneous written notice to the director and EPA of each such change, except for changes that qualify as insignificant under R307-415-5e. Such written notice shall describe each such change, including the date, any change in emissions, pollutants emitted, and any applicable requirements that would apply as a result of the change.

(c) The change shall not qualify for the permit shield.

(d) The permittee shall keep a record describing changes made at the source that result in emissions of a regulated air pollutant subject to an applicable requirement, but not otherwise regulated under the permit, and the emissions resulting from those changes.

(e) The off-permit provisions do not affect the requirement for a source to obtain an approval order under R307-401.

R307-415-7e. Permit Revision: Administrative Amendments.

(1) An "administrative permit amendment" is a permit revision that:

(a) Corrects typographical errors;

(b) Identifies a change in the name, address, or phone number of any person identified in the permit, or provides a similar minor administrative change at the source;

(c) Requires more frequent monitoring or reporting by the permittee;

(d) Allows for a change in ownership or operational control of a source where the director determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the director;

(e) Incorporates into the operating permit the requirements from an approval order issued under R307-401, provided that the procedures for issuing the approval order were substantially equivalent to the permit issuance or modification procedures of R307-415-7a through 7i and R307-415-8, and compliance requirements are substantially equivalent to those contained in R307-415-6a through 6g;

(2) Administrative permit amendments for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the Act.

(3) Administrative permit amendment procedures. An administrative permit amendment may be made by the director consistent with the following:

(a) The director shall take no more than 60 days from receipt of a request for an administrative permit amendment to take final action on such request, and may incorporate such changes without providing notice to the public or affected States provided that the director designates any such permit revisions as having been made pursuant to this paragraph. The director shall take final action on a request for a change in ownership or operational control of a source under (1)(d) above within 30 days of receipt of a request.

(b) The director shall submit a copy of the revised permit to EPA.

(c) The source may implement the changes addressed in the request for an administrative amendment immediately upon submittal of the request.

(4) The director shall, upon taking final action granting a request for an administrative permit amendment, allow coverage by the permit shield for administrative permit amendments made pursuant to (1)(e) above which meet the relevant requirements of R307-415-6a through 6g, 7 and 8 for significant permit modifications.

R307-415-7f. Permit Revision: Modification.

The permit modification procedures described in R307-415-7f shall not affect the requirement that a source obtain an approval order under R307-401 before constructing or modifying a source of air pollution. A modification not subject to the requirements of R307-401 shall not require an approval order in addition to the permit modification as described in this section. A permit modification is any revision to an operating permit that cannot be accomplished under the program's provisions for administrative permit amendments under R307-415-7e. Any permit modification for purposes of the acid rain portion of the permit shall be governed by regulations promulgated under Title IV of the Act.

(1) Minor permit modification procedures.

(a) Criteria. Minor permit modification procedures may be used only for those permit modifications that:

(i) Do not violate any applicable requirement or require an approval order under R307-401;

(ii) Do not involve significant changes to existing monitoring, reporting, or recordkeeping requirements in the permit;

(iii) Do not require or change a case-by-case determination of an emission limitation or other standard, or a source-specific determination for temporary sources of ambient impacts, or a visibility or increment analysis;

(iv) Do not seek to establish or change a permit term or condition for which there is no corresponding underlying applicable requirement and that the source has assumed to avoid an applicable requirement to which the source would otherwise be subject. Such term or condition would include a federally enforceable emissions cap assumed to avoid classification as a modification under any provision of Title I or an alternative emissions limit approved pursuant to regulations promulgated under Section 112(i)(5) of the Act, Early Reduction; and

(v) Are not modifications under any provision of Title I of the Act.

(b) Notwithstanding (1)(a) above and (2)(a) below, minor permit modification procedures may be used for permit modifications involving the use of economic incentives, marketable permits, emissions trading, and other similar approaches, to the extent that such minor permit modification procedures are explicitly provided for in the State Implementation Plan or an applicable requirement.

(c) Application. An application requesting the use of minor permit modification procedures shall meet the requirements of R307-415-5c and shall include all of the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs;

(ii) The source's suggested draft permit;

(iii) Certification by a responsible official, consistent with R307-415-5d, that the proposed modification meets the criteria for use of minor permit modification procedures and a request that such procedures be used;

(iv) Completed forms for the director to use to notify EPA and affected States as required under R307-415-8.

(d) EPA and affected State notification. Within five working days of receipt of a complete permit modification

application, the director shall notify EPA and affected States of the requested permit modification. The director promptly shall send any notice required under R307-415-8(2)(b) to EPA.

(e) Timetable for issuance. The director may not issue a final permit modification until after EPA's 45-day review period or until EPA has notified the director that EPA will not object to issuance of the permit modification, whichever is first. Within 90 days of the director's receipt of an application under minor permit modification procedures or 15 days after the end of EPA's 45-day review period under R307-415-8(3), whichever is later, the director shall:

(i) Issue the permit modification as proposed;

(ii) Deny the permit modification application;

(iii) Determine that the requested modification does not meet the minor permit modification criteria and should be reviewed under the significant modification procedures; or

(iv) Revise the draft permit modification and transmit to EPA the new proposed permit modification as required by R307-415-8(1).

(f) Source's ability to make change. A Part 70 source may make the change proposed in its minor permit modification application immediately after it files such application if the source has received an approval order under R307-401 or has met the approval order exemption requirements under R307-413-1 through 6. After the source makes the change allowed by the preceding sentence, and until the director takes any of the actions specified in (1)(e)(i) through (iii) above, the source must comply with both the applicable requirements governing the change and the proposed permit terms and conditions. During this time period, the source need not comply with the existing permit terms and conditions it seeks to modify. However, if the source fails to comply with its proposed permit terms and conditions during this time period, the existing permit terms and conditions it seeks to modify may be enforced against it.

(g) Permit shield. The permit shield under R307-415-6f shall not extend to minor permit modifications.

(2) Group processing of minor permit modifications. Consistent with this paragraph, the director may modify the procedure outlined in (1) above to process groups of a source's applications for certain modifications eligible for minor permit modification processing.

(a) Criteria. Group processing of modifications may be used only for those permit modifications:

(i) That meet the criteria for minor permit modification procedures under (1)(a) above; and

(ii) That collectively are below the following threshold level: 10 percent of the emissions allowed by the permit for the emissions unit for which the change is requested, 20 percent of the applicable definition of major source in R307-415-3, or five tons per year, whichever is least.

(b) Application. An application requesting the use of group processing procedures shall meet the requirements of R307-415-5c and shall include the following:

(i) A description of the change, the emissions resulting from the change, and any new applicable requirements that will apply if the change occurs.

(ii) The source's suggested draft permit.

(iii) Certification by a responsible official, consistent with R307-415-5d, that the proposed modification meets the criteria for use of group processing procedures and a request that such procedures be used.

(iv) A list of the source's other pending applications awaiting group processing, and a determination of whether the requested modification, aggregated with these other applications, equals or exceeds the threshold set under R307-415-7e(2)(a)(ii).

(v) Certification, consistent with R307-415-5d, that the source has notified EPA of the proposed modification. Such notification need only contain a brief description of the

requested modification.

(vi) Completed forms for the director to use to notify EPA and affected States as required under R307-415-8.

(c) EPA and affected State notification. On a quarterly basis or within five business days of receipt of an application demonstrating that the aggregate of a source's pending applications equals or exceeds the threshold level set under (2)(a)(ii) above, whichever is earlier, the director shall notify EPA and affected States of the requested permit modifications. The director shall send any notice required under R307-415-8(2)(b) to EPA.

(d) Timetable for issuance. The provisions of (1)(e) above shall apply to modifications eligible for group processing, except that the director shall take one of the actions specified in (1)(e)(i) through (iv) above within 180 days of receipt of the application or 15 days after the end of EPA's 45-day review period under R307-415-8(3), whichever is later.

(e) Source's ability to make change. The provisions of (1)(f) above shall apply to modifications eligible for group processing.

(f) Permit shield. The provisions of (1)(g) above shall also apply to modifications eligible for group processing.

(3) Significant modification procedures.

(a) Criteria. Significant modification procedures shall be used for applications requesting permit modifications that do not qualify as minor permit modifications or as administrative amendments. Every significant change in existing monitoring permit terms or conditions and every relaxation of reporting or recordkeeping permit terms or conditions shall be considered significant. Nothing herein shall be construed to preclude the permittee from making changes consistent with R307-415 that would render existing permit compliance terms and conditions irrelevant.

(b) Significant permit modifications shall meet all requirements of R307-415, including those for applications, public participation, review by affected States, and review by EPA, as they apply to permit issuance and permit renewal. The director shall complete review on the majority of significant permit modifications within nine months after receipt of a complete application.

R307-415-7g. Permit Revision: Reopening for Cause.

(1) Each issued permit shall include provisions specifying the conditions under which the permit will be reopened prior to the expiration of the permit. A permit shall be reopened and revised under any of the following circumstances:

(a) New applicable requirements become applicable to a major Part 70 source with a remaining permit term of three or more years. Such a reopening shall be completed not later than 18 months after promulgation of the applicable requirement. No such reopening is required if the effective date of the requirement is later than the date on which the permit is due to expire, unless the terms and conditions of the permit have been extended pursuant to R307-415-7c(3).

(b) Additional requirements, including excess emissions requirements, become applicable to an Title IV affected source under the Acid Rain Program. Upon approval by EPA, excess emissions offset plans shall be deemed to be incorporated into the permit.

(c) The director or EPA determines that the permit contains a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of the permit.

(d) EPA or the director determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

(e) Additional applicable requirements are to become effective before the renewal date of the permit and are in conflict with existing permit conditions.

(2) Proceedings to reopen and issue a permit shall follow the same procedures as apply to initial permit issuance and shall affect only those parts of the permit for which cause to reopen exists. Such reopening shall be made as expeditiously as practicable.

(3) Reopenings under (1) above shall not be initiated before a notice of such intent is provided to the Part 70 source by the director at least 30 days in advance of the date that the permit is to be reopened, except that the director may provide a shorter time period in the case of an emergency.

R307-415-7h. Permit Revision: Reopenings for Cause by EPA.

The director shall, within 90 days after receipt of notification that EPA finds that cause exists to terminate, modify or revoke and reissue a permit, forward to EPA a proposed determination of termination, modification, or revocation and reissuance, as appropriate. The director may request a 90-day extension if a new or revised permit application is necessary or if the director determines that the permittee must submit additional information.

R307-415-7i. Public Participation.

The director shall provide for public notice, comment and an opportunity for a hearing on initial permit issuance, significant modifications, reopenings for cause, and renewals, including the following procedures:

(1) Notice shall be given: by publication in a newspaper of general circulation in the area where the source is located; to persons on a mailing list developed by the director, including those who request in writing to be on the list; and by other means if necessary to assure adequate notice to the affected public.

(2) The notice shall identify the Part 70 source; the name and address of the permittee; the name and address of the director; the activity or activities involved in the permit action; the emissions change involved in any permit modification; the name, address, and telephone number of a person from whom interested persons may obtain additional information, including copies of the permit draft, the application, all relevant supporting materials, including any compliance plan or compliance and monitoring certification, and all other materials available to the director that are relevant to the permit decision; a brief description of the comment procedures; and the time and place of any hearing that may be held, including a statement of procedures to request a hearing, unless a hearing has already been scheduled.

(3) The director shall provide such notice and opportunity for participation by affected States as is provided for by R307-415-8.

(4) Timing. The director shall provide at least 30 days for public comment and shall give notice of any public hearing at least 30 days in advance of the hearing.

(5) The director shall keep a record of the commenters and also of the issues raised during the public participation process, and such records shall be available to the public and to EPA.

R307-415-8. Permit Review by EPA and Affected States.

(1) Transmission of information to EPA.

(a) The director shall provide to EPA a copy of each permit application, including any application for permit modification, each proposed permit, and each final operating permit, unless the Administrator has waived this requirement for a category of sources, including any class, type, or size within such category. The applicant may be required by the director to provide a copy of the permit application, including the compliance plan, directly to EPA. Upon agreement with EPA, the director may submit to EPA a permit application summary form and any relevant portion of the permit application and

compliance plan, in place of the complete permit application and compliance plan. To the extent practicable, the preceding information shall be provided in computer-readable format compatible with EPA's national database management system.

(b) The director shall keep for five years such records and submit to EPA such information as EPA may reasonably require to ascertain whether the Operating Permit Program complies with the requirements of the Act or of 40 CFR Part 70.

(2) Review by affected States.

(a) The director shall give notice of each draft permit to any affected State on or before the time that the director provides this notice to the public under R307-415-7i, except to the extent R307-415-7f(1) or (2) requires the timing to be different, unless the Administrator has waived this requirement for a category of sources, including any class, type, or size within such category.

(b) The director, as part of the submittal of the proposed permit to EPA, or as soon as possible after the submittal for minor permit modification procedures allowed under R307-415-7f(1) or (2), shall notify EPA and any affected State in writing of any refusal by the director to accept all recommendations for the proposed permit that the affected State submitted during the public or affected State review period. The notice shall include the director's reasons for not accepting any such recommendation. The director is not required to accept recommendations that are not based on applicable requirements or the requirements of R307-415.

(3) EPA objection. If EPA objects to the issuance of a permit in writing within 45 days of receipt of the proposed permit and all necessary supporting information, then the director shall not issue the permit. If the director fails, within 90 days after the date of an objection by EPA, to revise and submit a proposed permit in response to the objection, EPA may issue or deny the permit in accordance with the requirements of the Federal program promulgated under Title V of the Act.

(4) Public petitions to EPA. If EPA does not object in writing under R307-415-8(3), any person may petition EPA under the provisions of 40 CFR 70.8(d) within 60 days after the expiration of EPA's 45-day review period to make such objection. If EPA objects to the permit as a result of a petition, the director shall not issue the permit until EPA's objection has been resolved, except that a petition for review does not stay the effectiveness of a permit or its requirements if the permit was issued after the end of the 45-day review period and prior to an EPA objection. If the director has issued a permit prior to receipt of an EPA objection under this paragraph, EPA may modify, terminate, or revoke such permit, consistent with the procedures in 40 CFR 70.7(g) except in unusual circumstances, and the director may thereafter issue only a revised permit that satisfies EPA's objection. In any case, the source will not be in violation of the requirement to have submitted a timely and complete application.

(5) Prohibition on default issuance. The director shall not issue an operating permit, including a permit renewal or modification, until affected States and EPA have had an opportunity to review the proposed permit as required under this Section.

R307-415-9. Fees for Operating Permits.

(1) Definitions. The following definition applies only to R307-415-9: "Allowable emissions" are emissions based on the potential to emit stated by the director in an approval order, the State Implementation Plan or an operating permit.

(2) Applicability. As authorized by Section 19-2-109.1, all Part 70 sources must pay an annual fee, based on annual emissions of all chargeable pollutants.

(a) Any Title IV affected source that has been designated as a "Phase I Unit" in a substitution plan approved by the Administrator under 40 CFR Section 72.41 shall be exempted

from the requirement to pay an emission fee from January 1, 1995 to December 31, 1999.

(3) Calculation of Annual Emission Fee for a Part 70 Source.

(a) The emission fee shall be calculated for all chargeable pollutants emitted from a Part 70 source, even if only one unit or one chargeable pollutant triggers the applicability of R307-415 to the source.

(i) Fugitive emissions and fugitive dust shall be counted when determining the emission fee for a Part 70 source.

(ii) An emission fee shall not be charged for emissions of any amount of a chargeable pollutant if the emissions are already accounted for within the emissions of another chargeable pollutant.

(iii) An emission fee shall not be charged for emissions of any one chargeable pollutant from any one Part 70 source in excess of 4,000 tons per year.

(iv) Emissions resulting directly from an internal combustion engine for transportation purposes or from a non-road vehicle shall not be counted when calculating chargeable emissions for a Part 70 source.

(b) The emission fee for an existing source prior to the issuance of an operating permit, shall be based on the most recent emission inventory available unless a Part 70 source elected, prior to July 1, 1992, to base the fee for one or more pollutants on allowable emissions established in an approval order or the State Implementation Plan.

(c) The emission fee after the issuance or renewal of an operating permit shall be based on the most recent emission inventory available unless a Part 70 source elects, prior to the issuance or renewal of the permit, to base the fee for one or more chargeable pollutants on allowable emissions for the entire term of the permit.

(d) When a new Part 70 source begins operating, it shall pay an emission fee for that fiscal year, prorated from the date the source begins operating. The emission fee for a new Part 70 source shall be based on allowable emissions until that source has been in operation for a full calendar year, and has submitted an inventory of actual emissions. If a new Part 70 source is not billed in the first billing cycle of its operation, the emission fee shall be calculated using the emissions that would have been used had the source been billed at that time. This fee shall be in addition to any subsequent emission fees.

(e) When a Part 70 source is no longer subject to Part 70, the emission fee shall be prorated to the date that the source ceased to be subject to Part 70. If the Part 70 source has already paid an emission fee that is greater than the prorated fee, the balance will be refunded.

(i) If that Part 70 source again becomes subject to the emission fee requirements, it shall pay an emission fee for that fiscal year prorated from the date the source again became subject to the emission fee requirements. The fee shall be based on the emission inventory during the last full year of operation. The emission fee shall continue to be based on actual emissions reported for the last full calendar year of operation until that source has been in operation for a full calendar year and has submitted an updated inventory of actual emissions.

(ii) If a Part 70 source has chosen to base the emission fee on allowable emissions, then the prorated fee shall be calculated using allowable emissions.

(f) Modifications. The method for calculating the emission fee for a source shall not be affected by modifications at that source, unless the source demonstrates to the director that another method for calculating chargeable emissions is more representative of operations after the modification has been made.

(g) The director may presume that potential emissions of any chargeable pollutant for the source are equivalent to the actual emissions for the source if recent inventory data are not

available.

(4) Collection of Fees.

(a) The emission fee is due on October 1 of each calendar year or 45 days after the source has received notice of the amount of the fee, whichever is later.

(b) The director may require any person who fails to pay the annual emission fee by the due date to pay interest on the fee and a penalty under 19-2-109.1(7)(a).

(c) A person may contest an emission fee assessment, or associated penalty, under 19-2-109.1(8).

Notice of Continuation June 6, 2012

19-2-104

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-12. General Provisions.

R313-12-1. Authority.

The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(8) and Section 63J-1-504.

R313-12-2. Purpose and Scope.

It is the purpose of these rules to state such requirements as shall be applied in the use of radiation, radiation machines, and radioactive materials to ensure the maximum protection of the public health and safety to all persons at, or in the vicinity of, the place of use, storage, or disposal. These rules are intended to be consistent with the proper use of radiation machines and radioactive materials. Except as otherwise specifically provided, these rules apply to all persons who receive, possess, use, transfer, own or acquire any source of radiation, provided, however, that nothing in these rules shall apply to any person to the extent such person is subject to regulation by the U.S. Nuclear Regulatory Commission. See also Section R313-12-55.

R313-12-3. Definitions.

As used in these rules, these terms shall have the definitions set forth below. Additional definitions used only in a certain rule will be found in that rule.

"A1" means the maximum activity of special form radioactive material permitted in a Type A package.

"A2" means the maximum activity of radioactive material, other than special form radioactive material, low specific activity, and surface contaminated object material permitted in a Type A package. These values are either listed in 10 CFR 71, Appendix A, which is incorporated by reference in Section R313-19-100 or may be derived in accordance with the procedures prescribed in 10 CFR 71, Appendix A, which is incorporated by reference in Section R313-19-100.

"Absorbed dose" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.

"Accelerator produced radioactive material" means material made radioactive by a particle accelerator.

"Act" means Utah Radiation Control Act, Title 19, Chapter 3.

"Activity" means the rate of disintegration or transformation or decay of radioactive material. The units of activity are the becquerel (Bq) and the curie (Ci).

"Adult" means an individual 18 or more years of age.

"Address of use" means the building or buildings that are identified on the license and where radioactive material may be received, used or stored.

"Advanced practice registered nurse" means an individual licensed by this state to engage in the practice of advanced practice registered nursing. See Sections 58-31b-101 through 58-31b-801, Nurse Practice Act.

"Agreement State" means a state with which the United States Nuclear Regulatory Commission or the Atomic Energy Commission has entered into an effective agreement under Section 274 b. of the Atomic Energy Act of 1954, as amended (73 Stat. 689).

"Airborne radioactive material" means a radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors, or gases.

"Airborne radioactivity area" means: a room, enclosure, or area in which airborne radioactive material exists in concentrations:

(a) In excess of the derived air concentrations (DACs), specified in Rule R313-15, or

(b) To such a degree that an individual present in the area without respiratory protective equipment could exceed, during

the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI), or 12 DAC hours.

"As low as reasonably achievable" (ALARA) means making every reasonable effort to maintain exposures to radiation as far below the dose limits as is practical, consistent with the purpose for which the licensed or registered activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed or registered sources of radiation in the public interest.

"Area of use" means a portion of an address of use that has been set aside for the purpose of receiving, using, or storing radioactive material.

"Background radiation" means radiation from cosmic sources; naturally occurring radioactive materials, including radon, except as a decay product of source or special nuclear material, and including global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents such as Chernobyl that contribute to background radiation and are not under the control of the licensee. "Background radiation" does not include sources of radiation from radioactive materials regulated by the Division of Waste Management and Radiation Control under the Radiation Control Act or Rules.

"Becquerel" (Bq) means the SI unit of activity. One becquerel is equal to one disintegration or transformation per second.

"Bioassay" means the determination of kinds, quantities or concentrations, and in some cases, the locations of radioactive material in the human body, whether by direct measurement (in vivo counting) or by analysis and evaluation of materials excreted or removed from the human body. For purposes of these rules, "radiobioassay" is an equivalent term.

"Board" means the Waste Management and Radiation Control Board created under Section 19-1-106.

"Byproduct material" means:

(a) a radioactive material, with the exception of special nuclear material, yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material;

(b) the tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content, including discrete surface wastes resulting from uranium solution extraction processes. Underground ore bodies depleted by these solution extraction operations do not constitute "byproduct material" within this definition;

(c) (i) a discrete source of radium-226 that is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity; or

(ii) material that

(A) has been made radioactive by use of a particle accelerator; and

(B) is produced, extracted, or converted after extraction, before, on, or after August 8, 2005, for use for a commercial, medical, or research activity; and

(d) a discrete source of naturally occurring radioactive material, other than source material, that

(i) The Commission, in consultation with the Administrator of the Environmental Protection Agency, the Secretary of Energy, the Secretary of Homeland Security, and the head of any other appropriate Federal agency, has determined would pose a threat similar to the threat posed by a discrete source of radium-226 to the public health and safety or the common defense and security; and

(ii) Before, on, or after August 8, 2005, is extracted or converted after extraction for use in a commercial, medical, or research activity.

"Calibration" means the determination of:

(a) the response or reading of an instrument relative to a series of known radiation values over the range of the instrument; or

(b) the strength of a source of radiation relative to a standard.

"CFR" means Code of Federal Regulations.

"Chelating agent" means a chemical ligand that can form coordination compounds in which the ligand occupies more than one coordination position. The agents include beta diketones, certain proteins, amine polycarboxylic acids, hydroxycarboxylic acids, gluconic acid, and polycarboxylic acids.

"Chiropractor" means an individual licensed by this state to engage in the practice of chiropractic. See Sections 58-73-101 through 58-73-701, Chiropractic Physician Practice Act.

"Collective dose" means the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.

"Commencement of construction" means taking any action defined as "construction" or any other activity at the site of a facility subject to these rules that have a reasonable nexus to radiological health and safety.

"Commission" means the U.S. Nuclear Regulatory Commission.

"Committed dose equivalent" (HT,50), means the dose equivalent to organs or tissues of reference (T), that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.

"Committed effective dose equivalent" (HE,50), is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to each of these organs or tissues.

"Consortium" means an association of medical use licensees and a PET radionuclide production facility in the same geographical area that jointly own or share in the operation and maintenance cost of the PET radionuclide production facility that produces PET radionuclides for use in producing radioactive drugs within the consortium for noncommercial distributions among its associated members for medical use. The PET radionuclide production facility within the consortium must be located at an educational institution, a Federal facility, or a medical facility.

"Construction" means the installation of wells associated with radiological operations; for example, production, injection, or monitoring well networks associated with in-situ recovery or other facilities; the installation of foundations, or in-place assembly, erection, fabrication, or testing for any structure, system, or component of a facility or activity subject to these rules that are related to radiological safety or security. The term "construction" does not include:

(a) changes for temporary use of the land for public recreational purposes;

(b) site exploration, including necessary borings to determine foundation conditions or other preconstruction monitoring to establish background information related to the suitability of the site, the environmental impacts of construction or operation, or the protection of environmental values;

(c) preparation of the site for construction of the facility, including clearing of the site, grading, installation of drainage, erosion and other environmental mitigation measures, and construction of temporary roads and borrow areas;

(d) erection of fences and other access control measures that are not related to the safe use of, or security of, radiological materials subject to this part;

(e) excavation;

(f) erection of support buildings; for example, construction

equipment storage sheds, warehouse and shop facilities, utilities, concrete mixing plants, docking and unloading facilities, and office buildings; for use in connection with the construction of the facility;

(g) building of service facilities; for example, paved roads, parking lots, railroad spurs, exterior utility and lighting systems, potable water systems, sanitary sewerage treatment facilities, and transmission lines;

(h) procurement or fabrication of components or portions of the proposed facility occurring at other than the final, in-place location at the facility; or

(i) taking any other action that has no reasonable nexus to radiological health and safety.

"Controlled area" means an area, outside of a restricted area but inside the site boundary, access to which can be limited by the licensee or registrant for any reason.

"Critical group" means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.

"Curie" means a unit of measurement of activity. One curie (Ci) is that quantity of radioactive material which decays at the rate of 3.7×10^{10} to the tenth power disintegrations or transformations per second (dps or tps).

"Cyclotron" means a particle accelerator in which the charged particles travel in an outward spiral or circular path. A cyclotron accelerates charged particles at energies usually in excess of 10 megaelectron volts and is commonly used for production of short half-life radionuclides for medical use.

"Decommission" means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits:

(a) release of property for unrestricted use and termination of the license; or

(b) release of the property under restricted conditions and termination of the license.

"Deep dose equivalent" (H_d), which applies to external whole body exposure, means the dose equivalent at a tissue depth of one centimeter (1000 mg/cm^2).

"Dentist" means an individual licensed by this state to engage in the practice of dentistry. See sections 58-69-101 through 58-69-805, Dentist and Dental Hygienist Practice Act.

"Department" means the Utah Department of Environmental Quality.

"Depleted uranium" means the source material uranium in which the isotope uranium-235 is less than 0.711 weight percent of the total uranium present. Depleted uranium does not include special nuclear material.

"Diffuse source" means a radionuclide that has been unintentionally produced or concentrated during the processing of materials for use for commercial, medical, or research activities.

"Director" means the Director of the Division of Waste Management and Radiation Control.

"Discrete source" means a radionuclide that has been processed so that its concentration within a material has been purposely increased for use for commercial, medical, or research activities.

"Distinguishable from background" means that the detectable concentration of a radionuclide is statistically different from the background concentration of that radionuclide in the vicinity of the site or, in the case of structures, in similar materials using adequate measurement technology, survey, and statistical techniques.

"Dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, or total effective dose equivalent. For purposes of these rules, "radiation dose" is an equivalent term.

"Dose equivalent" (H_T), means the product of the absorbed

dose in tissue, quality factor, and other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem.

"Dose limits" means the permissible upper bounds of radiation doses established in accordance with these rules. For purpose of these rules, "limits" is an equivalent term.

"Effective dose equivalent" (H_E), means the sum of the products of the dose equivalent to each organ or tissue (H_T), and the weighting factor (w_T), applicable to each of the body organs or tissues that are irradiated.

"Embryo/fetus" means the developing human organism from conception until the time of birth.

"Entrance or access point" means an opening through which an individual or extremity of an individual could gain access to radiation areas or to licensed or registered radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.

"Explosive material" means a chemical compound, mixture, or device which produces a substantial instantaneous release of gas and heat spontaneously or by contact with sparks or flame.

"EXPOSURE" when capitalized, means the quotient of dQ by dm where "dQ" is the absolute value of the total charge of the ions of one sign produced in air when all the electrons, both negatrons and positrons, liberated by photons in a volume element of air having a mass of "dm" are completely stopped in air. The special unit of EXPOSURE is the roentgen (R). See Section R313-12-20 Units of exposure and dose for the SI equivalent. For purposes of these rules, this term is used as a noun.

"Exposure" when not capitalized as the above term, means being exposed to ionizing radiation or to radioactive material. For purposes of these rules, this term is used as a verb.

"EXPOSURE rate" means the EXPOSURE per unit of time, such as roentgen per minute and milliroentgen per hour.

"External dose" means that portion of the dose equivalent received from a source of radiation outside the body.

"Extremity" means hand, elbow, arm below the elbow, foot, knee, and leg below the knee.

"Facility" means the location within one building, vehicle, or under one roof and under the same administrative control

(a) at which the use, processing or storage of radioactive material is or was authorized; or

(b) at which one or more radiation-producing machines or radioactivity-inducing machines are installed or located.

"Former United States Atomic Energy Commission (AEC) or United States Nuclear Regulatory Commission (NRC) licensed facilities" means nuclear reactors, nuclear fuel reprocessing plants, uranium enrichment plants, or critical mass experimental facilities where AEC or NRC licenses have been terminated.

"Generally applicable environmental radiation standards" means standards issued by the U.S. Environmental Protection Agency under the authority of the Atomic Energy Act of 1954, as amended, that impose limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.

"Gray" (Gy) means the SI unit of absorbed dose. One gray is equal to an absorbed dose of one joule per kilogram.

"Hazardous waste" means those wastes designated as hazardous by the U.S. Environmental Protection Agency rules in 40 CFR Part 261.

"Healing arts" means the disciplines of medicine, dentistry, osteopathy, chiropractic, and podiatry.

"High radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving a dose equivalent in excess of one mSv (0.1 rem), in one hour at 30 centimeters from the source of radiation or from a surface

that the radiation penetrates. For purposes of these rules, rooms or areas in which diagnostic x-ray systems are used for healing arts purposes are not considered high radiation areas.

"Human use" means the intentional internal or external administration of radiation or radioactive material to human beings.

"Individual" means a human being.

"Individual monitoring" means the assessment of:

(a) dose equivalent, by the use of individual monitoring devices or, by the use of survey data; or

(b) committed effective dose equivalent by bioassay or by determination of the time weighted air concentrations to which an individual has been exposed, that is, DAC-hours.

"Individual monitoring devices" means devices designed to be worn by a single individual for the assessment of dose equivalent. For purposes of these rules, individual monitoring equipment and personnel monitoring equipment are equivalent terms. Examples of individual monitoring devices are film badges, thermoluminescence dosimeters (TLD's), pocket ionization chambers, and personal air sampling devices.

"Inspection" means an official examination or observation including, but not limited to, tests, surveys, and monitoring to determine compliance with rules, orders, requirements and conditions applicable to radiation sources.

"Interlock" means a device arranged or connected requiring the occurrence of an event or condition before a second condition can occur or continue to occur.

"Internal dose" means that portion of the dose equivalent received from radioactive material taken into the body.

"Lens dose equivalent" (LDE) applies to the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeter (300 mg/cm²).

"License" means a license issued by the Director in accordance with the rules adopted by the Board.

"Licensee" means a person who is licensed by the Department in accordance with these rules and the Act.

"Licensed or registered material" means radioactive material, received, possessed, used or transferred or disposed of under a general or specific license issued by the Director.

"Licensing state" means a state which, prior to November 30, 2007, was provisionally or finally designated as such by the Conference of Radiation Control Program Directors, Inc., which reviewed state regulations to establish equivalency with the Suggested State Regulations and ascertained whether a State has an effective program for control of natural occurring or accelerator produced radioactive material.

"Limits". See "Dose limits".

"Lost or missing source of radiation" means licensed or registered sources of radiation whose location is unknown. This definition includes, but is not limited to, radioactive material that has been shipped but has not reached its planned destination and whose location cannot be readily traced in the transportation system.

"Major processor" means a user processing, handling, or manufacturing radioactive material exceeding Type A quantities as unsealed sources or material, or exceeding four times Type B quantities as sealed sources, but does not include nuclear medicine programs, universities, industrial radiographers, or small industrial programs. Type A and B quantities are defined in 10 CFR 71.4.

"Member of the public" means an individual except when that individual is receiving an occupational dose.

"Minor" means an individual less than 18 years of age.

"Monitoring" means the measurement of radiation, radioactive material concentrations, surface area activities or quantities of radioactive material, and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of these rules, radiation monitoring and radiation protection monitoring are equivalent terms.

"Natural radioactivity" means radioactivity of naturally occurring nuclides.

"Nuclear Regulatory Commission" (NRC) means the U.S. Nuclear Regulatory Commission or its duly authorized representatives.

"Occupational dose" means the dose received by an individual in the course of employment in which the individual's assigned duties for the licensee or registrant involve exposure to sources of radiation, whether or not the sources of radiation are in the possession of the licensee, registrant, or other person. Occupational dose does not include doses received from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material and released in accordance with Rule R313-32, from voluntary participation in medical research programs, or as a member of the public.

"Package" means the packaging together with its radioactive contents as presented for transport.

"Particle accelerator" means a machine capable of accelerating electrons, protons, deuterons, or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of one megaelectron volt. For purposes of these rules, "accelerator" is an equivalent term.

"Permit" means a permit issued by the Director in accordance with the rules adopted by the Board.

"Permitee" means a person who is permitted by the Director in accordance with these rules and the Act.

"Person" means an individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, political subdivision of this state, or another state or political subdivision or agency thereof, and a legal successor, representative, agent or agency of the foregoing.

"Personnel monitoring equipment," see individual monitoring devices.

"Pharmacist" means an individual licensed by this state to engage in the practice of pharmacy. See Sections 58-17b-101 through 58-17b-801, Pharmacy Practice Act.

"Physician" means both physicians and surgeons licensed under Section 58-67-301, Utah Medical Practice Act, and osteopathic physicians and surgeons licensed under Section 58-68-301, Utah Osteopathic Medical Practice Act.

"Physician assistant" means an individual licensed by this state to engage in practice as a physician assistant. See Sections 58-70a-101 through 58-70a-504, Physician Assistant Act.

"Podiatrist" means an individual licensed by this state to engage in the practice of podiatry. See Sections 58-5a-101 through 58-5a-501, Podiatric Physician Licensing Act.

"Practitioner" means an individual licensed by this state in the practice of a healing art. For these rules, only the following are considered to be a practitioner: physician, dentist, podiatrist, chiropractor, physician assistant, and advanced practice registered nurse.

"Protective apron" means an apron made of radiation-attenuating materials used to reduce exposure to radiation.

"Public dose" means the dose received by a member of the public from exposure to radiation or to radioactive materials released by a licensee, or to any other source of radiation under the control of a licensee or registrant. Public dose does not include occupational dose or doses received from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material and released in accordance with Rule R313-32, or from voluntary participation in medical research programs.

"Pyrophoric material" means any liquid that ignites spontaneously in dry or moist air at or below 130 degrees Fahrenheit (54.4 degrees Celsius) or any solid material, other than one classed as an explosive, which under normal conditions is liable to cause fires through friction, retained heat from

manufacturing or processing, or which can be ignited and, when ignited, burns so vigorously and persistently as to create a serious transportation, handling, or disposal hazard. Included are spontaneously combustible and water-reactive materials.

"Quality factor" (Q) means the modifying factor, listed in Tables 1 and 2 of Section R313-12-20 that is used to derive dose equivalent from absorbed dose.

"Rad" means the special unit of absorbed dose. One rad is equal to an absorbed dose of 100 erg per gram or 0.01 joule per kilogram

"Radiation" means alpha particles, beta particles, gamma rays, x-rays, neutrons, high speed electrons, high speed protons, and other particles capable of producing ions. For purposes of these rules, ionizing radiation is an equivalent term. Radiation, as used in these rules, does not include non-ionizing radiation, like radiowaves or microwaves, visible, infrared, or ultraviolet light.

"Radiation area" means an area, accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.05 mSv (0.005 rem), in one hour at 30 centimeters from the source of radiation or from a surface that the radiation penetrates.

"Radiation machine" means a device capable of producing radiation except those devices with radioactive material as the only source of radiation.

"Radiation safety officer" means an individual who has the knowledge and responsibility to apply appropriate radiation protection rules and has been assigned such responsibility by the licensee or registrant. For a licensee authorized to use radioactive materials in accordance with the requirements of Rule R313-32,

(1) the individual named as the "Radiation Safety Officer" must meet the training requirements for a Radiation Safety Officer as stated in Rule R313-32; or

(2) the individual must be identified as a "Radiation Safety Officer" on

(a) a specific license issued by the Director, the U.S. Nuclear Regulatory Commission, or an Agreement State that authorizes the medical use of radioactive materials; or

(b) a medical use permit issued by a U.S. Nuclear Regulatory Commission master material licensee.

"Radioactive source". See "Source of radiation."

"Radioactive material" means a solid, liquid, or gas which emits radiation spontaneously.

"Radioactivity" means the transformation of unstable atomic nuclei by the emission of radiation.

"Radiobioassay". See "Bioassay".

"Registrant" means any person who is registered with respect to radioactive materials or radiation machines with the Director or is legally obligated to register with the Director pursuant to these rules and the Act.

"Registration" means registration with the Director in accordance with the rules adopted by the Board.

"Regulations of the U.S. Department of Transportation" means 49 CFR 100 through 189.

"Rem" means the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor. One rem equals 0.01 sievert (Sv).

"Research and development" means:

(a) theoretical analysis, exploration, or experimentation; or
 (b) the extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials, and processes. Research and development does not include the internal or external administration of radiation or radioactive material to human beings.

"Residual radioactivity" means radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials remaining at the site as a result of routine or accidental releases of radioactive material at the site and previous burials at the site, even if those burials were made in accordance with the provisions of Rule R313-15.

"Restricted area" means an area, access to which is limited by the licensee or registrant for the purpose of protecting individuals against undue risks from exposure to sources of radiation. A "Restricted area" does not include areas used as residential quarters, but separate rooms in a residential building may be set apart as a restricted area.

"Roentgen" (R) means the special unit of EXPOSURE. One roentgen equals 2.58×10^{-4} coulombs per kilogram of air. See EXPOSURE.

"Sealed source" means radioactive material that is permanently bonded or fixed in a capsule or matrix designed to prevent release and dispersal of the radioactive material under the most severe conditions which are likely to be encountered in normal use and handling.

"Sealed source and device registry" means the national registry that contains all the registration certificates, generated by both NRC and the Agreement States, that summarize the radiation safety information for the sealed sources and devices and describe the licensing and use conditions approved for the product.

"Shallow dose equivalent" (Hs) which applies to the external exposure of the skin of the whole body or the skin of an extremity, is taken as the dose equivalent at a tissue depth of 0.007 centimeter (seven mg per square centimeter).

"SI" means an abbreviation of the International System of Units.

"Sievert" (Sv) means the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor. One Sv equals 100 rem.

"Site boundary" means that line beyond which the land or property is not owned, leased, or otherwise controlled by the licensee or registrant.

"Source container" means a device in which sealed sources are transported or stored.

"Source material" means:

(a) uranium or thorium, or any combination thereof, in any physical or chemical form, or

(b) ores that contain by weight one-twentieth of one percent (0.05 percent), or more of, uranium, thorium, or any combination of uranium and thorium. Source material does not include special nuclear material.

"Source material milling" means any activity that results in the production of byproduct material as defined by (b) of "byproduct material".

"Source of radiation" means any radioactive material, or a device or equipment emitting or capable of producing ionizing radiation.

"Special form radioactive material" means radioactive material which satisfies the following conditions:

(a) it is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

(b) the piece or capsule has at least one dimension not less than five millimeters (0.197 inch); and

(c) it satisfies the test requirements specified by the U.S. Nuclear Regulatory Commission in 10 CFR 71.75. A special form encapsulation designed in accordance with the U.S. Nuclear Regulatory Commission requirements in effect on June 30, 1983, and constructed prior to July 1, 1985, may continue to

be used. A special form encapsulation designed in accordance with the requirements of 10 CFR 71.4 in effect on March 31, 1996, (see 10 CFR 71 revised January 1, 1983), and constructed before April 1, 1998, may continue to be used. Any other special form encapsulation must meet the specifications of this definition.

"Special nuclear material" means:

(a) plutonium, uranium-233, uranium enriched in the isotope 233 or in the isotope 235, and other material that the U.S. Nuclear Regulatory Commission, pursuant to the provisions of section 51 of the Atomic Energy Act of 1954, as amended, determines to be special nuclear material, but does not include source material; or

(b) any material artificially enriched by any of the foregoing but does not include source material.

"Special nuclear material in quantities not sufficient to form a critical mass" means uranium enriched in the isotope U-235 in quantities not exceeding 350 grams of contained U-235; uranium-233 in quantities not exceeding 200 grams; plutonium in quantities not exceeding 200 grams or a combination of them in accordance with the following formula: For each kind of special nuclear material, determine the ratio between the quantity of that special nuclear material and the quantity specified above for the same kind of special nuclear material. The sum of such ratios for all of the kinds of special nuclear material in combination shall not exceed one. For example, the following quantities in combination would not exceed the limitation and are within the formula:

$(175(\text{Grams contained U-235})/350) + (50(\text{Grams U-233}/200) + (50(\text{Grams Pu}/200)))$ is equal to one.

"Survey" means an evaluation of the radiological conditions and potential hazards incident to the production, use, transfer, release, disposal, or presence of sources of radiation. When appropriate, such evaluation includes, but is not limited to, tests, physical examinations and measurements of levels of radiation or concentrations of radioactive material present.

"Test" means the process of verifying compliance with an applicable rule.

"These rules" means "Utah Radiation Control Rules".

"Total effective dose equivalent" (TEDE) means the sum of the effective dose equivalent for external exposures and the committed effective dose equivalent for internal exposures.

"Total organ dose equivalent" (TODE) means the sum of the deep dose equivalent and the committed dose equivalent to the organ receiving the highest dose as described in Subsection R313-15-1107(1)(f).

"U.S. Department of Energy" means the Department of Energy established by Public Law 95-91, August 4, 1977, 91 Stat. 565, 42 U.S.C. 7101 et seq., to the extent that the Department exercises functions formerly vested in the U.S. Atomic Energy Commission, its Chairman, members, officers and components and transferred to the U.S. Energy Research and Development Administration and to the Administrator thereof pursuant to sections 104(b), (c), and (d) of Public Law 93-438, October 11, 1974, 88 Stat. 1233 at 1237, effective January 19, 1975 known as the Energy Reorganization Act of 1974, and retransferred to the Secretary of Energy pursuant to section 301(a) of Public Law 95-91, August 14, 1977, 91 Stat. 565 at 577-578, 42 U.S.C. 7151, effective October 1, 1977 known as the Department of Energy Organization Act.

"Unrefined and unprocessed ore" means ore in its natural form prior to processing, like grinding, roasting, beneficiating or refining.

"Unrestricted area" means an area, to which access is neither limited nor controlled by the licensee or registrant. For purposes of these rules, "uncontrolled area" is an equivalent term.

"Waste" means those low-level radioactive wastes containing radioactive material that are acceptable for disposal

in a land disposal facility. For the purposes of this definition, low-level radioactive waste means radioactive waste not classified as high-level radioactive waste, transuranic waste, spent nuclear fuel, or byproduct material as defined in paragraphs (b), (c), and (d) of the definition of byproduct material found in Section R313-12-3.

"Week" means seven consecutive days starting on Sunday.

"Whole body" means, for purposes of external exposure, head, trunk including male gonads, arms above the elbow, or legs above the knees.

"Worker" means an individual engaged in work under a license or registration issued by the Director and controlled by a licensee or registrant, but does not include the licensee or registrant.

"Working level" (WL), means any combination of short-lived radon daughters in one liter of air that will result in the ultimate emission of 1.3×10^5 MeV of potential alpha particle energy. The short-lived radon daughters are, for radon-222: polonium-218, lead-214, bismuth-214, and polonium-214; and for radon 220: polonium-216, lead-212, bismuth-212, and polonium-212.

"Working level month" (WLM), means an exposure to one working level for 170 hours. 2,000 working hours per year divided by 12 months per year is approximately equal to 170 hours per month.

"Year" means the period of time beginning in January used to determine compliance with the provisions of these rules. The licensee or registrant may change the starting date of the year used to determine compliance by the licensee or registrant provided that the decision to make the change is made not later than December 31 of the previous year. If a licensee or registrant changes in a year, the licensee or registrant shall assure that no day is omitted or duplicated in consecutive years.

R313-12-20. Units of Exposure and Dose.

(1) As used in these rules, the unit of EXPOSURE is the coulomb per kilogram (C per kg). One roentgen is equal to 2.58×10^{-4} coulomb per kilogram of air.

(2) As used in these rules, the units of dose are:

(a) Gray (Gy) is the SI unit of absorbed dose. One gray is equal to an absorbed dose of one joule per kilogram. One gray equals 100 rad.

(b) Rad is the special unit of absorbed dose. One rad is equal to an absorbed dose of 100 erg per gram or 0.01 joule per kilogram. One rad equals 0.01 Gy.

(c) Rem is the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor. One rem equals 0.01 Sv.

(d) Sievert (Sv) is the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor. One Sv equals 100 rem.

(3) As used in these rules, the quality factors for converting absorbed dose to dose equivalent are shown in Table 1.

TABLE 1
Quality Factors and Absorbed Dose Equivalencies

Type of Radiation	Quality Factor (Q)	Absorbed Dose Equal to a Unit Dose Equivalent
X, gamma, or beta radiation and high-speed electrons	1	1
Alpha particles, multiple-charged particles, fission fragments and heavy particles of unknown charge	20	0.05
Neutrons of unknown energy	10	0.1
High energy protons	10	0.1

For the column in Table 1 labeled "Absorbed Dose Equal to a Unit Dose Equivalent", the absorbed dose in rad is equal to one rem or the absorbed dose in gray is equal to one Sv.

(4) If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in sievert per hour or rem per hour, as provided in Subsection R313-12-20(3), 0.01 Sv of neutron radiation of unknown energies may, for purposes of these rules, be assumed to result from a total fluence of 25 million neutrons per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee or registrant may use the fluence rate per unit dose equivalent or the appropriate Q value from Table 2 to convert a measured tissue dose in gray or rad to dose equivalent in sievert or rem.

TABLE 2
Mean Quality Factors, Q, and Fluence Per Unit Dose Equivalent for Monoenergetic Neutrons

Neutron Energy Mev	Quality Factor Q	Fluence per Unit Dose Equivalent neutrons cm ⁻² rem ⁻¹	Fluence per Unit Dose Equivalent neutrons cm ⁻² Sv ⁻¹
thermal	2.5×10^{-8}	980×10^6	980×10^8
	1×10^{-7}	980×10^6	980×10^8
	1×10^{-6}	810×10^6	810×10^8
	1×10^{-5}	810×10^6	810×10^8
	1×10^{-4}	840×10^6	840×10^8
	1×10^{-3}	980×10^6	980×10^8
	1×10^{-2}	1010×10^6	1010×10^8
	1×10^{-1}	170×10^6	170×10^8
	5×10^{-1}	39×10^6	39×10^8
	1	27×10^6	27×10^8
	2.5	29×10^6	29×10^8
	5	23×10^6	23×10^8
	7	24×10^6	24×10^8
	10	24×10^6	24×10^8
	14	17×10^6	17×10^8
	20	16×10^6	16×10^8
	40	14×10^6	14×10^8
	60	16×10^6	16×10^8
	1×10^2	20×10^6	20×10^8
	2×10^2	19×10^6	19×10^8
	3×10^2	16×10^6	16×10^8
	4×10^2	14×10^6	14×10^8

For the column in Table 2 labeled "Quality Factor", the values of Q are at the point where the dose equivalent is maximum in a 30 cm diameter cylinder tissue-equivalent phantom.

For the columns in Table 2 labeled "Fluence per Unit Dose Equivalent", the values are for monoenergetic neutrons incident normally on a 30 cm diameter cylinder tissue equivalent phantom.

R313-12-40. Units of Radioactivity.

For purposes of these rules, activity is expressed in the SI unit of becquerel (Bq), or in the special unit of curie (Ci), or their multiples, or disintegrations or transformations per unit of time.

(1) One becquerel (Bq) equals one disintegration or transformation per second.

(2) One curie (Ci) equals 3.7×10^{10} disintegrations or transformations per second, which equals 3.7×10^{10} becquerel, which equals 2.22×10^{12} disintegrations or transformations per minute.

R313-12-51. Records.

(1) A licensee or registrant shall maintain records showing the receipt, transfer, and disposal of all sources of radiation.

(2) Prior to license termination, each licensee authorized to possess radioactive material with a half-life greater than 120 days, in an unsealed form, may forward the following records to the Director:

(a) records of disposal of licensed material made under Sections R313-15-1002 (including burials authorized before January 28, 1981), R313-15-1003, R313-15-1004, and R313-

15-1005; and

(b) records required by Subsection R313-15-1103(2)(d).

NOTE: 10 CFR 20.304 permitted burial of small quantities of licensed materials in soil before January 28, 1981, without specific U.S. Nuclear Regulatory Commission authorization. See 20.304 contained in the 10 CFR, parts 0 to 199, edition revised as of January 1, 1981.

(3) If licensed activities are transferred or assigned in accordance with Subsection R313-19-34(2), each licensee authorized to possess radioactive material, with a half-life greater than 120 days, in an unsealed form, shall transfer the following records to the new licensee and the new licensee will be responsible for maintaining these records until the license is terminated:

(a) records of disposal of licensed material made under Sections R313-15-1002 (including burials authorized before January 28, 1981), R313-15-1003, R313-15-1004, R313-15-1005, and R313-15-1008; and

(b) records required by Subsection R313-15-1103(2)(d).

(4) Prior to license termination, each licensee may forward the records required by Subsection R313-22-35(7) to the Director.

(5) Additional records requirements are specified elsewhere in these rules.

R313-12-52. Inspections.

(1) A licensee or registrant shall afford representatives of the Director, at reasonable times, opportunity to inspect sources of radiation and the premises and facilities wherein those sources of radiation are used or stored.

(2) A licensee or registrant shall make available to representatives of the Director for inspection, at any reasonable time, records maintained pursuant to these rules.

R313-12-53. Tests.

(1) A licensee or registrant shall perform upon instructions from a representative of the Director or shall permit the representative to perform reasonable tests as the representative deems appropriate or necessary including, but not limited to, tests of:

(a) sources of radiation;

(b) facilities wherein sources of radiation are used or stored;

(c) radiation detection and monitoring instruments; and

(d) other equipment and devices used in connection with utilization or storage of licensed or registered sources of radiation.

R313-12-54. Additional Requirements.

The Director may, by order, impose upon a licensee or registrant requirements in addition to those established in these rules that the Director deems appropriate or necessary to minimize any danger to public health and safety or the environment.

R313-12-55. Exemptions.

(1) The Board may, upon application or upon its own initiative, grant exemptions or exceptions from the requirements of these rules as it determines are authorized by law and will not result in undue hazard to public health and safety or the environment.

(2) U.S. Department of Energy contractors or subcontractors and U.S. Nuclear Regulatory Commission contractors or subcontractors operating within this state are exempt from these rules to the extent that the contractor or subcontractor under his contract receives, possesses, uses, transfers, or acquires sources of radiation. The following contractor categories are included:

(a) prime contractors performing work for the U.S.

Department of Energy at U.S. Government-owned or controlled sites, including the transportation of sources of radiation to or from the sites and the performance of contract services during temporary interruptions of the transportation;

(b) prime contractors of the U.S. Department of Energy performing research in, or development, manufacture, storage, testing or transportation of, atomic weapons or components thereof;

(c) prime contractors of the U.S. Department of Energy using or operating nuclear reactors or other nuclear devices in a United States Government-owned vehicle or vessel; and

(d) any other prime contractor or subcontractor of the U.S. Department of Energy or of the U.S. Nuclear Regulatory Commission when the state and the U.S. Nuclear Regulatory Commission jointly determine:

(i) that the exemption of the prime contractor or subcontractor is authorized by law; and

(ii) that under the terms of the contract or subcontract, there is adequate assurance that the work thereunder can be accomplished without undue risk to the public health and safety.

R313-12-70. Impounding.

Sources of radiation shall be subject to impounding pursuant to Section 19-3-111. Persons who have a source of radiation impounded are subject to fees established in accordance with the Legislative Appropriations Act for the actual cost of the management and oversight activities performed by representatives of the Director.

R313-12-100. Prohibited Uses.

(1) A hand-held fluoroscopic screen using x-ray equipment shall not be used unless it has been listed in the Registry of Sealed Source and Devices or accepted for certification by the U.S. Food and Drug Administration, Center for Devices and Radiological Health.

(2) A shoe-fitting fluoroscopic device shall not be used.

R313-12-110. Communications.

All communications and reports concerning these rules, and applications filed thereunder, should be addressed to the Division of Waste Management and Radiation Control, P.O. Box 144880, 195 North 1950 West, Salt Lake City, Utah 84114-4880.

R313-12-111. Submission of Electronic Copies.

(1) All submissions to the Director not exempt in paragraph R313-12-111(5) shall also be submitted to the Director in electronic format. This requirement extends to all attachments to these documents.

(2) The electronic copy shall be a true, accurate, searchable and reproducible copy of the official submission, except that it need not include signatures or professional stamps.

(3) All electronic copies shall be submitted on a CD or DVD nonrewritable disc, except that documents smaller than 25 megabytes may be submitted by email.

(4) All documents shall be submitted in one of the following electronic formats, at the choice of the submitter:

(a) A searchable PDF document (a document that may be read and searched using Adobe Reader); or

(b) A Microsoft Word document.

(5) The requirements of this rule do not apply to:

(a) X-ray registration applications;

(b) Submissions shorter than 25 pages unless otherwise ordered by the Director;

(c) Public comments received during a formal public comment period;

(d) Correspondence received from individuals or organizations that are not currently regulated by the agency, unless that correspondence is about proposing an activity or

facility that would be subject to agency regulation; and

(e) Documents used to make payments to the agency.

(6) If an official submission includes information for which business confidentiality is claimed or that is security-sensitive, this requirement applies only to that portion of the submission for which no confidentiality is claimed.

(7) The Director may waive the requirements of R3 13-12-111(1) for good cause.

KEY: definitions, units, inspections, exemptions

June 16, 2015

19-3-104

Notice of Continuation July 7, 2011

19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-14. Violations and Escalated Enforcement.****R313-14-1. Introduction, Purpose, and Authority.**

(1) The purpose of the radiation control inspection and compliance program is to assure the radiological safety of the public, radiation workers, and the environment by:

- (a) ensuring compliance with Utah Radiation Control rules or license conditions;
- (b) obtaining prompt correction of violations;
- (c) deterring future violations; and
- (d) encouraging improvement of licensee, permittee, or registrant performance, including the prompt identification, reporting, and correction of potential safety problems.

(2) Consistent with the purpose of the radiation control inspection and compliance program, prompt and vigorous enforcement action shall be taken when dealing with licensees, permittees, or registrants who fail to demonstrate adherence to these rules. Enforcement action is dependent on the circumstances of the case and may require that discretion be exercised after consideration of these standards. Sanctions have been designed to ensure that a licensee, permittee, or registrant does not deliberately profit from violations of the Utah Radiation Control rules.

(3) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-6-104(1)(a), 19-3-104(4) and 19-3-104(7), 19-6-107(2), 19-3-109, and 19-3-111.

R313-14-3. Definitions.

As used in Rule R313-14, the following definitions apply:

- (1) "Material False Statement" means a statement that is false by omission or commission and is relevant to the regulatory process.
- (2) "Requirement" means a legally binding mandate such as a statute, rule, license condition, permit, registration, technical specification, or order.
- (3) "Similar" means those violations which could have been reasonably expected to have been prevented by the licensee's, permittee's, or registrant's corrective action for a previous violation.
- (4) "Willfulness" means the deliberate intent to violate or falsify, and includes careless disregard for requirements. Acts which do not rise to the level of careless disregard are not included in this definition.

R313-14-10. Severity of Violations.

(1) Violations are placed in one of two major categories. These categories are:

- (a) electronically produced radiation operations; or
- (b) radioactive materials operations.

(2) Regulatory requirements vary in public health and environmental safety significance. Therefore, it is essential that the relative importance of violations be identified as the first step in the enforcement process. Based upon their relative hazard, violations are assigned to one of five levels of severity.

(3) Severity Level I is assigned to violations that are the most significant and Severity Level V violations are the least significant. In general, violations that are included in Severity Levels I and II involve actual or high potential impact on the public. Severity Level III violations are cause for significant concern. Severity Level IV violations are less serious but are of more than minor concern, however, if left uncorrected, they could lead to a more serious concern. Severity Level V violations are of minor safety or environmental concern.

(4) The severity of a violation shall be characterized at the level best suited to the significance of the particular violation. A severity level may be increased if circumstances surrounding the violation involve careless disregard of requirements, deception, or other indications of willfulness. In determining

the specific severity level of a violation involving willfulness, relevant factors will be considered, including the position of the person involved in the violation, the significance of an underlying violation, the intent of the violator, and the economic advantage gained by the violation. The relative weight given to these factors in arriving at the appropriate severity level is dependent on the circumstances of the violation.

(5) The severity level assigned to material false statements may be Severity Level I, II, or III, depending on the circumstances surrounding the statement. In determining the specific severity level of a violation involving material false statements or falsification of records, consideration is given to factors like the position of the person involved in the violation, for example, a first line supervisor as opposed to a senior manager, the significance of the information involved, and the intent of the violator. Negligence not amounting to careless disregard would be weighted differently than careless disregard or deliberateness. The relative weight given to these factors in arriving at the appropriate severity level is dependent on the circumstances of the violation.

R313-14-15. Enforcement Actions.

This Section describes the enforcement sanctions available to the Director and specifies the conditions under which they are to be used.

(1) Notice of Violation

(a) A Notice of Violation is a written notice setting forth one or more violations of a legally binding requirement. The licensee, permittee, or registrant may be required to provide a written statement describing:

- (i) corrective steps which have been taken by the licensee, permittee, or registrant and the results achieved;
- (ii) corrective steps which shall be taken to prevent recurrence; and
- (iii) the date when full compliance will be achieved.

(b) The Director may require responses to Notices of Violation to be under oath.

(c) A Notice of Violation is used by the Director as a method for formalizing the existence of a violation. The Notice may be the only enforcement action taken or it may be used as a basis for other enforcement actions. Licensee, permittee, or registrant initiative for self-identification and correction of problems is encouraged. The Director shall not generally issue Notices of Violation for a violation that meets the five following tests:

- (i) it was identified by the licensee, permittee, or registrant;
- (ii) it fits in Severity Level IV or V;
- (iii) it was reported, in writing, to the Director;
- (iv) it was or will be corrected, including measures to prevent recurrence, within 90 days or other period approved by the Director; and
- (v) it was not a violation that could reasonably be expected to have been prevented by the licensee's, permittee's, or registrant's corrective action for a previous violation.

(d) Licensees, permittees, or registrants are not ordinarily cited for violations resulting from matters outside of their control, like equipment failures that were not avoidable by reasonable quality assurance measures or management controls. However, licensees, permittees, and registrants are held responsible for acts of their employees. Accordingly, the rules should not be construed to excuse personal errors.

(2) Civil Penalty.

(a) A civil penalty is a monetary penalty that may be imposed for violation of Utah Radiation Control Rules or lawful orders issued by the Director. Civil penalties are designed to emphasize the need for lasting remedial action and to deter future violations. Generally, civil penalties are imposed for Severity Level I and Severity Level II violations. In the absence

of mitigating circumstances, civil penalties are considered for Severity Level III violations. Penalties are not ordinarily imposed for Severity Level IV and V violations unless those violations are similar to previous violations for which the licensee, permittee, or registrant failed to take effective corrective action.

(b) The level of a civil penalty may not exceed \$10,000 per violation. Except as modified by provision of the next paragraphs, the base civil penalties are as follows:

TABLE

Severity Level I Violations	\$10,000
Severity Level II Violations	\$ 8,000
Severity Level III Violations	\$ 5,000
Severity Level IV Violations	\$ 1,500
Severity Level V Violations	\$ 500

(i) Comprehensive licensee, permittee, or registrant programs for detection, correction and reporting of problems that may constitute, or lead to, violation of regulatory requirements are important and consideration may be given for effective internal audit programs. When licensees, permittees, or registrants find, report, and correct a violation expeditiously and effectively, the Director may apply adjustment factors to reduce or eliminate a civil penalty.

(ii) Ineffective licensee, permittee, or registrant programs for problem identification or correction are unacceptable. In cases involving willfulness, flagrant violations, repeated poor performance in an area of concern, or serious breakdown in management controls, the Director may apply the full enforcement authority.

(iii) The Director may review the proposed civil penalty case on its own merits and adjust the civil penalty upward or downward appropriately. After considering the relevant circumstances, adjustments to these values may be made for the factors identified below:

(A) Reduction of the civil penalty may be given when a licensee, permittee, or registrant identifies the violation and promptly reports, in writing, the violation to the Director. No consideration will be given to this factor if the licensee, permittee, or registrant does not take immediate action to correct the problem upon discovery.

(B) Recognizing that corrective action is always required to meet regulatory requirements, the promptness and extent to which the licensee, permittee, or registrant takes corrective action, including actions to prevent recurrence, may be considered in modifying the civil penalty to be assessed.

(C) Reduction of the civil penalty may be given for prior good performance in the general area of concern.

(D) The civil penalty may be increased as much as 50%, up to the \$10,000 maximum, for cases where the licensee, permittee, or registrant had prior knowledge of a problem as a result of an internal audit, or specific Director or industry notification, and had failed to take effective preventive steps.

(E) The civil penalty may be increased as much as 50%, up to the \$10,000 maximum, where multiple examples of a particular violation are identified during the inspection period.

(c) A violation of a continuing nature shall, for the purposes of calculating the proposed civil penalty, be considered a separate violation for each day of its continuance. A continuing violation is not considered a repeat violation. In the event a violation is repeated within five years, the scheduled amount of the civil penalty may be increased 50%, up to the \$10,000 maximum; and for repeat violations of Severity Levels II and III, the penalty will not be avoided by compliance. Other rights and procedures are not affected by the repeat violation.

(d) Payment of civil penalties shall be made within 30 working days of receipt of a Notice of Violation and Notice of Proposed Imposition of a Civil Penalty. An extension may be given when extenuating circumstances are shown to exist.

Payment shall be made by check, payable to the Division of Waste Management and Radiation Control and mailed to the Division at the address shown with the Notice of Violation.

(3) Orders.

(a) An Order is a written directive to modify, suspend, or revoke a license, permit, or registration; to cease and desist from a given practice or activity; to issue a civil penalty; or to take other action that may be necessary.

(b) Modification Orders are issued when some change in licensee, permittee, or registrant equipment, procedures, or management control is necessary.

(c) Suspension Orders may be used:

(i) to remove a threat to the public health and safety or the environment;

(ii) when the licensee, permittee, or registrant has not responded adequately to other enforcement action;

(iii) when the licensee, permittee, or registrant interferes with the conduct of an inspection; or

(iv) for a reason not mentioned above for which license, permit, or registration revocation is authorized.

(v) Suspensions may apply to all or part of the regulated activity. Ordinarily, an activity is not suspended, nor is a suspension prolonged for failure to comply with requirements when the failure is not willful or when adequate corrective actions have been taken.

(d) Revocation Orders may be used:

(i) when a licensee, permittee, or registrant is unable or unwilling to comply with these rules;

(ii) when a licensee, permittee, or registrant refuses to correct a violation;

(iii) when a licensee, permittee, or registrant does not respond to a Notice of Violation;

(iv) when a licensee, permittee, or registrant does not pay a fee required by the Department; or

(v) for any other reason for which revocation is authorized.

(e) Cease and Desist Orders are used to stop unauthorized activity that has continued despite notification by the Director that the activity is unauthorized.

(f) Orders may be made effective immediately, without prior opportunity for hearing, whenever it is determined that the public health, interest, or safety so requires, or when the Order is responding to a violation involving willfulness. Otherwise, a prior opportunity for a hearing is afforded. For cases in which a basis could reasonably exist for not taking the action as proposed, the licensee, permittee, or registrant shall be afforded an opportunity to show cause why the Order should not be issued in the proposed manner.

(4) Escalation of Enforcement Sanctions.

(a) In accordance with the provisions of Section 19-3-111 the radioactive material of a person may be impounded. Administrative procedures will be conducted as provided by Rule R305-7, prior to disposal of impounded radioactive materials.

(b) Violations of Severity Levels I, II, or III are considered to be very serious. If repetitive very serious violations occur, the Director may issue Orders in conjunction with other enforcement actions to achieve immediate corrective actions and to deter their recurrence. In accordance with the criteria contained in this section, the Director shall carefully consider the circumstances of cases when selecting and applying the appropriate sanctions.

(c) The progression of enforcement actions for repetitive violations may be based on violations under a single license, permit, or registration. The actual progression to be used in a particular case may depend on the circumstances. When more than one facility is covered by a single license, permit, or registration, the normal progression may be based on repetitive violations under the same license, permit, or registration. It

should be noted that under some circumstances, for example, where there is common control over some facet of facility operations, repetitive violations may be charged even though the second violation occurred at a different facility or under a different license, permit, or registration.

(5) Related Administrative Actions.

(a) In addition to the formal enforcement mechanisms of Notices of Violation and Orders, the Director may use administrative mechanisms, like enforcement conferences, bulletins, circulars, information notices, generic letters, and confirmatory action letters as part of the enforcement and regulatory program. Licensees, permittees, and registrants are expected to adhere to obligations and commitments resulting from these processes and the Director shall, if necessary, issue appropriate orders to make sure that expectation is realized.

(b) Enforcement Conferences are meetings held by the Director with licensee, permittee, or registrant management to discuss safety, public health, or environmental problems, compliance with regulatory requirements, proposed corrective measures, including schedules for implementation, and enforcement options available to the Director.

(c) Bulletins, Circulars, Information Notices, and Generic Letters are written notifications to groups of licensees, permittees, or registrants identifying specific problems and calling for or recommending specific actions on their part. Responses to these notifications may be required.

(d) Confirmatory Action Letters are letters confirming a licensee's, permittee's, or registrant's agreement to take certain actions to remove significant concerns about health and safety, or the environment.

R313-14-25. Public Disclosure of Enforcement Actions.

Enforcement actions and responses are publicly available for inspection. In addition, press releases are generally issued for Notices of Proposed Imposition of a Civil Penalty and Orders. In the case of orders and civil penalties related to violations at Severity Level I, II, or III, press releases may be issued at the time of the Order or the Notice of Proposed Imposition of the Civil Penalty. Press releases are not normally issued for Notices of Violation.

KEY: violations, penalties, enforcement

April 3, 2014

Notice of Continuation July 7, 2011

19-3-109

19-3-111

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-15. Standards for Protection Against Radiation.

R313-15-1. Purpose, Authority and Scope.

(1) Rule R313-15 establishes standards for protection against ionizing radiation resulting from activities conducted pursuant to licenses issued by the Director. These rules are issued pursuant to Subsections 19-3-104(4) and 19-3-104(7).

(2) The requirements of Rule R313-15 are designed to control the receipt, possession, use, transfer, and disposal of sources of radiation by any licensee or registrant so the total dose to an individual, including doses resulting from all sources of radiation other than background radiation, does not exceed the standards for protection against radiation prescribed in Rule R313-15. However, nothing in Rule R313-15 shall be construed as limiting actions that may be necessary to protect health and safety.

(3) Except as specifically provided in other sections of these rules, Rule R313-15 applies to persons licensed or registered by the Director to receive, possess, use, transfer, or dispose of sources of radiation. The limits in Rule R313-15 do not apply to doses due to background radiation, to exposure of patients to radiation for the purpose of medical diagnosis or therapy, to exposure from individuals administered radioactive material and released in accordance with Rule R313-32 (incorporating 10 CFR 35.75 by reference), or to exposure from voluntary participation in medical research programs.

R313-15-2. Definitions.

"Annual limit on intake" (ALI) means the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the reference man that would result in a committed effective dose equivalent of 0.05 Sv (5 rem) or a committed dose equivalent of 0.5 Sv (50 rem) to any individual organ or tissue. ALI values for intake by ingestion and by inhalation of selected radionuclides are given in Table I, Columns 1 and 2, of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference.

"Air-purifying respirator" means a respirator with an air-purifying filter, cartridge, or canister that removes specific air contaminants by passing ambient air through the air-purifying element.

"Assigned protection factor" (APF) means the expected workplace level of respiratory protection that would be provided by a properly functioning respirator or a class of respirators to properly fitted and trained users. Operationally, the inhaled concentration can be estimated by dividing the ambient airborne concentration by the APF.

"Atmosphere-supplying respirator" means a respirator that supplies the respirator user with breathing air from a source independent of the ambient atmosphere, and includes supplied-air respirators (SARs) and self-contained breathing apparatus (SCBA) units.

"Class" means a classification scheme for inhaled material according to its rate of clearance from the pulmonary region of the lung. Materials are classified as D, W, or Y, which applies to a range of clearance half-times: for Class D, Days, of less than ten days, for Class W, Weeks, from ten to 100 days, and for Class Y, Years, of greater than 100 days. For purposes of these rules, "lung class" and "inhalation class" are equivalent terms.

"Constraint (dose constraint)" in accordance with 10 CFR 20.1003, (2010), means a value above which specified licensee actions are required.

"Declared pregnant woman" means a woman who has voluntarily informed her employer, in writing, of her pregnancy and the estimated date of conception. The declaration remains in effect until the declared pregnant woman withdraws the

declaration in writing or is no longer pregnant.

"Demand respirator" means an atmosphere-supplying respirator that admits breathing air to the facepiece only when a negative pressure is created inside the facepiece by inhalation.

"Derived air concentration" (DAC) means the concentration of a given radionuclide in air which, if breathed by the reference man for a working year of 2,000 hours under conditions of light work, results in an intake of one ALI. For purposes of these rules, the condition of light work is an inhalation rate of 1.2 cubic meters of air per hour for 2,000 hours in a year. DAC values are given in Table I, Column 3, of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference.

"Derived air concentration-hour" (DAC-hour) means the product of the concentration of radioactive material in air, expressed as a fraction or multiple of the derived air concentration for each radionuclide, and the time of exposure to that radionuclide, in hours. A licensee or registrant may take 2,000 DAC-hours to represent one ALI, equivalent to a committed effective dose equivalent of 0.05 Sv (5 rem).

"Disposable respirator" means a respirator for which maintenance is not intended and that is designed to be discarded after excessive breathing resistance, sorbent exhaustion, physical damage, or end-of-service-life renders it unsuitable for use. Examples of this type of respirator are a disposable half-mask respirator or a disposable escape-only self-contained breathing apparatus (SCBA).

"Dosimetry processor" means an individual or an organization that processes and evaluates individual monitoring devices in order to determine the radiation dose delivered to the monitoring devices.

"Filtering facepiece" (dust mask) means a negative pressure particulate respirator with a filter as an integral part of the facepiece or with the entire facepiece composed of the filtering medium, not equipped with elastomeric sealing surfaces and adjustable straps.

"Fit factor" means a quantitative estimate of the fit of a particular respirator to a specific individual, and typically estimates the ratio of the concentration of a substance in ambient air to its concentration inside the respirator when worn.

"Fit test" means the use of a protocol to qualitatively or quantitatively evaluate the fit of a respirator on an individual.

"Helmet" means a rigid respiratory inlet covering that also provides head protection against impact and penetration.

"Hood" means a respiratory inlet covering that completely covers the head and neck and may also cover portions of the shoulders and torso.

"Inhalation class", refer to "Class".

"Labeled package" means a package labeled with a Radioactive White I, Yellow II, or Yellow III label as specified in U.S. Department of Transportation regulations 49 CFR 172.403 and 49 CFR 172.436 through 440, (2009). Labeling of packages containing radioactive materials is required by the U.S. Department of Transportation if the amount and type of radioactive material exceeds the limits for an excepted quantity or article as defined and limited by U.S. Department of Transportation regulations 49 CFR 173.403 and 49 CFR 173.421 through 424, (2009).

"Loose-fitting facepiece" means a respiratory inlet covering that is designed to form a partial seal with the face.

"Lung class", refer to "Class".

"Nationally tracked source" is a sealed source containing a quantity equal to or greater than Category 1 or Category 2 levels of any radioactive material listed in Appendix E of 10 CFR 20.1001 to 20.2402 (2010), which is incorporated by reference. In this context a sealed source is defined as radioactive material that is sealed in a capsule or closely bonded, in a solid form and which is not exempt from regulatory control. It does not mean material encapsulated solely for

disposal, or nuclear material contained in any fuel assembly, subassembly, fuel rod, or fuel pellet. Category 1 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the Category 1 threshold. Category 2 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the Category 2 threshold but less than the Category 1 threshold.

"Negative pressure respirator" (tight fitting) means a respirator in which the air pressure inside the facepiece is negative during inhalation with respect to the ambient air pressure outside the respirator.

"Nonstochastic effect" means a health effect, the severity of which varies with the dose and for which a threshold is believed to exist. Radiation-induced cataract formation is an example of a nonstochastic effect. For purposes of these rules, "deterministic effect" is an equivalent term.

"Planned special exposure" means an infrequent exposure to radiation, separate from and in addition to the annual occupational dose limits.

"Positive pressure respirator" means a respirator in which the pressure inside the respiratory inlet covering exceeds the ambient air pressure outside the respirator.

"Powered air-purifying respirator" (PAPR) means an air-purifying respirator that uses a blower to force the ambient air through air-purifying elements to the inlet covering.

"Pressure demand respirator" means a positive pressure atmosphere-supplying respirator that admits breathing air to the facepiece when the positive pressure is reduced inside the facepiece by inhalation.

"Qualitative fit test" (QLFT) means a pass/fail fit test to assess the adequacy of respirator fit that relies on the individual's response to the test agent.

"Quantitative fit test" (QNFT) means an assessment of the adequacy of respirator fit by numerically measuring the amount of leakage into the respirator.

"Quarter" means a period of time equal to one-fourth of the year observed by the licensee, approximately 13 consecutive weeks, providing that the beginning of the first quarter in a year coincides with the starting date of the year and that no day is omitted or duplicated in consecutive quarters.

"Reference Man" means a hypothetical aggregation of human physical and physiological characteristics determined by international consensus. These characteristics may be used by researchers and public health employees to standardize results of experiments and to relate biological insult to a common base. A description of the Reference Man is contained in the International Commission on Radiological Protection report, ICRP Publication 23, "Report of the Task Group on Reference Man."

"Respiratory protective equipment" means an apparatus, such as a respirator, used to reduce an individual's intake of airborne radioactive materials.

"Sanitary sewerage" means a system of public sewers for carrying off waste water and refuse, but excluding sewage treatment facilities, septic tanks, and leach fields owned or operated by the licensee or registrant.

"Self-contained breathing apparatus" (SCBA) means an atmosphere-supplying respirator for which the breathing air source is designed to be carried by the user.

"Stochastic effect" means a health effect that occurs randomly and for which the probability of the effect occurring, rather than its severity, is assumed to be a linear function of dose without threshold. Hereditary effects and cancer incidence are examples of stochastic effects. For purposes of these rules, "probabilistic effect" is an equivalent term.

"Supplied-air respirator" (SAR) or airline respirator means an atmosphere-supplying respirator for which the source of breathing air is not designed to be carried by the user.

"Tight-fitting facepiece" means a respiratory inlet covering

that forms a complete seal with the face.

"User seal check" (fit check) means an action conducted by the respirator user to determine if the respirator is properly seated to the face. Examples include negative pressure check, positive pressure check, irritant smoke check, or isoamyl acetate check.

"Very high radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving an absorbed dose in excess of five Gy (500 rad) in one hour at one meter from a radiation source or one meter from any surface that the radiation penetrates.

"Weighting factor" w_T for an organ or tissue (T) means the proportion of the risk of stochastic effects resulting from irradiation of that organ or tissue to the total risk of stochastic effects when the whole body is irradiated uniformly. For calculating the effective dose equivalent, the values of w_T are:

TABLE

ORGAN DOSE WEIGHTING FACTORS

Organ or Tissue	w_T
Gonads	0.25
Breast	0.15
Red bone marrow	0.12
Lung	0.12
Thyroid	0.03
Bone surfaces	0.03
Remainder	0.30(1)
Whole Body	1.00(2)

(1) 0.30 results from 0.06 for each of five "remainder" organs, excluding the skin and the lens of the eye, that receive the highest doses.

(2) For the purpose of weighting the external whole body dose, for adding it to the internal dose, a single weighting factor, $w_T = 1.0$, has been specified. The use of other weighting factors for external exposure will be approved on a case-by-case basis until such time as specific guidance is issued.

R313-15-3. Implementation.

(1) Any existing license or registration condition that is more restrictive than Rule R313-15 remains in force until there is an amendment or renewal of the license or registration.

(2) If a license or registration condition exempts a licensee or registrant from a provision of Rule R313-15 in effect on or before January 1, 1994, it also exempts the licensee or registrant from the corresponding provision of Rule R313-15.

(3) If a license or registration condition cites provisions of Rule R313-15 in effect prior to January 1, 1994, which do not correspond to any provisions of Rule R313-15, the license or registration condition remains in force until there is an amendment or renewal of the license or registration that modifies or removes this condition.

R313-15-101. Radiation Protection Programs.

(1) Each licensee or registrant shall develop, document, and implement a radiation protection program sufficient to ensure compliance with the provisions of Rule R313-15. See Section R313-15-1102 for recordkeeping requirements relating to these programs.

(2) The licensee or registrant shall use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and doses to members of the public that are as low as is reasonably achievable (ALARA).

(3) The licensee or registrant shall, at intervals not to exceed 12 months, review the radiation protection program content and implementation.

(4) To implement the ALARA requirements of Subsection R313-15-101(2), and notwithstanding the requirements in Section R313-15-301, a constraint on air emissions of radioactive material to the environment, excluding radon-222

and its decay products, shall be established by licensees or registrants such that the individual member of the public likely to receive the highest dose will not be expected to receive a total effective dose equivalent in excess of 0.1 mSv (0.01 rem) per year from these emissions. If a licensee or registrant subject to this requirement exceeds this dose constraint, the licensee or registrant shall report the exceedance as provided in Section R313-15-1203 and promptly take appropriate corrective action to ensure against recurrence.

R313-15-201. Occupational Dose Limits for Adults.

(1) The licensee or registrant shall control the occupational dose to individual adults, except for planned special exposures pursuant to Section R313-15-206, to the following dose limits:

(a) An annual limit, which is the more limiting of:

(i) The total effective dose equivalent being equal to 0.05 Sv (5 rem); or

(ii) The sum of the deep dose equivalent and the committed dose equivalent to any individual organ or tissue other than the lens of the eye being equal to 0.50 Sv (50 rem).

(b) The annual limits to the lens of the eye, to the skin of the whole body, and to the skin of the extremities which are:

(i) A lens dose equivalent of 0.15 Sv (15 rem), and

(ii) A shallow dose equivalent of 0.50 Sv (50 rem) to the skin of the whole body or to the skin of any extremity.

(2) Doses received in excess of the annual limits, including doses received during accidents, emergencies, and planned special exposures, shall be subtracted from the limits for planned special exposures that the individual may receive during the current year and during the individual's lifetime. See Subsections R313-15-206(5)(a) and R313-15-206(5)(b).

(3) When the external exposure is determined by measurement with an external personal monitoring device, the deep dose equivalent must be used in place of the effective dose equivalent, unless the effective dose equivalent is determined by a dosimetry method approved by the Director, U.S. Nuclear Regulatory Commission, or an Agreement State. The assigned deep dose equivalent must be for the part of the body receiving the highest exposure. The assigned shallow dose equivalent must be the dose averaged over the contiguous ten square centimeters of skin receiving the highest exposure.

(a) The deep dose equivalent, lens dose equivalent and shallow dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable; or

(b) When a protective apron is worn while working with medical fluoroscopic equipment and monitoring is conducted as specified in Subsection R313-15-502(1)(d), the effective dose equivalent for external radiation shall be determined as follows:

(i) When only one individual monitoring device is used and it is located at the neck outside the protective apron, and the reported dose exceeds 25 percent of the limit specified in Subsection R313-15-201(1), the reported deep dose equivalent value multiplied by 0.3 shall be the effective dose equivalent for external radiation; or

(ii) When individual monitoring devices are worn, both under the protective apron at the waist and outside the protective apron at the neck, the effective dose equivalent for external radiation shall be assigned the value of the sum of the deep dose equivalent reported for the individual monitoring device located at the waist under the protective apron multiplied by 1.5 and the deep dose equivalent reported for the individual monitoring device located at the neck outside the protective apron multiplied by 0.04.

(4) Derived air concentration (DAC) and annual limit on intake (ALI) values are specified in Table 1 of Appendix B of 10

CFR 20.1001 to 20.2402, (2010), which is incorporated by reference, and may be used to determine the individual's dose and to demonstrate compliance with the occupational dose limits. See Section R313-15-1107.

(5) Notwithstanding the annual dose limits, the licensee shall limit the soluble uranium intake by an individual to ten milligrams in a week in consideration of chemical toxicity. See footnote 3, of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference.

(6) The licensee or registrant shall reduce the dose that an individual may be allowed to receive in the current year by the amount of occupational dose received while employed by any other person. See Subsection R313-15-205(5).

R313-15-202. Compliance with Requirements for Summation of External and Internal Doses.

(1) If the licensee or registrant is required to monitor pursuant to both Subsections R313-15-502(1) and R313-15-502(2), the licensee or registrant shall demonstrate compliance with the dose limits by summing external and internal doses. If the licensee or registrant is required to monitor only pursuant to Subsection R313-15-502(1) or only pursuant to Subsection R313-15-502(2), then summation is not required to demonstrate compliance with the dose limits. The licensee or registrant may demonstrate compliance with the requirements for summation of external and internal doses pursuant to Subsections R313-15-202(2), R313-15-202(3) and R313-15-202(4). The dose equivalents for the lens of the eye, the skin, and the extremities are not included in the summation, but are subject to separate limits.

(2) Intake by Inhalation. If the only intake of radionuclides is by inhalation, the total effective dose equivalent limit is not exceeded if the sum of the deep dose equivalent divided by the total effective dose equivalent limit, and one of the following, does not exceed unity:

(a) The sum of the fractions of the inhalation ALI for each radionuclide, or

(b) The total number of derived air concentration-hours (DAC-hours) for all radionuclides divided by 2,000, or

(c) The sum of the calculated committed effective dose equivalents to all significantly irradiated organs or tissues (T) calculated from bioassay data using appropriate biological models and expressed as a fraction of the annual limit. For purposes of this requirement, an organ or tissue is deemed to be significantly irradiated if, for that organ or tissue, the product of the weighting factors, w_T , and the committed dose equivalent, $H_{T,50}$, per unit intake is greater than ten percent of the maximum weighted value of $H_{T,50}$, that is, $w_T H_{T,50}$, per unit intake for any organ or tissue.

(3) Intake by Oral Ingestion. If the occupationally exposed individual receives an intake of radionuclides by oral ingestion greater than ten percent of the applicable oral ALI, the licensee or registrant shall account for this intake and include it in demonstrating compliance with the limits.

(4) Intake through Wounds or Absorption through Skin. The licensee or registrant shall evaluate and, to the extent practical, account for intakes through wounds or skin absorption. The intake through intact skin has been included in the calculation of DAC for hydrogen-3 and does not need to be evaluated or accounted for pursuant to Subsection R313-15-202(4).

R313-15-203. Determination of External Dose from Airborne Radioactive Material.

(1) Licensees or registrants shall, when determining the dose from airborne radioactive material, include the contribution to the deep dose equivalent, lens dose equivalent, and shallow dose equivalent from external exposure to the radioactive cloud. See footnotes 1 and 2 of Appendix B of 10

CFR 20.1001 to 20.2402, (2010), which is incorporated by reference.

(2) Airborne radioactivity measurements and DAC values shall not be used as the primary means to assess the deep dose equivalent when the airborne radioactive material includes radionuclides other than noble gases or if the cloud of airborne radioactive material is not relatively uniform. The determination of the deep dose equivalent to an individual shall be based upon measurements using instruments or individual monitoring devices.

R313-15-204. Determination of Internal Exposure.

(1) For purposes of assessing dose used to determine compliance with occupational dose equivalent limits, the licensee or registrant shall, when required pursuant to Section R313-15-502, take suitable and timely measurements of:

- (a) Concentrations of radioactive materials in air in work areas; or
- (b) Quantities of radionuclides in the body; or
- (c) Quantities of radionuclides excreted from the body; or
- (d) Combinations of these measurements.

(2) Unless respiratory protective equipment is used, as provided in Section R313-15-703, or the assessment of intake is based on bioassays, the licensee or registrant shall assume that an individual inhales radioactive material at the airborne concentration in which the individual is present.

(3) When specific information on the physical and biochemical properties of the radionuclides taken into the body or the behavior of the material in an individual is known, the licensee or registrant may:

- (a) Use that information to calculate the committed effective dose equivalent, and, if used, the licensee or registrant shall document that information in the individual's record; and
- (b) Upon prior approval of the Director, adjust the DAC or ALI values to reflect the actual physical and chemical characteristics of airborne radioactive material, for example, aerosol size distribution or density; and
- (c) Separately assess the contribution of fractional intakes of Class D, W, or Y compounds of a given radionuclide to the committed effective dose equivalent. See Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference.

(4) If the licensee or registrant chooses to assess intakes of Class Y material using the measurements given in Subsections R313-15-204(1)(b) or R313-15-204(1)(c), the licensee or registrant may delay the recording and reporting of the assessments for periods up to seven months, unless otherwise required by Section R313-15-1202 or Section R313-15-1203. This delay permits the licensee or registrant to make additional measurements basic to the assessments.

(5) If the identity and concentration of each radionuclide in a mixture are known, the fraction of the DAC applicable to the mixture for use in calculating DAC-hours shall be either:

(a) The sum of the ratios of the concentration to the appropriate DAC value, that is, D, W, or Y, from Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference, for each radionuclide in the mixture; or

(b) The ratio of the total concentration for all radionuclides in the mixture to the most restrictive DAC value for any radionuclide in the mixture.

(6) If the identity of each radionuclide in a mixture is known, but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.

(7) When a mixture of radionuclides in air exists, a licensee or registrant may disregard certain radionuclides in the mixture if:

- (a) The licensee or registrant uses the total activity of the

mixture in demonstrating compliance with the dose limits in Section R313-15-201 and in complying with the monitoring requirements in Subsection R313-15-502(2), and

(b) The concentration of any radionuclide disregarded is less than ten percent of its DAC, and

(c) The sum of these percentages for all of the radionuclides disregarded in the mixture does not exceed 30 percent.

(8) When determining the committed effective dose equivalent, the following information may be considered:

(a) In order to calculate the committed effective dose equivalent, the licensee or registrant may assume that the inhalation of one ALI, or an exposure of 2,000 DAC-hours, results in a committed effective dose equivalent of 0.05 Sv (5 rem) for radionuclides that have their ALIs or DACs based on the committed effective dose equivalent.

(b) For an ALI and the associated DAC determined by the nonstochastic organ dose limit of 0.50 Sv (50 rem), the intake of radionuclides that would result in a committed effective dose equivalent of 0.05 Sv (5 rem), that is, the stochastic ALI, is listed in parentheses in Table 1 of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference. The licensee or registrant may, as a simplifying assumption, use the stochastic ALI to determine committed effective dose equivalent. However, if the licensee or registrant uses the stochastic ALI, the licensee or registrant shall also demonstrate that the limit in Subsection R313-15-201(1)(a)(ii) is met.

R313-15-205. Determination of Prior Occupational Dose.

(1) For each individual likely to receive, in a year, an occupational dose requiring monitoring pursuant to Section R313-15-502, the licensee or registrant shall Determine the occupational radiation dose received during the current year; and

(2) Prior to permitting an individual to participate in a planned special exposure, the licensee or registrant shall determine:

(a) The internal and external doses from all previous planned special exposures; and

(b) All doses in excess of the limits, including doses received during accidents and emergencies, received during the lifetime of the individual.

(3) In complying with the requirements of Subsections R313-15-205(1) or (2), a licensee or registrant may:

(a) Accept, as a record of the occupational dose that the individual received during the current year, a written signed statement from the individual, or from the individual's most recent employer for work involving radiation exposure, that discloses the nature and the amount of any occupational dose that the individual received during the current year;

(b) Attempt to obtain the records of cumulative occupational radiation dose. A licensee or registrant may accept, as the record of cumulative radiation dose, an up-to-date form DRC-05 or equivalent, signed by the individual and countersigned by an appropriate official of the most recent employer for work involving radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant; and

(c) Obtain reports of the individual's dose equivalents from the most recent employer for work involving radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant, by telephone, telegram, facsimile, other electronic media or letter. The licensee or registrant shall request a written verification of the dose data if the authenticity of the transmitted report cannot be established.

(4) The licensee or registrant shall record the exposure history, as required by Subsection R313-15-205(1) or (2), on form DRC-05, or other clear and legible record, of all the information required on form DRC-05. The form or record

shall show each period in which the individual received occupational exposure to radiation or radioactive material and shall be signed by the individual who received the exposure. For each period for which the licensee or registrant obtains reports, the licensee or registrant shall use the dose shown in the report in preparing form DRC-05 or equivalent. For any period in which the licensee or registrant does not obtain a report, the licensee or registrant shall place a notation on form DRC-05 or equivalent indicating the periods of time for which data are not available.

(5) For the purpose of complying with this requirement, licensees or registrants are not required to reevaluate the separate external dose equivalents and internal committed dose equivalents or intakes of radionuclides assessed pursuant to the rules in Rule R313-15 in effect before January 1, 1994. Further, occupational exposure histories obtained and recorded on form DRC-05 or equivalent before January 1, 1994, would not have included effective dose equivalent, but may be used in the absence of specific information on the intake of radionuclides by the individual.

(6) If the licensee or registrant is unable to obtain a complete record of an individual's current and previously accumulated occupational dose, the licensee or registrant shall assume:

(a) In establishing administrative controls under Subsection R313-15-201(6) for the current year, that the allowable dose limit for the individual is reduced by 12.5 mSv (1.25 rem) for each quarter for which records were unavailable and the individual was engaged in activities that could have resulted in occupational radiation exposure; and

(b) That the individual is not available for planned special exposures.

(7) The licensee or registrant shall retain the records on form DRC-05 or equivalent until the Director terminates each pertinent license or registration requiring this record. The licensee or registrant shall retain records used in preparing form DRC-05 or equivalent for three years after the record is made. This includes records required under the standards for protection against radiation in effect prior to January 1, 1994.

R313-15-206. Planned Special Exposures.

A licensee or registrant may authorize an adult worker to receive doses in addition to and accounted for separately from the doses received under the limits specified in Section R313-15-201 provided that each of the following conditions is satisfied:

(1) The licensee or registrant authorizes a planned special exposure only in an exceptional situation when alternatives that might avoid the dose estimated to result from the planned special exposure are unavailable or impractical.

(2) The licensee or registrant, and employer if the employer is not the licensee or registrant, specifically authorizes the planned special exposure, in writing, before the exposure occurs.

(3) Before a planned special exposure, the licensee or registrant ensures that each individual involved is:

(a) Informed of the purpose of the planned operation; and

(b) Informed of the estimated doses and associated potential risks and specific radiation levels or other conditions that might be involved in performing the task; and

(c) Instructed in the measures to be taken to keep the dose ALARA considering other risks that may be present.

(4) Prior to permitting an individual to participate in a planned special exposure, the licensee or registrant ascertains prior doses as required by Subsection R313-15-205(2) during the lifetime of the individual for each individual involved.

(5) Subject to Subsection R313-15-201(2), the licensee or registrant shall not authorize a planned special exposure that would cause an individual to receive a dose from all planned

special exposures and all doses in excess of the limits to exceed:

(a) The numerical values of any of the dose limits in Subsection R313-15-201(1) in any year; and

(b) Five times the annual dose limits in Subsection R313-15-201(1) during the individual's lifetime.

(6) The licensee or registrant maintains records of the conduct of a planned special exposure in accordance with Section R313-15-1106 and submits a written report in accordance with Section R313-15-1204.

(7) The licensee or registrant records the best estimate of the dose resulting from the planned special exposure in the individual's record and informs the individual, in writing, of the dose within 30 days from the date of the planned special exposure. The dose from planned special exposures shall not be considered in controlling future occupational dose of the individual pursuant to Subsection R313-15-201(1) but shall be included in evaluations required by Subsections R313-15-206(4) and R313-15-206(5).

R313-15-207. Occupational Dose Limits for Minors.

The annual occupational dose limits for minors are ten percent of the annual occupational dose limits specified for adult workers in Section R313-15-201.

R313-15-208. Dose to an Embryo/Fetus.

(1) The licensee or registrant shall ensure that the dose equivalent to the embryo/fetus during the entire pregnancy, due to occupational exposure of a declared pregnant woman, does not exceed five mSv (0.5 rem). See Section R313-15-1107 for recordkeeping requirements.

(2) The licensee or registrant shall make efforts to avoid substantial variation above a uniform monthly exposure rate to a declared pregnant woman so as to satisfy the limit in Subsection R313-15-208(1).

(3) The dose equivalent to an embryo/fetus is the sum of:

(a) The deep dose equivalent to the declared pregnant woman; and

(b) The dose equivalent resulting from radionuclides in the embryo/fetus and radionuclides in the declared pregnant woman.

(4) If the dose equivalent to the embryo/fetus is found to have exceeded five mSv (0.5 rem) or is within 0.5 mSv (0.05 rem) of this dose by the time the woman declares the pregnancy to the licensee or registrant, the licensee or registrant shall be deemed to be in compliance with Subsection R313-15-208(1) if the additional dose equivalent to the embryo/fetus does not exceed 0.50 mSv (0.05 rem) during the remainder of the pregnancy.

R313-15-301. Dose Limits for Individual Members of the Public.

(1) Each licensee or registrant shall conduct operations so that:

(a) The total effective dose equivalent to individual members of the public from the licensed or registered operation does not exceed one mSv (0.1 rem) in a year, exclusive of the dose contributions from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material and released, under Rule R313-32 (incorporating 10 CFR 35.75 by reference), from voluntary participation in medical research programs, and from the licensee's or registrant's disposal of radioactive material into sanitary sewerage in accordance with Section R313-15-1003; and

(b) The dose in any unrestricted area from external sources, exclusive of the dose contributions from patients administered radioactive material and released in accordance with Rule R313-32 (incorporating 10 CFR 35.75 by reference), does not exceed 0.02 mSv (0.002 rem) in any one hour; and

(c) Notwithstanding Subsection R313-15-301(1)(a), a licensee may permit visitors to an individual who cannot be released, under R313-32 (incorporating 10 CFR 35.75 by reference), to receive a radiation dose greater than one mSv (0.1 rem) if:

(i) The radiation dose received does not exceed five mSv (0.5 rem); and

(ii) The authorized user, as defined in R313-32, has determined before the visit that it is appropriate.; and

(d) The total effective dose equivalent to individual members of the public from infrequent exposure to radiation from radiation machines does not exceed 5 mSv (0.5 rem) in a year.

(2) If the licensee or registrant permits members of the public to have access to controlled areas, the limits for members of the public continue to apply to those individuals.

(3) A licensee, registrant, or an applicant for a license or registration may apply for prior Director authorization to operate up to an annual dose limit for an individual member of the public of five mSv (0.5 rem). This application shall include the following information:

(a) Demonstration of the need for and the expected duration of operations in excess of the limit in Subsection R313-15-301(1); and

(b) The licensee's or registrant's program to assess and control dose within the five mSv (0.5 rem) annual limit; and

(c) The procedures to be followed to maintain the dose ALARA.

(4) In addition to the requirements of R313-15, a licensee subject to the provisions of the United States Environmental Protection Agency's generally applicable environmental radiation standards in 40 CFR 190 shall comply with those standards.

(5) The Director may impose additional restrictions on radiation levels in unrestricted areas and on the total quantity of radionuclides that a licensee or registrant may release in effluents in order to restrict the collective dose.

R313-15-302. Compliance with Dose Limits for Individual Members of the Public.

(1) The licensee or registrant shall make or cause to be made surveys of radiation levels in unrestricted and controlled areas and radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits for individual members of the public in Section R313-15-301.

(2) A licensee or registrant shall show compliance with the annual dose limit in Section R313-15-301 by:

(a) Demonstrating by measurement or calculation that the total effective dose equivalent to the individual likely to receive the highest dose from the licensed or registered operation does not exceed the annual dose limit; or

(b) Demonstrating that:

(i) The annual average concentrations of radioactive material released in gaseous and liquid effluents at the boundary of the unrestricted area do not exceed the values specified in Table II of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference; and

(ii) If an individual were continuously present in an unrestricted area, the dose from external sources would not exceed 0.02 mSv (0.002 rem) in an hour and 0.50 mSv (0.05 rem) in a year.

(3) Upon approval from the Director, the licensee or registrant may adjust the effluent concentration values in Appendix B, Table II of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference, for members of the public, to take into account the actual physical and chemical characteristics of the effluents, such as, aerosol size distribution, solubility, density, radioactive decay equilibrium, and chemical

form.

R313-15-401. Radiological Criteria for License Termination - General Provisions.

(1) The criteria in Sections R313-15-401 through R313-15-406 apply to the decommissioning of facilities licensed under Rules R313-22 and R313-25, as well as other facilities subject to the Act. For low-level waste disposal facilities (Rule R313-25), the criteria apply only to ancillary surface facilities that support radioactive waste disposal activities.

(2) The criteria in Sections R313-15-401 through R313-15-406 do not apply to sites which:

(a) Have been decommissioned prior to the effective date of the rule in accordance with criteria approved by the Director;

(b) Have previously submitted and received Director approval on a license termination plan or decommissioning plan; or

(c) Submit a sufficient license termination plan or decommissioning plan before the effective date of the rule with criteria approved by the Director.

(3) After a site has been decommissioned and the license terminated in accordance with the criteria in Sections R313-15-401 through R313-15-406, the Director will require additional cleanup only if, based on new information, the Director determines that the criteria in Sections R313-15-401 through R313-15-406 was not met and residual radioactivity remaining at the site could result in significant threat to public health and safety.

(4) When calculating the total effective dose equivalent to the average member of the critical group, the licensee shall determine the peak annual total effective dose equivalent dose expected within the first 1000 years after decommissioning.

R313-15-402. Radiological Criteria for Unrestricted Use.

A site will be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a total effective dose equivalent to an average member of the critical group that does not exceed 0.25 mSv (0.025 rem) per year, including no greater than 0.04 mSv (0.004 rem) committed effective dose equivalent or total effective dose equivalent to an average member of the critical group from groundwater sources, and the residual radioactivity has been reduced to levels that are as low as reasonably achievable (ALARA). Determination of the levels which are ALARA must take into account consideration of any detriments, such as deaths from transportation accidents, expected to potentially result from decontamination and waste disposal.

R313-15-403. Criteria for License Termination Under Restricted Conditions.

A site will be considered acceptable for license termination under restricted conditions if:

(1) The licensee can demonstrate that further reductions in residual radioactivity necessary to comply with the provisions of Section R313-15-402 would result in net public or environmental harm or were not being made because the residual levels associated with restricted conditions are ALARA. Determination of the levels which are ALARA must take into account consideration of any detriments, such as traffic accidents, expected to potentially result from decontamination and waste disposal; and

(2) The licensee has made provisions for legally enforceable institutional controls that provide reasonable assurance that the total effective dose equivalent from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 0.25 mSv (0.025 rem) per year; and

(3) The licensee has provided sufficient financial assurance to enable an independent third party, including a

governmental custodian of a site, to assume and carry out responsibilities for any necessary control and maintenance of the site. Acceptable financial assurance mechanisms are:

(a) Funds placed into an account segregated from the licensee's assets outside the licensee's administrative control as described in Subsection R313-22-35(6)(a);

(b) Surety method, insurance, or other guarantee method as described in Subsection R313-22-35(6)(b);

(c) A statement of intent in the case of Federal, State, or local Government licensees, as described in Subsection R313-22-35(6)(d); or

(d) When a governmental entity is assuming custody and ownership of a site, an arrangement that is deemed acceptable by such governmental entity; and

(4) The licensee has submitted a decommissioning plan or license termination plan to the Director indicating the licensee's intent to decommission in accordance with Subsection R313-22-36(4) and specifying that the licensee intends to decommission by restricting use of the site. The licensee shall document in the license termination plan or decommissioning plan how the advice of individuals and institutions in the community who may be affected by the decommissioning has been sought and incorporated, as appropriate, following analysis of that advice;

(a) Licensees proposing to decommission by restricting use of the site shall seek advice from such affected parties regarding the following matters concerning the proposed decommissioning:

(i) Whether provisions for institutional controls proposed by the licensee;

(A) Will provide reasonable assurance that the total effective dose equivalent from residual radioactivity distinguishable from background to the average member of the critical group will not exceed 0.25 mSv (0.025 rem) total effective dose equivalent per year;

(B) Will be enforceable; and

(C) Will not impose undue burdens on the local community or other affected parties; and

(ii) Whether the licensee has provided sufficient financial assurance to enable an independent third party, including a governmental custodian of a site, to assume and carry out responsibilities for any necessary control and maintenance of the site; and

(b) In seeking advice on the issues identified in Subsection R313-15-403(4)(a), the licensee shall provide for:

(i) Participation by representatives of a broad cross section of community interests who may be affected by the decommissioning;

(ii) An opportunity for a comprehensive, collective discussion on the issues by the participants represented; and

(iii) A publicly available summary of the results of all such discussions, including a description of the individual viewpoints of the participants on the issues and the extent of agreement and disagreement among the participants on the issues; and

(5) Residual radioactivity at the site has been reduced so that if the institutional controls were no longer in effect, there is reasonable assurance that the total effective dose equivalent from residual radioactivity distinguishable from background to the average member of the critical group is as low as reasonably achievable and would not exceed either:

(a) one mSv (0.1 rem) per year; or

(b) five mSv (0.5 rem) per year provided the licensee:

(i) Demonstrates that further reductions in residual radioactivity necessary to comply with the one mSv (0.1 rem) per year value of Subsection R313-15-403(5)(a) are not technically achievable, would be prohibitively expensive, or would result in net public or environmental harm;

(ii) Makes provisions for durable institutional controls; and

(iii) Provides sufficient financial assurance to enable a

responsible government entity or independent third party, including a governmental custodian of a site, both to carry out periodic rechecks of the site no less frequently than every five years to assure that the institutional controls remain in place as necessary to meet the criteria of Subsection R313-15-403(2) and to assume and carry out responsibilities for any necessary control and maintenance of those controls. Acceptable financial assurance mechanisms are those in Subsection R313-15-403(3).

R313-15-404. Alternate Criteria for License Termination.

(1) The Director may terminate a license using alternative criteria greater than the dose criterion of Section R313-15-402, and Subsections R313-15-403(2) and R313-15-403(4)(a)(i)(A), if the licensee:

(a) Provides assurance that public health and safety would continue to be protected, and that it is unlikely that the dose from all man-made sources combined, other than medical, would be more than the one mSv (0.1 rem) per year limit of Subsection R313-15-301(1)(a), by submitting an analysis of possible sources of exposure; and

(b) Has employed, to the extent practical, restrictions on site use according to the provisions of Section R313-15-403 in minimizing exposures at the site; and

(c) Reduces doses to ALARA levels, taking into consideration any detriments such as traffic accidents expected to potentially result from decontamination and waste disposal; and

(d) Has submitted a decommissioning plan or license termination plan to the Director indicating the licensee's intent to decommission in accordance with Subsection R313-22-36(4), and specifying that the licensee proposes to decommission by use of alternate criteria. The licensee shall document in the decommissioning plan or license termination plan how the advice of individuals and institutions in the community who may be affected by the decommissioning has been sought and addressed, as appropriate, following analysis of that advice. In seeking such advice, the licensee shall provide for:

(i) Participation by representatives of a broad cross section of community interests who may be affected by the decommissioning; and

(ii) An opportunity for a comprehensive, collective discussion on the issues by the participants represented; and

(iii) A publicly available summary of the results of all such discussions, including a description of the individual viewpoints of the participants on the issues and the extent of agreement and disagreement among the participants on the issues.

(2) The use of alternate criteria to terminate a license requires the approval of the Director after consideration of recommendations from the Division's staff, comments provided by federal, state and local governments, and any public comments submitted pursuant to Section R313-15-405.

R313-15-405. Public Notification and Public Participation.

Upon the receipt of a license termination plan or decommissioning plan from the licensee, or a proposal by the licensee for release of a site pursuant to Sections R313-15-403 or R313-15-404, or whenever the Director deems such notice to be in the public interest, the Director shall:

(1) Notify and solicit comments from:

(a) Local and State governments in the vicinity of the site and any Indian Nation or other indigenous people that have treaty or statutory rights that could be affected by the decommissioning; and

(b) Federal, state and local governments for cases where the licensee proposes to release a site pursuant to Section R313-15-404.

(2) Publish a notice in a forum, such as local newspapers, letters to State or local organizations, or other appropriate forum, that is readily accessible to individuals in the vicinity of

the site, and solicit comments from affected parties.

R313-15-406. Minimization of Contamination.

Applicants for licenses, other than renewals, shall describe in the application how facility design and procedures for operation will minimize, to the extent practicable, contamination of the facility and the environment, facilitate eventual decommissioning, and minimize, to the extent practicable, the generation of waste.

R313-15-501. Surveys and Monitoring - General.

(1) Each licensee or registrant shall make, or cause to be made, surveys that:

(a) Are necessary for the licensee or registrant to comply with Rule R313-15; and

(b) Are necessary under the circumstances to evaluate:

(i) The magnitude and the extent of radiation levels; and

(ii) Concentrations or quantities of radioactive material; and

(iii) The potential radiological hazards.

(2) The licensee or registrant shall ensure that instruments and equipment used for quantitative radiation measurements, for example, dose rate and effluent monitoring, are calibrated at intervals not to exceed 12 months for the radiation measured, except when a more frequent interval is specified in another applicable part of these rules or a license condition.

(3) All personnel dosimeters, except for direct and indirect reading pocket ionization chambers and those dosimeters used to measure the dose to any extremity, that require processing to determine the radiation dose and that are used by licensees and registrants to comply with Section R313-15-201, with other applicable provisions of these rules, or with conditions specified in a license or registration shall be processed and evaluated by a dosimetry processor:

(a) Holding current personnel dosimetry accreditation from the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology; and

(b) Approved in this accreditation process for the type of radiation or radiations included in the NVLAP program that most closely approximates the type of radiation or radiations for which the individual wearing the dosimeter is monitored.

(4) The licensee or registrant shall ensure that adequate precautions are taken to prevent a deceptive exposure of an individual monitoring device.

R313-15-502. Conditions Requiring Individual Monitoring of External and Internal Occupational Dose.

Each licensee or registrant shall monitor exposures from sources of radiation at levels sufficient to demonstrate compliance with the occupational dose limits of Rule R313-15. As a minimum:

(1) Each licensee or registrant shall monitor occupational exposure to radiation from licensed, unlicensed, and registered radiation sources under the control of the licensee and shall supply and require the use of individual monitoring devices by:

(a) Adults likely to receive, in one year from sources external to the body, a dose in excess of ten percent of the limits in Subsection R313-15-201(1); and

(b) Minors likely to receive, in one year, from radiation sources external to the body, a deep dose equivalent in excess of one mSv (0.1 rem), a lens dose equivalent in excess of 1.5 mSv (0.15 rem), or a shallow dose equivalent to the skin or to the extremities in excess of five mSv (0.5 rem); and

(c) Declared pregnant women likely to receive during the entire pregnancy, from radiation sources external to the body, a deep dose equivalent in excess of one mSv (0.1 rem); and

(d) Individuals entering a high or very high radiation area; and

(e) Individuals working with medical fluoroscopic equipment.

(i) An individual monitoring device used for the dose to an embryo/fetus of a declared pregnant woman, pursuant to Subsection R313-15-208(1), shall be located under the protective apron at the waist.

(A) If an individual monitoring device worn by a declared pregnant woman has a monthly reported dose equivalent value in excess of 0.5 mSv (50 mrem), the value to be used for determining the dose to the embryo/fetus, pursuant to Subsection R313-15-208(3)(a) for radiation from medical fluoroscopy, may be the value reported by the individual monitoring device worn at the waist underneath the protective apron which has been corrected for the potential overestimation of dose recorded by the monitoring device because of the overlying tissue of the pregnant individual. This correction shall be performed by a radiation safety officer of an institutional radiation safety committee, a qualified expert approved by the Director.

(ii) An individual monitoring device used for lens dose equivalent shall be located at the neck, or an unshielded location closer to the eye, outside the protective apron.

(iii) When only one individual monitoring device is used to determine the effective dose equivalent for external radiation pursuant to Subsection R313-15-201(3)(b), it shall be located at the neck outside the protective apron. When a second individual monitoring device is used, for the same purpose, it shall be located under the protective apron at the waist. Note: The second individual monitoring device is required for a declared pregnant woman.

(iv) A registrant is not required to supply and require the use of individual monitoring devices provided the registrant has conducted a survey, pursuant to Section R313-15-501, that demonstrates that the working environment the individual encounters will not likely result in a dose in excess of ten percent of the limits in Subsection R313-15-201(1), and that the individual is neither a minor nor a declared pregnant woman.

(2) Each licensee or registrant shall monitor, to determine compliance with Section R313-15-204, the occupational intake of radioactive material by and assess the committed effective dose equivalent to:

(a) Adults likely to receive, in one year, an intake in excess of ten percent of the applicable ALI(s) in Table I, Columns 1 and 2, of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference; and

(b) Minors likely to receive, in one year, a committed effective dose equivalent in excess of one mSv (0.1 rem); and

(c) Declared pregnant women likely to receive, during the entire pregnancy, a committed effective dose equivalent in excess of one mSv (0.1 rem).

Note: All of the occupational doses in Section R313-15-201 continue to be applicable to the declared pregnant worker as long as the embryo/fetus dose limit is not exceeded.

R313-15-503. Location of Individual Monitoring Devices.

Each licensee or registrant shall ensure that individuals who are required to monitor occupational doses in accordance with Subsection R313-15-502(1) wear individual monitoring devices as follows:

(1) An individual monitoring device used for monitoring the dose to the whole body shall be worn at the unshielded location of the whole body likely to receive the highest exposure. When a protective apron is worn, the location of the individual monitoring device is typically at the neck (collar).

(2) An individual monitoring device used for monitoring the dose to an embryo/fetus of a declared pregnant woman, pursuant to Subsection R313-15-208(1), shall be located at the waist under any protective apron being worn by the woman.

(3) An individual monitoring device used for monitoring

the lens dose equivalent, to demonstrate compliance with Subsection R313-15-201(1)(b)(i), shall be located at the neck (collar), outside any protective apron being worn by the monitored individual, or at an unshielded location closer to the eye.

(4) An individual monitoring device used for monitoring the dose to the extremities, to demonstrate compliance with Subsection R313-15-201(1)(b)(ii), shall be worn on the extremity likely to receive the highest exposure. Each individual monitoring device shall be oriented to measure the highest dose to the extremity being monitored.

R313-15-601. Control of Access to High Radiation Areas.

(1) The licensee or registrant shall ensure that each entrance or access point to a high radiation area has one or more of the following features:

(a) A control device that, upon entry into the area, causes the level of radiation to be reduced below that level at which an individual might receive a deep dose equivalent of one mSv (0.1 rem) in one hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates; or

(b) A control device that energizes a conspicuous visible or audible alarm signal so that the individual entering the high radiation area and the supervisor of the activity are made aware of the entry; or

(c) Entryways that are locked, except during periods when access to the areas is required, with positive control over each individual entry.

(2) In place of the controls required by Subsection R313-15-601(1) for a high radiation area, the licensee or registrant may substitute continuous direct or electronic surveillance that is capable of preventing unauthorized entry.

(3) The licensee or registrant may apply to the Director for approval of alternative methods for controlling access to high radiation areas.

(4) The licensee or registrant shall establish the controls required by Subsections R313-15-601(1) and R313-15-601(3) in a way that does not prevent individuals from leaving a high radiation area.

(5) The licensee or registrant is not required to control each entrance or access point to a room or other area that is a high radiation area solely because of the presence of radioactive materials prepared for transport and packaged and labeled in accordance with the rules of the U.S. Department of Transportation provided that:

(a) The packages do not remain in the area longer than three days; and

(b) The dose rate at one meter from the external surface of any package does not exceed 0.1 mSv (0.01 rem) per hour.

(6) The licensee or registrant is not required to control entrance or access to rooms or other areas in hospitals solely because of the presence of patients containing radioactive material, provided that there are personnel in attendance who are taking the necessary precautions to prevent the exposure of individuals to radiation or radioactive material in excess of the established limits in Rule R313-15 and to operate within the ALARA provisions of the licensee's or registrant's radiation protection program.

(7) The registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a high radiation area as described in Section R313-15-601 if the registrant has met all the specific requirements for access and control specified in other applicable sections of these rules, such as, Rule R313-36 for industrial radiography, Rule R313-28 for x rays in the healing arts, Rule R313-30 for therapeutic radiation machines, and Rule R313-35 for industrial use of x-ray systems.

R313-15-602. Control of Access to Very High Radiation

Areas.

(1) In addition to the requirements in Section R313-15-601, the licensee or registrant shall institute measures to ensure that an individual is not able to gain unauthorized or inadvertent access to areas in which radiation levels could be encountered at five Gy (500 rad) or more in one hour at one meter from a source of radiation or any surface through which the radiation penetrates. This requirement does not apply to rooms or areas in which diagnostic x-ray systems are the only source of radiation, or to non-self-shielded irradiators.

(2) The registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a very high radiation area as described in Subsection R313-15-602(1) if the registrant has met all the specific requirements for access and control specified in other applicable sections of these rules, such as, Rule R313-36 for industrial radiography, Rule R313-28 for x rays in the healing arts, Rule R313-30 for therapeutic radiation machines, and Rule R313-35 for industrial use of x-ray systems.

R313-15-603. Control of Access to Very High Radiation Areas -- Irradiators.

(1) Section R313-15-603 applies to licensees or registrants with sources of radiation in non-self-shielded irradiators. Section R313-15-603 does not apply to sources of radiation that are used in teletherapy, in industrial radiography, or in completely self-shielded irradiators in which the source of radiation is both stored and operated within the same shielding radiation barrier and, in the designed configuration of the irradiator, is always physically inaccessible to any individual and cannot create a high levels of radiation in an area that is accessible to any individual.

(2) Each area in which there may exist radiation levels in excess of five Gy (500 rad) in one hour at one meter from a source of radiation that is used to irradiate materials shall meet the following requirements:

(a) Each entrance or access point shall be equipped with entry control devices which:

(i) Function automatically to prevent any individual from inadvertently entering a very high radiation area; and

(ii) Permit deliberate entry into the area only after a control device is actuated that causes the radiation level within the area, from the source of radiation, to be reduced below that at which it would be possible for an individual to receive a deep dose equivalent in excess of one mSv (0.1 rem) in one hour; and

(iii) Prevent operation of the source of radiation if it would produce radiation levels in the area that could result in a deep dose equivalent to an individual in excess of one mSv (0.1 rem) in one hour.

(b) Additional control devices shall be provided so that, upon failure of the entry control devices to function as required by Subsection R313-15-603(2)(a):

(i) The radiation level within the area, from the source of radiation, is reduced below that at which it would be possible for an individual to receive a deep dose equivalent in excess of one mSv (0.1 rem) in one hour; and

(ii) Conspicuous visible and audible alarm signals are generated to make an individual attempting to enter the area aware of the hazard and at least one other authorized individual, who is physically present, familiar with the activity, and prepared to render or summon assistance, aware of the failure of the entry control devices.

(c) The licensee or registrant shall provide control devices so that, upon failure or removal of physical radiation barriers other than the sealed source's shielded storage container:

(i) The radiation level from the source of radiation is reduced below that at which it would be possible for an individual to receive a deep dose equivalent in excess of one mSv (0.1 rem) in one hour; and

(ii) Conspicuous visible and audible alarm signals are generated to make potentially affected individuals aware of the hazard and the licensee or registrant or at least one other individual, who is familiar with the activity and prepared to render or summon assistance, aware of the failure or removal of the physical barrier.

(d) When the shield for stored sealed sources is a liquid, the licensee or registrant shall provide means to monitor the integrity of the shield and to signal, automatically, loss of adequate shielding.

(e) Physical radiation barriers that comprise permanent structural components, such as walls, that have no credible probability of failure or removal in ordinary circumstances need not meet the requirements of Subsections R313-15-603(2)(c) and R313-15-603(2)(d).

(f) Each area shall be equipped with devices that will automatically generate conspicuous visible and audible alarm signals to alert personnel in the area before the source of radiation can be put into operation and in time for any individual in the area to operate a clearly identified control device, which shall be installed in the area and which can prevent the source of radiation from being put into operation.

(g) Each area shall be controlled by use of such administrative procedures and such devices as are necessary to ensure that the area is cleared of personnel prior to each use of the source of radiation.

(h) Each area shall be checked by a radiation measurement to ensure that, prior to the first individual's entry into the area after any use of the source of radiation, the radiation level from the source of radiation in the area is below that at which it would be possible for an individual to receive a deep dose equivalent in excess of one mSv (0.1 rem) in one hour.

(i) The entry control devices required in Subsection R313-15-603(2)(a) shall be tested for proper functioning. See Section R313-15-1110 for recordkeeping requirements.

(i) Testing shall be conducted prior to initial operation with the source of radiation on any day, unless operations were continued uninterrupted from the previous day; and

(ii) Testing shall be conducted prior to resumption of operation of the source of radiation after any unintentional interruption; and

(iii) The licensee or registrant shall submit and adhere to a schedule for periodic tests of the entry control and warning systems.

(j) The licensee or registrant shall not conduct operations, other than those necessary to place the source of radiation in safe condition or to effect repairs on controls, unless control devices are functioning properly.

(k) Entry and exit portals that are used in transporting materials to and from the irradiation area, and that are not intended for use by individuals, shall be controlled by such devices and administrative procedures as are necessary to physically protect and warn against inadvertent entry by any individual through these portals. Exit portals for irradiated materials shall be equipped to detect and signal the presence of any loose radioactive material that is carried toward such an exit and automatically to prevent loose radioactive material from being carried out of the area.

(3) Licensees, registrants, or applicants for licenses or registrations for sources of radiation within the purview of Subsection R313-15-603(2) which will be used in a variety of positions or in locations, such as open fields or forests, that make it impractical to comply with certain requirements of Subsection R313-15-603(2), such as those for the automatic control of radiation levels, may apply to the Director for approval of alternative safety measures. Alternative safety measures shall provide personnel protection at least equivalent to those specified in Subsection R313-15-603(2). At least one of the alternative measures shall include an entry-preventing

interlock control based on a measurement of the radiation that ensures the absence of high radiation levels before an individual can gain access to the area where such sources of radiation are used.

(4) The entry control devices required by Subsections R313-15-603(2) and R313-15-603(3) shall be established in such a way that no individual will be prevented from leaving the area.

R313-15-701. Use of Process or Other Engineering Controls.

The licensee or registrant shall use, to the extent practical, process or other engineering controls, such as, containment, decontamination, or ventilation, to control the concentration of radioactive material in air.

R313-15-702. Use of Other Controls.

(1) When it is not practical to apply process or other engineering controls to control the concentration of radioactive material in the air to values below those that define an airborne radioactivity area, the licensee or registrant shall, consistent with maintaining the total effective dose equivalent ALARA, increase monitoring and limit intakes by one or more of the following means:

- (a) Control of access; or
- (b) Limitation of exposure times; or
- (c) Use of respiratory protection equipment; or
- (d) Other controls.

(2) If the licensee or registrant performs an ALARA analysis to determine whether or not respirators should be used, the licensee may consider safety factors other than radiological factors. The licensee or registrant should also consider the impact of respirator use on workers' industrial health and safety.

R313-15-703. Use of Individual Respiratory Protection Equipment.

If the licensee or registrant uses respiratory protection equipment to limit the intake of radioactive material:

(1) Except as provided in Subsection R313-15-703(2), the licensee or registrant shall use only respiratory protection equipment that is tested and certified by the National Institute for Occupational Safety and Health.

(2) The licensee or registrant may use equipment that has not been tested or certified by the National Institute for Occupational Safety and Health or for which there is no schedule for testing or certification, provided the licensee or registrant has submitted to the Director and the Director has approved an application for authorized use of that equipment. The application must include a demonstration by testing, or a demonstration on the basis of reliable test information, that the material and performance characteristics of the equipment are capable of providing the proposed degree of protection under anticipated conditions of use.

(3) The licensee or registrant shall implement and maintain a respiratory protection program that includes:

- (a) Air sampling sufficient to identify the potential hazard, permit proper equipment selection, and estimate doses; and
- (b) Surveys and bioassays, as necessary, to evaluate actual intakes; and
- (c) Testing of respirators for operability, user seal check for face sealing devices and functional check for others, immediately prior to each use; and
- (d) Written procedures regarding
 - (i) Monitoring, including air sampling and bioassays;
 - (ii) Supervision and training of respirator users;
 - (iii) Fit testing;
 - (iv) Respirator selection;
 - (v) Breathing air quality;
 - (vi) Inventory and control;
 - (vii) Storage, issuance, maintenance, repair, testing, and

quality assurance of respiratory protection equipment;

(viii) Recordkeeping; and

(ix) Limitations on periods of respirator use and relief from respirator use; and

(e) Determination by a physician prior to initial fitting of respirators, before the first field use of non-face sealing respirators, and either every 12 months thereafter or periodically at a frequency determined by a physician, that the individual user is medically fit to use the respiratory protection equipment; and

(f) Fit testing, with fit factor greater than or equal to ten times the APF for negative pressure devices, and a fit factor greater than or equal to 500 for positive pressure, continuous flow, and pressure-demand devices, before the first field use of tight fitting, face-sealing respirators and periodically thereafter at a frequency not to exceed one year. Fit testing must be performed with the facepiece operating in the negative pressure mode.

(4) The licensee or registrant shall advise each respirator user that the user may leave the area at any time for relief from respirator use in the event of equipment malfunction, physical or psychological distress, procedural or communication failure, significant deterioration of operating conditions, or any other conditions that might require such relief.

(5) The licensee or registrant shall also consider limitations appropriate to the type and mode of use. When selecting respiratory devices the licensee shall provide for vision correction, adequate communication, low temperature work environments, and the concurrent use of other safety or radiological protection equipment. The licensee or registrant shall use equipment in such a way as not to interfere with the proper operation of the respirator.

(6) Standby rescue persons are required whenever one-piece atmosphere-supplying suits, or any combination of supplied air respiratory protection device and personnel protective equipment are used from which an unaided individual would have difficulty extricating himself or herself. The standby persons must be equipped with respiratory protection devices or other apparatus appropriate for the potential hazards. The standby rescue persons shall observe or otherwise maintain continuous communication with the workers (visual, voice, signal line, telephone, radio, or other suitable means), and be immediately available to assist them in case of a failure of the air supply or for any other reason that requires relief from distress. A sufficient number of standby rescue persons must be immediately available to assist all users of this type of equipment and to provide effective emergency rescue if needed.

(7) Atmosphere-supplying respirators must be supplied with respirable air of grade D quality or better as defined by the Compressed Gas Association in publication G-7.1, "Commodity Specification for Air," 1997 ed. and included in 29 CFR 1910.134(i)(1)(ii)(A) through (E), (2010). Grade D quality air criteria include:

(a) Oxygen content (v/v) of 19.5 to 23.5%;

(b) Hydrocarbon (condensed) content of five milligrams per cubic meter of air or less;

(c) Carbon monoxide (CO) content of ten ppm or less;

(d) Carbon dioxide content of 1,000 ppm or less; and

(e) Lack of noticeable odor.

(8) The licensee shall ensure that no objects, materials or substances, such as facial hair, or any conditions that interfere with the face and facepiece seal or valve function, and that are under the control of the respirator wearer, are present between the skin of the wearer's face and the sealing surface of a tight-fitting respirator facepiece.

(9) In estimating the dose to individuals from intake of airborne radioactive materials, the concentration of radioactive material in the air that is inhaled when respirators are worn is initially assumed to be the ambient concentration in air without

respiratory protection, divided by the assigned protection factor. If the dose is later found to be greater than the estimated dose, the corrected value must be used. If the dose is later found to be less than the estimated dose, the corrected value may be used.

R313-15-704. Further Restrictions on the Use of Respiratory Protection Equipment.

The Director may impose restrictions in addition to the provisions of Section R313-15-702, Section R313-15-703, and Appendix A of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference to:

(1) Ensure that the respiratory protection program of the licensee or registrant is adequate to limit doses to individuals from intakes of airborne radioactive materials consistent with maintaining total effective dose equivalent ALARA; and

(2) Limit the extent to which a licensee or registrant may use respiratory protection equipment instead of process or other engineering controls.

R313-15-705. Application for Use of Higher Assigned Protection Factors.

The licensee or registrant shall obtain authorization from the Director before using assigned protection factors in excess of those specified in Appendix A of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference. The Director may authorize a licensee or registrant to use higher assigned protection factors on receipt of an application that:

(1) Describes the situation for which a need exists for higher protection factors; and

(2) Demonstrates that the respiratory protection equipment provides these higher protection factors under the proposed conditions of use.

R313-15-801. Security and Control of Licensed or Registered Sources of Radiation.

(1) The licensee or registrant shall secure licensed or registered radioactive material from unauthorized removal or access.

(2) The licensee or registrant shall maintain constant surveillance, and use devices or administrative procedures to prevent unauthorized use of licensed or registered radioactive material that is in an unrestricted area and that is not in storage.

(3) The registrant shall secure registered radiation machines from unauthorized removal.

(4) The registrant shall use devices or administrative procedures to prevent unauthorized use of registered radiation machines.

R313-15-901. Caution Signs.

(1) Standard Radiation Symbol. Unless otherwise authorized by the Director, the symbol prescribed by 10 CFR 20.1901, (2010), which is incorporated by reference, shall use the colors magenta, or purple, or black on yellow background. The symbol prescribed is the three-bladed design as follows:

(a) Cross-hatched area is to be magenta, or purple, or black, and

(b) The background is to be yellow.

(2) Exception to Color Requirements for Standard Radiation Symbol. Notwithstanding the requirements of 10 CFR 20.1901(a), (2010), which is incorporated by reference, licensees or registrants are authorized to label sources, source holders, or device components containing sources of radiation that are subjected to high temperatures, with conspicuously etched or stamped radiation caution symbols and without a color requirement.

(3) Additional Information on Signs and Labels. In addition to the contents of signs and labels prescribed in Rule R313-15, the licensee or registrant shall provide, on or near the required signs and labels, additional information, as appropriate,

to make individuals aware of potential radiation exposures and to minimize the exposures.

R313-15-902. Posting Requirements.

(1) Posting of Radiation Areas. The licensee or registrant shall post each radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIATION AREA."

(2) Posting of High Radiation Areas. The licensee or registrant shall post each high radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, HIGH RADIATION AREA" or "DANGER, HIGH RADIATION AREA."

(3) Posting of Very High Radiation Areas. The licensee or registrant shall post each very high radiation area with a conspicuous sign or signs bearing the radiation symbol and words "GRAVE DANGER, VERY HIGH RADIATION AREA."

(4) Posting of Airborne Radioactivity Areas. The licensee or registrant shall post each airborne radioactivity area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, AIRBORNE RADIOACTIVITY AREA" or "DANGER, AIRBORNE RADIOACTIVITY AREA."

(5) Posting of Areas or Rooms in which Licensed or Registered Material is Used or Stored. The licensee or registrant shall post each area or room in which there is used or stored an amount of licensed or registered material exceeding ten times the quantity of such material specified in Appendix C of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference, with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL."

R313-15-903. Exceptions to Posting Requirements.

(1) A licensee or registrant is not required to post caution signs in areas or rooms containing sources of radiation for periods of less than eight hours, if each of the following conditions is met:

(a) The sources of radiation are constantly attended during these periods by an individual who takes the precautions necessary to prevent the exposure of individuals to sources of radiation in excess of the limits established in Rule R313-15; and

(b) The area or room is subject to the licensee's or registrant's control.

(2) Rooms or other areas in hospitals that are occupied by patients are not required to be posted with caution signs pursuant to Section R313-15-902 provided that the patient could be released from licensee control pursuant to Rule R313-32.

(3) A room or area is not required to be posted with a caution sign because of the presence of a sealed source provided the radiation level at 30 centimeters from the surface of the sealed source container or housing does not exceed 0.05 mSv (0.005 rem) per hour.

(4) A room or area is not required to be posted with a caution sign because of the presence of radiation machines used solely for diagnosis in the healing arts.

(5) Rooms in hospitals or clinics that are used for teletherapy are exempt from the requirement to post caution signs under Section R313-15-902 if:

(a) Access to the room is controlled pursuant to Section R313-32; and

(b) Personnel in attendance take necessary precautions to prevent the inadvertent exposure of workers, other patients, and members of the public to radiation in excess of the limits established in Rule R313-15.

R313-15-904. Labeling Containers and Radiation Machines.

(1) The licensee or registrant shall ensure that each

container of licensed or registered material bears a durable, clearly visible label bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL." The label shall also provide information, such as the radionuclides present, an estimate of the quantity of radioactivity, the date for which the activity is estimated, radiation levels, kinds of materials, and mass enrichment, to permit individuals handling or using the containers, or working in the vicinity of the containers, to take precautions to avoid or minimize exposures.

(2) Each licensee or registrant shall, prior to removal or disposal of empty uncontaminated containers to unrestricted areas, remove or deface the radioactive material label or otherwise clearly indicate that the container no longer contains radioactive materials.

(3) Each registrant shall ensure that each radiation machine is labeled in a conspicuous manner which cautions individuals that radiation is produced when it is energized.

R313-15-905. Exemptions to Labeling Requirements.

A licensee or registrant is not required to label:

(1) Containers holding licensed or registered material in quantities less than the quantities listed in Appendix C of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference; or

(2) Containers holding licensed or registered material in concentrations less than those specified in Table III of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference; or

(3) Containers attended by an individual who takes the precautions necessary to prevent the exposure of individuals in excess of the limits established by Rule R313-15; or

(4) Containers when they are in transport and packaged and labeled in accordance with the rules of the U.S. Department of Transportation; or

(5) Containers that are accessible only to individuals authorized to handle or use them, or to work in the vicinity of the containers, if the contents are identified to these individuals by a readily available written record. Examples of containers of this type are containers in locations such as water-filled canals, storage vaults, or hot cells. The record shall be retained as long as the containers are in use for the purpose indicated on the record; or

(6) Installed manufacturing or process equipment, such as piping and tanks.

R313-15-906. Procedures for Receiving and Opening Packages.

(1) Each licensee or registrant who expects to receive a package containing quantities of radioactive material in excess of a Type A quantity, as used in Section R313-19-100, which incorporates 10 CFR 71.4 by reference, shall make arrangements to receive:

(a) The package when the carrier offers it for delivery; or

(b) The notification of the arrival of the package at the carrier's terminal and to take possession of the package expeditiously.

(2) Each licensee or registrant shall:

(a) Monitor the external surfaces of a labeled package for radioactive contamination unless the package contains only radioactive material in the form of gas or in special form as defined in Section R313-12-3; and

(b) Monitor the external surfaces of a labeled package for radiation levels unless the package contains quantities of radioactive material that are less than or equal to the Type A quantity, as used in Section R313-19-100, which incorporates 10 CFR 71.4 by reference; and

(c) Monitor all packages known to contain radioactive material for radioactive contamination and radiation levels if

there is evidence of degradation of package integrity, such as packages that are crushed, wet, or damaged.

(3) The licensee or registrant shall perform the monitoring required by Subsection R313-15-906(2) as soon as practical after receipt of the package, but not later than three hours after the package is received at the licensee's or registrant's facility if it is received during the licensee's or registrant's normal working hours or if there is evidence of degradation of package integrity, such as a package that is crushed, wet, or damaged. If a package is received after working hours, and has no evidence of degradation of package integrity, the package shall be monitored no later than three hours from the beginning of the next working day.

(4) The licensee or registrant shall immediately notify the final delivery carrier and, by telephone and telegram, mailgram, or facsimile, the Director when:

(a) Removable radioactive surface contamination exceeds the limits of Section R313-19-100 which incorporates 10 CFR 71.87(i) by reference; or

(b) External radiation levels exceed the limits of Section R313-19-100 which incorporates 10 CFR 71.47 by reference.

(5) Each licensee or registrant shall:

(a) Establish, maintain, and retain written procedures for safely opening packages in which radioactive material is received; and

(b) Ensure that the procedures are followed and that due consideration is given to special instructions for the type of package being opened.

(6) Licensees or registrants transferring special form sources in vehicles owned or operated by the licensee or registrant to and from a work site are exempt from the contamination monitoring requirements of Subsection R313-15-906(2), but are not exempt from the monitoring requirement in Subsection R313-15-906(2) for measuring radiation levels that ensures that the source is still properly lodged in its shield.

R313-15-1001. Waste Disposal - General Requirements.

(1) A licensee or registrant shall dispose of licensed or registered material only:

(a) By transfer to an authorized recipient as provided in Section R313-15-1006 or in Rules R313-21, R313-22, R313-24, or R313-25, or to the U.S. Department of Energy; or

(b) By decay in storage; or

(c) By release in effluents within the limits in Section R313-15-301; or

(d) As authorized pursuant to Sections R313-15-1002, R313-15-1003, R313-15-1004, R313-15-1005, or R313-15-1008.

(2) A person shall be specifically licensed or registered to receive waste containing licensed or registered material from other persons for:

(a) Treatment prior to disposal; or

(b) Treatment or disposal by incineration; or

(c) Decay in storage; or

(d) Disposal at a land disposal facility licensed pursuant to Rule R313-25; or

(e) Storage until transferred to a storage or disposal facility authorized to receive the waste.

R313-15-1002. Method for Obtaining Approval of Proposed Disposal Procedures.

A licensee or registrant or applicant for a license or registration may apply to the Director for approval of proposed procedures, not otherwise authorized in these rules, to dispose of licensed or registered material generated in the licensee's or registrant's operations. Each application shall include:

(1) A description of the waste containing licensed or registered material to be disposed of, including the physical and chemical properties that have an impact on risk evaluation, and

the proposed manner and conditions of waste disposal; and

(2) An analysis and evaluation of pertinent information on the nature of the environment; and

(3) The nature and location of other potentially affected facilities; and

(4) Analyses and procedures to ensure that doses are maintained ALARA and within the dose limits in Rule R313-15.

R313-15-1003. Disposal by Release into Sanitary Sewerage.

(1) A licensee or registrant may discharge licensed or registered material into sanitary sewerage if each of the following conditions is satisfied:

(a) The material is readily soluble, or is readily dispersible biological material, in water; and

(b) The quantity of licensed or registered radioactive material that the licensee or registrant releases into the sewer in one month divided by the average monthly volume of water released into the sewer by the licensee or registrant does not exceed the concentration listed in Table III of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference; and

(c) If more than one radionuclide is released, the following conditions shall also be satisfied:

(i) The licensee or registrant shall determine the fraction of the limit in Table III of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference, represented by discharges into sanitary sewerage by dividing the actual monthly average concentration of each radionuclide released by the licensee or registrant into the sewer by the concentration of that radionuclide listed in Table III of Appendix B of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference; and

(ii) The sum of the fractions for each radionuclide required by Subsection R313-15-1003(1)(c)(i) does not exceed unity; and

(d) The total quantity of licensed or registered radioactive material that the licensee or registrant releases into the sanitary sewerage system in a year does not exceed 185 GBq (five Ci) of hydrogen-3, 37 GBq (one Ci) of carbon-14, and 37 GBq (one Ci) of all other radioactive materials combined.

(2) Excreta from individuals undergoing medical diagnosis or therapy with radioactive material are not subject to the limitations contained in Subsection R313-15-1003(1).

R313-15-1004. Treatment or Disposal by Incineration.

A licensee or registrant may treat or dispose of licensed or registered material by incineration only in the form and concentration specified in Section R313-15-1005 or as specifically approved by the Director pursuant to Section R313-15-1002.

R313-15-1005. Disposal of Specific Wastes.

(1) A licensee or registrant may dispose of the following licensed or registered material as if it were not radioactive:

(a) 1.85 kBq (0.05 uCi), or less, of hydrogen-3 or carbon-14 per gram of medium used for liquid scintillation counting; and

(b) 1.85 kBq (0.05 uCi) or less, of hydrogen-3 or carbon-14 per gram of animal tissue, averaged over the weight of the entire animal.

(2) A licensee or registrant shall not dispose of tissue pursuant to Subsection R313-15-1005(1)(b) in a manner that would permit its use either as food for humans or as animal feed.

(3) The licensee or registrant shall maintain records in accordance with Section R313-15-1109.

R313-15-1006. Transfer for Disposal and Manifests.

(1) The requirements of Section R313-15-1006 and

Appendix G of 10 CFR 20.1001 to 20.2402, (2010), which are incorporated into these rules by reference, are designed to:

(a) control transfers of low-level radioactive waste by any waste generator, waste collector, or waste processor licensee, as defined in Appendix G in 10 CFR 20.1001 to 20.2402, (2010), who ships low-level waste either directly, or indirectly through a waste collector or waste processor, to a licensed low-level waste land disposal facility as defined in Section R313-25-2;

(b) establish a manifest tracking system; and

(c) supplement existing requirements concerning transfers and recordkeeping for those wastes.

(2) Any licensee shipping radioactive waste intended for ultimate disposal at a licensed land disposal facility must document the information required on the U.S. Nuclear Regulatory Commission's Uniform Low-Level Radioactive Waste Manifest and transfer this recorded manifest information to the intended consignee in accordance with Appendix G to 10 CFR 20.1001 to 20.2402, (2010), which is incorporated into these rules by reference.

(3) Each shipment manifest shall include a certification by the waste generator as specified in Section II of Appendix G to 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference.

(4) Each person involved in the transfer of waste for disposal or in the disposal of waste, including the waste generator, waste collector, waste processor, and disposal facility operator, shall comply with the requirements specified in Section III of Appendix G to 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference.

(5) A licensee shipping byproduct material as defined in paragraphs (c) and (d) of the Section R313-12-3 definition of byproduct material intended for ultimate disposal at a land disposal facility licensed under Rule R313-25 must document the information required on the NRC's Uniform Low-Level Radioactive Waste Manifest and transfer the recorded manifest information to the intended consignee in accordance with Appendix G to 10 CFR Part 20 (2010 edition).

R313-15-1007. Compliance with Environmental and Health Protection Rules.

Nothing in Sections R313-15-1001, R313-15-1002, R313-15-1003, R313-15-1004, R313-15-1005, or R313-15-1006 relieves the licensee or registrant from complying with other applicable Federal, State and local rules governing any other toxic or hazardous properties of materials that may be disposed of pursuant to Sections R313-15-1001, R313-15-1002, R313-15-1003, R313-15-1004, R313-15-1005, or R313-15-1006.

R313-15-1008. Disposal of Section R313-12-3 Byproduct Material Definition Paragraphs (c) and (d).

(1) Licensed material defined in Section R313-12-3, byproduct material definition, paragraphs (c) and (d), may be disposed in accordance with Rule R313-25, even though it is not defined as low-level radioactive waste. Therefore, licensed byproduct material being disposed of at a facility, or transferred for ultimate disposal at a facility licensed under Rule R313-25, must meet the requirements of Section R313-15-1006.

(2) A licensee may dispose of licensed material defined in Section R313-12-3, byproduct material definition, paragraphs (c) and (d), at a disposal facility authorized to dispose of such material in accordance with Federal or State solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act of 2005.

R313-15-1009. Classification and Characteristics of Low-Level Radioactive Waste.

(1) Classification of Radioactive Waste for Land Disposal

(a) Considerations. Determination of the classification of radioactive waste involves two considerations. First,

consideration shall be given to the concentration of long-lived radionuclides (and their shorter-lived precursors) whose potential hazard will persist long after such precautions as institutional controls, improved waste form, and deeper disposal have ceased to be effective. These precautions delay the time when long-lived radionuclides could cause exposures. In addition, the magnitude of the potential dose is limited by the concentration and availability of the radionuclide at the time of exposure. Second, consideration shall be given to the concentration of shorter-lived radionuclides for which requirements on institutional controls, waste form, and disposal methods are effective.

(b) Classes of waste.

(i) Class A waste is waste that is usually segregated from other waste classes at the disposal site. The physical form and characteristics of Class A waste shall meet the minimum requirements set forth in Subsection R313-15-1009(2)(a). If Class A waste also meets the stability requirements set forth in Subsection R313-15-1009(2)(b), it is not necessary to segregate the waste for disposal.

(ii) Class B waste is waste that shall meet more rigorous requirements on waste form to ensure stability after disposal. The physical form and characteristics of Class B waste shall meet both the minimum and stability requirements set forth in Subsection R313-15-1009(2).

(iii) Class C waste is waste that not only shall meet more rigorous requirements on waste form to ensure stability but also requires additional measures at the disposal facility to protect against inadvertent intrusion. The physical form and characteristics of Class C waste shall meet both the minimum and stability requirements set forth in Subsection R313-15-1009(2).

(c) Classification determined by long-lived radionuclides. If the radioactive waste contains only radionuclides listed in Table I, classification shall be determined as follows:

(i) If the concentration does not exceed 0.1 times the value in Table I, the waste is Class A.

(ii) If the concentration exceeds 0.1 times the value in Table I, but does not exceed the value in Table I, the waste is Class C.

(iii) If the concentration exceeds the value in Table I, the waste is not generally acceptable for land disposal.

(iv) For wastes containing mixtures of radionuclides listed in Table I, the total concentration shall be determined by the sum of fractions rule described in Subsection R313-15-1009(1)(g).

TABLE I

Radionuclide	Concentration	
	curie/cubic meter(1)	nanocurie/gram(2)
C-14	8	
C-14 in activated metal	80	
Ni-59 in activated metal	220	
Nb-94 in activated metal	0.2	
Tc-99	3	
I-129	0.08	
Alpha emitting transuranic radionuclides with half-life greater than five years		100
Pu-241		3,500
Cm-242		20,000
Ra-226		100

NOTE: (1) To convert the Ci/m³ values to gigabecquerel (GBq)/cubic meter, multiply the Ci/m³ value by 37.

(2) To convert the nCi/g values to becquerel (Bq)/gram, multiply the nCi/g value by 37.

(d) Classification determined by short-lived radionuclides. If the waste does not contain any of the radionuclides listed in Table I, classification shall be determined based on the

concentrations shown in Table II. However, as specified in Subsection R313-15-1009(1)(f), if radioactive waste does not contain any nuclides listed in either Table I or II, it is Class A.

(i) If the concentration does not exceed the value in Column 1, the waste is Class A.

(ii) If the concentration exceeds the value in Column 1 but does not exceed the value in Column 2, the waste is Class B.

(iii) If the concentration exceeds the value in Column 2 but does not exceed the value in Column 3, the waste is Class C.

(iv) If the concentration exceeds the value in Column 3, the waste is not generally acceptable for near-surface disposal.

(v) For wastes containing mixtures of the radionuclides listed in Table II, the total concentration shall be determined by the sum of fractions rule described in Subsection R313-15-1009(1)(g).

TABLE II

Radionuclide	Concentration, curie/cubic meter(1)		
	Column 1	Column 2	Column 3
Total of all radionuclides with less than 5-year half-life	700	(2)	(2)
H-3	40	(2)	(2)
Co-60	700	(2)	(2)
Ni-63	3.5	70	700
Ni-63 in activated metal	35	700	7000
Sr-90	0.04	150	7000
Cs-137	1	44	4600

NOTE: (1) To convert the Ci/m³ value to gigabecquerel (GBq)/cubic meter, multiply the Ci/m³ value by 37.

(2) There are no limits established for these radionuclides in Class B or C wastes. Practical considerations such as the effects of external radiation and internal heat generation on transportation, handling, and disposal will limit the concentrations for these wastes. These wastes shall be Class B unless the concentrations of other radionuclides in Table II determine the waste to be Class C independent of these radionuclides.

(e) Classification determined by both long- and short-lived radionuclides. If the radioactive waste contains a mixture of radionuclides, some of which are listed in Table I and some of which are listed in Table II, classification shall be determined as follows:

(i) If the concentration of a radionuclide listed in Table I is less than 0.1 times the value listed in Table I, the class shall be that determined by the concentration of radionuclides listed in Table II.

(ii) If the concentration of a radionuclide listed in Table I exceeds 0.1 times the value listed in Table I, but does not exceed the value in Table I, the waste shall be Class C, provided the concentration of radionuclides listed in Table II does not exceed the value shown in Column 3 of Table II.

(f) Classification of wastes with radionuclides other than those listed in Tables I and II. If the waste does not contain any radionuclides listed in either Table I or II, it is Class A.

(g) The sum of the fractions rule for mixtures of radionuclides. For determining classification for waste that contains a mixture of radionuclides, it is necessary to determine the sum of fractions by dividing each radionuclide's concentration by the appropriate limit and adding the resulting values. The appropriate limits shall all be taken from the same column of the same table. The sum of the fractions for the column shall be less than 1.0 if the waste class is to be determined by that column. Example: A waste contains Sr-90 in a concentration of 1.85 TBq/m³ (50 Ci/m³) and Cs-137 in a concentration of 814 GBq/m³ (22 Ci/m³). Since the concentrations both exceed the values in Column 1, Table II, they shall be compared to Column 2 values. For Sr-90 fraction, $50/150 = 0.33$, for Cs-137 fraction, $22/44 = 0.5$; the sum of the fractions = 0.83. Since the sum is less than 1.0, the waste is

Class B.

(h) Determination of concentrations in wastes. The concentration of a radionuclide may be determined by indirect methods such as use of scaling factors which relate the inferred concentration of one radionuclide to another that is measured, or radionuclide material accountability, if there is reasonable assurance that the indirect methods can be correlated with actual measurements. The concentration of a radionuclide may be averaged over the volume of the waste, or weight of the waste if the units are expressed as becquerel (nanocurie) per gram.

(2) Radioactive Waste Characteristics

(a) The following are minimum requirements for all classes of waste and are intended to facilitate handling and provide protection of health and safety of personnel at the disposal site.

(i) Wastes shall be packaged in conformance with the conditions of the license issued to the site operator to which the waste will be shipped. Where the conditions of the site license are more restrictive than the provisions of Rule R313-15, the site license conditions shall govern.

(ii) Wastes shall not be packaged for disposal in cardboard or fiberboard boxes.

(iii) Liquid waste shall be packaged in sufficient absorbent material to absorb twice the volume of the liquid.

(iv) Solid waste containing liquid shall contain as little free-standing and non-corrosive liquid as is reasonably achievable, but in no case shall the liquid exceed one percent of the volume.

(v) Waste shall not be readily capable of detonation or of explosive decomposition or reaction at normal pressures and temperatures, or of explosive reaction with water.

(vi) Waste shall not contain, or be capable of generating, quantities of toxic gases, vapors, or fumes harmful to persons transporting, handling, or disposing of the waste. This does not apply to radioactive gaseous waste packaged in accordance with Subsection R313-15-1009(2)(a)(viii).

(vii) Waste shall not be pyrophoric. Pyrophoric materials contained in wastes shall be treated, prepared, and packaged to be nonflammable.

(viii) Wastes in a gaseous form shall be packaged at an absolute pressure that does not exceed 1.5 atmospheres at 20 degrees celsius. Total activity shall not exceed 3.7 TBq (100 Ci) per container.

(ix) Wastes containing hazardous, biological, pathogenic, or infectious material shall be treated to reduce to the maximum extent practical the potential hazard from the non-radiological materials.

(b) The following requirements are intended to provide stability of the waste. Stability is intended to ensure that the waste does not degrade and affect overall stability of the site through slumping, collapse, or other failure of the disposal unit and thereby lead to water infiltration. Stability is also a factor in limiting exposure to an inadvertent intruder, since it provides a recognizable and nondispersible waste.

(i) Waste shall have structural stability. A structurally stable waste form will generally maintain its physical dimensions and its form, under the expected disposal conditions such as weight of overburden and compaction equipment, the presence of moisture, and microbial activity, and internal factors such as radiation effects and chemical changes. Structural stability can be provided by the waste form itself, processing the waste to a stable form, or placing the waste in a disposal container or structure that provides stability after disposal.

(ii) Notwithstanding the provisions in Subsections R313-15-1009(2)(a)(iii) and R313-15-1009(2)(a)(iv), liquid wastes, or wastes containing liquid, shall be converted into a form that contains as little free-standing and non-corrosive liquid as is reasonably achievable, but in no case shall the liquid exceed one percent of the volume of the waste when the waste is in a

disposal container designed to ensure stability, or 0.5 percent of the volume of the waste for waste processed to a stable form.

(iii) Void spaces within the waste and between the waste and its package shall be reduced to the extent practical.

(3) Labeling. Each package of waste shall be clearly labeled to identify whether it is Class A, Class B, or Class C waste, in accordance with Subsection R313-15-1009(1).

R313-15-1101. Records - General Provisions.

(1) Each licensee or registrant shall use the SI units becquerel, gray, sievert and coulomb per kilogram, or the special units, curie, rad, rem, and roentgen, including multiples and subdivisions, and shall clearly indicate the units of all quantities on records required by Rule R313-15.

(2) Notwithstanding the requirements of Subsection R313-15-1101(1), when recording information on shipment manifests, as required in Subsection R313-15-1006(2), information must be recorded in SI units or in SI units and the special units specified in Subsection R313-15-1101(1).

(3) The licensee or registrant shall make a clear distinction among the quantities entered on the records required by Rule R313-15, such as, total effective dose equivalent, total organ dose equivalent, shallow dose equivalent, lens dose equivalent, deep dose equivalent, or committed effective dose equivalent.

R313-15-1102. Records of Radiation Protection Programs.

(1) Each licensee or registrant shall maintain records of the radiation protection program, including:

(a) The provisions of the program; and

(b) Audits and other reviews of program content and implementation.

(2) The licensee or registrant shall retain the records required by Subsection R313-15-1102(1)(a) until the Director terminates each pertinent license or registration requiring the record. The licensee or registrant shall retain the records required by Subsection R313-15-1102(1)(b) for three years after the record is made.

R313-15-1103. Records of Surveys.

(1) Each licensee or registrant shall maintain records showing the results of surveys and calibrations required by Section R313-15-501 and Subsection R313-15-906(2). The licensee or registrant shall retain these records for three years after the record is made.

(2) The licensee or registrant shall retain each of the following records until the Director terminates each pertinent license or registration requiring the record:

(a) Records of the results of surveys to determine the dose from external sources of radiation used, in the absence of or in combination with individual monitoring data, in the assessment of individual dose equivalents; and

(b) Records of the results of measurements and calculations used to determine individual intakes of radioactive material and used in the assessment of internal dose; and

(c) Records showing the results of air sampling, surveys, and bioassays required pursuant to Subsections R313-15-703(3)(a) and R313-15-703(3)(b); and

(d) Records of the results of measurements and calculations used to evaluate the release of radioactive effluents to the environment.

R313-15-1105. Records of Prior Occupational Dose.

For each individual who is likely to receive in a year an occupational dose requiring monitoring pursuant to Section R313-15-502, the licensee or registrant shall retain the records of prior occupational dose and exposure history as specified in Section R313-15-205 on form DRC-05 or equivalent until the Director terminates each pertinent license requiring this record. The licensee or registrant shall retain records used in preparing

form DRC-05 or equivalent for three years after the record is made.

R313-15-1106. Records of Planned Special Exposures.

(1) For each use of the provisions of Section R313-15-206 for planned special exposures, the licensee or registrant shall maintain records that describe:

(a) The exceptional circumstances requiring the use of a planned special exposure; and

(b) The name of the management official who authorized the planned special exposure and a copy of the signed authorization; and

(c) What actions were necessary; and

(d) Why the actions were necessary; and

(e) What precautions were taken to assure that doses were maintained ALARA; and

(f) What individual and collective doses were expected to result; and

(g) The doses actually received in the planned special exposure.

(2) The licensee or registrant shall retain the records until the Director terminates each pertinent license or registration requiring these records.

R313-15-1107. Records of Individual Monitoring Results.

(1) Recordkeeping Requirement. Each licensee or registrant shall maintain records of doses received by all individuals for whom monitoring was required pursuant to Section R313-15-502, and records of doses received during planned special exposures, accidents, and emergency conditions. Assessments of dose equivalent and records made using units in effect before January 1, 1994, need not be changed. These records shall include, when applicable:

(a) The deep dose equivalent to the whole body, lens dose equivalent, shallow dose equivalent to the skin, and shallow dose equivalent to the extremities; and

(b) The estimated intake of radionuclides, see Section R313-15-202; and

(c) The committed effective dose equivalent assigned to the intake of radionuclides; and

(d) The specific information used to calculate the committed effective dose equivalent pursuant to Subsections R313-15-204(1) and R313-15-204(3) and when required by Section R313-15-502; and

(e) The total effective dose equivalent when required by Section R313-15-202; and

(f) The total of the deep dose equivalent and the committed dose to the organ receiving the highest total dose.

(2) Recordkeeping Frequency. The licensee or registrant shall make entries of the records specified in Subsection R313-15-1107(1) at intervals not to exceed one year.

(3) Recordkeeping Format. The licensee or registrant shall maintain the records specified in Subsection R313-15-1107(1) on form DRC-06, in accordance with the instructions for form DRC-06, or in clear and legible records containing all the information required by form DRC-06.

(4) The licensee or registrant shall maintain the records of dose to an embryo/fetus with the records of dose to the declared pregnant woman. The declaration of pregnancy, including the estimated date of conception, shall also be kept on file, but may be maintained separately from the dose records.

(5) The licensee or registrant shall retain each required form or record until the Director terminates each pertinent license or registration requiring the record.

R313-15-1108. Records of Dose to Individual Members of the Public.

(1) Each licensee or registrant shall maintain records sufficient to demonstrate compliance with the dose limit for

individual members of the public. See Section R313-15-301.

(2) The licensee or registrant shall retain the records required by Subsection R313-15-1108(1) until the Director terminates each pertinent license or registration requiring the record. Requirements for disposition of these records, prior to license termination, are located in Section R313-12-51 for activities licensed under these rules.

R313-15-1109. Records of Waste Disposal.

(1) Each licensee or registrant shall maintain records of the disposal of licensed or registered materials made pursuant to Sections R313-15-1002, R313-15-1003, R313-15-1004, R313-15-1005, Rule R313-25, and disposal by burial in soil, including burials authorized before January 28, 1981.

(2) The licensee or registrant shall retain the records required by Subsection R313-15-1109(1) until the Director terminates each pertinent license or registration requiring the record.

R313-15-1110. Records of Testing Entry Control Devices for Very High Radiation Areas.

(1) Each licensee or registrant shall maintain records of tests made pursuant to Subsection R313-15-603(2)(i) on entry control devices for very high radiation areas. These records shall include the date, time, and results of each such test of function.

(2) The licensee or registrant shall retain the records required by Subsection R313-15-1110(1) for three years after the record is made.

R313-15-1111. Form of Records.

Each record required by Rule R313-15 shall be legible throughout the specified retention period. The record shall be the original or a reproduced copy or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period or the record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records, such as letters, drawings, and specifications, shall include all pertinent information, such as stamps, initials, and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.

R313-15-1201. Reports of Stolen, Lost, or Missing Licensed or Registered Sources of Radiation.

(1) Telephone Reports. Each licensee or registrant shall report to the Director by telephone as follows:

(a) Immediately after its occurrence becomes known to the licensee or registrant, stolen, lost, or missing licensed or registered radioactive material in an aggregate quantity equal to or greater than 1,000 times the quantity specified in Appendix C of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference, under such circumstances that it appears to the licensee or registrant that an exposure could result to individuals in unrestricted areas;

(b) Within 30 days after its occurrence becomes known to the licensee or registrant, lost, stolen, or missing licensed or registered radioactive material in an aggregate quantity greater than ten times the quantity specified in Appendix C of 10 CFR 20.1001 to 20.2402, (2010), which is incorporated by reference, that is still missing.

(c) Immediately after its occurrence becomes known to the registrant, a stolen, lost, or missing radiation machine.

(2) Written Reports. Each licensee or registrant required to make a report pursuant to Subsection R313-15-1201(1) shall, within 30 days after making the telephone report, make a written report to the Director setting forth the following information:

(a) A description of the licensed or registered source of

radiation involved, including, for radioactive material, the kind, quantity, and chemical and physical form; and, for radiation machines, the manufacturer, model and serial number, type and maximum energy of radiation emitted;

(b) A description of the circumstances under which the loss or theft occurred; and

(c) A statement of disposition, or probable disposition, of the licensed or registered source of radiation involved; and

(d) Exposures of individuals to radiation, circumstances under which the exposures occurred, and the possible total effective dose equivalent to persons in unrestricted areas; and

(e) Actions that have been taken, or will be taken, to recover the source of radiation; and

(f) Procedures or measures that have been, or will be, adopted to ensure against a recurrence of the loss or theft of licensed or registered sources of radiation.

(3) Subsequent to filing the written report, the licensee or registrant shall also report additional substantive information on the loss or theft within 30 days after the licensee or registrant learns of such information.

(4) The licensee or registrant shall prepare any report filed with the Director pursuant to Section R313-15-1201 so that names of individuals who may have received exposure to radiation are stated in a separate and detachable portion of the report.

R313-15-1202. Notification of Incidents.

(1) Immediate Notification. Notwithstanding other requirements for notification, each licensee or registrant shall immediately report each event involving a source of radiation possessed by the licensee or registrant that may have caused or threatens to cause any of the following conditions:

(a) An individual to receive;

(i) A total effective dose equivalent of 0.25 Sv (25 rem) or more; or

(ii) A lens dose equivalent of 0.75 Sv (75 rem) or more; or

(iii) A shallow dose equivalent to the skin or extremities or a total organ dose equivalent of 2.5 Gy (250 rad) or more; or

(b) The release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake five times the occupational ALI. This provision does not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures.

(2) Twenty-Four Hour Notification. Each licensee or registrant shall, within 24 hours of discovery of the event, report to the Director each event involving loss of control of a licensed or registered source of radiation possessed by the licensee or registrant that may have caused, or threatens to cause, any of the following conditions:

(a) An individual to receive, in a period of 24 hours:

(i) A total effective dose equivalent exceeding 0.05 Sv (five rem); or

(ii) A lens dose equivalent exceeding 0.15 Sv (15 rem); or

(iii) A shallow dose equivalent to the skin or extremities or a total organ dose equivalent exceeding 0.5 Sv (50 rem); or

(b) The release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake in excess of one occupational ALI. This provision does not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures.

(3) The licensee or registrant shall prepare each report filed with the Director pursuant to Section R313-15-1202 so that names of individuals who have received exposure to sources of radiation are stated in a separate and detachable portion of the report.

(4) Licensees or registrants shall make the reports required by Subsections R313-15-1202(1) and R313-15-1202(2) to the

Director by telephone, telegram, mailgram, or facsimile.

(5) The provisions of Section R313-15-1202 do not apply to doses that result from planned special exposures, provided such doses are within the limits for planned special exposures and are reported pursuant to Section R313-15-1204.

R313-15-1203. Reports of Exposures, Radiation Levels, and Concentrations of Radioactive Material Exceeding the Constraints or Limits.

(1) Reportable Events. In addition to the notification required by Section R313-15-1202, each licensee or registrant shall submit a written report within 30 days after learning of any of the following occurrences:

(a) Incidents for which notification is required by Section R313-15-1202; or

(b) Doses in excess of any of the following:

(i) The occupational dose limits for adults in Section R313-15-201; or

(ii) The occupational dose limits for a minor in Section R313-15-207; or

(iii) The limits for an embryo/fetus of a declared pregnant woman in Section R313-15-208; or

(iv) The limits for an individual member of the public in Section R313-15-301; or

(v) Any applicable limit in the license or registration; or

(vi) The ALARA constraints for air emissions established under Subsection R313-15-101(4); or

(c) Levels of radiation or concentrations of radioactive material in:

(i) A restricted area in excess of applicable limits in the license or registration; or

(ii) An unrestricted area in excess of ten times the applicable limit set forth in Rule R313-15 or in the license or registration, whether or not involving exposure of any individual in excess of the limits in Section R313-15-301; or

(d) For licensees subject to the provisions of U.S. Environmental Protection Agency's generally applicable environmental radiation standards in 40 CFR 190, levels of radiation or releases of radioactive material in excess of those standards, or of license conditions related to those standards.

(2) Contents of Reports.

(a) Each report required by Subsection R313-15-1203(1) shall describe the extent of exposure of individuals to radiation and radioactive material, including, as appropriate:

(i) Estimates of each individual's dose; and

(ii) The levels of radiation and concentrations of radioactive material involved; and

(iii) The cause of the elevated exposures, dose rates, or concentrations; and

(iv) Corrective steps taken or planned to ensure against a recurrence, including the schedule for achieving conformance with applicable limits, ALARA constraints, generally applicable environmental standards, and associated license or registration conditions.

(b) Each report filed pursuant to Subsection R313-15-1203(1) shall include for each occupationally overexposed individual: the name, Social Security account number, and date of birth. With respect to the limit for the embryo/fetus in Section R313-15-208, the identifiers should be those of the declared pregnant woman. The report shall be prepared so that this information is stated in a separate and detachable portion of the report.

(3) All licensees or registrants who make reports pursuant to Subsection R313-15-1203(1) shall submit the report in writing to the Director.

R313-15-1204. Reports of Planned Special Exposures.

The licensee or registrant shall submit a written report to the Director within 30 days following any planned special

exposure conducted in accordance with Section R313-15-206, informing the Director that a planned special exposure was conducted and indicating the date the planned special exposure occurred and the information required by Section R313-15-1106.

R313-15-1205. Reports to Individuals of Exceeding Dose Limits.

When a licensee or registrant is required, pursuant to the provisions of Sections R313-15-1203 or R313-15-1204, to report to the Director any exposure of an identified occupationally exposed individual, or an identified member of the public, to sources of radiation, the licensee or registrant shall also provide the individual a written report on the exposure data included in the report to the Director. This report shall be transmitted at a time no later than the transmittal to the Director.

R313-15-1206. Reports of Transactions Involving Nationally Tracked Sources.

Each licensee who manufactures, transfers, receives, disassembles, or disposes of a nationally tracked source shall complete and submit a National Source Tracking Transaction Report as specified in paragraphs (1) through (5) of this section for each type of transaction.

(1) Each licensee who manufactures a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(a) The name, address, and license number of the reporting licensee;

(b) The name of the individual preparing the report;

(c) The manufacturer, model, and serial number of the source;

(d) The radioactive material in the source;

(e) The initial source strength in becquerels (curies) at the time of manufacture; and

(f) The manufacture date of the source.

(2) Each licensee that transfers a nationally tracked source to another person shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(a) The name, address, and license number of the reporting licensee;

(b) The name of the individual preparing the report;

(c) The name and license number of the recipient facility and the shipping address;

(d) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the source;

(e) The radioactive material in the source;

(f) The initial or current source strength in becquerels (curies);

(g) The date for which the source strength is reported;

(h) The shipping date;

(i) The estimated arrival date; and

(j) For nationally tracked sources transferred as waste under a Uniform Low-Level Radioactive Waste Manifest, the waste manifest number and the container identification of the container with the nationally tracked source.

(3) Each licensee that receives a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(a) The name, address, and license number of the reporting licensee;

(b) The name of the individual preparing the report;

(c) The name, address, and license number of the person that provided the source;

(d) The manufacturer, model, and serial number of the

source or, if not available, other information to uniquely identify the source;

(e) The radioactive material in the source;
(f) The initial or current source strength in becquerels (curies);

(g) The date for which the source strength is reported;
(h) The date of receipt; and
(i) For material received under a Uniform Low-Level Radioactive Waste Manifest, the waste manifest number and the container identification with the nationally tracked source.

(4) Each licensee that disassembles a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(a) The name, address, and license number of the reporting licensee;
(b) The name of the individual preparing the report;
(c) The manufacturer, model, and serial number of the source or, if not available, other information to uniquely identify the source;

(d) The radioactive material in the source;
(e) The initial or current source strength in becquerels (curies);

(f) The date for which the source strength is reported; and
(g) The disassemble date of the source.

(5) Each licensee who disposes of a nationally tracked source shall complete and submit a National Source Tracking Transaction Report. The report must include the following information:

(a) The name, address, and license number of the reporting licensee;
(b) The name of the individual preparing the report;
(c) The waste manifest number;
(d) The container identification with the nationally tracked source.

(e) The date of disposal; and
(f) The method of disposal.

(6) The reports discussed in paragraphs (1) through (5) of this section must be submitted by the close of the next business day after the transaction. A single report may be submitted for multiple sources and transactions. The reports must be submitted to the National Source Tracking System by using:

(a) The on-line National Source Tracking System;
(b) Electronically using a computer-readable format;
(c) By facsimile;
(d) By mail to the address on the National Source Tracking Transaction Report Form (NRC Form 748); or
(e) By telephone with followup by facsimile or mail.

(7) Each licensee shall correct any error in previously filed reports or file a new report for any missed transaction within 5 business days of the discovery of the error or missed transaction. Such errors may be detected by a variety of methods such as administrative reviews or by physical inventories required by regulation. In addition, each licensee shall reconcile the inventory of nationally tracked sources possessed by the licensee against that licensee's data in the National Source Tracking System. The reconciliation must be conducted during the month of January in each year. The reconciliation process must include resolving any discrepancies between the National Source Tracking System and the actual inventory by filing the reports identified by paragraphs (1) through (5) of this section. By January 31 of each year, each licensee must submit to the National Source Tracking System confirmation that the data in the National Source Tracking System is correct.

(8) Each licensee that possesses Category 1 nationally tracked sources shall report its initial inventory of Category 1 nationally tracked sources to the National Source Tracking System by November 15, 2007. Each licensee that possesses Category 2 nationally tracked sources shall report its initial

inventory of Category 2 nationally tracked sources to the National Source Tracking System by November 30, 2007. The information may be submitted by using any of the methods identified by paragraph (6)(a) through (6)(d) of this section. The initial inventory report must include the following information:

(a) The name, address, and license number of the reporting licensee;

(b) The name of the individual preparing the report;
(c) The manufacturer, model, and serial number of each nationally tracked source or, if not available, other information to uniquely identify the source;

(d) The radioactive material in the sealed source;
(e) The initial or current source strength in becquerels (curies); and

(f) The date for which the source strength is reported.

R313-15-1207. Notifications and Reports to Individuals.

(1) Requirements for notification and reports to individuals of exposure to radiation or radioactive material are specified in Rule R313-18.

(2) When a licensee or registrant is required pursuant to Section R313-15-1203 to report to the Director any exposure of an individual to radiation or radioactive material, the licensee or registrant shall also notify the individual. Such notice shall be transmitted at a time not later than the transmittal to the Director, and shall comply with the provisions of Rule R313-18.

R313-15-1301. Vacating Premises.

Each specific licensee or registrant shall, not less than 30 days before vacating or relinquishing possession or control of premises which may have been contaminated with radioactive material as a result of his activities, notify the Director in writing of intent to vacate. When deemed necessary by the Director, the licensee shall decontaminate the premises in such a manner that the annual total effective dose equivalent to any individual after the site is released for unrestricted use should not exceed 0.1 mSv (0.01 rem) above background and that the annual total effective dose equivalent from any specific environmental source during decommissioning activities should not exceed 0.1 mSv (0.01 rem) above background.

KEY: radioactive materials, contamination, waste disposal, safety

March 17, 2015

Notice of Continuation December 3, 2012

19-3-104

19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-16. General Requirements Applicable to the Installation, Registration, Inspection, and Use of Radiation Machines.****R313-16-200. Purpose and Authority.**

(1) The purpose of this rule is to prescribe requirements governing the installation, registration, inspection, and use of sources of electronically produced ionizing radiation. This rule provides for the registration of individuals providing inspection services to a facility where one or more radiation machines are installed or located.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(9).

R313-16-215. Definitions.

"Qualified expert" means an individual having the knowledge and training to measure regulatory parameters on radiation machines, to evaluate radiation safety programs, to evaluate radiation levels, and to give advice on radiation protection needs while conducting inspections of radiation machine facilities registered with the Division. Qualified experts are not considered employees or representatives of the Division of Waste Management and Radiation Control or the State.

"Sorting Center" means a facility in which radiation machines are in storage until they are shipped out of state.

"Storage" means a condition in which a radiation machine is not being used for an extended period of time, and has been made inoperable.

R313-16-220. Exemptions.

(1) Electronic equipment that produces radiation incidental to its operation for other purposes is exempt from the registration and notification requirements of Rule R313-16, providing the dose equivalent rate averaged over an area of ten square centimeters does not exceed 0.5 mrem (5.0 uSv) per hour at five centimeters from accessible surfaces of the equipment.

(2) Radiation machines while in transit are exempt from the requirements of Section R313-16-230. See Section R313-16-250 for other applicable requirements.

(3) Television receivers are exempt from the requirements of Rule R313-16.

(4) Radiation machines while in the possession of a manufacturer, assembler, or a sorting center are exempt from the requirements of Section R313-16-230.

(5) Radiation machines owned by an agency of the Federal Government are exempt from the requirements of Rule R313-16.

R313-16-225. Responsibility for Radiation Safety Program.

(1) The registrant shall be ultimately responsible for radiation safety, but may designate another person to implement the radiation safety program. When, in the Director's opinion, neither the registrant nor the registrant's designee is sufficiently qualified to insure safe use of the machine; the Director may order the registrant to designate another individual who has adequate qualifications.

(2) The registrant or the registrant's designee shall:

(a) develop a detailed program of radiation safety that assures compliance with the applicable requirements of these rules, including Section R313-15-101;

(b) have instructions given concerning radiation hazards and radiation safety practices to individuals who may be occupationally exposed;

(c) have surveys made and other procedures carried out as required by these rules; and

(d) keep a copy of all reports, records, and written policies and procedures required by these rules.

R313-16-230. Registration of Radiation Machines.

(1) Ionizing radiation producing machines not exempted by Section R313-16-220 shall be registered with the Director.

(2) Registration shall be required annually in accordance with a schedule established by the Director.

(3) Registration for the facility is achieved when the Director receives the following:

(a) a current and complete application form DRC-10 for registration of radiation machines; and

(b) annual registration fees.

(4) Registration for the current fiscal year shall be acknowledged by the Director through receipts for the remittance of the registration fee.

R313-16-231. Additional Requirements for the Issuance of a Registration for Particle Accelerators Excluding Therapeutic Radiation Machines (See Rule R313-30).

(1) In addition to the requirements of Section R313-16-230, a registrant who proposes to use a particle accelerator shall submit an application to the Director containing the following:

(a) information demonstrating that the applicant, by reason of training and experience, is qualified to use the accelerator in question for the purpose requested in a manner that will minimize danger to public health and safety or the environment;

(b) a discussion which demonstrates that the applicant's equipment, facilities, and operating and emergency procedures are adequate to protect health and minimize danger to public health and safety or the environment;

(c) the name and qualifications of the individual, appointed by the applicant, to serve as radiation safety officer pursuant to Section R313-35-140;

(d) a description of the applicant's or the staff's experience in the use of particle accelerators and radiation safety training; and

(e) a description of the radiation safety training the applicant will provide to particle accelerator operators.

R313-16-233. Notification of Intent to Provide Servicing and Services.

(1) Persons engaged in the business of installing or offering to install radiation machines or engaged in the business of furnishing or offering to furnish radiation machine servicing or services in this State shall notify the Director of the intent to provide these services within 30 days following the effective date of this rule or, thereafter, prior to furnishing or offering to furnish these services.

(2) The notification shall specify:

(a) that the applicable requirements of these rules have been read and understood;

(b) the services which will be provided;

(c) the training and experience that qualify for the discharge of the services; and

(d) the type of measurement instrument to be used, frequency of calibration, and source of calibration.

(3) For the purpose of Section R313-16-233, services may include but shall not be limited to:

(a) installation or servicing of radiation machines and associated radiation machine components; and

(b) calibration of radiation machines or radiation measurement instruments or devices.

(4) Individuals shall not perform the services listed in Subsection R313-16-233(3) unless they are specifically listed for that individual on the notification of intent required in Subsection R313-16-233(1) and the complete information required by Subsection R313-16-233(2) has been received by the Director.

R313-16-235. Designation of Registrant.

The owner or lessee of a radiation machine is the registrant.

The registrant shall be responsible for penalties imposed under the Director's escalated enforcement authority, see Rule R313-14.

R313-16-240. Reciprocal Recognition of Registration or License.

Radiation machines from jurisdictions other than the State of Utah may be operated in this state for a period of less than 30 days providing that the requirements of Section R313-16-280 have been met and providing they are properly registered or licensed with the State Agency having jurisdiction over the office directing the activities of the individuals operating the radiation machines. Radiation machines operating under reciprocity may be inspected pursuant to Section R313-16-290.

R313-16-250. Report of Changes.

The registrant shall send written notification within 14 working days to the Director when:

- (1) there are changes in location or ownership of a radiation machine;
- (2) radiation machines are retired from service;
- (3) radiation machines are put in storage or returned to service from storage; or
- (4) modifications in facility or equipment are made that might reasonably be expected to effect compliance under the terms of these rules.

R313-16-260. Approval Not Implied.

Registration does not constitute approval of activities performed under the registration and no person shall state or imply that activities under the registration have been approved by the Director.

R313-16-270. Transferor, Assembler, or Installer Obligation.

(1) Persons who sell, lease, transfer, lend, dispose, assemble, or install a radiation machine in this state shall notify the Director within 14 working days of the following:

- (a) the name and address of the person who received the machine and also the name and address of the new registrant of the machine if not the same;
- (b) the manufacturer, model, and serial number of the master control of the radiation machine and the number of x-ray tubes transferred; and
- (c) the date of transfer of the radiation machine.

(2) Radiation machine equipment or accessories shall not be installed if the equipment will not meet the requirements of these rules when installation is completed.

(3) Reporting Compliance. Assemblers who install one or more components into a radiation machine system or subsystem, shall certify that the equipment meets the standards of these rules. A copy of this certification shall be transmitted to the purchaser and to the Director within 14 working days following the completion of the installation.

(4) Certification can be accomplished by providing the following in conjunction with the information required by Section R313-16-250 and Subsection R313-16-270(1):

- (a) the full name and address of the assembler and the date of assembly or installation;
- (b) a statement as to whether the equipment is a replacement for other equipment, in addition to other equipment, or new equipment in a new facility;
- (c) an affirmation that the applicable rules have been met;
- (d) a statement of the type and intended use of the radiation machine system or subsystem, for example "radiographic-stationary general purpose x-ray;" and
- (e) a list of the components which were assembled or installed into the radiation machine system or subsystem, identifying the components by type, manufacturer, model

number, and serial number.

R313-16-275. Obligation of Equipment Registrant or Recipient of New Equipment.

The registrant of a radiation machine shall not allow the equipment to be put into operation until it has been determined that the facility in which it is installed meets the shielding and design requirements of Rule R313-28; see Sections R313-28-32, R313-28-200 and R313-28-450.

R313-16-280. Out-of-State Radiation Machines.

(1) Whenever a radiation machine is to be brought into the state, for either temporary or extended use, the person proposing to bring the machine into the state shall give written notice to the Director at least three working days before the machine is to be used in the state. The notice shall include the type of radiation machine; the manufacturer model and serial number of the master control; the nature, duration, and scope of use; and the exact location where the radiation machine is to be used. If, for a specific case, the three working-day period would impose an undue hardship, the person may, upon application to the Director, obtain permission to proceed sooner.

- (2) In addition, the out-of-state person shall:
 - (a) comply with the applicable portions of these rules;
 - (b) supply the Director other information as the Director requests.

R313-16-290. Inspection of Radiation Machines and Facilities.

(1) Registrants shall assure that radiation machines registered pursuant to Section R313-16-230 are compliant with these rules. Radiation machines, facilities, and radiation safety programs are subject to inspection to assure compliance with these rules and to assist in lowering radiation exposure to as low as reasonably achievable levels, see Section R313-15-101. Inspections may be performed by representatives of the Director or by independent qualified experts.

(2) Inspections may, at the Director's discretion, be done after the installation of equipment, or after a change in the facility or equipment which might cause a significant change in radiation output or hazards. Inspections may be completed in accordance with the schedule as defined in Table I.

TABLE I

FACILITY TYPE	MAXIMUM TIME BETWEEN INSPECTIONS
Hospital or Radiation Therapy Facility	one year
Medical Facility using Fluoroscopic or Computed Tomography (CT) Units	one year
Medical Facility Using General Radiographic Devices	two years
Chiropractic	two years
Dental	five years
Podiatry	five years
Veterinary	five years
Industrial Facility with High or Very High Radiation Areas Accessible to Individuals	one year
Industrial Facility Using Cabinet X-Ray Units or Units Designed for Other Industrial Purposes	five years
Other	one to five years

(3) The registrant, in a timely manner, shall pay the appropriate inspection fee after completion of the inspection.

(4) Ionizing radiation producing machines which have been officially placed in storage are exempt from inspection fees but are subject to visual verification of their status by representatives of the Director.

R313-16-291. Inspection Services.

Registrants shall only utilize qualified experts who have been registered by the Director in accordance with Section

R313-16-293. Registrants may also utilize inspectors from the Division of Waste Management and Radiation Control in lieu of registered qualified experts.

R313-16-292. Minimum Qualifications for Registration of Inspection Services.

A qualified expert who is engaged in the business of furnishing or offering to furnish inspection services at facilities shall meet the training and experience criteria developed by the Director. At a minimum, the training and experience shall include:

(1) Bachelor's degree in health physics, chemistry, biology, physical or environmental science plus one year full-time paid professional related experience, such as performing radiation safety evaluations in a hospital.

(a) An advanced degree in a related field may be substituted for one year of required experience; or

(2) Five years full-time paid professional, directly related work experience.

R313-16-293. Application for Registration of Inspection Services.

(1) Each qualified expert who is providing or offering to provide inspection services at facilities registered with the Director shall complete an application for registration on a form prescribed by the Director and shall submit all information required by the Director as indicated on the form. A qualified expert must complete the registration process prior to providing services.

(2) Individuals applying for registration under Section R313-16-293 shall personally sign and submit to the Director an attestation statement:

(a) that they have read and understand the requirements of these rules; and

(b) that they will document inspection items defined by the Director on a form prescribed by the Director; and

(c) that they will follow guidelines for the evaluation of x-ray equipment defined by the Director; and

(d) that, except for those facilities where a registered qualified expert is a full-time employee, they will limit inspections to facilities with which they have no direct conflict of interest; and

(e) that radiation exposure measurements and peak tube potential measurements will be made with instruments which have been calibrated biennially by the manufacturer of the instrument or by a calibration laboratory accredited in x-ray calibration procedures by the American Association of Physicians in Medicine, American Association for Laboratory Accreditation, Conference of Radiation Control Program Directors, Health Physics Society or the National Voluntary Laboratory Accreditation Program; and

(f) that the calibration of radiation exposure measuring and peak tube potential measuring instruments used to evaluate compliance of x-ray systems with the requirements of these rules will include at least secondary level traceability to a National Institute of Standards and Technology, or similar international agency, transfer standard instrument or transfer standard source; and

(g) that they will make available to representatives of the Director documents concerning the calibration of any radiation exposure measuring or peak tube potential measuring instrument used to evaluate compliance of x-ray systems; and

(h) that they or the registrant will submit to the Director, within 30 calendar days after completion of an inspection, a written report of compliance or noncompliance; and

(i) that reports of items of noncompliance will include:

(i) the name of the facility inspected, and

(ii) the date of the inspection, and

(iii) the manufacturer, model number, and serial number

or Utah identification number of the control unit for the radiation machine, and

(iv) the requirements of the rule where compliance was not achieved, and

(v) the manner in which the facility or radiation machine failed to meet the requirements, and

(vi) a signed commitment from the registrant of the radiation machine facility that the problem will be fixed within 30 days of the date the written report of noncompliance is submitted to the Director; and

(vii) that all reports of compliance or noncompliance will contain a statement signed by the qualified expert acknowledging under penalties of law that all information contained in the report is truthful, accurate, and complete; and

(viii) that they acknowledge that they are subject to the provisions of Section R313-16-300.

(3) Individuals applying for registration under Section R313-16-293 shall attach to their application a copy of two inspection reports that demonstrate their work product follows the evaluation guidelines defined by the Director pursuant to Subsection R313-16-293(2)(c). The inspection reports shall pertain to inspections performed within the last two years.

R313-16-294. Issuance of Registration Certificate for Inspection Services.

Upon a determination that an applicant meets the requirements of these rules, the Director shall issue a registration certificate for inspection services.

R313-16-295. Expiration of Registration Certificates for Inspection Services.

A registration certificate for inspection services shall expire at the end of the day on the date stated therein.

R313-16-296. Renewal of Registration Certificate for Inspection Services.

(1) Timely renewal of a registration certificate for inspection services is possible when:

(a) the qualified expert files an application for renewal of a registration certificate for inspection services 30 days in advance of the registration certificate expiration date and in accordance with Section R313-16-293, and

(b) the qualified expert attaches to the application documentation that they performed a minimum of two inspections in Utah under these rules each year the previous registration certificate was in effect. An applicant who did not complete the minimum number of inspections in Utah may, as an alternative, attach to the application documentation that they performed four inspections at facilities in other states. These four inspections shall demonstrate their work product follows the evaluation guidelines defined by the Director pursuant to Subsection R313-16-293(2)(c).

(2) A registered qualified expert who allows a registration certificate to expire is no longer a qualified expert and may not perform inspection services that will be accepted by the Director. Reapplication may be accomplished pursuant to Section R313-16-293.

R313-16-297. Revocation of Registration Certificate for Inspection Services.

A registration certificate for inspection services may be revoked by the Director for any matter of deliberate misconduct pursuant to Section R313-16-300 or for misfeasance, malfeasance or nonfeasance.

R313-16-300. Deliberate Misconduct.

(1) Any registrant, applicant for registration, employee of a registrant or applicant; or any contractor, including a supplier or consultant, subcontractor, employee of a contractor or

subcontractor of any registrant or applicant for registration, who knowingly provides to any registrant, applicant, contractor, or subcontractor, any components, equipment, materials, or other goods or services that relate to a registrant's, or applicant's activities in these rules, may not:

(a) Engage in deliberate misconduct that causes or would have caused, if not detected, a registrant or applicant to be in violation of any rule or order; or any term, condition, or limitation of any registration issued by the Director; or

(b) Deliberately submit to the Director, a registrant, an applicant, or a registrant's or applicant's contractor or subcontractor, information that the person submitting the information knows to be incomplete or inaccurate in some respect material to the Director.

(2) A person who violates Subsections R313-16-300(1)(a) or (b) may be subject to enforcement action in accordance with Rule R313-14.

(3) For the purposes of Subsection R313-16-300(1)(a), deliberate misconduct by a person means an intentional act or omission that the person knows:

(a) Would cause a registrant or applicant to be in violation of any rule or order; or any term, condition, or limitation, of any registration issued by the Director; or

(b) Constitutes a violation of a requirement, procedure, instruction, contract, purchase order, or policy of a registrant, applicant, contractor, or subcontractor.

KEY: x-rays, inspections

September 14, 2007

Notice of Continuation July 7, 2011

19-3-104

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-17. Administrative Procedures.

R313-17-1. Authority.

The rules set forth herein are adopted pursuant to the provision of Subsection 19-3-104(4) and Sections 19-1-301 and 19-1-301.5.

R313-17-2. Public Notice and Public Comment Period.

(1) The Director shall give public notice of and provide an opportunity to comment on the following:

(a) A proposed major licensing action for license categories 2b and c, 4a, b, c, d and 6 identified in Section R313-70-7.

(i) Major licensing actions include:

- (A) Pending issuance of a new license,
- (B) Pending issuance of a license renewal,
- (C) Pending approval of a license termination,
- (D) An increase in process, storage, or disposal capacity,
- (E) A geographic expansion,
- (F) A change in engineering design, construction, or process controls that will more than likely cause an individual to receive a higher total effective dose equivalent or increase the annual quantity of radioactive effluents released to the environment,

(G) A decrease in environmental monitoring or sampling frequency,

(H) Pending approval of reclamation, decontamination or decommissioning plans,

(I) Pending approval of corrective actions to control or remediate existing radioactive material contamination, not already authorized by a license,

(J) A licensing issue the Director deems is of significant public interest.

(b) The initial proposed registration of an ionizing radiation producing machine which operates at a kilovoltage potential (kVp) greater than 200 in an open beam configuration. R313-17-2(1)(b) does not apply to ionizing radiation producing machines used in the healing arts.

(c) Board activities that may have significant public interest and the Board requests the Director to take public comment on those proposed activities.

(2) The Director may elect to give public notice of and provide an opportunity to comment on licensing actions that do not include the actions in Subsection R313-17-2(1)(a)(i), for all license categories identified in Section R313-70-7.

(3) Public notice shall allow at least 30 days for public comment.

(4) Public notice may describe more than one action listed in Subsection R313-17-2(1) and may combine notice of a public hearing with notice of the proposed action.

(5) Public notice shall be given by one or more of the following methods:

(a) Publication in a newspaper of general circulation in the area affected by the proposed action,

(b) Publication on the Division of Waste Management and Radiation Control website, or

(c) Distribution by an electronic mail server.

R313-17-3. Administrative Procedures.

Administrative proceedings under the Radiation Control Act are governed by Rule R305-7.

R313-17-4. Special Procedures for Decisions Associated with Licenses for Uranium Mills and Disposal of Byproduct Material.

(1) Definitions. For purposes of this rule:

(a) "Byproduct material" has the same meaning as defined in 42 U.S.C. Section 2014(e)(2);

(b) "License" means a radioactive materials license for a uranium mill or disposal of byproduct material, including any ground water discharge permit incorporated in a license; and

(c) "Question and answer hearing" means the informal hearing described in paragraphs (3) through (5) held for the purpose of responding to questions from the public.

(2) Scope. This rule R313-17-4 applies only to licensing activities that meet both of the following criteria:

(a) they are licensing activities described in R313-17-2(a)(i)(A) through (I); and

(b) they are for licenses or license amendments for uranium mills and disposal of byproduct materials.

(3) Opportunity for Question and Answer Hearing Prior to Director's Decision.

(a) For licensing actions that are subject to the scope of this rule, the Director may, at the Director's discretion, schedule a question and answer hearing at the time it proposes the action.

(b) If the Director does not choose to schedule a question and answer hearing at the time it proposes a licensing action, the Director shall provide notice to the public of an opportunity to request a question and answer hearing, and it shall schedule and hold a hearing if there is a request from a member of the public.

(c) Notice of a hearing or an opportunity to request a hearing under this rule shall be made as provided in R313-17-3(5). Members of the public shall be given at least ten days to request a hearing.

(d) The Director may combine the question and answer hearing with a licensing hearing held for the purpose of taking public comment on a proposed licensing action.

(4) Procedures Prior to Question and Answer Hearing.

(a) The Director shall provide a notice of the question and answer hearing at least 30 days before the hearing. The notice shall also summarize the applicable procedures, including the obligation to provide questions in advance of the hearing.

(b) Any person who proposes to ask questions during the question and answer hearing shall submit the questions to the Director. Questions must be received by the Director by the deadline specified in the public notice, which shall be no fewer than 15 days after the notice of the question and answer hearing is posted. If a question relies on information that is not included in the licensing record, that information shall be submitted with the questions. The relevance of and the relevant portions of any supporting materials shall be described with reasonable specificity. Information submitted in accordance with this paragraph will become part of the record.

(c) If the Director determines that any of the questions submitted will not be answered during the question and answer hearing, as provided in paragraph (5)(f), the Director shall notify the person who submitted the questions prior to the hearing. Notification shall include a statement about the Director's reasons for the determination.

(5) Procedures for Question and Answer Hearing.

(a) The question and answer hearing shall ordinarily be held in the Department of Environmental Quality offices. Unless the question and answer hearing is held in a place near the proposed facility, the Director shall provide an opportunity for the public to participate by telephone or other electronic means.

(b) The question and answer hearing will not ordinarily be scheduled for longer than three hours. The Director may allocate time to those who have submitted questions after considering the number and nature of the questions submitted.

(c) A hearing officer who is not the director or a member of the director's staff shall manage the question and answer hearing. Representatives of the licensee and Director's staff shall attend the hearing.

(d) The question and answer hearing shall be recorded and transcribed. Alternatively, the Director may elect to have a court reporter record and transcribe the hearing.

(e) The Director shall determine whether the initial and follow-up question will be answered by the applicant, by the Director's staff, or by both. Notwithstanding the Director's decision, the applicant may choose to respond to any question. After the response to a question, the person who submitted the question shall be allowed to follow up with additional questions based on the response provided.

(f) Appropriate questions are those that seek specific factual information about the license application, or about other documents created during the licensing process. The following kinds of questions do not require a response during a question and answer hearing:

- (i) Questions that are not relevant to the licensing action;
- (ii) Questions that are based on information that is not in the record;
- (iii) Questions that are vague;
- (iv) Questions that require speculation;
- (v) Questions that seek legal conclusions;
- (vi) Questions that have been previously answered;
- (vii) Questions that are more appropriately characterized as comments; and
- (viii) Questions that would not have to be answered during a trial-type hearing.

(g) Either the Director or the applicant may elect to answer a question even if it is a question that does not require a response under paragraph (f). No waiver will result from answering a question that does not require a response.

(h) Questions requesting information that is clear in the record may be answered by referring the questioner to the record.

(i) In the event that a questioner or the applicant disagrees with the Director's determinations under paragraphs (4)(c), (5)(b), or (5)(e), it may request a determination by the hearing officer. If the hearing officer disagrees with the Director's determination, the Director or, as appropriate, the applicant may then:

- (i) comply with the hearing officer's determination during the question and answer hearing;
- (ii) comply with the hearing officer's determination by responding to the question in writing no fewer than 10 days before the end of the comment period; or
- (iii) notify the questioner or applicant that it contests the determination, and provide information to the questioner about the procedures available to it under paragraph (5)(j).

(j) If a decision of the hearing officer is contested as described in paragraph (5)(i)(iii), the person who asked the question may challenge that failure to comply with the hearing officer's decision on appeal. If the hearing officer's determination is upheld on appeal, the record on appeal shall be supplemented as described in paragraph (6) and R305-7-607.

(6) Formal Questioning During Appeal.

If no opportunity for a question and answer hearing is provided, or if an opportunity that was provided is found by the Administrative Law Judge to have been deficient, an opportunity for questions and answers shall be provided on appeal as described in R305-7-607. This opportunity for questions and answers on appeal shall be available only to a petitioner who has exhausted procedures and remedies available under paragraphs R313-17-4(1) through R313-17-4(5). The scope of questions and answers on appeal shall be limited by the scope of the deficiency.

KEY: administrative procedures, comment, hearings, adjudicative proceedings

February 17, 2015

19-3-104(4)

Notice of Continuation July 7, 2011 19-1-301 and 19-1-301.5

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-18. Notices, Instructions and Reports to Workers by Licensees or Registrants--Inspections.****R313-18-1. Purpose and Authority.**

(1) The purpose of this rule is to establish requirements for notices, instructions and reports by licensees or registrants to individuals engaged in work under a license or registration and options available to such individuals in connection with inspections of licensees or registrants.

(2) The rules set forth herein are adopted pursuant to the provisions of Sections 19-3-104(4) and 19-3-104(7).

R313-18-2. General.

The rules of R313-18 shall apply to all persons who receive, possess, use, own or transfer a source of radiation licensed by or registered with the Director pursuant to the rules in R313-16, R313-19 or R313-22.

R313-18-11. Posting of Notices to Workers.

(1) Licensees or registrants shall post current copies of the following documents:

(a) the rules in R313-15 and R313-18;

(b) the license, certificate of registration, conditions or documents incorporated into the license by reference and amendments thereto;

(c) the operating procedures applicable to work under the license or registration; and

(d) a notice of violation involving radiological working conditions, proposed imposition of civil penalty, order issued pursuant to R313-14, or any response from the licensee or registrant.

(2) If posting of a document specified in R313-18-11(1)(a), (b), or (c) is not practicable, the licensee or registrant may post a notice which describes the document and states where it may be examined.

(3) DRC-04 "Notice to Employees," shall be posted by licensees or registrants wherever individuals work in or frequent a portion of a restricted area.

(4) Documents from the Director which are posted pursuant to R313-18-11(1)(d) shall be posted within five working days after receipt of the documents from the Director; the licensee's or registrant's response, if there is one, shall be posted for a minimum of five working days after dispatch from the licensee or registrant. The documents shall remain posted for a minimum of five working days or until action correcting the violation has been completed, whichever is later.

(5) Documents, notices or forms posted pursuant to R313-18-11 shall appear in a sufficient number of places to permit individuals engaged in work under the license or registration to observe them on the way to or from any particular work location to which the document applies, shall be conspicuous, and shall be replaced if defaced or altered.

R313-18-12. Instructions to Workers.

(1) All individuals who in the course of employment are likely to receive in a year an occupational dose in excess of 1.0 mSv (100 mrem):

(a) shall be kept informed of the storage, transfer, or use of sources of radiation in the licensee's or registrant's workplace;

(b) shall be instructed in the health protection considerations associated with exposure to radiation or radioactive material to the individual and potential offspring, in precautions or procedures to minimize exposure, and in the purposes and functions of protective devices employed;

(c) shall be instructed in, and instructed to observe, to the extent within the worker's control, the applicable provisions of these rules and licenses for the protection of personnel from exposure to radiation or radioactive material;

(d) shall be instructed as to their responsibility to report promptly to the licensee or registrant a condition which may constitute, lead to, or cause a violation of the Act, these rules, or a condition of the licensee's license or unnecessary exposure to radiation or radioactive material;

(e) shall be instructed in the appropriate response to warnings made in the event of an unusual occurrence or malfunction that may involve exposure to radiation or radioactive material; and

(f) shall be advised as to the radiation exposure reports which workers shall be furnished pursuant to R313-18-13.

(2) In determining those individuals subject to the requirements of R313-18-12(1), licensees must take into consideration assigned activities during normal and abnormal situations involving exposure to radiation or radioactive material which can reasonably be expected to occur during the life of a licensed facility. The extent of these instructions shall be commensurate with potential radiological health protection considerations for the workplace.

R313-18-13. Notifications and Reports to Individuals.

(1) Radiation exposure data for an individual and the results of measurements, analyses, and calculations of radioactive material deposited or retained in the body of an individual shall be reported to the individual as specified in R313-18-13. The information reported shall include data and results obtained pursuant to these rules, orders, or license conditions, as shown in records maintained by the licensee or registrant pursuant to R313-15-1107. Notifications and reports shall:

(a) be in writing;

(b) include appropriate identifying data such as the name of the licensee or registrant, the name of the individual, and the individual's identification number, preferably social security number;

(c) include the individual's exposure information; and

(d) contain the following statement:

"This report is furnished to you under the provisions of the Utah Administrative Code Section R313-18-13. You should preserve this report for further reference."

(2) Licensees or registrants shall make dose information available to workers as shown in records maintained by the licensee or registrant pursuant to R313-15-1107. The licensee shall provide an annual report to each individual monitored under R313-15-502 of the dose received in that monitoring year if:

(a) The individual's occupational dose exceeds 1 mSv (100 mrem) TEDE or 1 mSv (100 mrem) to any individual organ or tissue; or

(b) The individual requests his or her annual dose report.

(3) Licensees or registrants shall furnish a written report of the worker's exposure to sources of radiation at the request of a worker formerly engaged in activities controlled by the licensee or registrant. The report shall include the dose record for each year the worker was required to be monitored pursuant to R313-15-502. The report shall be furnished within 30 days from the date of the request, or within 30 days after the dose of the individual has been determined by the licensee or registrant, whichever is later. The report shall cover the period of time that the worker's activities involved exposure to sources of radiation and shall include the dates and locations of work under the license or registration in which the worker participated during this period.

(4) When a licensee or registrant is required pursuant to R313-15-1202, R313-15-1203, or R313-15-1204 to report to the Director an exposure of an individual to sources of radiation, the licensee or registrant shall also provide the individual a written report on the exposure data included in the report to the Director. This report shall be transmitted at a time

no later than the transmittal to the Director.

(5) At the request of a worker who is terminating employment with the licensee or registrant in work involving exposure to radiation or radioactive material, during the current year, the licensee or registrant shall provide at termination to the worker, or to the worker's designee, a written report regarding the radiation dose received by that worker from operations of the licensee or registrant during the current year or fraction thereof. If the most recent individual monitoring results are not available at that time, a written estimate of the dose shall be provided together with a clear indication that this is an estimate.

R313-18-14. Presence of Representatives of Licensees or Registrants and Workers During Inspection.

(1) Licensees or registrants shall afford representatives of the Director, at reasonable times, the opportunity to inspect materials, machines, activities, facilities, premises, and records pursuant to these rules.

(2) During an inspection, representatives of the Director may consult privately with workers as specified in R313-18-15. The licensee or registrant may accompany representatives during other phases of an inspection.

(3) If, at the time of inspection, an individual has been authorized by the workers to represent them during inspections, the licensee or registrant shall notify the representatives of the Director of the authorization and shall give the workers' representative an opportunity to accompany the representatives during the inspection of physical working conditions.

(4) The workers' representative shall be routinely engaged in work under control of the licensee or registrant and shall have received instructions as specified in R313-18-12.

(5) Different representatives of licensees or registrants and workers may accompany the representatives of the Director during different phases of an inspection if there is no resulting interference with the conduct of the inspection. However, only one workers' representative at a time may accompany the representatives of the Director.

(6) With the approval of the licensee or registrant and the workers' representative, an individual who is not routinely engaged in work under control of the licensee or registrant, for example, a consultant to the licensee or registrant or to the workers' representative, shall be afforded the opportunity to accompany representatives of the Director during the inspection of physical working conditions.

(7) Notwithstanding the other provisions of R313-18-14, representatives of the Director are authorized to refuse to permit accompaniment by an individual who deliberately interferes with a fair and orderly inspection. With regard to areas containing information classified by an Agency of the U.S. Government in the interest of national security, an individual who accompanies an inspector may have access to such information only if authorized to do so. With regard to areas containing proprietary information, the workers' representative for that area shall be an individual previously authorized by the licensee or registrant to enter that area.

R313-18-15. Consultation with Workers During Inspections.

(1) Representatives of the Director may consult privately with workers concerning matters of occupational radiation protection and other matters related to applicable provisions of these rules and licenses to the extent the representatives deem necessary for the conduct of an effective and thorough inspection.

(2) During the course of an inspection, workers may bring privately to the attention of the representatives of the Director, either orally or in writing, a past or present condition which the worker has reason to believe may have contributed to or caused a violation of the Act, these rules, or license condition, or an unnecessary exposure of an individual to sources of radiation

under the licensee's or registrant's control. A notice in writing shall comply with the requirements of R313-18-16(1).

(3) The provisions of R313-18-15(2) shall not be interpreted as authorization to disregard instructions pursuant to R313-18-12.

R313-18-16. Request by Workers for Inspections.

(1) A worker or representative of workers believing that a violation of the Act, these rules, or license conditions exists or has occurred in work under a license or registration with regard to radiological working conditions in which the worker is engaged, may request an inspection by giving notice of the alleged violation to the Director. The notice shall be in writing, shall set forth the specific grounds for the notice, and shall be signed by the worker or representative of the workers. A copy shall be provided to the licensee or registrant by representatives of the Director no later than at the time of inspection except that, upon the request of the worker giving the notice, his name and the name of individuals referred to therein shall not appear in a copy or on a record published, released, or made available by the Director except for good cause shown.

(2) If, upon receipt of the notice, representatives of the Director determine that the complaint meets the requirements set forth in R313-18-16(1), and that there are reasonable grounds to believe that the alleged violation exists or has occurred, an inspection shall be made as soon as practicable to determine if the alleged violation exists or has occurred. Inspections pursuant to R313-18-16 need not be limited to matters referred to in the complaint.

(3) A licensee, registrant or contractor or subcontractor of a licensee or registrant shall not discharge or discriminate against a worker because that worker has filed a complaint or instituted or caused to be instituted a proceeding under these rules or has testified or is about to testify in a proceeding or because of the exercise by the worker on behalf of the worker or others of an option afforded by R313-18.

R313-18-17. Inspections Not Warranted -- Informal Review.

(1)(a) If the Director determines, with respect to a complaint under Section R313-18-16, that an inspection is not warranted because there are no reasonable grounds to believe that a violation exists or has occurred, the Director shall notify the complainant in writing of that determination. The complainant may obtain review of the determination by submitting a written statement of position with the Director. The Director will provide the licensee or registrant with a copy of the statement by certified mail, excluding, at the request of the complainant, the name of the complainant. The licensee or registrant may submit an opposing written statement of position with the Director. The Director will provide the complainant with a copy of the statement by certified mail.

(b) Upon the request of the complainant, the Director may hold an informal conference in which the complainant and the licensee or registrant may orally present their views. An informal conference may also be held at the request of the licensee or registrant, but disclosure of the identity of the complainant will be made only following receipt of written authorization from the complainant. After considering written and oral views presented, the Director shall affirm, modify, or reverse the determination of the representatives of the Director and furnish the complainant and the licensee or registrant a written notification of the decision and the reason therefor.

(2) If the Director determines that an inspection is not warranted because the requirements of R313-18-16(1) have not been met, the complainant shall be notified in writing of the determination. The determination shall be without prejudice to the filing of a new complaint meeting the requirements of R313-18-16(1).

KEY: radioactive materials, inspections, radiation safety,
licensing
March 19, 2013 19-3-104
Notice of Continuation July 7, 2011 19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-19. Requirements of General Applicability to Licensing of Radioactive Material.

R313-19-1. Purpose and Authority.

(1) The purpose of this rule is to prescribe requirements governing the licensing of radioactive material. This rule also gives notice to all persons who knowingly provide to any licensee, applicant, certificate of registration holder, contractor, or subcontractor, components, equipment, materials, or other goods or services, that relate to a licensee's, applicant's or certificate of registration holder's activities subject to these rules, that they may be individually subject to Director enforcement action for violation of Section R313-19-5.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

R313-19-2. General.

(1) A person shall not manufacture, produce, receive, possess, use, transfer, own or acquire radioactive material except as authorized in a specific or general license issued pursuant to Rules R313-21 or R313-22 or as otherwise provided in Rule R313-19.

(2) In addition to the requirements of Rules R313-19, R313-21 or R313-22, all licensees are subject to the requirements of Rules R313-12, R313-15, and R313-18. Licensees engaged in source material milling operations, authorized to possess byproduct material, as defined in Section R313-12-3 (see definition (b)) from source material milling operations, authorized to possess and maintain a source material milling facility in standby mode, authorized to receive byproduct material from other persons for disposal, or authorized to possess and dispose of byproduct material generated by source material milling operations are subject to the requirements of Rule R313-24. Licensees engaged in land disposal of radioactive material are subject to the requirements of Rule R313-25. Licensees using radioactive material in the healing arts are subject to the requirements of Rule R313-32. Licensees authorized to use sealed sources containing radioactive materials in panoramic irradiators with dry or wet storage of radioactive sealed sources, underwater irradiators, or irradiators with high dose rates from radioactive sealed sources are subject to the requirements of Rule R313-34. Licensees engaged in industrial radiographic operations are subject to the requirements of Rule R313-36. Licensees possessing category 1 or category 2 quantities of radioactive material, as defined in Section R313-37-3 (incorporating 10 CFR 37.5 by reference), are subject to the physical protection requirements of Rule R313-37. Licensees engaged in wireline and subsurface tracer studies are subject to the requirements of Rule R313-38.

R313-19-5. Deliberate Misconduct.

(1) Any licensee, certificate of registration holder, applicant for a license or certificate of registration, employee of a licensee, certificate of registration holder or applicant; or any contractor, including a supplier or consultant, subcontractor, employee of a contractor or subcontractor of any licensee or certificate of registration holder or applicant for a license or certificate of registration, who knowingly provides to any licensee, applicant, certificate holder, contractor, or subcontractor, any components, equipment, materials, or other goods or services that relate to a licensee's, certificate holder's or applicant's activities in these rules, may not:

(a) Engage in deliberate misconduct that causes or would have caused, if not detected, a licensee, certificate of registration holder, or applicant to be in violation of any rule or order; or any term, condition, or limitation of any license issued by the Director; or

(b) Deliberately submit to the Director, a licensee,

certificate of registration holder, an applicant, or a licensee's, certificate holder's or applicant's, contractor or subcontractor, information that the person submitting the information knows to be incomplete or inaccurate in some respect material to the Director.

(2) A person who violates Subsections R313-19-5(1)(a) or (b) may be subject to enforcement action in accordance with Rule R313-14.

(3) For the purposes of Subsection R313-19-5(1)(a), deliberate misconduct by a person means an intentional act or omission that the person knows:

(a) Would cause a licensee, certificate of registration holder or applicant to be in violation of any rule or order; or any term, condition, or limitation, of any license issued by the Director; or

(b) Constitutes a violation of a requirement, procedure, instruction, contract, purchase order, or policy of a licensee, certificate of registration holder, applicant, contractor, or subcontractor.

R313-19-7. Carriers.

Common and contract carriers, freight forwarders, warehousemen, and the U.S. Postal Service are exempt from the regulations in Rules R313-19, R313-21, R313-22, R313-32, R313-34, R313-36, R313-37, and R313-38 and the requirements for a license set forth in Subsection 19-3-104(3) to the extent that they transport or store radioactive material in the regular course of carriage for another or storage incident thereto.

R313-19-13. Exemptions.

(1) Source material.

(a) A person is exempt from Rules R313-19, R313-21, and R313-22 to the extent that the person receives, possesses, uses, owns, or transfers source material in a chemical mixture, compound, solution or alloy in which the source material is by weight less than 1/20 of one percent (0.05 percent) of the mixture, compound, solution, or alloy.

(b) A person is exempt from Rules R313-19, R313-21, and R313-22 to the extent that the person receives, possesses, uses or transfers unrefined and unprocessed ore containing source material; provided, that, except as authorized in a specific license, such person shall not refine or process the ore.

(c) A person is exempt from Rules R313-19, R313-21, and R313-22 to the extent that the person receives, possesses, uses or transfers:

(i) any quantities of thorium contained in:

(A) incandescent gas mantles,

(B) vacuum tubes,

(C) welding rods,

(D) electric lamps for illuminating purposes: provided that, each lamp does not contain more than 50 milligrams of thorium,

(E) germicidal lamps, sunlamps, and lamps for outdoor or industrial lighting provided that each lamp does not contain more than two grams of thorium,

(F) rare earth metals and compounds, mixtures, and products containing not more than 0.25 percent by weight thorium, uranium, or any combination of these, or

(G) personnel neutron dosimeters provided that each dosimeter does not contain more than 50 milligrams of thorium;

(ii) source material contained in the following products:

(A) glazed ceramic tableware, provided that the glaze contains not more than 20 percent by weight source material,

(B) piezoelectric ceramic containing not more than two percent by weight source material, or

(C) glassware containing not more than ten percent by weight source material, but not including commercially manufactured glass brick, pane glass, ceramic tile, or other glass

or ceramic used in construction;

(iii) photographic film, negatives and prints containing uranium or thorium;

(iv) a finished product or part fabricated of, or containing, tungsten-thorium or magnesium-thorium alloys, provided that the thorium content of the alloy does not exceed four percent by weight and that this exemption shall not be deemed to authorize the chemical, physical, or metallurgical treatment or processing of the product or part;

(v) uranium contained in counterweights installed in aircraft, rockets, projectiles, and missiles, or stored or handled in connection with installation or removal of the counterweights, provided that:

(A) the counterweights are manufactured in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission authorizing distribution by the licensee pursuant to 10 CFR Part 40,

(B) each counterweight has been impressed with the following legend clearly legible through any plating or other covering: "DEPLETED URANIUM",

(C) each counterweight is durably and legibly labeled or marked with the identification of the manufacturer and the statement: "UNAUTHORIZED ALTERATIONS PROHIBITED",

(D) The requirements specified in Subsections R313-19-13(1)(c)(v)(B) and (C) need not be met by counterweights manufactured prior to December 31, 1969, provided that such counterweights are impressed with the legend, "CAUTION - RADIOACTIVE MATERIAL - URANIUM", as previously required by the rules, and

(E) the exemption contained in Subsection R313-19-13(1)(c)(v) shall not be deemed to authorize the chemical, physical, or metallurgical treatment or processing of counterweights other than repair or restoration of any plating or other covering;

(vi) natural or depleted uranium metal used as shielding constituting part of a shipping container which is conspicuously and legibly impressed with the legend "CAUTION - RADIOACTIVE SHIELDING - URANIUM" and the uranium metal is encased in mild steel or equally fire resistant metal of minimum wall thickness of one eighth inch (3.2 mm);

(vii) thorium contained in finished optical lenses, provided that each lens does not contain more than 30 percent by weight of thorium, and that this exemption shall not be deemed to authorize either:

(A) the shaping, grinding, or polishing of a lens or manufacturing processes other than the assembly of such lens into optical systems and devices without alteration of the lens, or

(B) the receipt, possession, use, or transfer of thorium contained in contact lenses, or in spectacles, or in eyepieces in binoculars or other optical instruments;

(viii) uranium contained in detector heads for use in fire detection units, provided that each detector head contains not more than 0.005 microcurie (185.0 Bq) of uranium; or

(ix) thorium contained in a finished aircraft engine part containing nickel-thoria alloy, provided that:

(A) the thorium is dispersed in the nickel-thoria alloy in the form of finely divided thoria (thorium dioxide), and

(B) the thorium content in the nickel-thoria alloy does not exceed four percent by weight.

(d) The exemptions in Subsection R313-19-13(1)(c) do not authorize the manufacture of any of the products described.

(2) Radioactive material other than source material.

(a) Exempt concentrations.

(i) Except as provided in Subsection R313-19-13(2)(a)(iii) a person is exempt from Rules R313-19, R313-21 and R313-22 to the extent that the person receives, possesses, uses, transfers, owns or acquires products or materials containing:

(A) radioactive material introduced in concentrations not in excess of those listed in Section R313-19-70, or

(B) diffuse sources of natural occurring radioactive materials containing less than 15 picocuries per gram radium-226.

(ii) A manufacturer, processor, or producer of a product or material is exempt from the requirements for a license set forth in Rules R313-19, R313-21 and R313-22 and Rules R313-32, R313-34, R313-36, and R313-38 to the extent that the person transfers:

(A) radioactive material contained in a product or material in concentrations not in excess of those specified in R313-19-70; and

(B) introduced into the product or material by a licensee holding a specific license issued by the U.S. Nuclear Regulatory Commission authorizing the introduction.

(C) The exemption in R313-19-13-2(a)(ii)(A) and R313-19-13-2(a)(ii)(B) does not apply to the transfer of radioactive material contained in any food, beverage, cosmetic, drug, or other commodity or product designed for ingestion or inhalation by, or application to, a human being.

(iii) A person may not introduce radioactive material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under Subsection R313-19-13(2)(a)(i) or equivalent regulations of a Licensing State, the U.S. Nuclear Regulatory Commission or an Agreement State, except in accordance with a specific license issued pursuant to Subsection R313-22-75(1).

(b) Exempt quantities.

(i) Except as provided in Subsections R313-19-13(2)(b)(ii) through (iv) a person is exempt from these rules to the extent that the person receives, possesses, uses, transfers, owns, or acquires radioactive material in individual quantities which do not exceed the applicable quantity set forth in Section R313-19-71.

(ii) Subsection R313-19-13(2)(b) does not authorize the production, packaging or repackaging of radioactive material for purposes of commercial distribution, or the incorporation of radioactive material into products intended for commercial distribution.

(iii) A person may not, for purposes of commercial distribution, transfer radioactive material in the individual quantities set forth in Section R313-19-71, knowing or having reason to believe that the quantities of radioactive material will be transferred to persons exempt under Subsection R313-19-13(2)(b) or equivalent regulations of a Licensing State, the U.S. Nuclear Regulatory Commission or an Agreement State, except in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission, pursuant to 10 CFR Part 32 or by the Director pursuant to Subsection R313-22-75(2), which license states that the radioactive material may be transferred by the licensee to persons exempt under Subsection R313-19-13(2)(b) or the equivalent regulations of a Licensing State, the U.S. Nuclear Regulatory Commission or an Agreement State.

(iv) A person who possesses radioactive material received or acquired prior to September 25, 1971, under the general license formerly provided in 10 CFR Part 31.4 or equivalent regulations of a State is exempt from the requirements for a license set forth in Rule R313-19 to the extent that the person possesses, uses, transfers or owns radioactive material. This exemption does not apply for diffuse sources of radium-226.

(v) No person may, for purposes of producing an increased radiation level, combine quantities of radioactive material covered by this exemption so that the aggregate quantity exceeds the limits set forth in R313-19-71, except for radioactive material combined within a device placed in use before May 3, 1999, or as otherwise provided by these rules.

(c) Exempt items.

(i) Certain items containing radioactive material. Except

for persons who apply radioactive material to, or persons who incorporate radioactive material into the following products, a person is exempt from these rules to the extent that person receives, possesses, uses, transfers, owns or acquires the following products:

(A) Timepieces or hands or dials containing not more than the following specified quantities of radioactive material and not exceeding the following specified levels of radiation:

(I) 25 millicuries (925.0 MBq) of tritium per timepiece;

(II) five millicuries (185.0 MBq) of tritium per hand;

(III) 15 millicuries (555.0 MBq) of tritium per dial. Bezels when used shall be considered as part of the dial;

(IV) 100 microcuries (3.7 MBq) of promethium-147 per watch or 200 microcuries (7.4 MBq) of promethium-147 per any other timepiece;

(V) 20 microcuries (0.74 MBq) of promethium-147 per watch hand or 40 microcuries (1.48 MBq) of promethium-147 per other timepiece hand;

(VI) 60 microcuries (2.22 MBq) of promethium-147 per watch dial or 120 microcuries (4.44 MBq) of promethium-147 per other timepiece dial. Bezels when used shall be considered as part of the dial;

(VII) the radiation dose rate from hands and dials containing promethium-147 will not exceed, when measured through 50 milligrams per square centimeter of absorber:

for wrist watches, 0.1 millirad (1.0 uGy) per hour at ten centimeters from any surface;

for pocket watches, 0.1 millirad (1.0 uGy) per hour at one centimeter from any surface;

for other timepieces, 0.2 millirad (2.0 uGy) per hour at ten centimeters from any surface;

(VIII) one microcurie (37.0 kBq) of radium-226 per timepiece in timepieces manufactured prior to November 30, 2007.

(B)(I) Static elimination devices which contain, as sealed source or sources, radioactive material consisting of a total of not more than 18.5 MBq (500 uCi) of polonium-210 per device.

(II) Ion generating tubes designed for ionization of air that contain, as a sealed source or sources, byproduct material consisting of a total of not more than 18.5 MBq (500 uCi) of polonium-210 per device or of a total of not more than 1.85 GBq (50 mCi) of hydrogen-3 (tritium) per device.

(III) Such devices authorized before October 23, 2012 for use under the general license then provided in 10 CFR 31.3 (January 1, 2012) or equivalent regulations of the Commission or an Agreement State and manufactured, tested, and labeled by the manufacturer in accordance with the specifications contained in a specific license issued by the Commission or Agreement State.

(C) Precision balances containing not more than one millicurie (37.0 MBq) of tritium per balance or not more than 0.5 millicurie (18.5 MBq) of tritium per balance part manufactured before June 9, 2010.

(D) Marine compasses containing not more than 750 millicuries (27.8 GBq) of tritium gas and other marine navigational instruments containing not more than 250 millicuries (9.25 GBq) of tritium gas manufactured before June 9, 2010.

(E) Ionization chamber smoke detectors containing not more than 1 microcurie (37 kBq) of americium-241 per detector in the form of a foil and designed to protect life and property from fires.

(F) Electron tubes, including spark gap tubes, power tubes, gas tubes including glow lamps, receiving tubes, microwave tubes, indicator tubes, pick-up tubes, radiation detection tubes, and other completely sealed tubes that are designed to conduct or control electrical currents; provided that each tube does not contain more than one of the following specified quantities of radioactive material:

(I) 150 millicuries (5.55 GBq) of tritium per microwave receiver protector tube or ten millicuries (370.0 MBq) of tritium per any other electron tube;

(II) one microcurie (37.0 kBq) of cobalt-60;

(III) five microcuries (185.0 kBq) of nickel-63;

(IV) 30 microcuries (1.11 MBq) of krypton-85;

(V) five microcuries (185.0 kBq) of cesium-137;

(VI) 30 microcuries (1.11 MBq) of promethium-147;

(VII) one microcurie (37.0 kBq) of radium-226;

and provided further, that the radiation dose rate from each electron tube containing radioactive material will not exceed one millirad (10.0 uGy) per hour at one centimeter from any surface when measured through seven milligrams per square centimeter of absorber.

(G) Ionizing radiation measuring instruments containing, for purposes of internal calibration or standardization, one or more sources of radioactive material, provided that:

(I) each source contains no more than one exempt quantity set forth in Section R313-19-71; and

(II) each instrument contains no more than ten exempt quantities. For purposes of this requirement, an instrument's source(s) may contain either one type or different types of radionuclides and an individual exempt quantity may be composed of fractional parts of one or more of exempt quantities in Section R313-19-71, provided that the sum of the fractions shall not exceed unity;

(III) for purposes of Subsection R313-19-13(2)(c)(i)(G), 0.05 microcurie (1.85 kBq) of americium-241 is considered an exempt quantity under Section R313-19-71.

(ii) Self-luminous products containing radioactive material.

(A) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147, and except as provided in R313-19-13(2)(c)(ii)(C), any person is exempt from the requirements for a license set forth in Section 274 b. of the Atomic Energy Act of 1954 and from the regulations in R313-15, R313-19, R313-32, R313-34, R313-36, R313-37, and R313-38 to the extent that such a person receives, possesses, uses, transfers, owns, or acquires tritium, krypton-85, or promethium-147 in self-luminous products manufactured, processed, produced, or initially transferred in accordance with a specific license issued pursuant to 10 CFR 32.22 (2015), which license authorizes the initial transfer of the product for use.

(B) Any person who desires to manufacture, process, or produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147 for use under R313-19-13(2)(c)(ii)(A), should apply for a license under 10 CFR 32.22 (2015) and for a certificate of registration in accordance with 10 CFR 32.210 (2015).

(C) The exemption in R313-19-13(2)(c)(ii)(A) does not apply to tritium, krypton-85, or promethium-147 used in products primarily for frivolous purposes or in toys or adornments.

(D) Radium-226. A person is exempt from these rules, to the extent that such person receives, possesses, uses, transfers, or owns articles containing less than 0.1 microcurie (3.7 kBq) of radium-226 which were acquired prior to the effective date of these rules.

(iii) Gas and aerosol detectors containing radioactive material.

(A) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution gas and aerosol detectors containing radioactive material, any person is exempt from the requirements for a license set forth in Section 274 b. of the Atomic Energy Act of 1954 and from the regulations in parts R313-18, R313-15, R313-19, R313-21,

R313-22, R313-32, R313-34, R313-36, R313-37, and R313-38 to the extent that such person receives, possesses, uses, transfers, owns, or acquires byproduct material in gas and aerosol detectors designed to protect health, safety, or property, and manufactured, processed, produced, or initially transferred in accordance with a specific license issued under 10 CFR 32.26 (2015), which license authorizes the initial transfer of the product for use under this section. This exemption also covers gas and aerosol detectors manufactured or distributed before November 30, 2007, in accordance with a specific license issued by a State under comparable provisions to 10 CFR 32.26 (2015) authorizing distribution to persons exempt from regulatory requirements.

(B) Any person who desires to manufacture, process, or produce gas and aerosol detectors containing byproduct material, or to initially transfer such products for use under paragraph (a) of this section, should apply for a specific license issued by the U.S. Nuclear Regulatory Commission pursuant to 10 CFR Part 32.26 (2015) and for a certificate of registration in accordance with R313-22-210 or equivalent regulations of an Agreement State.

(iv) Capsules containing carbon-14 urea for "in vivo" diagnostic use for humans.

(A) Except as provided in Subsection R313-19-13(2)(c)(iv)(B), any person is exempt from the requirements in Rules R313-19 and R313-32 provided that the person receives, possesses, uses, transfers, owns, or acquires capsules containing 37 kBq (1 uCi) carbon-14 urea (allowing for nominal variation that may occur during the manufacturing process) each, for "in vivo" diagnostic use for humans.

(B) Any person who desires to use the capsules for research involving human subjects shall apply for and receive a specific license pursuant to Rule R313-32.

(C) Nothing in Subsection R313-19-13(2)(c)(iv) relieves persons from complying with applicable United States Food and Drug Administration, other Federal, and State requirements governing receipt, administration, and use of drugs.

(v) Certain industrial devices.

(A) Except for persons who manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing radioactive material designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing an ionized atmosphere, any person is exempt from the requirements for a license set forth in Section 274 b. of the Atomic Energy Act of 1954 and from the regulations in parts R313-18, R313-15, R313-18, R313-15, R313-19, R313-21, R313-22, R313-32, R313-34, R313-36, R313-37, and R313-38 to the extent that such person receives, possesses, uses, transfers, owns, or acquires radioactive material, in these certain detecting, measuring, gauging, or controlling devices and certain devices for producing an ionized atmosphere, and manufactured, processed, produced, or initially transferred in accordance with a specific license issued under 10 CFR 32.30 (2015), which license authorizes the initial transfer of the device for use under this rule. This exemption does not cover sources not incorporated into a device, such as calibration and reference sources.

(B) Any person who desires to manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material for use under R313-19-13(2)(c)(v)(A), should apply for a license under 10 CFR 32.30 (2015) and for a certificate of registration in accordance with R313-22-210.

(vi) With respect to Subsections R313-19-13(2)(b)(iii), R313-19-13(2)(c)(i), (iii) and (iv), the authority to transfer possession or control by the manufacturer, processor, or producer of equipment, devices, commodities, or other products

containing byproduct material whose subsequent possession, use, transfer, and disposal by other persons is exempted from regulatory requirements may be obtained only from the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

R313-19-20. Types of Licenses.

Licenses for radioactive materials are of two types: general and specific.

(1) General licenses provided in Rule R313-21 are effective without the filing of applications with the Director or the issuance of licensing documents to the particular persons, although the filing of a registration certificate with the Director may be required by the particular general license. The general licensee is subject to the other applicable portions of these rules and limitations of the general license.

(2) Specific licenses require the submission of an application to the Director and the issuance of a licensing document by the Director. The licensee is subject to applicable portions of these rules as well as limitations specified in the licensing document.

R313-19-25. Prelicensing Inspection.

The Director may verify information contained in applications and secure additional information deemed necessary to make a reasonable determination as to whether to issue a license and whether special conditions should be attached thereto by visiting the facility or location where radioactive materials would be possessed or used, and by discussing details of the proposed possession or use of the radioactive materials with the applicant or representatives designated by the applicant. Such visits may be made by representatives of the Director.

R313-19-30. Reciprocal Recognition of Licenses.

(1) Subject to these rules, a person who holds a specific license from the U.S. Nuclear Regulatory Commission, an Agreement State, or Licensing State, and issued by the agency having jurisdiction where the licensee maintains an office for directing the licensed activity and at which radiation safety records are normally maintained, is hereby granted a general license to conduct the activities authorized in the licensing document within this state, except in areas of exclusive federal jurisdiction, for a period not in excess of 180 days in a calendar year provided that:

(a) the licensing document does not limit the activity authorized by the document to specified installations or locations;

(b) the out-of-state licensee notifies the Director in writing at least three days prior to engaging in such activity. Notifications shall indicate the location, period, and type of proposed possession and use within the state, and shall be accompanied by a copy of the pertinent licensing document. If, for a specific case, the three-day period would impose an undue hardship on the out-of-state licensee, the licensee may, upon application to the Director, obtain permission to proceed sooner. The Director may waive the requirement for filing additional written notifications during the remainder of the calendar year following the receipt of the initial notification from a person engaging in activities under the general license provided in Subsection R313-19-30(1);

(c) the out-of-state licensee complies with all applicable rules of the Board and with the terms and conditions of the licensing document, except those terms and conditions which may be inconsistent with applicable rules of the Board;

(d) the out-of-state licensee supplies other information as the Director may request; and

(e) the out-of-state licensee shall not transfer or dispose of radioactive material possessed or used under the general license provided in Subsection R313-19-30(1) except by transfer to a

person specifically licensed by the Director or by the U.S. Nuclear Regulatory Commission, a Licensing State, or an Agreement State to receive the material.

(2) Notwithstanding the provisions of Subsection R313-19-30(1), a person who holds a specific license issued by the U.S. Nuclear Regulatory Commission, a Licensing State, or an Agreement State authorizing the holder to manufacture, transfer, install, or service a device described in Subsection R313-21-22(4) within the areas subject to the jurisdiction of the licensing body is hereby granted a general license to install, transfer, demonstrate, or service a device in this state provided that:

(a) the person shall file a report with the Director within thirty days after the end of a calendar quarter in which a device is transferred to or installed in this state. Reports shall identify each general licensee to whom a device is transferred by name and address, the type of device transferred, and the quantity and type of radioactive material contained in the device;

(b) the device has been manufactured, labeled, installed, and serviced in accordance with applicable provisions of the specific license issued to the person by the Nuclear Regulatory Commission, a Licensing State, or an Agreement State;

(c) the person shall assure that any labels required to be affixed to the device under rules of the authority which licensed manufacture of the device bear a statement that "Removal of this label is prohibited"; and

(d) the holder of the specific license shall furnish to the general licensee to whom the device is transferred or on whose premises a device is installed a copy of the general license contained in Subsection R313-21-22(4) or in equivalent rules of the agency having jurisdiction over the manufacture and distribution of the device.

(3) The Director may withdraw, limit, or qualify his acceptance of a specific license or equivalent licensing document issued by the U.S. Nuclear Regulatory Commission, a Licensing State or an Agreement State, or a product distributed pursuant to the licensing document, upon determining that the action is necessary in order to prevent undue hazard to public health and safety or the environment.

R313-19-34. Terms and Conditions of Licenses.

(1) Licenses issued pursuant to Rule R313-19 shall be subject to provisions of the Act, now or hereafter in effect, and to all rules, and orders of the Director.

(2) Licenses issued or granted under Rules R313-21 and R313-22 and rights to possess or utilize radioactive material granted by a license issued pursuant to Rules R313-21 and R313-22 shall not be transferred, assigned, or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of a license to a person unless the Director shall, after securing full information find that the transfer is in accordance with the provisions of the Act now or hereafter in effect, and to all rules, and orders of the Director, and shall give his consent in writing.

(3) Persons licensed by the Director pursuant to Rules R313-21 and R313-22 shall confine use and possession of the material licensed to the locations and purposes authorized in the license.

(4) Licensees shall notify the Director in writing and request termination of the license when the licensee decides to terminate activities involving materials authorized under the license.

(5) Licensees shall notify the Director in writing immediately following the filing of a voluntary or involuntary petition for bankruptcy under any Chapter of Title 11, Bankruptcy, of the United States Code by or against:

(a) the licensee;

(b) an entity, as that term is defined in 11 USC 101(15), controlling the licensee or listing the license or licensee as property of the estate; or

(c) an affiliate, as that term is defined in 11 USC 101(2), of the licensee.

(6) The notification specified in Subsection R313-19-34(5) shall indicate:

(a) the bankruptcy court in which the petition for bankruptcy was filed; and

(b) the date of the filing of the petition.

(7) Licensees required to submit emergency plans pursuant to Subsection R313-22-32(8) shall follow the emergency plan approved by the Director. The licensee may change the approved plan without the Director's approval only if the changes do not decrease the effectiveness of the plan. The licensee shall furnish the change to the Director and to affected off-site response organizations within six months after the change is made. Proposed changes that decrease, or potentially decrease, the effectiveness of the approved emergency plan may not be implemented without prior application to and prior approval by the Director.

(8) Each licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators or rubidium-82 from strontium-82/rubidium-82 generators shall test the generator eluates for molybdenum-99 breakthrough or strontium-82 and strontium-85 contamination, respectively, in accordance with Rule R313-32 (incorporating 10 CFR 35.204 by reference). The licensee shall record the results of each test and retain each record for three years after the record is made.

(9) Each portable gauge licensee shall use a minimum of two independent physical controls that form tangible barriers to secure portable gauges from unauthorized removal, whenever portable gauges are not under the control and constant surveillance of the licensee.

(10) (a) Authorization under Subsection R313-22-32(9) to produce Positron Emission Tomography (PET) radioactive drugs for noncommercial transfer to medical use licensees in its consortium does not relieve the licensee from complying with applicable FDA, other Federal, and State requirements governing radioactive drugs.

(b) A licensee authorized under Subsection R313-22-32(9) to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall:

(i) Satisfy the labeling requirements in Subsection R313-22-75(9)(a)(iv) for each PET radioactive drug transport radiation shield and each syringe, vial, or other container used to hold a PET radioactive drug intended for noncommercial distribution to members of its consortium.

(ii) Possess and use instrumentation to measure the radioactivity of the PET radioactive drugs intended for noncommercial distribution to members of its consortium and meet the procedural, radioactivity measurement, instrument test, instrument check, and instrument adjustment requirements in Subsection R313-22-75(9)(c).

(c) A licensee that is a pharmacy authorized under Subsection R313-22-32(9) to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall require that any individual that prepares PET radioactive drugs shall be:

(i) an authorized nuclear pharmacist that meets the requirements in Subsection R313-22-75(9)(b)(ii); or

(ii) an individual under the supervision of an authorized nuclear pharmacist as specified in Rule R313-32 (incorporating 10 CFR 35.27 by reference).

(d) A pharmacy authorized under Subsection R313-22-32(9) to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium that allows an individual to work as an authorized nuclear pharmacist, shall meet the requirements of Subsection R313-22-75(9)(b)(v).

R313-19-41. Transfer of Material.

(1) Licensees shall not transfer radioactive material except as authorized pursuant to Section R313-19-41.

(2) Except as otherwise provided in the license and subject to the provisions of Subsections R313-19-41(3) and (4), licensees may transfer radioactive material:

(a) to the Director, if prior approval from the Director has been received;

(b) to the U.S. Department of Energy;

(c) to persons exempt from the rules in Rule R313-19 to the extent permitted under the exemption;

(d) to persons authorized to receive the material under terms of a general license or its equivalent, or a specific license or equivalent licensing document, issued by the Director, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State, or to a person otherwise authorized to receive the material by the federal government or an agency thereof, the Director, an Agreement State or a Licensing State; or

(e) as otherwise authorized by the Director in writing.

(3) Before transferring radioactive material to a specific licensee of the Director, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State, or to a general licensee who is required to register with the Director, the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State prior to receipt of the radioactive material, the licensee transferring the material shall verify that the transferee's license authorizes the receipt of the type, form, and quantity of radioactive material to be transferred.

(4) The following methods for the verification required by Subsection R313-19-41(3) are acceptable:

(a) the transferor may possess, and read a current copy of the transferee's specific license or registration certificate;

(b) the transferor may possess a written certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form, and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency, and expiration date;

(c) for emergency shipments, the transferor may accept oral certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form, and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency, and expiration date, provided that the oral certification is confirmed in writing within ten days;

(d) the transferor may obtain other information compiled by a reporting service from official records of the Director, the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State regarding the identity of licensees and the scope and expiration dates of licenses and registration; or

(e) when none of the methods of verification described in Subsection R313-19-41(4) are readily available or when a transferor desires to verify that information received by one of the methods is correct or up-to-date, the transferor may obtain and record confirmation from the Director, the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State that the transferee is licensed to receive the radioactive material.

(5) Shipment and transport of radioactive material shall be in accordance with the provisions of Section R313-19-100.

R313-19-50. Reporting Requirements.

(1) Licensees shall notify the Director as soon as possible but not later than four hours after the discovery of an event that prevents immediate protective actions necessary to avoid exposures to radiation or radioactive materials that could exceed regulatory limits or releases of licensed material that could exceed regulatory limits. Events may include fires, explosions, toxic gas releases, etc.

(2) The following events involving licensed material

require notification of the Director by the licensee within 24 hours:

(a) an unplanned contamination event that:

(i) requires access to the contamination area, by workers or the public, to be restricted for more than 24 hours by imposing additional radiological controls or by prohibiting entry into the area;

(ii) involves a quantity of material greater than five times the lowest annual limit on intake specified in Appendix B of 10 CFR 20.1001 through 20.2402 (2010), which is incorporated by reference, for the material; and

(iii) has access to the area restricted for a reason other than to allow radionuclides with a half-life of less than 24 hours to decay prior to decontamination; or

(b) an event in which equipment is disabled or fails to function as designed when:

(i) the equipment is required by rule or license condition to prevent releases exceeding regulatory limits, to prevent exposures to radiation and radioactive materials exceeding regulatory limits, or to mitigate the consequences of an accident;

(ii) the equipment is required by rule or license condition to be available and operable; and

(iii) no redundant equipment is available and operable to perform the required safety function; or

(c) an event that requires unplanned medical treatment at a medical facility of an individual with spreadable radioactive contamination on the individual's clothing or body; or

(d) an unplanned fire or explosion damaging licensed material or a device, container, or equipment containing licensed material when:

(i) the quantity of material involved is greater than five times the lowest annual limit on intake specified in Appendix B of 10 CFR 20.1001 through 20.2402 (2010), which is incorporated by reference, for the material; and

(ii) the damage affects the integrity of the licensed material or its container.

(3) Preparation and submission of reports. Reports made by licensees in response to the requirements of Section R313-19-50 must be made as follows:

(a) For radioactive materials, other than special nuclear material, licensees shall make reports required by Subsections R313-19-50(1) and (2) by telephone to the Director. To the extent that the information is available at the time of notification, the information provided in these reports must include:

(i) the caller's name and call back telephone number;

(ii) a description of the event, including date and time;

(iii) the exact location of the event;

(iv) the radionuclides, quantities, and chemical and physical form of the licensed material involved; and

(v) available personnel radiation exposure data.

(b) For special nuclear materials, licensees shall make reports required by Subsections R313-19-50(1) and (2) by telephone to the Director. To the extent that the information is available at the time of notification, the information provided in these reports must include:

(i) the caller's name, position title, and call-back telephone number;

(ii) the date, time, and exact location of the event; and

(iii) a description of the event, including:

(A) radiological or chemical hazards involved, including isotopes, quantities, and chemical and physical form of any material released; and

(B) actual or potential health and safety consequences to the workers, the public, and the environment, including relevant chemical and radiation data for actual personnel exposures to radiation or radioactive materials or hazardous chemicals produced from radioactive materials (e.g., level of radiation exposure, concentration of chemicals, and duration of

exposure).

(c) Written report for materials other than special nuclear materials. A licensee who makes a report required by Subsections R313-19-50(1) or (2) shall submit a written follow-up report within 30 days of the initial report. Written reports prepared pursuant to other rules may be submitted to fulfill this requirement if the reports contain all of the necessary information and the appropriate distribution is made. These written reports shall be sent to the Director. The report shall include the following:

- (i) A description of the event, including the probable cause and the manufacturer and model number, if applicable, of equipment that failed or malfunctioned;
- (ii) the exact location of the event;
- (iii) the radionuclides, quantities, and chemical and physical form of the licensed material involved;
- (iv) date and time of the event;
- (v) corrective actions taken or planned and results of evaluations or assessments; and
- (vi) the extent of exposure of individuals to radiation or radioactive materials without identification of individuals by name.

(d) Written report for special nuclear material. A licensee who makes a report required by Subsections R313-19-50(1) or (2) shall submit a written follow-up report within 30 days of the initial report. Written reports prepared pursuant to other rules may be submitted to fulfill this requirement if the reports contain all of the necessary information and the appropriate distribution is made. These written reports shall be sent to the Director. The report shall include the following:

- (i) the complete applicable information required by Subsection R313-19-50(3)(b);
- (ii) the probable cause of the event, including all factors that contributed to the event and the manufacturer and model number (if applicable) of any equipment that failed or malfunctioned; and
- (iii) corrective actions taken or planned to prevent occurrence of similar or identical events in the future and the results of any evaluations or assessments.

R313-19-61. Modification, Revocation, and Termination of Licenses.

(1) The terms and conditions of all licenses shall be subject to amendment, revision, or modification or the license may be suspended or revoked by reason of amendments to the Act, or by reason of rules, and orders issued by the Director.

(2) Licenses may be revoked, suspended, or modified, in whole or in part, for any material false statement in the application or any statement of fact required under provisions of the Act, or because of conditions revealed by the application or statement of fact or any report, record, or inspection or other means which would warrant the Director to refuse to grant a license on an original application, or for violation of, or failure to observe any of the terms and conditions of the Act, or of the license, or of any rule, or order of the Director.

(3) Administrative reviews, modifications, revocations or terminations of licenses will be in accordance with Title 19, Chapter 3.

(4) The Director may terminate a specific license upon written request submitted by the licensee to the Director.

R313-19-70. Exempt Concentrations of Radioactive Materials.

Refer to Subsection R313-19-13(2)(a)

TABLE

Element	Column I Concentration Material	Column II Concentration
---------	---------------------------------------	----------------------------

(Atomic Number)	Radionuclide	Normally Used As Gas (uCi/ml)	Liquid (uCi/ml) Solid (uCi/g)
Antimony (51)	Sb-122		3 E-4
	Sb-124		2 E-4
	Sb-125		1 E-3
Argon (18)	Ar-37	1 E-3	
	Ar-41	4 E-7	
Arsenic (33)	As-73		5 E-3
	As-74		5 E-4
	As-76		2 E-4
	As-77		8 E-4
Barium (56)	Ba-131		2 E-3
	Ba-140		3 E-4
Beryllium (4)	Be-7		2 E-2
Bismuth (83)	Bi-206		4 E-4
Bromine (35)	Br-82	4 E-7	3 E-3
Cadmium (48)	Cd-109		2 E-3
	Cd-115m		3 E-4
Calcium (20)	Cd-115		3 E-4
	Ca-45		9 E-5
	Ca-47		5 E-4
Carbon (6)	C-14	1 E-6	8 E-3
Cerium (58)	Ce-141		9 E-4
	Ce-143		4 E-4
	Ce-144		1 E-4
Cesium (55)	Cs-131		2 E-2
	Cs-134m		6 E-2
	Cs-134		9 E-5
	Cs-137		4 E-3
Chlorine (17)	Cl-38	9 E-7	2 E-2
Chromium (24)	Cr-51		2 E-2
Cobalt (27)	Co-57		5 E-3
	Co-58		1 E-3
Copper (29)	Co-60		5 E-4
	Cu-64		3 E-3
Dysprosium (66)	Dy-165		4 E-3
	Dy-166		4 E-4
Erbium (68)	Er-169		9 E-4
	Er-171		1 E-3
Europium (63)	Eu-152		6 E-4
	(T = 9.2 h) Eu-155		2 E-3
Fluorine (9)	F-18	2 E-6	8 E-3
Gadolinium (64)	Gd-153		2 E-3
	Gd-159		8 E-4
Gallium (31)	Ga-72		4 E-4
Germanium (32)	Ge-71		2 E-2
Gold (79)	Au-196		2 E-3
	Au-198		5 E-4
	Au-199		2 E-3
Hafnium (72)	Hf-181		7 E-4
Hydrogen (1)	H-3	5 E-6	3 E-2
Indium (49)	In-113m		1 E-2
	In-114m		2 E-4
Iodine (53)	I-126	3 E-9	2 E-5
	I-131	3 E-9	2 E-5
	I-132	8 E-8	6 E-4
	I-133	1 E-8	7 E-5
	I-134	2 E-7	1 E-3
Iridium (77)	Ir-190		2 E-3
	Ir-192		4 E-4
	Ir-194		3 E-4
Iron (26)	Fe-55		8 E-3
	Fe-59		6 E-4
Krypton (36)	Kr-85m	1 E-6	
	Kr-85	3 E-6	
Lanthanum (57)	La-140		2 E-4
Lead (82)	Pb-203		4 E-3
Lutetium (71)	Lu-177		1 E-3
Manganese (25)	Mn-52		3 E-4
	Mn-54		1 E-3
	Mn-56		1 E-3
Mercury (80)	Hg-197m		2 E-3
	Hg-197		3 E-3
	Hg-203		2 E-4
Molybdenum (42)	Mo-99		2 E-3
Neodymium (60)	Nd-147		6 E-4
	Nd-149		3 E-3
Nickel (28)	Ni-65		1 E-3
Niobium	Nb-95		1 E-3
(Columbium)(41)	Nb-97		9 E-3
	Osmium (76)		7 E-4
Osmium (76)	Os-185		7 E-4
	Os-191m		3 E-2
	Os-191		2 E-3
	Os-193		6 E-4
Palladium (46)	Pd-103		3 E-3
	Pd-109		9 E-4
Phosphorus (15)	P-32		2 E-4
Platinum (78)	Pt-191		1 E-3
	Pt-193m		1 E-2

	Pt-197m		1 E-2
	Pt-197		1 E-3
Potassium (19)	K-42		3 E-3
Praseodymium (59)	Pr-142		3 E-4
	Pr-143		5 E-4
Promethium (61)	Pm-147		2 E-3
	Pm-149		4 E-3
Rhenium (75)	Re-183		6 E-4
	Re-186		9 E-3
	Re-188		6 E-4
Rhodium (45)	Rh-103m		1 E-1
	Rh-105		1 E-3
Rubidium (37)	Rb-86		7 E-4
Ruthenium (44)	Ru-97		4 E-4
	Ru-103		8 E-4
	Ru-105		1 E-3
	Ru-106		1 E-4
Samarium (62)	Sm-153		8 E-4
Scandium (21)	Sc-46		4 E-4
	Sc-47		9 E-4
	Sc-48		3 E-4
Selenium (34)	Se-75		3 E-3
Silicon (14)	Si-31		9 E-3
Silver (47)	Ag-105		1 E-3
	Ag-110m		3 E-4
	Ag-111		4 E-4
Sodium (11)	Na-24		2 E-3
Strontium (38)	Sr-85		1 E-4
	Sr-89		1 E-4
	Sr-91		7 E-4
	Sr-92		7 E-4
Sulfur (16)	S-35	9 E-8	6 E-4
Tantalum (73)	Ta-182		4 E-4
Technetium (43)	Tc-96m		1 E-1
	Tc-96		1 E-3
Tellurium (52)	Te-125m		2 E-3
	Te-127m		6 E-4
	Te-127		3 E-3
	Te-129m		3 E-4
	Te-131m		6 E-4
	Te-132		3 E-4
Terbium (65)	Tb-160		4 E-4
Thallium (81)	Tl-200		4 E-3
	Tl-201		3 E-3
	Tl-202		1 E-3
	Tl-204		1 E-3
Thulium (69)	Tm-170		5 E-4
	Tm-171		5 E-3
Tin (50)	Sn-113		9 E-4
	Sn-125		2 E-4
Tungsten (Wolfram) (74)	W-181		4 E-3
	W-187		7 E-4
Vanadium (23)	V-48		3 E-4
Xenon (54)	Xe-131m	4 E-6	
	Xe-133	3 E-6	
	Xe-135	1 E-6	
Ytterbium (70)	Yb-175		1 E-3
Yttrium (39)	Y-90		2 E-4
	Y-91m		3 E-2
	Y-91		3 E-4
	Y-92		6 E-4
	Y-93		3 E-4
Zinc (30)	Zn-65		1 E-3
	Zn-69m		7 E-4
	Zn-69		2 E-2
Zirconium (40)	Zr-95		6 E-4
	Zr-97		2 E-4

kilobecquerels (kBq), multiply the above values by 37.

R313-19-71. Exempt Quantities of Radioactive Materials.
Refer to Subsection R313-19-13(2)(b)

TABLE	
RADIOACTIVE MATERIAL	MICROCURIES
Antimony-122 (Sb-122)	100
Antimony-124 (Sb-124)	10
Antimony-125 (Sb-125)	10
Arsenic-73 (As-73)	100
Arsenic-74 (As-74)	10

Iridium-194 (Ir-194)	100
Iron-52 (Fe-52)	10
Iron-55 (Fe-55)	100
Iron-59 (Fe-59)	10
Krypton-85 (Kr-85)	100
Krypton-87 (Kr-87)	10
Lanthanum-140 (La-140)	10
Lutetium-177 (Lu-177)	100

(1) In expressing the concentrations in Section R313-19-70, the activity stated is that of the parent radionuclide and takes into account the radioactive decay products, because many radionuclides disintegrate into radionuclides which are also radioactive.

(2) For purposes of Subsection R313-19-13(2)(a) where there is involved a combination of radionuclides, the limit for the combination should be derived as follows: Determine for each radionuclide in the product the ratio between the radioactivity concentration present in the product and the exempt radioactivity concentration established in Section R313-19-70 for the specific radionuclide when not in combination. The sum of the ratios may not exceed one or unity.

(3) To convert microcuries (uCi) to SI units of

Manganese-52 (Mn-52)	10

(1) To convert microcuries (uCi) to SI units of kilobecquerels (kBq), multiply the above values by 37.

R313-19-100. Transportation.

For purposes of Section R313-19-100, 10 CFR 71.0(c), 71.1(a), 71.3, 71.4, 71.13, 71.14(a), 71.15, 71.17, 71.19(a), 71.19(b), 71.19(c), 71.20 through 71.23, 71.47, 71.83 through 71.89, 71.97, 71.101(a), 71.101(b), 71.101(c)(1), 71.101(g), 71.105, 71.127 through 71.137, and Appendix A to Part 71 (2014) are incorporated by reference with the following clarifications or exceptions:

- (1) The exclusion of the following:
 - (a) In 10 CFR 71.4 the following definitions:
 - (i) "close reflection by water";
 - (ii) "licensed material";
 - (iii) "optimum interspersed hydrogenous moderation";
 - (iv) "spent nuclear fuel or spent fuel"; and
 - (v) "state."
 - (2) The substitution of the following date reference:
 - (a) "October 1, 2011" for "October 1, 2008".
 - (3) The substitution of the following rule references:
 - (a) "R313-36 (incorporating 10 CFR 34.31(b) by reference)" for "Sec. 34.31(b) of this chapter" as found in 10 CFR 71.101(g);
 - (b) "R313-15-502" for reference to "10 CFR 20.1502";
 - (c) "R313-14" for reference to "10 CFR Part 2 Subpart B";
 - (d) "Rule R313-32, 10 CFR Part 35," for reference to "10 CFR part 35";
 - (e) "R313-15-906(5)" for reference to "10 CFR 20.1906(e)";
 - (f) "R313-19-100(5)" for "Sec.71.5";
 - (g) "10 CFR 71.101(a), 71.101(b), 71.101(c)(1), 71.101(g), 71.105, and 71.127 through 71.137" for "subpart H of this part" or for "subpart H" except in 10 CFR 71.17(b), 71.20(b), 71.21(b), 71.22(b), 71.23(b);
 - (h) "10 CFR 71.0(c), 71.1(a), 71.3, 71.4, 71.17(c)(2), 71.20(c)(2), 71.21(d)(2), 71.83 through 71.89, 71.97, 71.101(a), 71.101(b), 71.101(c)(1), 71.101(g), 71.105, and 71.127 through 71.137" for "subparts A, G, and H of this part";
 - (i) "10 CFR 71.47" for "subparts E and F of this part"; and
 - (j) "10 CFR 71.101(a), 71.101(b), 71.101(c)(1), 71.101(g), 71.105, and 71.127 through 71.137" for "Sec. Sec. 71.101 through 71.137."
 - (4) The substitution of the following terms:
 - (a) "Director" for:
 - (i) "Commission" in 10 CFR 71.0(c), 71.17(a), 71.20(a), 71.21(a), 71.22(a), 71.23(a), and 71.101(c)(1);
 - (ii) "Director, Division of Nuclear Safety, Office of Nuclear Security and Incident Response" in 10 CFR 71.97(c)(1), and 71.97(f)(1);
 - (iii) "Director, Office of State Programs, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001" in 10 CFR 71.97(c)(3)(iii);

- (iv) "NRC" in 10 CFR 71.101(f);
- (b) "Director, the U.S. Nuclear Regulatory Commission, or an Agreement State" for "Commission" in 10 CFR 71.3;
- (c) "The Governor of Utah" for:
 - (i) "the governor of a State" in 71.97(a);
 - (ii) "each appropriate governor" in 10 CFR 71.97(c)(1);
 - (iii) "the governor" in 10 CFR 71.97(c)(3);
 - (iv) "the governor of the state" in 10 CFR 71.97(e);
 - (v) "the governor of each state" in 10 CFR 71.97(f)(1);
 - (vi) "a governor" in 10 CFR 71.97(e);
- (d) "State of Utah" for "State" in 71.97(a), 71.97(b)(2), and 71.97(d)(4);
- (e) "the Governor of Utah's" for:
 - (i) "the governor's" in 10 CFR 71.97(a), 71.97(c)(3), 71.97(c)(3)(iii), 71.97(e), and 71.97(f)(1);
 - (ii) "governor's" in 10 CFR 71.97(c)(1), and 71.97(e);
 - (f) "Specific or general" for "NRC" in 10 CFR 71.0(c);
 - (g) "The Director at the address specified in R313-12-110" for reference to "ATTN: Document Control Desk, Director, Spent Fuel Project Office, Office of Nuclear Material Safety and Safeguards" in 10 CFR 71.101(c)(1);
 - (h) "Each" for "Using an appropriate method listed in Sec. 71.1(a), each" in 10 CFR 71.101(c)(1);
 - (i) "The material must be contained in a Type A package meeting the requirements of 49 CFR 173.417(a)." for "The fissile material need not be contained in a package which meets the standards of subparts E and F of this part; however, the material must be contained in a Type A package. The Type A package must also meet the DOT requirements of 49 CFR 173.417(a)." as found in 10 CFR 71.22(a) and 71.23(a);
 - (j) "Licensee" for "licensee, certificate holder, and applicant for a COC"; and
 - (k) "Licensee is" for reference to "licensee, certificate holder, and applicant for a COC are."
- (5) Transportation of licensed material
 - (a) Each licensee who transports licensed material outside the site of usage, as specified in the license issued by the Director, the U.S. Nuclear Regulatory Commission or an Agreement State, or where transport is on public highways, or who delivers licensed material to a carrier for transport, shall comply with the applicable requirements of the U.S. Department of Transportation regulations in 49 CFR parts 107, 171 through 180, and 390 through 397 (2009), appropriate to the mode of transport.
 - (i) The licensee shall particularly note DOT regulations in the following areas:
 - (A) Packaging--49 CFR part 173: subparts A (49 CFR 173.1 through 49 CFR 173.13), B (49 CFR 173.21 through 49 CFR 173.40), and I (49 CFR 173.401 through 49 CFR 173.477).
 - (B) Marking and labeling--49 CFR part 172: subpart D (49 CFR 172.300 through 49 CFR 172.338); and 49 CFR 172.400 through 49 CFR 172.407 and 49 CFR 172.436 through 49 CFR 172.441 of subpart E.
 - (C) Placarding--49 CFR part 172: subpart F (49 CFR 172.500 through 49 CFR 172.560), especially 49 CFR 172.500 through 49 CFR 172.519 and 49 CFR 172.556; and appendices B and C.
 - (D) Accident reporting--49 CFR part 171: 49 CFR 171.15 and 171.16.
 - (E) Shipping papers and emergency information--49 CFR part 172: subparts C (49 CFR 172.200 through 49 CFR 172.205) and G (49 CFR 172.600 through 49 CFR 172.606).
 - (F) Hazardous material employee training--49 CFR part 172: subpart H (49 CFR 172.700 through 49 CFR 172.704).
 - (G) Security plans--49 CFR part 172: subpart I (49 CFR 172.800 through 49 CFR 172.804).
 - (H) Hazardous material shipper/carrier registration--49 CFR part 107: subpart G (49 CFR 107.600 through 49 CFR

107.606).

(ii) The licensee shall also note DOT regulations pertaining to the following modes of transportation:

(A) Rail--49 CFR part 174: subparts A through D (49 CFR 174.1 through 49 CFR 174.86) and K (49 CFR 174.700 through 49 CFR 174.750).

(B) Air--49 CFR part 175.

(C) Vessel--49 CFR part 176: subparts A through F (49 CFR 176.1 through 49 CFR 176.99) and M (49 CFR 176.700 through 49 CFR 107.720).

(D) Public Highway--49 CFR part 177 and parts 390 through 397.

(b) If DOT regulations are not applicable to a shipment of licensed material, the licensee shall conform to the standards and requirements of the DOT specified in paragraph (a) of this section to the same extent as if the shipment or transportation were subject to DOT regulations. A request for modification, waiver, or exemption from those requirements, and any notification referred to in those requirements, must be filed with, or made to, the Director, P.O. Box 144850, Salt Lake City, Utah 84114-4850.

KEY: licenses, reciprocity, transportation, exemptions

19-3-104

Notice of Continuation September 23, 2011

19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-21. General Licenses.

R313-21-1. Purpose and Scope.

(1) R313-21 establishes general licenses for the possession and use of radioactive material contained in certain items and a general license for ownership of radioactive material.

(2) The rules set forth herein are adopted pursuant to the provisions of Sections 19-3-104(3) and 19-3-104(6).

R313-21-21. General Licenses--Source Material.

(1) A general license is hereby issued authorizing commercial and industrial firms, research, educational and medical institutions, and state and local government agencies to use and transfer not more than 6.82 kilogram (15 lb) of source material at any one time for research, development, educational, commercial, or operational purposes. A person authorized to use or transfer source material, pursuant to this general license, may not receive more than a total of 68.2 kilogram (150 lb) of source material in any one calendar year.

(2) Persons who receive, possess, use, or transfer source material pursuant to the general license issued in R313-21-21(1) are exempt from the provisions of R313-15 and R313-18, to the extent that such receipt, possession, use or transfer is within the terms of the general license; provided, however, that this exemption shall not be deemed to apply to a person who is also in possession of source material under a specific license issued pursuant to R313-22.

(3) Persons who receive, possess, use, or transfer source material pursuant to the general license in R313-21-21(1) are prohibited from administering source material, or the radiation therefrom, either externally or internally, to human beings except as may be authorized by the Director in a specific license.

(4) A general license is hereby issued authorizing the receipt of title to source material without regard to quantity. This general license does not authorize a person to receive, possess, use, or transfer source material.

(5) Depleted uranium in industrial products and devices.

(a) A general license is hereby issued to receive, acquire, possess, use, or transfer, in accordance with the provisions of R313-21-21(5)(b), (c), (d), and (e), depleted uranium contained in industrial products or devices for the purpose of providing a concentrated mass in a small volume of the product or device.

(b) The general license in R313-21-21(5)(a) applies only to industrial products or devices which have been manufactured or initially transferred, either in accordance with a specific license issued to the manufacturer of the products or devices pursuant to R313-22-75(11) or in accordance with a specific license issued to the manufacturer by the Nuclear Regulatory Commission, an Agreement State, or a Licensing State which authorizes manufacture of the products or devices for distribution to persons generally licensed by the Nuclear Regulatory Commission, an Agreement State, or a Licensing State.

(c)(i) Persons who receive, acquire, possess, or use depleted uranium pursuant to the general license established by R313-21-21(5)(a) shall file form DRC-12 "Registration Form-Use of Depleted Uranium Under General License," with the Director. The form shall be submitted within 30 days after the first receipt or acquisition of depleted uranium. The registrant shall furnish on form DRC-12 the following information and other information as may be required by that form:

(A) name and address of the registrant;

(B) a statement that the registrant has developed and will maintain procedures designed to establish physical control over the depleted uranium described in R313-21-21(5)(a) and designed to prevent transfer of such depleted uranium in any form, including metal scrap, to persons not authorized to receive the depleted uranium; and

(C) name and title, address, and telephone number of the individual duly authorized to act for and on behalf of the registrant in supervising the procedures identified in R313-21-21(5)(c)(i)(B).

(ii) The registrant possessing or using depleted uranium under the general license established by R313-21-21(5)(a) shall report in writing to the Director any changes in information previously furnished on form DRC-12 "Registration Form - Use of Depleted Uranium Under General License." The report shall be submitted within 30 days after the effective date of the change.

(d) A person who receives, acquires, possesses, or uses depleted uranium pursuant to the general license established by R313-21-21(5)(a):

(i) shall not introduce depleted uranium, in any form, into a chemical, physical, or metallurgical treatment or process, except a treatment or process for repair or restoration of any plating or other covering of the depleted uranium;

(ii) shall not abandon depleted uranium;

(iii) shall transfer or dispose of depleted uranium only by transfer in accordance with the provisions of R313-19-41. In the case where the transferee receives the depleted uranium pursuant to the general license established by R313-21-21(5)(a), the transferor shall furnish the transferee a copy of R313-21 and a copy of form DRC-12. In the case where the transferee receives the depleted uranium pursuant to a general license contained in the Nuclear Regulatory Commission's or Agreement State's regulation equivalent to R313-21-21(5)(a), the transferor shall furnish the transferee a copy of this rule and a copy of form DRC-12 accompanied by a note explaining that use of the product or device is regulated by the Nuclear Regulatory Commission or Agreement State under requirements substantially the same as those in R313-21;

(iv) within 30 days of any transfer, shall report in writing to the Director the name and address of the person receiving the depleted uranium pursuant to the transfer;

(v) shall not export depleted uranium except in accordance with a license issued by the Nuclear Regulatory Commission pursuant to 10 CFR Part 110; and

(vi) shall pay annual fees pursuant to R313-70.

(e) Any person receiving, acquiring, possessing, using, or transferring depleted uranium pursuant to the general license established by R313-21-21(5)(a) is exempt from the requirements of R313-15 and R313-18 of these rules with respect to the depleted uranium covered by that general license.

R313-21-22. General Licenses*--Radioactive Material Other Than Source Material.

NOTE: *Different general licenses are issued in this section, each of which has its own specific conditions and requirements.

(1) RESERVED.

(2) Certain items and self-luminous products containing radium-226.

(a) A general license is hereby issued to a person to acquire, receive, possess, use, or transfer, in accordance with the provisions of Subsections R313-21-22(2)(b), R313-21-22(2)(c), and R313-21-22(2)(d), radium-226 contained in the following products manufactured prior to November 30, 2007.

(i) Antiquities originally intended for use by the general public. For the purposes of Subsection R313-21-22(2)(a), antiquities mean products originally intended for use by the general public and distributed in the late 19th and early 20th centuries, such as radium emanator jars, revigators, radium water jars, radon generators, refrigerator cards, radium bath salts, and healing pads.

(ii) Intact timepieces containing greater than 37 kilobecquerels (1 uCi), nonintact timepieces, and timepiece hands and dials no longer installed in timepieces.

(iii) Luminous items installed in air, marine, or land vehicles.

(iv) All other luminous products provided that no more than 100 items are used or stored at the same location at one time.

(v) Small radium sources containing no more than 37 kilobecquerels (1 uCi) of radium-226. For the purposes of Subsection R313-21-22(2)(a), "small radium sources" means discrete survey instrument check sources, sources contained in radiation measuring instruments, sources used in educational demonstrations such as cloud chambers and spinthariscopes, electron tubes, static eliminators, or as designated by the Director.

(b) Persons who acquire, receive, possess, use, or transfer radioactive material under the general license issued in Subsection R313-21-22(2)(a) are exempt from the provisions of Rules R313-15, R313-18, and Sections R313-12-51 and R313-19-50, to the extent that the receipt, possession, use, or transfers of radioactive material is within the terms of the general license; provided, however, that this exemption shall not be deemed to apply to a person specifically licensed under Rule R313-22.

(c) A person who acquires, receives, possesses, uses, or transfers radioactive material in accordance with the general license in Subsection R313-21-22(2)(a):

(i) Shall notify the Director should there be an indication of possible damage to the product so that it appears it could result in a loss of the radioactive material. A report containing a brief description of the event, and the remedial action taken, must be furnished to the Director within 30 days.

(ii) Shall not abandon products containing radium-226. The product, and radioactive material from the product, may only be disposed of according to Section R313-15-1008 or by transfer to a person authorized by a specific license to receive the radium-226 in the product or as otherwise approved by the Director.

(iii) Shall not export products containing radium-226 except in accordance with 10 CFR Part 110.

(iv) Shall dispose of products containing radium-226 at a disposal facility authorized to dispose of radioactive material in accordance with Federal or State solid or hazardous waste laws, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act of 2005, by transfer to a person authorized to receive radium-226 under Rule R313-22 or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State or as otherwise approved by the Director.

(v) Shall respond to written requests from the Director to provide information relating to the general license within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information within the allotted time, it shall, within that same time period, request a longer period to supply the information by providing the Director a written justification using the method stated in Section R313-12-110.

(d) The general license in R313-21-22(2)(a) does not authorize the manufacture, assembly, disassembly, repair, or import of products containing radium-226, except that timepieces may be disassembled and repaired.

(3) RESERVED.

(4) Certain detecting, measuring, gauging or controlling devices and certain devices for producing light or an ionized atmosphere.*

NOTE: *Persons possessing radioactive material in devices under a general license in R313-21-22(4) before January 15, 1975, may continue to possess, use, or transfer that material in accordance with the labeling requirements of R313-21-22(4) in effect on January 14, 1975.

(a) A general license is hereby issued to commercial and industrial firms and research, educational and medical institutions, individuals in the conduct of their business, and

state or local government agencies to own, acquire, receive, possess, use or transfer, in accordance with the provisions of R313-21-22(4)(b), (c) and (d), radioactive material, excluding special nuclear material, contained in devices designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing light or an ionized atmosphere.

(b)(i) The general license in R313-21-22(4)(a) applies only to radioactive material contained in devices which have been manufactured or initially transferred and labeled in accordance with the specifications contained in:

(A) a specific license issued by the Director pursuant to R313-22-75(4); or

(B) an equivalent specific license issued by the Nuclear Regulatory Commission or an Agreement State; or

(C) An equivalent specific license issued by a State with provisions comparable to R313-22-75.*

NOTE: *Regulations under the Federal Food, Drug, and Cosmetic Act authorizing the use of radioactive control devices in food production require certain additional labeling thereon which is found in 21 CFR 179.21.

(ii) The devices must have been received from one of the specific licensees described in R313-21-22(4)(b)(i) or through a transfer made under R313-21-22(4)(c)(ix).

(c) Any person who owns, acquires, receives, possesses, uses or transfers radioactive material in a device pursuant to the general license in R313-21-22(4)(a):

(i) shall assure that all labels affixed to the device at the time of receipt and bearing a statement that removal of the label is prohibited are maintained thereon and shall comply with all instructions and precautions provided by the labels;

(ii) shall assure that the device is tested for leakage of radioactive material and proper operation of the on-off mechanism and indicator, if any, at no longer than six-month intervals or at other intervals as are specified in the label; however:

(A) Devices containing only krypton need not be tested for leakage of radioactive material, and

(B) Devices containing only tritium or not more than 3.7 megabecquerel (100 uCi) of other beta, gamma, or both, emitting material or 0.37 megabecquerel (10 uCi) of alpha emitting material and devices held in storage in the original shipping container prior to initial installation need not be tested for any purpose;

(iii) shall assure that other testing, installation, servicing, and removal from installation involving the radioactive materials, its shielding or containment, are performed:

(A) in accordance with the instructions provided by the labels; or

(B) by a person holding a specific license pursuant to R313-22 or from the Nuclear Regulatory Commission, an Agreement State, or a Licensing State to perform such activities;

(iv) shall maintain records showing compliance with the requirements of R313-21-22(4)(c)(ii) and (iii). The records shall show the results of tests. The records also shall show the dates of performance of, and the names of persons performing, testing, installation, servicing, and removal from the installation the radioactive material and its shielding or containment. The licensee shall retain these records as follows:

(A) Each record of a test for leakage of radioactive material required by R313-21-22(4)(c)(ii) shall be retained for three years after the next required leak test is performed or until the sealed source is transferred or disposed of;

(B) Each record of a test of the on-off mechanism and indicator required by R313-21-22(4)(c)(ii) shall be retained for three years after the next required test of the on-off mechanism and indicator is performed or until the sealed source is transferred or disposed of;

(C) Each record that is required by R313-21-22(4)(c)(iii) shall be retained for three years from the date of the recorded event or until the device is transferred or disposed of;

(v) shall immediately suspend operation of the device if there is a failure of, or damage to, or any indication of a possible failure of or damage to, the shielding of the radioactive material or the on-off mechanism or indicator, or upon the detection of 185 becquerel (0.005 uCi) or more removable radioactive material. The device may not be operated until it has been repaired by the manufacturer or other person holding a specific license to repair the device that was issued by the Director, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State. The device and any radioactive material from the device may only be disposed of by transfer to a person authorized by a specific license to receive the radioactive material in the device or as otherwise approved by the Director, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State. A report containing a brief description of the event and the remedial action taken; and, in the case of detection of 185 becquerel (0.005 uCi) or more removable radioactive material or failure of or damage to a source likely to result in contamination of the premises or the environs, a plan for ensuring that the premises and environs are acceptable for unrestricted use, must be furnished to the Director within 30 days. Under these circumstances, the criteria set out in R313-15-402 may be applicable, as determined by the Director on a case-by-case basis;

(vi) shall not abandon the device containing radioactive material;

(vii) shall not export the device containing radioactive materials except in accordance with 10 CFR 110;

(viii)(A) shall transfer or dispose of the device containing radioactive material only by export as provided by R313-21-22(4)(c)(vii), by transfer to another general licensee as authorized in R313-21-22(4)(c)(ix), to a person authorized to receive the device by a specific license issued under R313-22, to an authorized waste collector under R313-25, or equivalent regulations of the Nuclear Regulatory Commission, an Agreement State, or a Licensing State, or as otherwise approved under R313-21-22(4)(c)(viii)(C);

(B) shall furnish a report to the Director within 30 days after transfer of a device to a specific licensee or export. The report must contain:

(I) the identification of the device by manufacturer's or initial transferor's name, model number, and serial number;

(II) the name, address, and license number of the person receiving the device, the license number is not applicable if exported; and

(III) the date of the transfer;

(C) shall obtain written approval from the Director before transferring the device to any other specific licensee not specifically identified in R313-21-22(4)(c)(viii)(A); however, a holder of a specific license may transfer a device for possession and use under its own specific license without prior approval, if the holder:

(I) verifies that the specific license authorizes the possession and use, or applies for and obtains an amendment to the license authorizing the possession and use;

(II) removes, alters, covers, or clearly and unambiguously augments the existing label (otherwise required by R313-21-22(4)(c)(i)) so that the device is labeled in compliance with R313-15-904; however, the manufacturer, model number, and serial number must be retained;

(III) obtains the manufacturer's or initial transferor's information concerning maintenance that would be applicable under the specific license (such as leak testing procedures); and

(IV) reports the transfer under R313-21-22(4)(c)(viii)(B);

(ix) shall transfer the device to another general licensee only if:

(A) the device remains in use at a particular location. In this case, the transferor shall give the transferee a copy of R313-21-22(4), R313-12-51, R313-15-1201, and R313-15-1202, and any safety documents identified in the label of the device. Within 30 days of the transfer, the transferor shall report to the Director:

(I) the manufacturer's or initial transferor's name;

(II) the model number and serial number of the device transferred;

(III) the transferee's name and mailing address for the location of use; and

(IV) the name, title, and phone number of the responsible individual identified by the transferee in accordance with R313-21-22(4)(c)(xii) to have knowledge of and authority to take actions to ensure compliance with the appropriate regulations and requirements; or

(B) the device is held in storage by an intermediate person in the original shipping container at its intended location of use prior to initial use by a general licensee;

(x) shall comply with the provisions of R313-15-1201 and R313-15-1202 for reporting radiation incidents, theft or loss of licensed material, but shall be exempt from the other requirements of R313-15 and R313-18;

(xi) shall respond to written requests from the Director to provide information relating to the general license within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information within the allotted time, it shall, within that same time period, request a longer period to supply the information by submitting a letter to the Director and provide written justification as to why it cannot comply;

(xii) shall appoint an individual responsible for having knowledge of the appropriate regulations and requirements and the authority for taking required actions to comply with appropriate regulations and requirements. The general licensee, through this individual, shall ensure the day-to-day compliance with appropriate regulations and requirements. This appointment does not relieve the general licensee of any of its responsibility in this regard;

(xiii)(A) shall register, in accordance with R313-21-22(4)(c)(xiii)(B) and (C), devices containing at least 370 megabecquerel (ten mCi) of cesium-137, 3.7 megabecquerel (0.1 mCi) of strontium-90, 37 megabecquerel (one mCi) of cobalt-60, 3.7 megabecquerel (0.1 mCi) of radium-226, or 37 megabecquerel (one mCi) of americium-241 or any other transuranic, (elements with atomic number greater than uranium-92), based on the activity indicated on the label. Each address for a location of use, as described under R313-21-22(4)(c)(xiii)(C)(IV) represents a separate general licensee and requires a separate registration and fee;

(B) if in possession of a device meeting the criteria of R313-21-22(4)(c)(xiii)(A), shall register these devices annually with the Director and shall pay the fee required by R313-70. Registration shall include verifying, correcting, or adding, as appropriate, to the information provided in a request for registration received from the Director. The registration information must be submitted to the Director within 30 days of the date of the request for registration or as otherwise indicated in the request. In addition, a general licensee holding devices meeting the criteria of R313-21-22(4)(c)(xiii)(A) is subject to the bankruptcy notification requirement in R313-19-34(5) and (6);

(C) in registering devices, the general licensee shall furnish the following information and any other information specifically requested by the Director:

(I) name and mailing address of the general licensee;

(II) information about each device: the manufacturer or initial transferor, model number, serial number, the radioisotope and activity as indicated on the label;

(III) name, title, and telephone number of the responsible person designated as a representative of the general licensee under R313-21-22(4)(c)(xii);

(IV) address or location at which the device(s) are used, stored, or both. For portable devices, the address of the primary place of storage;

(V) certification by the responsible representative of the general licensee that the information concerning the device(s) has been verified through a physical inventory and checking of label information; and

(VI) certification by the responsible representative of the general licensee that they are aware of the requirements of the general license; and

(D) persons generally licensed by the Nuclear Regulatory Commission, an Agreement State, or Licensing State with respect to devices meeting the criteria in R313-21-22(4)(c)(xiii)(A) are not subject to registration requirements if the devices are used in areas subject to Division jurisdiction for a period less than 180 days in any calendar year. The Director will not request registration information from such licensees;

(xiv) shall report changes to the mailing address for the location of use, including changes in the name of a general licensee, to the Director within 30 days of the effective date of the change. For a portable device, a report of address change is only required for a change in the device's primary place of storage; and

(xv) may not hold devices that are not in use for longer than 2 years. If devices with shutters are not being used, the shutter must be locked in the closed position. The testing required by R313-21-22(4)(c)(ii) need not be performed during the period of storage only. However, when devices are put back into service or transferred to another person, and have not been tested within the required test interval, they must be tested for leakage before use or transfer and the shutter tested before use. Devices kept in standby for future use are excluded from the two-year time limit if the general licensee performs quarterly physical inventories of these devices while they are in standby.

(d) The general license in R313-21-22(4)(a) does not authorize the manufacture or import of devices containing radioactive material.

(e) The general license provided in R313-21-22(4)(a) is subject to the provisions of R313-12-51 through R313-12-53, R313-12-70, R313-14, R313-19-34, R313-19-41, R313-19-61, and R313-19-100.

(5) Luminous safety devices for aircraft.

(a) A general license is hereby issued to own, receive, acquire, possess and use tritium or promethium-147 contained in luminous safety devices for use in aircraft, provided:

(i) each device contains not more than 370.0 gigabecquerel (10 Ci) of tritium or 11.1 gigabecquerel (300 mCi) of promethium-147; and

(ii) each device has been manufactured, assembled or initially transferred in accordance with a specific license issued by the Nuclear Regulatory Commission or an Agreement State, or each device has been manufactured or assembled in accordance with the specifications contained in a specific license issued by the Director or an Agreement State to the manufacturer or assembler of the device pursuant to licensing requirements equivalent to those in R313-22-75(5).

(b) Persons who own, receive, acquire, possess or use luminous safety devices pursuant to the general license in R313-21-22(5) are exempt from the requirements of R313-15 and R313-18, except that they shall comply with the provisions of R313-15-1201 and R313-15-1202.

(c) This general license does not authorize the manufacture, assembly, repair, or import of luminous safety devices containing tritium or promethium-147.

(d) This general license does not authorize the export of luminous safety devices containing tritium or promethium-147.

(e) This general license does not authorize the ownership, receipt, acquisition, possession or use of promethium-147 contained in instrument dials.

(f) This general license is subject to the provisions of R313-12-51 through R313-12-70, R313-14, R313-19-34, R313-19-41, R313-19-61, and R313-19-100.

(6) Ownership of radioactive material. A general license is hereby issued to own radioactive material without regard to quantity. Notwithstanding any other provisions of R313-21, this general license does not authorize the manufacture, production, transfer, receipt, possession, use, import, or export of radioactive material except as authorized in a specific license.

(7) Calibration and reference sources.

(a) A general license is hereby issued to own, receive, acquire, possess, use and transfer, in the form of calibration or reference sources, americium-241, plutonium or radium-226 in accordance with the provisions of Subsections R313-21-22(7)(b) and (c), to a person who holds a specific license issued by the Director which authorizes that person to receive, possess, use and transfer radioactive material.

(b) The general license in Subsection R313-21-22(7)(a) applies only to calibration or reference sources which have been manufactured or initially transferred in accordance with the specifications contained in a specific license issued by the Nuclear Regulatory Commission pursuant to 10 CFR 32.57 or 10 CFR 70.39 or which have been manufactured in accordance with the specifications contained in a specific license issued to the manufacturer by the Director, or an Agreement State which authorizes manufacture of the sources for distribution to persons generally licensed, or in accordance with a specific license issued by a State with requirements equivalent to 10 CFR 32.57 or 10 CFR 70.39.

(c) The general license provided in Subsection R313-21-22(7)(a) is subject to the provisions of Sections R313-12-51 through R313-12-53, R313-12-70, and Rules R313-14, R313-19-34, R313-19-41, R313-19-61, R313-19-100, R313-15 and R313-18. In addition, persons who own, receive, acquire, possess, use or transfer one or more calibration or reference sources pursuant to the general license in Subsection R313-21-22(7)(a):

(i) shall not possess at any one time, at any one location of storage or use, more than 185.0 kilobecquerel (5 uCi) of americium-241, 185.0 kilobecquerel (5 uCi) of plutonium, or 185.0 kilobecquerel (5 uCi) of radium-226 in such sources;

(ii) shall not receive, possess, use or transfer a source unless the source, or the storage container, bears a label which includes one of the following statements or a substantially similar statement which contains the information called for in the following statement:

The receipt, possession, use and transfer of this source, Model No., Serial No., are subject to a general license and the regulations of the United States Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority. Do not remove this label.

CAUTION - RADIOACTIVE MATERIAL
THIS SOURCE CONTAINS (AMERICIUM-241)(PLUTONIUM)(RADIUM-226)*
DO NOT TOUCH RADIOACTIVE PORTION OF THIS SOURCE.

.....
Typed or printed name of the manufacturer or initial transferor

NOTE: *Show the name of the appropriate material.

(iii) shall not transfer, abandon, or dispose of a source except by transfer to a person authorized by a license issued by the Director, the Nuclear Regulatory Commission, or an Agreement State to receive the source;

(iv) shall store a source, except when the source is being

used, in a closed container adequately designed and constructed to contain americium-241, plutonium, or radium-226 which might otherwise escape during storage; and

(v) shall not use a source for any purpose other than the calibration of radiation detectors or the standardization of other sources.

(d) A general license issued pursuant to Subsection R313-21-22(7)(a) does not authorize the manufacture, import, or export of calibration or reference sources containing americium-241, plutonium, or radium-226.

(8) RESERVED.

(9) General license for use of radioactive material for certain in vitro clinical or laboratory testing.*

NOTE: *The New Drug provisions of the Federal Food, Drug and Cosmetic Act also govern the availability and use of any specific diagnostic drug in interstate commerce.

(a) A general license is hereby issued to any physician, veterinarian in the practice of veterinary medicine, clinical laboratory or hospital to receive, acquire, possess, transfer or use, for the following stated tests, in accordance with the provisions of R313-21-22(9) (b), (c), (d), (e), and (f) the following radioactive materials in prepackaged units for use in in-vitro clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation therefrom, to human beings or animals:

(i) iodine-125, in units not exceeding 370.0 kilobecquerel (10 uCi) each;

(ii) iodine-131, in units not exceeding 370.0 kilobecquerel (10 uCi) each;

(iii) carbon-14, in units not exceeding 370.0 kilobecquerel (10 uCi) each;

(iv) hydrogen-3 (tritium), in units not exceeding 1.85 megabecquerel (50 uCi) each;

(v) iron-59, in units not exceeding 740.0 kilobecquerel (20 uCi) each;

(vi) cobalt-57, in units not exceeding 370.0 kilobecquerel (10 uCi) each;

(vii) selenium-75, in units not to exceed 370.0 kilobecquerel (10 uCi) each; or

(viii) mock iodine-125, reference or calibration sources, in units not exceeding 1.85 kilobecquerel (0.05 uCi) of iodine-129 and 185.0 becquerel (0.005 uCi) of americium-241 each.

(b) A person shall not receive, acquire, possess, use or transfer radioactive material pursuant to the general license established by R313-21-22(9)(a) until that person has filed form DRC-07, "Registration Form-In Vitro Testing with Radioactive Material Under General License," with the Director and received a Certificate of Registration signed by the Director, or until that person has been authorized pursuant to R313-32 to use radioactive material under the general license in R313-21-22(9). The physician, veterinarian, clinical laboratory or hospital shall furnish on form DRC-07 the following information and other information as may be required by that form:

(i) name and address of the physician, veterinarian, clinical laboratory or hospital;

(ii) the location of use; and

(iii) a statement that the physician, veterinarian, clinical laboratory or hospital has appropriate radiation measuring instruments to carry out in vitro clinical or laboratory tests with radioactive material as authorized under the general license in Subsection R313-21-22(9)(a) and that the tests will be performed only by personnel competent in the use of radiation measuring instruments and in the handling of the radioactive material.

(c) A person who receives, acquires, possesses or uses radioactive material pursuant to the general license established by Subsection R313-21-22(9)(a) shall comply with the following:

(i) The general licensee shall not possess at any one time,

pursuant to the general license in Subsection R313-21-22(9)(a) at any one location of storage or use, a total amount of iodine-125, iodine-131, selenium-75, iron-59, cobalt-57, or any combination, in excess of 7.4 megabecquerel (200 uCi).

(ii) The general licensee shall store the radioactive material, until used, in the original shipping container or in a container providing equivalent radiation protection.

(iii) The general licensee shall use the radioactive material only for the uses authorized by Subsection R313-21-22(9)(a).

(iv) The general licensee shall not transfer the radioactive material except to a person authorized to receive it pursuant to a license issued by the Director, the Nuclear Regulatory Commission, an Agreement State or Licensing State, nor transfer the radioactive material in a manner other than in the unopened, labeled shipping container as received from the supplier.

(v) The general licensee shall dispose of the Mock Iodine-125 reference or calibration sources described in Subsection R313-21-22(9)(a)(viii) as required by Section R313-15-1001.

(vi) The general licensee shall pay annual fees pursuant to Rule R313-70.

(d) The general licensee shall not receive, acquire, possess, or use radioactive material pursuant to Subsection R313-21-22(9)(a):

(i) Except as prepackaged units which are labeled in accordance with the provision of a specific license issued pursuant to R313-22-75(7) or in accordance with the provisions of a specific license issued by the Nuclear Regulatory Commission, or an Agreement State, or before November 30, 2007, in accordance with the provisions of a specific license issued by a State with comparable provisions to 10 CFR 32.71 (2010) which authorizes the manufacture and distribution of iodine-125, iodine-131, carbon-14, hydrogen-3(tritium), iron-59, selenium-75, cobalt-57, or Mock Iodine-125 to persons generally licensed under Subsection R313-21-22(9) or its equivalent, and

(ii) Unless the following statement, or a substantially similar statement which contains the information called for in the following statement, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:

"This radioactive material shall be received, acquired, possessed and used only by physicians, veterinarians in the practice of veterinary medicine, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation therefrom, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of the United States Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority.

.....
Name of Manufacturer"

(e) The physician, veterinarian, clinical laboratory or hospital possessing or using radioactive material under the general license in Subsection R313-21-22(9)(a) shall report in writing to the Director, changes in the information previously furnished in the "Registration Form-In Vitro Testing with Radioactive Material Under General License", form DRC -07. The report shall be furnished within 30 days after the effective date of the change.

(f) Any person using radioactive material pursuant to the general license of Subsection R313-21-22(9)(a) is exempt from the requirements of Rules R313-15 and R313-18 with respect to radioactive material covered by that general license, except that persons using the Mock Iodine-125 described in Subsection R313-21-22(9)(a)(viii) shall comply with the provisions of Sections R313-15-1001, R313-15-1201 and R313-15-1202.

(10) Ice Detection Devices.

(a) A general license is hereby issued to own, receive, acquire, possess, use and transfer strontium-90 contained in ice detection devices, provided each device contains not more than 1.85 megabecquerel (50 uCi) of strontium-90 and each device has been manufactured or initially transferred in accordance with a specific license issued by the Nuclear Regulatory Commission, or each device has been manufactured in accordance with the specifications contained in a specific license issued by the Director, an Agreement State, or a Licensing State to the manufacturer of the device pursuant to licensing requirements equivalent to those in 10 CFR 32.61.

(b) Persons who own, receive, acquire, possess, use or transfer strontium-90 contained in ice detection devices pursuant to the general license in Subsection R313-21-22(10)(a):

(i) shall, upon occurrence of visually observable damage, such as a bend or crack or discoloration from over-heating to the device, discontinue use of the device until it has been inspected, tested for leakage and repaired by a person holding a specific license from the Director, the Nuclear Regulatory Commission, an Agreement State, or a Licensing State to manufacture or service the device; or shall dispose of the device pursuant to the provisions of Section R313-15-1001;

(ii) shall assure that all labels affixed to the device at the time of receipt, and which bear a statement which prohibits removal of the labels, are maintained thereon; and

(iii) are exempt from the requirements of Rules R313-15 and R313-18 except that the persons shall comply with the provisions of Sections R313-15-1001, R313-15-1201 and R313-15-1202.

(c) This general license does not authorize the manufacture, assembly, disassembly, repair, or import of strontium-90 in ice detection devices.

(d) This general license is subject to the provision of Sections R313-12-51 through R313-12-53, R313-12-70, R313-14, R313-19-34, R313-19-41, R313-19-61, and R313-19-100 of these rules.

KEY: radioactive materials, general licenses, source materials

August 26, 2015

19-3-104

Notice of Continuation October 4, 2013

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-22. Specific Licenses.

R313-22-1. Purpose and Authority.

(1) The purpose of this rule is to prescribe the requirements for the issuance of specific licenses.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

R313-22-2. General.

The provisions and requirements of Rule R313-22 are in addition to, and not in substitution for, other requirements of these rules. In particular the provisions of Rule R313-19 apply to applications and licenses subject to Rule R313-22.

R313-22-4. Definitions.

"Alert" means events may occur, are in progress, or have occurred that could lead to a release of radioactive material but that the release is not expected to require a response by off-site response organizations to protect persons off-site.

"Nationally tracked source" is a sealed source containing a quantity equal to or greater than Category 1 or Category 2 levels of any radioactive material listed in Appendix E of 10 CFR 20.1001 to 20.2402 (2010), which is incorporated by reference. In this context a sealed source is defined as radioactive material that is sealed in a capsule or closely bonded, in a solid form and which is not exempt from regulatory control. It does not mean material encapsulated solely for disposal, or nuclear material contained in any fuel assembly, subassembly, fuel rod, or fuel pellet. Category 1 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the Category 1 threshold. Category 2 nationally tracked sources are those containing radioactive material at a quantity equal to or greater than the Category 2 threshold but less than the Category 1 threshold.

"Principal activities" means activities authorized by the license which are essential to achieving the purpose(s) for which the license was issued or amended. Storage during which no licensed material is accessed for use or disposal and activities incidental to decontamination or decommissioning are not principal activities.

"Site Area Emergency" means events may occur, are in progress, or have occurred that could lead to a significant release of radioactive material and that could require a response by off-site response organizations to protect persons off-site.

R313-22-30. Specific License by Rule.

A license by rule is issued in the following circumstances, without the necessity of filing an application for a specific license as required by Subsection R313-22-32(1), and the licensee shall be subject to the applicable provisions of Sections R313-22-33, R313-22-34, R313-22-35, R313-22-36 and R313-22-37:

(1) When a site must be timely remediated of contamination by radioactive materials that are subject to licensing under these rules but are unlicensed;

(2) When radioactive materials existing as a result of improper handling, spillage, accidental contamination, or unregulated or illegal possession, transfer, or receipt, must be stored and those materials have not been licensed under these rules.

R313-22-32. Filing Application for Specific Licenses.

(1) Applications for specific licenses shall be filed on a form prescribed by the Director.

(2) The Director may, after the filing of the original application, and before the expiration of the license, require further statements in order to enable the Director to determine whether the application should be granted or denied or whether

a license should be modified or revoked.

(3) Applications shall be signed by the applicant or licensee or a person duly authorized to act for and on the applicant's behalf.

(4) An application for a license may include a request for a license authorizing one or more activities.

(5) In the application, the applicant may incorporate by reference information contained in previous applications, statements, or reports filed with the Director, provided the references are clear and specific.

(6)(i) Except as provided in R313-22 (6)(ii), (iii) or (iv) of this section, an application for a specific license to use byproduct material in the form of a sealed source or in a device that contains the sealed source must either---

(A) Identify the source or device by manufacturer and model number as registered with the sealed source and device registry under R313-22-210; or

(B) Contain the information identified in R313-22-210.

(ii) For sources or devices manufactured before October 23, 2012 that are not registered with sealed source and device registry under R313-22-210 and for which the applicant is unable to provide all categories of information specified in R313-22-210, the application must include:

(A) All available information identified in R313-22-210 concerning the source, and, if applicable, the device; and

(B) Sufficient additional information to demonstrate that there is reasonable assurance that the radiation safety properties of the source or device are adequate to protect health and minimize danger to life and property. Such information must include a description of the source or device, a description of radiation safety features, the intended use and associated operating experience, and the results of a recent leak test.

(iii) For sealed sources and devices allowed to be distributed without registration of safety information in accordance with 10 CFR 32.210(g)(1) (2015), the applicant may supply only the manufacturer, model number, and radionuclide and quantity.

(iv) If it is not feasible to identify each sealed source and device individually, the applicant may propose constraints on the number and type of sealed sources and devices to be used and the conditions under which they will be used, in lieu of identifying each sealed source and device.

(7) As provided by Section R313-22-35, certain applications for specific licenses filed under these rules shall contain a proposed decommissioning funding plan or a certification of financial assurance for decommissioning. In the case of renewal applications submitted before January 1, 1995, this submittal may follow the renewal application but shall be submitted on or before January 1, 1995.

(8)(a) Applications to possess radioactive materials in unsealed form, on foils or plated sources, or sealed in glass in excess of the quantities in Section R313-22-90, "Quantities of Radioactive Materials Requiring Consideration of the Need for an Emergency Plan for Responding to a Release", shall contain either:

(i) An evaluation showing that the maximum dose to a individual off-site due to a release of radioactive materials would not exceed one rem effective dose equivalent or five rems to the thyroid; or

(ii) An emergency plan for responding to a release of radioactive material.

(b) One or more of the following factors may be used to support an evaluation submitted under Subsection R313-22-32(8)(a)(i):

(i) The radioactive material is physically separated so that only a portion could be involved in an accident;

(ii) All or part of the radioactive material is not subject to release during an accident because of the way it is stored or packaged;

(iii) The release fraction in the respirable size range would be lower than the release fraction shown in Section R313-22-90 due to the chemical or physical form of the material;

(iv) The solubility of the radioactive material would reduce the dose received;

(v) Facility design or engineered safety features in the facility would cause the release fraction to be lower than shown in Section R313-22-90;

(vi) Operating restrictions or procedures would prevent a release fraction as large as that shown in Section R313-22-90; or

(vii) Other factors appropriate for the specific facility.

(c) An emergency plan for responding to a release of radioactive material submitted under Subsection R313-22-32(8)(a)(ii) shall include the following information:

(i) Facility description. A brief description of the licensee's facility and area near the site.

(ii) Types of accidents. An identification of each type of radioactive materials accident for which protective actions may be needed.

(iii) Classification of accidents. A classification system for classifying accidents as alerts or site area emergencies.

(iv) Detection of accidents. Identification of the means of detecting each type of accident in a timely manner.

(v) Mitigation of consequences. A brief description of the means and equipment for mitigating the consequences of each type of accident, including those provided to protect workers on-site, and a description of the program for maintaining equipment.

(vi) Assessment of releases. A brief description of the methods and equipment to assess releases of radioactive materials.

(vii) Responsibilities. A brief description of the responsibilities of licensee personnel should an accident occur, including identification of personnel responsible for promptly notifying off-site response organizations and the Director; also responsibilities for developing, maintaining, and updating the plan.

(viii) Notification and coordination. A commitment to and a brief description of the means to promptly notify off-site response organizations and request off-site assistance, including medical assistance for the treatment of contaminated injured on-site workers when appropriate. A control point shall be established. The notification and coordination shall be planned so that unavailability of some personnel, parts of the facility, and some equipment will not prevent the notification and coordination. The licensee shall also commit to notify the Director immediately after notification of the appropriate off-site response organizations and not later than one hour after the licensee declares an emergency.

NOTE: These reporting requirements do not supersede or release licensees of complying with the requirements under the Emergency Planning and Community Right-to-Know Act of 1986, Title III, Public Law 99-499 or other state or federal reporting requirements, including 40 CFR 302, 2010.

(ix) Information to be communicated. A brief description of the types of information on facility status, radioactive releases, and recommended protective actions, if necessary, to be given to off-site response organizations and to the Director.

(x) Training. A brief description of the frequency, performance objectives and plans for the training that the licensee will provide workers on how to respond to an emergency including special instructions and orientation tours the licensee would offer to fire, police, medical and other emergency personnel. The training shall familiarize personnel with site-specific emergency procedures. Also, the training shall thoroughly prepare site personnel for their responsibilities in the event of accident scenarios postulated as most probable for the specific site including the use of team training for the scenarios.

(xi) Safe shutdown. A brief description of the means of restoring the facility to a safe condition after an accident.

(xii) Exercises. Provisions for conducting quarterly communications checks with off-site response organizations and biennial on-site exercises to test response to simulated emergencies. Quarterly communications checks with off-site response organizations shall include the check and update of all necessary telephone numbers. The licensee shall invite off-site response organizations to participate in the biennial exercises. Participation of off-site response organizations in biennial exercises although recommended is not required. Exercises shall use accident scenarios postulated as most probable for the specific site and the scenarios shall not be known to most exercise participants. The licensee shall critique each exercise using individuals not having direct implementation responsibility for the plan. Critiques of exercises shall evaluate the appropriateness of the plan, emergency procedures, facilities, equipment, training of personnel, and overall effectiveness of the response. Deficiencies found by the critiques shall be corrected.

(xiii) Hazardous chemicals. A certification that the applicant has met its responsibilities under the Emergency Planning and Community Right-to-Know Act of 1986, Title III, Public Law 99-499, if applicable to the applicant's activities at the proposed place of use of the radioactive material.

(d) The licensee shall allow the off-site response organizations expected to respond in case of an accident 60 days to comment on the licensee's emergency plan before submitting it to the Director. The licensee shall provide any comments received within the 60 days to the Director with the emergency plan.

(9) An application from a medical facility, educational institution, or Federal facility to produce Positron Emission Tomography (PET) radioactive drugs for non-commercial transfer to licensees in its consortium authorized for medical use under Rule R313-32 shall include:

(a) A request for authorization for the production of PET radionuclides or evidence of an existing license issued pursuant to 10 CFR Part 30 or equivalent Agreement State requirements for a PET radionuclide production facility within its consortium from which it receives PET radionuclides.

(b) Evidence that the applicant is qualified to produce radioactive drugs for medical use by meeting one of the criteria in Subsection R313-22-75(9)(a)(ii).

(c) Identification of the individual(s) authorized to prepare the PET radioactive drugs if the applicant is a pharmacy, and documentation that each individual meets the requirements of an authorized nuclear pharmacist as specified in Rule R313-32.

(d) Information identified in Subsection R313-22-75(9)(a)(iii) on the PET drugs to be noncommercially transferred to members of its consortium.

R313-22-33. General Requirements for the Issuance of Specific Licenses.

(1) A license application shall be approved if the Director determines that:

(a) the applicant and all personnel who will be handling the radioactive material are qualified by reason of training and experience to use the material in question for the purpose requested in accordance with these rules in a manner as to minimize danger to public health and safety or the environment;

(b) the applicant's proposed equipment, facilities, and procedures are adequate to minimize danger to public health and safety or the environment;

(c) the applicant's facilities are permanently located in Utah, otherwise the applicant shall seek reciprocal recognition as required by Section R313-19-30;

(d) the issuance of the license will not be inimical to the health and safety of the public;

(e) the applicant satisfies applicable special requirements in Sections R313-22-50 and R313-22-75, and Rules R313-24, R313-25, R313-32, R313-34, R313-36, or R313-38; and

(f) in the case of an application for a license to receive and possess radioactive material for commercial waste disposal by land burial, or for the conduct of other activities which the Director determines will significantly affect the quality of the environment, the Director, before commencement of construction of the plant or facility in which the activity will be conducted, has concluded, after weighing the environmental, economic, technical and other benefits against environmental costs and considering available alternatives, that the action called for is the issuance of the proposed license, with any appropriate conditions to protect environmental values. The Director shall respond to the application within 60 days. Commencement of construction prior to a response and conclusion shall be grounds for denial of a license to receive and possess radioactive material in the plant or facility.

R313-22-34. Issuance of Specific Licenses.

(1) Upon a determination that an application meets the requirements of the Act and the rules of the Board, the Director will issue a specific license authorizing the proposed activity in a form and containing conditions and limitations as the Director deems appropriate or necessary.

(a) Specific licenses for a new license application shall have an expiration date five years from the end of the month in which it is issued.

(b) Specific licenses for a renewed license shall expire ten years after the expiration date of the previous version of the license.

(c) Notwithstanding R313-22-34(1)(b), if during the review of the license renewal application, the Director determines issues that need to be reassessed sooner than the ten year renewal interval, the Director may shorten the renewal interval on a case by case basis. Examples of issues that may result in a shortened renewal interval includes new technologies, new company management, poor regulatory compliance, or other situations that would warrant increased attention.

(2) The Director may incorporate in licenses at the time of issuance, additional requirements and conditions with respect to the licensee's receipt, possession, use and transfer of radioactive material subject to Rule R313-22 as the Director deems appropriate or necessary in order to:

(a) minimize danger to public health and safety or the environment;

(b) require reports and the keeping of records, and to provide for inspections of activities under the license as may be appropriate or necessary; and

(c) prevent loss or theft of material subject to Rule R313-22.

R313-22-35. Financial Assurance and Recordkeeping for Decommissioning.

(1)(a) Applicants for a specific license authorizing the possession and use of unsealed radioactive material of half-life greater than 120 days and in quantities exceeding 10^5 times the applicable quantities set forth in Appendix B of 10 CFR 30.1 through 30.72, 2010, which is incorporated by reference, shall submit a decommissioning funding plan as described in Subsection R313-22-35(5). The decommissioning funding plan shall also be submitted when a combination of radionuclides is involved if R divided by 10^5 is greater than one, where R is defined here as the sum of the ratios of the quantity of each radionuclide to the applicable value in Appendix B of 10 CFR 30.1 through 30.72, 2010, which is incorporated by reference.

(b) Holders of, or applicants for, a specific license authorizing the possession and use of sealed sources or plated foils of half-life greater than 120 days and in quantities

exceeding 10^{12} times the applicable quantities set forth in Appendix B of 10 CFR 30.1 through 30.72, 2010, which is incorporated by reference, or when a combination of isotopes is involved if R , as defined in Subsection R313-22-35(1)(a), divided by 10^{12} is greater than one, shall submit a decommissioning funding plan as described in Subsection R313-22-35(5).

(c) Applicants for a specific license authorizing the possession and use of more than 100 mCi of source material in a readily dispersible form shall submit a decommissioning funding plan as described in Subsection R313-22-35(5).

(2) Applicants for a specific license authorizing possession and use of radioactive material of half-life greater than 120 days and in quantities specified in Subsection R313-22-35(4), or authorizing the possession and use of source material greater than 10 mCi but less than or equal to 100 mCi in a readily dispersible form shall either:

(a) submit a decommissioning funding plan as described in Subsection R313-22-35(5); or

(b) submit a certification that financial assurance for decommissioning has been provided in the amount prescribed by Subsection R313-22-35(4) using one of the methods described in Subsection R313-22-35(6). Applicants for a specific license authorizing the possession and use of source material in a readily dispersible form shall submit a certification that financial assurance for decommissioning has been provided in the amount of \$225,000 by October 20, 2007. For an applicant subject to this subsection, this certification may state that the appropriate assurance will be obtained after the application has been approved and the license issued but before the receipt of licensed material. If the applicant defers execution of the financial instrument until after the license has been issued, a signed original of the financial instrument obtained to satisfy the requirements of Subsection R313-22-35(6) shall be submitted to the Director before receipt of licensed material. If the applicant does not defer execution of the financial instrument, the applicant shall submit to the Director, as part of the certification, a signed original of the financial instrument obtained to satisfy the requirements in Subsection R313-22-35(6).

(3)(a) Holders of a specific license issued on or after October 20, 2006, which is of a type described in Subsections R313-22-35(1) or (2), shall provide financial assurance for decommissioning in accordance with the criteria set forth in Section R313-22-35.

(b) Holders of a specific license issued before October 20, 2006, and of a type described in Subsection R313-22-35(1), shall submit by October 20, 2007, a decommissioning funding plan as described in Subsection R313-22-35(5) or a certification of financial assurance for decommissioning in an amount at least equal to \$1,125,000 in accordance with the criteria set forth in Section R313-22-35. If the licensee submits the certification of financial assurance rather than a decommissioning funding plan, the licensee shall include a decommissioning funding plan in any application for license renewal.

(c) Holders of a specific license issued before October 20, 2006, and of a type described in Subsection R313-22-35(2), shall submit by October 20, 2007, a decommissioning funding plan as described in Subsection R313-22-35(5) or a certification of financial assurance for decommissioning in accordance with the criteria set forth in Section R313-22-35.

(d) A licensee who has submitted an application before October 20, 2006, for renewal of license in accordance with Section R313-22-37, shall provide financial assurance for decommissioning in accordance with Subsections R313-22-35(1) and (2).

(e) Waste collectors and waste processors, as defined in Appendix G of 10 CFR 20.1001 to 20.2402, 2010, which is

incorporated by reference, shall provide financial assurance in an amount based on a decommissioning funding plan as described in Subsection R313-22-35(5). The decommissioning funding plan shall include the cost of disposal of the maximum amount (curies) of radioactive material permitted by the license, and the cost of disposal of the maximum quantity, by volume, of radioactive material which could be present at the licensee's facility at any time, in addition to the cost to remediate the licensee's site to meet the license termination criteria of Rule R313-15.

(f) Holders of a specific license issued prior to October 20, 2006, which is of a type described in Subsections R313-22-35(1), (2), or (3)(g), shall submit a decommissioning funding plan to the Director on or before October 20, 2007. Holders of a specific license issued on or after October 20, 2006, which is of a type described in Subsections R313-22-35(1), (2), or (3)(g), shall submit a decommissioning funding plan to the Director as a part of the license application.

(g) Applicants for a specific license authorizing the possession and use of radioactive materials in sufficient quantities that require financial assurance and recordkeeping for decommissioning under Section R313-22-35 shall assure that all documents submitted to the Director for the purpose of demonstrating compliance with financial assurance and recordkeeping requirements meet the applicable criteria contained in the Nuclear Regulatory Commission's document NUREG-1757, Volume 3, "Consolidated NMSS Decommissioning Guidance: Financial Assurance, Recordkeeping, and Timeliness" (9/2003).

(h) Documents provided to the Director under Subsection R313-22-35(3)(g) shall provide that legal remedies be sought in a court of appropriate jurisdiction within Utah.

(4) Table of required amounts of financial assurance for decommissioning by quantity of material. Licensees required to submit an amount of financial assurance listed in this table must do so during a license application or as part of an amendment to an existing license. Licensees having possession limits exceeding the upper bounds of this table must base financial assurance on a decommissioning funding plan.

TABLE

<p>Greater than 10^4 but less than or equal to 10^5 times the applicable quantities of radioactive material, as defined in Appendix B of 10 CFR 30.1 through 30.72 (2010) which is incorporated by reference, in unsealed form. For a combination of radionuclides, if R, as defined in Subsection R313-22-35(1)(a) divided by 10^4 is greater than one but R divided by 10^5 is less than or equal to one:</p>	<p>\$1,125,000</p>
<p>Greater than 10^3 but less than or equal to 10^4 times the applicable quantities of radioactive material, as defined in Appendix B of 10 CFR 30.1 through 30.72 (2010) which is incorporated by reference, in unsealed form. For a combination of radionuclides, if R, as defined in Subsection R313-22-35(1)(a) divided by 10^3 is greater than one but R divided by 10^4 is less than or equal to one:</p>	<p>\$225,000</p>
<p>Greater than 10^{10} but less than or equal to 10^{12} times the applicable quantities of radioactive material, as defined in Appendix B of 10 CFR 30.1 through 30.72 (2010) which is incorporated by reference, in sealed sources or plated foils. For combination of radionuclides, if R, as defined in R313-22-35(1)(a), divided by 10^{10} is greater than one, but R divided by 10^{12} is less than or equal to one:</p>	<p>\$113,000</p>

(5) A decommissioning funding plan shall contain a cost

estimate for decommissioning and a description of the method of assuring funds for decommissioning from Subsection R313-22-35(6), including means for adjusting cost estimates and associated funding levels periodically over the life of the facility. Cost estimates shall be adjusted at intervals not to exceed 3 years. The decommissioning funding plan shall also contain a certification by the licensee that financial assurance for decommissioning has been provided in the amount of the cost estimate for decommissioning and a signed original of the financial instrument obtained to satisfy the requirements of Subsection R313-22-35(6).

(6) Financial assurance for decommissioning shall be provided by one or more of the following methods:

(a) Prepayment. Prepayment is the deposit prior to the start of operation into an account segregated from licensee assets and outside the licensee's administrative control of cash or liquid assets so that the amount of funds would be sufficient to pay decommissioning costs. Prepayment may be in the form of a trust, escrow account, government fund, certificate of deposit, or deposit of government securities;

(b) A surety method, insurance, or other guarantee method. These methods shall guarantee that decommissioning costs will be paid. A surety method may be in the form of a surety bond, letter of credit, or line of credit. A parent company guarantee of funds for decommissioning costs based on a financial test may be used if the guarantee and test are as contained in Subsection R313-22-35(8). A parent company guarantee may not be used in combination with other financial methods to satisfy the requirements of Section R313-22-35. A guarantee of funds by the applicant or licensee for decommissioning costs based on a financial test may be used if the guarantee and test are as contained in Subsection R313-22-35(9). A guarantee by the applicant or licensee may not be used in combination with any other financial methods to satisfy the requirements of Section R313-22-35 or in any situation where the applicant or licensee has a parent company holding majority control of the voting stock of the company. A surety method or insurance used to provide financial assurance for decommissioning shall contain the following conditions:

(i) the surety method or insurance shall be open-ended or, if written for a specified term, such as five years, shall be renewed automatically unless 90 days or more prior to the renewal date the issuer notifies the Director, the beneficiary, and the licensee of its intention not to renew. The surety method or insurance shall also provide that the full face amount be paid to the beneficiary automatically prior to the expiration without proof of forfeiture if the licensee fails to provide a replacement acceptable to the Director within 30 days after receipt of notification of cancellation,

(ii) the surety method or insurance shall be payable to a trust established for decommissioning costs. The trustee and trust shall be acceptable to the Director. An acceptable trustee includes an appropriate state or federal government agency or an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency, and

(iii) the surety method or insurance shall remain in effect until the Director has terminated the license;

(c) An external sinking fund in which deposits are made at least annually, coupled with a surety method or insurance, the value of which may decrease by the amount being accumulated in the sinking fund. An external sinking fund is a fund established and maintained by setting aside funds periodically in an account segregated from licensee assets and outside the licensee's administrative control in which the total amount of funds would be sufficient to pay decommissioning costs at the time termination of operation is expected. An external sinking fund may be in the form of a trust, escrow account, government fund, certificate of deposit, or deposit of government securities.

The surety or insurance provisions shall be as stated in Subsection R313-22-35(6)(b);

(d) In the case of Federal, State or local government licensees, a statement of intent containing a cost estimate for decommissioning or an amount based on the Table in Subsection R313-22-35(4) and indicating that funds for decommissioning will be obtained when necessary; or

(e) When a governmental entity is assuming custody and ownership of a site, an arrangement that is deemed acceptable by such governmental entity.

(7) Persons licensed under Rule R313-22 shall keep records of information important to the decommissioning of a facility in an identified location until the site is released for unrestricted use. Before licensed activities are transferred or assigned in accordance with Subsection R313-19-34(2), licensees shall transfer all records described in Subsections R313-22-35(7)(a) through (d) to the new licensee. In this case, the new licensee will be responsible for maintaining these records until the license is terminated. If records important to the decommissioning of a facility are kept for other purposes, reference to these records and their locations may be used. Information the Director considers important to decommissioning consists of the following:

(a) records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment, or site. These records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage into porous materials such as concrete. These records shall include any known information on identification of involved nuclides, quantities, forms, and concentrations;

(b) as-built drawings and modification of structures and equipment in restricted areas where radioactive materials are used or stored, and of locations of possible inaccessible contamination such as buried pipes which may be subject to contamination. If required drawings are referenced, each relevant document need not be indexed individually. If drawings are not available, the licensee shall substitute appropriate records of available information concerning these areas and locations;

(c) except for areas containing only sealed sources, provided the sources have not leaked or no contamination remains after a leak, or radioactive materials having only half-lives of less than 65 days, a list contained in a single document and updated every two years, including all of the following:

(i) all areas designated and formerly designated as restricted areas as defined under Section R313-12-3;

(ii) all areas outside of restricted areas that require documentation under Subsection R313-22-35(7)(a);

(iii) all areas outside of restricted areas where current and previous wastes have been buried as documented under Section R313-15-1109; and

(iv) all areas outside of restricted areas which contain material such that, if the license expired, the licensee would be required to either decontaminate the area to meet the criteria for decommissioning in Sections R313-15-401 through R313-15-406, or apply for approval for disposal under Section R313-15-1002; and

(d) records of the cost estimate performed for the decommissioning funding plan or of the amount certified for decommissioning, and records of the funding method used for assuring funds if either a funding plan or certification is used.

(8) Criteria relating to use of financial tests and parent company guarantees for providing reasonable assurance of funds for decommissioning.

(a) To pass the financial test referred to in Subsection R313-22-35(6)(b), the parent company shall meet one of the following criteria:

(i) The parent company shall have all of the following:

(A) Two of the following three ratios: a ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5;

(B) Net working capital and tangible net worth each at least six times the current decommissioning cost estimates, or prescribed amount if a certification is used;

(C) Tangible net worth of at least \$10 million; and

(D) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the current decommissioning cost estimates, or prescribed amount if a certification is used; or

(ii) The parent company shall have all of the following:

(A) A current rating for its most recent bond issuance of AAA, AA, A, or BBB as issued by Standard and Poor's or Aaa, Aa, A or Baa as issued by Moody's;

(B) Tangible net worth at least six times the current decommissioning cost estimate, or prescribed amount if a certification is used;

(C) Tangible net worth of at least \$10 million; and

(D) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the current decommissioning cost estimates, or prescribed amount if certification is used.

(b) The parent company's independent certified public accountant shall have compared the data used by the parent company in the financial test, which is derived from the independently audited, year end financial statements for the latest fiscal year, with the amounts in such financial statement. In connection with that procedure the licensee shall inform the Director within 90 days of any matters coming to the auditor's attention which cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test.

(c)(i) After the initial financial test, the parent company shall repeat the passage of the test within 90 days after the close of each succeeding fiscal year.

(ii) If the parent company no longer meets the requirements of Subsection R313-22-35(8)(a) the licensee shall send notice to the Director of intent to establish alternative financial assurance as specified in Section R313-22-35. The notice shall be sent by certified mail within 90 days after the end of the fiscal year for which the year end financial data show that the parent company no longer meets the financial test requirements. The licensee shall provide alternate financial assurance within 120 days after the end of such fiscal year.

(d) The terms of a parent company guarantee which an applicant or licensee obtains shall provide that:

(i) The parent company guarantee will remain in force unless the guarantor sends notice of cancellation by certified mail to the licensee and the Director. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the licensee and the Director, as evidenced by the return receipts.

(ii) If the licensee fails to provide alternate financial assurance as specified in Section R313-22-35 within 90 days after receipt by the licensee and Director of a notice of cancellation of the parent company guarantee from the guarantor, the guarantor will provide such alternative financial assurance in the name of the licensee.

(iii) The parent company guarantee and financial test provisions shall remain in effect until the Director has terminated the license.

(iv) If a trust is established for decommissioning costs, the trustee and trust shall be acceptable to the Director. An acceptable trustee includes an appropriate State or Federal Government agency or an entity which has the authority to act

as a trustee and whose trust operations are regulated and examined by a Federal or State agency.

(9) Criteria relating to use of financial tests and self guarantees for providing reasonable assurance of funds for decommissioning.

(a) To pass the financial test referred to in Subsection R313-22-35(6)(b), a company shall meet all of the following criteria:

(i) Tangible net worth at least ten times the total current decommissioning cost estimate, or the current amount required if certification is used, for all decommissioning activities for which the company is responsible as self-guaranteeing licensee and as parent-guarantor;

(ii) Assets located in the United States amounting to at least 90 percent of total assets or at least ten times the total current decommissioning cost estimate, or the current amount required if certification is used, for all decommissioning activities for which the company is responsible as self-guaranteeing licensee and as parent-guarantor; and

(iii) A current rating for its most recent bond issuance of AAA, AA, or A as issued by Standard and Poor's, or Aaa, Aa, or A as issued by Moody's.

(b) To pass the financial test, a company shall meet all of the following additional requirements:

(i) The company shall have at least one class of equity securities registered under the Securities Exchange Act of 1934;

(ii) The company's independent certified public accountant shall have compared the data used by the company in the financial test which is derived from the independently audited, yearend financial statements for the latest fiscal year, with the amounts in such financial statement. In connection with that procedure, the licensee shall inform the Director within 90 days of any matters coming to the attention of the auditor that cause the auditor to believe that the data specified in the financial test should be adjusted and that the company no longer passes the test; and

(iii) After the initial financial test, the company shall repeat passage of the test within 90 days after the close of each succeeding fiscal year.

(c) If the licensee no longer meets the requirements of Subsection R313-22-35(9)(a), the licensee shall send immediate notice to the Director of its intent to establish alternate financial assurance as specified in Section R313-22-35 within 120 days of such notice.

(d) The terms of a self-guarantee which an applicant or licensee furnishes shall provide that:

(i) The guarantee will remain in force unless the licensee sends notice of cancellation by certified mail to the Director. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by the Director, as evidenced by the return receipt.

(ii) The licensee shall provide alternative financial assurance as specified in Section R313-22-35 within 90 days following receipt by the Director of a notice of a cancellation of the guarantee.

(iii) The guarantee and financial test provisions shall remain in effect until the Director has terminated the license or until another financial assurance method acceptable to the Director has been put in effect by the licensee.

(iv) The licensee shall promptly forward to the Director and the licensee's independent auditor all reports covering the latest fiscal year filed by the licensee with the Securities and Exchange Commission pursuant to the requirements of section 13 of the Securities and Exchange Act of 1934.

(v) If, at any time, the licensee's most recent bond issuance ceases to be rated in a category of "A" or above by either Standard and Poor's or Moody's, the licensee shall provide notice in writing of such fact to the Director within 20 days after publication of the change by the rating service. If the licensee's

most recent bond issuance ceases to be rated in any category of A or above by both Standard and Poor's and Moody's, the licensee no longer meets the requirements of Subsection R313-22-35(9)(a).

(vi) The applicant or licensee shall provide to the Director a written guarantee, a written commitment by a corporate officer, which states that the licensee will fund and carry out the required decommissioning activities or, upon issuance of an order by the Director, the licensee shall set up and fund a trust in the amount of the current cost estimates for decommissioning.

R313-22-36. Expiration and Termination of Licenses and Decommissioning of Sites and Separate Buildings or Outdoor Areas.

(1) A specific license expires at the end of the day on the expiration date stated in the license unless the licensee has filed an application for renewal under Section R313-22-37 no less than 30 days before the expiration date stated in the existing license. If an application for renewal has been filed at least 30 days prior to the expiration date stated in the existing license, the existing license expires at the end of the day on which the Director makes a final determination to deny the renewal application or, if the determination states an expiration date, the expiration date stated in the determination.

(2) A specific license revoked by the Director expires at the end of the day on the date of the Director's final determination to revoke the license, or on the expiration date stated in the determination, or as otherwise provided by an Order issued by the Director.

(3) A specific license continues in effect, beyond the expiration date if necessary, with respect to possession of radioactive material until the Director notifies the licensee in writing that the license is terminated. During this time, the licensee shall:

(a) limit actions involving radioactive material to those related to decommissioning; and

(b) continue to control entry to restricted areas until they are suitable for release so that there is not an undue hazard to public health and safety or the environment.

(4) Within 60 days of the occurrence of any of the following, a licensee shall provide notification to the Director in writing of such occurrence, and either begin decommissioning its site, or any separate building or outdoor area that contains residual radioactivity so that the building or outdoor area is suitable for release so that there is not an undue hazard to public health and safety or the environment, or submit within 12 months of notification a decommissioning plan, if required by Subsection R313-22-36(7), and begin decommissioning upon approval of that plan if:

(a) the license has expired pursuant to Subsections R313-22-36(1) or (2); or

(b) the licensee has decided to permanently cease principal activities at the entire site or in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release because of an undue hazard to public health and safety or the environment; or

(c) no principal activities under the license have been conducted for a period of 24 months; or

(d) no principal activities have been conducted for a period of 24 months in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release because of an undue hazard to public health and safety or the environment.

(5) Coincident with the notification required by Subsection R313-22-36(4), the licensee shall maintain in effect all decommissioning financial assurances established by the licensee pursuant to Section R313-22-35 in conjunction with a license issuance or renewal or as required by Section R313-22-

36. The amount of the financial assurance must be increased, or may be decreased, as appropriate, to cover the detailed cost estimate for decommissioning established pursuant to Subsection R313-22-36(7)(d)(v).

(a) A licensee who has not provided financial assurance to cover the detailed cost estimate submitted with the decommissioning plan shall do so on or before August 15, 1997.

(b) Following approval of the decommissioning plan, a licensee may reduce the amount of the financial assurance as decommissioning proceeds and radiological contamination is reduced at the site with the approval of the Director.

(6) The Director may grant a request to extend the time periods established in Subsection R313-22-36(4) if the Director determines that this relief is not detrimental to the public health and safety and is otherwise in the public interest. The request must be submitted no later than 30 days before notification pursuant to Subsection R313-22-36(4). The schedule for decommissioning set forth in Subsection R313-22-36(4) may not commence until the Director has made a determination on the request.

(7)(a) A decommissioning plan shall be submitted if required by license condition or if the procedures and activities necessary to carry out decommissioning of the site or separate building or outdoor area have not been previously approved by the Director and these procedures could increase potential health and safety impacts to workers or to the public, such as in any of the following cases:

(i) procedures would involve techniques not applied routinely during cleanup or maintenance operations;

(ii) workers would be entering areas not normally occupied where surface contamination and radiation levels are significantly higher than routinely encountered during operation;

(iii) procedures could result in significantly greater airborne concentrations of radioactive materials than are present during operation; or

(iv) procedures could result in significantly greater releases of radioactive material to the environment than those associated with operation.

(b) The Director may approve an alternate schedule for submittal of a decommissioning plan required pursuant to Subsection R313-22-36(4) if the Director determines that the alternative schedule is necessary to the effective conduct of decommissioning operations and presents no undue risk from radiation to the public health and safety and is otherwise in the public interest.

(c) Procedures such as those listed in Subsection R313-22-36(7)(a) with potential health and safety impacts may not be carried out prior to approval of the decommissioning plan.

(d) The proposed decommissioning plan for the site or separate building or outdoor area must include:

(i) a description of the conditions of the site or separate building or outdoor area sufficient to evaluate the acceptability of the plan;

(ii) a description of planned decommissioning activities;

(iii) a description of methods used to ensure protection of workers and the environment against radiation hazards during decommissioning;

(iv) a description of the planned final radiation survey; and

(v) an updated detailed cost estimate for decommissioning, comparison of that estimate with present funds set aside for decommissioning, and a plan for assuring the availability of adequate funds for completion of decommissioning.

(vi) For decommissioning plans calling for completion of decommissioning later than 24 months after plan approval, the plan shall include a justification for the delay based on the criteria in Subsection R313-22-36(8).

(e) The proposed decommissioning plan will be approved by the Director if the information therein demonstrates that the

decommissioning will be completed as soon as practical and that the health and safety of workers and the public will be adequately protected.

(8)(a) Except as provided in Subsection R313-22-36(9), licensees shall complete decommissioning of the site or separate building or outdoor area as soon as practical but no later than 24 months following the initiation of decommissioning.

(b) Except as provided in Subsection R313-22-36(9), when decommissioning involves the entire site, the licensee shall request license termination as soon as practical but no later than 24 months following the initiation of decommissioning.

(9) The Director may approve a request for an alternative schedule for completion of decommissioning of the site or separate building or outdoor area, and license termination if appropriate, if the Director determines that the alternative is warranted by consideration of the following:

(a) whether it is technically feasible to complete decommissioning within the allotted 24-month period;

(b) whether sufficient waste disposal capacity is available to allow completion of decommissioning within the allotted 24-month period;

(c) whether a significant volume reduction in wastes requiring disposal will be achieved by allowing short-lived radionuclides to decay;

(d) whether a significant reduction in radiation exposure to workers can be achieved by allowing short-lived radionuclides to decay; and

(e) other site-specific factors which the Director may consider appropriate on a case-by-case basis, such as the regulatory requirements of other government agencies, lawsuits, ground-water treatment activities, monitored natural ground-water restoration, actions that could result in more environmental harm than deferred cleanup, and other factors beyond the control of the licensee.

(10) As the final step in decommissioning, the licensee shall:

(a) certify the disposition of all licensed material, including accumulated wastes, by submitting a completed Form DRC-14 or equivalent information; and

(b) conduct a radiation survey of the premises where the licensed activities were carried out and submit a report of the results of this survey, unless the licensee demonstrates in some other manner that the premises are suitable for release in accordance with the criteria for decommissioning in Sections R313-15-401 through R313-15-406. The licensee shall, as appropriate:

(i) report levels of gamma radiation in units of millisieverts (microroentgen) per hour at one meter from surfaces, and report levels of radioactivity, including alpha and beta, in units of megabecquerels (disintegrations per minute or microcuries) per 100 square centimeters--removable and fixed--for surfaces, megabecquerels (microcuries) per milliliter for water, and becquerels (picocuries) per gram for solids such as soils or concrete; and

(ii) specify the survey instrument(s) used and certify that each instrument is properly calibrated and tested.

(11) Specific licenses, including expired licenses, will be terminated by written notice to the licensee when the Director determines that:

(a) radioactive material has been properly disposed;

(b) reasonable effort has been made to eliminate residual radioactive contamination, if present; and

(c) documentation is provided to the Director that:

(i) a radiation survey has been performed which demonstrates that the premises are suitable for release in accordance with the criteria for decommissioning in Sections R313-15-401 through R313-15-406; or

(ii) other information submitted by the licensee is sufficient to demonstrate that the premises are suitable for

release in accordance with the criteria for decommissioning in Sections R313-15-401 through R313-15-406.

R313-22-37. Renewal of Licenses.

Application for renewal of a specific license shall be filed on a form prescribed by the Director and in accordance with Section R313-22-32.

R313-22-38. Amendment of Licenses at Request of Licensee.

Applications for amendment of a license shall be filed in accordance with Section R313-22-32 and shall specify the respects in which the licensee desires the license to be amended and the grounds for the amendment.

R313-22-39. Director Action on Applications to Renew or Amend.

In considering an application by a licensee to renew or amend the license, the Director will use the criteria set forth in Sections R313-22-33, R313-22-50, and R313-22-75 and in Rules R313-24, R313-25, R313-32, R313-34, R313-36, or R313-38, as applicable.

R313-22-50. Special Requirements for Specific Licenses of Broad Scope.

Authority to transfer possession or control by the manufacturer, processor, or producer of any equipment, device, commodity or other product containing byproduct material whose subsequent possession, use, transfer and disposal by all other persons who are exempted from regulatory requirements may be obtained only from the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

(1) The different types of broad licenses are set forth below:

(a) A "Type A specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of the radioactive material specified in the license, but not exceeding quantities specified in the license, for any authorized purpose. The quantities specified are usually in the multicurie range.

(b) A "Type B specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of radioactive material specified in Section R313-22-100 for any authorized purpose. The possession limit for a Type B broad license, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in Section R313-22-100, Column I. If two or more radionuclides are possessed thereunder, the possession limits are determined as follows: For each radionuclide, determine the ratio of the quantity possessed to the applicable quantity specified in Section R313-22-100, Column I, for that radionuclide. The sum of the ratios for the radionuclides possessed under the license shall not exceed unity.

(c) A "Type C specific license of broad scope" is a specific license authorizing receipt, acquisition, ownership, possession, use and transfer of any chemical or physical form of radioactive material specified in Section R313-22-100, for any authorized purpose. The possession limit for a Type C broad license, if only one radionuclide is possessed thereunder, is the quantity specified for that radionuclide in Section R313-22-100, Column II. If two or more radionuclides are possessed thereunder, the possession limits are determined as follows: For each radionuclide, determine the ratio of the quantity possessed to the applicable quantity specified in Section R313-22-100, Column II, for that radionuclide. The sum of the ratios for the radionuclides possessed under the license shall not exceed unity.

(2) An application for a Type A specific license of broad scope shall be approved if all of the following are complied with:

(a) the applicant satisfies the general requirements

specified in Section R313-22-33;

(b) the applicant has engaged in a reasonable number of activities involving the use of radioactive material; and

(c) the applicant has established administrative controls and provisions relating to organization and management, procedures, recordkeeping, material control and accounting, and management review that are necessary to assure safe operations, including:

(i) the establishment of a radiation safety committee composed of such persons as a radiation safety officer, a representative of management, and persons trained and experienced in the safe use of radioactive material;

(ii) the appointment of a radiation safety officer who is qualified by training and experience in radiation protection, and who is available for advice and assistance on radiation safety matters; and

(iii) the establishment of appropriate administrative procedures to assure:

(A) control of procurement and use of radioactive material,

(B) completion of safety evaluations of proposed uses of radioactive material which take into consideration such matters as the adequacy of facilities and equipment, training and experience of the user, and the operating or handling procedures, and

(C) review, approval, and recording by the radiation safety committee of safety evaluations of proposed uses prepared in accordance with Subsection R313-22-50(2)(c)(iii)(B) prior to use of the radioactive material.

(3) An application for a Type B specific license of broad scope shall be approved if all of the following are complied with:

(a) the applicant satisfies the general requirements specified in Section R313-22-33;

(b) the applicant has established administrative controls and provisions relating to organization and management, procedures, recordkeeping, material control and accounting, and management review that are necessary to assure safe operations, including:

(i) the appointment of a radiation safety officer who is qualified by training and experience in radiation protection, and who is available for advice and assistance on radiation safety matters; and

(ii) the establishment of appropriate administrative procedures to assure:

(A) control of procurement and use of radioactive material,

(B) completion of safety evaluations of proposed uses of radioactive material which take into consideration such matters as the adequacy of facilities and equipment, training and experience of the user, and the operating or handling procedures, and

(C) review, approval, and recording by the radiation safety officer of safety evaluations of proposed uses prepared in accordance with Subsection R313-22-50(3)(b)(iii)(B) prior to use of the radioactive material.

(4) An application for a Type C specific license of broad scope shall be approved, if:

(a) the applicant satisfies the general requirements specified in Section R313-22-33;

(b) the applicant submits a statement that radioactive material will be used only by, or under the direct supervision of individuals, who have received:

(i) a college degree at the bachelor level, or equivalent training and experience, in the physical or biological sciences or in engineering; and

(ii) at least forty hours of training and experience in the safe handling of radioactive material, and in the characteristics of ionizing radiation, units of radiation dose and quantities,

radiation detection instrumentation, and biological hazards of exposure to radiation appropriate to the type and forms of radioactive material to be used; and

(c) the applicant has established administrative controls and provisions relating to procurement of radioactive material, procedures, recordkeeping, material control and accounting, and management review necessary to assure safe operations.

(5) Specific licenses of broad scope are subject to the following conditions:

(a) unless specifically authorized by the Director, persons licensed pursuant to this section shall not:

(i) conduct tracer studies in the environment involving direct release of radioactive material;

(ii) receive, acquire, own, possess, use, or transfer devices containing 100,000 curies (3.7 PBq) or more of radioactive material in sealed sources used for irradiation of materials;

(iii) conduct activities for which a specific license issued by the Director under Section R313-22-75, and Rules R313-25, R313-32 or R313-36 is required; or

(iv) add or cause the addition of radioactive material to a food, beverage, cosmetic, drug or other product designed for ingestion or inhalation by, or application to, a human being.

(b) Type A specific licenses of broad scope issued under Rule R313-22 shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety committee.

(c) Type B specific license of broad scope issued under Rule R313-22 shall be subject to the condition that radioactive material possessed under the license may only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety officer.

(d) Type C specific license of broad scope issued under Rule R313-22 shall be subject to the condition that radioactive material possessed under the license may only be used, by or under the direct supervision of, individuals who satisfy the requirements of Subsection R313-22-50(4).

R313-22-75. Special Requirements for a Specific License to Manufacture, Assemble, Repair, or Distribute Commodities, Products, or Devices Which Contain Radioactive Material.

(1) Licensing the introduction of radioactive material in exempt concentrations into products or materials, and transfer of ownership or possession of the products and materials.

(a) The authority to introduce radioactive material in exempt concentrations into equipment, devices, commodities or other products may be obtained only from the Nuclear Regulatory Commission, Washington, D.C. 20555; and

(b) The manufacturer, processor or producer of equipment, devices, commodities or other products containing exempt concentrations of radioactive materials may obtain the authority to transfer possession or control of the equipment, devices, commodities, or other products containing exempt concentrations to persons who are exempt from regulatory requirements only from the Nuclear Regulatory Commission, Washington, D.C. 20555.

(2) Licensing the distribution of radioactive material in exempt quantities. Authority to transfer possession or control by the manufacturer, processor or producer of equipment, devices, commodities or other products containing byproduct material whose subsequent possession, use, transfer, and disposal by other persons who are exempted from regulatory requirements may be obtained only from the Nuclear Regulatory Commission, Washington, D.C. 20555.

(3) Reserved

(4) Licensing the manufacture and distribution of devices to persons generally licensed under Subsection R313-21-22(4).

(a) An application for a specific license to manufacture or distribute devices containing radioactive material, excluding

special nuclear material, to persons generally licensed under Subsection R313-21-22(4) or equivalent regulations of the Nuclear Regulatory Commission, an Agreement State or a Licensing State will be approved if:

(i) the applicant satisfies the general requirements of Section R313-22-33;

(ii) the applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control, labels, proposed uses, installation, servicing, leak testing, operating and safety instructions, and potential hazards of the device to provide reasonable assurance that:

(iii) the device has been registered in the Sealed Source and Device Registry.

(A) the device can be safely operated by persons not having training in radiological protection,

(B) under ordinary conditions of handling, storage and use of the device, the radioactive material contained in the device will not be released or inadvertently removed from the device, and it is unlikely that a person will receive in one year, a dose in excess of ten percent of the annual limits specified in Subsection R313-15-201(1), and

(C) under accident conditions, such as fire and explosion, associated with handling, storage and use of the device, it is unlikely that a person would receive an external radiation dose or dose commitment in excess of the following organ doses:

TABLE

Whole body; head and trunk; active blood-forming organs; gonads; or lens of eye	150.0 mSv (15 rems)
Hands and forearms; feet and ankles; localized areas of skin averaged over areas no larger than one square centimeter	2.0 Sv (200 rems)
Other organs	500.0 mSv (50 rems); and

(iii) each device bears a durable, legible, clearly visible label or labels approved by the Director, which contain in a clearly identified and separate statement:

(A) instructions and precautions necessary to assure safe installation, operation and servicing of the device; documents such as operating and service manuals may be identified in the label and used to provide this information,

(B) the requirement, or lack of requirement, for leak testing, or for testing an "on-off" mechanism and indicator, including the maximum time interval for testing, and the identification of radioactive material by radionuclide, quantity of radioactivity, and date of determination of the quantity, and

(C) the information called for in one of the following statements, as appropriate, in the same or substantially similar form:

(I) "The receipt, possession, use and transfer of this device, Model No., Serial No., are subject to a general license or the equivalent, and the regulations of the Nuclear Regulatory Commission or a state with which the Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority. This label shall be maintained on the device in a legible condition. Removal of this label is prohibited." The label shall be printed with the words "CAUTION -RADIOACTIVE MATERIAL" and the name of the manufacturer or distributor shall appear on the label. The model, serial number, and name of the manufacturer or distributor may be omitted from this label provided the information is elsewhere specified in labeling affixed to the device.

(II) "The receipt, possession, use and transfer of this device, Model No., Serial No., are subject to a

general license or the equivalent, and the regulations of a Licensing State. This label shall be maintained on the device in a legible condition. Removal of this label is prohibited." The label shall be printed with the words "CAUTION - RADIOACTIVE MATERIAL" and the name of the manufacturer or distributor shall appear on the label. The model, serial number, and name of the manufacturer or distributor may be omitted from this label provided the information is elsewhere specified in labeling affixed to the device.

(D) Each device having a separable source housing that provides the primary shielding for the source also bears, on the source housing, a durable label containing the device model number and serial number, the isotope and quantity, the words, "Caution-Radioactive Material," the radiation symbol described in Section R313-15-901, and the name of the manufacturer or initial distributor.

(E) Each device meeting the criteria of Subsection R313-21-22(4)(c)(xiii)(A), bears a permanent label, for example, embossed, etched, stamped, or engraved, affixed to the source housing if separable, or the device if the source housing is not separable, that includes the words, "Caution-Radioactive Material," and, if practicable, the radiation symbol described in Section R313-15-901.

(b) In the event the applicant desires that the device be required to be tested at intervals longer than six months, either for proper operation of the "on-off" mechanism and indicator, if any, or for leakage of radioactive material or for both, the applicant shall include in the application sufficient information to demonstrate that a longer interval is justified by performance characteristics of the device or similar devices and by design features which have a significant bearing on the probability or consequences of leakage of radioactive material from the device or failure of the "on-off" mechanism and indicator. In determining the acceptable interval for the test for leakage of radioactive material, the Director will consider information which includes, but is not limited to:

- (i) primary containment, or source capsule;
- (ii) protection of primary containment;
- (iii) method of sealing containment;
- (iv) containment construction materials;
- (v) form of contained radioactive material;
- (vi) maximum temperature withstood during prototype tests;
- (vii) maximum pressure withstood during prototype tests;
- (viii) maximum quantity of contained radioactive material;
- (ix) radiotoxicity of contained radioactive material; and
- (x) operating experience with identical devices or similarly designed and constructed devices.

(c) In the event the applicant desires that the general licensee under Subsection R313-21-22(4), or under equivalent regulations of the Nuclear Regulatory Commission, an Agreement State or a Licensing State be authorized to install the device, collect the sample to be analyzed by a specific licensee for leakage of radioactive material, service the device, test the "on-off" mechanism and indicator, or remove the device from installation, the applicant shall include in the application written instructions to be followed by the general licensee, estimated calendar quarter doses associated with this activity or activities, and basis for these estimates. The submitted information shall demonstrate that performance of this activity or activities by an individual untrained in radiological protection, in addition to other handling, storage, and use of devices under the general license, is unlikely to cause that individual to receive a dose in excess of ten percent of the annual limits specified in Subsection R313-15-201(1).

(d)(i) If a device containing radioactive material is to be transferred for use under the general license contained in Subsection R313-21-22(4), each person that is licensed under

Subsection R313-22-75(4) shall provide the information specified in Subsections R313-22-75(4)(d)(i)(A) through (E) to each person to whom a device is to be transferred. This information must be provided before the device may be transferred. In the case of a transfer through an intermediate person, the information must also be provided to the intended user prior to initial transfer to the intermediate person. The required information includes:

(A) a copy of the general license contained in Subsection R313-21-22(4); if Subsections R313-21-22(4)(c)(ii) through (iv) or R313-21-22(4)(c)(xiii) do not apply to the particular device, those paragraphs may be omitted;

(B) a copy of Sections R313-12-51, R313-15-1201, and R313-15-1202;

(C) a list of services that can only be performed by a specific licensee;

(D) Information on acceptable disposal options including estimated costs of disposal; and

(E) An indication that the Director's policy is to issue civil penalties for improper disposal.

(ii) If radioactive material is to be transferred in a device for use under an equivalent general license of the Nuclear Regulatory Commission, an Agreement State, or Licensing State, each person that is licensed under Subsection R313-22-75(4) shall provide the information specified in Subsections R313-22-75(4)(d)(ii)(A) through (D) to each person to whom a device is to be transferred. This information must be provided before the device may be transferred. In the case of a transfer through an intermediate person, the information must also be provided to the intended user prior to initial transfer to the intermediate person. The required information includes:

(A) A copy of an Agreement State's or Licensing State's regulations equivalent to Sections R313-12-51, R313-15-1201, R313-15-1202, and Subsection R313-21-22(4) or a copy of 10 CFR 31.5, 10 CFR 31.2, 10 CFR 30.51, 10 CFR 20.2201, and 10 CFR 20.2202. If a copy of the Nuclear Regulatory Commission regulations is provided to a prospective general licensee in lieu of the Agreement State's or Licensing State's regulations, it shall be accompanied by a note explaining that use of the device is regulated by the Agreement State or Licensing State; if certain paragraphs of the regulations do not apply to the particular device, those paragraphs may be omitted;

(B) A list of services that can only be performed by a specific licensee;

(C) Information on acceptable disposal options including estimated costs of disposal; and

(D) The name or title, address, and phone number of the contact at the Nuclear Regulatory Commission, Agreement State, or Licensing State from which additional information may be obtained.

(iii) An alternative approach to informing customers may be proposed by the licensee for approval by the Director.

(iv) Each device that is transferred after February 19, 2002 must meet the labeling requirements in Subsection R313-22-75(4)(a)(iii).

(v) If a notification of bankruptcy has been made under Section R313-19-34 or the license is to be terminated, each person licensed under Subsection R313-22-75(4) shall provide, upon request, to the Director, the Nuclear Regulatory Commission, or an appropriate Agreement State or Licensing State, records of final disposition required under Subsection R313-22-75(4)(d)(vii)(H).

(vi) Each person licensed under Subsection R313-22-75(4) to initially transfer devices to generally licensed persons shall comply with the requirements of Subsections R313-22-75(4)(d)(vi) and (vii).

(A) The person shall report all transfers of devices to persons for use under the general license under Subsection R313-21-22(4) and all receipts of devices from persons licensed

under Subsection R313-21-22(4) to the Director. The report must be submitted on a quarterly basis on Form 653, "Transfers of Industrial Devices Report" as prescribed by the Nuclear Regulatory Commission, or in a clear and legible report containing all of the data required by the form.

(B) The required information for transfers to general licensees includes:

(I) The identity of each general licensee by name and mailing address for the location of use; if there is no mailing address for the location of use, an alternative address for the general licensee shall be submitted along with information on the actual location of use.

(II) The name, title, and phone number of the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the appropriate regulations and requirements;

(III) The date of transfer;

(IV) The type, model number, and serial number of device transferred; and

(V) The quantity and type of radioactive material contained in the device.

(C) If one or more intermediate persons will temporarily possess the device at the intended place of use before its possession by the user, the report must include the same information for both the intended user and each intermediate person, and clearly designate the intermediate persons.

(D) For devices received from a Subsection R313-21-22(4) general licensee, the report must include the identity of the general licensee by name and address, the type, model number, and serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.

(E) If the licensee makes changes to a device possessed by a Subsection R313-21-22(4) general licensee, such that the label must be changed to update required information, the report must identify the general licensee, the device, and the changes to information on the device label.

(F) The report must cover each calendar quarter, must be filed within 30 days of the end of the calendar quarter, and must clearly indicate the period covered by the report.

(G) The report must clearly identify the specific licensee submitting the report and include the license number of the specific licensee.

(H) If no transfers have been made to or from persons generally licensed under Subsection R313-21-22(4) during the reporting period, the report must so indicate.

(vii) The person shall report all transfers of devices to persons for use under a general license in the Nuclear Regulatory Commission's, an Agreement State's, or Licensing State's regulations that are equivalent to Subsection R313-21-22(4) and all receipts of devices from general licensees in the Nuclear Regulatory Commission's, Agreement State's, or Licensing State's jurisdiction to the Nuclear Regulatory Commission, or to the responsible Agreement State or Licensing State agency. The report must be submitted on Form 653, "Transfers of Industrial Devices Report" as prescribed by the Nuclear Regulatory Commission, or in a clear and legible report containing all of the data required by the form.

(A) The required information for transfers to general licensee includes:

(I) The identity of each general licensee by name and mailing address for the location of use; if there is no mailing address for the location of use, an alternative address for the general licensee shall be submitted along with information on the actual location of use.

(II) The name, title, and phone number of the person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the

appropriate regulations and requirements;

(III) The date of transfer;

(IV) The type, model number, and serial number of the device transferred; and

(V) The quantity and type of radioactive material contained in the device.

(B) If one or more intermediate persons will temporarily possess the device at the intended place of use before its possession by the user, the report must include the same information for both the intended user and each intermediate person, and clearly designate the intermediate persons.

(C) For devices received from a general licensee, the report must include the identity of the general licensee by name and address, the type, model number, and serial number of the device received, the date of receipt, and, in the case of devices not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.

(D) If the licensee makes changes to a device possessed by a general licensee, such that the label must be changed to update required information, the report must identify the general licensee, the device, and the changes to information on the device label.

(E) The report must cover each calendar quarter, must be filed within 30 days of the end of the calendar quarter, and must clearly indicate the period covered by the report.

(F) The report must clearly identify the specific licensee submitting the report and must include the license number of the specific licensee.

(G) If no transfers have been made to or from a Nuclear Regulatory Commission licensee, or to or from a particular Agreement State or Licensing State licensee during the reporting period, this information shall be reported to the Nuclear Regulatory Commission or the responsible Agreement State or Licensing State agency upon request of the agency.

(H) The person shall maintain all information concerning transfers and receipts of devices that supports the reports required by Subsection R313-22-75(4)(d)(vii). Records required by Subsection R313-22-75(4)(d)(vii)(H) must be maintained for a period of three years following the date of the recorded event.

(5) Special requirements for the manufacture, assembly or repair of luminous safety devices for use in aircraft. An application for a specific license to manufacture, assemble or repair luminous safety devices containing tritium or promethium-147 for use in aircraft for distribution to persons generally licensed under Subsection R313-21-22(5) will be approved if:

(a) the applicant satisfies the general requirements of Section R313-22-33; and

(b) the applicant satisfies the requirements of 10 CFR 32.53 through 32.56 (2015) or their equivalent.

(6) Special requirements for license to manufacture or initially transfer calibration sources containing americium-241, plutonium or radium-226 for distribution to persons generally licensed under Subsection R313-21-22(7). An application for a specific license to manufacture calibration and reference sources containing americium-241, plutonium or radium-226 to persons generally licensed under Subsection R313-21-22(7) will be approved if:

(a) the applicant satisfies the general requirements of Section R313-22-33; and

(b) the applicant satisfies the requirements of 10 CFR 32.57 through 32.59, and 10 CFR 70.39 (2015), or their equivalent.

(7) Manufacture and distribution of radioactive material for certain in vitro clinical or laboratory testing under general license. An application for a specific license to manufacture or distribute radioactive material for use under the general license of Subsection R313-21-22(9) will be approved if:

(a) the applicant satisfies the general requirements specified in Section R313-22-33;

(b) the radioactive material is to be prepared for distribution in prepackaged units of:

(i) iodine-125 in units not exceeding 370 kilobecquerel (ten uCi) each;

(ii) iodine-131 in units not exceeding 370 kilobecquerel (ten uCi) each;

(iii) carbon-14 in units not exceeding 370 kilobecquerel (ten uCi) each;

(iv) hydrogen-3 (tritium) in units not exceeding 1.85 megabecquerel (50 uCi) each;

(v) iron-59 in units not exceeding 740.0 kilobecquerel (20 uCi) each;

(vi) cobalt-57 in units not exceeding 370 kilobecquerel (ten uCi) each;

(vii) selenium-75 in units not exceeding 370 kilobecquerel (ten uCi) each; or

(viii) mock iodine-125 in units not exceeding 1.85 kilobecquerel (0.05 uCi) of iodine-129 and 1.85 kilobecquerel (0.05 uCi) of americium-241 each;

(c) prepackaged units bear a durable, clearly visible label:

(i) identifying the radioactive contents as to chemical form and radionuclide, and indicating that the amount of radioactivity does not exceed 370 kilobecquerel (ten uCi) of iodine-125, iodine-131, carbon-14, cobalt-57, or selenium-75; 1.85 megabecquerel (50 uCi) of hydrogen-3 (tritium); 740.0 kilobecquerel (20 uCi) of iron-59; or Mock Iodine-125 in units not exceeding 1.85 kilobecquerel (0.05 uCi) of iodine-129 and 1.85 kilobecquerel (0.05 uCi) of americium-241 each; and

(ii) displaying the radiation caution symbol described in Section R313-15-901 and the words, "CAUTION, RADIOACTIVE MATERIAL", and "Not for Internal or External Use in Humans or Animals";

(d) one of the following statements, as appropriate, or a substantially similar statement which contains the information called for in one of the following statements, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure which accompanies the package:

(i) "This radioactive material shall be received, acquired, possessed and used only by physicians, veterinarians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation therefrom, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of the Nuclear Regulatory Commission or of a state with which the Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority.

.....
Name of Manufacturer"

(ii) "This radioactive material shall be received, acquired, possessed and used only by physicians, veterinarians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation therefrom, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of a Licensing State.

.....
Name of Manufacturer"

(e) the label affixed to the unit, or the leaflet or brochure which accompanies the package, contains adequate information as to the precautions to be observed in handling and storing radioactive material. In the case of the Mock Iodine-125 reference or calibration source, the information accompanying the source shall also contain directions to the licensee regarding the waste disposal requirements set out in Section R313-15-1001.

(8) Licensing the manufacture and distribution of ice detection devices. An application for a specific license to manufacture and distribute ice detection devices to persons generally licensed under Subsection R313-21-22(10) will be approved if:

(a) the applicant satisfies the general requirements of Section R313-22-33; and

(b) the criteria of 10 CFR 32.61, 32.62, 2015 ed. are met.

(9) Manufacture, preparation, or transfer for commercial distribution of radioactive drugs containing radioactive material for medical use under R313-32.

(a) An application for a specific license to manufacture and distribute radiopharmaceuticals containing radioactive material for use by persons licensed pursuant to Rule R313-32 will be approved if:

(i) the applicant satisfies the general requirements specified in Section R313-22-33;

(ii) the applicant submits evidence that the applicant is at least one of the following:

(A) registered with the U.S. Food and Drug Administration (FDA) as the owner or operator of a drug establishment that engages in the manufacture, preparation, propagation, compounding, or processing of a drug under 21 CFR 207.20(a);

(B) registered or licensed with a state agency as a drug manufacturer;

(C) licensed as a pharmacy by a State Board of Pharmacy; or

(D) operating as a nuclear pharmacy within a medical institution; or

(E) registered with a State Agency as a Positron Emission Tomography (PET) drug production facility.

(iii) the applicant submits information on the radionuclide; the chemical and physical form; the maximum activity per vial, syringe, generator, or other container of the radioactive drug; and the shielding provided by the packaging to show it is appropriate for the safe handling and storage of the radioactive drugs by medical use licensees; and

(iv) the applicant satisfies the following labeling requirements:

(A) A label is affixed to each transport radiation shield, whether it is constructed of lead, glass, plastic, or other material, of a radioactive drug to be transferred for commercial distribution. The label must include the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL"; the name of the radioactive drug or its abbreviation; and the quantity of radioactivity at a specified date and time. For radioactive drugs with a half life greater than 100 days, the time may be omitted.

(B) A label is affixed to each syringe, vial, or other container used to hold a radioactive drug to be transferred for commercial distribution. The label must include the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL" and an identifier that ensures that the syringe, vial, or other container can be correlated with the information on the transport radiation shield label.

(b) A licensee described by Subsections R313-22-75(9)(a)(ii)(C) or (D):

(i) May prepare radioactive drugs for medical use, as defined in Rule R313-32 (incorporating 10 CFR 35.2 by reference), provided that the radioactive drug is prepared by either an authorized nuclear pharmacist, as specified in Subsections R313-22-75(9)(b)(ii) and (iv), or an individual under the supervision of an authorized nuclear pharmacist as specified in Rule R313-32 (incorporating 10 CFR 35.27 by reference).

(ii) May allow a pharmacist to work as an authorized nuclear pharmacist if:

(A) this individual qualifies as an authorized nuclear pharmacist as defined in Rule R313-32 (incorporating 10 CFR 35.2 by reference);

(B) this individual meets the requirements specified in Rule R313-32 (incorporating 10 CFR 35.55(b) and 10 CFR 35.59 by reference) and the licensee has received an approved license amendment identifying this individual as an authorized nuclear pharmacist; or

(C) this individual is designated as an authorized nuclear pharmacist in accordance with Subsection R313-22-75(9)(b)(iv).

(iii) The actions authorized in Subsections R313-22-75(9)(b)(i) and (ii) are permitted in spite of more restrictive language in license conditions.

(iv) May designate a pharmacist, as defined in Rule R313-32 (incorporating 10 CFR 35.2 by reference), as an authorized nuclear pharmacist if:

(A) The individual was a nuclear pharmacist preparing only radioactive drugs containing accelerator produced radioactive material, and

(B) The individual practiced at a pharmacy at a Government agency or Federally recognized Indian Tribe before November 30, 2007, or at all other pharmacies before August 8, 2009, or an earlier date as noticed by the NRC.

(v) Shall provide to the Director:

(A) a copy of each individual's certification by a specialty board whose certification process has been recognized by the Nuclear Regulatory Commission or Agreement State as specified in Rule R313-32 (incorporating 10 CFR 35.55(a) by reference) with the written attestation signed by a preceptor as required by Rule R313-32 (incorporating 10 CFR 35.55(b)(2) by reference); or

(B) the Nuclear Regulatory Commission or Agreement State license; or

(C) the permit issued by a licensee or Commission master materials permittee of broad scope or the authorization from a commercial nuclear pharmacy authorized to list its own authorized nuclear pharmacist; or

(D) the permit issued by a U.S. Nuclear Commission master materials licensee; or

(E) documentation that only accelerator produced radioactive materials were used in the practice of nuclear pharmacy at a Government agency or Federally recognized Indian Tribe before November 30, 2007 or at all other locations of use before August 8, 2009, or an earlier date as noticed by the NRC; and

(F) a copy of the state pharmacy licensure or registration, no later than 30 days after the date that the licensee allows, pursuant to Subsections R313-22-75(9)(b)(ii)(A) and R313-22-75(9)(b)(ii)(C), the individual to work as an authorized nuclear pharmacist.

(c) A licensee shall possess and use instrumentation to measure the radioactivity of radioactive drugs. The licensee shall have procedures for use of the instrumentation. The licensee shall measure, by direct measurement or by combination of measurements and calculations, the amount of radioactivity in dosages of alpha-, beta-, or photon-emitting radioactive drugs prior to transfer for commercial distribution. In addition, the licensee shall:

(i) perform tests before initial use, periodically, and following repair, on each instrument for accuracy, linearity, and geometry dependence, as appropriate for the use of the instrument; and make adjustments when necessary; and

(ii) check each instrument for constancy and proper operation at the beginning of each day of use.

(d) Nothing in Subsection R313-22-75(9) relieves the licensee from complying with applicable FDA, or Federal, and State requirements governing radioactive drugs.

(10) Manufacture and distribution of sources or devices

containing radioactive material for medical use. An application for a specific license to manufacture and distribute sources and devices containing radioactive material to persons licensed under Rule R313-32 for use as a calibration, transmission, or reference source or for the uses listed in Rule R313-32 (incorporating 10 CFR 35.400, 10 CFR 35.500, 10 CFR 35.600, and 35.1000 by reference) will be approved if:

(a) the applicant satisfies the general requirements in Section R313-22-33;

(b) the applicant submits sufficient information regarding each type of source or device pertinent to an evaluation of its radiation safety, including:

(i) the radioactive material contained, its chemical and physical form and amount,

(ii) details of design and construction of the source or device,

(iii) procedures for, and results of, prototype tests to demonstrate that the source or device will maintain its integrity under stresses likely to be encountered in normal use and accidents,

(iv) for devices containing radioactive material, the radiation profile of a prototype device,

(v) details of quality control procedures to assure that production sources and devices meet the standards of the design and prototype tests,

(vi) procedures and standards for calibrating sources and devices,

(vii) legend and methods for labeling sources and devices as to their radioactive content, and

(viii) instructions for handling and storing the source or device from the radiation safety standpoint, these instructions are to be included on a durable label attached to the source or device or attached to a permanent storage container for the source or device; provided that instructions which are too lengthy for a label may be summarized on the label and printed in detail on a brochure which is referenced on the label;

(c) the label affixed to the source or device, or to the permanent storage container for the source or device, contains information on the radionuclide, quantity and date of assay, and a statement that the source or device is licensed by the Director for distribution to persons licensed pursuant to Rule R313-32 (incorporating 10 CFR 35.18, 10 CFR 35.400, 10 CFR 35.500, and 10 CFR 35.600 by reference) or under equivalent regulations of the Nuclear Regulatory Commission, an Agreement State or a Licensing State; provided that labeling for sources which do not require long term storage may be on a leaflet or brochure which accompanies the source;

(d) the source or device has been registered in the Sealed Source and Device Registry.

(e) in the event the applicant desires that the source or device be required to be tested for leakage of radioactive material at intervals longer than six months, the applicant shall include in the application sufficient information to demonstrate that a longer interval is justified by performance characteristics of the source or device or similar sources or devices and by design features that have a significant bearing on the probability or consequences of leakage of radioactive material from the source; and

(f) in determining the acceptable interval for test of leakage of radioactive material, the Director shall consider information that includes, but is not limited to:

(i) primary containment or source capsule,

(ii) protection of primary containment,

(iii) method of sealing containment,

(iv) containment construction materials,

(v) form of contained radioactive material,

(vi) maximum temperature withstood during prototype tests,

(vii) maximum pressure withstood during prototype tests,

- (viii) maximum quantity of contained radioactive material,
- (ix) radiotoxicity of contained radioactive material, and
- (x) operating experience with identical sources or devices or similarly designed and constructed sources or devices.

(11) Requirements for license to manufacture and distribute industrial products containing depleted uranium for mass-volume applications.

(a) An application for a specific license to manufacture industrial products and devices containing depleted uranium for use pursuant to Subsection R313-21-21(5) or equivalent regulations of the Nuclear Regulatory Commission or an Agreement State will be approved if:

(i) the applicant satisfies the general requirements specified in Section R313-22-33;

(ii) the applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling or marking, proposed uses and potential hazards of the industrial product or device to provide reasonable assurance that possession, use or transfer of the depleted uranium in the product or device is not likely to cause an individual to receive a radiation dose in excess of ten percent of the annual limits specified in Subsection R313-15-201(1); and

(iii) the applicant submits sufficient information regarding the industrial product or device and the presence of depleted uranium for a mass-volume application in the product or device to provide reasonable assurance that unique benefits will accrue to the public because of the usefulness of the product or device.

(b) In the case of an industrial product or device whose unique benefits are questionable, the Director will approve an application for a specific license under Subsection R313-22-75(11) only if the product or device is found to combine a high degree of utility and low probability of uncontrolled disposal and dispersal of significant quantities of depleted uranium into the environment.

(c) The Director may deny an application for a specific license under Subsection R313-22-75(11) if the end use of the industrial product or device cannot be reasonably foreseen.

(d) Persons licensed pursuant to Subsection R313-22-75(11)(a) shall:

(i) maintain the level of quality control required by the license in the manufacture of the industrial product or device, and in the installation of the depleted uranium into the product or device;

(ii) label or mark each unit to:

(A) identify the manufacturer of the product or device and the number of the license under which the product or device was manufactured, the fact that the product or device contains depleted uranium, and the quantity of depleted uranium in each product or device; and

(B) state that the receipt, possession, use and transfer of the product or device are subject to a general license or the equivalent and the regulations of the Nuclear Regulatory Commission or an Agreement State;

(iii) assure that the uranium before being installed in each product or device has been impressed with the following legend clearly legible through a plating or other covering: "Depleted Uranium";

(iv) furnish to each person to whom depleted uranium in a product or device is transferred for use pursuant to the general license contained in Subsection R313-21-21(5) or its equivalent:

(A) a copy of the general license contained in Subsection R313-21-21(5) and a copy of form DRC-12; or

(B) a copy of the general license contained in the Nuclear Regulatory Commission's or Agreement State's regulation equivalent to Subsection R313-21-21(5) and a copy of the Nuclear Regulatory Commission's or Agreement State's certificate, or alternatively, furnish a copy of the general license contained in Subsection R313-21-21(5) and a copy of form DRC-12 with a note explaining that use of the product or device

is regulated by the Nuclear Regulatory Commission or an Agreement State under requirements substantially the same as those in Subsection R313-21-21(5);

(v) report to the Director all transfers of industrial products or devices to persons for use under the general license in Subsection R313-21-21(5). The report shall identify each general licensee by name and address, an individual by name or position who may constitute a point of contact between the Director and the general licensee, the type and model number of device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within thirty days after the end of the calendar quarter in which the product or device is transferred to the generally licensed person. If no transfers have been made to persons generally licensed under Subsection R313-21-21(5) during the reporting period, the report shall so indicate;

(vi) provide certain other reports as follows:

(A) report to the Nuclear Regulatory Commission all transfers of industrial products or devices to persons for use under the Nuclear Regulatory Commission general license in 10 CFR 40.25 (2010);

(B) report to the responsible state agency all transfers of devices manufactured and distributed pursuant to Subsection R313-22-75(11) for use under a general license in that state's regulations equivalent to Subsection R313-21-21(5),

(C) reports shall identify each general licensee by name and address, an individual by name or position who may constitute a point of contact between the agency and the general licensee, the type and model number of the device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within thirty days after the end of each calendar quarter in which a product or device is transferred to the generally licensed person,

(D) if no transfers have been made to Nuclear Regulatory Commission licensees during the reporting period, this information shall be reported to the Nuclear Regulatory Commission, and

(E) if no transfers have been made to general licensees within a particular Agreement State during the reporting period, this information shall be reported to the responsible Agreement State agency upon the request of that agency; and

(vii) records shall be kept showing the name, address and point of contact for each general licensee to whom the person transfers depleted uranium in industrial products or devices for use pursuant to the general license provided in Subsection R313-21-21(5) or equivalent regulations of the Nuclear Regulatory Commission or an Agreement State. The records shall be maintained for a period of two years and shall show the date of each transfer, the quantity of depleted uranium in the product or device transferred, and compliance with the report requirements of Subsection R313-22-75(11).

R313-22-90. Quantities of Radioactive Materials Requiring Consideration of the Need for an Emergency Plan for Responding to a Release. Refer to Subsection R313-22-32(8).

TABLE

Radioactive Material(1)	Release Fraction	Quantity (curies)
Actinium-228	0.001	4,000

R313-22-201. Serialization of Nationally Tracked Sources.

Each licensee who manufacturers a nationally tracked source after October 19, 2007, shall assign a unique serial number to each nationally tracked source. Serial numbers must be composed only of alpha-numeric characters.

R313-22-210. Registration of Product Information.

Licensees who manufacture or initially distribute a sealed source or device containing a sealed source whose product is intended for use under a specific license or general license are deemed to have provided reasonable assurance that the radiation safety properties of the source or device are adequate to protect health and minimize danger to life and the environment if the sealed source or device has been evaluated in accordance with 10 CFR 32.210 (2015) or equivalent regulations of an Agreement State.

R313-22-211. Inactivation of Certificates of Registration of Sealed Sources and Devices.

Licensees who no longer manufacture or initially transfer any of the sealed sources or devices covered by a particular certificate issued in accordance with the requirements of R313-22-210 shall request inactivation of the registration certificate in accordance with 10 CFR 32.211 (2015) or equivalent regulations of an Agreement State.

Notice of Continuation September 23, 2011 **19-6-107**

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-24. Uranium Mills and Source Material Mill Tailings Disposal Facility Requirements.****R313-24-1. Purpose and Authority.**

(1) The purpose of this rule is to prescribe requirements for possession and use of source material in milling operations such as conventional milling, in-situ leaching, or heap-leaching. The rule includes requirements for the possession of byproduct material, as defined in Section R313-12-3 (see "byproduct material" definition (b)), from source material milling operations, as well as, possession and maintenance of a facility in standby mode. In addition, requirements are prescribed for the receipt of byproduct material from other persons for possession and disposal. The rule also prescribes requirements for receipt of byproduct material from other persons for possession and disposal incidental to the byproduct material generated by the licensee's source material milling operations.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

(3) The requirements of Rule R313-24 are in addition to, and not substitution for, the other applicable requirements of Title R313. In particular, the provisions of Rules R313-12, R313-15, R313-18, R313-19, R313-21, R313-22, and R313-70 apply to applicants and licensees subject to Rule R313-24.

(4) See R313-17-4 for special procedures for decisions associated with licenses for activity which results in the production or disposal of byproduct material.

R313-24-2. Scope.

(1) The requirements in Rule R313-24 apply to source material milling operations, byproduct material, and byproduct material disposal facilities.

R313-24-3. Environmental Analysis.

(1) Each new license application, renewal, or major amendment shall contain an environmental report describing the proposed action, a statement of its purposes, and the environment affected. The environmental report shall present a discussion of the following:

(a) An assessment of the radiological and nonradiological impacts to the public health from the activities to be conducted pursuant to the license or amendment;

(b) An assessment of any impact on waterways and groundwater resulting from the activities conducted pursuant to the license or amendment;

(c) Consideration of alternatives, including alternative sites and engineering methods, to the activities to be conducted pursuant to the license or amendment; and

(d) Consideration of the long-term impacts including decommissioning, decontamination, and reclamation impacts, associated with activities to be conducted pursuant to the license or amendment.

(2) Commencement of construction prior to issuance of the license or amendment shall be grounds for denial of the license or amendment.

(3) The Director shall provide a written analysis of the environmental report which shall be available for public notice and comment pursuant to R313-17-2.

R313-24-4. Clarifications or Exceptions.

For the purposes of Rule R313-24, 10 CFR 40.2a through 40.4; 40.12; 40.20(a); 40.21; 40.26(a) through (c); 40.31(h); 40.41(c); the introduction to 40.42(k) and 40.42(k)(3)(i); 40.61(a) and (b); 40.65; and Appendix A to Part 40 (2015) are incorporated by reference with the following clarifications or exceptions:

(1) The exclusion and substitution of the following:

(a) Exclude 10 CFR 40.26(c)(1) and replace with "(1) The

provisions of Sections R313-12-51, R313-12-52, R313-12-53, R313-19-34, R313-19-50, R313-19-61, R313-24-1, Rules R313-14, R313-15, R313-18, and R313-24 (incorporating 10 CFR 40.2a, 40.3, 40.4, and 40.26 by reference)";

(b) In Appendix A to 10 CFR 40, exclude Criterion 5B(1) through 5H, Criterion 7A, Criterion 13, and replace the excluded Criterion with "Utah Administrative Code, R317-6, Ground Water Quality Protection"; and

(c) In Appendix A to 10 CFR 40, exclude Criterion 11A through 11F and Criterion 12;

(2) The substitution of the following:

(a) "10 CFR 40" for reference to "this part" as found throughout the incorporated text;

(b) "Director" for reference to "Commission" in the first and fourth references contained in 10 CFR 40.2a, in 10 CFR 40.3, 40.20(a), 40.26, 40.41(c), 40.61, and 40.65;

(c) "Rules R313-19, R313-21, or R313-22" for "Section 62 of the Act" as found in 10 CFR 40.12(a);

(d) "Rules R313-21 or R313-22" for reference to "the regulations in this part" in 10 CFR 40.41(c);

(e) "Section R313-19-100" for reference to "part 71 of this chapter" as found in 10 CFR 40.41(c);

(f) In 10 CFR 40.42(k)(3)(i), "R313-15-401 through R313-15-406" for reference to "10 CFR part 20, subpart E";

(g) "source material milling" for reference to "uranium milling, in production of uranium hexafluoride, or in a uranium enrichment facility" as found in 10 CFR 40.65(a);

(h) "Director" for reference to "appropriate NRC Regional Office shown in Appendix D to 10 CFR part 20 of this chapter, with copies to the Director, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555," as stated in 10 CFR 65(a)(1);

(i) "require the licensee to" for reference to "require to" in 10 CFR 40.65(a)(1); and

(j) In Appendix A to 10 CFR part 40, the following substitutions:

(i) "R313-12-3" for reference to "Sec. 20.1003 of this chapter" as found in the first paragraph of the introduction to Appendix A;

(ii) "Utah Administrative Code, Rule R317-6, Ground Water Quality Protection" for ground water standards in "Environmental Protection Agency in 40 CFR part 192, subparts D and E" as found in the Introduction, paragraph 4; or "Environmental Protection Agency in 40 CFR part 192, subparts D and E (48 FR 45926; October 7, 1983)" as found in Criterion 5;

(iii) "Director as defined in Subsection 19-5-102(6)" for reference to "Commission" in the definition of "compliance period," in paragraph five of the introduction and in Criterion 5A(3);

(iv) "Director" for reference to "Commission" in the definition of "closure plan", in paragraph five of the introduction, and in Criteria 6(2), 6(4), 6(6), 6A(2), 6A(3), 9, and 10 of Appendix A;

(v) "license issued by the Director" for reference to "Commission license" in the definition of "licensed site," in the introduction to Appendix A;

(vi) "Director" for reference to "NRC" in Criterion 4D;

(vii) "representatives of the Director" for reference to "NRC staff" in Criterion 6(6);

(viii) "Director-approved" for reference to "Commission-approved" in Criterion 6A(1) and Criterion 9;

(ix) "Director" for reference to "appropriate NRC regional office as indicated in Criterion 8A" as found, Criterion 8, paragraph 2 or for reference to "appropriate NRC regional office as indicated in Appendix D to 10 CFR part 20 of this chapter, or the Director, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555," as stated in Criterion 8A; and

(x) "Director" for reference to "the Commission or the State regulatory agency" in Criterion 9, paragraph 2.

Notice of Continuation May 24, 2012 19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-25. License Requirements for Land Disposal of Radioactive Waste - General Provisions.****R313-25-1. Purpose and Authority.**

(1) The purpose of this rule is to prescribe the requirements for the issuance of licenses for the land disposal of wastes received from other persons.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4), 19-3-104(7), 19-3-104(10), and 19-3-104(11).

(3) The requirements of Rule R313-25 are in addition to, and not in substitution for, other applicable requirements of these rules.

R313-25-2. Definitions.

As used in Rule R313-25, the following definitions apply:

"Active maintenance" means significant activity needed during the period of institutional control to maintain a reasonable assurance that the performance objectives in Sections R313-25-20 and R313-25-21 are met. Active maintenance may include the pumping and treatment of water from a disposal unit, the replacement of a disposal unit cover, or other episodic or continuous measures. Active maintenance does not include custodial activities like repair of fencing, repair or replacement of monitoring equipment, revegetation, minor additions to soil cover, minor repair of disposal unit covers, and general disposal site upkeep.

"Approval application" means an application by a radioactive waste facility regulated under Title 19, Chapter 3 or Title 19, Chapter 5, for a permit, permit modification, license, license amendment, or other authorization.

"Buffer zone" means a portion of the disposal site that is controlled by the licensee and that lies under the disposal units and between the disposal units and the boundary of the site.

"Custodial agency" means an agency of the government designated to act on behalf of the government owner of the disposal site.

"Day" for purposes of this Rule means calendar days.

"Disposal" means the isolation of wastes from the biosphere by placing them in a land disposal facility.

"Disposal site" means that portion of a land disposal facility which is used for disposal of waste. It consists of disposal units and a buffer zone.

"Disposal unit" means a discrete portion of the disposal site into which waste is placed for disposal. For near-surface disposal, the disposal unit may be a trench.

"Engineered barrier" means a man-made structure or device intended to improve the land disposal facility's performance under Rule R313-25.

"Groundwater permit" means a groundwater quality discharge permit issued under the authority of Title 19, Chapter 5 and Rule R317-6.

"Hydrogeologic unit" means a soil or rock unit or zone that has a distinct influence on the storage or movement of ground water.

"Inadvertent intruder" means a person who may enter the disposal site after closure and engage in activities unrelated to post closure management, such as agriculture, dwelling construction, or other pursuits which could, by disturbing the site, expose individuals to radiation.

"Intruder barrier" means a sufficient depth of cover over the waste that inhibits contact with waste and helps to ensure that radiation exposures to an inadvertent intruder will meet the performance objectives set forth in Rule R313-25, or engineered structures that provide equivalent protection to the inadvertent intruder.

"Land disposal facility" means the land, buildings and structures, and equipment which are intended to be used for the

disposal of radioactive waste.

"Monitoring" means observing and making measurements to provide data to evaluate the performance and characteristics of the disposal site.

"Near-surface disposal facility" means a land disposal facility in which waste is disposed of within approximately the upper 30 meters of the earth's surface.

"Site closure and stabilization" means those actions that are taken upon completion of operations that prepare the disposal site for custodial care, and that assure that the disposal site will remain stable and will not need ongoing active maintenance.

"Stability" means structural stability.

"Surveillance" means monitoring and observation of the disposal site to detect needs for maintenance or custodial care, to observe evidence of intrusion, and to ascertain compliance with other license and regulatory requirements.

"Tolling period," for purposes of this Rule, means a period during which days are not counted toward the deadlines specified in Subsections R313-25-6(3)(c), (4)(c)(i), (5)(b)(i), and (6)(b)(i).

"Treatment" means the stabilization or the reduction in volume of waste by a chemical or a physical process.

"Waste" means those low-level radioactive wastes containing radioactive material that are acceptable for disposal in a land disposal facility. For the purposes of this definition, low-level radioactive waste means radioactive waste not classified as high-level radioactive waste, transuranic waste, spent nuclear fuel, or byproduct material as defined in (b), (c), and (d) of the definition for byproduct material found in Section R313-12-3.

R313-25-3. Pre-licensing Plan Approval Criteria for Siting of Commercial Radioactive Waste Disposal Facilities.

(1) Persons proposing to construct or operate commercial radioactive waste disposal facilities, including waste incinerators, shall obtain a plan approval from the Director before applying for a license. Plans shall meet the siting criteria and plan approval requirements of Section R313-25-3.

(2) The siting criteria and plan approval requirements in Section R313-25-3 apply to prelicensing plan approval applications.

(3) Treatment and disposal facilities, including commercial radioactive waste incinerators, shall not be located:

(a) within or underlain by:

(i) national, state, and county parks, monuments, and recreation areas; designated wilderness and wilderness study areas; wild and scenic river areas;

(ii) ecologically and scientifically significant natural areas, including wildlife management areas and habitats for listed or proposed endangered species as designated by federal law;

(iii) 100 year floodplains;

(iv) areas 200 feet distant from Holocene faults;

(v) underground mines, salt domes and salt beds;

(vi) dam failure flood areas;

(vii) areas subject to landslide, mud flow, or other earth movement, unless adverse impacts can be mitigated;

(viii) farmlands classified or evaluated as "prime", "unique", or of "statewide importance" by the U.S. Department of Agricultural Soil Conservation Service under the Prime Farmland Protection Act;

(ix) areas five miles distant from existing permanent dwellings, residential areas, and other habitable structures, including schools, churches, and historic structures;

(x) areas five miles distant from surface waters including intermittent streams, perennial streams, rivers, lakes, reservoirs, and wetlands;

(xi) areas 1000 feet distant from archeological sites to which adverse impacts cannot reasonably be mitigated;

(xii) recharge zones of aquifers containing ground water

which has a total dissolved solids content of less than 10,000 mg/l; or

(xiii) drinking water source protection areas designated by the Utah Drinking Water Board;

(b) in areas:

(i) above or underlain by aquifers containing ground water which has a total dissolved solids content of less than 500 mg/l and which aquifers do not exceed state ground water standards for pollutants;

(ii) above or underlain by aquifers containing ground water which has a total dissolved solids content between 3000 and 10,000 mg/l when the distance from the surface to the ground water is less than 100 ft.;

(iii) areas of extensive withdrawal of water, mineral or energy resources.

(iv) above or underlain by weak and unstable soils, including soils that lose their ability to support foundations as a result of hydrocompaction, expansion, or shrinkage;

(v) above or underlain by karst terrains.

(4) Commercial radioactive waste disposal facilities may not be located within a distance to existing drinking water wells and watersheds for public water supplies of five years ground water travel time plus 1000 feet.

(5) The plan approval siting application shall include hydraulic conductivity and other information necessary to estimate adequately the ground water travel distance.

(6) The plan approval siting application shall include the results of studies adequate to identify the presence of ground water aquifers in the area of the proposed site and to assess the quality of the ground water of all aquifers identified in the area of the proposed site.

(7) Emergency response and safety.

(a) The plan approval siting application shall demonstrate the availability and adequacy of services for on-site emergencies, including medical and fire response. The application shall provide written evidence that the applicant has coordinated on-site emergency response plans with the local emergency planning committee (LEPC).

(b) The plan approval siting application shall include a comprehensive plan for responding to emergencies at the site.

(c) The plan approval siting application shall show proposed routes for transportation of radioactive wastes within the state. The plan approval siting application shall address the transportation means and routes available to evacuate the population at risk in the event of on-site accidents, including spills and fires.

(8) The plan approval siting application shall provide evidence that if the proposed disposal site is on land not owned by state or federal government, that arrangements have been made for assumption of ownership in fee by a state or federal agency.

(9) Siting Authority. The Director recognizes that Titles 10 and 17 of the Utah Code give cities and counties authority for local use planning and zoning. Nothing in Section R313-25-3 precludes cities and counties from establishing additional requirements as provided by applicable state and federal law.

R313-25-4. License Required.

(1) Persons shall not receive, possess, or dispose of waste at a land disposal facility unless authorized by a license issued by the Director pursuant to Rules R313-25 and R313-22.

(2) Persons shall file an application with the Director pursuant to Section R313-22-32 and obtain a license as provided in Rule R313-25 before commencement of construction of a land disposal facility. Failure to comply with this requirement may be grounds for denial of a license and other penalties established by law and rules.

R313-25-5. Content of Application.

In addition to the requirements set forth in Section R313-22-33, an application to receive from others, possess, and dispose of wastes shall consist of general information, specific technical information, institutional information, and financial information as set forth in Sections R313-25-7 through R313-25-11.

R313-25-6. Director Review of Application.

(1) The Director shall review each approval application to determine whether it complies with applicable statutory and regulatory requirements. Approval applications will be categorized as Category 1, 2, 3 and 4 applications, as provided in Subsections R313-25-6(2) through (5).

(2) Category 1 applications.

(a) A Category 1 application is an application that:

- (i) is administrative in nature;
- (ii) requires limited scrutiny by the Director; and
- (iii) does not require public comment.

(b) Examples of a Category 1 application include an application to:

- (i) correct typographical errors;
- (ii) Change the name, address, or phone number of persons or agencies identified in the license or permit;
- (iii) change the procedures or location for maintaining records; or
- (iv) extend the date for compliance with a permit or license requirement by no more than 120 days.

(c) The Director shall review and approve or deny a Category 1 application within 30 days after the day on which the Director Receives the application.

(3) Category 2 applications:

(a) A Category 2 application is one that is not a Category 1, 3 or 4 application.

(b) Examples of a Category 2 application include:

- (i) Increase in process, storage, or disposal capacity
- (ii) Change engineering design, construction, or process controls;
- (iii) Approve a proposed corrective action plan; or
- (iv) Transfer direct control of a license or groundwater permit.

(c)(i) The Director shall review and approve or deny a Category 2 application within 180 days after the day on which the Director receives the application.

(ii) The period described in Subsection R313-25-6(3)(c)(i) shall be tolled as provided in Subsection R313-25-6(7).

(4) Category 3 applications.

(a) Category 3 application is an application for:

- (i) a radioactive waste license renewal;
- (ii) a groundwater permit renewal;
- (iii) an amendment to an existing radioactive waste license or groundwater permit to allow a new disposal cell;
- (iv) an amendment to an existing radioactive waste license or groundwater permit that would allow the facility to eliminate groundwater monitoring; or
- (v) approval of a radioactive waste disposal facility closure plan.

(b)(i) The Director shall review and approve or deny a Category 3 application within 365 days after the day on which the Director receives the application.

(ii) The period described in Subsection R313-25-6(4)(b)(i) shall be tolled as provided in Subsection R313-25-6(7).

(5) Category 4 applications.

(a) A Category 4 application is an application for:

- (i) a new radioactive waste license; or
 - (ii) a new groundwater permit.
- (b)(i) The Director shall review and approve or deny a Category 4 application within 540 days after the day on which the Director receives the application.

(ii) The period described in Subsection R313-25-6(5)(b)(i)

shall be tolled as provided in Subsection R313-25-6(7).

(6)(a) Within 60 days after the day on which the Director receives a Category 2, 3 or 4 approval application, the Director shall determine whether the application is complete and contains all the information necessary to process it for approval and make a finding by issuance of a written:

- (i) notice of completeness to the applicant; or
- (ii) notice of deficiency to the applicant, including a list of the additional information necessary to complete the application.

(b) The Director shall review written information submitted in response to a notice of deficiency within 30 days after the day on which the Director receives the supplemental information and shall again follow the procedures specified in Subsection R313-25-6(1)(a).

(c) If a document that is submitted as an application is substantially deficient, the Director may determine that it does not qualify as an application. Any such determination shall be made within 45 days of the document's submission and will include the Director's written findings.

(7) Tolling Periods. The periods specified for the Director's review and approval or denial under Subsections R313-25-6(3)(c)(i), (4)(b)(i), and (5)(b)(i) shall be tolled:

- (a) while an owner or operator of a facility responds to the Director's request for information;
- (b) during a public comment period; and
- (c) while the federal government reviews the application.

(8) The Director shall prepare a detailed written explanation of the technical and regulatory basis for the Director's approval or denial of an approval application.

R313-25-7. General Information.

The general information shall include the following:

- (1) identity of the applicant including:
 - (a) the full name, address, telephone number, and description of the business or occupation of the applicant;
 - (b) if the applicant is a partnership, the names and addresses of the partners and the principal location where the partnership does business;
 - (c) if the applicant is a corporation or an unincorporated association:
 - (i) the state where it is incorporated or organized and the principal location where it does business; and
 - (ii) the names and addresses of its directors and principal officers; and
 - (d) if the applicant is acting as an agent or representative of another person in filing the application, the applicant shall provide, with respect to the other person, information required under Subsection R313-25-7(1).
- (2) Qualifications of the applicant shall include the following:
 - (a) the organizational structure of the applicant, both offsite and onsite, including a description of lines of authority and assignments of responsibilities, whether in the form of administrative directives, contract provisions, or otherwise;
 - (b) the technical qualifications, including training and experience of the applicant and members of the applicant's staff, to engage in the proposed activities. Minimum training and experience requirements for personnel filling key positions described in Subsection R313-25-7(2)(a) shall be provided;
 - (c) a description of the applicant's personnel training program; and
 - (d) the plan to maintain an adequate complement of trained personnel to carry out waste receipt, handling, and disposal operations in a safe manner.

(3) A description of:

- (a) the location of the proposed disposal site;
- (b) the general character of the proposed activities;
- (c) the types and quantities of waste to be received, possessed, and disposed of;

(d) plans for use of the land disposal facility for purposes other than disposal of wastes; and

- (e) the proposed facilities and equipment; and
- (4) proposed schedules for construction, receipt of waste, and first emplacement of waste at the proposed land disposal facility.

R313-25-8. Specific Technical Information.

The application shall include certain technical information. The following information is needed to determine whether or not the applicant can meet the performance objectives and the applicable technical requirements of Rule R313-25:

(1) A description of the natural and demographic disposal site characteristics shall be based on and determined by disposal site selection and characterization activities. The description shall include geologic, geochemical, geotechnical, hydrologic, ecologic, archaeological, meteorologic, climatologic, and biotic features of the disposal site and vicinity.

(2) Descriptions of the design features of the land disposal facility and of the disposal units for near-surface disposal shall include those design features related to infiltration of water; integrity of covers for disposal units; structural stability of backfill, wastes, and covers; contact of wastes with standing water; disposal site drainage; disposal site closure and stabilization; elimination to the extent practicable of long-term disposal site maintenance; inadvertent intrusion; occupational exposures; disposal site monitoring; and adequacy of the size of the buffer zone for monitoring and potential mitigative measures.

(3) Descriptions of the principal design criteria and their relationship to the performance objectives.

(4) Descriptions of the natural events or phenomena on which the design is based and their relationship to the principal design criteria.

(5) Descriptions of codes and standards which the applicant has applied to the design, and will apply to construction of the land disposal facilities.

(6) Descriptions of the construction and operation of the land disposal facility. The description shall include as a minimum the methods of construction of disposal units; waste emplacement; the procedures for and areas of waste segregation; types of intruder barriers; onsite traffic and drainage systems; survey control program; methods and areas of waste storage; and methods to control surface water and ground water access to the wastes. The description shall also include a description of the methods to be employed in the handling and disposal of wastes containing chelating agents or other non-radiological substances which might affect meeting the performance objectives of Rule R313-25

(7) A description of the disposal site closure plan, including those design features which are intended to facilitate disposal site closures and to eliminate the need for active maintenance after closure.

(8) Identification of the known natural resources at the disposal site whose exploitation could result in inadvertent intrusion into the wastes after removal of active institutional control.

(9) Descriptions of the kind, amount, classification and specifications of the radioactive material proposed to be received, possessed, and disposed of at the land disposal facility.

(10) Descriptions of quality assurance programs, tailored to low-level waste disposal, including audit and managerial controls, for the determination of natural disposal site characteristics and for quality control during the design, construction, operation, and closure of the land disposal facility and the receipt, handling, and emplacement of waste.

(11) A description of the radiation safety program for control and monitoring of radioactive effluents to ensure compliance with the performance objective in Section R313-25-

20 and monitoring of occupational radiation exposure to ensure compliance with the requirements of Rule R313-15 and to control contamination of personnel, vehicles, equipment, buildings, and the disposal site. The applicant shall describe procedures, instrumentation, facilities, and equipment appropriate to both routine and emergency operations.

(12) A description of the environmental monitoring program to provide data and to evaluate potential health and environmental impacts and the plan for taking corrective measures if migration is indicated.

(13) Descriptions of the administrative procedures that the applicant will apply to control activities at the land disposal facility.

(14) A description of the facility electronic recordkeeping system as required in Section R313-25-33.

R313-25-9. Technical Analyses.

(1) The licensee or applicant shall conduct a site-specific performance assessment and receive Director approval prior to accepting any radioactive waste if:

(a) the waste was not considered in the development of the limits on Class A waste and not included in the analyses of the Draft Environmental Impact Statement on 10 CFR Part 61 "Licensing Requirements for Land Disposal of Radioactive Waste," NUREG-0782. U.S. Nuclear Regulatory Commission, September 1981, or

(b) the waste is likely to result in greater than 10 percent of the dose limits in Section R313-25-19 during the time period at which peak dose would occur, or

(c) the waste will result in greater than 10 percent of the total site source term over the operational life of the facility, or

(d) the disposal of the waste would result in an unanalyzed condition not considered in Rule R313-25.

(2) A licensee that has a previously-approved site-specific performance assessment that addressed a radioactive waste for which a site-specific performance assessment would otherwise be required under Subsection R313-25-9(1) shall notify the Director of the applicability of the previously-approved site-specific performance assessment at least 60 days prior to the anticipated acceptance of the radioactive waste.

(3) The licensee shall not accept radioactive waste until the Director has approved the information submitted pursuant to Subsections R313-25-9(1) or (2).

(4) The licensee or applicant shall also include in the specific technical information the following analyses needed to demonstrate that the performance objectives of Rule R313-25 will be met:

(a) Analyses demonstrating that the general population will be protected from releases of radioactivity shall consider the pathways of air, soil, ground water, surface water, plant uptake, and exhumation by burrowing animals. The analyses shall clearly identify and differentiate between the roles performed by the natural disposal site characteristics and design features in isolating and segregating the wastes. The analyses shall clearly demonstrate a reasonable assurance that the exposures to humans from the release of radioactivity will not exceed the limits set forth in Section R313-25-20.

(b) Analyses of the protection of inadvertent intruders shall demonstrate a reasonable assurance that the waste classification and segregation requirements will be met and that adequate barriers to inadvertent intrusion will be provided.

(c) Analysis of the protection of individuals during operations shall include assessments of expected exposures due to routine operations and likely accidents during handling, storage, and disposal of waste. The analysis shall provide reasonable assurance that exposures will be controlled to meet the requirements of Rule R313-15.

(d) Analyses of the long-term stability of the disposal site shall be based upon analyses of active natural processes

including erosion, mass wasting, slope failure, settlement of wastes and backfill, infiltration through covers over disposal areas and adjacent soils, surface drainage of the disposal site, and the effects of changing lake levels. The analyses shall provide reasonable assurance that there will not be a need for ongoing active maintenance of the disposal site following closure.

(5)(a) Notwithstanding Subsection R313-25-9(1), any facility that proposes to land dispose of significant quantities of concentrated depleted uranium (more than one metric ton in total accumulation) after June 1, 2010, shall submit for the Director's review and approval a performance assessment that demonstrates that the performance standards specified in 10 CFR Part 61 and corresponding provisions of Utah rules will be met for the total quantities of concentrated depleted uranium and other wastes, including wastes already disposed of and the quantities of concentrated depleted uranium the facility now proposes to dispose. Any such performance assessment shall be revised as needed to reflect ongoing guidance and rulemaking from NRC. For purposes of this performance assessment, the compliance period shall be a minimum of 10,000 years. Additional simulations shall be performed for the period where peak dose occurs and the results shall be analyzed qualitatively.

(b) No facility may dispose of significant quantities of concentrated depleted uranium prior to the approval by the Director of the performance assessment required in Subsection R313-25-9(5)(a).

(c) For purposes of this Subsection R313-25-9(5) only, "concentrated depleted uranium" means waste with depleted uranium concentrations greater than 5 percent by weight.

R313-25-10. Institutional Information.

The institutional information submitted by the applicant shall include:

(1) A certification by the federal or state agency which owns the disposal site that the agency is prepared to accept transfer of the license when the provisions of Section R313-25-17 are met and will assume responsibility for institutional control after site closure and for post-closure observation and maintenance.

(2) Evidence, if the proposed disposal site is on land not owned by the federal or a state government, that arrangements have been made for assumption of ownership in fee by the federal or a state agency.

R313-25-11. Financial Information.

This information shall demonstrate that the applicant is financially qualified to carry out the activities for which the license is sought. The information shall meet other financial assurance requirements of Rule R313-25.

R313-25-12. Requirements for Issuance of a License.

A license for the receipt, possession, and disposal of waste containing radioactive material will be issued by the Director upon finding that:

(1) the issuance of the license will not constitute an unreasonable risk to the health and safety of the public;

(2) the applicant is qualified by reason of training and experience to carry out the described disposal operations in a manner that protects health and minimizes danger to life or property;

(3) the applicant's proposed disposal site, disposal design, land disposal facility operations, including equipment, facilities, and procedures, disposal site closure, and post-closure institutional control, are adequate to protect the public health and safety as specified in the performance objectives of Section R313-25-20;

(4) the applicant's proposed disposal site, disposal site design, land disposal facility operations, including equipment,

facilities, and procedures, disposal site closure, and post-closure institutional control are adequate to protect the public health and safety in accordance with the performance objectives of Section R313-25-21;

(5) the applicant's proposed land disposal facility operations, including equipment, facilities, and procedures, are adequate to protect the public health and safety in accordance with Rule R313-15;

(6) the applicant's proposed disposal site, disposal site design, land disposal facility operations, disposal site closure, and post-closure institutional control plans are adequate to protect the public health and safety in that they will provide reasonable assurance of the long-term stability of the disposed waste and the disposal site and will eliminate to the extent practicable the need for continued maintenance of the disposal site following closure;

(7) the applicant's demonstration provides reasonable assurance that the requirements of Rule R313-25 will be met;

(8) the applicant's proposal for institutional control provides reasonable assurance that control will be provided for the length of time found necessary to ensure the findings in Subsections R313-25-12(3) through (6) and that the institutional control meets the requirements of Section R313-25-29.

(9) the financial or surety arrangements meet the requirements of Rule R313-25.

R313-25-13. Conditions of Licenses.

(1) A license issued under Rule R313-25, or a right thereunder, may not be transferred, assigned, or disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of the license to a person, unless the Director finds, after securing full information, that the transfer is in accordance with the provisions of the Radiation Control Act and Rules and gives his consent in writing in the form of a license amendment.

(2) The Director may require the licensee to submit written statements under oath.

(3) The license will be terminated only on the full implementation of the final closure plan, including post-closure observation and maintenance, as approved by the Director.

(4) The licensee shall submit to the provisions of the Act now or hereafter in effect, and to all findings and orders of the Director. The terms and conditions of the license are subject to amendment, revision, or modification, by reason of amendments to, or by reason of rules, and orders issued in accordance with the terms of the Act and these rules.

(5) Persons licensed by the Director pursuant to Rule R313-25 shall confine possession and use of the materials to the locations and purposes authorized in the license.

(6) The licensee shall not dispose of waste until the Director has inspected the land disposal facility and has found it to conform with the description, design, and construction described in the application for a license.

(7) The Director may incorporate, by rule or order, into licenses at the time of issuance or thereafter, additional requirements and conditions with respect to the licensee's receipt, possession, and disposal of waste as the Director deems appropriate or necessary in order to:

(a) protect health or to minimize danger to life or property;

(b) require reports and the keeping of records, and to provide for inspections of licensed activities as the Director deems necessary or appropriate to effectuate the purposes of the Radiation Control Act and Rules.

(8) The authority to dispose of wastes expires on the expiration date stated in the license. An expiration date on a license applies only to the above ground activities and to the authority to dispose of waste. Failure to renew the license shall not relieve the licensee of responsibility for implementing site closure, post-closure observation, and transfer of the license to

the site owner.

R313-25-14. Application for Renewal or Closure.

(1) An application for renewal or an application for closure under Section R313-25-15 shall be filed at least 90 days prior to license expiration.

(2) Applications for renewal of a license shall be filed in accordance with Sections R313-25-5 and R313-25-7 through 25-11. Applications for closure shall be filed in accordance with Section R313-25-15. Information contained in previous applications, statements, or reports filed with the Director under the license may be incorporated by reference if the references are clear and specific.

(3) If a licensee has filed an application in proper form for renewal of a license, the license shall not expire unless and until the Director has taken final action to deny application for renewal.

(4) In evaluating an application for license renewal, the Director will apply the criteria set forth in Section R313-25-12.

R313-25-15. Contents of Application for Site Closure and Stabilization.

(1) Prior to final closure of the disposal site, or as otherwise directed by the Director, the licensee shall submit an application to amend the license for closure. This closure application shall include a final revision and specific details of the disposal site closure plan included in the original license application submitted and approved under Section R313-25-8(7). The plan shall include the following:

(a) additional geologic, hydrologic, or other data pertinent to the long-term containment of emplaced wastes obtained during the operational period;

(b) the results of tests, experiments, or other analyses relating to backfill of excavated areas, closure and sealing, waste migration and interaction with emplacement media, or other tests, experiments, or analyses pertinent to the long-term containment of emplaced waste within the disposal site;

(c) proposed revision of plans for:

(i) decontamination or dismantlement of surface facilities;

(ii) backfilling of excavated areas; or

(iii) stabilization of the disposal site for post-closure care.

(d) Significant new information regarding the environmental impact of closure activities and long-term performance of the disposal site.

(2) Upon review and consideration of an application to amend the license for closure submitted in accordance with Subsection R313-25-15(1), the Director shall issue an amendment authorizing closure if there is reasonable assurance that the long-term performance objectives of Rule R313-25 will be met.

R313-25-16. Post-Closure Observation and Maintenance.

The licensee shall observe, monitor, and carry out necessary maintenance and repairs at the disposal site until the site closure is complete and the license is transferred by the Director in accordance with Section R313-25-17. The licensee shall remain responsible for the disposal site for an additional five years. The Director may approve closure plans that provide for shorter or longer time periods of post-closure observation and maintenance, if sufficient rationale is developed for the variance.

R313-25-17. Transfer of License.

Following closure and the period of post-closure observation and maintenance, the licensee may apply for an amendment to transfer the license to the disposal site owner. The license shall be transferred when the Director finds:

(1) that the disposal site was closed according to the licensee's approved disposal site closure plan;

(2) that the licensee has provided reasonable assurance that the performance objectives of Rule R313-25 have been met;

(3) that funds for care and records required by Subsections R313-25-33(4) and (5) have been transferred to the disposal site owner;

(4) that the post-closure monitoring program is operational and can be implemented by the disposal site owner; and

(5) that the Federal or State agency which will assume responsibility for institutional control of the disposal site is prepared to assume responsibility and ensure that the institutional requirements found necessary under Subsection R313-25-12(8) will be met.

R313-25-18. Termination of License.

(1) Following the period of institutional control needed to meet the requirements of Section R313-25-12, the licensee may apply for an amendment to terminate the license.

(2) This application will be reviewed in accordance with the provisions of Section R313-22-32.

(3) A license shall be terminated only when the Director finds:

(a) that the institutional control requirements of Subsection R313-25-12(8) have been met;

(b) that additional requirements resulting from new information developed during the institutional control period have been met;

(c) that permanent monuments or markers warning against intrusion have been installed; and

(d) that records required by Subsections R313-25-33(4) and (5) have been sent to the party responsible for institutional control of the disposal site and a copy has been sent to the Director immediately prior to license termination.

R313-25-19. General Requirement.

Land disposal facilities shall be sited, designed, operated, closed, and controlled after closure so that reasonable assurance exists that exposures to individuals do not exceed the limits stated in Sections R313-25-20 and 25-23.

R313-25-20. Protection of the General Population from Releases of Radioactivity.

Concentrations of radioactive material which may be released to the general environment in ground water, surface water, air, soil, plants or animals shall not result in an annual dose exceeding an equivalent of 0.25 mSv (0.025 rem) to the whole body, 0.75 mSv (0.075 rem) to the thyroid, and 0.25 mSv (0.025 rem) to any other organ of any member of the public. No greater than 0.04 mSv (0.004 rem) committed effective dose equivalent or total effective dose equivalent to any member of the public shall come from groundwater. Reasonable efforts should be made to maintain releases of radioactivity in effluents to the general environment as low as is reasonably achievable.

R313-25-21. Protection of Individuals from Inadvertent Intrusion.

Design, operation, and closure of the land disposal facility shall ensure protection of any individuals inadvertently intruding into the disposal site and occupying the site or contacting the waste after active institutional controls over the disposal site are removed.

R313-25-22. Protection of Individuals During Operations.

Operations at the land disposal facility shall be conducted in compliance with the standards for radiation protection set out in Rule R313-15 of these rules, except for release of radioactivity in effluents from the land disposal facility, which shall be governed by Section R313-25-20. Every reasonable effort should be made to maintain radiation exposures as low as is reasonably achievable, ALARA.

R313-25-23. Stability of the Disposal Site After Closure.

The disposal facility shall be sited, designed, used, operated, and closed to achieve long-term stability of the disposal site and to eliminate, to the extent practicable, the need for ongoing active maintenance of the disposal site following closure so that only surveillance, monitoring, or minor custodial care are required.

R313-25-24. Disposal Site Suitability Requirements for Land Disposal - Near-Surface Disposal.

(1) The primary emphasis in disposal site suitability is given to isolation of wastes and to disposal site features that ensure that the long-term performance objectives are met.

(2) The disposal site shall be capable of being characterized, modeled, analyzed and monitored.

(3) Within the region where the facility is to be located, a disposal site should be selected so that projected population growth and future developments are not likely to affect the ability of the disposal facility to meet the performance objectives of Rule R313-25.

(4) Areas shall be avoided having known natural resources which, if exploited, would result in failure to meet the performance objectives of Rule R313-25.

(5) The disposal site shall be generally well drained and free of areas of flooding or frequent ponding. Waste disposal shall not take place in a 100-year flood plain, coastal high-hazard area or wetland, as defined in Executive Order 11988, "Floodplain Management Guidelines."

(6) Upstream drainage areas shall be minimized to decrease the amount of runoff which could erode or inundate waste disposal units.

(7) The disposal site shall provide sufficient depth to the water table that ground water intrusion, perennial or otherwise, into the waste will not occur. The Director will consider an exception to this requirement to allow disposal below the water table if it can be conclusively shown that disposal site characteristics will result in molecular diffusion being the predominant means of radionuclide movement and the rate of movement will result in the performance objectives being met. In no case will waste disposal be permitted in the zone of fluctuation of the water table.

(8) The hydrogeologic unit used for disposal shall not discharge ground water to the surface within the disposal site.

(9) Areas shall be avoided where tectonic processes such as faulting, folding, seismic activity, vulcanism, or similar phenomena may occur with such frequency and extent to significantly affect the ability of the disposal site to meet the performance objectives of Rule R313-25 or may preclude defensible modeling and prediction of long-term impacts.

(10) Areas shall be avoided where surface geologic processes such as mass wasting, erosion, slumping, landsliding, or weathering occur with sufficient such frequency and extent to significantly affect the ability of the disposal site to meet the performance objectives of Rule R313-25, or may preclude defensible modeling and prediction of long-term impacts.

(11) The disposal site shall not be located where nearby facilities or activities could adversely impact the ability of the site to meet the performance objectives of Rule R313-25 or significantly mask the environmental monitoring program.

R313-25-25. Disposal Site Design for Near-Surface Land Disposal.

(1) Site design features shall be directed toward long-term isolation and avoidance of the need for continuing active maintenance after site closure.

(2) The disposal site design and operation shall be compatible with the disposal site closure and stabilization plan and lead to disposal site closure that provides reasonable assurance that the performance objectives will be met.

(3) The disposal site shall be designed to complement and improve, where appropriate, the ability of the disposal site's natural characteristics to assure that the performance objectives will be met.

(4) Covers shall be designed to minimize, to the extent practicable, water infiltration, to direct percolating or surface water away from the disposed waste, and to resist degradation by surface geologic processes and biotic activity.

(5) Surface features shall direct surface water drainage away from disposal units at velocities and gradients which will not result in erosion that will require ongoing active maintenance in the future.

(6) The disposal site shall be designed to minimize to the extent practicable the contact of water with waste during storage, the contact of standing water with waste during disposal, and the contact of percolating or standing water with wastes after disposal.

R313-25-26. Near Surface Land Disposal Facility Operation and Disposal Site Closure.

(1) Wastes designated as Class A pursuant to Section R313-15-1009 of these rules shall be segregated from other wastes by placing them in disposal units which are sufficiently separated from disposal units for the other waste classes so that any interaction between Class A wastes and other wastes will not result in the failure to meet the performance objectives of Rule R313-25. This segregation is not necessary for Class A wastes if they meet the stability requirements of Subsection R313-15-1009(2)(b).

(2) Wastes designated as Class C pursuant to Section R313-15-1009 shall be disposed of so that the top of the waste is a minimum of five meters below the top surface of the cover or shall be disposed of with intruder barriers that are designed to protect against an inadvertent intrusion for at least 500 years.

(3) Except as provided in Subsection R313-25-1(1), only waste classified as Class A, B, or C shall be acceptable for near-surface disposal. Wastes shall be disposed of in accordance with the requirements of Subsections R313-25-26(4) through 11.

(4) Wastes shall be emplaced in a manner that maintains the package integrity during emplacement, minimizes the void spaces between packages, and permits the void spaces to be filled.

(5) Void spaces between waste packages shall be filled with earth or other material to reduce future subsidence within the fill.

(6) Waste shall be placed and covered in a manner that limits the radiation dose rate at the surface of the cover to levels that at a minimum will permit the licensee to comply with all provisions of Section R313-15-105 at the time the license is transferred pursuant to Section R313-25-17.

(7) The boundaries and locations of disposal units shall be accurately located and mapped by means of a land survey. Near-surface disposal units shall be marked in such a way that the boundaries of the units can be easily defined. Three permanent survey marker control points, referenced to United States Geological Survey or National Geodetic Survey control stations, shall be established on the site to facilitate surveys. The United States Geological Survey or National Geodetic Survey control stations shall provide horizontal and vertical controls as checked against United States Geological Survey or National Geodetic Survey record files.

(8) A buffer zone of land shall be maintained between any buried waste and the disposal site boundary and beneath the disposed waste. The buffer zone shall be of adequate dimensions to carry out environmental monitoring activities specified in Subsection R313-25-27(4) and take mitigative measures if needed.

(9) Closure and stabilization measures as set forth in the approved site closure plan shall be carried out as the disposal

units are filled and covered.

(10) Active waste disposal operations shall not have an adverse effect on completed closure and stabilization measures.

(11) Only wastes containing or contaminated with radioactive material shall be disposed of at the disposal site.

(12) Proposals for disposal of waste that are not generally acceptable for near-surface disposal because the wastes form and disposal methods shall be different and, in general, more stringent than those specified for Class C waste, may be submitted to the Director for approval.

R313-25-27. Environmental Monitoring.

(1) At the time a license application is submitted, the applicant shall have conducted a preoperational monitoring program to provide basic environmental data on the disposal site characteristics. The applicant shall obtain information about the ecology, meteorology, climate, hydrology, geology, geochemistry, and seismology of the disposal site. For those characteristics that are subject to seasonal variation, data shall cover at least a 12-month period.

(2) During the land disposal facility site construction and operation, the licensee shall maintain an environmental monitoring program. Measurements and observations shall be made and recorded to provide data to evaluate the potential health and environmental impacts during both the construction and the operation of the facility and to enable the evaluation of long-term effects and need for mitigative measures. The monitoring system shall be capable of providing early warning of releases of waste from the disposal site before they leave the site boundary.

(3) After the disposal site is closed, the licensee responsible for post-operational surveillance of the disposal site shall maintain a monitoring system based on the operating history and the closure and stabilization of the disposal site. The monitoring system shall be capable of providing early warning of releases of waste from the disposal site before they leave the site boundary.

(4) The licensee shall have plans for taking corrective measures if the environmental monitoring program detects migration of waste which would indicate that the performance objectives may not be met.

R313-25-28. Alternative Requirements for Design and Operations.

The Director may, upon request or on the Director's own initiative, authorize provisions other than those set forth in Sections R313-25-25 and 25-27 for the segregation and disposal of waste and for the design and operation of a land disposal facility on a specific basis, if it finds reasonable assurance of compliance with the performance objectives of Rule R313-25.

R313-25-29. Institutional Requirements.

(1) Land Ownership. Disposal of waste received from other persons may be permitted only on land owned in fee by the Federal or a State government.

(2) Institutional Control. The land owner or custodial agency shall conduct an institutional control program to physically control access to the disposal site following transfer of control of the disposal site from the disposal site operator. The institutional control program shall also include, but not be limited to, conducting an environmental monitoring program at the disposal site, periodic surveillance, minor custodial care, and other equivalents as determined by the Director, and administration of funds to cover the costs for these activities. The period of institutional controls will be determined by the Director, but institutional controls may not be relied upon for more than 100 years following transfer of control of the disposal site to the owner.

R313-25-30. Applicant Qualifications and Assurances.

The applicant shall show that it either possesses the necessary funds, or has reasonable assurance of obtaining the necessary funds, or by a combination of the two, to cover the estimated costs of conducting all licensed activities over the planned operating life of the project, including costs of construction and disposal.

R313-25-31. Funding for Disposal Site Closure and Stabilization.

(1) The applicant shall provide assurances prior to the commencement of operations that sufficient funds will be available to carry out disposal site closure and stabilization, including:

(a) decontamination or dismantlement of land disposal facility structures, and

(b) closure and stabilization of the disposal site so that following transfer of the disposal site to the site owner, the need for ongoing active maintenance is eliminated to the extent practicable and only minor custodial care, surveillance, and monitoring are required. These assurances shall be based on Director approved cost estimates reflecting the Director approved plan for disposal site closure and stabilization. The applicant's cost estimates shall take into account total costs that would be incurred if an independent contractor were hired to perform the closure and stabilization work.

(2) In order to avoid unnecessary duplication and expense, the Director will accept financial sureties that have been consolidated with earmarked financial or surety arrangements established to meet requirements of Federal or other State agencies or local governmental bodies for decontamination, closure, and stabilization. The Director will accept these arrangements only if they are considered adequate to satisfy the requirements of Section R313-25-31 and if they clearly identify that the portion of the surety which covers the closure of the disposal site is clearly identified and committed for use in accomplishing these activities.

(3) The licensee's financial or surety arrangement shall be submitted annually for review by the Director to assure that sufficient funds will be available for completion of the closure plan.

(4) The amount of the licensee's financial or surety arrangement shall change in accordance with changes in the predicted costs of closure and stabilization. Factors affecting closure and stabilization cost estimates include inflation, increases in the amount of disturbed land, changes in engineering plans, closure and stabilization that have already been accomplished, and other conditions affecting costs. The financial or surety arrangement shall be sufficient at all times to cover the costs of closure and stabilization of the disposal units that are expected to be used before the next license renewal.

(5) The financial or surety arrangement shall be written for a specified period of time and shall be automatically renewed unless the person who issues the surety notifies the Director; the beneficiary, the site owner; and the principal, the licensee, not less than 90 days prior to the renewal date of its intention not to renew. In such a situation, the licensee shall submit a replacement surety within 30 days after notification of cancellation. If the licensee fails to provide a replacement surety acceptable to the Director, the beneficiary may collect on the original surety.

(6) Proof of forfeiture shall not be necessary to collect the surety so that, in the event that the licensee could not provide an acceptable replacement surety within the required time, the surety shall be automatically collected prior to its expiration. The conditions described above shall be clearly stated on surety instruments.

(7) Financial or surety arrangements generally acceptable to the Director include surety bonds, cash deposits, certificates

of deposit, deposits of government securities, escrow accounts, irrevocable letters or lines of credit, trust funds, and combinations of the above or other types of arrangements as may be approved by the Director. Self-insurance, or an arrangement which essentially constitutes self-insurance, will not satisfy the surety requirement for private sector applicants.

(8) The licensee's financial or surety arrangement shall remain in effect until the closure and stabilization program has been completed and approved by the Director, and the license has been transferred to the site owner.

R313-25-32. Financial Assurances for Institutional Controls.

(1) Prior to the issuance of the license, the applicant shall provide for Director approval, a binding arrangement, between the applicant and the disposal site owner that ensures that sufficient funds will be available to cover the costs of monitoring and required maintenance during the institutional control period. The binding arrangement shall be reviewed annually by the Director to ensure that changes in inflation, technology, and disposal facility operations are reflected in the arrangements.

(2) Subsequent changes to the binding arrangement specified in Subsection R313-25-32(1) relevant to institutional control shall be submitted to the Director for prior approval.

R313-25-33. Maintenance of Records, Reports, and Transfers.

(1) Licensees shall maintain records and make reports in connection with the licensed activities as may be required by the conditions of the license or by the rules and orders of the Director.

(2) Records which are required by these rules or by license conditions shall be maintained for a period specified by the appropriate rules or by license condition. If a retention period is not otherwise specified, these records shall be maintained and transferred to the officials specified in Subsection R313-25-33(4) as a condition of license termination unless the Director otherwise authorizes their disposition.

(3) Records which shall be maintained pursuant to Rule R313-25 may be the original or a reproduced copy or microfilm if this reproduced copy or microfilm is capable of producing copy that is clear and legible at the end of the required retention period.

(4) Notwithstanding Subsections R313-25-33(1) through (3), copies of records of the location and the quantity of wastes contained in the disposal site shall be transferred upon license termination to the chief executive of the nearest municipality, the chief executive of the county in which the facility is located, the county zoning board or land development and planning agency, the State Governor, and other state, local, and federal governmental agencies as designated by the Director at the time of license termination.

(5) Following receipt and acceptance of a shipment of waste, the licensee shall record the date that the shipment is received at the disposal facility, the date of disposal of the waste, a traceable shipment manifest number, a description of any engineered barrier or structural overpack provided for disposal of the waste, the location of disposal at the disposal site, the condition of the waste packages as received, discrepancies between the materials listed on the manifest and those received, the volume of any pallets, bracing, or other shipping or onsite generated materials that are contaminated, and are disposed of as contaminated or suspect materials, and evidence of leakage or damaged packages or radiation or contamination levels in excess of limits specified in U.S. Department of Transportation and Director regulations or rules. The licensee shall briefly describe repackaging operations of the waste packages included in the shipment, plus other information required by the Director as a license condition.

(6) Licensees authorized to dispose of waste received from other persons shall file a copy of their financial report or a certified financial statement annually with the Director in order to update the information base for determining financial qualifications.

(7)(a) Licensees authorized to dispose of waste received from other persons, pursuant to Rule R313-25, shall submit annual reports to the Director. Reports shall be submitted by the end of the first calendar quarter of each year for the preceding year.

(b) The reports shall include:

(i) specification of the quantity of each of the principal contaminants released to unrestricted areas in liquid and in airborne effluents during the preceding year;

(ii) the results of the environmental monitoring program;

(iii) a summary of licensee disposal unit survey and maintenance activities;

(iv) a summary, by waste class, of activities and quantities of radionuclides disposed of;

(v) instances in which observed site characteristics were significantly different from those described in the application for a license; and

(vi) other information the Director may require.

(c) If the quantities of waste released during the reporting period, monitoring results, or maintenance performed are significantly different from those predicted, the report shall cover this specifically.

(8) In addition to the other requirements in Section R313-25-33, the licensee shall store, or have stored, manifest and other information pertaining to receipt and disposal of radioactive waste in an electronic recordkeeping system.

(a) The manifest information that must be electronically stored is:

(i) that required in Appendix G of 10 CFR 20.1001 to 20.2402, (2006), which is incorporated into these rules by reference, with the exception of shipper and carrier telephone numbers and shipper and consignee certifications; and

(ii) that information required in Subsection R313-25-33(5).

(b) As specified in facility license conditions, the licensee shall report the stored information, or subsets of this information, on a computer-readable medium.

R313-25-34. Tests on Land Disposal Facilities.

Licensees shall perform, or permit the Director to perform, any tests the Director deems appropriate or necessary for the administration of the rules in Rule R313-25, including, but not limited to, tests of:

(1) wastes;

(2) facilities used for the receipt, storage, treatment, handling or disposal of wastes;

(3) radiation detection and monitoring instruments; or

(4) other equipment and devices used in connection with the receipt, possession, handling, treatment, storage, or disposal of waste.

R313-25-35. Director Inspections of Land Disposal Facilities.

(1) Licensees shall afford to the Director, at reasonable times, opportunity to inspect waste not yet disposed of, and the premises, equipment, operations, and facilities in which wastes are received, possessed, handled, treated, stored, or disposed of.

(2) Licensees shall make available to the Director for inspection, upon reasonable notice, records kept by it pursuant to these rules. Authorized representatives of the Director may copy and take away copies of, for the Director's use, any records required to be kept pursuant to Rule R313-25.

Notice of Continuation September 23, 2011

19-3-104

19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-26. Generator Site Access Permit Requirements for Accessing Utah Radioactive Waste Disposal Facilities.****R313-26-1. Purpose and Authority.**

(1) The purpose of this rule is to prescribe the requirements for the issuance of permits to generators for accessing a land disposal facility located within the State and requirements for shippers.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

(3) The requirements of Rule R313-26 are in addition to, and not in substitution for, other applicable requirements of these rules.

R313-26-2. Definitions.

As used in Rule R313-26, the following definitions apply:

"Disposal" means the isolation of wastes from the biosphere by placing them in a land disposal facility.

"Generator Site Access Permit" means an authorization to deliver radioactive wastes to a land disposal facility located within the State of Utah.

"Land disposal facility" has the same meaning as that given in Section R313-25-2.

"Manifest" means the document, as defined in Appendix G of 10 CFR 20.1001 to 20.2402 (2006), used for identifying the quantity, composition, origin, and destination of radioactive waste during its transport to a disposal facility.

"Packager" means Waste Processor, Waste Collector or Waste Generator as defined in Section R313-26-2.

"Radioactive waste" means any material that contains radioactivity or is radioactively contaminated and is intended for ultimate disposal at a licensed land disposal facility in Utah.

"Shipper" means the person who offers radioactive waste for transportation, typically consigning this type of waste to a land disposal facility.

"Waste Collector," "Waste Generator," and "Waste Processor" has the meaning as defined in Appendix G of 10 CFR 20.1001 to 20.2402 (2006).

R313-26-3. Generator Site Access Permits.

A Waste Generator, Waste Collector, or Waste Processor shall obtain a Generator Site Access Permit from the Director before transferring radioactive waste to a land disposal facility in Utah.

(1) Generator Site Access Permit applications shall be filed on a form prescribed by the Director.

(2) Applications shall be received by the Director at least 30 days prior to any shipments being delivered to a land disposal facility in Utah.

(3) Each Generator Site Access Permit application shall include a certification to the Director that the shipper shall comply with all applicable State or Federal laws, administrative rules and regulations, licenses, or license conditions of the land disposal facility regarding the packaging, transportation, storage, disposal and delivery of radioactive wastes.

(4) Generator Site Access Permit fees shall be assessed annually by the Director based on the following classifications:

(a) Waste Generators shipping more than 1000 cubic feet of radioactive waste annually to a land disposal facility in Utah.

(b) Waste Generators shipping 1000 cubic feet or less of radioactive waste annually to a land disposal facility in Utah.

(c) Waste Collectors or Waste Processors shipping radioactive waste to a land disposal facility in Utah.

(5) Generator Site Access Permits shall be valid for a maximum of one year from the date of issuance. The Director may modify individual Generator Site Access Permit terms and prorate the annual fees accordingly for administrative purposes.

(6) Generator Site Access Permits may be renewed by

filing a new application with the Director. To ensure timely renewal, generators and brokers shall submit applications, for Generator Site Access Permit renewal, a minimum of 30 days prior to the expiration date of their Generator Site Access Permit.

(7) Generator Site Access Permit fees are not refundable.

(8) Transfer of a Generator Site Access Permit shall be approved by the Director.

(9) The number of Generator Site Access Permits required by each generator shall be determined by the following requirements:

(a) Generators who own multiple facilities within the same state may apply for one Generator Site Access Permit, provided the same contact person within the generator's company shall be responsible for responding to the Director for matters pertaining to the waste shipments.

(b) Facilities which are owned by the same generator and located in different states shall obtain separate Generator Site Access Permits.

(c) Persons who both generate and are either a Waste Processor or Waste Collector shall obtain separate Generator Site Access Permits.

R313-26-4. Shipper's Requirements.

(1) The shipper shall provide on demand the Director a copy of the Nuclear Regulatory Commission's "Uniform Low Level Radioactive Waste Manifest" for shipments consigned for disposal within Utah.

(2) The appropriate Generator Site Access Permit number(s) shall be documented on the manifest.

(3) Waste Generators, Waste Processors and Waste Collectors shall ensure that all Generator Site Access Permits are current prior to shipment of waste to a land disposal facility located in the state of Utah, and that the waste will arrive at the land disposal facility prior to the expiration date of the Generator Site Access Permits.

(4) A Waste Collector, Waste Processor or Waste Generator shall ensure all radioactive waste contained within a shipment for disposal at a land disposal facility in the state is traceable to the original generators and states, regardless of whether the waste is shipped directly from the point of generation to the disposal facility.

(5) The shipper shall ensure waste material is contained where no release of material can occur under conditions normally incident to transportation and shall utilize waste container(s)/package(s) where containment integrity has not been compromised.

R313-26-5. Land Disposal Facility Licensee Requirements.

The land disposal facility licensee shall ensure that Waste Generators, Waste Collectors and Waste Processors have a current, unencumbered Generator Site Access Permit prior to accepting a Waste Generator's, Waste Collector's or Waste Processor's waste.

R313-26-6. Enforcement.

Generator Site Access Permittees shall be subject to the provisions of Rule R313-14 for violations of federal regulations, state rules or requirements in the current land disposal facility operating license regarding radioactive waste packaging, transportation, labeling, notification, classification, marking, manifesting or description.

**KEY: radioactive waste generator permit

19-3-106.4

Notice of Continuation April 6, 2011

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-28. Use of X-Rays in the Healing Arts.****R313-28-10. Purpose and Scope.**

(1) The purpose of the rules in R313-28 is to prescribe the requirements for the use of x-rays in the healing arts.

(2) The rules set forth herein are adopted pursuant to the provisions of Sections 19-3-104(4) and 19-3-104(7).

R313-28-20. Definitions.

As used in R313-28, the following definitions apply:

"Accessible surface" means the external surface of the enclosure or housing provided by the manufacturer.

"Actual focal spot" refer to "Focal spot."

"Aluminum equivalent" means the thickness of aluminum, type 1100 alloy, affording the same attenuation, under specified conditions, as the material in question. The nominal chemical composition of type 1100 aluminum alloy is 99.00 percent minimum aluminum, 0.12 percent copper.

"Assembler" means individuals engaged in the business of assembling, replacing, or installing one or more components into an x-ray system or subsystem. The term includes the owner of an x-ray system or his or her employee or agent if they assemble components into an x-ray system that is subsequently used to provide professional or commercial services.

"Attenuation block" means a block or stack, having appropriate dimensions 20 cm by 20 cm by 3.8 cm, of type 1100 aluminum alloy or other materials having equivalent attenuation.

"Automatic EXPOSURE control" means a device which automatically controls one or more technique factors in order to obtain, at a preselected location, a required quantity of radiation. Phototimer and ion chamber devices are included in this category.

"Barrier" refer to "Protective barrier".

"Beam axis" means a line from the source through the centers of the x-ray fields.

"Beam-limiting device" means a device which provides a means to restrict the dimensions of the x-ray field.

"Certified components" means components of x-ray systems which are subject to regulations promulgated under Public Law 90-602, the Radiation Control for Health and Safety Act of 1968.

"Certified system" means an x-ray system which has one or more certified components.

"Changeable filters" means filters designed to be removed by the operator.

"Coefficient of variation (C)" means the ratio of the standard deviation to the mean value of a population of observations.

"Computed tomography" means the production of a tomogram by the acquisition and computer processing of x-ray transmission data.

"Control panel" means that part of the x-ray control upon which are mounted the switches, knobs, push buttons, and other hardware necessary for setting the technique factors.

"Cooling curve" means the graphical relationship between heat units stored and cooling time.

"CT" means computed tomography.

"CT gantry" means the tube housing assemblies, beam-limiting devices, detectors, and the supporting structures and frames which house these components.

"Dead-man switch" means a switch so constructed that a circuit closing contact can be maintained only by continuous pressure on the switch by the operator.

"Diagnostic source assembly" means the tube housing assembly with a beam-limiting device attached.

"Diagnostic x-ray system" means an x-ray system designed for irradiation of part of the human body for the purpose of recording or visualization for diagnostic purposes.

"Entrance EXPOSURE rate" means the EXPOSURE free in air per unit time at the point where the useful beam enters the patient.

"Equipment" refer to "X-ray equipment".

"Field emission equipment" means equipment which uses an x-ray tube in which electron emission from the cathode is due solely to the action of an electric field.

"Filter" means material placed in the useful beam to absorb preferentially selected radiations.

"Fluoroscopic imaging assembly" means a subsystem in which x-ray photons produce a fluoroscopic image. It includes equipment housing, electrical interlocks, the primary protective barrier, and structural material providing linkage between the image receptor and the diagnostic source assembly.

"Focal spot" means the area on the anode of the x-ray tube bombarded by the electrons accelerated from the cathode and from which the useful beam originates. Also referred to as "Actual focal spot."

"Gonad shield" means a protective barrier for the testes or ovaries.

"Half-value layer or HVL" means the thickness of specified material which attenuates the beam of radiation to an extent that the EXPOSURE rate is reduced to one-half of its original value. In this definition, the contribution of scatter radiation, other than that which might be present initially in the beam concerned, is deemed to be excluded.

"Healing arts screening" means the use of x-ray equipment to examine individuals who are asymptomatic for the disease for which the screening is being performed and the use of x-rays are not specifically and individually ordered by a licensed practitioner of the healing arts legally authorized to order x-ray tests for the purpose of diagnosis.

"Heat unit" means a unit of energy equal to the product of the peak kilovoltage, milliamperes, and seconds: for example, kVp times mA times seconds.

"HVL" refer to "half value layer."

"Image intensifier" means a device installed in its housing which instantaneously converts an x-ray pattern into a light image of higher energy density.

"Image receptor" means a device, for example, a fluorescent screen radiographic film, solid state detector, or gaseous detector, which transforms incident x-ray photons to produce a visible image or stores the information in a form which can be made into a visible image. In those cases where means are provided to preselect a portion of the image receptor, the term "image receptor" shall mean the preselected portion of the device.

"Irradiation" means the exposure of matter to ionizing radiation.

"Kilovolts peak" refer to "Peak tube potential".

"kV" means kilovolts.

"kVp" refer to "Peak tube potential."

"Lead equivalent" means the thickness of lead affording the same attenuation, under specified conditions, as the material in question.

"Leakage radiation" means radiation emanating from the diagnostic source assembly except for:

- (a) the useful beam, and
- (b) radiation produced when the exposure switch or timer is not activated.

"Leakage technique factors" means the technique factors associated with the diagnostic source assembly which are used in measuring leakage radiation. They are defined as follows:

- (a) For diagnostic source assemblies intended for capacitor energy storage equipment, the maximum-rated peak tube potential and the maximum-rated number of exposures in an hour for operation at the maximum-rated peak tube potential with the quantity of charge per exposure being ten millicoulombs, ten milliamperere seconds, or the minimum

obtainable from the unit, whichever is larger.

(b) For diagnostic source assemblies intended for field emission equipment rated for pulsed operation, the maximum-rated peak tube potential and the maximum-rated number of x-ray pulses in an hour for operation at the maximum-rated peak tube potential.

(c) For other diagnostic source assemblies, the maximum-rated peak tube potential and the maximum-rated continuous tube current for the maximum-rated peak tube potential.

"Light field" means that area of the intersection of the light beam from the beam-limiting device and one of the set of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the illumination is one-fourth of the maximum in the intersection.

"mA" means tube current in milliamperes.

"mAs" means milliamperes second or the product of the tube current in milliamperes and the time of exposure in seconds.

"Mammography imaging medical physicist" means an individual who conducts mammography surveys of mammography facilities.

"Mammography survey" means an evaluation of x-ray imaging equipment and oversight of a mammography facility's quality control program.

"Mobile x-ray equipment" refer to "X-ray equipment".

"Multiple scan average dose" means the average dose at the center of a series of scans, specified at the center of the axis of rotation of a CT x-ray system.

"New installation" means change, modification or relocation of new or existing shielding or equipment.

"Operator of diagnostic x-ray equipment" means either:

(a) The individual responsible for insuring that the appropriate technique factors are set on the x-ray equipment, or
(b) The individual who makes the radiation exposure.

"Patient" means an individual subjected to healing arts examination, diagnosis, or treatment.

"PBL" refer to "Positive beam limitation."

"Peak tube potential" means the maximum value of the potential difference across the x-ray tube during an exposure.

"Phantom" means a volume of material behaving in a manner similar to tissue with respect to the attenuation and scattering of radiation.

"PID" refer to "Position indicating device."

"Portable x-ray equipment" refer to "X-ray equipment".

"Position indicating device (PID)" means a device, on dental x-ray equipment which indicates the beam position and establishes a definite source-surface (skin) distance. The device may or may not incorporate or serve as a beam-limiting device.

"Positive beam limitation" means the automatic or semi-automatic adjustment of an x-ray beam to the size of the selected image receptor, whereby exposures cannot be made without such adjustment.

"Primary beam scatter" means scattered radiation which has been deviated in direction or energy by materials irradiated by the primary beam.

"Primary protective barrier" refer to "Protective barrier".

"Protective apron" means an apron made of radiation absorbing materials, used to reduce radiation exposure.

"Protective barrier" means a barrier of radiation absorbing material used to reduce radiation exposure.

(a) "Primary protective barrier" means the material, excluding filters, placed in the useful beam to reduce the radiation exposure for protection purposes.

(b) "Secondary protective barrier" means the material which attenuates stray radiation.

"Protective glove" means a glove made of radiation absorbing materials used to reduce radiation exposure.

"Radiation therapy simulation system" means a radiographic or fluoroscopic x-ray system intended for localizing the volume to be exposed during radiation therapy

and for confirming the position and size of the therapeutic irradiation field.

"Radiograph" means an image receptor on which the image is created directly or indirectly by an x-ray pattern and results in a permanent record.

"Rating" means the operating limits of an x-ray system or subsystem as specified by the component manufacturer.

"Recording" means producing a permanent form of an image resulting from x-ray photons.

"Reference plane" means a plane which is displaced from and parallel to the tomographic plane.

"Scan" means the complete process of collecting x-ray transmission data for the production of a tomogram. Data can be collected simultaneously during a single scan for the production of one or more tomograms.

"Scan increment" means the amount of relative displacement of the patient with respect to the computer tomographic x-ray system between successive scans measured along the direction of such displacement.

"Scattered radiation" means radiation that, during passage through matter, has been deviated in direction, energy or both direction and energy. Also refer to "Primary Beam Scatter".

"Shutter" means a device attached to the tube housing assembly which can intercept the entire cross sectional area of the useful beam and which has a lead equivalency at least that of the tube housing assembly.

"SID" refer to "Source-image receptor distance".

"Source" means the focal spot of the x-ray tube.

"Source to image receptor distance" means the distance from the source to the center of the input surface of the image receptor.

"Special purpose x-ray system" means that which is designed for irradiation of specific body parts.

"Spot film" means a radiograph which is made during a fluoroscopic examination to permanently record conditions which exist during that fluoroscopic procedure.

"Spot film device" means a device intended to transport or position a radiographic image receptor between the x-ray source and fluoroscopic image receptor, including a device intended to hold a cassette over the input end of an image intensifier for the purpose of making a radiograph.

"SSD" means the distance between the source and the skin entrance plane of the patient.

"Stationary x-ray equipment" refer to "X-ray equipment".

"Stray radiation" means the sum of leakage and scattered radiation.

"Technique factors" means the following conditions of operation.

(a) For capacitor energy storage equipment, peak tube potential in kV and quantity of charge in mAs.

(b) For field emission equipment rated for pulsed operation, peak tube potential in kV and number of x-ray pulses.

(c) For other equipment, peak tube potential in kV and either;

(i) the tube current in mA and exposure time in seconds, or

(ii) the product of tube current and exposure time in mAs.

"Termination of irradiation" means the stopping of irradiation in a fashion which will not permit continuance of irradiation without the resetting of operating conditions at the control panel.

"Tomogram" means the depiction of the x-ray attenuation properties of a section through the body.

"Tomographic plane" means that geometric plane which is identified as corresponding to the output tomogram.

"Tomographic section" means the volume of an object whose x-ray attenuation properties are imaged in a tomogram.

"Tube" means an x-ray tube, unless otherwise specified.

"Tube housing assembly" means the tube housing with tube

installed. It includes high-voltage or filament transformers and other appropriate elements when they are contained within the tube housing.

"Tube rating chart" means the set of curves which specify the rated limits of operation of the tube in terms of the technique factors.

"Useful beam" means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam limiting device when the switch or timer is activated.

"Visible area" means that portion of the input surface of the image receptor over which incident x-ray photons are producing a visible image.

"X-ray exposure control" means a device, switch, button, or other similar means by which an operator initiates or terminates the radiation exposure. The x-ray exposure control may include associated equipment, for example, timers and back-up timers.

"X-ray equipment" means an x-ray system, subsystem, or component thereof. Types of x-ray equipment are as follows:

(a) "Mobile" means x-ray equipment mounted on a permanent base with wheels or casters for moving while completely assembled.

(b) "Portable" means x-ray equipment designed to be hand-carried.

(c) "Stationary" means x-ray equipment which is installed in a fixed location.

"X-ray field" means that area of the intersection of the useful beam and one of the sets of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the EXPOSURE rate is one-fourth of the maximum in the intersection.

"X-ray high-voltage generator" means a device which transforms electrical energy from the potential supplied by the x-ray control to the tube operating potential. The device may also include means for transforming alternating current to direct current, filament transformers for the x-ray tube high-voltage switches, electrical protective devices, and other appropriate elements.

"X-ray system" means an assemblage of components for the controlled production of x-rays. It includes minimally an x-ray high-voltage generator, an x-ray control, a tube housing assembly, a beam-limiting device, and the necessary supporting structures. Additional components which function with the system are considered integral parts of the system.

"X-ray tube" means an electron tube which is designed to be used primarily for the production of x-rays.

R313-28-31. General and Administrative Requirements.

(1) Persons shall not make, sell, lease, transfer, lend, or install x-ray equipment or the accessories used in connection with x-ray equipment unless the accessories and equipment, when properly placed in operation and properly used, will meet the applicable requirements of these rules.

(2) The registrant shall be responsible for directing the operation of the x-ray machines which are under the registrant's administrative control. The registrant or registrant's agent shall assure that the requirements of R313-28-31(2)(a) through R313-28-31(2)(i) are met in the operation of the x-ray machines.

(a) An x-ray machine which does not meet the provisions of these rules shall not be operated for diagnostic purposes, when directed by the Director.

(b) Individuals who will be operating the x-ray equipment shall be instructed in the registrant's written radiation safety program and be qualified in the safe use of the equipment. Required operator qualifications are listed in R313-28-350.

(c) The registrant of a facility shall create and make available to x-ray operators written safety procedures, including patient holding and restrictions of the operating technique

required for the safe operation of the x-ray systems. Individuals who operate x-ray systems shall be responsible for complying with these rules.

(d) Except for individuals who cannot be moved out of the room and the patient being examined, only the staff and ancillary personnel or other individuals needed for the medical procedure or training shall be present in the room during the radiographic exposure and shall be positioned as follows:

(i) individuals other than the patient shall be positioned so that no part of the body will be struck by the useful beam unless protected by not less than 0.5 mm lead equivalent material;

(ii) the x-ray operator, other staff, ancillary personnel and other individuals needed for the medical procedure shall be protected from primary beam scatter by protective aprons or barriers unless it can be shown that by virtue of distances employed, EXPOSURE levels are reduced to the limits specified in R313-15-201; and

(iii) patients who are not being examined and cannot be removed from the room shall be protected from the primary beam scatter by whole body protective barriers of not less than 0.25 mm lead equivalent material or shall be so positioned that the nearest portion of the body is at least two meters from both the tube head and nearest edge of the image receptor.

(e) For patients who have not passed reproductive age, gonad shielding of not less than 0.5 mm lead equivalent material shall be used during radiographic procedures in which the gonads are in the useful beam, except for cases in which this would interfere with the diagnostic procedure.

(f) Individuals shall be exposed to the useful beam for healing arts purposes only when the exposure has been specifically ordered and authorized by a licensed practitioner of the healing arts after a medical consultation. Deliberate exposures for the following purposes are prohibited:

(i) exposure of an individual for training, demonstration or other non-healing arts purposes; and

(ii) exposure of an individual for the purpose of healing arts screening except as authorized by R313-28-31(2)(i).

(g) When a patient or film must be provided with auxiliary support during a radiation exposure:

(i) mechanical holding devices shall be used when the technique permits. The written procedures, required by R313-28-31(2)(c), shall list individual projections where mechanical holding devices can be utilized;

(ii) written safety procedures, as required by R313-28-31(2)(c), shall indicate the requirements for selecting an individual to hold patients or films and the procedure that individual shall follow;

(iii) the individual holding patients or films during radiographic examinations shall be instructed in personal radiation safety and protected as required by R313-28-31(2)(d)(i);

(iv) Individuals shall not be used routinely to hold film or patients;

(v) In those cases where the patient must hold the film, except during intraoral examinations, portions of the body other than the area of clinical interest struck by the useful beam shall be protected by not less than 0.5 mm lead equivalent material; and

(vi) Facilities shall have protective aprons and gloves available in sufficient numbers to provide protection to personnel who are involved with x-ray operations and who are otherwise not shielded.

(h) Personnel monitoring. Individuals who are associated with the operation of an x-ray system are subject to the applicable requirements of R313-15.

(i) Healing arts screening. Persons proposing to conduct a healing arts screening program shall not initiate the program without prior approval of the Director. When requesting approval, that person shall submit the information outlined in

R313-28-400. If information submitted becomes invalid or outdated, the Director shall be notified immediately.

(3) Maintenance of records and information. The registrant shall maintain at least the following information for each x-ray machine:

- (a) model numbers of major components;
- (b) record of surveys or calculations to demonstrate compliance with R313-15-302, calibration, maintenance and modifications performed on the x-ray machine; and
- (c) a shielding design report for the x-ray suite which states assumed values for workload and use factors and includes a drawing of surrounding areas showing assumed values for occupancy factors.

(4) X-ray records. Facilities shall maintain an x-ray record containing the patient's name, the types of examinations, and the dates the examinations were performed. When the patient or film must be provided with human auxiliary support, the name of the human holder shall be recorded. The registrant shall retain these records for three years after the record is made.

(5) Portable or mobile equipment shall be used only for examinations where it is impractical to transfer the patient to a stationary radiographic installation.

(6) Hand-held medical x-ray systems. X-ray equipment designed to be hand-held shall comply with Section R313-28-31, excluding Subsection R313-28-31(5), and R313-28-52, excluding Subsections R313-28-52(8)(b)(i) and (ii).

(a) When operating hand-held equipment for which it is not possible for the operator to remain at least six feet from the x-ray machine during x-ray exposure, protective aprons of at least 0.5 millimeter lead equivalence shall be provided for the operator to protect the operator's torso and gonads from backscatter radiation;

(b) In addition to the dose limits in R313-15-301, operators of hand-held x-ray equipment shall ensure that members of the public that may be exposed to scatter radiation or primary beam transmission from the hand-held device are not exposed above 2 milliroentgen per hour;

(i) Operators will ensure that members of the public likely to be exposed to greater than 2 milliroentgen per hour will be provided protective aprons of at least 0.5 millimeter lead equivalence or are moved to a distance such that the exposure rate to the individual is below 2 milliroentgen per hour; and

(c) In addition to the requirements of Subsection R313-28-350(1), each operator of hand-held x-ray equipment shall complete the training program supplied by the manufacturer prior to using the x-ray unit. Records of training shall be maintained on file for examination by an authorized representative of the Director.

(7) Procedures and auxiliary equipment designed to minimize patient and personnel exposure commensurate with the needed diagnostic information shall be utilized.

(a) The speed of the screen and film combinations used shall be the fastest speed consistent with the diagnostic objective of the examinations. Film cassettes without intensifying screens shall not be used for routine diagnostic radiological imaging, with the exception of standard film packets for intra-oral use in dental radiography. If the requirements of R313-28-31(6)(a) cannot be met, an exemption may be requested pursuant to R313-12-55.

(b) The radiation exposure to the patient shall be the minimum exposure required to produce images of good diagnostic quality.

(c) X-ray systems, other than fluoroscopic, computed tomography, dental or veterinary units, shall not be utilized in procedures where the source to patient distance is less than 30 centimeters.

R313-28-32. Plan Review.

(1) Prior to construction, the floor plans, shielding

specifications and equipment arrangement of all new installations, or modifications of existing installations, utilizing ionizing radiation shall be submitted to a Qualified Expert for review. The required information is denoted in R313-28-200 and R313-28-450.

(2) A copy of the Qualified Expert's conclusions regarding shielding specifications must be submitted to the Director within 14 working days.

(3) The Director may require additional modifications should a subsequent analysis of operating conditions, for example, a change in workload or use and occupancy factors, indicate the possibility of an individual receiving a dose in excess of the limits prescribed in R313-15.

R313-28-35. General Requirements for Diagnostic X-Ray Systems.

In addition to other requirements of R313-28, all diagnostic x-ray systems shall meet the following requirements:

(1) Warning label. The control panel containing the main power switch shall bear the warning statement, legible and accessible to view: "WARNING: This x-ray unit may be dangerous to patient and operator unless safe exposure factors and operating instructions are observed."

(2) Battery charge indicator. On battery powered generators, visual means shall be provided on the control panel to indicate whether the battery is in a state of charge adequate for proper operation.

(3) Leakage radiation from the diagnostic source assembly. The leakage radiation from the diagnostic source assembly measured at a distance of one meter in any direction from the source shall not exceed 25.8 uC/kg (100 milliroentgens) in one hour when the x-ray tube is operated at its leakage technique factors.

(4) Radiation from components other than the diagnostic source assembly. The radiation emitted by a component other than the diagnostic source assembly shall not exceed 0.516 uC/kg (two milliroentgens) in one hour at five centimeters from accessible surfaces of the component when it is operated in an assembled x-ray system under the conditions for which it was designed. Compliance shall be determined by measurements averaged over an area of 100 square centimeters with no linear dimension greater than 20 centimeters.

(5) Beam quality.

(a) The half value layer of the useful beam for a given x-ray tube potential shall not be less than the values shown in R313-28-35, Table I. If it is necessary to determine such half-value layer at an x-ray tube potential which is not listed in Table I, linear interpolation or extrapolation may be made.

TABLE I

DESIGN OPERATING RANGE (KILOVOLTS PEAK)	MEASURED POTENTIAL (KILOVOLTS PEAK)	DENTAL INTRA-ORAL MANUFACTURED BEFORE AUGUST 1, 1974 AND ON OR AFTER DECEMBER 1, 1980	ALL OTHER DIAGNOSTIC X-RAY SYSTEMS
Below 51	30	(use prohibited)	0.3
	40	(use prohibited)	0.4
	50	1.5	0.5
	51	1.5	1.2
	60	1.5	1.3
	70	1.5	1.5
	Above 70	71	2.1
80		2.3	2.3
90		2.5	2.5
100		2.7	2.7
110		3.0	3.0
120		3.2	3.2
130		3.5	3.5
140		3.8	3.8
150		4.1	4.1

(b) For capacitor discharge equipment, compliance with the requirements of R313-28-35(5)(a) shall be determined with

the system fully charged and a setting of 10 mAs for exposures.

(c) The required minimal half-value layer of the useful beam shall include the filtration contributed by materials which are permanently present between the focal spot of the tube and the patient.

(d) Filtration control. For x-ray systems which have variable kVp and variable filtration for the useful beam, a device shall link the kVp selector with the filters and shall prevent an exposure unless the minimum amount of filtration necessary to produce the HVL required by R313-28-35(5)(a) is in the useful beam for the given kVp which has been selected.

(6) Multiple tubes. When two or more radiographic tubes are controlled by one exposure switch, the tube or tubes which have been selected shall be clearly indicated prior to initiation of the exposure. For equipment manufactured after August 1, 1974, indications shall be both on the x-ray control panel and at or near the tube housing assembly which has been selected.

(7) Mechanical support of tube head. The tube housing assembly supports shall be adjusted so that the tube housing assembly will remain stable during an exposure unless the tube housing movement during exposure is a designed function of the x-ray system.

(8) Technique indicators.

(a) The technique factors to be used during an exposure shall be indicated before the exposure begins, except when automatic EXPOSURE controls are used, in which case the technique factors which are set prior to the exposure shall be indicated.

(b) On equipment having fixed technique factors, the requirements, in R313-28-35(8)(a) may be met by permanent markings. Indication of technique factors shall be visible from the operator's position except in the case of spot films made by the fluoroscopist.

(9) Maintaining compliance. Diagnostic x-ray systems and their associated components certified pursuant to the provisions of 21 CFR Part 1020 (2006) shall be maintained in compliance with applicable requirements of that standard.

(10) Locks. All position locking, holding, and centering devices on x-ray system components and systems shall function as intended.

(11) X-ray systems which have been granted a variance by the Director, Center for Devices and Radiological Health, Food and Drug Administration (Director), from the performance standards for ionizing radiation emitting products, in accordance with 21 CFR 1010.4 (2006) shall be deemed to satisfy the requirements in R313-28 that correspond to the variance granted by the Director. The registrant shall insure that labeling pursuant to 21 CFR 1010.5(f) (2006) remains legible and visible on the x-ray system.

R313-28-40. Fluoroscopic X-Ray Systems.

All fluoroscopic x-ray systems used shall be image intensified and meet the following requirements:

(1) Primary barrier.

(a) The fluoroscopic imaging assembly shall be provided with a primary protective barrier which intercepts the entire cross section of the useful beam at SIDs for which the unit was designed.

(b) The x-ray tube used for fluoroscopy shall not produce x-rays unless the barrier is in position to intercept the entire useful beam.

(2) Fluoroscopic beam limitation.

(a) For certified fluoroscopic systems with or without a spot film device neither the length nor the width of the x-ray field in the plane of the image receptor shall exceed that of the visible area of the image receptor by more than three percent of the SID. The sum of the excess length and the excess width shall be no greater than four percent of the SID.

(b) For uncertified fluoroscopic systems with a spot film

device, the x-ray beam with the shutters fully open, during fluoroscopy or spot filming, shall be no larger than the largest image receptor size for which the device is designed. Measurements shall be made at the minimum SID available but at no less than 20 centimeters table top to the film plane distance.

(c) For uncertified fluoroscopic systems without a spot film device, the requirements of R313-28-40(1) apply.

(d) Other requirements for fluoroscopic beam limitation:

(i) means shall be provided to permit further limitation of the field. Beam-limiting devices manufactured after May 22, 1979, and incorporated in equipment with a variable SID or visible area of greater than 300 square centimeters shall be provided with means for stepless adjustment of the x-ray field;

(ii) equipment with a fixed SID and a visible area of 300 square centimeters or less shall be provided with either stepless adjustment of the x-ray field or with means to further limit the x-ray field size at the plane of the image receptor to 125 square centimeters or less;

(iii) if provided, stepless adjustment shall at the greatest SID, provide continuous field sizes from the maximum attainable to a field size of five centimeters by five centimeters or less;

(iv) for equipment manufactured after February 25, 1978, when the angle between the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor; and

(v) for non-circular x-ray fields used with circular image receptors, the error in alignment shall be determined along the length and width dimensions of the x-ray field which pass through the center of the visible area of the image receptor.

(3) Spot-film beam limitation. Spot-film devices shall meet the following requirements:

(a) means shall be provided between the source and the patient for adjustment of the x-ray field size in the plane of the film to the size of that portion of the film which has been selected on the spot film selector. Adjustments shall be automatically accomplished except when the x-ray field size in the plane of the film is smaller than that of the selected portion of the film. For spot film devices manufactured after June 21, 1979, if the x-ray field size is less than the size of the selected portion of the film, the means for adjustment of the field size shall be only at the operator's option;

(b) neither the length nor the width of the x-ray field in the plane of the image receptor shall differ from the corresponding dimensions of the selected portion of the image receptor by more than three percent of the SID when adjusted for full coverage of the selected portion of the image receptor. The sum, without regard to sign, of the length and width differences shall not exceed four percent of the SID;

(c) it shall be possible to adjust the x-ray field size in the plane of the film to a size smaller than the selected portion of the film. The minimum field size at the greatest SID shall be equal to, or less than, five by five centimeters;

(d) the center of the x-ray field in the plane of the film shall be aligned with the center of the selected portion of the film to within two percent of the SID; and

(e) on spot film devices manufactured after February 25, 1978, if the angle between the plane of the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor, and compliance shall be determined with the beam axis indicated to be perpendicular to the plane of the image receptor.

(4) Override. If a means exists to override the automatic x-ray field size adjustments required in R313-28-40(2) and (3), that means:

(a) shall be designed for use only in the event of system

failure;

(b) shall incorporate a signal visible at the fluoroscopist's position which will indicate whenever the automatic field size adjustment is overridden; and

(c) shall be clearly and durably labeled as follows: FOR X-RAY FIELD LIMITATION SYSTEM FAILURE.

(5) Activation of the fluoroscopic tube. X-ray production in the fluoroscopic mode shall be controlled by a dead-man switch. When recording serial fluoroscopic images, the fluoroscopist shall be able to terminate the x-ray exposure immediately, but means may be provided to permit completion of a single exposure of the series in process.

(6) Entrance EXPOSURE rate allowable limits.

(a) For fluoroscopic equipment manufactured before May 19, 1995, the following requirements apply:

(i) fluoroscopic equipment which is provided with automatic exposure rate control shall not be operable at combinations of tube potential and current which will result in an EXPOSURE rate in excess of 2.58 mC/kg (ten roentgens) per minute at the point where the center of the useful beam enters the patient, except:

(A) during recording of fluoroscopic images, or

(B) when an optional high level control is provided. When so provided, the equipment shall not be operable at combinations of tube potential and current which will result in an EXPOSURE rate in excess of 1.29 mC/kg (five roentgens) per minute at the point where the center of the useful beam enters the patient unless the high level control is activated. Special means of activation of high level controls shall be required. The high level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high level control is being employed.

(ii) fluoroscopic equipment which is not provided with automatic exposure rate control shall not be operable at combinations of tube potential and current which will result in an EXPOSURE rate in excess of 1.29 mC/kg (five roentgens) per minute at the point where the center of the useful beam enters the patient, except:

(A) during recording of fluoroscopic images, or

(B) when an optional high level control is activated. Special means of activation of high level controls shall be required. The high level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high level control is being employed.

(iii) fluoroscopic equipment which is provided with both automatic exposure rate control and a manual mode shall not be operable at combinations of tube potential and current that will result in an exposure rate of 2.58 mC/kg (ten roentgens) per minute in either mode at the point where the center of the useful beam enters the patient except:

(A) during recording of fluoroscopic images, or

(B) when an optional high level control is provided. When so provided, the equipment shall not be operable at combinations of tube potential and current which will result in an EXPOSURE rate in excess of 1.29 mC/kg (five roentgens) per minute at the point where the center of the useful beam enters the patient unless the high level control is activated. Special means of activation of high level controls shall be required. The high level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high level control is being employed.

(b) For fluoroscopic equipment manufactured on and after May 19, 1995, the following requirements apply:

(i) fluoroscopic equipment operable at combinations of tube potential and current which will result in an EXPOSURE rate greater than 1.29 mC/kg (five roentgens) per minute at the

point where the center of the useful beam enters the patient shall be equipped with automatic exposure rate control. Provision for manual selection of technique factors may be provided.

(ii) fluoroscopic equipment shall not be operable at combinations of tube potential and current which will result in an EXPOSURE rate in excess of 2.58 mC/kg (ten roentgens) per minute at the point where the center of the useful beam enters the patient except:

(A) during recording of images from an x-ray image-intensifier tube using photographic film or a video camera when the x-ray source is operated in pulsed mode, or

(B) when an optional high level control is activated. When the high level control is activated, the equipment shall not be operable at combinations of tube potential and current which will result in an EXPOSURE rate in excess of 5.16 mC/kg (20 roentgens) per minute at the point where the center of the useful beam enters the patient. Special means of activation of high level controls shall be required. The high level control shall be operable only when continuous manual activation is provided by the operator. A continuous signal audible to the fluoroscopist shall indicate that the high level control is being employed.

(c) Compliance with the requirements of R313-28-40(6) shall be determined as follows:

(i) if the source is below the x-ray table, the EXPOSURE rate shall be measured one centimeter above the tabletop or cradle;

(ii) if the source is above the x-ray table, the EXPOSURE rate shall be measured at 30 centimeters above the tabletop with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement;

(iii) for a C-arm type of fluoroscope, the exposure rate shall be measured 30 centimeters from the input surface of the fluoroscopic imaging assembly, with the source positioned at available SID's, provided that the end of the beam-limiting device or spacer is no closer than 30 centimeters from the input surface of the fluoroscopic imaging assembly; or

(iv) for a lateral type fluoroscope, the exposure rate shall be measured at a point 15 centimeters from the centerline of the x-ray table and in the direction of the x-ray source with the end of the beam-limiting device or spacer positioned as close as possible to the point of measurement. If the tabletop is movable, it shall be positioned as close as possible to the lateral x-ray source with the end of the beam-limiting device or spacer no closer than 15 centimeters to the x-ray table.

(d) Fluoroscopic radiation therapy simulation systems are exempt from the requirements of R313-28-40(6).

(7) Measurement of entrance EXPOSURE rates shall be performed for both maximum and typical values as follows:

(a) measurements shall be made annually or after maintenance of the system which might affect the EXPOSURE rate;

(b) results of these measurements shall be posted where the fluoroscopist may have ready access to the results while using the fluoroscope and in the record required in R313-28-31(3)(b). The measurement results shall be stated in roentgens per minute and include the machine settings used in determining results. The name of the person performing the measurements and the date the measurements were performed shall be included in the results;

(c) conditions of the annual measurement of maximum entrance EXPOSURE rate shall be performed as follows:

(i) the measurement shall be made under the conditions that satisfy the requirements of R313-28-40(6)(c);

(ii) the kVp, mA, and other selectable parameters shall be adjusted to those settings which give the maximum entrance EXPOSURE rate; and

(iii) x-ray systems that incorporate automatic exposure rate control shall have sufficient attenuative material placed in the

useful beam to produce the maximum output of that system; and
(d) conditions of the annual measurement of typical entrance EXPOSURE rate are as follows:

(i) the measurement shall be made under the conditions that satisfy the requirements of R313-28-40(6)(c);

(ii) the kVp, mA, and other selectable parameters shall be those settings typical of clinical use of the x-ray system; and

(iii) the x-ray system that incorporates automatic EXPOSURE rate control shall have an appropriate phantom placed in the useful beam to produce a milliamperage and kilovoltage typical of the use of the x-ray system.

(8) Barrier transmitted radiation rate limits.

(a) The EXPOSURE rate due to transmission through the primary protective barrier with the attenuation block in the useful beam, combined with radiation from the image intensifier, if provided, shall not exceed 0.516 uC/kg (two milliroentgens) per hour at ten centimeters from accessible surfaces of the fluoroscopic imaging assembly beyond the plane of the image receptor for each mC/kg (roentgen) per minute of entrance EXPOSURE rate.

(b) Measuring compliance of barrier transmission.

(i) The EXPOSURE rate due to transmission through the primary protective barrier combined with radiation from the image intensifier shall be determined by measurements averaged over an area of 100 square centimeters with no linear dimension greater than 20 centimeters.

(ii) If the source is below the tabletop, the measurement shall be made with the input surface of the fluoroscopic imaging assembly positioned 30 centimeters above the tabletop.

(iii) If the source is above the tabletop and the SID is variable, the measurement shall be made with the end of the beam-limiting device or spacer as close to the tabletop as it can be placed, provided that it shall not be closer than 30 centimeters.

(iv) Movable grids and compression devices shall be removed from the useful beam during the measurement.

(9) Indication of potential and current. During fluoroscopy and cinefluorography, x-ray tube potential and current shall be continuously indicated.

(10) Source-skin distance. The source to skin distance shall not be less than:

(a) 38 centimeters on stationary fluoroscopic systems manufactured on or after August 1, 1974;

(b) 35.5 centimeters on stationary fluoroscopic systems manufactured prior to August 1, 1974;

(c) 30 centimeters on all mobile fluoroscopes; or

(d) 20 centimeters for all mobile fluoroscopes when used for specific surgical applications.

(11) Fluoroscopic timer.

(a) Means shall be provided to preset the cumulative on-time of the fluoroscopic x-ray tube. The maximum cumulative time of the timing device shall not exceed five minutes without resetting.

(b) A signal audible to the fluoroscopist shall indicate the completion of a preset cumulative on-time. The signal shall continue to sound while x-rays are produced until the timing device is reset.

(12) Control of scatter radiation.

(a) The tables of fluoroscopic assemblies when combined with normal operating procedures shall provide protection from scatter radiation so that unprotected parts of a staff or ancillary individual's body shall not be exposed to unattenuated scattered radiation which originates from under the table. The attenuation required shall be not less than 0.25 mm lead equivalent.

(b) Equipment configuration when combined with procedures shall not allow portions of a staff member's or ancillary person's body, except the extremities, to be exposed to unattenuated scattered radiation emanating from above the tabletop unless:

(i) the radiation has passed through not less than 0.25 mm lead equivalent material including, but not limited to, drapes, bucky-slot cover panel, or self supporting curtains, in addition to the lead equivalency provided by the protective apron referred to in R313-28-31(2)(d),

(ii) that individual is at least 120 centimeters from the center of the useful beam, or

(iii) it is not feasible to attach shielding to special procedures equipment and personnel are wearing protective aprons.

(13) Spot film exposure reproducibility. Fluoroscopic systems equipped with radiographic spot film mode shall meet the exposure reproducibility requirements of R313-28-54.

(14) Radiation therapy simulation systems. Radiation therapy simulation systems shall be exempt from all the requirements R313-28-40(1), (8), and (11) provided that:

(a) the systems are designed and used in such a manner that no individual other than the patient is in the x-ray room during periods of time when the system is producing x-rays; and

(b) the systems which do not meet the requirements of R313-28-40(11) are provided with a means of indicating the cumulative time that an individual patient has been exposed to x-rays. Procedures shall require, in these cases, that the timer be reset between examinations.

R313-28-51. Radiographic Systems Other than Fluoroscopic, Dental Intraoral, or Computed Tomography -- Beam Limitation.

The useful beam shall be limited to the area of clinical interest and show evidence of collimation. This shall be deemed to have been met if a positive beam limiting device meeting the manufacturer's specifications or the requirements of R313-28-300 has been properly used or if evidence of collimation is shown on at least three sides or three corners of the film, for example, projections of the shutters of the collimator, cone cutting at the corners or a border at the film's edge.

(1) General purpose stationary and mobile x-ray systems.

(a) Only x-ray systems provided with a means for independent stepless adjustment of at least two dimensions of the x-ray field shall be used.

(b) A method shall be provided for visually defining the perimeter of the x-ray field. The total misalignment of the edges of the visually defined field with the respective edges of the x-ray field along either the length or width of the visually defined field shall not exceed two percent of the distance from the source to the center of the visually defined field when the surface upon which it appears is perpendicular to the axis of the x-ray beam.

(c) The Board may grant an exemption on non-certified x-ray systems to R313-28-51(1)(a) and (b) provided the registrant makes a written application for the exemption and in that application:

(i) demonstrates it is impractical to comply with R313-28-51(1)(a) and (b); and

(ii) demonstrates the purpose of R313-28-51(1)(a) and (b) will be met by other methods.

(2) In addition to the requirements of R313-28-51(1) above, stationary general purpose x-ray systems, both certified and non-certified shall meet the following requirements:

(a) a method shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor, to align the center of the x-ray field with respect to the center of the image receptor to within two percent of the SID, and to indicate the SID to within two percent;

(b) the beam-limiting device shall numerically indicate the field size in the plane of the image receptor to which it is adjusted; and

(c) indication of field size dimensions and SID's shall be specified in inches or centimeters and shall be such that aperture

adjustments result in x-ray field dimensions in the plane of the image receptor which correspond to those of the image receptor to within two percent of the SID when the beam axis is perpendicular to the plane of the image receptor.

(3) Radiographic equipment designed for only one image receptor size at a fixed SID shall be provided with means to limit the field at the plane of the image receptor to dimensions no greater than those of the image receptor, and to align the center of the x-ray field with the center of the image receptor to within two percent of the SID, or shall be provided with means to both size and align the x-ray field so that the x-ray field at the plane of the image receptor does not extend beyond the edges of the image receptor.

(4) Special purpose x-ray systems.

(a) Means shall be provided to limit the x-ray field in the plane of the image receptor so that the x-ray field does not exceed each dimension of the image receptor by more than two percent of the SID when the axis of the x-ray beam is perpendicular to the plane of the image receptor.

(b) Means shall be provided to align the center of the x-ray field with the center of the image receptor to within two percent of the SID, or means shall be provided to both size and align the x-ray field so that the x-ray field at the plane of the image receptor does not extend beyond the edges of the image receptor. Compliance shall be determined with the axis of the x-ray beam perpendicular to the plane of the image receptor.

(c) R313-28-51(4)(a) and R313-28-51(4)(b) may be met with a system that meets the requirements for a general purpose x-ray system as specified in R313-28-51(1) or, when alignment means are also provided, may be met with either;

(i) an assortment of removable, fixed-aperture, beam-limiting devices sufficient to meet the requirements for the combination of image receptor sizes and SID's for which the unit is designed with the beam limiting device having clear and permanent markings to indicate the image receptor size and SID for which it is designed; or

(ii) a beam-limiting device having multiple fixed apertures sufficient to meet the requirement for the combinations of image receptor sizes and SID's for which the unit is designed. Permanent, clearly legible markings shall indicate the image receptor size and SID for which the aperture is designed and shall indicate which aperture is in position for use.

R313-28-52. Radiographic Systems Other Than Fluoroscopic, Dental Intraoral, or Computed Tomography -- Radiation Exposure Control Devices.

(1) Exposure Initiation. Means shall be provided to initiate the radiation exposure by a deliberate action on the part of the operator, for example, the depression of a switch. Radiation exposure shall not be initiated without a deliberate action. In addition, it shall not be possible to initiate an exposure when the timer is set to a "zero" or "off" position if either position is provided.

(2) Exposure termination. Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor. Except for dental panoramic systems, termination of an exposure shall cause automatic resetting of the timer to its initial setting or to "zero."

(3) Manual Exposure Control: An x-ray control shall be incorporated into x-ray systems so that an exposure can be terminated at times except for:

(a) exposure of one-half second or less; or

(b) during serial radiography when means shall be provided to permit completion of a single exposure of the series in process.

(4) Automatic EXPOSURE controls, phototimers. When automatic EXPOSURE control is provided:

(a) indication shall be made on the control panel when this

mode of operation is selected;

(b) when the x-ray tube potential is equal to or greater than 51 kVp, the minimum exposure time for field emission equipment rated for pulsed operation shall be equal to or less than the interval equivalent to two pulses; and

(c) the minimum exposure time for all equipment other than that specified in R313-28-52(4)(b) shall be equal to or less than 1/60 second or a time interval required to deliver five mAs, whichever is greater.

(5) Exposure Indication. Means shall be provided for visual indication observable at or from the operator's protected position whenever x-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.

(6) Exposure Duration, Timer, Linearity. For systems having independent selection of exposure time settings, the average ratio of exposure to the indicated milliampere-seconds product obtained at two consecutive timer settings or at two settings not differing by more than a factor of two shall not differ by more than 0.10 times their sum.

(7) Exposure Control Location. The x-ray exposure control shall be placed so that the operator can view the patient while making the exposure.

(8) Operator Protection.

(a) Stationary x-ray systems shall be required to have the x-ray exposure switch permanently mounted in a protected area.

(b) Mobile and portable x-ray systems which are:

(i) used continuously for greater than one week at the same location, one room or suite, shall meet the requirements of R313-28-52(8)(a); or

(ii) used for less than one week at one location, one room, or suite shall be provided with either a protective barrier at least two meters (6.5 feet) high for operator protection during exposures, or means shall be provided to allow the operator to be at least 2.7 meters (nine feet) from the tube housing assembly during the exposure.

R313-28-53. Radiographic Systems Other Than Fluoroscopic, or Dental Intraoral Systems -- Source-to-Skin or Receptor Distance.

Mobile or portable radiographic systems shall be provided with a means to limit the source-to-skin distance to 30 or more centimeters.

R313-28-54. Radiographic Systems Other Than Fluoroscopic, or Dental Intraoral Systems -- Exposure Reproducibility.

When technique factors, including control panel selections associated with automatic exposure control systems, are held constant the coefficient of variation of exposure for both manual and automatic exposure control systems shall not exceed 0.05. This requirement applies to clinically used techniques.

R313-28-55. Radiographic Systems - Standby Radiation From Capacitor Discharge Equipment.

Radiation emitted from the x-ray tube when the system is fully charged and the exposure switch or timer is not activated shall not exceed a rate of 0.516 uC/kg (two milliroentgens) per hour at five centimeters from accessible surfaces of the diagnostic source assembly, with the beam-limiting device fully open.

R313-28-56. Radiographic Systems Other Than Fluoroscopic, or Dental Intraoral Systems -- Accuracy.

Deviation of measured technique factors from indicated values of kVp and exposure time shall not exceed the limits specified for that system by its manufacturer. In the absence of manufacturer's specifications, the deviation shall not exceed ten percent of the indicated value for kVp and ten percent of the

indicated value for times greater than 50 milliseconds.

R313-28-57. Radiographic Systems Other Than Fluoroscopic, or Dental Intraoral Systems -- mA/mAs Linearity.

The following requirements apply when the equipment is operated on a power supply as specified by the manufacturer for fixed x-ray tube potentials within the range of 40 percent to 100 percent of the maximum rated potentials.

(1) Equipment having independent selection of x-ray tube current, mA. Where the tube current is continuous, the average ratios of exposure to the indicated milliamperere-seconds product, C/kg/mAs or mR/mAs, obtained at two consecutive tube current settings or at two settings differing by no more than a factor of two shall not differ by more than 0.10 times their sum.

(2) Equipment having a combined x-ray tube current-exposure time product, mAs, selector, but not a separate tube current, mA, selector. Where the tube current is continuous, the average ratios of exposure to the indicated milliamperere-seconds product, C/kg/mAs or mR/mAs, obtained at two consecutive milliamperere-seconds settings or at two settings differing by no more than a factor of two shall not differ by more than 0.10 times their sum.

R313-28-80. Intraoral Dental Radiographic Systems.

In addition to the provisions of R313-28-31, R313-28-32 and R313-28-35, the requirements of this section apply to x-ray equipment and associated facilities used for dental radiography. Criteria for extraoral dental radiographic systems are covered in R313-28-51, R313-28-52 and R313-28-53. Intraoral dental radiographic systems used must meet the requirements of R313-28-80.

(1) Source-to-Skin distance (SSD). X-ray systems designed for use with an intraoral image receptor shall be provided with means to limit source-to-skin distance to not less than:

- (a) 18 centimeters if operable above 50 kilovolts peak, or
- (b) 10 centimeters if not operable above 50 kilovolts peak.

(2) Field limitation. Radiographic systems designed for use with an intraoral image receptor shall be provided with means to limit the x-ray field so that:

- (a) if the minimum source-to-skin distance (SSD) is 18 centimeters or more, the x-ray field, at the minimum SSD, shall be containable in a circle having a diameter of no more than seven centimeters; and
- (b) if the minimum SSD is less than 18 centimeters, the x-ray field, at the minimum SSD, shall be containable in a circle having a diameter of no more than six centimeters.

(3) Exposure Initiation.

(a) Means shall be provided to initiate the radiation exposure by a deliberate action on the part of the operator, for example, the depression of a switch. Radiation exposure shall not be initiated without a deliberate action; and

(b) It shall not be possible to make an exposure when the timer is set to a "zero" or "off" position if either position is provided.

(4) Exposure Termination.

(a) Means shall be provided to terminate the exposure at a preset time interval, preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor.

(b) An x-ray exposure control shall be incorporated into x-ray systems so that an exposure of more than 0.5 seconds can be terminated immediately by the operator.

(c) Termination of an exposure shall cause automatic resetting of the timer to its initial setting or to "zero."

(5) Exposure Indication. Means shall be provided for visual indication, observable from the operator's protected position, whenever x-rays are produced. In addition, a signal

audible to the operator shall indicate that the exposure has terminated.

(6) Timer Linearity. For systems having independent selection of exposure time settings, the average ratio of exposure to the indicated milliamperere-seconds product obtained at two consecutive timer settings or at two settings not differing by more than a factor of two shall not differ by more than 0.10 times their sum.

(7) Exposure Control Location and Operator Protection.

(a) Stationary x-ray systems shall be required to have the x-ray exposure control mounted in a protected area or a means to allow the operator to be at least 2.7 meters (9.0 feet) from the tube housing assembly while making exposures; and

(b) Mobile and portable x-ray systems which are:

(i) used for greater than one week in the same location, for example, a room or suite, shall meet the requirements of R313-28-80(7)(a); or

(ii) used for less than one week in the same location shall be provided with either a protective barrier at least two meters high for operator protection, or means to allow the operator to be at least 2.7 meters (nine feet) from the tube housing assembly while making exposures.

(8) Exposure Reproducibility. When all technique factors are held constant, the coefficient of variation of exposure shall not exceed 0.05 for certified x-ray systems or 0.10 for non-certified x-ray systems. This requirement applies to clinically used techniques.

(9) mA/mAs Linearity. The following requirements apply when the equipment is operated on a power supply as specified by the manufacturer for fixed x-ray tube potentials within the range of 40 to 100 percent of the maximum rated potentials.

(a) For equipment having independent selection of x-ray tube current, the average ratios of exposure to the indicated milliamperere-seconds product obtained at two consecutive tube current settings or, when the tube current selection is continuous, two settings differing by no more than a factor of two shall not differ by more than 0.10 times their sum.

(b) For equipment having a combined x-ray tube current-exposure time product selector but not a separate tube current selector, the average ratios of exposure to the indicated milliamperere-seconds product obtained at two consecutive mAs selector settings, or when the mAs selector provides continuous selection, at two settings differing by no more than a factor of two shall not differ by more than 0.10 times their sum.

(10) Accuracy. Deviation of technique factors from indicated values shall not exceed the limits specified for that system by its manufacturer. In the absence of manufacturer's specifications the deviation shall not exceed ten percent of the indicated value.

(11) Administrative Controls.

(a) Patient and film holding devices shall be used when the technique permits and holding is required.

(b) The x-ray tube housing and the position indicating device shall not be hand-held during an exposure.

(c) The x-ray system shall be operated so that the useful beam at the patient's skin does not exceed the requirements of R313-28-80(2).

(d) Dental fluoroscopy without image intensification shall not be used.

(12) Hand-held Portable Dental X-ray Systems.

(a) X-ray equipment designed to be hand-held shall comply with Section R313-28-31, excluding Subsection R313-28-31(5), and with Section R313-28-80, excluding Subsections R313-28-80(7)(b) and R313-28-80(11)(b).

(b) Protective shielding of at least 0.5 millimeter lead equivalence shall be provided for the operator to protect the operator's torso, hands, face, and gonads from backscatter radiation. If the protective shielding is a backscatter shield attached to the x-ray unit, the shield shall be positioned as close

to the patient as possible and the operator shall take care to remain in a protective position.

(c) Portable radiation machines designed to be hand-held are exempt from Subsection R313-28-35(7). The portable radiation machines shall be held by the tube housing support or handle and shall be used in accordance with the manufacturer's operating procedures.

(d) In addition to the requirements of Subsection R313-28-350(1), each operator shall complete the training program supplied by the manufacturer prior to using the x-ray unit. Records of training shall be maintained on file for examination by an authorized representative of the Director.

R313-28-120. Mammography X-Ray Systems - Equipment Design and Performance Standards.

Only x-ray equipment meeting the following standards shall be used for mammography examinations.

(1) Equipment Design.

(a) FDA Standards. The requirements of 21 CFR 1020.30 and 21 CFR 1020.31 (2006) are adopted and incorporated by reference.

(b) Dedicated Equipment. The x-ray equipment shall be specifically designed for mammography.

(c) Compression. Devices parallel to the imaging plane shall be available to immobilize and compress the breast during mammography procedures.

(d) Image Receptor. The x-ray equipment shall have both an 18 cm by 24 cm and a 24 cm by 30 cm image receptor and moving grids matched to each image receptor size.

(e) Automatic Exposure Control. X-ray equipment used in healing arts screening shall have automatic exposure control capabilities with a post exposure meter which indicates either milliamperes-seconds or time values.

(f) Focal Spot. The focal spot size and source to image receptor distance configurations shall be limited to those appropriate for mammography.

(g) Beam Limitation. The x-ray equipment must allow for the x-ray field to extend to or beyond the chest wall edge of the image receptor.

(h) Magnification. X-ray equipment used in a noninvasive manner, requiring techniques beyond those utilized in standard mammography of asymptomatic patients, shall have x-ray magnification capability for noninvasive procedures. The equipment shall be able to provide at least one magnification within the range of 1.4 to 2.0.

(2) Performance Standards.

(a) State Standards. The x-ray equipment shall meet the applicable performance standards in R313-28.

(b) Filtration. The useful beam shall have a half-value layer between the values of the measured kilovolts peak divided by 100 and the measured kilovolts peak divided by 100 plus 0.1 mm of aluminum equivalent. These values are to include the contribution to filtration by the compression device.

(c) Minimum Radiation Output. X-ray equipment installed after the effective date of this rule shall meet the following standard: at 28 kilovolts peak on the focal spot used in routine healing arts screening the x-ray equipment shall be capable of sustaining a minimum output of 500 mR per second for at least three seconds. This output shall be measured at a point 4.5 centimeters from the surface of the patient support device when the source to image receptor distance is at its maximum and the compression paddle is in the beam. Existing x-ray equipment shall meet this minimum radiation output standard within one year of the effective date of this rule.

(d) Exposure Linearity. For kilovolts peak settings used clinically, the exposure per mAs shall be within plus or minus ten percent of the average exposure per mAs for those mAs stations or time stations, if applicable, that are tested.

(e) Automatic Exposure Control. The automatic exposure

control mode shall produce consistent film density under changing patient and examination conditions. These conditions include breast thickness, adiposity, kilovolts peak and density settings. This requirement will be deemed satisfied when:

(i) an automatic exposure control technique guide is posted, and

(ii) for a series of films obtained for attenuator thicknesses of two to seven centimeters the resulting radiographic optical densities are within plus or minus 0.2 of the average value when the kVp and density control setting are adjusted as indicated on the technique guide. The attenuator used for determining compliance shall be either acrylic or other tissue equivalent material.

(f) Patient Dose. The x-ray equipment must be capable of giving an average glandular dose to an average size breast of average tissue density that does not exceed 3.0 mGy (0.3 rad) with a grid or 1.0 mGy (0.1 rad) without a grid. This will be deemed satisfied when using an acrylic phantom of 4.5 cm thickness. In addition, under all clinical use conditions, the average glandular dose to the breast must be less than 5.0 mGy (0.5 rad) per film for healing arts screening procedures.

(3) Mammography X-ray Equipment Quality Control.

(a) Initial Installation. Upon completion of the initial installation of the x-ray equipment, and before it is commissioned for clinical use, the equipment shall be evaluated by a mammography imaging medical physicist who has been approved by the Board. The evaluation results shall be submitted to the Director for review and approval.

(b) Annual Evaluation. At intervals not to exceed 12 months or at the request of the Director, the x-ray equipment shall be evaluated by a mammography imaging medical physicist who has been approved by the Board.

(c) The registrant shall develop and implement a quality control testing procedure for monitoring the radiation performance of the x-ray equipment.

R313-28-140. Qualifications of Mammography Imaging Medical Physicist.

An individual seeking certification by the Board for approval as a mammography imaging medical physicist shall file an application for certification on forms furnished by the Division. The Board may certify individuals who meet the requirements for initial qualifications. To remain certified by the Board as a mammography imaging medical physicist, an individual shall satisfy the requirements for continuing qualifications.

(1) Initial qualifications.

(a) Be certified by the American Board of Radiology in Radiological Physics or Diagnostic Radiological Physics, or the American Board of Medical Physicists in Diagnostic Imaging Physics; or

(b) Satisfy the following educational and experience requirements:

(i) Have a master's or higher degree from an accredited university or college in physical sciences; and

(ii) Have two years full-time experience conducting mammography surveys. Five mammography surveys shall be equal to one year full-time experience.

(2) Continuing qualifications.

(a) During the three-year period after initial certification and for each subsequent three-year period, the individual shall earn 15 hours of continuing educational credits in mammography imaging; and

(b) Perform at least two mammography surveys during the 12-month period from June 1 and May 31 to remain certified by the Board.

(3) Mammography imaging medical physicists who fail to maintain the required continuing qualifications stated in R313-28-140(2) shall re-establish their qualifications before

independently surveying another mammography facility. To re-establish their qualifications, mammography imaging physicists who fail to meet:

(a) The continuing education requirements of R313-28-140(2)(a) must obtain a sufficient number of continuing educational credits to bring their total credits up to the required 15 in the previous three years.

(b) The continuing experience requirement of R313-28-140(2)(b) must obtain experience by surveying two mammography facilities for each year of not meeting the continuing experience requirements under the supervision of a mammography imaging medical physicist approved by the Board.

R313-28-160. Computed Tomography X-ray Equipment.

(1) Equipment Requirements.

(a) In the event of equipment failure affecting data collection, means shall be provided to terminate the x-ray exposure automatically by either de-energizing the x-ray source or intercepting the x-ray beam with a shutter mechanism through the use of either a back-up timer or devices which monitor equipment function.

(b) A visible signal shall indicate when the x-ray exposure has been terminated through the means required by R313-28-160 (1)(a).

(c) The operator shall be able to terminate the x-ray exposure at any time during a scan, or series of scans, of greater than 0.5 second duration.

(2) Tomographic Plane Indication and Alignment.

(a) Means shall be provided to permit visual determination of the location of a reference plane. This reference plane can be offset from the location of the tomographic plane.

(b) If a device using a light source is used to satisfy R313-28-160 (2)(a), the light source shall provide illumination at levels sufficient to permit visual determination of the location of the tomographic plane or reference plane.

(c) The total error in the indicated location of the tomographic plane or reference plane shall not exceed 5 millimeters.

(3) Beam-On and Shutter Status Indicators.

(a) The computed tomography (CT) x-ray control panel and CT gantry shall provide visual indication whenever x-rays are produced and, if applicable, whether the shutter is open or closed.

(b) Each emergency button or switch shall be clearly labeled as to its function.

(4) Indication of CT Conditions of Operation.

(a) The CT x-ray system shall be designed such that technique factors, tomographic section thickness, and scan increment shall be indicated prior to the initiation of a scan or series of scans.

(5) Quality Assurance Procedures. Quality assurance procedures shall be conducted on the CT x-ray equipment.

(a) The quality assurance procedures shall be in writing. Such procedures shall include, but not be limited to, the following:

(i) Specifications of the tests that are to be performed, including instructions to be employed in the performance of those tests; and

(ii) Specifications of the frequency at which tests are to be performed, the acceptable tolerance for each parameter measured and actions to be taken if tolerances are exceeded.

(b) The parameters measured to satisfy R313-28-160(5)(a)(ii) shall include, but not be limited to, kVp, mA and reproducibility of dose appropriate to the type of CT procedures performed.

(c) Records of tests performed to satisfy the requirements of R313-28-160(5)(a) and (b) shall be maintained for three years for inspection by the Division.

(6) Dose Calibration.

(a) Radiation measurements shall be performed at least annually and after change or replacement of components which could cause a change in the radiation output.

(b) The calibration of the radiation measuring instrument shall be traceable to a national standard and shall be calibrated at intervals not to exceed two years.

(c) Measurements shall be specified in terms of the multiple scan average dose, using phantoms and technique factors appropriate to the type of CT procedures performed.

R313-28-200. Information on Radiation Shielding Required for Plan Reviews.

In order to evaluate a need for radiation shielding associated with a plan review, the following information shall be submitted to a Qualified Expert so that an adequate review may be performed.

(1) The plans showing, as a minimum, the following:

(a) the normal location of the radiation producing equipment's radiation port, the port's travel and traverse limits, general directions of the radiation beam, locations of windows, the location of the operator's booth, and the location of the x-ray control panel;

(b) structural composition and thickness of walls, doors, partitions, floor, and ceiling of the rooms concerned;

(c) the dimensions, including height, floor to floor, of the rooms concerned;

(d) the type of occupancy of adjacent areas inclusive of space above and below the rooms concerned. If there is an exterior wall, show distance to the closest existing occupied areas;

(e) the make and model of the x-ray equipment, the maximum energy output, and the energy waveform; and

(f) the type of examination or treatment which will be performed with the equipment.

(2) Information on the anticipated workload of the x-ray systems in mA-minutes per week.

(3) A report showing all basic assumptions used in the development of the shielding specifications.

R313-28-300. Additional Requirements Applicable to Certified Systems Only.

Diagnostic x-ray systems incorporating one or more certified components shall be required to comply with the following additional requirements which relate to the certified component.

(1) Beam limitation for stationary and mobile general purpose x-ray systems.

(a) There shall be provided a means of stepless adjustment of the size of the x-ray field. The minimum field size at an SID of 100 centimeters shall be equal to or less than five centimeters by five centimeters.

(b) When a light localizer is used to define the x-ray field, it shall provide an average illumination of not less than 160 LUX (15 foot-candles) at 100 centimeters or at the maximum SID, whichever is less. The average illumination shall be based upon measurements made in the approximate center of the quadrants of the light field. Radiation therapy simulation systems are exempt from this requirement.

(2) Beam Limitation for Portable X-ray Systems. Beam limitation for portable x-ray systems shall meet the additional field limitation requirements of R313-28-51(1) or R313-28-300(1).

(3) Beam limitation and alignment on stationary general purpose x-ray systems equipped with PBL.

(a) PBL shall prevent the production of x-rays when:

(i) either the length or the width of the x-ray field in the plane of the image receptor differs, except as permitted by R313-28-300(3)(c), from the corresponding image receptor

dimensions by more than three percent of the SID; or

(ii) the sum of the length and width differences as stated in R313-28-300(3)(a)(i) without regard to sign exceeds four percent of the SID.

(b) Compliance with R313-28-300(3)(a) shall be determined when the equipment indicates that the beam axis is perpendicular to the plane of the image receptor. Compliance shall be determined no sooner than five seconds after insertion of the image receptor.

(c) The PBL system shall be capable of operation, at the discretion of the operator, so that the field size at the image receptor can be adjusted to a size smaller than the image receptor through stepless adjustment of the field size. The minimum field size at a distance of 100 centimeters shall be equal to or less than five centimeters by five centimeters.

(d) The PBL system shall be designed so that if a change in image receptor does not cause an automatic return to PBL function as described in R313-28-300(3)(a), then change of the image receptor size or SID must cause the automatic return.

(4) Tube Stands for Portable X-Ray Systems. A tube stand or other mechanical support shall be used for portable x-ray systems, so that the x-ray tube housing assembly need not be hand-held during exposures.

R313-28-350. Qualifications of Operators.

Operators of diagnostic x-ray systems must be licensed to practice in Utah in accordance with Title 58 Chapter 54.

(1) The registrant shall document that the operator of diagnostic x-ray equipment is trained in the proper choice of technique factors to be used and in the safe and effective operation of the x-ray equipment.

R313-28-400. Information to be Submitted by Persons Proposing to Conduct Healing Art Screening.

(1) Individuals requesting that the Director approve a healing arts screening program shall submit the following information:

(a) name and address of the applicant and, where applicable, the names and addresses of agents within this State;

(b) diseases or conditions for which the x-ray examinations are to be used;

(c) description, in detail, of the x-ray examinations proposed in the screening program including the frequency of screening and the duration of the entire screening program;

(d) description of the population to be examined in the screening program including age, sex, physical condition, and other appropriate information;

(e) an evaluation of known alternate methods not involving ionizing radiation which could achieve the goals of the screening program and why these methods are not used in preference to the x-ray examinations; and

(f) written evidence that:

(i) an Investigational Review Board, which has been approved by the United States Food and Drug Administration, has reviewed and approved the healing arts screening program; or

(ii) the United States Food and Drug Administration has approved the use of the x-ray examination for the diseases or conditions of interest.

(2) The Director shall not approve a request for a healing arts screening program unless the submissions required by R313-28-400(1) are determined by the Director to be complete and adequate.

R313-28-450. Minimum Design Requirements for an X-ray Machine Operator's Booth - New Installations Only.

(1) Space requirements:

(a) The operator shall be allotted not less than 0.70 square meter (7.5 square feet) of unobstructed floor space in the booth.

(b) The minimum space as indicated above may be geometric configurations with no dimension of less than 0.61 meters (two feet).

(c) The space shall be allotted excluding encumbrances by the console, for example, overhang or cables, or other similar encroachments.

(d) The booth shall be located or constructed to ensure that unattenuated primary beam scatter originating on the examination table or at the wall mounted image receptor will not reach the operator's position in the booth.

(2) Structural Requirements.

(a) The booth walls shall be permanently fixed barriers of at least 2.13 meters (seven feet) high.

(b) When a door or movable panel is used as an integral part of the booth shielding, it must have a permissive device which will prevent an exposure when the door or panel is not closed.

(c) Shielding shall be provided to meet the requirements of R313-15.

(3) X-Ray Exposure Control Placement: The x-ray exposure control for the system shall be fixed within the booth and:

(a) shall be at least one meter (40 inches) from points subject to primary beam scatter, leakage or primary beam radiation; and

(b) shall allow the operator to use the majority of the available viewing windows.

(4) Viewing system requirements:

(a) When the viewing system is a window:

(i) the viewing window shall have a visible area of at least 0.09 square meters (one square foot);

(ii) regardless of size or shape, at least 0.09 square meters (one square foot) of the window area must be centered no less than 0.6 meters (two feet) from the open edge of the booth and no less than 1.5 meters (five feet) from the floor; and

(iii) the window shall have at least the same lead equivalence of that required in the booth's wall in which it is mounted.

(b) When the viewing system is by mirrors, the mirrors shall be so located as to accomplish the general requirements of R313-28-450(4)(a).

(c) When the viewing system is by electronic means:

(i) the camera shall be so located as to accomplish the general requirements of R313-28-450(4)(a); and

(ii) there shall be an alternate viewing system as a backup for the primary system.

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-30. Therapeutic Radiation Machines.****R313-30-1. Scope and Applicability.**

(1) R313-30 establishes requirements, for which the registrant is responsible, for use of therapeutic radiation machines. The provisions of R313-30 are in addition to, and not in substitution for, other applicable provisions of these rules.

(2) The use of therapeutic radiation machines shall be by, or under the supervision of, a licensed practitioner of the healing arts who meets the training and experience criteria established by R313-30-3(3).

(3) R313-30 shall only apply to therapeutic radiation machines which accelerate electrons into a target to produce bremsstrahlung or which accelerate electrons to produce a clinically useful electron beam.

R313-30-2. Definitions.

As used in R313-30, the following definitions apply:

"Absorbed dose (D)" means the mean energy imparted by ionizing radiation to matter. Absorbed dose is determined as the quotient of dE by dM, where dE is the mean energy imparted by ionizing radiation to matter of mass dM. The SI unit of absorbed dose is joule per kilogram and the special name of the unit of absorbed dose is the gray (Gy). The previously used special unit of absorbed dose (rad) is being replaced by the gray.

"Absorbed dose rate" means absorbed dose per unit time, for machines with timers, or dose monitor unit per unit time for linear accelerators.

"Accessible surfaces" means surface of equipment or of an equipment part that can be easily or accidentally touched by persons without the use of a tool, or without opening an access panel or door.

"Added filtration" means filtration which is in addition to the inherent filtration.

"Air kerma (K)" means the kinetic energy released in air by ionizing radiation. Kerma is determined as the quotient of dE by dM, where dE is the sum of the initial kinetic energies of the charged ionizing particles liberated by uncharged ionizing particles in air of mass dM. The SI unit of air kerma is joule per kilogram and the special name for the unit of kerma is the gray (Gy).

"Barrier" See "Protective barrier."

"Beam axis" means the axis of rotation of the radiation head.

"Beam-limiting device" means a field defining collimator which provides a means to restrict the dimensions of the useful beam.

"Beam monitoring system" means a system designed and installed in the radiation head to detect and measure the radiation present in the useful beam.

"Beam scattering foil" means a thin piece of material, usually metallic, placed in the beam to scatter a beam of electrons in order to provide a more uniform electron distribution in the useful beam.

"Bent beam linear accelerator" means a linear accelerator geometry in which the accelerated electron beam must change direction by passing through a bending magnet.

"Changeable filters" means filters, exclusive of inherent filtration, which can be removed from the useful beam through electronic, mechanical, or physical processes.

"Contact therapy system" means a therapeutic radiation machine with a short target to skin distance (TSD), usually less than five centimeters.

"Detector" See "Radiation detector."

"Dose monitor unit (DMU)" means a unit response from the beam monitoring system from which the absorbed dose can be calculated.

"External beam radiation therapy" means therapeutic

irradiation in which the source of radiation is at a distance from the body.

"Field-flattening filter" means a filter used to homogenize the absorbed dose rate over the radiation field.

"Filter" means material placed in the useful beam to change beam quality in therapeutic radiation machines subject to R313-30-6.

"Gantry" means that part of a therapeutic radiation machine supporting and allowing movements of the radiation head about a center of rotation.

"Gray (Gy)" means the SI unit of absorbed dose, kerma, and specific energy imparted equal to 1 joule per kilogram. The previous unit of absorbed dose (rad) is being replaced by the gray. Note that 1 Gy equals 100 rad.

"Half-value layer (HVL)" means the thickness of a specified material which attenuates x-radiation or gamma radiation to the extent that the air kerma rate, exposure rate or absorbed dose rate is reduced to one-half of the value measured without the material at the same point.

"Interlock" means a device preventing the start or continued operation of equipment unless certain predetermined conditions prevail.

"Interruption of irradiation" means the stopping of irradiation with the possibility of continuing irradiation without resetting of operating conditions at the control panel.

"Irradiation" means the exposure of a living being or matter to ionizing radiation.

"Isocenter" means the center of the sphere through which the useful beam axis passes while the gantry moves through its full range of motions.

"Kilovolt (kV) or kilo electron volt (keV)" means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of one thousand volts in a vacuum. Current convention is to use kV for photons and keV for electrons.

"Lead equivalent" means the thickness of the material in question affording the same attenuation, under specified conditions, as lead.

"Leakage radiation" means radiation emanating from the therapeutic radiation machine except for the useful beam.

"Light field" means the area illuminated by light, simulating the radiation field.

"mA" means milliamperere.

"Megavolt (MV) or mega electron volt (MeV)" means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of one million volts in a vacuum. Current convention is to use MV for photons and MeV for electrons.

"Monitor unit (MU)" See "Dose monitor unit."

"Moving beam radiation therapy" means radiation therapy with continuous displacement of one or more mechanical axes relative to the patient during irradiation. It includes arc therapy, skip therapy, conformal therapy and rotational therapy.

"Nominal treatment distance" means:

(a) For electron irradiation, the distance from the scattering foil, virtual source, or exit window of the electron beam to the entrance surface of the irradiated object along the central axis of the useful beam.

(b) For x-ray irradiation, the virtual source or target to isocenter distance along the central axis of the useful beam. For non-isocentric equipment, this distance shall be that specified by the manufacturer.

"Patient" means an individual subjected to machine produced external beam radiation for the purposes of medical therapy.

"Peak tube potential" means the maximum value of the potential difference across the x-ray tube during an exposure.

"Periodic quality assurance check" means a procedure which is performed to ensure that a previous calibration

continues to be valid.

"Phantom" means an object which attenuates, absorbs, and scatters ionizing radiation in the same quantitative manner as tissue.

"Practical range of electrons" corresponds to classical electron range where the only remaining contribution to dose is from bremsstrahlung x-rays.

"Primary dose monitoring system" means a system which will monitor the useful beam during irradiation and which will terminate irradiation when a pre-selected number of dose monitor units have been delivered.

"Primary protective barrier" See "Protective barrier."

"Protective barrier" means a barrier of radiation absorbing materials used to reduce radiation exposure. The types of protective barriers are as follows:

(a) "Primary protective barrier" means the material, excluding filters, placed in the useful beam or a barrier which attenuates the primary beam.

(b) "Secondary protective barrier" means the material which attenuates stray radiation.

"Radiation detector" means a device which, in the presence of radiation provides, by either direct or indirect means a signal or other indication suitable for use in measuring one or more quantities of incident radiation.

"Radiation field" See "Useful beam."

"Radiation head" means the structure from which the useful beam emerges.

"Radiation Therapy Physicist" means an individual qualified in accordance with R313-30-3(4).

"Redundant beam monitoring system" means a combination of two dose monitoring systems in which each system is designed to terminate irradiation in accordance with a pre-selected number of dose monitor units.

"Scattered radiation" means ionizing radiation emitted by interaction of ionizing radiation with matter, the interaction being accompanied by a change in direction of the radiation.

"Secondary dose monitoring system" means a system which will terminate irradiation in the event of failure of the primary dose monitoring system.

"Secondary protective barrier" See "Protective barrier."

"Shadow tray" means a device attached to the radiation head to support auxiliary beam blocking material.

"Shutter" means a device attached to the tube housing assembly which can totally intercept the useful beam and which has a lead equivalency not less than that of the tube housing assembly.

"Sievert (Sv)" means the SI unit of dose equivalent. The unit of dose equivalent is the joule per kilogram. The previous unit of dose equivalent (rem) is being replaced by the sievert. Note that 1 Sv equals 100 rem.

"Simulator, or radiation therapy simulation system" means an x-ray system intended for localizing the volume to be exposed during radiation therapy and reproducing the position and size of the therapeutic irradiation field.

"Source" means the region or material from which the radiation emanates.

"Source-skin distance (SSD)" See "Target-skin distance."

"Stationary beam radiation therapy" means radiation therapy without displacement of the radiation source relative to the patient during irradiation.

"Stray radiation" means the sum of leakage and scattered radiation.

"Target" means that part of an x-ray tube or particle accelerator onto which is directed a beam of accelerated particles to produce ionizing radiation or other particles.

"Target-skin distance (TSD)" means the distance measured along the beam axis from the center of the front surface of the x-ray target or electron virtual source to the surface of the irradiated object or patient.

"Tenth-value layer (TVL)" means the thickness of a specified material which, x-radiation or gamma radiation to the extent that the air kerma rate, exposure rate or absorbed dose rate is reduced to one-tenth of the value measured without the material at the same point.

"Termination of irradiation" means the stopping of irradiation in a fashion which will not permit continuance of irradiation without the resetting of operating conditions at the control panel.

"Therapeutic radiation machine" means x-ray or electron-producing equipment designed and used for external beam radiation therapy.

"Tube" means an x-ray tube, unless otherwise specified.

"Tube housing assembly" means the tube housing with tube installed. It includes high-voltage and filament transformers and other appropriate elements that are contained within the tube housing.

"Useful beam" means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam limiting device when the exposure controls are in a mode to cause the therapeutic radiation machine to produce radiation.

"Virtual source" means a point from which radiation appears to originate.

"Wedge filter" means a filter which effects continuous change in transmission over all or a part of the radiation field.

"X-ray tube" means an electron tube which is designed to be used primarily for the production of x-rays.

R313-30-3. General Administrative Requirements for Facilities Using Therapeutic Radiation Machines.

(1) Administrative Controls. The registrant shall be responsible for directing the operation of the therapeutic radiation machines which have been registered with the Director. The registrant or the registrant's agent shall ensure that the requirements of R313-30 are met in the operation of the therapeutic radiation machines.

(2) A therapeutic radiation machine which does not meet the provisions of these rules shall not be used for irradiation of patients.

(3) Training for External Beam Radiation Therapy Authorized Users. The registrant for a therapeutic radiation machine subject to R313-30-6 or R313-30-7 shall require the authorized user to be a physician who:

(a) Is certified in:

(i) Radiology or therapeutic radiology by the American Board of Radiology; or

(ii) Radiation oncology by the American Osteopathic Board of Radiology; or

(iii) Radiology, with specialization in radiotherapy, as a British "Fellow of the Faculty of Radiology" or "Fellow of the Royal College of Radiology"; or

(iv) Therapeutic radiology by the Canadian Royal College of Physicians and Surgeons; or

(b) Is in the active practice of therapeutic radiology, and has completed 200 hours of instruction in basic radiation techniques applicable to the use of an external beam radiation therapy unit, 500 hours of supervised work experience, and a minimum of three years of supervised clinical experience.

(i) To satisfy the requirement for instruction, the classroom and laboratory training shall include:

(A) Radiation physics and instrumentation;

(B) Radiation protection;

(C) Mathematics pertaining to the use and measurement of radioactivity; and

(D) Radiation biology.

(ii) To satisfy the requirement for supervised work experience, training shall be under the supervision of an authorized user and shall include:

(A) Review of the full calibration measurements and periodic quality assurance checks;

(B) Preparing treatment plans and calculating treatment times;

(C) Using administrative controls to prevent misadministrations;

(D) Implementing emergency procedures to be followed in the event of the abnormal operation of a external beam radiation therapy unit or console; and

(E) Checking and using radiation survey meters.

(iii) To satisfy the requirement for a period of supervised clinical experience, training shall include one year in a formal training program approved by the Residency Review Committee for Radiology of the Accreditation Council for Graduate Medical Education or the Committee on Postdoctoral Training of the American Osteopathic Association and an additional two years of clinical experience in therapeutic radiology under the supervision of an authorized user. The supervised clinical experience shall include:

(A) Examining individuals and reviewing their case histories to determine their suitability for external beam radiation therapy treatment, and limitations and contraindications;

(B) Selecting proper dose and how it is to be administered;

(C) Calculating the external beam radiation therapy doses and collaborating with the authorized user in the review of patients' progress and consideration of the need to modify originally prescribed doses as warranted by patients' reaction to radiation; and

(D) Post-administration follow-up and review of case histories.

(iv) An individual who satisfies the requirements in R313-30-3(b), but not R313-30-3(a), must submit an application to the Director and must satisfy the requirements in R313-30-3(a) within one year of initial application to the Director.

(c) After December 31, 1994, a physician shall not act as an authorized user for a therapeutic radiation machine until the physician's training has been reviewed and approved by the Director.

(4) Training for Radiation Therapy Physicist. The registrant for a therapeutic radiation machine subject to R313-30-6 or R313-30-7 shall require the Radiation Therapy Physicist to:

(a) Satisfy the provisions of R313-16, as a provider of radiation services in the area of calibration and compliance surveys of external beam radiation therapy units; and

(b) Be certified by the American Board of Radiology in:

(i) Therapeutic radiological physics; or

(ii) Roentgen-ray and gamma-ray physics; or

(iii) X-ray and radium physics; or

(iv) Radiological physics; or

(c) Be certified by the American Board of Medical Physics in Radiation Oncology Physics; or

(d) Be certified by the Canadian College of Medical Physics; or

(e) Hold a master's or doctor's degree in physics, biophysics, radiological physics, or health physics, and have completed one year of full time training in therapeutic radiological physics and also one year of full time work experience under the supervision of a Radiation Therapy Physicist at a medical institution. To meet this requirement, the individual shall have performed the tasks listed in R313-30-4(1), R313-30-6(16), R313-30-7(19), R313-30-6(17), and R313-30-7(20) under the supervision of a Radiation Therapy Physicist during the year of work experience.

(f) Notwithstanding the provisions of R313-30-3(4)(e), certification pursuant to R313-30-3(4)(b), (c) or (d) shall be required on or before December 31, 1999 for all persons currently qualifying as a Radiation Therapy Physicist pursuant

to R313-30-3(4)(e).

(5) Qualifications of Operators.

(a) Individuals who will be operating a therapeutic radiation machine for medical use shall be American Registry of Radiologic Technologists (ARRT) Registered Radiation Therapy Technologists.

(b) The names and training of personnel currently operating a therapeutic radiation machine shall be kept on file at the facility. Information on former operators shall be retained for a period of at least two years beyond the last date they were authorized to operate a therapeutic radiation machine at that facility.

(6) Written safety procedures and rules shall be developed by a Radiation Therapy Physicist and shall be available in the control area of a therapeutic radiation machine, including restrictions required for the safe operation of the particular therapeutic radiation machine. The operator shall be familiar with these rules as required in R313-18-12(1)(c).

(7) Individuals shall not be exposed to the useful beam except for medical therapy purposes. Exposure for medical therapy purposes shall be ordered in writing by an authorized user who is specifically identified on the Certificate of Registration. This provision specifically prohibits deliberate exposure of an individual for training, demonstration or other non-healing-arts purposes.

(8) Visiting Authorized User. Notwithstanding the provisions of R313-30-3(7), a registrant may permit a physician to act as a visiting authorized user under the term of the registrant's Certificate of Registration for up to 60 days per calendar year under the following conditions:

(a) The visiting authorized user has the prior written permission of the registrant's management and, if the use occurs on behalf of an institution, the institution's Radiation Safety Committee; and

(b) The visiting authorized user meets the requirements established for authorized users in R313-30-3(3)(a) and R313-30-3(3)(b); and

(c) The registrant maintains copies of records specified by R313-30-3(8) for five years from the date of the last visit.

(9) Individuals associated with the operation of a therapeutic radiation machine shall be instructed in and shall comply with the provisions of the registrant's quality management program. In addition to the requirements of R313-30, these individuals are also subject to the requirements of R313-15-201, R313-15-202, R313-15-205 and R313-15-502.

(10) Information and Maintenance Record and Associated Information. The registrant shall maintain the following information in a separate file or package for therapeutic radiation machines, for inspection by the representatives of the Director:

(a) Report of acceptance testing;

(b) Records of surveys, calibrations, and periodic quality assurance checks of the therapeutic radiation machine required by R313-30, as well as the names of persons who performed the activities;

(c) Records of major maintenance and modifications performed on the therapeutic radiation machine after the effective date of these rules, as well as the names of persons who performed the services; and

(d) Signature of person authorizing the return of therapeutic radiation machine to clinical use after service, repair, or upgrade.

(11) Records Retention. Records required by R313-30 shall be retained until disposal is authorized by the Director unless another retention period is specifically authorized in R313-30. Required records shall be retained in an active file form at least the time of generation until the next inspection by a representative of the Director. A required record generated prior to the last inspection may be microfilmed or otherwise

archived as long as a complete copy of said record can be retrieved until the Director authorizes final disposal.

R313-30-4. General Technical Requirements for Facilities Using Therapeutic Radiation Machines.

(1) Protection Surveys.

(a) The registrant shall ensure that radiation protection surveys of new facilities, and existing facilities not previously surveyed are performed with an operable radiation measurement survey instrument calibrated in accordance with R313-30-8. The radiation protection survey shall be performed by, or under the direction of, a Radiation Therapy Physicist or a Certified Health Physicist and shall verify that, with the therapeutic radiation machine in a "BEAM-ON" condition, with the largest clinically available treatment field and with a scattering phantom in the useful beam of radiation:

(i) Radiation levels in restricted areas are not likely to cause personnel exposures in excess of the limits specified in R313-15-201(1); and

(ii) Radiation levels in unrestricted areas do not exceed the limits specified in R313-15-301(1).

(b) In addition to the requirements of R313-30-4(1)(a), a radiation protection survey shall also be performed prior to subsequent medical use and:

(i) After making changes in the treatment room shielding;

(ii) After making changes in the location of the therapeutic radiation machine within the treatment room;

(iii) After relocation of, or modification of, the therapeutic radiation machine; or

(iv) Before using the therapeutic radiation machine in a manner that could result in increased radiation levels in areas outside the external beam radiation therapy treatment room.

(c) The survey record shall indicate instances where the facility, in the opinion of the Radiation Therapy Physicist or a Certified Health Physicist, is in violation of applicable radiation protection rules. The survey record shall also include the date of the measurements, the reason the survey is required, the manufacturer's name, model number and serial number of the therapeutic radiation machine, the instruments used to measure radiation levels, a plan of the areas surrounding the treatment room that were surveyed, the measured dose rate at several points in areas expressed in microsieverts, millirems, per hour, the calculated maximum level of radiation over a period of one week for restricted and unrestricted areas, and the signature of the individual responsible for conducting the survey;

(d) If the results of the surveys required by R313-30-4(1)(a) or R313-30-4(1)(b) indicate radiation levels in excess of the respective limit specified in R313-30-4(1)(a), the registrant shall lock the control in the "OFF" position and not use the unit:

(i) Except as may be necessary to repair, replace, or test the therapeutic radiation machine, the therapeutic radiation machine shielding, or the treatment room shielding; or

(ii) Until the registrant has received a written approval from the Director.

(2) Modification of Radiation Therapy Unit or Room Before Beginning a Treatment Program. If the survey required by R313-30-4(1) indicates that an individual in an unrestricted area may be exposed to levels of radiation greater than those permitted by R313-15-301(1) of these rules, before beginning the treatment program the registrant shall:

(a) Either equip the unit with beam direction interlocks or add additional radiation shielding to ensure compliance with R313-15-301(1) of these rules;

(b) Perform the survey required by R313-30-4(1) again; and

(c) Include in the report required by R313-30-4(4) the results of the initial survey, a description of the modification made to comply with R313-30-4(2)(a), and the results of the second survey; or

(d) Request and receive a registration amendment under R313-15-301(3) of these rules that authorizes radiation levels in unrestricted areas greater than those permitted by R313-15-301(1) of these rules.

(3) Possession of Survey Instruments. Facility locations authorized to use a therapeutic radiation machine in accordance with R313-30-6 and R313-30-7 shall possess appropriately calibrated portable monitoring equipment. As a minimum, the equipment shall include a portable radiation measurement survey instrument capable of measuring dose rates over the range 10 uSv (1 mrem) per hour to 10 mSv (1000 mrem) per hour. The survey instruments shall be operable and calibrated in accordance with R313-30-8.

(4) Reports of External Beam Radiation Therapy Surveys and Measurements. The registrant for a therapeutic radiation machine subject to R313-30-6 or R313-30-7 shall furnish a copy of the records required in R313-30-4(1) and R313-30-4(2) to the Director within 30 days following completion of the action that initiated the record requirement.

R313-30-5. Quality Management Program.

(1) In addition to the definitions in R313-30-2, the following definitions are applicable to a quality management program:

"Course" means the entire treatment consisting of multiple fractions as prescribed in the written directive.

"Misadministration" means the administration of an external beam radiation therapy dose:

(a) Involving the wrong patient, wrong treatment modality, or wrong treatment site;

(b) When the treatment consists of three or fewer fractions and the calculated total administered dose differs from the total prescribed dose by more than ten percent of the total prescribed dose;

(c) When the calculated weekly administered dose differs from the weekly prescribed dose by more than 30 percent; or

(d) When the calculated total administered dose differs from the total prescribed dose by more than 20 percent of the total prescribed dose;

"Prescribed dose" means the total dose and dose per fraction as documented in the written directive.

"Recordable event" means the administration of an external beam radiation therapy dose when the calculated weekly administered dose differs by 15 percent or more from the weekly prescribed dose;

"Written directive" means an order in writing for a specific patient, dated and signed by an authorized user prior to the administration of radiation, containing the following information: total dose, dose per fraction, treatment site and overall treatment period.

(2) Scope and Applicability. Applicants or registrants subject to R313-30-6 or R313-30-7 shall establish and maintain a written quality management program to provide high confidence that radiation will be administered as directed by the authorized user. The quality management program shall include written policies and procedures to meet the following specific objectives:

(a) Prior to administration, a written directive is prepared for an external beam radiation therapy dose;

(i) Notwithstanding R313-30-5(2)(a), a written revision to an existing written directive may be made provided that the revision is dated and signed by an authorized user prior to administration of the external beam radiation therapy dose or the next external beam radiation therapy fractional dose;

(ii) Notwithstanding R313-30-5(2)(a), if, because of the patient's condition, a delay in order to provide a written revision to an existing written directive would jeopardize the patient's health, an oral revision to an existing written directive shall be acceptable, provided that the oral revision is documented

immediately in the patient's record and a revised written directive is signed by an authorized user within 48 hours of the oral revision;

(iii) Notwithstanding R313-30-5(2)(a), if, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patient's health, an oral directive shall be acceptable, provided that the information contained in the oral directive is documented immediately in the patient's record and a written directive is prepared and signed by an authorized user within 24 hours of the oral directive.

(b) Prior to the administration of a course of radiation treatments, the patient's identity is verified, by more than one method, as the individual named in the written directive;

(c) External beam radiation therapy final plans of treatment and related calculations are in accordance with the respective written directives;

(d) An administration is in accordance with the written directive; and

(e) Unintended deviations from the written directive is identified and evaluated, and appropriate action are taken.

(3) Development of Quality Management Program.

(a) An application for registration subject to R313-30-6 or R313-30-7 shall include a quality management program that specifies staff, duties and responsibilities, and equipment and procedures as part of the application required by R313-16 of these rules. The registrant shall implement the program upon issuance of a Certificate of Registration by the Director;

(b) Existing registrants subject to R313-30-6 or R313-30-7 shall submit to the Director a written certification that a quality management program has been implemented by December 31, 1994.

(4) As a part of the quality management program, the registrant shall:

(a) Develop procedures for, and conduct a review of, the quality management program including, since the last review, an evaluation of a representative sample of patient administrations, recordable events, and misadministrations to verify compliance with the quality management program;

(b) Conduct these reviews annually. The intervals should not exceed 12 months and shall not exceed 13 months;

(c) Evaluate these reviews to determine the effectiveness of the quality management program and, if required, make modifications to meet the requirements of R313-30-5(2); and

(d) Maintain records of these reviews, including the evaluations and findings of the reviews, in a form that can be readily audited, for three years.

(5) The registrant shall evaluate and respond, within 30 days after discovery of the recordable event, to recordable events by:

(a) Assembling the relevant facts including the cause;

(b) Identifying what corrective actions are required to prevent recurrence; and

(c) Retaining a record, in a form that can be readily audited, for three years, of the relevant facts and what corrective actions were taken.

(6) The registrant shall retain:

(a) Written directives; and

(b) A record of administered radiation doses, in a form that can be readily audited, for three years after the date of administration.

(7) The registrant may make modifications to the quality management program to increase the program's efficiency provided the program's effectiveness is not decreased.

(8) The registrant shall evaluate misadministrations and shall take the following actions in response to a misadministration:

(a) Notify the Director by telephone no later than the next calendar day after discovery of the misadministration;

(b) Submit a written report to the Director within 15 days after discovery of the misadministration. The written report shall include: the registrant's name; the prescribing physician's name; a brief description of the event; why the event occurred; the effect on the patient; what improvements are needed to prevent recurrence; actions taken to prevent recurrence; whether the registrant notified the patient or the patient's responsible relative or guardian, this person will subsequently be referred to as "the patient," and if not, why not; and if the patient was notified, what information was provided to the patient. The report shall not include the patient's name or other information that could lead to identification of the patient;

(c) Notify the referring physician and also notify the patient of the misadministration no later than 24 hours after its discovery, unless the referring physician personally informs the registrant either that the physician will inform the patient, or that, based on medical judgment, telling the patient would be harmful. The registrant is not required to notify the patient without first consulting the referring physician. If the referring physician or patient cannot be reached within 24 hours, the registrant shall notify the patient as soon as possible thereafter. The registrant shall not delay appropriate medical care for the patient, including necessary remedial care as a result of the misadministration, because of a delay in notification;

(d) Retain a record of misadministrations for five years. The record shall contain the names of individuals involved; including the prescribing physician, allied health personnel, the patient, and the patient's referring physician; the patient's social security number or identification number if one has been assigned; a brief description of the event; why it occurred; the effect on the patient; what improvements are needed to prevent recurrence; and the actions taken to prevent recurrence; and

(e) If the patient was notified, furnish, within 15 days after discovery of the misadministration, a written report to the patient by sending either a copy of the report that was submitted to the Director, or a brief description of both the event and the consequences as they may effect the patient, provided a statement is included that the report submitted to the Director can be obtained from the registrant;

(9) Aside from the notification requirement, nothing in R313-30-5(8) affects the rights or duties of registrants and physicians in relation to patients, the patient's responsible relatives or guardians, or to others.

R313-30-6. Therapeutic Radiation Machines of Less Than 500 kV.

(1) Leakage Radiation. When the x-ray tube is operated at its maximum rated tube current for the maximum kV, the leakage air kerma rate shall not exceed the value specified at the distance specified for that classification of therapeutic radiation machine:

(a) Systems 5-50 kV. The leakage air kerma rate measured at a position five centimeters from the tube housing assembly shall not exceed 1 mGy (100 mrad) in one hour.

(b) Systems greater than 50 and less than 500 kV. The leakage air kerma rate measured at a distance of one meter from the source in every direction shall not exceed 1 cGy (1 rad) in one hour. This air kerma rate measurement may be averaged over areas no larger than 100 square centimeters. In addition, the air kerma rate at a distance of five centimeters from the surface of the tube housing assembly shall not exceed 30 cGy (30 rad) per hour.

(2) Permanent Beam Limiting Devices. Permanent diaphragms or cones used for limiting the useful beam shall provide at least the same degree of attenuation as required for the tube housing assembly.

(3) Adjustable or Removable Beam Limiting Devices.

(a) Adjustable or removable beam limiting devices, diaphragms, cones or blocks shall not transmit more than five

percent of the useful beam for the most penetrating beam used;

(b) When adjustable beam limiting devices are used, the position and shape of the radiation field shall be indicated by a light beam.

(4) Filter System. The filter system shall be so designed that:

(a) Filters can not be accidentally displaced at every possible tube orientation;

(b) For equipment installed after the effective date of these rules, an interlock system prevents irradiation if the proper filter is not in place;

(c) The air kerma rate escaping from the filter slot shall not exceed 1 cGy (1 rad) per hour at one meter under operating conditions; and

(d) Filters shall be marked as to its material of construction and its thickness.

(5) Tube Immobilization.

(a) The x-ray tube shall be so mounted that it can not accidentally turn or slide with respect to the housing aperture; and

(b) The tube housing assembly shall be capable of being immobilized for stationary portal treatments.

(6) Source Marking. The tube housing assembly shall be so marked that it is possible to determine the location of the source to within five millimeters, and the marking shall be readily accessible for use during calibration procedures.

(7) Beam Block. Contact therapy tube housing assemblies shall have a removable shield of material, equivalent in attenuation to 0.5 millimeters of lead at 100 kV, which can be positioned over the entire useful beam exit port during periods when the beam is not in use.

(8) Timer. A suitable irradiation control device shall be provided to terminate the irradiation after a pre-set time interval.

(a) A timer which has a display shall be provided at the treatment control panel. The timer shall have a pre-set time selector. The timer shall activate with an indication of "BEAM-ON" and retain its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the timer;

(b) For equipment manufactured after the effective date of these rules, the timer shall be a cumulative timer with an elapsed time indicator. Otherwise, the timer may be a countdown timer;

(c) The timer shall terminate irradiation when a pre-selected time has elapsed, if the dose monitoring system present has not previously terminated irradiation;

(d) The timer shall permit pre-setting and determination of exposure times as short as one second;

(e) The timer shall not permit an exposure if set at zero;

(f) The timer shall not activate until the shutter is opened when irradiation is controlled by a shutter mechanism unless calibration includes a timer error correction to compensate for mechanical lag; and

(g) Timer shall be accurate to within one percent of the selected value or to within one second, whichever is greater.

(9) Control Panel Functions. The control panel, in addition to the displays required by other provisions in R313-30-6, shall have:

(a) An indication of whether electrical power is available at the control panel and if activation of the x-ray tube is possible;

(b) An indication of whether x-rays are being produced;

(c) Means for indicating x-ray tube potential and current;

(d) The means for terminating an exposure at any time;

(e) A locking device which will prevent unauthorized use of the therapeutic radiation machine; and

(f) For therapeutic radiation machines manufactured after the effective date of these rules, a positive display of specific filters in the beam.

(10) Multiple Tubes. When a control panel may energize

more than one x-ray tube:

(a) It shall be possible to activate only one x-ray tube at a time;

(b) There shall be an indication at the control panel identifying which x-ray tube is activated; and

(c) There shall be an indication at the tube housing assembly when that tube is energized.

(11) Target-to-Skin Distance (TSD). There shall be a means of determining the central axis TSD to within one centimeter and of reproducing this measurement to within two millimeters thereafter.

(12) Shutters. Unless it is possible to bring the x-ray output to the prescribed exposure parameters within five seconds after the x-ray "ON" switch is energized, the beam shall be attenuated by a shutter having a lead equivalency not less than that of the tube housing assembly. In addition, after the unit is at operating parameters, the shutter shall be controlled electrically by the operator from the control panel. An indication of shutter position shall appear at the control panel.

(13) Low Filtration X-ray Tubes. Therapeutic radiation machines equipped with a beryllium or other low-filtration window shall have a label clearly marked on the tube housing assembly and shall be provided with a permanent warning device on the control panel that is activated when no additional filtration is present, to indicate that the dose rate is very high.

(14) Facility Design Requirements for Therapeutic Radiation Machines Capable of Operating in the Range 50 kV to 500 kV. In addition to shielding adequate to meet requirements of R313-30-9, the treatment room shall meet the following design requirements:

(a) Aural Communication. Provision shall be made for continuous two-way aural communication between the patient and the operator at the control panel;

(b) Viewing Systems. Provision shall be made to permit continuous observation of the patient during irradiation and the viewing system shall be so located that the operator can observe the patient from the control panel. The therapeutic radiation machine shall not be used for patient irradiation unless at least one viewing system is operational.

(15) Additional Requirements. Treatment rooms which contain a therapeutic radiation machine capable of operating above 150 kV shall meet the following additional requirements:

(a) Protective barriers shall be fixed except for entrance doors or beam interceptors;

(b) The control panel shall be located outside the treatment room or in a totally enclosed booth, which has a ceiling, inside the room;

(c) Interlocks shall be provided so that entrance doors, including doors to interior booths, shall be closed before treatment can be initiated or continued. If the radiation beam is interrupted by a door opening, it shall not be possible to restore the machine to operation without closing the door and reinitiating irradiation by manual action at the control panel; and

(d) When a door referred to in R313-30-6(15)(c) is opened while the x-ray tube is activated, the irradiation shall be interrupted either electrically or by the closure of the shutter.

(16) Full Calibration Measurements.

(a) Full calibration of a therapeutic radiation machine subject to R313-30-6 shall be performed by, or under the direct supervision of, a Radiation Therapy Physicist:

(i) Before the first medical use following installation or reinstallation of the therapeutic radiation machine;

(ii) Annually. The intervals should not exceed 12 months and shall not exceed 13 months; and

(iii) Before medical use under the following conditions:

(A) Whenever quality assurance check measurements indicate that the radiation output differs by more than five percent from the value obtained at the last full calibration and

the difference cannot be reconciled; and

(B) Following a component replacement, major repair, or modification of components that could significantly affect the characteristics of the radiation beam.

(iv) Notwithstanding the requirements of R313-30-6(16)(a)(iii):

(A) Full calibration of therapeutic radiation machines with multi-energy capabilities is required only for those modes and energies that are not within their acceptable range; and

(B) If the repair, replacement or modification does not affect all energies, full calibration shall be performed on the affected energy that is in most frequent clinical use at the facility. The remaining energies may be validated with quality assurance check procedures against the criteria in R313-30-6(16)(a)(iii)(A).

(v) The registrant shall use the dosimetry system described in R313-30-8(6)(a) to perform the full calibration required in R313-30-6(16)(b);

(b) To satisfy the requirement of R313-30-6(16)(a), full calibration shall include measurements recommended for annual calibration by NCRP Report 69, "Dosimetry of X-Ray and Gamma Ray Beams for Radiation Therapy in the Energy Range 10 keV to 50 MeV," 1981 ed., which is adopted and incorporated by reference.

(c) The registrant shall maintain a record of calibrations for the duration of the registration. The record shall include the date of the calibration, the manufacturer's name, model number, and serial number for both the therapeutic radiation machine and the x-ray tube, the model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine, and the signature of the Radiation Therapy Physicist responsible for performing the calibration.

(17) Periodic Quality Assurance Checks.

(a) Periodic quality assurance checks shall be performed on therapeutic radiation machines subject to R313-30-6, which are capable of operation at greater than 50 kV.

(b) To satisfy the requirement of R313-30-6(17)(a), quality assurance checks shall meet the following requirements:

(i) The registrant shall perform quality assurance checks in accordance with written procedures established by the Radiation Therapy Physicist; and

(ii) The quality assurance check procedures shall specify the frequency at which tests or measurements are to be performed. The quality assurance check procedures shall specify that the quality assurance check shall be performed during the calibration specified in R313-30-6(16)(a). The acceptable tolerance for parameters measured in the quality assurance check, when compared to the value for that parameter determined in the calibration specified in R313-30-6(16)(a), shall be stated.

(c) The cause for a parameter exceeding a tolerance set by the Radiation Therapy Physicist shall be investigated and corrected before the system is used for patient irradiation;

(d) Whenever a quality assurance check indicates a significant change in the operating characteristics of a system, as specified in the Radiation Therapy Physicist's quality assurance check procedures, the system shall be recalibrated as required in R313-30-6(16)(a);

(e) The registrant shall use the dosimetry system described in R313-30-8(6)(b) to make the quality assurance check required in R313-30-6(17)(b);

(f) The registrant shall have the Radiation Therapy Physicist review and sign the results of radiation output quality assurance checks monthly. The interval should not exceed 30 days and shall not exceed 40 days;

(g) Therapeutic radiation machines subject to R313-30-6 shall have safety quality assurance checks of external beam radiation therapy facilities performed monthly. The interval should not exceed 30 days and shall not exceed 40 days;

(h) Notwithstanding the requirements of R313-30-6(17)(f) and R313-30-6(17)(g), the registrant shall ensure that no therapeutic radiation machine is used to administer radiation to humans unless the quality assurance checks required by R313-30-6(17)(f) and R313-30-6(17)(g) have been performed within the required interval immediately prior to the administration;

(i) To satisfy the requirement of R313-30-6(17)(g), safety quality assurance checks shall ensure proper operation of:

(i) Electrical interlocks at external beam radiation therapy room entrances;

(ii) Proper operation of the "BEAM-ON" and termination switches;

(iii) Beam condition indicator lights on the access doors, control console, and in the radiation therapy room;

(iv) Viewing systems;

(v) If applicable, electrically operated treatment room doors from inside and outside the treatment room;

(j) The registrant shall maintain a record of quality assurance checks required by R313-30-6(17)(a) and R313-30-6(17)(g) for three years. The record shall include the date of the quality assurance check, the manufacturer's name, model number, and serial number for the therapeutic radiation machine, the manufacturer's name, model number and serial number of the instruments used to measure the radiation output of the therapeutic radiation machine, and the signature of the individual who performed the periodic quality assurance check.

(18) Operating Procedures.

(a) The therapeutic radiation machine shall not be used for irradiation of patients unless the requirements of R313-30-6(16) and R313-30-6(17) have been met;

(b) Therapeutic radiation machines shall not be left unattended unless secured pursuant to R313-30-6(9)(e);

(c) When a patient must be held in position for radiation therapy, mechanical supporting or restraining devices shall be used;

(d) The tube housing assembly shall not be held by an individual during operation unless the assembly is designed to require holding and the peak tube potential of the system does not exceed 50 kV. In these cases, the holder shall wear protective gloves and apron of not less than 0.5 millimeters lead equivalency at 100 kV;

(e) A copy of the current operating and emergency procedures shall be maintained at the therapeutic radiation machine control console; and

(f) No individual other than the patient shall be in the treatment room during exposures from therapeutic radiation machines operating above 150 kV. At energies less than or equal to 150 kV, individuals, other than the patient, in the treatment room shall be protected by a barrier sufficient to meet the requirements of R313-15-201 of these rules.

R313-30-7. Therapeutic Radiation Machines - Photon Therapy Systems (500 kV and Above) and Electron Therapy Systems (500 keV and Above).

(1) Leakage Radiation Outside the Maximum Useful Beam in Photon and Electron Modes.

(a) The absorbed dose rate due to leakage radiation (excluding neutrons) at any point outside the maximum sized useful beam, but within a circular plane of radius two meters which is perpendicular to and centered on the central axis of the useful beam at the nominal treatment distance, that is at the plane of the patient, shall not exceed a maximum of 0.2 percent and an average of 0.1 percent of the absorbed dose rate on the central axis of the beam at the nominal treatment distance. Measurements shall be averaged over an area not exceeding 100 square centimeters at a minimum of 16 points uniformly distributed in the plane;

(b) Except for the area defined in R313-30-7(1)(a), the absorbed dose rate, excluding that from neutrons, at one meter

from the electron path between the electron source and the target or electron window shall not exceed 0.5 percent of the absorbed dose rate on the central axis of the beam at the nominal treatment distance. Measurements shall be averaged over an area not exceeding 100 square centimeters;

(c) For equipment manufactured after the effective date of these rules, the neutron absorbed dose outside the useful beam shall be in compliance with applicable acceptance criteria; and

(d) For therapeutic radiation machines, the registrant shall determine, or obtain from the manufacturer, the leakage radiation existing at the positions specified in R313-30-7(1)(a) through R313-30-7(1)(c) for the specified operating conditions. Records on leakage radiation measurements shall be maintained at the installation for inspection by representatives of the Director.

(2) Leakage Radiation Through Beam Limiting Devices.

(a) Photon Radiation.

(i) Adjustable or interchangeable beam limiting devices, such as the collimating jaws or x-ray cones, shall attenuate the useful beam so that at the nominal treatment distance, the maximum absorbed dose anywhere in the area shielded by the beam limiting devices shall not exceed two percent of the maximum absorbed dose on the central axis of the useful beam measured in a ten centimeters by ten centimeters radiation field; and

(ii) Interchangeable beam limiting devices, such as auxiliary beam blocking material, shall attenuate the useful beam so that at the nominal treatment distance, the maximum absorbed dose anywhere in the area shielded by the interchangeable beam limiting device shall not exceed five percent of the maximum absorbed dose on the central axis of the useful beam measured in a ten centimeter by ten centimeter radiation field.

(b) Electron Radiation. Adjustable or interchangeable electron applicators shall attenuate the radiation, including but not limited to photon radiation generated by electrons incident on the beam limiting device and electron applicator and other parts of the radiation head, so that the absorbed dose in a plane perpendicular to the central axis of the useful beam at the nominal treatment distance shall not exceed:

(i) A maximum of two percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit shall apply beyond a line seven centimeters outside the periphery of the useful beam; and

(ii) A maximum of ten percent of the absorbed dose on the central axis of the useful beam at the nominal treatment distance. This limit shall apply beyond a line two centimeters outside the periphery of the useful beam.

(c) Measurement of Leakage Radiation.

(i) Photon Radiation. Measurements of leakage radiation through the beam limiting devices shall be made with the beam limiting devices closed and residual apertures blocked by at least two tenth value layers of suitable absorbing material. In the case of overlapping beam limiting devices, the leakage radiation through the sets of beam limiting devices shall be measured independently at the depth of maximum dose. Measurements shall be made using a radiation detector of area not exceeding ten square centimeters;

(ii) Electron Radiation. Measurements of leakage radiation through the electron applicators shall be made with an appropriate radiation detector suitably protected against radiation which has been scattered from material beyond the radiation detector. Measurements shall be made using an appropriate amount of water equivalent build up material for the energies being measured.

(3) Filters and Wedges.

(a) Filters and wedges which are removable from the system shall be clearly marked with an identification number;

(i) For removable wedge filters, the nominal wedge angle

shall appear on the wedge, or on the wedge tray if the wedge filter is permanently mounted to the tray.

(ii) If the wedge or wedge tray is damaged, the Radiation Therapy Physicist will decide if the wedge transmission factor shall be redetermined;

(b) For equipment manufactured after the effective date of these rules which utilize a system of wedge filters:

(i) Irradiation shall not be possible until a selection of a wedge filter or a positive selection to use "no wedge filter" has been made at the treatment control panel;

(ii) An interlock system shall be provided to prevent irradiation if the wedge filter selected is not in the correct position;

(iii) A display shall be provided at the treatment control panel showing the wedge filters in use; and

(iv) An interlock shall be provided to prevent irradiation if a wedge filter selection operation, either manual or automatic, carried out in the treatment room does not agree with the wedge filter selection operation carried out at the treatment control panel.

(c) If the absorbed dose rate information required by R313-30-7(8) relates exclusively to operation with a field flattening filter or beam scattering foil in place, the filter or foil shall be removable only by the use of tools. If removable, the filter or foil shall be interlocked to prevent incorrect selection and incorrect positioning.

(d) For equipment manufactured after the effective date of these rules which utilize a system of interchangeable field flattening filters or interchangeable beam scattering foils:

(i) An interlock system shall be provided to prevent irradiation if the appropriate flattening filter for the x-ray energy selected is not in the correct position in the beam;

(ii) An interlock system shall be provided to prevent irradiation if the appropriate beam scattering foil for the electron energy selected is not in the correct position in the beam;

(iii) An interlock system shall be provided to prevent irradiation if no scattering foil is in place for the electron beams, or if no flattening filter is in place for the x-ray beams; and

(iv) A display shall be provided at the treatment control panel showing a fault indicator when the interlock system has prevented irradiation. The fault indicator will identify a filter or foil error.

(4) Stray Radiation in the Useful Beam. For equipment manufactured after the effective date of these rules, the registrant shall determine during acceptance testing, or obtain from the manufacturer, data sufficient to ensure that x-ray stray radiation in the useful electron beam, absorbed dose at the surface during x-ray irradiation and stray neutron radiation in the useful x-ray beam meet applicable acceptance criteria.

(5) Beam Monitors. Therapeutic radiation machines subject to R313-30-7 shall be provided with redundant beam monitoring systems. The sensors for these systems shall be fixed in the useful beam during treatment to indicate the dose monitor unit rate, and to monitor other beam parameters.

(a) Equipment manufactured after the effective date of these rules shall be provided with at least two independently powered integrating dose meters. Alternatively, common elements may be used if the production of radiation is terminated upon failure of a common element.

(b) Equipment manufactured on or before the effective date of these rules shall be provided with at least one radiation detector. This detector shall be incorporated into a useful beam monitoring system;

(c) The detector and the system into which that detector is incorporated shall meet the following requirements:

(i) Detectors shall be removable only with tools and, if movable, shall be interlocked to prevent incorrect positioning;

(ii) Detectors shall form part of a beam monitoring system from whose readings in dose monitor units the absorbed dose at

a reference point can be calculated;

(iii) The beam monitoring systems shall be capable of independently monitoring, interrupting, and terminating irradiation; and

(iv) For equipment manufactured after the effective date of these rules, the design of the beam monitoring systems shall ensure that the:

(A) Malfunctioning of one system shall not affect the correct functioning of the secondary system; and

(B) Failure of an element common to both systems which could affect the correct function of both systems shall terminate irradiation or prevent the initiation of radiation.

(v) Beam monitoring systems shall have a legible display at the treatment control panel. For equipment manufactured after the effective date of these rules, displays shall:

(A) Maintain a reading until intentionally reset;

(B) Have only one scale and no electrical or mechanical scale multiplying factors;

(C) Utilize a design so that increasing dose monitor units are displayed by increasing numbers; and

(D) In the event of power failure, the dose monitor units delivered up to the time of failure, or the beam monitoring information required in R313-30-7(5)(c)(v)(C) displayed at the control panel at the time of failure shall be retrievable in at least one system for a 20 minute period of time.

(6) Beam Symmetry.

(a) Bent-beam linear accelerators subject to R313-30-7 shall be provided with auxiliary devices to monitor beam symmetry;

(b) The devices referenced in R313-30-7(6)(a) shall be able to detect field asymmetry greater than ten percent; and

(c) The devices referenced in R313-30-7(6)(a) shall be configured to terminate irradiation if the specifications in R313-30-7(6)(b) can not be maintained.

(7) Selection and Display of Dose Monitor Units.

(a) Irradiation shall not be possible until a selection of a number of dose monitor units has been made at the treatment control panel;

(b) The preselected number of dose monitor units shall be displayed at the treatment control panel until reset manually for the next irradiation;

(c) After termination of irradiation, it shall be necessary to reset the dosimeter display before subsequent treatment can be initiated; and

(d) For equipment manufactured after the effective date of these rules, after termination of irradiation, it shall be necessary for the operator to reset the preselected dose monitor units before irradiation can be initiated.

(8) Air Kerma Rate and Absorbed Dose Rate. For equipment manufactured after the effective date of these rules, a system shall be provided from whose readings the air kerma rate or absorbed dose rate at a reference point can be calculated. The radiation detectors specified in R313-30-7(5) may form part of this system. In addition:

(a) The dose monitor unit dose rate shall be displayed at the treatment control panel;

(b) If the equipment can deliver an air kerma rate or absorbed dose rate at the nominal treatment distance more than twice the maximum value specified by the manufacturer, a device shall be provided which terminates irradiation when the air kerma rate or absorbed dose rate exceeds a value twice the specified maximum. The dose rate at which the irradiation will be terminated shall be a record maintained by the registrant;

(c) If the equipment can deliver, under any fault condition, an air kerma rate or absorbed dose rate at the nominal treatment distance more than ten times the maximum value specified by the manufacturer, a device shall be provided to prevent the air kerma rate or absorbed dose rate anywhere in the radiation field from exceeding twice the specified maximum value and to

terminate irradiation if the excess absorbed dose at the nominal treatment distance exceeds 4 Gy (400 rad); and

(d) For therapeutic radiation machines, the registrant shall determine, or obtain from the manufacturer, the maximum values specified in R313-30-7(8)(b) and R313-30-7(8)(c) for the specified operating conditions. Records of these maximum values shall be maintained at the installation for inspection by representatives of the Director.

(9) Termination of Irradiation by the Beam Monitoring System or Systems During Stationary Beam Radiation Therapy.

(a) Primary systems shall terminate irradiation when the preselected number of dose monitor units has been detected by the system;

(b) If the original design of the equipment included a secondary dose monitoring system, that system shall be capable of terminating irradiation when not more than 15 percent or 40 dose monitor units above the preselected number of dose monitor units set at the control panel has been detected by the secondary dose monitoring system; and

(c) For equipment manufactured after the effective date of these rules, an indicator on the control panel shall show which monitoring system has terminated irradiation.

(10) Termination Switches. It shall be possible to terminate irradiation and equipment movement or go from an interruption condition to termination condition at any time from the operator's position at the treatment control panel.

(11) Interruption Switches. If a therapeutic radiation machine has an interrupt mode, it shall be possible to interrupt irradiation and equipment movements at any time from the treatment control panel. Following an interruption, it shall be possible to restart irradiation by operator action without a reselection of operating conditions. If a change is made of a pre-selected value during an interruption, irradiation and equipment movements shall be automatically terminated.

(12) Timer. A suitable irradiation control device shall be provided to terminate the irradiation after a preset time interval.

(a) A timer shall be provided which has a display at the treatment control panel. The timer shall have a preset time selector and an elapsed time indicator;

(b) The timer shall be a cumulative timer which activates with an indication of "BEAM-ON" and retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;

(c) The timer shall terminate irradiation when a preselected time has elapsed, if the dose monitoring systems have not previously terminated irradiation.

(13) Selection of Radiation Type. Equipment capable of both x-ray therapy and electron therapy shall meet the following additional requirements:

(a) Irradiation shall not be possible until a selection of radiation type (x-rays or electrons) has been made at the treatment control panel;

(b) The radiation type selected shall be displayed at the treatment control panel before and during irradiation;

(c) An interlock system shall be provided to ensure that the equipment can principally emit only the radiation type which has been selected;

(d) An interlock system shall be provided to prevent irradiation with x-rays, except to obtain a verification film, when electron applicators are fitted;

(e) An interlock system shall be provided to prevent irradiation with electrons when accessories specific for x-ray therapy are fitted; and

(f) An interlock system shall be provided to prevent irradiation if selected operations carried out in the treatment room do not agree with the selected operations carried out at the treatment control panel.

(14) Selection of Energy. Equipment capable of

generating radiation beams of different energies shall meet the following requirements:

(a) Irradiation shall not be possible until a selection of energy has been made at the treatment control panel;

(b) The nominal energy value selected shall be displayed at the treatment control panel before and during irradiation; and

(c) Irradiation shall not be possible until the appropriate flattening filter or scattering foil for the selected energy is in its proper location.

(15) Selection of Stationary Beam Radiation Therapy or Moving Beam Radiation Therapy. Therapeutic radiation machines capable of both stationary beam radiation therapy and moving beam radiation therapy shall meet the following requirements:

(a) Irradiation shall not be possible until a selection of stationary beam radiation therapy or moving beam radiation therapy has been made at the treatment control panel;

(b) The mode of operation shall be displayed at the treatment control panel;

(c) An interlock system shall be provided to ensure that the equipment can operate only in the mode which has been selected;

(d) An interlock system shall be provided to prevent irradiation if a selected parameter in the treatment room does not agree with the selected parameter at the treatment control panel;

(e) Moving beam radiation therapy shall be controlled to obtain the selected relationships between incremental dose monitor units and incremental angle of movement. For equipment manufactured after the effective date of these rules:

(i) An interlock system shall be provided to terminate irradiation if the number of dose monitor units delivered in increments of ten degrees of rotation or one centimeter of motion differs by more than 20 percent from the selected value;

(ii) Where angle terminates the irradiation in moving beam radiation therapy, the dose monitor units shall differ by less than five percent from the dose monitor unit value selected;

(iii) An interlock shall be provided to prevent motion of more than five degrees or one centimeter beyond the selected limits during moving beam radiation therapy;

(iv) For equipment manufactured after the effective date of these rules, an interlock shall be provided to require that a selection of direction be made at the treatment control panel in units which are capable of both clockwise and counter-clockwise moving beam radiation therapy.

(v) Moving beam radiation therapy shall be controlled with both primary position sensors and secondary position sensors to obtain the selected relationships between incremental dose monitor units and incremental movement.

(f) Where the beam monitor system terminates the irradiation in moving beam radiation therapy, the termination of irradiation shall be as required by R313-30-7(9); and

(g) For equipment manufactured after the effective date of these rules, an interlock system shall be provided to terminate irradiation if movement:

(i) Occurs during stationary beam radiation therapy; or

(ii) Does not start or stops during moving beam radiation therapy unless the stoppage is a preplanned function.

(16) Facility Design Requirements for Therapeutic Radiation Machines Operating above 500 kV. In addition to shielding adequate to meet requirements of R313-30-9, the following design requirements are made:

(a) Protective Barriers. Protective barriers shall be fixed, except for access doors to the treatment room or movable beam interceptors;

(b) Control Panel. In addition to other requirements specified in R313-30, the control panel shall also:

(i) Be located outside the treatment room;

(ii) Provide an indication of whether electrical power is available at the control panel and if activation of the radiation is

possible;

(iii) Provide an indication of whether radiation is being produced; and

(iv) Include an access control device which will prevent unauthorized use of the therapeutic radiation machine;

(c) Viewing Systems. Windows, mirrors, closed-circuit television or an equivalent viewing system shall be provided to permit continuous observation of the patient following positioning and during irradiation and shall be so located that the operator may observe the patient from the treatment control panel. The therapeutic radiation machine shall not be used for patient irradiation unless at least one viewing system is operational;

(d) Aural Communications. Provision shall be made for continuous two-way aural communication between the patient and the operator at the control panel. The therapeutic radiation machine shall not be used for irradiation of patients unless continuous two-way aural communication is possible;

(e) Room Entrances. Treatment room entrances shall be provided with warning lights in a readily observable position near the outside of access doors, which will indicate when the useful beam is "ON;"

(f) Entrance Interlocks. Interlocks shall be provided so that access controls are activated before treatment can be initiated or continued. If the radiation beam is interrupted by an access control, it shall not be possible to restore the machine to operation without closing the door and reinitiating irradiation by manual action at the control panel;

(g) Beam Interceptor Interlocks. If the shielding material in a protective barrier requires the presence of a beam interceptor to ensure compliance with R313-30-301(1), interlocks shall be provided to prevent the production of radiation, unless the beam interceptor is in place, whenever the useful beam is directed at the designated barriers;

(h) Emergency Cutoff Switches. At least one emergency power cutoff switch shall be located in the radiation therapy room and shall terminate equipment electrical power including radiation and mechanical motion. This switch is in addition to the termination switch required by R313-30-7(11). Emergency power cutoff switches shall include a manual reset so that the therapeutic radiation machine cannot be restarted from the unit's control panel without resetting the emergency cutoff switch. Alternatively, power cannot be restarted without pressing a RESET button in the treatment room after resetting the power breaker, and the operator shall check the treatment room and patient prior to turning the power back on;

(i) Safety Interlocks. Safety interlocks shall be designed so that defects or component failures in the safety interlock system prevent or terminate operation of the therapeutic radiation machine; and

(j) Surveys for Residual Radiation. Surveys for residual activity shall be conducted on therapeutic radiation machines capable of generating photon and electron energies above 10 MV prior to machining, removing, or working on therapeutic radiation machine components which may have become activated due to photo-neutron production.

(17) Radiation Therapy Physicist Support.

(a) The services of a Radiation Therapy Physicist shall be required in facilities having therapeutic radiation machines with energies of 500 kV and above. The Radiation Therapy Physicist shall be responsible for:

(i) Full calibrations required by R313-30-7(19) and protection surveys required by R313-30-4(1);

(ii) Supervision and review of dosimetry;

(iii) Beam data acquisition and transfer for computerized dosimetry, and supervision of its use;

(iv) Quality assurance, including quality assurance check review required by R313-30-7(20)(e) of these rules;

(v) Consultation with the authorized user in treatment

planning, as needed; and

(vi) Perform calculations and assessments regarding misadministrations.

(b) If the Radiation Therapy Physicist is not a full-time employee of the registrant, the operating procedures required by R313-30-7(18) shall also specifically address how the Radiation Therapy Physicist is to be contacted for problems or emergencies, as well as the specific actions to be taken until the Radiation Therapy Physicist can be contacted.

(18) Operating Procedures.

(a) No individual, other than the patient, shall be in the treatment room during treatment or during an irradiation for testing or calibration purposes;

(b) Therapeutic radiation machines shall not be made available for medical use unless the requirements of R313-30-4(1), R313-30-7(19) and R313-30-7(20) have been met;

(c) Therapeutic radiation machines, when not in operation, shall be secured to prevent unauthorized use;

(d) If a patient must be held in position during treatment, mechanical supporting or restraining devices shall be used;

(e) A copy of the current operating and emergency procedures shall be maintained at the therapeutic radiation machine control console; and

(f) When adjustable beam limiting devices or beam limiting devices that do not contact the skin are used, the position and shape of the radiation field shall be indicated by a light field.

(19) Full Calibration Measurements.

(a) Full calibration of a therapeutic radiation machine subject to R313-30-7 shall be performed by, or under the direct supervision of, a Radiation Therapy Physicist:

(i) Before the first medical use following installation or reinstallation of the therapeutic radiation machine;

(ii) Annually. The intervals should not exceed 12 months and shall not exceed 13 months; and

(iii) Before medical use under the following conditions:

(A) Whenever quality assurance check measurements indicate that the radiation output differs by more than five percent from the value obtained at the last full calibration and the difference cannot be easily reconciled; and

(B) Following component replacement, major repair, or modification of components, if the appropriate Quality Assurance checks demonstrate that the characteristics of the radiation beam have been significantly affected as determined by a Radiation Therapy Physicist. The Quality Assurance checks shall be performed by, or under the direct supervision of, a Radiation Therapy Physicist. The determination of the need for a full calibration shall be made by a Radiation Therapy Physicist.

(iv) Notwithstanding the requirements of R313-30-7(19)(a)(iii):

(A) Full calibration of therapeutic radiation machines with multi-energy and multi-mode capabilities is required only for those modes and energies that are not within their range and the difference cannot be easily reconciled; and

(B) If the repair, replacement or modification does not affect all modes and energies, full calibration shall be performed on the effected mode or energy if the Quality Assurance checks demonstrate that the characteristics of the radiation beam have been significantly affected as determined by a Radiation Therapy Physicist. The Quality Assurance checks shall be performed by, or under the direct supervision of, a Radiation Therapy Physicist. The determination of the need for a full calibration shall be made by a Radiation Therapy Physicist. The remaining energies or modes may be validated with quality assurance check procedures against the criteria in R313-30-7(19)(a)(iii)(A).

(b) To satisfy the requirement of R313-30-7(19)(a), full calibration shall include measurements required for annual

calibration by American Association of Physicists in Medicine (AAPM) Report 46, "Comprehensive Quality Assurance for Radiation Oncology," 1994 ed., which is adopted and incorporated by reference;

(c) The registrant shall use the dosimetry system described in R313-30-8(6) to measure the radiation output for one set of exposure conditions. The remaining radiation measurements required in R313-30-7(19)(b) may then be made using a dosimetry system that indicates relative dose rates; and

(d) The registrant shall maintain a record of calibrations for the duration of the registration. The record shall include the date of the calibration, the manufacturer's name, model number, and serial number for the therapeutic radiation machine, the model numbers and serial numbers of the instruments used to calibrate the therapeutic radiation machine, and the signature of the Radiation Therapy Physicist responsible for performing the calibration.

(20) Periodic Quality Assurance Checks.

(a) Periodic quality assurance checks shall be performed on therapeutic radiation machines subject to R313-30-7. These checks should be performed at intervals not to exceed those intervals recommended in American Association of Physicists in Medicine (AAPM) Report 46, "Comprehensive Quality Assurance for Radiation Oncology," 1994 ed., which is adopted and incorporated by reference.

(i) Determination of parameters for central axis radiation output shall be done at least weekly. The interval shall not exceed ten days.

(ii) The interval at which periodic quality assurance checks are to be performed shall be determined by the Radiation Therapy Physicist and shall be documented in the registrant's quality management program. The interval for a specific performance check may be based on the history of that performance check for a particular machine. The interval may be increased above the recommended limits only if the Radiation Therapy Physicist determines the increase is justified based on the history of the performance check for that machine or a machine of the same manufacturer and the same model.

(iii) If the performance check demonstrates a need to decrease the interval, the Radiation Therapy Physicist shall decide if the interval should be decreased. The decreased interval shall be continued until the performance check demonstrates that the decreased interval is not necessary.

(b) To satisfy the requirement of R313-30-7(20)(a), quality assurance checks shall include determination of central axis radiation output and shall include a representative sampling of periodic quality assurance checks contained in American Association of Physicists in Medicine (AAPM) Report 46, "Comprehensive Quality Assurance for Radiation Oncology," 1994 ed., which is adopted and incorporated by reference.

(i) A representative sampling shall include those referenced periodic quality assurance checks necessary to assure that the radiation beam and alignment parameters for all therapy machines and modes of operation are within limits prescribed by AAPM Report 46.

(ii) The intervals for a representative sampling of referenced periodic quality assurance checks should not exceed 12 consecutive months and shall not exceed 13 consecutive months.

(c) The registrant shall use a dosimetry system which has been inter-compared semi-annually. The intervals should not exceed six months and shall not exceed seven months, with a dosimetry system described in R313-30-8(6)(a) to make the periodic quality assurance checks required in R313-30-7(20)(a)(i);

(d) The registrant shall perform periodic quality assurance checks required by R313-30-7(20)(a) in accordance with procedures established by the Radiation Therapy Physicist;

(e) The registrant shall review the results of periodic

radiation output checks according to the following procedures:

(i) The authorized user and Radiation Therapy Physicist shall be immediately notified if a parameter is not within its acceptable range. The therapeutic radiation machine shall not be made available for subsequent medical use until the Radiation Therapy Physicist has determined that all parameters are within their acceptable range;

(ii) If periodic radiation output check parameters appear to be within their acceptable range, the periodic radiation output check shall be reviewed and signed by either the authorized user or Radiation Therapy Physicist within two weeks;

(iii) The Radiation Therapy Physicist shall review and sign the results of radiation output quality assurance checks at intervals not to exceed one month; and

(iv) Other Quality Assurance checks shall be reviewed at intervals specified in the Quality Management Program, as required by R313-30-5.

(f) Therapeutic radiation machines subject to R313-30-7 shall have safety quality assurance checks of external beam radiation therapy facilities performed weekly at intervals not to exceed ten days;

(g) To satisfy the requirement of R313-30-7(20)(f), safety quality assurance checks shall ensure proper operation of:

(i) Electrical interlocks at external beam radiation therapy room entrances;

(ii) Proper operation of the "BEAM-ON", interrupt and termination switches;

(iii) Beam condition indicator lights on the access doors, control console, and in the radiation therapy room;

(iv) Viewing and aural communication systems;

(v) Electrically operated treatment room doors from inside and outside the treatment room;

(vi) At least one emergency power cutoff switch. If more than one emergency power cutoff switch is installed and not all switches are tested at once, switches shall be tested on a rotating basis. Safety quality assurance checks of the emergency power cutoff switches may be conducted at the end of the treatment day in order to minimize possible stability problems with the therapeutic radiation machine.

(h) The registrant shall promptly repair a system identified in R313-30-7(20)(g) that is not operating properly; and

(i) The registrant shall maintain a record of quality assurance checks required by R313-30-7(20)(a) and R313-30-7(20)(g) for three years. The record shall include the date of the quality assurance check, the manufacturer's name, model number, and serial number for the therapeutic radiation machine, the manufacturer's name, model number and serial number of the instruments used to measure the radiation output of the therapeutic radiation machine, and the signature of the individual who performed the periodic quality assurance check.

R313-30-8. Calibration and Check of Survey Instruments and Dosimetry Equipment.

(1) The registrant shall ensure that the survey instruments used to show compliance with R313-30 have been calibrated before first use, at intervals not to exceed 12 months, and following repair.

(2) To satisfy the requirements of R313-30-8(1), the registrant shall:

(a) Calibrate required scale readings up to 10 mSv (1000 mrem) per hour with an appropriate radiation source that is traceable to the National Institute of Standards and Technology (NIST);

(b) Calibrate at least two points on the scales to be calibrated. These points should be at approximately 1/3 and 2/3 of scale rating; and

(3) To satisfy the requirements of R313-30-8(2), the registrant shall:

(a) Consider a point as calibrated if the indicated dose rate

differs from the calculated dose rate by not more than ten percent; and

(b) Consider a point as calibrated if the indicated dose rate differs from the calculated dose rate by not more than 20 percent if a correction factor or graph is conspicuously attached to the instrument.

(4) The registrant shall retain a record of calibrations required in R313-30-8(1) for three years. The record shall include:

(a) A description of the calibration procedure; and

(b) A description of the source used and the certified dose rates from the source, and the rates indicated by the instrument being calibrated, the correction factors deduced from the calibration data, the signature of the individual who performed the calibration, and the date of calibration.

(5) The registrant may obtain the services of individuals licensed by the Director, the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State to perform calibrations of survey instruments. Records of calibrations which contain information required by R313-30-8(4) shall be maintained by the registrant.

(6) Dosimetry Equipment.

(a) The registrant shall have a calibrated dosimetry system available for use. The system shall have been calibrated for by the National Institute for Standards and Technology (NIST) or by an American Association of Physicists in Medicine (AAPM) Accredited Dosimetry Calibration Laboratory (ADCL). The calibration shall have been performed within 24 months prior to use and after servicing that may have affected system calibration.

(i) For beams with energies greater than 1 MV (1 MeV), the dosimetry system shall have been calibrated for Cobalt-60;

(ii) For beams with energies equal to or less than 1 MV (1 MeV), the dosimetry system shall have been calibrated at an energy or energy range appropriate for the radiation being used.

(b) The registrant shall have available for use a dosimetry system for quality assurance check measurements. To meet this requirement, the system may be compared with a system that has been calibrated in accordance with R313-30-8(6)(a). This comparison shall have been performed within the previous 12 months (six months if the dosimetry system is an ionization chamber) and after servicing that may have affected system calibration. The quality assurance check system may be the same system used to meet the requirement in R313-30-8(6)(a);

(c) The registrant shall maintain a record of dosimetry system calibration, intercomparison, and comparison for the duration of the license and registration. For calibrations, intercomparisons, or comparisons, the record shall include the date, the model numbers and serial numbers of the instruments that were calibrated, intercompared, or compared as required by R313-30-8(6)(a) and R313-30-8(6)(b), the correction factors that were determined, the names of the individuals who performed the calibration, intercomparison, or comparison, and evidence that the calibration, intercomparison, or comparison was performed by, or under the direct supervision of, a Radiation Therapy Physicist.

R313-30-9. Shielding and Safety Design Requirements.

(1) Therapeutic radiation machines subject to R313-30-6 or R313-30-7 shall be provided with the primary and secondary barriers that are necessary to ensure compliance with R313-15-201 and R313-30-301 of these rules.

(2) Facility design information for new installations of a therapeutic radiation machine or installations of a therapeutic radiation machine of higher energy into a room not previously approved for that energy shall be submitted for approval by the Director prior to actual installation of the therapeutic radiation machine. The minimum facility design information that must be submitted is contained in R313-30-10.

R313-30-10. Information on Radiation Shielding Required for Plan Reviews.**(1) Therapeutic Radiation Machines**

(a) Basic facility information including: name, telephone number and registration number of the individual responsible for preparation of the shielding plan; name and telephone number of the facility supervisor; and the street address, including room number, of the external beam radiation therapy facility. The plan should also indicate whether this is a new structure or a modification to existing structures.

(b) Wall, floor, and ceiling areas struck by the useful beam shall have primary barriers. For an adjacent area that is normally unoccupied, barrier thicknesses may be less than the required thickness, if:

(i) That area where the exposure rates and exposures exceed the limits specified in R313-15-301(1) is permanently fenced or walled to prevent access;

(ii) The appropriate warning signs are posted at appropriate intervals and locations on the fence or wall;

(iii) The exposure rates and exposures outside the fence or wall are less than the limits specified in R313-15-301(1);

(iv) Access to the area is controlled by the operator, and once access is gained, the therapeutic radiation machine cannot be operated until the area has been cleared and access is again controlled by the operator;

(v) The ceiling is of sufficient thickness to reduce exposure due to skyshine, so that the exposure rates and exposures surrounding the facility are less than the limits specified in R313-15-301(1); and

(vi) The primary barrier is of sufficient thickness to ensure that the exposure rates and exposures from the primary beam in spaces in adjacent buildings are less than the limits specified in R313-15-301(1).

(c) Secondary barriers shall be provided in wall, floor, and ceiling areas not having primary barriers.

(2) Therapeutic Radiation Machines up to 150 kV (photons only). In addition to the requirements listed in R313-30-10(1), therapeutic radiation machine facilities which produce only photons with a maximum energy less than or equal to 150 kV shall submit shielding plans which contain, as a minimum, the following additional information:

(a) Equipment specifications, including the manufacturer and model number of the therapeutic radiation machine, as well as the maximum technique factors.

(b) Maximum design workload for the facility including total weekly radiation output, expressed in gray (rad) or air kerma at one meter, total beam-on time per day or week, the average treatment time per patient, along with the anticipated number of patients to be treated per day or week.

(c) A facility blueprint or drawing indicating: the scale of the blueprint or drawing; direction of North; normal location of the therapeutic radiation machine's radiation ports; the port's travel and traverse limits; general directions of the useful beam; locations of windows and doors; and the location of the therapeutic radiation machine control panel. If the control panel is located inside the external beam radiation therapy treatment room, the location of the operator's booth shall be noted on the plan and the operator's station at the control panel shall be behind a protective barrier sufficient to ensure compliance with R313-15-101 of these rules.

(d) The structural composition and thickness or the lead or concrete equivalent of walls, doors, partitions, floor, and ceiling of the rooms concerned.

(e) The type of occupancy of adjacent areas inclusive of space above and below the rooms concerned. If there is an exterior wall, show distance to the closest areas where it is likely that individuals may be present.

(f) At least one example calculation which shows the methodology used to determine the amount of shielding required

for the physical conditions; that is the primary and secondary or leakage barriers, restricted and unrestricted areas, entry doors; and shielding material in the facility.

(i) If commercial software is used to generate shielding requirements, please also identify the software used and the version or revision date.

(ii) If the software used to generate shielding requirements is not in the open literature, please also submit quality control sample calculations to verify the result obtained with the software.

(3) Therapeutic Radiation Machines over 150 kV. In addition to the requirements listed in R313-30-10(1), therapeutic radiation machine facilities which produce photons with a maximum energy in excess of 150 kV and electrons and protons or other subatomic particles shall submit shielding plans which contain, as a minimum, the following additional information:

(a) Equipment specifications including the manufacturer and model number of the therapeutic radiation machine, and gray (rad) at the isocenter and the energies and types of radiation produced, that is photon and electron. The source to isocenter distance shall be specified.

(b) Maximum design workload for the facility including total weekly radiation output, expressed in gray (rad) at one meter, total beam-on time per day or week, the average treatment time per patient, along with the anticipated number of patients to be treated per day or week.

(c) Facility blueprint or drawing, including both floor plan and elevation views, indicating relative orientation of the therapeutic radiation machine; scale; types; thickness and minimum density of shielding materials; direction of North; the locations and size of penetrations through shielding barriers, ceiling, walls and floor; as well as details of the doors and maze.

(d) The structural composition and thickness or concrete equivalent of walls, doors, partitions, floor, and ceiling of the rooms concerned.

(e) The type of occupancy of adjacent areas inclusive of space above and below the rooms concerned. If there is an exterior wall, show distance to the closest areas where it is likely that individuals may be present.

(f) Description of assumptions that were used in shielding calculations including, but not limited to; design energy, for example a room may be designed for 6 MV unit although only a 4 MV unit is currently proposed; workload; presence of integral beam-stop in unit; occupancy and uses of adjacent areas; fraction of time that useful beam will intercept permanent barriers, walls, floor and ceiling; and "allowed" radiation exposure in both restricted and unrestricted areas.

(g) At least one example calculation which shows the methodology used to determine the amount of shielding required for the physical conditions; that is the primary and secondary or leakage barriers, restricted and unrestricted areas, small angle scatter, entry doors and maze; and shielding material in the facility.

(i) If commercial software is used to generate shielding requirements, also identify the software used and the version or revision date.

(ii) If the software used to generate shielding requirements is not in the open literature, also submit quality control sample calculations to verify the result obtained with the software.

(4) Neutron Shielding. In addition to the requirements listed in R313-30-10(3), therapeutic radiation machine facilities which are capable of operating above 10 MV shall submit shielding plans which contain, as a minimum, the following additional information:

(a) The structural composition, thickness, minimum density and location of neutron shielding material.

(b) Description of assumptions that were used in neutron shielding calculations including, but not limited to, neutron

spectra as a function of energy, neutron flux rate, absorbed dose and dose equivalent, due to neutrons, in both restricted and unrestricted areas.

(c) At least one example calculation which shows the methodology used to determine the amount of neutron shielding required for the physical conditions, that is, restricted and unrestricted areas, entry doors and maze and neutron shielding material utilized in the facility.

(i) If commercial software is used to generate shielding requirements, also identify the software used and the version or revision date.

(ii) If the software used to generate shielding requirements is not in the open literature, also submit quality control sample calculations to verify the result obtained with the software.

(d) The methods and instrumentation which will be used to verify the adequacy of neutron shielding installed in the facility.

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-32. Medical Use of Radioactive Material.****R313-32-1. Purpose and Authority.**

(1) The purpose of this rule is to prescribe requirements and provisions for the medical use of radioactive material and for issuance of specific licenses authorizing the medical use of this material. These requirements and provisions provide for the protection of the public health and safety. The requirements and provisions of Rule R313-32 are in addition to, and not in substitution for, other sections of Title R313.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

R313-32-2. Clarifications or Exceptions.

For the purposes of Rule R313-32, 10 CFR 35.2 through 35.7; 35.10(d) through 35.10(f); 35.11(a) through 35.11(b); 35.12; and 35.13(b) through 35.3067 (2010) are incorporated by reference with the following clarifications or exceptions:

- (1) The exclusion of the following:
 - (a) In 10 CFR 35.2, exclude definitions for "Address of Use," "Agreement State," "Area of Use," "Dentist," "Pharmacist," "Physician," "Podiatrist," and "Sealed Source"; and
 - (b) In 10 CFR 35.3067, exclude "with a copy to the Director, Office of Nuclear Material Safety and Safeguards."
- (2) The substitution of the following date references:
 - (a) "May 13, 2005" for "October 24, 2002"; and
 - (b) "May 10, 2006" for "April 29, 2005."
- (3) The substitution of the following rule references:
 - (a) "Rule R313-15" for reference to "10 CFR Part 20" or for reference to "Part 20 of this chapter";
 - (b) "Rule R313-19" for reference to "Part 30 of this chapter" or for reference to "10 CFR Part 30" except for the reference to "Part 30 of this chapter" found in 10 CFR 35.65(d);
 - (c) "10 CFR 30" for reference to "Part 30 of this chapter" found in 10 CFR 35.65(d);
 - (d) "Rules R313-15 and R313-19" for reference to "parts 20 and 30 of this chapter";
 - (e) "Section R313-12-110" for reference to "Sec. 30.6 of this chapter" or for reference to "Sec. 30.6(a)" or for reference to "Sec. 30.6(a) of this chapter";
 - (f) "Section R313-15-101" for reference to "Sec. 20.1101 of this chapter";
 - (g) "Subsection R313-15-301(1)(a)" for reference to "Sec. 20.1301(a)(1) of this chapter";
 - (h) "Subsection R313-15-301(1)(c)" for reference to "Sec. 20.1301(c) of this chapter";
 - (i) "Section R313-15-501" for reference to "Sec. 20.1501 of this chapter";
 - (j) "Section R313-18-12" for reference to "Sec. 19.12 of this chapter";
 - (k) "Subsection R313-22-75(10) or equivalent U.S. Nuclear Regulatory Commission or Agreement State regulations" for reference to "Sec. 32.74 of this chapter," found in 10 CFR 35.65(b);
 - (l) "Subsection R313-22-75(10)" for reference to "10 CFR 32.74 of this chapter," or for reference to "Sec. 32.74 of this chapter" except for the reference to "Sec. 32.74 of this chapter" found in 10 CFR 35.65(b);
 - (m) "Rule R313-70" for reference to "Part 170 of this chapter";
 - (n) "Section R313-19-34(2)" for reference to "Sec. 30.34(b) of this chapter";
 - (o) "Rule R313-22" for reference to "Part 33 of this chapter";
 - (p) "Subsection R313-22-50(2)" for reference to "Sec. 33.13 of this chapter";
 - (q) "Subsection R313-22-75(9)(b)(iv)" for reference to

"Sec. 32.72(b)(4)";

(r) "Subsection R313-22-75(9), 10 CFR 32.72, " for reference to "Sec. 32.72 of this chapter";

(s) "Subsection R313-22-75(9)(b)(v)" for reference to "Sec. 32.72(b)(5)"

(t) "(c)(1) or (c)(2)" for reference to "(c)(1)" in 10 CFR 35.50(d);

(u) "35.600 or 35.1000" for reference to "35.600" in 10 CFR 35.41(b)(1); and

(v) "Subsection R313-22-32(9), 10 CFR 30.32(j)," for reference to "30.32(j) of this chapter".

(4) The substitution of the following terms:

(a) "radioactive material" for reference to "byproduct material";

(b) "original" for "original and one copy";

(c) "(801) 536-4250 or after hours, (801) 536-4123" for "(301) 951-0550";

(d) "Form DRC-01, 'Radioactive Material License Application'" for reference to "NRC Form 313, 'Application for Material License'";

(e) "State of Utah radioactive materials" for reference to "NRC" in 10 CFR 35.6(c);

(f) "the Director, the U.S. Nuclear Regulatory Commission, or an Agreement State" for reference to "the Commission or Agreement State" or for reference to "the Commission or an Agreement State";

(g) "an Director, the U.S. Nuclear Regulatory Commission, or an Agreement State" for reference to "a Commission or Agreement State";

(h) "Equivalent U.S. Nuclear Regulatory Commission or Agreement State" for reference to "equivalent Agreement State" as found in 10 CFR 35.63(b)(2)(i), 10 CFR 35.63(c)(3), 10 CFR 35.65(a), 10 CFR 35.100(a), 10 CFR 35.200(a), and 10 CFR 35.300(a);

(i) "Director" for reference to "NRC Operations Center" in 10 CFR 35.3045(c) and 10 CFR 35.3047(c);

(j) "Utah Division of Waste Management and Radiation Control" for reference to "NRC Operations Center" in Footnote 3 to 10 CFR 35.3045;

(k) "Director" for reference to "appropriate NRC Regional Office listed in Sec. 30.6 of this chapter";

(l) "Utah Waste Management and Radiation Control Board" for reference to "Commission" in 10 CFR 35.18(a)(3)(second instance) and 10 CFR 35.19;

(m) "Director" for reference to "Commission" in 10 CFR 35.10(b), 10 CFR 35.12(d)(2), 10 CFR 35.14(a)(first instance), 10 CFR 35.14(b), 10 CFR 35.18(a), 10 CFR 35.18(a)(3)(first instance), 10 CFR 35.18(b), 10 CFR 35.24(a)(1), 10 CFR 35.24(c), 10 CFR 35.26(a), and 10 CFR 35.1000(b);

(n) "the Director" for reference to "NRC" in 10 CFR 35.13(b)(4)(i), 10 CFR 35.3045(g)(1), and 10 CFR 35.3047(f)(1);

(o) "the U.S. Nuclear Regulatory Commission or an Agreement State" for reference to "an Agreement State" in 10 CFR 35.49(a) and 10 CFR 35.49(c);

(p) "Director, a U.S. Nuclear Regulatory Commission, or Agreement State" for reference to "NRC or Agreement State" in 10 CFR 35.63(b)(2)(ii), 10 CFR 35.100(c), 10 CFR 35.200(c), and 10 CFR 35.300(c); and

(q) In 10 CFR 35.75(a) "Footnote 1", substitute "The current version of NUREG-1556, Vol. 9" for "NUREG-1556 Vol. 9,";

Notice of Continuation September 23, 2011

19-3-104

19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-34. Requirements for Irradiators.

R313-34-1. Purpose and Authority.

(1) Rule R313-34 prescribes requirements for the issuance of licenses authorizing the use of sealed sources containing radioactive materials in irradiators used to irradiate objects or materials using gamma radiation.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

(3) The requirements of Rule R313-34 are in addition to, and not in substitution for, the other requirements of these rules.

R313-34-2. Scope.

(1) Rule R313-34 shall apply to panoramic irradiators that have either dry or wet storage of the radioactive sealed sources; underwater irradiators in which both the source and the product being irradiated are under water; and irradiators whose dose rates exceed 5 grays (500 rads) per hour at 1 meter from the radioactive sealed sources in air or in water, as applicable for the irradiator type.

(2) The requirements of Rule R313-34 shall not apply to self-contained dry-source-storage irradiators in which both the source and the area subject to irradiation are contained within a device and are not accessible by personnel, medical radiology or teletherapy, the irradiation of materials for nondestructive testing purposes, gauging, or open-field agricultural irradiations.

R313-34-3. Clarifications or Exemptions.

For purposes of Rule R313-34, 10 CFR 36, 2014 ed., is incorporated by reference with the following clarifications or exceptions:

(1) The exclusion of the following 10 CFR sections: 36.1, 36.5, 36.8, 36.11, 36.17, 36.19(a), 36.91, and 36.93;

(2) The substitution of the following:

(a) Radiation Control Act for Atomic Energy Act of 1954;

(b) Utah Radiation Control Rules for the reference to NRC regulations and the Commission's regulations;

(c) The Director or the Executive Secretary's for the Commission or the Commission's, and NRC in the following 10 CFR sections: 36.13, 36.13(f), 36.15, 36.19(b), 36.53(c), 36.69, and 36.81(a), 36.81(d) and 36.81(e); and

(d) In 10 CFR 36.51(a)(1), Rule R313-15 for NRC;

(3) Appendix B of 10 CFR Part 20 refers to the 2014 ed. of 10 CFR; and

(4) The substitution of Title R313 references for the following 10 CFR references:

(a) Section R313-12-51 for reference to 10 CFR 30.51;

(b) Rule R313-15 for the reference to 10 CFR 20;

(c) Subsection R313-15-501(3) for the reference to 10 CFR 20.1501(c);

(d) Section R313-15-902 for the reference to 10 CFR 20.1902;

(e) Rule R313-18 for the reference to 10 CFR 19;

(f) Section R313-19-41 for the reference to 10 CFR 30.41;

(g) Section R313-19-50 for the reference to 10 CFR 30.50;

(h) Section R313-22-33 for the reference to 10 CFR 30.33;

(i) Section R313-22-210 for the reference to 10 CFR 32.210;

(j) Section R313-22-35 for the reference to 10 CFR 30.35;

and

(k) Rule R313-70 for the reference to 10 CFR 170.31.

KEY: irradiators, survey, radiation, radiation safety

May 5, 2015 19-3-104(4)

Notice of Continuation December 31, 2014 19-3-104(7)

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-35. Requirements for X-Ray Equipment Used for Non-Medical Applications.****R313-35-1. Purpose and Scope.**

(1) R313-35 establishes radiation safety requirements for registrants who use electronic sources of radiation for industrial radiographic applications, analytical applications or other non-medical applications. Registrants engaged in the production of radioactive material are also subject to the requirements of R313-19 and R313-22. The requirements of R313-35 are an addition to, and not a substitution for, the requirements of R313-15, R313-16, R313-18 and R313-70.

(2) The rules set forth herein are adopted pursuant to the provisions of Sections 19-3-104(3) and 19-3-104(6).

R313-35-2. Definitions.

As used in R313-35:

"Analytical x-ray system" means a group of components utilizing x-rays to determine the elemental composition or to examine the microstructure of materials by either x-ray fluorescence or diffraction analysis.

"Cabinet x-ray system" means an x-ray system with the x-ray tube installed in an enclosure, hereinafter termed "cabinet," which, independent of existing architectural structure except the floor on which it may be placed, is intended to contain at least that portion of a material being irradiated, provide radiation attenuation, and exclude personnel from its interior during generation of x-radiation. Included are all x-ray systems designed primarily for the inspection of carry-on baggage at airline, railroad and bus terminals, and similar facilities. An x-ray tube used within a shielded part of a building, or x-ray equipment which may temporarily or occasionally incorporate portable shielding is not considered a cabinet x-ray system.

"Collimator" means a device used to limit the size, shape and direction of the primary radiation beam.

"Direct reading dosimeter" means an ion-chamber pocket dosimeter or an electronic personal dosimeter.

"External surface" means the outside surfaces of cabinet x-ray systems, including the high-voltage generator, doors, access panels, latches, control knobs, and other permanently mounted hardware and including the plane across an aperture or port.

"Fail-safe characteristics" means design features which cause beam port shutters to close, or otherwise prevent emergence of the primary beam, upon the failure of a safety or warning device.

"Forensics x-ray" means the use of x-ray systems in forensic autopsies of deceased humans, police agency use of x-ray systems for evidence identification and testing, or x-ray system use for arson or questionable origin fire investigations.

"Nondestructive testing" means the examination of the macroscopic structure of materials by nondestructive methods utilizing x-ray sources of radiation.

"Non-medical applications" means uses of x-ray systems except those used for providing diagnostic information or therapy on human patients.

"Normal operating procedures" means instructions necessary to accomplish the x-ray procedure being performed. These procedures shall include positioning of the equipment and the object being examined, equipment alignment, routine maintenance by the registrant, and data recording procedures which are related to radiation safety.

"Open-beam configuration" means a mode of operation of an analytical x-ray system in which individuals could accidentally place some part of the body into the primary beam during normal operation if no further safety devices are incorporated.

"Portable package inspection system" means a portable x-ray system designed and used for determining the presence of

explosives in a package.

"Primary beam" means ionizing radiation which passes through an aperture of the source housing via a direct path from the x-ray tube located in the radiation source housing.

"Very high radiation area" means an area, accessible to individuals, in which radiation levels could result in individuals receiving an absorbed dose in excess of five Gy (500 rad) in one hour at one meter from a source of radiation or from any surface that the radiation penetrates. At very high doses received at high dose rates, units of absorbed dose, gray and rad, are appropriate, rather than units of dose equivalent, sievert and rem.

"X-ray system" means an assemblage of components for the controlled production of x-rays. It includes, minimally, an x-ray high-voltage generator, an x-ray control, a tube housing assembly, and the necessary supporting structures. Additional components which function with the system are considered integral parts of the system.

R313-35-20. Personnel Monitoring.

Registrants using x-ray systems in non-medical applications shall meet the requirements of R313-15-502.

R313-35-30. Locking of X-ray Systems Other Than Veterinary X-Ray Systems.

The control panel of x-ray systems located in uncontrolled areas shall be equipped with a locking device that will prevent the unauthorized use of a x-ray system or the accidental production of radiation. Non-cabinet x-ray systems shall be kept locked with the key removed when not in use.

R313-35-40. Storage Precautions.

X-ray systems shall be secured to prevent tampering or removal by unauthorized personnel.

R313-35-50. Training Requirements.

In addition to the requirements of R313-18-12, an individual operating x-ray systems for non-medical applications shall be trained in the operating procedures for the x-ray system and the emergency procedures related to radiation safety for the facility. Records of training shall be made and maintained for three years after the termination date of the individual.

R313-35-60. Surveys.

In addition to the requirements of R313-15-501, radiation surveys of x-ray systems shall be performed:

- (1) upon installation of the x-ray system; and
- (2) following change to or maintenance of components of an x-ray system which effect the output, collimation, or shielding effectiveness.

R313-35-70. Radiation Survey Instruments.

Survey instruments used in determining compliance with R313-15 and R313-35 shall meet the following requirements:

- (1) Instrumentation shall be capable of measuring a range from 0.02 millisieverts (2 millirem) per hour through 0.01 sievert (1 rem) per hour.

- (2) Instrumentation shall be calibrated at intervals not to exceed 12 months and after instrument servicing, except for battery changes.

- (3) For linear scale instruments, calibration shall be shown at two points located approximately one-third and two-thirds of full-scale on each scale. For logarithmic scale instruments, calibration shall be shown at mid-range of each decade, and at two points of at least one decade. For digital instruments, calibration shall be shown at three points between 0.02 and 10 millisieverts (2 and 1000 millirems) per hour.

- (4) An accuracy of plus or minus 20 percent of the calibration source shall be demonstrated for each point checked

pursuant to R313-35-70(3).

(5) The registrant shall perform visual and operability checks of survey instruments before use on each day the survey instrument is to be used to ensure that the equipment is in good working condition. If survey instrument problems are found, the equipment shall be removed from service until repaired.

(6) Results of the instrument calibrations showing compliance with R313-35-70(3) and R313-35-70(4) shall be recorded and maintained for a period of three years from the date the record is made.

(7) Records demonstrating compliance with R313-35-70(5) shall be made when a problem is found. The records shall be maintained for a period of three years from the date the record is made.

R313-35-80. Cabinet X-ray Systems.

(1) The requirements as found in 21 CFR 1020.40, 1996 ed., are adopted and incorporated by reference.

(2) Individuals operating cabinet x-ray systems with conveyor belts shall be able to observe the entry port from the operator's position.

R313-35-90. Portable Package Inspection Systems.

Portable package inspection systems shall be registered in accordance with R313-16 and shall be exempt from inspection by representatives of the Director.

R313-35-100. Analytical X-Ray Systems Excluding Cabinet X-Ray Systems.

(1) Equipment. Analytical x-ray systems not contained in cabinet x-ray systems shall meet all the following requirements.

(a) A device which prevents the entry of portions of an individual's body into the primary x-ray beam path, or which causes the beam to be shut off upon entry into its path, shall be provided for open-beam configurations.

(i) Pursuant to R313-12-55(1), an application for an exemption from R313-35-100(1)(a) shall contain the following information:

(A) a description of the various safety devices that have been evaluated;

(B) the reason that these devices cannot be used; and

(C) a description of the alternative methods that will be employed to minimize the possibility of an accidental exposure, including procedures to assure that operators and others in the area will be informed of the absence of safety devices.

(ii) applications for exemptions to R313-35-100(1)(a) shall be submitted to the Director.

(b) Open-beam configurations shall be provided with a readily discernible indication of:

(i) the "on" or "off" status of the x-ray tube which shall be located near the radiation source housing if the primary beam is controlled in this manner; or

(ii) the "open" or "closed" status of the shutters which shall be located near ports on the radiation source housing, if the primary beam is controlled in this manner.

(c) Warning devices shall be labeled so that their purpose is easily identified and the devices shall be conspicuous at the beam port. On equipment installed after July 1, 1989, warning devices shall have fail-safe characteristics.

(d) Unused ports on radiation source housings shall be secured in the closed position in a manner which will prevent casual opening. Security requirements will be deemed met if the beam port cannot be opened without the use of tools that are not part of the closure.

(e) Analytical x-ray systems shall be labeled with a readily discernible sign or signs bearing a radiation symbol which meets the requirements of R313-15-901 and the words:

(i) "CAUTION-HIGH INTENSITY X-RAY BEAM," or words having a similar intent, on the x-ray tube housing; and

(ii) "CAUTION RADIATION - THIS EQUIPMENT PRODUCES RADIATION WHEN ENERGIZED," or words having a similar intent, near switches that energize an x-ray tube.

(f) On analytical x-ray systems with open-beam configurations which are installed after July 1, 1989, ports on the radiation source housing shall be equipped with a shutter that cannot be opened unless a collimator or a coupling has been connected to the port.

(g) An easily visible warning light labeled with the words "X-RAY ON," or words having a similar intent, shall be located near switches that energize an x-ray tube and near x-ray ports. They shall be illuminated only when the tube is energized.

(h) On analytical x-ray systems installed after July 1, 1989, warning lights shall have fail-safe characteristics.

(i) X-ray generators shall be supplied with a protective cabinet which limits leakage radiation measured at a distance of five centimeters from its surface so that they are not capable of producing a dose equivalent in excess of 2.5 microsieverts (0.25 millirem) in one hour.

(j) The components of an analytical x-ray system located in an uncontrolled area shall be arranged and include sufficient shielding or access control so that no radiation levels exist in areas surrounding the component group which could result in a dose to an individual present therein in excess of the dose limits given in R313-15-301.

(2) Personnel Requirements.

(a) An individual shall not be permitted to operate or maintain an analytical x-ray system unless the individual has received instruction which satisfies the requirements of R313-18-12(1). The instruction shall include:

(i) identification of radiation hazards associated with the use of the analytical x-ray system;

(ii) the significance of the various radiation warnings and safety devices incorporated into the analytical x-ray system, or the reasons they have not been installed on certain pieces of equipment and the extra precautions required in these cases;

(iii) proper operating procedures for the analytical x-ray system;

(iv) symptoms of an acute localized exposure; and

(v) proper procedures for reporting an actual or suspected exposure.

(b) Registrants shall maintain records which demonstrate compliance with the requirements of R313-35-100(2)(a) for a period of three years after the termination of the individual.

(c) Normal operating procedures shall be written and available to analytical x-ray system workers. An individual shall not be permitted to operate analytical x-ray systems using procedures other than those specified in the normal operating procedures unless the individual has obtained written approval of the registrant or the registrant's designee.

(d) An individual shall not bypass a safety device unless the individual has obtained the written approval of the registrant or the registrant's designee. Approval shall be for a specified period of time. When a safety device has been bypassed, a readily discernible sign bearing the words "SAFETY DEVICE NOT WORKING," or words having a similar intent, shall be placed on the radiation source housing.

(3) Personnel Monitoring. In addition to the requirements of R313-15-502, finger or wrist dosimetric devices shall be provided to and shall be used by:

(a) analytical x-ray system workers using equipment having an open-beam configuration and not equipped with a safety device; and

(b) personnel maintaining analytical x-ray systems if the maintenance procedures require the presence of a primary x-ray beam when local components in the analytical x-ray system are disassembled or removed.

(4) Posting. Areas or rooms containing analytical x-ray

systems not considered to be cabinet x-ray systems shall be conspicuously posted to satisfy the requirements in R313-15-902.

R313-35-105. Portable, Hand-Held, Non-Medical X-ray Systems.

(1) In addition to compliance to the provisions of Rule R313-35 the following sections are specific to portable, hand-held, non-medical x-ray systems, excluding portable handheld devices that are manufactured to provide inherent operator protection:

(a) Protective aprons of at least 0.5 millimeter lead equivalence shall be provided for the operator to protect the operator's torso and gonads from backscatter radiation while operating the x-ray source;

(b) Each operator of hand-held x-ray systems shall complete a training program supplied by the manufacturer prior to using the x-ray system. Records of training shall be maintained on file for examination by an authorized representative of the Director; and

(c) For hand-held x-ray systems, the provision in Subsection R313-35-110(1)(d) of the length of electrical cord for the dead-man switch is optional.

R313-35-110. Veterinary X-Ray Systems.

(1) Equipment. X-ray systems shall meet the following standards to be used for veterinary radiographic examinations.

(a) The leakage radiation from the diagnostic source assembly measured at a distance of one meter shall not exceed 25.8 $\mu\text{C}/\text{kg}$ (100 milliroentgens) in one hour when the x-ray tube is operated at its leakage technique factors.

(b) Diaphragms, cones, or a stepless adjustable collimator shall be provided for collimating the useful beam to the area of clinical interest and shall provide the same degree of protection as is required of the diagnostic source housing.

(c) A device shall be provided to terminate the exposure after a preset time or exposure.

(d) A "dead-man type" exposure switch shall be provided, together with an electrical cord of sufficient length, so that the operator may stand out of the useful beam and at least six feet from the animal during x-ray exposures.

(e) For stationary or mobile x-ray systems, a method shall be provided for visually defining the perimeter of the x-ray field. The total misalignment of the edges of the visually defined field with the respective edges of the x-ray field along either the length or width of the visually defined field shall not exceed six percent of the distance from the source to the center of the visually defined field when the surface upon which it appears is perpendicular to the axis of the x-ray beam.

(f) For portable x-ray systems, a method shall be provided to align the center of the x-ray field with respect to the center of the image receptor to within six percent of the source to image receptor distance, and to indicate the source to image receptor distance to within six percent.

(2) Structural shielding. For stationary x-ray systems, the wall, ceiling, and floor areas shall provide enough shielding to meet the requirements of R313-15-301.

(3) Operating procedures.

(a) Where feasible, the operator shall stand well away from the useful beam and the animal during radiographic exposures.

(b) In applications in which the operator is not located beyond a protective barrier, clothing consisting of a protective apron having a lead equivalent of not less than 0.5 millimeters shall be worn by the operator and other individuals in the room during exposures.

(c) An individual other than the operator shall not be in the x-ray room while exposures are being made unless the individual's assistance is required.

(d) If the animal must be held by an individual, that

individual shall be protected with appropriate shielding devices, for example, protective gloves and apron. The individual shall be so positioned that no unshielded part of that individual's body will be struck by the useful beam.

R313-35-120. X-Ray Systems Less than 1 MeV used for Non-Destructive Testing.

(1) Cabinet x-ray systems.

Cabinet x-ray systems shall meet the requirements of R313-35-80.

(2) Fixed Gauges.

(a) Warning Devices. A light, which is clearly visible from all accessible areas around the x-ray system, shall indicate when the x-ray system is operating.

(b) Personnel Monitoring. Notwithstanding R313-15-502(1)(a), individuals conducting x-ray system maintenance requiring the x-ray beam to be on shall be provided with and required to wear personnel monitoring devices.

(3) Industrial and Other X-ray Systems.

(a) Equipment.

(i) The registrant shall perform visual and operability checks of indication lights and warning lights before use on each day the equipment is to be used to ensure that the equipment is in good working condition. If equipment problems are found, the equipment shall be removed from service until repaired.

(ii) Inspection and routine maintenance of x-ray systems, interlocks, indication lights, exposure switches, and cables shall be made at intervals not to exceed six months or before the first use thereafter to ensure the proper functioning of components important to safety. If equipment problems are found, the equipment shall be removed from service until repaired.

(iii) Records demonstrating compliance with R313-35-120(3)(a)(i) shall be made when problems with the equipment are found. These records shall be maintained for a period of three years.

(iv) Records demonstrating compliance with R313-35-120(3)(a)(ii) shall be made. These records shall be maintained for a period of three years.

(b) Controls. X-ray systems which produce a high radiation area shall be controlled to meet the requirements of R313-15-601.

(c) Personnel Monitoring Requirements.

(i) Registrants shall not permit individuals to conduct x-ray operations unless all of the following conditions are met.

(A) Individuals shall wear a thermoluminescent dosimeter or film badge.

(I) Each film badge or thermoluminescent dosimeter shall be assigned to and worn by only one individual.

(II) Film badges shall be replaced at periods not to exceed one month and thermoluminescent dosimeters shall be replaced at periods not to exceed three months.

(B) Individuals shall wear a direct reading dosimeter if conducting non-destructive testing at a temporary job site or in a room or building not meeting the requirements of R313-15-301.

(I) Pocket dosimeters shall have a range from zero to two millisieverts (200 millirem) and must be recharged at the beginning of each shift.

(II) Direct reading dosimeters shall be read and the exposures recorded at the beginning and end of each shift. Records shall be maintained for three years after the record is made.

(III) Direct reading dosimeters shall be checked at intervals not to exceed 12 months for correct response to radiation and the results shall be recorded. Records shall be maintained for a period three years from the date the record is made. Acceptable dosimeters shall read within plus or minus 20 percent of the true radiation exposure.

(IV) If an individual's ion-chamber pocket dosimeter is found to be off scale or if the individual's electronic personnel dosimeter reads greater than 2 millisieverts (200 millirems), and the possibility of radiation exposure cannot be ruled out as the cause, the individual's film badge or thermoluminescent dosimeter shall be sent for processing within 24 hours. In addition, the individual shall not resume work with sources of radiation until a determination of the individual's radiation exposure has been made.

(d) Controls. In addition to the requirements of R313-15-601, barriers, temporary or otherwise, and pathways leading to high radiation areas shall be identified in accordance with R313-15-902.

(e) Surveillance. During non-destructive testing applications conducted at a temporary job site or in a room or building not meeting the requirements of R313-15-301, the operator shall maintain continuous direct visual surveillance of the operation to protect against unauthorized entry into a high radiation area.

R313-35-130. X-Ray Systems Greater than 1 MeV used for Non-Destructive Testing.

(1) Equipment.

(a) Individuals shall not receive, possess, use, transfer, own, or acquire a particle accelerator unless it is registered pursuant to R313-16-231.

(b) The registrant shall perform visual and operability checks of indication lights and warning lights before use on each day the equipment is to be used to ensure that the equipment is in good working condition. If equipment problems are found, the equipment shall be removed from service until repaired.

(c) Inspection and routine maintenance of x-ray systems, interlocks, indication lights, exposure switches, and cables shall be made at intervals not to exceed three months or before the first use thereafter to ensure the proper functioning of components important to safety. If equipment problems are found, the equipment shall be removed from service until repaired.

(d) Records demonstrating compliance with R313-35-130(1)(b) shall be made when problems with the equipment are found. These records shall be maintained for a period of three years.

(e) Records demonstrating compliance with R313-35-130(1)(c) shall be made. These records shall be maintained for a period of three years.

(f) Maintenance performed on x-ray systems shall be in accordance with the manufacturer's specifications.

(g) Instrumentation, readouts and controls on the particle accelerator control console shall be clearly identified and easily discernible.

(h) A switch on the accelerator control console shall be routinely used to turn the accelerator beam off and on. The safety interlock system shall not be used to turn off the accelerator beam, except in an emergency.

(2) Shielding and Safety Design Requirements.

(a) An individual who has satisfied a criterion listed in R313-16-292, shall be consulted in the design of a particle accelerator's installation and called upon to perform a radiation survey when the accelerator is first capable of producing radiation.

(b) Particle accelerator installations shall be provided with primary or secondary barriers which are sufficient to assure compliance with R313-15-201 and R313-15-301.

(c) Entrances into high radiation areas or very high radiation areas shall be provided with interlocks that shut down the machine under conditions of barrier penetration.

(d) When a radiation safety interlock system has been tripped, it shall only be possible to resume operation of the accelerator by manually resetting controls first at the position

where the interlock has been tripped, and then at the main control console.

(e) Safety interlocks shall be on separate electrical circuits which shall allow their operation independently of other safety interlocks.

(f) Safety interlocks shall be fail-safe. This means that they must be designed so that defects or component failures in the interlock system prevent operation of the accelerator.

(g) The registrant may apply to the Director for approval of alternate methods for controlling access to high or very high radiation areas. The Director may approve the proposed alternatives if the registrant demonstrates that the alternative methods of control will prevent unauthorized entry into a high or very high radiation area, and the alternative method does not prevent individuals from leaving a high or very high radiation area.

(h) A "scram" button or other emergency power cutoff switch shall be located and easily identifiable in high radiation areas or in very high radiation areas. The cutoff switch shall include a manual reset so that the accelerator cannot be restarted from the accelerator control console without resetting the cutoff switch.

(i) Safety and warning devices, including interlocks, shall be checked for proper operation at intervals not to exceed three months, and after maintenance on the safety and warning devices. Results of these tests shall be maintained for inspection at the accelerator facility for three years.

(j) A copy of the current operating and emergency procedures shall be maintained at the accelerator control panel.

(k) Locations designated as high radiation areas or very high radiation areas and entrances to locations designated as high radiation areas or very high radiation areas shall be equipped with easily observable flashing or rotating warning lights that operate when radiation is being produced.

(l) High radiation areas or very high radiation areas shall have an audible warning device which shall be activated for 15 seconds prior to the possible creation of the high radiation area or the very high radiation area. Warning devices shall be clearly discernible in high radiation areas or in very high radiation areas. The registrant shall instruct personnel in the vicinity of the particle accelerator as to the meaning of this audible warning signal.

(m) Barriers, temporary or otherwise, and pathways leading to high radiation areas or very high radiation areas shall be identified in accordance with R313-15-902.

(3) Personnel Requirements.

(a) Registrants shall not permit individuals to act as particle accelerator operators until the individuals have complied with the following:

(i) been instructed in radiation safety; and

(ii) been instructed pursuant to R313-35-50 and the applicable requirements of R313-15.

(iii) Records demonstrating compliance with R313-35-130(3)(a)(i) and R313-35-130(3)(a)(ii) shall be maintained for a period of three years from the termination date of the individual.

(b) Registrants shall not permit an individual to conduct x-ray operations unless the individual meets the personnel monitoring requirements of R313-35-120(3)(c).

(4) Radiation Monitoring Requirements.

(a) At particle accelerator facilities, there shall be available appropriate portable monitoring equipment which is operable and has been calibrated for the radiations being produced at the facility. On each day the particle accelerator is to be used, the portable monitoring equipment shall be tested for proper operation.

(b) When changes have been made in shielding, operation, equipment, or occupancy of adjacent areas, a radiation protection survey shall be performed and documented by an

individual who has satisfied a criterion listed in R313-16-292 or the individual designated as being responsible for radiation safety.

(c) Records of radiation protection surveys, calibrations, and instrumentation tests shall be maintained at the accelerator facility for inspection by representatives of the Director for a period of three years.

R313-35-140. Duties and Authorities of a Radiation Safety Officer.

Facilities operating x-ray systems under R313-35-130 shall appoint a Radiation Safety Officer. The specific duties and authorities of the Radiation Safety Officer include, but are not limited to:

(1) establishing and overseeing all operating, emergency, and ALARA procedures as required by R313-15;

(2) ensuring that radiation safety activities are being performed in accordance with approved procedures and regulatory requirements in the daily operation of the registrant's program;

(3) overseeing and approving the training program for radiographic personnel, ensuring that appropriate and effective radiation protection practices are taught;

(4) ensuring that required radiation surveys are performed and documented in accordance with the R313-35-130(4);

(5) ensuring that personnel monitoring devices are calibrated and used properly by occupationally exposed personnel, that records are kept of the monitoring results, and that timely notifications are made as required by R313-15-1203; and

(6) ensuring that operations are conducted safely and to assume control for instituting corrective actions including stopping of operations when necessary.

19-3-104

19-6-107

R313. Environmental Quality, Radiation Control.**R313-36. Special Requirements for Industrial Radiographic Operations.****R313-36-1. Purpose and Authority.**

(1) The rules in R313-36 prescribe requirements for the issuance of licenses and establish radiation safety requirements for persons utilizing sources of radiation for industrial radiography.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

(3) The requirements of R313-36 are in addition to, and not in substitution for, the other requirements of these rules.

R313-36-2. Scope.

(1) The requirements of R313-36 shall apply to licensees using radioactive materials to perform industrial radiography.

(2) The requirements of R313-36 shall not apply to persons using electronic sources of radiation to conduct industrial radiography.

R313-36-3. Clarifications or Exceptions.

For purposes of R313-36, 10 CFR 34.3; 34.13; 34.20(a)(1); 34.20(b) through 34.41(b); 34.42(a) through 34.42(c); 34.43(a)(1); 34.43(b) through 34.45(a)(8); 34.45(a)(10) through 34.101 (2015), are incorporated by reference with the following clarifications or exceptions:

(1) The exclusion of the following:

(a) In 10 CFR 34.3, exclude definitions for "Lay-barge radiography," "Offshore platform radiography," and "Underwater radiography";

(b) In 10 CFR 34.27(d), exclude "A copy of the report must be sent to the Administrator of the appropriate Nuclear Regulatory Commission's Regional Office listed in appendix D of 10 CFR part 20 of this chapter "Standards for Protection Against Radiation.""; and

(c) In 10 CFR 34.27(e), exclude "Licensees will have until June 27, 1998, to comply with the DU leak-testing requirements of this paragraph."

(2) The substitution of the following wording:

(a) "radioactive materials" for references to "byproduct materials";

(b) "Utah Radiation Control Rules" for references to:

(i) "Commission's regulations";

(ii) "Federal regulations";

(iii) "NRC regulations"; and

(iv) "Commission regulations.";

(c) "Director" for references to:

(i) "Commission";

(ii) "appropriate NRC regional office listed in Section 30.6(a)(2)";

(iii) "Director, Office of Federal and State Materials and Environmental Management Programs" except as used in 10 CFR 34.43(a)(1); and

(iv) "NRC's Office of Federal and State Materials and Environmental Management Programs";

(d) "Director, the U.S. Nuclear Regulatory Commission, or an Agreement State" for references to:

(i) "NRC or an Agreement State"; and

(ii) "Commission or an Agreement State";

(e) "Director, the U.S. Nuclear Regulatory Commission, or by an Agreement State" for references to "Commission or by an Agreement State";

(f) "License(s)" for references to "NRC license(s)";

(g) "NRC or Agreement State License" for references to "Agreement State license"; and

(h) "the Utah Radiation Control Rules" for references to "this chapter, such as Section 21.21."

(3) The substitution of the following rule references:

(a) In 10 CFR 34.51, "R313-12" for references to "10 CFR

part 20 of this chapter";

(b) "R313-15" for references to "10 CFR part 20" and "10 CFR part 20 of this chapter" except as found in 10 CFR 34.51;

(c) "R313-15-601(1)(a)" for references to "Section 20.1601(a)(1) of this chapter";

(d) "R313-15-902(1) and (2)" for references to "10 CFR 20.1902(a) and (b) of this chapter";

(e) "R313-15-903" for references to "Section 20.1903 of this chapter";

(f) "R313-15-1203" for references to "10 CFR 20.2203" and "Section 20.2203 of this chapter";

(g) "R313-12-110" for references to "Section 30.6(a) of this chapter" except as used in 10 CFR 34.43(a)(1);

(h) "R313-19-30" for references to "Section 150.20 of this chapter";

(i) "R313-19-50" for references to "Section 30.50";

(j) "R313-19-100" for references to "10 CFR part 71", and "49 CFR parts 171 - 173";

(k) "R313-22-33" for references to "Section 30.33 of this chapter";

(l) "R313-36" for references to "NRC regulations contained in this part";

(m) "R313-19-100(5)" for references to "Section 71.5 of this chapter"

(n) "R313-19-5" for references to "Sections 30.7, 30.9, and 30.10 of this chapter."

KEY: industry, radioactive material, licensing, surveys**June 16, 2015****19-3-104****Notice of Continuation September 23, 2011****19-6-107**

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-37. Physical Protection of Category 1 and Category 2 Quantities of Radioactive Material.****R313-37-1. Purpose and Authority.**

(1) The rules in R313-37 prescribe requirements for the physical protection program for a licensee that possesses an aggregated category 1 or category 2 quantity of radioactive material.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(4) and 19-3-104(7).

(3) The requirements of R313-37 are in addition to, and not in substitution for, the other requirements of these rules.

R313-37-2. Scope.

These requirements provide reasonable assurance of the security of category 1 and category 2 quantities of radioactive material by protecting these materials from theft or diversion. Specific requirements for access to material, and use, transfer, and transportation of material are included.

R313-37-3. Clarifications or Exceptions.

For purposes of R313-37, 10 CFR 37.5, 37.11(c), 37.21 through 37.43(d)(8), 37.45 through 37.103, and Appendix A to 10 CFR 37 (2014), are incorporated by reference with the following clarifications or exceptions:

(1) The exclusion of the following:

(a) In 10 CFR 37.5, exclude definitions for "Act", "Agreement State", "Becquerel", "Byproduct Material", "Commission", "Curie", "Government Agency", "License", "License issuing authority", "Lost or missing licensed material", "Person", "State", and "United States";

(b) In 10 CFR 37.77(a)(1), exclude the wording "Notifications to the NRC must be to the NRC's Director, Division of Security Policy, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001. The notification to the NRC may be made by email to RAMQC_SHIPMENTS@nrc.gov or by fax to 301-816-5151."; and

(c) In 10 CFR 37.81(g), exclude the wording "In addition, the licensee shall provide one copy of the written report addressed to the Director, Division of Security Policy, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001."

(2) The substitution of the following wording:

(a) "Utah Radiation Control Rule" for references to:

(i) "Commission regulation" in 10 CFR 37.101; and

(ii) "regulation" in 10 CFR 37.103;

(b) "Utah Radiation Control Rules" for reference to:

(i) "regulations and laws" in 10 CFR 37.31(d);

(ii) "Commission requirements" in 10 CFR 37.43(a)(3) and 37.43(c)(1)(ii); and

(iii) "regulations in this part" in 10 CFR 37.103;

(c) "Director" for references to:

(i) "appropriate NRC regional office listed in Section 30.6(a)(2) of this Chapter" in 10 CFR 37.45(b);

(ii) "Commission" in 10 CFR 37.103;

(iii) "NRC" in 10 CFR 37.31(d), 37.43(c)(3)(iii), 37.57(a) (second instance of NRC) and (c), 37.77, and 37.77(a)(1) (first instance) and (3), and 37.81(g);

(iv) "NRC's Director, Division of Security Policy, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, DC 29555-0001" in 10 CFR 37.77(c)(2) and 37.77(d);

(v) "NRC's Director of Nuclear Security, Office of Nuclear Security and Incident Response, U.S. Nuclear Regulatory Commission, Washington, DC 29555-0001" in 10 CFR 37.77(c)(1) (second instance);

(vi) "NRC's Operations Center" in 10 CFR 37.81(a) and

(b);

(vii) "NRC's Operations Center (301-816-5100)" in 10 CFR 37.57(a) and (b) and 37.81(a) through (f);

(viii) "NRC regional office listed in section 30.6(a)(2) of this chapter" in 10 CFR 37.41.(a)(3); and

(ix) "NRC regional office specified in section 30.6 of this chapter" in 10 CFR 37.41(a)(3);

(d) "Director, the U.S. Nuclear Regulatory Commission, or an Agreement State" for references to "Commission or an Agreement State" in 10 CFR 37.71 and 37.71(a) and (b);

(e) "U.S. Nuclear Regulatory Commission's Security Orders or the legally binding requirement issued by Agreement States" for references to "Security Orders" in 10 CFR 37.21(a)(3), 37.25(b)(2), and 37.41(a)(3);

(f) "mail, hand delivery, or electronic submission" for references to "an appropriate method listed in section 37.7" in 10 CFR 37.57(c) and 37.81(g); and

(g) "shall, by mail, hand delivery, or electronic submission," for reference to "shall use an appropriate method listed in section 37.7 to" in 10 CFR 37.27(c).

(3) The substitution of the following rule references:

(a) "R313-19-41(4)" for reference to "section 30.41(d) of this chapter." In 10 CFR 37.71;

(b) "R313-19-100 (incorporating 10 CFR 71.97 by reference)" for reference to "section 71.97 of this chapter" in 10 CFR 37.73(b);

(c) "R313-19-100 (incorporating 10 CFR 71.97(b) by reference)" for reference to "section 71.97(b) of this chapter" in 10 CFR 37.73(b); and

(d) "10 CFR 73" for references to "part 73 of this chapter" in 10 CFR 37.21(c)(4), 37.25(b)(2), and 37.27(a)(4).

19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.**R313-38. Licenses and Radiation Safety Requirements for Well Logging.****R313-38-1. Purpose and Authority.**

(1) Rule R313-38 prescribes requirements for the issuance of a license authorizing the use of licensed materials including sealed sources, radioactive tracers, radioactive markers, and uranium sinker bars in well logging in a single well. This rule also prescribes radiation safety requirements for persons using licensed materials in these operations.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsections 19-3-104(3) and 19-3-104(6).

(3) The provisions and requirements of Rule R313-38 are in addition to, and not in substitution for, the other requirements of these rules. In particular, the provisions of Rules R313-15, R313-18, R313-19, and R313-22 apply to applicants and licensees subject to these rules.

R313-38-2. Scope.

(1) The requirements of Rule R313-38 do not apply to the issuance of a license authorizing the use of licensed material in tracer studies involving multiple wells, such as field flooding studies, or to the use of sealed sources auxiliary to well logging but not lowered into wells.

R313-38-3. Clarifications or Exceptions.

For purposes of Rule R313-38, 10 CFR 39 (2013), is incorporated by reference with the following clarifications or exceptions:

(1) The exclusion of the following 10 CFR sections: 39.1, 39.5, 39.8, 39.11, 39.101, and 39.103;

(2) The exclusion of the following 10 CFR references within 10 CFR 39: Sec. 40.32, and Sec. 70.23;

(3) The exclusion of "licensed material" in 10 CFR 39.2 definitions;

(4) The substitution of the following wording:

(a) License for reference to NRC license;

(b) Utah Radiation Control Rules for the references to:

(i) The Commission's regulations;

(ii) The NRC regulations;

(iii) NRC regulations; and

(iv) Pertinent Federal regulations;

(c) Director for reference to Commission, except as stated in Subsection R313-38-3(4)(d);

(d) Representatives of the Director for the references to the Commission in:

(i) 10 CFR 39.33(d);

(ii) 10 CFR 39.35(a);

(iii) 10 CFR 39.37;

(iv) 10 CFR 39.39(b); and

(v) 10 CFR 39.67(f);

(e) Director for references to:

(i) NRC in:

(A) 10 CFR 39.63(l);

(B) 10 CFR 39.77(c)(1)(i) and (ii); and

(C) 10 CFR 39.77(d)(9); and

(ii) Appropriate NRC Regional Office in:

(A) 10 CFR 39.77(a);

(B) 10 CFR 39.77(c)(1); and

(C) 10 CFR 39.77(d);

(iii) Appropriate NRC Regional Office listed in appendix

D of part 20 of this chapter in:

(A) 10 CFR 39.35(d)(2)

(f) Director, the U.S. Nuclear Regulatory Commission or an Agreement State for the references to:

(i) Commission or an Agreement State in:

(A) 10 CFR 39.35(b); and

(B) 10 CFR 39.43(d) and (e); and

(ii) Commission pursuant to Sec. 39.13(c) or by an Agreement State in:

(A) 10 CFR 39.43(c); and

(B) 10 CFR 39.51;

(g) In 10 CFR 39.35(d)(1), persons specifically licensed by the Director, the U.S. Nuclear Regulatory Commission, or an Agreement State for the reference to an NRC or Agreement State licensee that is authorized;

(h) In 10 CFR 39.75(e), a U.S. Nuclear Regulatory Commission or an Agreement State for the reference to the Agreement State;

(5) The substitution of the following Title R313 references for specific 10 CFR references:

(a) Section R313-12-3 for the reference to Sec. 20.1003 of this chapter;

(b) Section R313-12-54 for the reference to 10 CFR 39.17;

(c) Subsection R313-12-55(1) for the reference to 10 CFR 39.91;

(d) Rule R313-15 for references to:

(i) Part 20; and

(ii) Part 20 of this chapter;

(e) Subsection R313-15-901(1) for the reference to Sec. 20.1901(a);

(f) Section R313-15-906 for the reference to Sec. 20.1906 of this chapter;

(g) Sections R313-15-1201 through R313-15-1203 for the references to:

(i) Secs. 20.2201-20.2202; and

(ii) Sec. 20.2203;

(h) Rule R313-18 for the reference to part 19;

(i) Section R313-19-30 for the reference to Sec. 150.20 of this chapter;

(j) Section R313-19-50 for the references to:

(i) Sec. 30.50; and

(ii) Part 21 of this chapter;

(k) Section R313-19-71 for the reference to Sec. 30.71;

(l) Section R313-19-100 for the references to:

(i) 10 CFR Part 71; and

(ii) Sec. 71.5 of this chapter; and

(m) Section R313-22-33 for the reference to 10 CFR 30.33;

(n) Rules R313-15, R313-18, and R313-38 for corresponding references to:

(i) Parts 19, 20, and 39 of this chapter;

(ii) A copy of parts 19, 20, and 39 of NRC regulations.

KEY: radioactive materials, well logging, surveys, subsurface tracer studies

March 17, 2015

Notice of Continuation October 7, 2013

19-3-104

19-6-107

R313. Environmental Quality, Waste Management and Radiation Control, Radiation.

R313-70. Payments, Categories and Types of Fees.

R313-70-1. Purpose and Authority.

(1) The purpose of this rule is to prescribe the requirements to assess fees of registrants and licensees possessing sources of radiation.

(2) The rules set forth herein are adopted pursuant to the provisions of Subsection 19-3-104(6).

R313-70-2. Scope.

The requirements of Rule R313-70 apply to persons who receive, possess, or use sources of radiation provided: however, that nothing in these rules shall apply to the extent a person is subject to regulation by the U.S. Nuclear Regulatory Commission.

R313-70-3. Communications.

Communications concerning Rule R313-70 should be addressed to the Director, and may be sent to the Division of Waste Management and Radiation Control, Department of Environmental Quality. Communications may be delivered in person at the Division of Waste Management and Radiation Control offices.

R313-70-5. Payment of Fees.

(1) New Application Fee: Applications for radiation machine registration or radioactive material licensing for which a fee is prescribed, shall be accompanied by a remittance in the full amount of the fee. Applications will not be accepted for filing or processing prior to payment of the full amount specified. Applications for which no remittance is received will be returned to the applicant. Application fees will be charged irrespective of the Director's disposition of the application or a withdrawal of the application.

(2) Annual Fee: Persons and individuals who are subject to licensing or registration of radioactive material or radiation machine registration with the Director under provisions of the Utah Radiation Control Rules, are assessed an annual fee in accordance with categories of Sections R313-70-7 and R313-70-8. The appropriate fee shall be filed annually with the Director, by the due date the Director specifies for registrants or by the anniversary date for licensees. The account of a licensee or registrant that is delinquent on or after 61 days may be transferred to the Office of State Debt Collection in accordance with Section R21-1-5.

(3) Inspection Fee: Persons and entities who, under provisions of the Utah Radiation Control Rules, are subject to radiation machine registration with the Director are assessed an inspection fee in accordance with Section R313-70-8. Fees for inspection of a radiation machine are due within 30 days of receipt of an invoice from the Agency. The inspection account of a registrant that is delinquent on or after 61 days may be transferred to the Office of State Debt Collection in accordance with Section R21-1-5.

(4) Failure to pay the prescribed fee: the Director will not process applications and may suspend or revoke licenses or registrations or may issue an order with respect to the activities as the Director determines to be appropriate or necessary in order to carry out the provisions of this part of Rule R313-70, and of the Act.

(a) General license certificates of registration and new specific licenses issued pursuant to the provisions in Rules R313-21 or R313-22, will be valid for a period of five years unless failure to submit appropriate fee occurs. Specific license renewals issued pursuant to the provisions in Rule R313-22 may be valid for a period of ten years or less in accordance with Subsections R313-22-34(1)(b) and (1)(c). Machine registrations will be valid for one year during the schedule established by the

Director in accordance with Section R313-16-230. Failure to submit appropriate fees will render the license, certificate or registration invalid, at which time a new application with appropriate fees shall be submitted.

(b) Renewal applications shall be filed in a timely manner in accordance with Sections R313-22-37 or R313-16-230. The radioactive material license will expire on the date specified on the license. A general license certificate of registration will expire on the date specified on the certificate of registration. A radiation machine registration will expire as outlined in Section R313-16-230. The Director may renew an expired license if the licensee provides information that explains why the renewal application was not submitted pursuant to the provisions in Subsection R313-22-36(1) and other information the Director may request to determine that issuance of the license will not be inimical to the health and safety of the public.

(5) Method of Payment: Fees shall be made payable to: Division of Waste Management and Radiation Control, Department of Environmental Quality.

R313-70-7. License Categories and Types of Fees for Radioactive Materials Licenses.

Fees shall be established in accordance with the Legislative Appropriations Act. Copies of established fee schedules may be obtained from the Director.

TABLE

LICENSE CATEGORY	TYPE OF FEE
(1) Special Nuclear Material	
(a) Licenses for possession and use of special nuclear material in sealed sources contained in devices used in industrial measuring systems, including x-ray fluorescence analyzers and neutron generators.	New License or Renewal Annual Fee
(b) Licenses for possession and use of less than 15 g special nuclear material in unsealed form for research and development.	New License or Renewal Annual Fee
(c) All other special nuclear material licenses.	New License or Renewal Annual Fee
(d) Special nuclear material to be used as calibration and reference sources.	New License or Renewal Annual Fee
(2) Source Material.	
(a) Licenses for concentrations of uranium from other areas like copper or phosphates for the production of moist, solid, uranium yellow cake.	New License or Renewal Annual Fee Review Fees
(b) Licenses for possession and use of source material in extraction facilities such as conventional milling, in-situ leaching, heap leaching, and other processes including licenses authorizing the possession of byproduct material	Monthly fee for active or inactive mill Review Fees

(tailings and other wastes) from source material extraction facilities, as well as licenses authorizing the possession and maintenance of a facility in a standby mode, and licenses that authorize the receipt of byproduct material, as defined in Section 19-3-102, from other persons for possession and disposal incidental to the disposal of the uranium waste tailings generated by the licensee's milling operations.	Application Fee New License or Renewal Monthly Fee		operations. (e) Licenses for possession and use of sealed sources for irradiation of materials in which the source is not removed from its shield (self-shielded units).	New License or Renewal Annual Fee
(c) Licenses that authorize the receipt of byproduct material, as defined in Section 19-3-102, from other persons for possession and disposal.			(f)(i) Licenses for possession and use of less than 10,000 curies of radioactive material in sealed sources for irradiation of materials in which the source is exposed for irradiation purposes.	New License or Renewal Annual Fee
(d) Licenses for possession and use of source material for shielding.	New License or Renewal Annual Fee		(f)(ii) Licenses for possession and use of 10,000 curies or more of radioactive material in sealed sources for irradiation of materials in which the source is exposed for irradiation purposes.	New License or Renewal Annual Fee
(e) All other source material licenses.	New License or Renewal Annual Fee		(g) Licenses to distribute items containing radioactive material that require device review to persons exempt from the licensing requirements of Rule R313-19, except specific licenses authorizing redistribution of items that have been authorized for distribution to persons exempt from the licensing requirements of Rule R313-19.	New License or Renewal Annual Fee
(3) Radioactive Material Other than Source Material and Special Nuclear Material.			(h) Licenses to distribute items containing radioactive material or quantities of radioactive material that do not require device evaluation to persons exempt from the licensing requirements of Rule R313-19, except for specific licenses authorizing redistribution of items that have been authorized for distribution to persons exempt from the licensing requirements of Rule R313-19.	New License or Renewal Annual Fee
(a)(i) Licenses of broad scope for possession and use of radioactive material for processing or manufacturing of items containing radioactive material for commercial distribution.	New License or Renewal Annual Fee		(i) Licenses to distribute items containing radioactive material that require sealed source or device review to persons generally licensed under Rule R313-21, except	
(a)(ii) Other licenses for possession and use of radioactive material for processing or manufacturing of items containing radioactive material for commercial distribution.	New License or Renewal Annual Fee			
(b) Licenses authorizing the processing or manufacturing and distribution or redistribution of radio-pharmaceuticals, generators, reagent kits, or sources or devices containing radioactive material.	New License or Renewal Annual Fee			
(c) Licenses authorizing distribution or redistribution of radiopharmaceuticals, generators, reagent kits, or sources or devices not involving processing of radioactive material.	New License or Renewal Annual Fee			
(d) Licenses for possession and use of radioactive material for industrial radiography	New License or Renewal Annual Fee			

<p>specific licenses authorizing redistribution of items that have been authorized for distribution to persons generally licensed under Rule R313-21.</p>	<p>New License or Renewal Annual Fee</p>	<p>material. The licensee will dispose of the material by transfer to another person authorized to receive or dispose of the material.</p>	<p>New License or Renewal Annual Fee</p>
<p>(j) Licenses to distribute items containing radioactive material or quantities of radioactive material that do not require sealed source or device review to persons generally licensed under Rule R313-21, except specific licenses authorizing redistribution of items that have been authorized for distribution to persons generally licensed under Rule R313-21.</p>	<p>New License or Renewal Annual Fee</p>	<p>(c) Licenses specifically authorizing the receipt of prepackaged waste radioactive material from other persons. The licensee will dispose of the material by transfer to another person authorized to receive or dispose of the material.</p>	<p>New License or Renewal Annual Fee</p>
<p>(k) Licenses for possession and use of radioactive material for research and development, which do not authorize commercial distribution.</p>	<p>New License or Renewal Annual Fee</p>	<p>(d) Licenses authorizing packaging of radioactive waste for shipment to waste disposal site where licensee does not take possession of waste material.</p>	<p>New License or Renewal Annual Fee</p>
<p>(l) All other specific radioactive material licenses.</p>	<p>New License or Renewal Annual Fee</p>	<p>(5) Well logging, well surveys and tracer studies.</p>	<p>New License or Renewal Annual Fee</p>
<p>(m) Licenses of broad scope for possession and use of radioactive material for research and development which do not authorize commercial distribution.</p>	<p>New License or Renewal Annual Fee</p>	<p>(a) Licenses for possession and use of radioactive material for well logging, well surveys and tracer studies other than field flooding tracer studies.</p>	<p>New License or Renewal Annual Fee</p>
<p>(n) Licenses that authorize services for other licensees, except licenses that authorize leak testing or waste disposal services which are subject to the fees specified for the listed services.</p>	<p>New License or Renewal Annual Fee</p>	<p>(b) Licenses for possession and use of radioactive material for field flooding tracer studies.</p>	<p>New License or Renewal Annual Fee</p>
<p>(o) Licenses that authorize services for leak testing only.</p>	<p>New License or Renewal Annual Fee</p>	<p>(6) Nuclear laundries.</p>	<p>New License or Renewal Annual Fee</p>
<p>(4) Radioactive Waste Disposal: (a) Licenses specifically authorizing the receipt of waste radioactive material from other persons for the purpose of commercial disposal by land by the licensee.</p>	<p>Application Fee New License or Renewal Siting Review Fee</p>	<p>(a) Licenses for commercial collection and laundry of items contaminated with radioactive material.</p>	<p>New License or Renewal Annual Fee</p>
<p>(b) Licenses specifically authorizing the receipt of waste radioactive material from other persons for the purpose of packaging or repackaging the</p>	<p>New License or Renewal Annual Fee</p>	<p>(7) Human use of radioactive material. (a) Licenses for human use of radioactive material in sealed sources contained in teletherapy devices.</p>	<p>New License or Renewal Annual Fee</p>
		<p>(b) Other licenses issued for human use of radioactive material, except licenses for use of radioactive material contained in teletherapy devices. (c) Licenses of broad scope issued to medical institutions or two or more physicians authorizing research and development,</p>	<p>New License or Renewal Annual Fee</p>

including human use of radioactive material, except licenses for radioactive material in sealed sources contained in teletherapy devices.
 (8) Civil Defense.
 (a) Licenses for possession and use of radioactive material for civil defense activities.
 (9) Power Source.
 (a) Licenses for the manufacture and distribution of encapsulated radioactive material wherein the decay energy of the material is used as a source for power.
 (10) General License.
 (a) Measuring, gauging and control devices as described in Subsection R313-21-22(4), other than hydrogen-3 (tritium) devices and polonium-210 devices containing no more than 10 millicuries used for producing light or an ionized atmosphere.
 (b) In Vitro testing
 (c) Depleted uranium
 (d) Reciprocal recognition, as provided for in Section R313-19-30, of a license issued by the U.S. Nuclear Regulatory Commission, an Agreement State or a Licensing State.

Notice of Continuation September 23, 2011

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-1. Utah Hazardous Waste Definitions and References.

R315-1-1. Definitions.

(a) Terms used in R315-1 through R315-101 are defined in Sections 19-1-103 and 19-6-102.

(b) For R315-1 through R315-101, the terms defined in 40 CFR 260.10, 264.18(a)(2), and 279.1, 2010 ed., are adopted and incorporated by reference with the following revisions:

(1) Substitute "Director of the Division of Waste Management and Radiation Control" for "Regional Administrator" or "Administrator," except in the following cases:

(i) In the actual definitions of "Administrator" and "Regional Administrator;" and

(ii) In the definitions of "hazardous waste constituent" and "industrial furnace," "Board" shall be substituted.

(2) Insert in the definition of "existing tank system" or "existing component" the following additional phrase after "July 14, 1986," "or December 16, 1988 for purposes of implementing the non-HSWA requirements of the tank regulations as promulgated by EPA on July 14, 1986, 51 FR 25470, as they have been incorporated into the corresponding rules of R315. A non-HSWA existing tank system or non-HSWA tank component is one which does not implement any of the requirements of the federal Hazardous and Solid Waste Amendments of 1984 (HSWA) as identified in Table 1 of 40 CFR 271.1."

(3) Insert in the definition of "new tank system" or "new tank component" the following additional phrase after "July 14, 1986," "or December 16, 1988 for purposes of implementing the non-HSWA requirements of the tank regulations as promulgated by EPA on July 14, 1986, 51 FR 25470, as they have been incorporated into the corresponding rules of R315; except, however, for purposes of 40 CFR 265.193(g)(2) and 40 CFR 264.193(g)(2), a new tank system is one which construction commences after July 14, 1986. A non-HSWA new tank system or non-HSWA new tank component is one which does not implement any of the requirements of the federal Hazardous and Solid Waste Amendments of 1984 (HSWA) as identified in Table 1 of 40 CFR 271.1."

(c) The terms defined in 40 CFR 261.1(c), 2010 ed., are adopted and incorporated by reference.

(d) For purposes of R315-3 regarding application and permit procedures for hazardous waste facilities, the terms defined in 40 CFR 270.2, 1999 ed., are adopted and incorporated by reference with the following revisions:

(1) "Permit" means the plan approval as required by subsection 19-6-108(3)(a), or equivalent control document issued by the Director to implement the requirements of the Utah Solid and Hazardous Waste Act;

(2) "Director" or "State Director" means the Director of the Division of Waste Management and Radiation Control, and

(3) Replace existing definition of "corrective action management unit" with the definition as found in 40 CFR 260.10, 2000 ed.

(e) The definitions of "Polychlorinated biphenyl, PCB," and "Polychlorinated item" as found in 761.3, 40 CFR, 1990 ed., are adopted and incorporated by reference.

(f) In addition, the following terms are defined as follows:

(1) "Approved hazardous waste management facility" or "approved facility" means a hazardous waste treatment, storage, or disposal facility which has received an EPA permit in accordance with federal requirements, has been approved under 19-6-108 and R315-3, or has been permitted or approved under any other EPA authorized hazardous waste state program.

(2) "Director" means the Director of the Division of Waste Management and Radiation Control.

(3) "Division" means the Division of Waste Management

and Radiation Control.

(4) "Hazard class" means:

(i) The DOT hazard class identified in 49 CFR 172; and

(ii) If the DOT hazard class is "OTHER REGULATED MATERIAL," ORM, the EPA hazardous waste characteristic exhibited by the waste and identified in R315-2-9.

(5) "Monitoring" means all procedures used to systematically inspect and collect data on operational parameters of the facility or on the quality of the air, ground water, surface water, or soils.

(6) "No free liquids" as used in R315-2-4(a)(23) and R315-2-4(b)(16), means that solvent-contaminated wipes may not contain free liquids as determined by Method 9095B (Paint Filter Liquids Test), included in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, see R315-1-2, and that there is no free liquid in the container holding the wipes.

(7) "POHC's" means principle organic hazardous constituents.

(8) "Permittee" means any person who has received an approval of a hazardous waste operation plan under 19-6-108 and R315-3 or a Federal RCRA permit for a treatment, storage, or disposal facility.

(9) "Precipitation run-off" means water generated from naturally occurring storm events. If the precipitation run-off has been in contact with a waste defined in R315-2-9, it qualifies as "precipitation run-off" if the water does not exhibit any of the characteristics identified in R315-2-9. If the precipitation run-off has been in contact with a waste listed in R315-2-10 or R315-2-11, then it qualifies as "precipitation run-off" when the water has been excluded under R315-2-16. Water containing any leachate does not qualify as "precipitation run-off".

(10) "Solvent-contaminated wipe" means:

(1) A wipe that, after use or after cleaning up a spill, either:

(i) Contains one or more of the F001 through F005 solvents found in R315-2-10(e), which incorporates by reference 40 CFR 261.31 or the corresponding P- or U- listed solvents found in R315-2-11, which incorporates by reference 40 CFR 261.33;

(ii) Exhibits a hazardous characteristic found in R315-2-9(a) when that characteristic results from a solvent found in R315-2-10, which incorporates by reference 40 CFR part 261; and/or

(iii) Exhibits only the hazardous waste characteristic of ignitability found in R315-2-9(d) due to the presence of one or more solvents that are not listed in R315-2-10 which incorporates by reference 40 CFR part 261.

(2) Solvent-contaminated wipes that contain listed hazardous waste other than solvents, or exhibit the characteristic of toxicity, corrosivity, or reactivity due to contaminants other than solvents, are not eligible for the exclusions at R315-2-4(a)(23) and R315-2-4(b)(16).

(11) "Spill" means the accidental discharging, spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous wastes or materials which, when spilled, become hazardous wastes, into or on any land or water.

(12) "Waste management area" means the limit projected in the horizontal plane of the area on which waste will be placed during the active life of a regulated unit. The waste management area includes horizontal space taken up by any liner, dike, or other barrier designed to contain waste in a regulated unit. If the facility contains more than one regulated unit, the waste management area is described by an imaginary line circumscribing the several regulated units.

(13) "Wipe" means a woven or non-woven shop towel, rag, pad, or swab made of wood pulp, fabric, cotton, polyester blends, or other material.

(g) Terms used in R315-15 are defined in sections 19-6-703 and 19-6-706(2)(b)(ii).

(h) For purposes of R315-101 regarding cleanup action and risk-based closure standards, the following terms are defined as follows:

(1) "The concentration term, C" is calculated as the 95% upper confidence limit, UCL, on the arithmetic average for normally distributed data, or as the 95% upper confidence limit on the arithmetic average for lognormally distributed data. For normally distributed data, $C = \text{Mean} + t \times \text{Standard Deviation}/n^{1/2}$, where n is the number of observations, and t is Student's t distribution (at the 95% one-sided confidence level and n-1 degrees of freedom), tables of which are printed in most introductory statistics textbooks. For lognormally distributed data, $C = \exp(\text{Mean of lognormal-transformed data} + 0.5 \times \text{Variance of lognormal-transformed data} + \text{Standard Deviation of lognormal-transformed data} \times H/(n - 1)^{1/2})$, where n is the number of observations, and H is Land's H statistic (at the 95% one-sided confidence level), tables of which are printed in advanced statistics books. For data which are not normally nor lognormally distributed, appropriate statistics, such as nonparametric confidence limits, shall be applied.

(2) "Area of contamination" means a hazardous waste management unit or an area where a release has occurred. The boundary is defined as the furthest extent where contamination from a defined source has migrated in any medium at the time the release is first identified.

(3) "Contaminate" means to render a medium polluted through the introduction of hazardous waste or hazardous constituents as identified in R315-50-10, which incorporates by reference 40 CFR 261, Appendix VIII.

(4) "Hazard index" means the sum of more than one hazard quotient for multiple substances, multiple exposure pathways, or both. The Hazard Index is calculated separately for chronic, subchronic, and shorter duration exposures.

(5) "Hazard quotient" means the ratio of a single substance exposure level over a specified time period, e.g. subchronic, to a reference dose for that substance derived from a similar exposure period.

(6) "Risk-based closure" means closure of a site where hazardous waste was managed or any medium has been contaminated by a release of hazardous waste or hazardous constituents, and where hazardous waste or hazardous constituents remain at the site in any medium at concentrations determined, under this rule, to cause minimal levels of risk to human health and the environment so as to require no further action or monitoring on the part of the responsible party nor any notice of hazardous waste management on the deed to the property.

(7) "Reasonable maximum exposure (RME)" means the highest exposure that is reasonably expected to occur at a site. The goal of RME is to combine upper-bound and mid-range exposure factors so that the result represents an exposure scenario that is both protective and reasonable; not the worst possible case.

(8) "Release" means spill or discharge of hazardous waste, hazardous constituents, or material that becomes hazardous waste when released to the environment.

(9) "Responsible party" means the owner or operator of a facility, or any other person responsible for the release of hazardous waste or hazardous constituents.

(10) "Site" means the area of contamination and any other area that could be impacted by the released contaminants, or could influence the migration of those contaminants, regardless of whether the site is owned by the responsible party.

R315-1-2. References.

(a) For purposes of R315-1 through R315-101, the publication references of 40 CFR 260.11, 2006 ed., are adopted

and incorporated by reference.

(b) R315-1 through R315-101 incorporate by reference a number of provisions from 40 CFR. The incorporated provisions sometimes include cross-references to other sections of 40 CFR. Wherever there are sections in R315-1 through R315-101 that correspond to those cross-references, the cross-references of 40 CFR are not incorporated into R315-1 through R315-101. Instead, the corresponding sections in R315-1 through R315-101 shall apply.

Notice of Continuation July 13, 2011

19-6-105

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-2. General Requirements - Identification and Listing of Hazardous Waste.****R315-2-1. Purpose and Scope.**

(a) This rule identifies those solid wastes which are subject to regulation as hazardous wastes under R315-3 through R315-9 and R315-13 of these rules and which are subject to the notification requirements of these rules.

(b)(1) The definition of solid waste contained in this rule applies only to wastes that also are hazardous for purposes of the rules implementing Chapter 6, Title 19. For example, it does not apply to materials such as non-hazardous scrap, paper, textiles, or rubber that are not otherwise hazardous wastes and that are recycled.

(2) This rule identifies only some of the materials which are solid wastes and hazardous wastes under the Utah Solid and Hazardous Waste Act. A material which is not defined as a solid waste in this rule, or is not a hazardous waste identified or listed in this rule, is still a solid waste and a hazardous waste for purposes of these sections if:

(i) In the case of section 19-6-109, the Director has reason to believe that the material may be a solid waste within the meaning of subsection 19-6-102(13) and a hazardous waste within the meaning of subsection 19-6-102(7) or

(ii) In the case of section 19-6-115, the material is presenting an imminent and substantial danger to human health or the environment.

R315-2-2. Definition of Solid Waste.

(a)(1) A solid waste is any discarded material that is not excluded by subsection R315-2-4(a) or that is not excluded by variance granted under R315-2-18 and R315-2-19.

(2) A discarded material is any material which is:

(i) Abandoned, as explained in paragraph (b) of this section; or

(ii) Recycled, as explained in paragraph (c) of this section; or

(iii) Considered inherently waste-like, as explained in paragraph (d) of this section.

(b) Materials are solid waste if they are abandoned by being:

(1) Disposed of; or

(2) Burned or incinerated; or

(3) Accumulated, stored, or treated, but not recycled, before or in lieu of being abandoned by being disposed of, burned, or incinerated.

(c) Materials are solid wastes if they are recycled - or accumulated, stored, or treated before recycling - as specified in paragraphs (c)(1) through (c)(4) of this section. Table 1 of 40 CFR 261.2, 1998 ed., is adopted and incorporated by reference, except that the heading for column 3 shall read "reclamation (Section 261.2(c)(3)) (except as provided in 261.4(a)(17) for mineral processing secondary materials)."

(1) Used in a manner constituting disposal

(i) Materials noted with "*" in column 1 of Table 1 of 40 CFR 261.2, are solid wastes when they are:

(A) Applied to or placed on the land in a manner that constitutes disposal; or

(B) Used to produce products that are applied to or placed on the land or are otherwise contained in products that are applied to or placed on the land, in which cases the product itself remains a solid waste.

(ii) However, commercial chemical products listed in R315-2-11 are not solid wastes if they are applied to the land and that is their ordinary manner of use.

(2) Burning for energy recovery.

(i) Materials noted with a "*" in column 2 of Table 1 of 40 CFR 261.2 are solid wastes when they are:

(A) Burned to recover energy;

(B) Used to produce a fuel or are otherwise contained in fuels, in which cases the fuel itself remains a solid waste.

(ii) However, commercial chemical products listed in R315-2-11 are not solid wastes if they are themselves fuels.

(3) Reclaimed. Materials noted with a "*" in column 3 of Table 1 of 40 CFR 261.2 are solid wastes when reclaimed, except as provided under R315-2-4(a)(17), which shall be effective on July 1, 1999. Materials noted with a "----" in column 3 of Table 1 are not solid wastes when reclaimed.

(4) Accumulated speculatively. Materials noted with a "*" in column 4 of Table 1 of 40 CFR 261.2 are solid wastes when accumulated speculatively.

(d) Inherently waste-like materials. The following materials are solid wastes when they are recycled in any manner:

(1) Hazardous Waste Nos. F020, F021, unless used as an ingredient to make a product at the site of generation, F022, F023, F026, and F028.

(2) Secondary materials fed to a halogen acid furnace that exhibit a characteristic of a hazardous waste or are listed as a hazardous waste as defined in R315-2-9 through R315-2-10 and R315-2-24, except for brominated material that meets the following criteria:

(i) The material must contain a bromine concentration of at least 45%; and

(ii) The material must contain less than a total of 1% of toxic organic compounds listed in 40 CFR 261 Appendix VIII; and

(iii) The material is processed continually on-site in the halogen acid furnace via direct conveyance (hard piping).

(3) The Board will use the following criteria to add wastes to that list:

(i)(A) The materials are ordinarily disposed of, burned, or incinerated; or

(B) The materials contain toxic constituents listed in R315-50-10 and these constituents are not ordinarily found in raw materials or products for which the materials substitute, or are found in raw materials or products in smaller concentrations, and are not used or reused during the recycling process; and

(ii) The material may pose a substantial hazard to human health and the environment when recycled.

(e) Materials that are not solid waste when recycled.

(1) Materials are not solid wastes when they can be shown to be recycled by being:

(i) Used or reused as ingredients in an industrial process to make a product, provided the materials are not being reclaimed; or

(ii) Used or reused as effective substitutes for commercial products; or

(iii) Returned to the original process from which they are generated, without first being reclaimed or land disposed. The material shall be returned as a substitute for feedstock materials. In cases where the original process to which the material is returned is a secondary process, the materials must be managed such that there is no placement on the land. After June 30, 1999, in cases where the materials are generated and reclaimed within the primary mineral processing industry, the conditions of the exclusion found at R315-2-4(a)(16) apply rather than this provision.

(2) The following materials are solid wastes, even if the recycling involves use, reuse, or return to the original process, described in paragraphs (e)(1)(i)-(iii) of this section:

(i) Materials used in a manner constituting disposal, or used to produce products that are applied to the land; or

(ii) Materials burned for energy recovery, used to produce a fuel, or contained in fuels; or

(iii) Materials accumulated speculatively; or

(iv) Materials listed in paragraphs (d)(1) and (d)(2) of this section.

(f) Documentation of claims that materials are not solid wastes or are conditionally exempt from regulation. Respondents in actions to enforce rules implementing the Utah Solid and Hazardous Waste Act who raise a claim that a certain material is not a solid waste, or is conditionally exempt from regulation, must demonstrate that there is a known market or disposition for the material, and that they meet the terms of the exclusion or exemption. In doing so, they must provide appropriate documentation, such as contracts showing that a second person uses the material as an ingredient in a production process, to demonstrate that the material is not a waste, or is exempt from regulation. In addition, owners or operators of facilities claiming that they actually are recycling materials must show that they have the necessary equipment to do so.

R315-2-3. Definition of Hazardous Waste.

(a) A solid waste as defined in section R315-2-2 is a hazardous waste if:

(1) It is not excluded from regulation as a hazardous waste under subsection R315-2-4(b); and

(2) It meets any of the following criteria:

(i) It is listed in sections R315-2-10 or R315-2-11 and has not been excluded from this section under sections R315-2-16 or R315-2-17.

(ii) It exhibits any of the characteristics of hazardous waste identified in R315-2-9. However, any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded under R315-2-4(b)(7) and any other solid waste exhibiting a characteristic of hazardous waste under R315-2-9 is a hazardous waste only if it exhibits a characteristic that would not have been exhibited by the excluded waste alone if such mixture had not occurred, or if it continues to exhibit any of the characteristics exhibited by the non-excluded wastes prior to mixture. Further, for the purposes of applying the Toxicity Characteristic to such mixtures, the mixture is also a hazardous waste if it exceeds the maximum concentration for any contaminant listed in table 1, 40 CFR 261.24, which R315-2-9(g)(2) incorporates by reference, that would not have been exceeded by the excluded waste alone if the mixture had not occurred or if it continues to exceed the maximum concentration for any contaminant exceeded by the nonexempt waste prior to mixture.

(iii) RESERVED.

(iv) It is a mixture of solid waste and one or more hazardous wastes listed in R315-2-10 or R315-2-11 and has not been excluded from paragraph (a)(2) of this section under R315-2-16 and R315-2-17, or paragraph (f) of this section; however, the following mixtures of solid wastes and hazardous wastes listed in R315-2-10 or R315-2-11 are not hazardous wastes, except by application of paragraph (a)(2)(i) or (ii) of this section, if the generator can demonstrate that the mixture consists of wastewater the discharge of which is subject to regulation under either Section 402 or Section 307(b) of the Clean Water Act, 33 U.S.C. 1251 et seq., including wastewater at facilities which have eliminated the discharge of wastewater, and;

(A) One or more of the following spent solvents listed in R315-2-10(e), which incorporates by reference 40 CFR 261.31 - carbon tetrachloride, tetrachloroethylene, trichloroethylene - provided that the maximum total weekly usage of these solvents, other than the amounts that can be demonstrated not to be discharged to wastewater, divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pre-treatment system does not exceed 1 part per million; or

(B) One or more of the following spent solvents listed in R315-2-10(e), which incorporates by reference 40 CFR 261.31 - methylene chloride, 1,1,1-trichloroethane, chlorobenzene, o-dichlorobenzene, cresols, cresylic acid, nitrobenzene, toluene,

methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents - provided that the maximum total weekly usage of these solvents, other than the amounts that can be demonstrated not to be discharged to wastewater, divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pre-treatment system does not exceed 25 parts per million; or

(C) One of the following wastes listed in R315-2-10(f), which incorporates by reference 40 CFR 261.32, provided that the wastes are discharged to the refinery oil recovery sewer before primary oil/water/solids separation - heat exchanger bundle cleaning sludge from the petroleum refining industry, EPA Hazardous Waste No. K050, crude oil storage tank sediment from petroleum refining operations, EPA Hazardous Waste No. K169, clarified slurry oil tank sediment and/or in-line filter/separation solids from petroleum refining operations, EPA Hazardous Waste No. K170, spent hydrotreating catalyst, EPA Hazardous Waste No. K171, and spent hydrorefining catalyst, EPA Hazardous Waste No. K172; or

(D) A discarded commercial chemical product, or chemical intermediate listed in R315-2-11, arising from "de minimis" losses of these materials from manufacturing operations in which these materials are used as raw materials or are produced in the manufacturing process. For purposes of this subparagraph, "de minimis" losses include those from normal material handling operations, for example, spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves or other devices used to transfer materials; minor leaks of process equipment, storage tanks or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; and rinsate from empty containers or from containers that are rendered empty by that rinsing; or

(E) Wastewater resulting from laboratory operations containing toxic (T) wastes listed in Sections R315-2-10 or R315-2-11, which incorporates by reference 40 CFR 261 subpart D, provided that the annualized average flow of laboratory wastewater does not exceed one percent of total wastewater flow into the headworks of the facility's wastewater treatment or pre-treatment system, or provided the wastes, combined annualized average concentration does not exceed one part per million in the headworks of the facility's wastewater treatment or pre-treatment facility. Toxic (T) wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation; or

(F) One or more of the following wastes listed in R315-2-10(f), which incorporates by reference 40 CFR 261.32 - wastewaters from the production of carbamates and carbamoyl oximes, EPA Hazardous Waste No. K157 - Provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine, including all amounts that cannot be demonstrated to be reacted in the process, destroyed through treatment, or is recovered, i.e., what is discharged or volatilized, divided by the average weekly flow of process wastewater prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 parts per million by weight; or

(G) Wastewaters derived from the treatment of one or more of the following wastes listed in R315-2-10(f), which incorporates by reference 40 CFR 261.32 - organic waste, including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates, from the production of carbamates and carbamoyl oximes, EPA Hazardous Waste No. K156 - Provided, that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 milligrams per liter.

(v) Rebuttable presumption for used oil. Used oil containing more than 1000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in R315-2-10(e) and (f), which incorporates by reference 40 CFR 261 Subpart D. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste, for example, by using an analytical method from SW-846, Third Edition, to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in R315-50-10, which incorporates by reference 40 CFR 261, Appendix VIII.

(A) The rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed, through a tolling agreement, to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner, or disposed.

(B) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units.

(b) A solid waste which is not excluded from regulation under paragraph (a)(1) of this section becomes a hazardous waste when any of the following events occur:

(1) In the case of a waste listed in sections R315-2-10 or R315-2-11, when the waste first meets the listing description set forth in sections R315-2-10 or R315-2-11.

(2) In the case of the mixture of solid waste and one or more listed hazardous wastes, when a hazardous waste listed in sections R315-2-10 or R315-2-11 is first added to the solid waste.

(3) In the case of any other waste, including a waste mixture, when the waste exhibits any of the characteristics identified in section R315-2-9.

(c) Unless and until it meets the criteria of paragraph (d) of this section:

(1) A hazardous waste will remain a hazardous waste.

(2)(i) Except as otherwise provided in paragraph (c)(2)(ii) or (f) of this section, any solid waste generated from the treatment, storage, or disposal of a hazardous waste, including any sludge, spill residue, ash, emission control dust, or leachate, but not including precipitation run-off, is a hazardous waste. However, materials that are reclaimed from solid wastes and that are used beneficially are not solid wastes and hence are not hazardous wastes under this provision unless the reclaimed material is burned for energy recovery or used in a manner constituting disposal.

(ii) The following solid wastes are not hazardous even though they are generated from the treatment, storage, or disposal of a hazardous waste, unless they exhibit one or more of the characteristics of hazardous waste:

(A) Waste pickle liquor sludge generated by lime stabilization of spent pickle liquor from the iron and steel industry, SIC Codes 331 and 332.

(B) Wastes from burning any of the materials exempted from regulations by 40 CFR 261.6(a)(3)(iii) and (v). R315-2-6 incorporates by reference the requirements of 40 CFR 261.6 concerning recyclable materials.

(C)(1) Nonwastewater residues, such as slag, resulting from high temperature metals recovery (HTMR) processing of K061, K062, or F006 waste, in units identified as rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations or industrial furnaces (as defined in 40 CFR 260.10 (6), (7), and (13) of the definition for "Industrial Furnace" which R315-1-1(b) incorporates by reference), that are disposed in solid waste landfills regulated under R315-301 through R315-320, provided

that these residues meet the generic exclusion levels identified below for all constituents, and exhibit no characteristics of hazardous waste. Testing requirements shall be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan; at a minimum, composite samples of residues shall be collected and analyzed quarterly and/or when the process or operation generating the waste changes. Persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements.

TABLE

Constituent Maximum for any single composite sample - TCLP (mg/l)

Generic exclusion levels for K061 and K062 nonwastewater HTMR residues

Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Zinc	70

Generic exclusion levels for F006 nonwastewater HTMR residues

Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Cyanide (total)(mg/kg)	1.8
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Zinc	70

(2) A one-time notification and certification shall be placed in the facility's files and sent to the Director for K061, K062 or F006 HTMR residues that meet the generic exclusion levels for all constituents and do not exhibit any characteristics that are sent to solid waste landfills regulated under R315-301 through R315-320. The notification and certification that is placed in the generators or treaters files shall be updated if the process or operation generating the waste changes and/or if the solid waste landfill regulated under R315-301 through R315-320 receiving the waste changes. However, the generator or treater need only notify the Director on an annual basis if such changes occur. Such notification and certification should be sent to the Director by the end of the calendar year, but no later than December 31. The notification shall include the following information: The name and address of the solid waste landfill regulated under R315-301 through R315-320 receiving the waste shipments; the EPA Hazardous Waste Number(s) and treatability group(s) at the initial point of generation; and, the treatment standards applicable to the waste at the initial point of generation. The certification shall be signed by an authorized representative and shall state as follows: "I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment."

(D) Biological treatment sludge from the treatment of one of the following wastes listed in R315-2-10(f), which

incorporates by reference 40 CFR 261.32 - organic waste, including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates, from the production of carbamates and carbamoyl oximes, EPA Hazardous Waste No. K156, and wastewaters from the production of carbamates and carbamoyl oximes, EPA Hazardous Waste No. K157.

(E) Catalyst inert support media separated from one of the following wastes listed in R315-2-10(f), which incorporates by reference 40 CFR 261.32, - Spent hydrotreating catalyst, EPA Hazardous Waste No. K171, and Spent hydrorefining catalyst, EPA Hazardous Waste No. K172.

(d) Any solid waste described in paragraph (c) of this section is not a hazardous waste if it meets the following criteria:

(1) In the case of any solid waste, it does not exhibit any of the characteristics of hazardous waste identified in section R315-2-9. However, wastes that exhibit a characteristic at the point of generation may still be subject to the requirements of R315-13 which incorporates by reference 40 CFR 268, even if they no longer exhibit a characteristic at the point of land disposal.

(2) In the case of a waste which is a listed waste under sections R315-2-10 or R315-2-11, contains a waste listed under sections R315-2-10 or R315-2-11, or is derived from a waste listed in sections R315-2-10 or R315-2-11, it also has been excluded from paragraph (c) of this section under R315-2-16 and R315-2-17.

(e) Notwithstanding R315-2-3(a) through (d) and provided the debris as defined in R315-13, which incorporates by reference 40 CFR 268, does not exhibit a characteristic identified in R315-2-9, the following materials are not subject to regulation under R315-1, R315-2 to R315-8, R315-13, and R315-14:

(1) Hazardous debris as defined in R315-13, which incorporates by reference 40 CFR 268, that has been treated using one of the required extraction or destruction technologies specified in R315-13, which incorporates by reference 40 CFR 268.45 Table 1; persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements; or

(2) Debris as defined in R315-13, which incorporates by reference 40 CFR 268, that the Director, considering the extent of contamination, has determined is no longer contaminated with hazardous waste.

(f)(1) A hazardous waste that is listed in R315-2-10 or R315-2-11 solely because it exhibits one or more characteristics of ignitability as defined under R315-2-9(d), corrosivity as defined under R315-2-9(e), or reactivity as defined under R315-2-9(f) is not hazardous waste, if the waste no longer exhibits any characteristic of hazardous waste identified in R315-2-9(a), (d), (e), (f), or (g).

(2) The exclusion described in paragraph (f)(1) of this section also pertains to

(i) Any mixture of a solid waste and a hazardous waste listed in R315-2-10 and R315-2-11 solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity as regulated under R315-2-3(a)(2)(iv); and,

(ii) Any solid waste generated from treating, storing, or disposing of a hazardous waste listed in R315-2-10 and R315-2-11 solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity as regulated under R315-2-3(c)(2)(i).

(3) Wastes excluded from R315-2-3 are subject to R315-13-1, which incorporates by reference 40 CFR 268, (as applicable), even if they no longer exhibit a characteristic at the point of land disposal.

(4) Any mixture of a solid waste excluded from regulation under R315-2-4(b)(7) and a hazardous waste listed in R315-2-10 and R315-2-11, which incorporates by reference 40 CFR 261

subpart D, solely because it exhibits one or more of the characteristics of ignitability, corrosivity, or reactivity as regulated under paragraph (a)(2)(iv) of this section is not a hazardous waste, if the mixture no longer exhibits any characteristic of hazardous waste identified in R315-2-9(a), (d) - (g) for which the hazardous waste listed in R315-2-10 and R315-2-11, which incorporates by reference 40 CFR 261 subpart D, was listed.

R315-2-4. Exclusions.

(a) MATERIALS WHICH ARE NOT SOLID WASTES.

The following materials are not solid wastes for the purpose of this rule:

(1) Domestic sewage or any mixture of domestic sewage and other wastes that passes through a sewer system to a publicly-owned treatment works for treatment. "Domestic sewage" means untreated sanitary wastes that pass through a sewer system.

(2) Industrial wastewater discharges that are point source discharges subject to regulation under Section 402 of the Clean Water Act, as amended. This exclusion applies only to the actual point source discharge. It does not exclude industrial wastewaters while they are being collected, stored, or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.

(3) Irrigation return flows.

(4) Source, special nuclear or by-product material as defined by the Atomic Energy Act of 1954, as amended, 42 U.S.C. Section 2011 et seq.

(5) Materials subjected to in-situ mining techniques which are not removed from the ground as part of the extraction process.

(6) Pulping liquors, black liquor that are reclaimed in a pulping liquor recovery furnace and then reused in the pulping process, unless it is accumulated speculatively as defined in R315-1-1(c), which incorporates by reference 40 CFR 261.1(c).

(7) Spent sulfuric acid used to produce virgin sulfuric acid, unless it is accumulated speculatively as defined in subsection R315-1-1(c), which incorporates by reference 40 CFR 261.1(c).

(8) Secondary materials that are reclaimed and returned to the original process or processes in which they were generated where they are reused in the production process provided:

(i) Only tank storage is involved, and the entire process through completion of reclamation is closed by being entirely connected with pipes or other comparable enclosed means of conveyance;

(ii) Reclamation does not involve controlled flame combustion (such as occurs in boilers, industrial furnaces, or incinerators);

(iii) The secondary materials are never accumulated in such tanks for over twelve months without being reclaimed; and

(iv) The reclaimed material is not used to produce a fuel, or used to produce products that are used in a manner constituting disposal.

(9)(i) Spent wood preserving solutions that have been reclaimed and are reused for their original intended purpose; and

(ii) wastewaters from the wood preserving process that have been reclaimed and are reused to treat wood.

(iii) Prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in R315-2-4(a)(9)(i) and (ii), so long as they meet all of the following conditions:

(A) The wood preserving wastewaters and spent wood preserving solutions are reused onsite at water borne plants in the production process for their original intended purpose;

(B) Prior to reuse, the wastewaters and spent wood preserving solutions are managed to prevent release to either land or groundwater or both;

(C) Any unit used to manage wastewaters and/or spent wood preserving solutions prior to reuse can be visually or otherwise determined to prevent such releases;

(D) Any drip pad used to manage the wastewaters and/or spent wood preserving solutions prior to reuse complies with the standards in R315-7-28, which incorporates by reference 40 CFR 265.440 - 445, regardless of whether the plant generates a total of less than 100 kg/month of hazardous waste; and

(E) Prior to operating pursuant to this exclusion, the plant owner or operator submits to the Director a one-time notification stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records for a period of no less than 3 years from the date specified in the notice. The exclusion applies only so long as the plant meets all of the conditions. If the plant goes out of compliance with any condition, it may apply to the Director for reinstatement. The Director may reinstate the exclusion upon finding that the plant has returned to compliance with all conditions and that violations are not likely to recur.

(10) EPA Hazardous Waste Nos. K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke by-products processes that are hazardous only because they exhibit the Toxicity Characteristic (TC) specified in R315-2-9(g) when, subsequent to generation, these materials are recycled to coke ovens, to the tar recovery process as a feedstock to produce coal tar or are mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the wastes from the point they are generated to the point they are recycled to coke ovens or the tar recovery or refining processes, or mixed with coal tar.

(11) Nonwastewater splash condenser dross residue from the treatment of K061 in high temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery.

(12)(i) Oil-bearing hazardous secondary materials, i.e., sludges, byproducts, or spent materials, that are generated at a petroleum refinery, SIC code 2911, and are inserted into the petroleum refining process, SIC code 2911 - including distillation, catalytic cracking, fractionation, gasification (as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10), or thermal cracking units, i.e., cokers, unless the material is placed on the land, or speculatively accumulated before being so recycled. Materials inserted into thermal cracking units are excluded under this paragraph, provided that the coke product also does not exhibit a characteristic of hazardous waste. Oil-bearing hazardous secondary materials may be inserted into the same petroleum refinery where they are generated, or sent directly to another petroleum refinery, and still be excluded under this provision. Except as provided in R315-2-4(a)(12)(ii), oil-bearing hazardous secondary materials generated elsewhere in the petroleum industry, i.e., from sources other than petroleum refineries, are not excluded under R315-2-4. Residuals generated from processing or recycling materials excluded under this paragraph (a)(12)(i), where such materials as generated would have otherwise met a listing under R315-2-10, R315-2-11, R315-2-24, and R315-2-26, are designated as F037 listed wastes when disposed of or intended for disposal.

(ii) Recovered oil that is recycled in the same manner and with the same conditions as described in R315-2-4(a)(12)(i). Recovered oil is oil that has been reclaimed from secondary materials, including wastewater, generated from normal petroleum industry practices, including refining, exploration and production, bulk storage, and transportation incident thereto

(SIC codes 1311, 1321, 1381, 1382, 1389, 2911, 4612, 4613, 4922, 4923, 4789, 5171, and 5152.) Recovered oil does not include oil-bearing hazardous wastes listed in R315-2-10, R315-2-11, R315-2-24, and R315-2-26; however, oil recovered from such wastes may be considered recovered oil. Recovered oil does not include used oil as defined in 19-6-703(19).

(13) Excluded scrap metal, processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal, being recycled.

(14) Shredded circuit boards being recycled provided that they are:

(i) Stored in containers sufficient to prevent a release to the environment prior to recovery; and

(ii) Free of mercury switches, mercury relays, and nickel-cadmium batteries and lithium batteries.

(15) Condensates derived from the overhead gases from kraft mill steam strippers that are used to comply with 40 CFR 63.446(e). The exemption applies only to combustion at the mill generating the condensates.

(16) Comparable fuels or comparable syngas fuels that meet the requirements of R315-2-26, which incorporates by reference 40 CFR 261.38.

(17) Spent materials as defined in R315-1-1(c), which incorporates by reference 40 CFR 261.1, other than hazardous wastes listed in R315-2-10, 2-11, and 2-26 (which incorporate by reference 40 CFR 261 Subpart D), and R315-2-24, generated within the primary mineral processing industry from which minerals, acids, cyanide, water or other values are recovered by mineral processing or by beneficiation, provided that:

(i) The spent material is legitimately recycled to recover minerals, acids, cyanide, water or other values;

(ii) The spent material is not accumulated speculatively;

(iii) Except as provided in R315-2-4(a)(17)(iv), the spent material is stored in tanks, containers, or buildings meeting the following minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof all of which are made of non-earthen materials providing structural support, except smelter buildings may have partially earthen floors provided the secondary material is stored on the non-earthen portion, and have a roof suitable for diverting rainwater away from the foundation; a tank must be free standing, not be a surface impoundment as defined R315-1-1(b), which incorporates by reference 40 CFR 260.10, and be manufactured of a material suitable for containment of its contents; a container must be free standing and be manufactured of a material suitable for containment of its contents. If tanks or containers contain any particulate which may be subject to wind dispersal, the owner/operator must operate these units in a manner which controls fugitive dust. Tanks, containers, and buildings must be designed, constructed and operated to prevent significant releases to the environment of these materials.

(iv) The Director may make a site-specific determination, after public review and comment, that only solid mineral processing spent materials may be placed on pads, rather than in tanks, containers, or buildings. Solid mineral processing spent materials do not contain any free liquid. The Director must affirm that pads are designed, constructed and operated to prevent significant releases of the secondary material into the environment. Pads must provide the same degree of containment afforded by the non-RCRA tanks, containers and buildings eligible for exclusion.

(A) The Director must also consider if storage on pads poses the potential for significant releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, air exposure pathways are: the volume and physical and chemical properties of the secondary material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via

each exposure pathway, and the possibility and extent of harm to human and environmental receptors via each exposure pathway.

(B) Pads must meet the following minimum standards: be designed of non-earthen material that is compatible with the chemical nature of the mineral processing spent material, capable of withstanding physical stresses associated with placement and removal, have run on/runoff controls, be operated in a manner which controls fugitive dust, and have integrity assurance through inspections and maintenance programs.

(C) Before making a determination under this paragraph, the Director must provide notice and the opportunity for comment to all persons potentially interested in the determination. This can be accomplished by placing notice of this action in major local newspapers, or broadcasting notice over local radio stations.

(v) The owner or operator provides notice to the Director, providing the following information: the types of materials to be recycled; the type and location of the storage units and recycling processes; and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process.

(vi) For purposes of R315-2-4(b)(7), mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by non-mineral processing industries are not eligible for the conditional exclusion from the definition of solid waste.

(vii) R315-2-4(a)(16) becomes effective July 1, 1999.

(18) Petrochemical recovered oil from an associated organic chemical manufacturing facility, where the oil is to be inserted into the petroleum refining process, SIC code 2911, along with normal petroleum refinery process streams, provided:

(i) The oil is hazardous only because it exhibits the characteristic of ignitability, as defined in R315-2-9(d), and/or toxicity for benzene, R315-2-9(g), waste code D018; and

(ii) The oil generated by the organic chemical manufacturing facility is not placed on the land, or speculatively accumulated before being recycled into the petroleum refining process. An "associated organic chemical manufacturing facility" is a facility where the primary SIC code is 2869, but where operations may also include SIC codes 2821, 2822, and 2865; and is physically co-located with a petroleum refinery; and where the petroleum refinery to which the oil being recycled is returned also provides hydrocarbon feedstocks to the organic chemical manufacturing facility. "Petrochemical recovered oil" is oil that has been reclaimed from secondary materials, i.e., sludges, byproducts, or spent materials, including wastewater, from normal organic chemical manufacturing operations, as well as oil recovered from organic chemical manufacturing processes.

(19) Spent caustic solutions from petroleum refining liquid treating processes used as a feedstock to produce cresylic or naphthenic acid unless the material is placed on the land, or accumulated speculatively as defined in R315-1-1(c), which incorporates by reference 40 CFR 261.1(c).

(20) Hazardous secondary materials used to make zinc fertilizers, provided that the conditions specified below are satisfied:

(i) Hazardous secondary materials used to make zinc micronutrient fertilizers must not be accumulated speculatively, as defined in R315-1-1(c) which incorporates by reference 40 CFR 261.1(c)(8).

(ii) Generators and intermediate handlers of zinc-bearing hazardous secondary materials that are to be incorporated into zinc fertilizers must:

(A) Submit a one-time notice to the Director which contains the name, address and EPA ID number of the generator or intermediate handler facility, provides a brief description of

the secondary material that will be subject to the exclusion, and identifies when the manufacturer intends to begin managing excluded, zinc-bearing hazardous secondary materials under the conditions specified in R315-2-4(a)(20).

(B) Store the excluded secondary material in tanks, containers, or buildings that are constructed and maintained in a way that prevents releases of the secondary materials into the environment. At a minimum, any building used for this purpose must be an engineered structure made of non-earthen materials that provide structural support, and must have a floor, walls and a roof that prevent wind dispersal and contact with rainwater. Tanks used for this purpose must be structurally sound and, if outdoors, must have roofs or covers that prevent contact with wind and rain. Containers used for this purpose must be kept closed except when it is necessary to add or remove material, and must be in sound condition. Containers that are stored outdoors must be managed within storage areas that:

(1) have containment structures or systems sufficiently impervious to contain leaks, spills and accumulated precipitation;

(2) provide for effective drainage and removal of leaks, spills and accumulated precipitation; and

(3) prevent run-on into the containment system.

(C) With each off-site shipment of excluded hazardous secondary materials, provide written notice to the receiving facility that the material is subject to the conditions of R315-2-4(a)(20).

(D) Maintain at the generator's or intermediate handler's facility for no less than three years records of all shipments of excluded hazardous secondary materials. For each shipment these records must at a minimum contain the following information:

(1) Name of the transporter and date of the shipment;

(2) Name and address of the facility that received the excluded material, and documentation confirming receipt of the shipment; and

(3) Type and quantity of excluded secondary material in each shipment.

(iii) Manufacturers of zinc fertilizers or zinc fertilizer ingredients made from excluded hazardous secondary materials must:

(A) Store excluded hazardous secondary materials in accordance with the storage requirements for generators and intermediate handlers, as specified in R315-2-4(a)(20)(ii)(B).

(B) Submit a one-time notification to the Director that, at a minimum, specifies the name, address and EPA ID number of the manufacturing facility, and identifies when the manufacturer intends to begin managing excluded, zinc-bearing hazardous secondary materials under the conditions specified in R315-2-4(a)(20).

(C) Maintain for a minimum of three years records of all shipments of excluded hazardous secondary materials received by the manufacturer, which must at a minimum identify for each shipment the name and address of the generating facility, name of transporter and date the materials were received, the quantity received, and a brief description of the industrial process that generated the material.

(D) Submit to the Director an annual report that identifies the total quantities of all excluded hazardous secondary materials that were used to manufacture zinc fertilizers or zinc fertilizer ingredients in the previous year, the name and address of each generating facility, and the industrial process(s) from which they were generated.

(iv) Nothing in this section preempts, overrides or otherwise negates the provision in R315-5-1.11, which incorporates by reference 40 CFR 262.11, which requires any person who generates a solid waste to determine if that waste is a hazardous waste.

(v) Interim status and permitted storage units that have

been used to store only zinc-bearing hazardous wastes prior to the submission of the one-time notice described in R315-2-4(a)(20)(ii)(A), and that afterward will be used only to store hazardous secondary materials excluded under this paragraph, are not subject to the closure requirements of R315-7 and R315-8.

(21) Zinc fertilizers made from hazardous wastes, or hazardous secondary materials that are excluded under R315-2-4(a)(20), provided that:

(i) The fertilizers meet the following contaminant limits:

(A) For metal contaminants:

Constituent	Maximum Allowable Total Concentration in Fertilizer, per Unit (1%) of Zinc ppm)
Arsenic	0.3
Cadmium	1.4
Chromium	0.6
Lead	2.8
Mercury	0.3

(B) For dioxin contaminants the fertilizer must contain no more than eight (8) parts per trillion of dioxin, measured as toxic equivalent (TEQ).

(ii) The manufacturer performs sampling and analysis of the fertilizer product to determine compliance with the contaminant limits for metals no less than every six months, and for dioxins no less than every twelve months. Testing must also be performed whenever changes occur to manufacturing processes or ingredients that could significantly affect the amounts of contaminants in the fertilizer product. The manufacturer may use any reliable analytical method to demonstrate that no constituent of concern is present in the product at concentrations above the applicable limits. It is the responsibility of the manufacturer to ensure that the sampling and analysis are unbiased, precise, and representative of the product(s) introduced into commerce.

(iii) The manufacturer maintains for no less than three years records of all sampling and analyses performed for purposes of determining compliance with the requirements of R315-2-4(a)(21)(ii). Such records must at a minimum include:

(A) The dates and times product samples were taken, and the dates the samples were analyzed;

(B) The names and qualifications of the person(s) taking the samples;

(C) A description of the methods and equipment used to take the samples;

(D) The name and address of the laboratory facility at which analyses of the samples were performed;

(E) A description of the analytical methods used, including any cleanup and sample preparation methods; and

(F) All laboratory analytical results used to determine compliance with the contaminant limits specified in R315-2-4(a)(21).

(22) Used cathode ray tubes (CRTs)

(i) Used, intact CRTs as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, are not solid wastes within the United States unless they are disposed, or unless they are speculatively accumulated as defined in R315-1-1(c), which incorporates by reference 40 CFR 261.1(c)(8), by CRT collectors or glass processors.

(ii) Used, intact CRTs as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, are not solid wastes when exported for recycling provided that they meet the requirements of R315-2-27, which incorporates by reference 40 CFR 261.40.

(iii) Used, broken CRTs as defined in R315-1-1(b), which incorporates by reference 40 CFR 260.10, are not solid wastes provided that they meet the requirements of R315-2-27, which incorporates by reference 40 CFR 261.39.

(iv) Glass removed from CRTs is not a solid waste provided that it meets the requirements of R315-2-27, which incorporates by reference 40 CFR 261.39(c).

(23) Solvent-contaminated wipes that are sent for cleaning and reuse are not solid wastes from the point of generation, provided that

(i) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in non-leaking, closed containers that are labeled "Excluded Solvent-Contaminated Wipes." The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, or when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

(ii) The solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for cleaning;

(iii) At the point of being sent for cleaning onsite or at the point of being transported off-site for cleaning, the solvent-contaminated wipes must contain no free liquids as defined in section 260.10 of this chapter.

(iv) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in R315-1 through R315-101;

(v) Generators must maintain at their site the following documentation:

(A) Name and address of the laundry or dry cleaner that is receiving the solvent-contaminated wipes;

(B) Documentation that the 180-day accumulation time limit in R315-2-4(a)(23)(ii) is being met;

(C) Description of the process the generator is using to ensure the solvent-contaminated wipes contain no free liquids at the point of being laundered or dry cleaned on-site or at the point of being transported off-site for laundering or dry cleaning;

(vi) The solvent-contaminated wipes are sent to a laundry or dry cleaner whose discharge, if any, is regulated under sections 301 and 402 or section 307 of the Clean Water Act.

(B) SOLID WASTES WHICH ARE NOT HAZARDOUS WASTES.

The following solid wastes are not hazardous wastes:

(1) Household waste, including household waste that has been collected, transported, stored, treated, disposed, recovered, such as refuse-derived fuel or reused. "Household waste" means any material, including garbage, trash and sanitary wastes in septic tanks, derived from households, including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds and day-use recreation areas. A resource recovery facility managing municipal solid waste shall not be deemed to be treating, storing, disposing of or otherwise managing hazardous wastes for the purposes of regulation under this subtitle, if the facility:

(i) Receives and burns only

(A) Household waste, from single and multiple dwellings, hotels, motels, and other residential sources and

(B) Solid waste from commercial of industrial sources that does not contain hazardous waste; and

(ii) The facility does not accept hazardous wastes and the owner or operator of the facility has established contractual requirements or other appropriate notification or inspection procedures to assure that hazardous wastes are not received at or burned in the facility.

(2) Solid wastes generated by any of the following and

which are returned to the soil as fertilizers:

- (i) The growing and harvesting of agricultural crops.
- (ii) The raising of animals, including animal manures.
- (3) Mining overburden returned to the mine site.
- (4) Fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels, except as provided by R315-14-7, which incorporates by reference 40 CFR 266.112, for facilities that burn or process hazardous waste.

(5) Drilling fluids, produced waters, and other wastes associated with the exploration, development, or production of crude oil, natural gas or geothermal energy.

(6) The following additional solid wastes:

(i) Wastes which fail the test for the Toxicity Characteristic because chromium is present or are listed in sections R315-2-10 or R315-2-11 due to the presence of chromium, which do not fail the test for the Toxicity Characteristic for any other constituent or are not listed due to the presence of any other constituent, and which do not fail the test for any other characteristic, if it is shown by a waste generator or by waste generators that:

(A) The chromium in the waste is exclusively, or nearly exclusively, trivalent chromium; and

(B) The waste is generated from an industrial process which uses trivalent chromium exclusively, or nearly exclusively, and the process does not generate hexavalent chromium; and

(C) The waste is typically and frequently managed in non-oxidizing environments.

(ii) Specific wastes which meet the standard in paragraphs (b)(6)(i)(A),(B), and (C) of this section, so long as they do not fail the test for the toxicity characteristic for any other constituent, and do not exhibit any other characteristic, are:

(A) Chrome blue trimmings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.

(B) Chrome blue shavings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.

(C) Buffing dust generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue.

(D) Sewer screenings generated by the following subcategories of the leather tanning and finishing industry: hair/pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.

(E) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; retan/wet finish; no beamhouse; through-the-blue; and shearling.

(F) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish; hair save/chrome tan/retan/wet finish; and through-the-blue.

(G) Waste scrap leather from the leather tanning industry, the shoe manufacturing industry, and other leather product manufacturing industries.

(H) Wastewater treatment sludges from the production of TiO₂ pigment using chromium-bearing ores by the chloride process.

(7) Solid waste from the extraction, beneficiation, and processing of ores and minerals, including coal, phosphate rock,

and overburden from the mining of uranium ore, except as provided by R315-14-7, which incorporates by reference 40 CFR 266.112 for facilities that burn or process hazardous waste.

(i) For purposes of R315-2-4(b)(7) beneficiation of ores and minerals is restricted to the following activities; crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water and/or carbon dioxide; roasting, autoclaving, and/or chlorination in preparation for leaching (except where the roasting (and/or autoclaving and/or chlorination)/leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic separation; electrostatic separation; flotation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat, tank, and in situ leaching.

(ii) For the purposes of R315-2-4(b)(7), solid waste from the processing of ores and minerals includes only the following wastes as generated:

(A) Slag from primary copper processing;
 (B) Slag from primary lead processing;
 (C) Red and brown muds from bauxite refining;
 (D) Phosphogypsum from phosphoric acid production;
 (E) Slag from elemental phosphorus production ;
 (F) Gasifier ash from coal gasification;
 (G) Process wastewater from coal gasification;
 (H) Calcium sulfate wastewater treatment plant sludge from primary copper processing;

(I) Slag tailings from primary copper processing;
 (J) Fluorogypsum from hydrofluoric acid production;
 (K) Process wastewater from hydrofluoric acid production;
 (L) Air pollution control dust/sludge from iron blast furnaces;

(M) Iron blast furnace slag;
 (N) Treated residue from roasting/leaching of chrome ore;
 (O) Process wastewater from primary magnesium processing by the anhydrous process;

(P) Process wastewater from phosphoric acid production;
 (Q) Basic oxygen furnace and open hearth furnace air pollution control dust/sludge from carbon steel production;

(R) Basic oxygen furnace and open hearth furnace slag from carbon steel production;

(S) Chloride process waste solids from titanium tetrachloride production;

(T) Slag from primary zinc processing.

(iii) A residue derived from co-processing mineral processing secondary materials with normal beneficiation raw materials or with normal mineral processing raw materials remains excluded under R315-2-4(b) if the owner or operator:

(A) Processes at least 50 percent by weight normal beneficiation raw materials or normal mineral processing raw materials; and,

(B) Legitimately reclaims the secondary mineral processing materials.

(8) Cement kiln dust waste, except as provided by R315-14-7, which incorporates by reference 40 CFR 266.112, for facilities that burn or process hazardous waste.

(9) Solid waste which consists of discarded arsenical-treated wood or wood products which fails the test for the Toxicity Characteristic for Hazardous Waste Codes D004 through D017 and which is not a hazardous waste for any other reason if the waste is generated by persons who utilize the arsenical-treated wood and wood products for these materials' intended end use.

(10) Petroleum-contaminated media and debris that fail the test for the Toxicity Characteristic (TC) of R315-2-9(g), Hazardous Waste Codes D018 through D043 only, and are subject to the corrective action requirements under R311-202, which incorporates by reference 40 CFR 280.

(11) Injected groundwater that is hazardous only because it exhibits the Toxicity Characteristic, Hazardous Waste Codes D018 through D043 only, in R315-2-9(e) that is reinjected through an underground injection well pursuant to free phase hydrocarbon recovery operations undertaken at petroleum refineries, petroleum marketing terminals, petroleum bulk plants, petroleum pipelines, and petroleum transportation spill sites until January 25, 1993. This extension applies to recovery operations in existence, or for which contracts have been issued, on or before March 25, 1991. For groundwater returned through infiltration galleries from such operations at petroleum refineries, marketing terminals, and bulk plants, until October 2, 1991. New operations involving injection wells, beginning after March 25, 1991, will qualify for this compliance date extension until January 25, 1993, only if:

(i) Operations are performed pursuant to a written state agreement that includes a provision to assess the groundwater and the need for further remediation once the free phase recovery is completed; and

(ii) A copy of the written agreement has been submitted to: Characteristics Section (OS-333), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460 and the Division of Waste Management and Radiation Control, Dept. of Environmental Quality, State of Utah, Salt Lake City, UT 84114-4880.

(12) Used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment, including mobile air conditioning systems, mobile refrigeration, and commercial and industrial air conditioning and refrigeration systems that use chlorofluorocarbons as the heat transfer fluid in a refrigeration cycle, provided the refrigerant is reclaimed for further use.

(13) Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.

(14) Non-terne plated used oil filters that are not mixed with wastes listed in R315-2-10(e) and (f) and R315-2-11, which incorporate by reference 40 CFR 261 Subpart D, if these oil filters have been gravity hot-drained using one of the following methods:

(i) Puncturing the filter anti-drain back valve or the filter dome end and hot draining;

(ii) Hot-draining and crushing;

(iii) Dismantling and hot-draining; or

(iv) Any other equivalent hot-draining method that will remove used oil.

(15) Leachate or gas condensate collected from landfills where certain solid wastes have been disposed, provided that:

(i) The solid wastes disposed would meet one or more of the listing descriptions for Hazardous Waste Codes K169, K170, K171, K172, K174, K175, K176, K177, K178, and K181 if these wastes had been generated after the effective date of the listing;

(ii) The solid wastes described in paragraph R315-2-4(b)(15)(i) were disposed prior to the effective date of the listing;

(iii) The leachate or gas condensate does not exhibit any characteristic of hazardous waste nor are derived from any other listed hazardous waste;

(iv) Discharge of the leachate or gas condensate, including leachate or gas condensate transferred from the landfill to a POTW by truck, rail, or dedicated pipe, is subject to regulation under R317-8 of the Utah Water Quality Rules.

(v) As of February 13, 2001, leachate or gas condensate derived from K169-K172 is no longer exempt if it is stored or managed in a surface impoundment prior to discharge. As of November 21, 2003, leachate or gas condensate derived from K176, K177, and K 178 is no longer exempt if it is stored or managed in a surface impoundment prior to discharge. After February 26, 2007, leachate or gas condensate derived from K181 will no longer be exempt if it is stored or managed in a

surface impoundment prior to discharge. There is one exception: if the surface impoundment is used to temporarily store leachate or gas condensate in response to an emergency situation, e.g., shutdown of wastewater treatment system, provided the impoundment has a double liner, and provided the leachate or gas condensate is removed from the impoundment and continues to be managed in compliance with the conditions of this paragraph after the emergency ends.

(16) Solvent-contaminated wipes, except for wipes that are hazardous waste due to the presence of trichloroethylene, that are sent for disposal are not hazardous wastes from the point of generation provided that

(i) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in non-leaking, closed containers that are labeled "Excluded Solvent-Contaminated Wipes." The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, or when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;

(ii) The solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for disposal;

(iii) At the point of being transported for disposal, the solvent-contaminated wipes must contain no free liquids as defined in R315-1-1(e)(6).

(iv) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in R315-1 through R315-101;

(v) Generators must maintain at their site the following documentation:

(A) Name and address of the landfill or combustor that is receiving the solvent-contaminated wipes;

(B) Documentation that the 180 day accumulation time limit in R315-4-(b)(16)(ii) is being met;

(C) Description of the process the generator is using to ensure solvent-contaminated wipes contain no free liquids at the point of being transported for disposal;

(vi) The solvent-contaminated wipes are sent for disposal

(A) To a municipal solid waste landfill:

(1) regulated under R315-301 through R315-320

(2) is a Class I or V Landfill; and

(3) has a composite liner;

(B) or to a hazardous waste landfill regulated under R315-1 through R315-101; or

(C) To a municipal waste combustor or other combustion facility regulated under section 129 of the Clean Air Act or to a hazardous waste combustor, boiler, or industrial furnace regulated under R315-7, R315-8 or R315-14-7, which incorporates by reference 266 subpart H.

(c) HAZARDOUS WASTES WHICH ARE EXEMPTED FROM CERTAIN RULES.

A hazardous waste which is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, or in a manufacturing process unit or an associated non-waste-treatment-manufacturing unit is not subject to these regulations or to the notification requirements of Section 3010 of RCRA until it exits the unit in which it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than 90 days after the unit ceases to be operated for manufacturing, or for storage or transportation of products or raw materials.

(d) SAMPLES

(1) Except as provided in paragraph (d)(2) of this section, a sample of solid waste or a sample of water, soil, or air, which is collected for the sole purpose of testing to determine its characteristics or compositions, is not subject to any requirements of these rules when:

(i) The sample is being transported to a laboratory for the purpose of testing;

(ii) The sample is being transported back to the sample collector after testing;

(iii) The sample is being stored by the sample collector before transport to a laboratory for testing;

(iv) The sample is being stored in a laboratory before testing;

(v) The sample is being stored in a laboratory after testing but before it is returned to the sample collector; or

(vi) The sample is being stored temporarily in the laboratory after testing for a specific purpose, for example, until conclusion of a court case or enforcement action where further testing of the sample may be necessary.

(2) In order to qualify for the exemption in paragraphs (d)(1)(i) and (ii) of this section, a sample collector shipping samples to a laboratory and a laboratory returning samples to a sample collector shall:

(i) Comply with U.S. Department of Transportation (DOT), U.S. Postal Service (USPS), or any other applicable shipping requirements; or

(ii) Comply with the following requirements if the sample collector determines that DOT, USPS, or other shipping requirements do not apply to the shipment of the sample:

(A) Assure that the following information accompanies the sample:

(1) The sample collector's name, mailing address, and telephone number;

(2) The laboratory's name, mailing address, and telephone number;

(3) The quantity of the sample;

(4) The date of shipment; and

(5) A description of the sample.

(B) Package the sample so that it does not leak, spill, or vaporize from its packaging.

(3) This exemption does not apply if the laboratory determines that the waste is hazardous but the laboratory is no longer meeting any of the conditions stated in paragraph (d)(1) of this section.

(e) TREATABILITY STUDY SAMPLES.

(1) Except as provided in paragraph (e)(2) of this Section, a person who generates or collects samples for the purpose of conducting treatability studies as defined in section R315-1-1, which incorporates by reference the definitions of 40 CFR 260.10, are not subject to any requirement of R315-2, R315-5, and R315-6, or to the notification requirements of Section 3010 of RCRA, nor are these samples included in the quantity determinations of R315-2-5, which incorporates by reference the requirements concerning conditionally exempt small quantity generators of 40 CFR 261.5 and R315-5-3.34, which incorporates by reference the requirements concerning waste accumulation time for generators of 40 CFR 262.34(d) when:

(i) the sample is being collected and prepared for transportation by the generator or sample collector;

(ii) the sample is being accumulated or stored by the generator or sample collector prior to transportation to a laboratory or testing facility; or

(iii) the sample is being transported to the laboratory or testing facility for the purpose of conducting a treatability study.

(2) The exemption in paragraph (e)(1) of this section is applicable to samples of hazardous waste being collected and shipped for the purpose of conducting treatability studies provided that:

(i) The generator or sample collector uses, in "treatability studies," no more than 10,000 kg of media contaminated with non-acute hazardous waste, 1000 kg of non-acute hazardous waste other than contaminated media, 1 kg of acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste for each process being evaluated for each generated waste stream;

(ii) The mass of each sample shipment does not exceed 10,000 kg; the 10,000 kg quantity may be all media contaminated with non-acute hazardous waste, or may include 2500 kg of media contaminated with acute hazardous waste, 1000 kg of hazardous waste, and 1 kg of acute hazardous waste; and

(iii) the sample shall be packaged so that it will not leak, spill, or vaporize from its packaging during shipment and the requirements of paragraph A or B of this subparagraph are met;

(A) the transportation of each sample shipment complies with U.S. Department of Transportation (DOT), U.S. Postal Service (USPS), or any other applicable shipping requirements; or

(B) if the DOT, USPS, or other shipping requirements do not apply to the shipment of the sample, the following information shall accompany the sample:

(1) the name, mailing address, and telephone number of the originator of the sample;

(2) the name, address, and telephone number of the facility that will perform the treatability study;

(3) the quantity of the sample;

(4) the date of shipment; and

(5) a description of the sample, including its EPA Hazardous Waste Number.

(iv) the sample is shipped to a laboratory or testing facility which is exempt under R315-2-4(f) (40 CFR 261.4(f)) or has an appropriate RCRA permit or interim status;

(v) the generator or sample collector maintains the following records for a period ending 3 years after completion of the treatability study:

(A) copies of the shipping documents;

(B) a copy of the contract with the facility conducting the treatability study;

(C) documentation showing:

(1) the amount of waste shipped under this exemption;

(2) the name, address, and EPA identification number of the laboratory or testing facility that received the waste;

(3) the date the shipment was made; and

(4) whether or not unused samples and residues were returned to the generator.

(vi) the generator reports the information required under paragraph (e)(v)(C) of this section in its biennial report.

(3) The Director may grant requests on a case-by-case basis for up to an additional two years for treatability studies involving bioremediation. The Director may grant requests on a case-by-case basis for quantity limits in excess of those specified in paragraphs (e)(2) (i) and (ii) and (f)(4) of this section, for up to an additional 5000 kg of media contaminated with non-acute hazardous waste, 500 kg of non-acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste and 1 kg of acute hazardous waste:

(i) In response to requests for authorization to ship, store and conduct treatability studies on additional quantities in advance of commencing treatability studies. Factors to be considered in reviewing such requests include the nature of the technology, the type of process, e.g., batch versus continuous, size of the unit undergoing testing, particularly in relation to scale-up considerations, the time/quantity of material required to reach steady state operating conditions, or test design considerations such as mass balance calculations.

(ii) In response to requests for authorization to ship, store and conduct treatability studies on additional quantities after

initiation or completion of initial treatability studies, when: There has been an equipment or mechanical failure during the conduct of a treatability study; there is a need to verify the results of a previously conducted treatability study; there is a need to study and analyze alternative techniques within a previously evaluated treatment process; or there is a need to do further evaluation of an ongoing treatability study to determine final specifications for treatment.

(iii) The additional quantities and time frames allowed in paragraph (e)(3) (i) and (ii) of this section are subject to all the provisions in paragraphs (e) (1) and (e)(2) (iii) through (vi) of this section. The generator or sample collector must apply to the Director and provide in writing the following information:

(A) The reason why the generator or sample collector requires additional time or quantity of sample for treatability study evaluation and the additional time or quantity needed;

(B) Documentation accounting for all samples of hazardous waste from the waste stream which have been sent for or undergone treatability studies including the date each previous sample from the waste stream was shipped, the quantity of each previous shipment, the laboratory or testing facility to which it was shipped, what treatability study processes were conducted on each sample shipped, and the available results on each treatability study;

(C) A description of the technical modifications or change in specifications which will be evaluated and the expected results;

(D) If such further study is being required due to equipment or mechanical failure, the applicant must include information regarding the reason for the failure or breakdown and also include what procedures or equipment improvements have been made to protect against further breakdowns; and

(E) Such other information that the Director considers necessary.

(f) SAMPLES UNDERGOING TREATABILITY STUDIES AT LABORATORIES AND TESTING FACILITIES.

Samples undergoing treatability studies and the laboratory or testing facility that conducts these treatability studies, to the extent these facilities are not otherwise subject to RCRA requirements, are not subject to any requirement of this rule, R315-3 through R315-8, and R315-13, or to the notification requirements of Section 3010 of RCRA provided that the conditions of paragraphs (f)(1) through (11) of this Section are met. A mobile treatment unit (MTU) may qualify as a testing facility subject to paragraphs (f)(1) through (11) of this section. Where a group of MTUs are located at the same site, the limitations specified in (f)(1) through (11) of this section apply to the entire group of MTUs collectively as if the group were one MTU.

(1) No less than 45 days before conducting treatability studies, the facility notifies the Director in writing that it intends to conduct treatability studies under this paragraph.

(2) The laboratory or testing facility conducting the treatability study has an EPA identification number.

(3) No more than a total of 10,000 kg of "as received" media contaminated with non-acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste or 250 kg of other "as received" hazardous waste is subject to initiation of treatment in all treatability studies in any single day. "As received" waste refers to the waste as received in the shipment from the generator or sample collector.

(4) The quantity of "as received" hazardous waste stored at the facility for the purpose of evaluation in treatability studies does not exceed 10,000 kg, the total of which can include 10,000 kg of media contaminated with non-acute hazardous waste, 2500 kg of media contaminated with acute hazardous waste, 1000 kg of non-acute hazardous wastes other than contaminated media, and 1 kg of acute hazardous waste. This

quantity limitation does not include treatment materials, including nonhazardous solid waste, added to "as received" hazardous waste.

(5) No more than 90 days have elapsed since the treatability study for the sample was completed, or no more than one year, two years for treatability studies involving bioremediation, have elapsed since the generator or sample collector shipped the sample to the laboratory or testing facility, whichever date first occurs. Up to 500 kg of treated material from a particular waste stream from treatability studies may be archived for future evaluation up to five years from the date of initial receipt. Quantities of materials archived are counted against the total storage limit for the facility.

(6) The treatability study does not involve the placement of hazardous waste on the land or open burning of hazardous waste.

(7) The facility maintains records for three years following completion of each study that show compliance with the treatment rate limits and the storage time and quantity limits. The following specific information shall be included for each treatability study conducted:

(i) the name, address, and EPA identification number of the generator or sample collector of each waste sample;

(ii) the date the shipment was received;

(iii) the quantity of waste accepted;

(iv) the quantity of "as received" waste in storage each day;

(v) the date the treatment study was initiated and the amount of "as received" waste introduced to treatment each day;

(vi) the date the treatability study was concluded; and

(vii) the date any unused sample or residues generated from the treatability study were returned to the generator or sample collector or, if sent to a designated facility, the name of the facility and the EPA identification number.

(8) The facility keeps, on-site, a copy of the treatability study contract and all shipping papers associated with the transport of treatability study samples to and from the facility for a period ending three years from the completion date of each treatability study.

(9) The facility prepares and submits a report to the Director by March 15 of each year that estimates the number of studies and the amount of waste expected to be used in treatability studies during the current year, and includes the following information for the previous calendar year:

(i) the name, address, and EPA identification number of the facility conducting the treatability studies;

(ii) the types, by process, of treatability studies conducted;

(iii) the names and addresses of persons for whom studies have been conducted, including their EPA identification numbers;

(iv) the total quantity of waste in storage each day;

(v) the quantity and types of waste subjected to treatability studies;

(vi) when each treatability study was conducted; and

(vii) the final disposition of residues and unused sample from each treatability study.

(10) The facility determines whether any unused sample or residues generated by the treatability study are hazardous waste under R315-2-3 and, if so, are subject to R315-2 through R315-8, and R315-13, unless the residues and unused samples are returned to the sample originator under the exemption of paragraph (e) of this section.

(11) The facility notifies the Director by letter when the facility is no longer planning to conduct any treatability studies at the site.

(g) DREDGED MATERIAL THAT IS NOT A HAZARDOUS WASTE.

Dredged material that is subject to the requirements of a permit that has been issued under 404 of the Federal Water

Pollution Control Act (33 U.S.C. 1344) or section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1413) is not a hazardous waste. For this paragraph (g), the following definitions apply:

(1) The term dredged material has the same meaning as defined in 40 CFR 232.2;

(2) The term permit means:

(i) A permit issued by the U.S. Army Corps of Engineers (Corps) or the Utah State Division of Water Quality;

(ii) A permit issued by the Corps under section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 U.S.C. 1413); or

(iii) In the case of Corps civil works projects, the administrative equivalent of the permits referred to in paragraphs R315-2-4(g)(2)(i) and (ii), as provided for in Corps regulations.

R315-2-5. Special Requirements for Hazardous Waste Generated by Conditionally Exempt Small Quantity Generators.

The requirements of 40 CFR 261.5, 2010 ed., are adopted and incorporated by reference.

R315-2-6. Requirements for Recyclable Materials.

The requirements of 40 CFR 261.6, 2010 ed., are adopted and incorporated by reference within this rule, except for the following changes:

(a) Paragraph 40 CFR 261.6(a)(5) shall be amended to read as follows:

Hazardous waste as identified in 40 CFR 262.80(a) that is exported to or imported from designated member countries of the Organization for Economic Cooperation and Development (OECD) (as defined in Section 262.58(a)(1)) for purpose of recovery is subject to the requirements of 40 CFR part 262, subpart H, if it is subject to either the Federal manifesting requirements of 40 CFR Part 262, to the universal waste management standards of 40 CFR Part 273, or to State requirements analogous to 40 CFR Part 273.

R315-2-7. Residues of Hazardous Waste in Empty Containers.

(a)(1) Any hazardous waste remaining in either

(i) an empty container, or

(ii) an empty inner liner removed from a container, as defined in paragraph (b) of this section, is not subject to regulation under R315-2 through R315-13.

(2) Any hazardous waste in either:

(i) a container that is not empty, or

(ii) an inner liner removed from a container that is not empty, as defined in paragraph (b) of this section, is subject to regulation under R315-2 through R315-13.

(b)(1) A container or an inner liner removed from a container that has held any hazardous waste, except a waste that is a compressed gas or that is identified as acute hazardous waste listed in sections R315-2-10(e) or R315-2-11(e) is empty if:

(i) All wastes have been removed that can be removed using the practices commonly employed to remove materials from that type of container, e.g., pouring, pumping, and aspirating; and

(ii) No more than 2.5 centimeters, one inch, of residue remains on the bottom of the container or inner liner; or

(iii)(A) No more than three percent by weight of the total capacity of the container remains in the container or inner liner if the container is less than or equal to 119 gallons in size, or

(B) No more than 0.3 percent by weight of the total capacity of the container remains in the container or inner liner if the container is greater than 119 gallons in size.

(2) A container that has held a hazardous waste that is a

compressed gas is empty when the pressure in the container approaches atmospheric.

(3) A container or an inner liner removed from a container that has held an acute hazardous waste listed in sections R315-2-10(e) or R315-2-11(e) is empty if:

(i) The container or inner liner has been triple rinsed using a solvent capable of removing the commercial chemical product or manufacturing chemical intermediate;

(ii) The container or inner liner has been cleaned by another method that has been shown in the scientific literature, or by tests conducted by the generator, to achieve equivalent removal; or

(iii) In the case of a container, the inner liner that prevented contact of the commercial chemical product or manufacturing chemical intermediate with the container, has been removed.

R315-2-8. PCB Wastes Regulated under the Toxic Substance Control Act, 42 U.S.C. et seq.

The disposal of PCB-containing dielectric fluid and electric equipment containing such fluid authorized for use and regulated under part 761 40 CFR and that are hazardous only because they fail the test for the Toxicity Characteristic, hazardous codes D018 through D043 only, are exempt from regulation under R315-2 through R315-50 and the notification requirements of section 3010 of RCRA.

R315-2-9. Characteristics of Hazardous Waste.

(a) GENERAL.

(1) A solid waste, as defined in section R315-2-2, which is not excluded from regulation as a hazardous waste under R315-2-4(b), is a hazardous waste if it exhibits any of the characteristics identified in this section.

(2) A hazardous waste which is identified by a characteristic in this section, is assigned every EPA Hazardous Waste Number that is applicable as set forth in this section. This number shall be used in complying with the notification requirements of section 3010 of RCRA and all applicable recordkeeping and reporting requirements under R315-3 through R315-8, and R315-13.

(3) For purposes of this section, the Director will consider a sample obtained using any of the applicable sampling methods specified in R315-50-6, or an equivalent method, to be a representative sample.

(b) CRITERIA FOR IDENTIFYING THE CHARACTERISTICS OF HAZARDOUS WASTE.

(1) The Board shall identify and define a characteristic of hazardous waste in this section only upon determining that:

(i) A solid waste that exhibits the characteristic may:

(A) Cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or

(B) Pose a substantial present or potential hazard to human health or the environment when it is improperly treated, stored, transported, disposed of or otherwise managed; and

(ii) The characteristic can be:

(A) Measured by an available standardized test method which is reasonably within the capability of generators of solid waste or private sector laboratories that are available to serve generators of solid waste; or

(B) Reasonably detected by generators of solid waste through their knowledge of their waste.

(c) CRITERIA FOR LISTING HAZARDOUS WASTE.

(1) The Board shall list a solid waste as a hazardous waste only upon determining that the solid waste meets one of the following criteria:

(i) It exhibits any of the characteristics of hazardous waste identified in this section.

(ii) It has been found to be fatal to humans in low doses,

or, in the absence of data on human toxicity, it has been shown in studies to have an oral LD 50 toxicity, rat, of less than 50 milligrams per kilogram, an inhalation LC 50 toxicity, rat, of less than 50 milligrams per liter, or a dermal LD 50 toxicity, rabbit, of less than 200 milligrams per kilogram or is otherwise capable of causing or significantly contributing to an increase in serious irreversible, or incapacitating reversible illness. Waste listed in accordance with these criteria will be designated Acute Hazardous Waste.

(iii) It contains any of the toxic constituents listed in R315-50-10 and, after considering the following factors, the Board concludes that the waste is capable of posing a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported or disposed of, or otherwise managed:

(A) The nature of the toxicity presented by the constituent.

(B) The concentration of the constituent in the waste.

(C) The potential of the constituent or any toxic degradation product of the constituent to migrate from the waste into the environment under the types of improper management considered in paragraph (c)(1)(iii)(G) of this section.

(D) The persistence of the constituent or any toxic degradation product of the constituent.

(E) The potential for the constituent or any toxic degradation product of the constituent to degrade into non-harmful constituents and the rate of degradation.

(F) The degree to which the constituent or any degradation product of the constituent bioaccumulates in ecosystems.

(G) The plausible types of improper management to which the waste could be subjected.

(H) The quantities of the waste generated at individual generation sites or on a regional or national basis.

(I) The nature and severity of the human health and environmental damage that has occurred as a result of the improper management of wastes containing the constituent.

(J) Action taken by other governmental agencies or regulatory programs based on the health or environmental hazard posed by the waste or waste constituent.

(K) Other factors as may be appropriate.

Substances will be listed on R315-50-10 only if they have been shown in scientific studies to have toxic, carcinogenic, mutagenic or teratogenic effects on humans or other life forms. Wastes listed in accordance with these criteria will be designated Toxic wastes.

(2) The Board may list classes or types of solid waste as hazardous waste if they have reason to believe that individual wastes, within the class or type of waste, typically or frequently are hazardous under the definition of hazardous waste found in Section 19-6-102 of the Utah Solid and Hazardous Waste Act.

(3) The Board will use the criteria for listing specified in this section to establish the exclusion limits referred to in 40 CFR 261.5(c). R315-2-5 incorporates by reference the requirements of 40 CFR 261.5 concerning conditionally exempt small quantity generators.

(d) CHARACTERISTIC OF IGNITABILITY

(1) A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:

(i) It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume, and has a flash point less than 60 degrees C, 140 degrees F, as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in ASTM Standard D-93-79, or D-93-80, incorporated by reference, see section R315-1-2, or a Setaflash Closed Cup Tester, using the test method specified in ASTM Standard D-3278-78, incorporated by reference, see section R315-1-2, or as determined by an equivalent test method approved under the procedures set forth in section R315-2-15.

(ii) It is not a liquid and is capable, under standard

temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.

(iii) It is an ignitable "compressed gas" as defined in 49 CFR 173.300(a), 1990 ed., which is adopted and incorporated by reference, and as determined by the test methods described in that regulation or equivalent test methods approved under section R315-2-15.

(iv) It is an "oxidizer" as defined in 49 CFR 173.151, 1990 ed., which is adopted and incorporated by reference.

(2) A solid waste that exhibits the characteristic of ignitability has the EPA Hazardous Waste Number of D001.

(e) CHARACTERISTIC OF CORROSIVITY

(1) A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:

(i) It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter using Method 9040 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, see R315-1-2.

(ii) It is a liquid and corrodes steel, SAE 1020, at a rate greater than 6.35 mm, 0.250 inch, per year at a test temperature of 55 degrees C, 130 degrees F, as determined by the test method specified in NACE, National Association of Corrosion Engineers Standard TM-01-69 as standardized in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, see R315-1-2.

(2) A solid waste that exhibits the characteristic of corrosivity has the EPA Hazardous Waste Number of D002.

(f) CHARACTERISTIC OF REACTIVITY

(1) A solid waste exhibits the characteristic of reactivity if a representative sample of the waste has any of the following properties:

(i) It is normally unstable and readily undergoes violent change without detonating.

(ii) It reacts violently with water.

(iii) It forms potentially explosive mixtures with water.

(iv) When mixed with water, it generates toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.

(v) It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5, can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.

(vi) It is capable of detonation or explosive reaction if it is subjected to a strong initiating source or if heated under confinement.

(vii) It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.

(viii) It is a "forbidden explosive" as defined in 49 CFR 173.54, or a "Division 1.1, 1.2, or 1.3 explosive" as defined in 49 CFR 173.50 and 173.53, which are incorporated by reference.

(2) A solid waste that exhibits the characteristic of reactivity has the EPA Hazardous Waste Number of D003.

(g) TOXICITY CHARACTERISTIC

(1) A solid waste (except manufactured gas plant waste) exhibits the characteristic of toxicity if, using the Toxicity Characteristic Leaching Procedure, test Method 1311 in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, see R315-1-2, the extract from a representative sample of the waste contains any of the contaminants listed in Table 1 of 40 CFR 261.24 at a concentration equal to or greater than the respective value given in that Table. Where the waste contains less than 0.5 percent

filterable solids, the waste itself, after filtering using the methodology outlined in Method 1311, is considered to be the extract for the purposes of this paragraph.

(2) A solid waste that exhibits the characteristic of toxicity has the EPA Hazardous Waste Number specified in Table 1 of 40 CFR 261.24, which corresponds to the toxic contaminant causing it to be hazardous. Table 1 of 40 CFR 261.24, 1990 ed., is adopted and incorporated by reference.

R315-2-10. Lists of Hazardous Wastes.

(a) A solid waste is a hazardous waste if it is listed in this section or R315-2-11, unless it has been excluded from this list under section R315-2-16.

(b) The Board will indicate the basis for listing the classes or types of wastes listed in this section and R315-2-11 by employing one or more of the following Hazard Codes:

Ignitable Waste: (I)
Corrosive Waste: (C)
Reactive Waste: (R)
Toxicity Characteristic Waste: (E)
Acute Hazardous Waste: (H)
Toxic Waste: (T)

R315-50-9, which incorporates by reference 40 CFR 261, Appendix VII, identifies the constituent which caused the Board to list the waste as a Toxicity Characteristic Waste (E) or Toxic Waste (T) in this section and R315-2-11.

(c) Each hazardous waste listed in this section and R315-2-11, is assigned an EPA Hazardous Waste Number which precedes the name of the waste. This number shall be used to comply with R315-1 through R315-13 where description and identification of a hazardous waste is required.

(d) The following hazardous wastes listed in this section are subject to the exclusion limits for acutely hazardous wastes established in R315-2-4:

EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027.

(e) The listing of hazardous wastes from non-specific sources found in 40 CFR 261.31, 2010 ed., is adopted and incorporated by reference with the following additional waste:

(1) F999 - Residues from demilitarization, treatment, and testing of nerve, military, and chemical agents CX, GA, GB, GD, H, HD, HL, HN-1, HN-2, HN-3, HT, L, T, and VX. (R,T,C,H)

(f) The listing of hazardous wastes from specific sources found in 40 CFR 261.32, 2010 ed., is adopted and incorporated by reference.

R315-2-11. Discarded Commercial Chemical Products, Off-Specification Species, Container Residues, and Spill Residues Thereof.

The phrase "commercial chemical product or manufacturing chemical intermediate having the generic name listed in R315-2-11" refers to a chemical substance which is manufactured or formulated for commercial or manufacturing use which consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulations in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in paragraphs (e) or (f) of this section, which incorporate by reference, respectively, the lists of acute hazardous wastes and hazardous wastes in 40 CFR 261.33. Where a manufacturing process waste is deemed to be hazardous waste because it contains a substance listed in paragraphs (e) or (f) of this section, that waste will be listed in Section R315-2-10, which incorporates the lists of hazardous wastes in 40 CFR 261.31 and 261.32, or will be identified as a hazardous waste by the characteristics set forth in Section R315-2-9.

The following materials or items are hazardous wastes if

and when they are discarded or intended to be discarded as described in Subsection R315-2-2(a)(2)(i), when they are mixed with waste oil or used oil or other material and applied to the land for dust suppression or road treatment, when they are otherwise applied to the land in lieu of their original intended use or when they are contained in products that are applied to the land in lieu of their original intended use, or when, in lieu of their original intended use, they are produced for use as, or a component of a fuel, distributed for use as a fuel, or burned as a fuel.

(a) Any commercial chemical product, or manufacturing chemical intermediate having the generic name listed in paragraphs (e) or (f) of this section, which incorporate by reference, respectively, the lists of acute hazardous wastes and hazardous wastes in 40 CFR 261.33.

(b) Any off-specification commercial chemical product or manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraphs (e) or (f) of this section, which incorporate by reference, respectively, the lists of acute hazardous wastes and hazardous wastes in 40 CFR 261.33.

(c) Any residue remaining in a container or in an inner liner removed from a container that has held any commercial chemical product or manufacturing chemical intermediate having the generic name listed in paragraph (e) or (f) of this section, which incorporate by reference, respectively, the lists of acute hazardous wastes and hazardous wastes in 40 CFR 261.33, unless the container is empty as defined in R315-2-7(b). Unless the residue is being beneficially used or reused, or legitimately recycled or reclaimed; or being accumulated, stored, transported or treated prior to such use, re-use, recycling or reclamation, the Director considers the residue to be intended for discard and thus, a hazardous waste. An example of a legitimate re-use of the residue would be where the residue remains in the container and the container is used to hold the same commercial chemical product or manufacturing chemical intermediate it previously held. An example of the discard of the residue would be where the drum is sent to a drum reconditioner who reconditions the drum but discards the residue.

(d) Any residue or contaminated soil, water or other debris resulting from the cleanup of a discharge, into or on any land or water, of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in paragraphs (e) or (f) of this section, which incorporate by reference, respectively, the lists of acute hazardous wastes and hazardous wastes in 40 CFR 261.33, or any residue or contaminated soil, water or other debris resulting from the cleanup of a spill, into or on any land or water, of any off-specification chemical product and manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in paragraph (e) or (f) of this section, which incorporate by reference, respectively, the lists of acute hazardous wastes and hazardous wastes in 40 CFR 261.33. Unless the residue is being beneficially used or reused, or legitimately recycled or reclaimed; or being accumulated, stored, transported or treated prior to such use, re-use, recycling or reclamation, the Director considers the residue to be intended for discard, and thus a hazardous waste. An example of a legitimate re-use of the residue would be where the residue remains in the container and the container is used to hold the same commercial chemical product or manufacturing chemical product or manufacturing chemical intermediate it previously held. An example of the discard of the residue would be where the drum is sent to the drum reconditioner who reconditions the drum but discards the residue.

(e) The listing of chemicals, found in 40 CFR 261.33(e), 1997 ed., is adopted and incorporated by reference, with the addition of the following waste:

(1) P999 Nerve, Military, and Chemical Agents (i.e., CX, GA, GB, GD, H, HD, HL, HN-1, HN-2, HN-3, HT, L, T, and VX.)

(f) The listing of chemicals, found in 40 CFR 261.33(f), 2010 ed., is adopted and incorporated by reference.

R315-2-12. Inspections.

Any duly authorized officer, employee or representative of the Department or the Director may, at any reasonable time and upon presentation of appropriate credentials and upon providing the opportunity to have a representative of the owner, operator, or agent in charge to be present, enter upon and inspect any property, premise, or place on or at which hazardous wastes are generated, transported, stored, treated or disposed of, and may have access to and the right to copy any records relating to these wastes for the purpose of ascertaining the compliance with R315-1 through R315-101. Those persons referred to in this section may also inspect any waste and obtain samples thereof, including samples from any vehicle in which wastes are being transported or samples of any containers or labels. Any person obtaining samples shall give to the owner, operator or agent a receipt describing the sample obtained and, if requested, a portion of each sample of waste equal in volume or weight to the portion retained. If any analysis is made of those samples, a copy of the results of that analysis shall be furnished promptly to the owner, operator, or agent in charge.

R315-2-13. Variances Authorized.

(a) Variances will be granted by the Board only to the extent allowed under State and Federal law.

(b) The Board may consider a variance request in accordance with the standard established in section 19-6-111.(c) The Board may, at its own instance, review any variance granted during the term for which a variance was granted.

(d) A person applying for a variance shall submit the application, in writing, to the Director. The application shall provide the following:

(1) Citation of the statutory, regulatory, or permit requirement from which the variance is sought;

(2) For variances for which the Board promulgates or has promulgated specific rules, information meeting the requirements of those rules;

(3) Information demonstrating that application of or compliance with the requirement would cause undue or unreasonable hardship on the person applying for the variance;

(4) Proposed alternative requirements, if any;

(5) Information demonstrating that the variance will achieve the purpose and intent of the statutory, regulatory, or permit provision from which the variance is sought;

(6) Information demonstrating that any alternative requirement or requirements will adequately protect human health and the environment; and

(7) If no alternative requirement is proposed, information demonstrating that if the variance is granted, human health and the environment will be adequately protected.

(e) A person applying for a variance shall provide such additional information as the Board or the Director requires.

(f) Nothing in R315-2-13(d) or (e) limits the authority of the Board to grant variances in accordance with the standard established in section 19-6-111. A person applying for a variance under R315-9-2 shall provide such information described under R315-2-13(d) as the Director directs.

R315-2-15. Petitions for Equivalent Testing or Analytical Methods.

(a) Any person seeking to add a testing or analytical method to R315-2, R315-7, R315-8, or R315-50, which incorporates the testing and analytical methods of 40 CFR 261, may petition for a regulatory amendment under this section and

R315-2-17. To be successful, the person shall demonstrate to the satisfaction of the Board that the proposed method is equal to or superior to the corresponding method prescribed in R315-2, R315-7, R315-8, or R315-50, in terms of its sensitivity, accuracy, and precision, i.e., reproducibility.

(b) Each petition shall include:

(1) The petitioner's name and address;

(2) A statement of the petitioner's interest in the proposed action;

(3) A description of the proposed action, including, where appropriate, suggested regulatory language;

(4) A statement of the need and justification for the proposed action, including any supporting tests, studies, or other information;

(5) A full description of the proposed method, including all procedural steps and equipment used in the method;

(6) A description of the types of wastes or waste matrices for which the proposed method may be used;

(7) Comparative results obtained from using the proposed method with those obtained from using the relevant or corresponding methods prescribed in R315-2, R315-7, R315-8, and R315-50;

(8) An assessment of any factors which may interfere with, or limit the use of, the proposed method; and

(9) A description of the quality control procedures necessary to ensure the sensitivity, accuracy, and precision of the proposed method.

(c) After receiving a petition for an equivalent method, the Board may request any additional information on the proposed method which it may reasonably require to evaluate the method.

(d) The Board will consider any petitions in accordance with rulemaking procedures outlined in Section 63G-3-601.

(e) Petitioner may, alternatively, proceed under the provisions of 40 CFR 260.21 to have an alternative analytical method approved by EPA. In the event approval is granted, the petitioner shall so notify the Board and the Director and the decision of EPA will be binding upon the Board and the Director.

R315-2-16. Petitions to Amend This Rule to Exclude a Waste Produced at a Particular Facility.

(a) The requirements of 40 CFR 260.22, 1993 ed., as amended by 58 FR 46040, August 31, 1993, regarding petitions to exclude a waste are adopted and incorporated by reference with the following amendments:

(1) Substitute "Board" for "Administrator;"

(2) Include the following paragraphs:

(i) The Board will consider any petitions in accordance with Section 19-1-301.5.

(ii) Petitioner may, alternatively, proceed under the provisions of 40 CFR 260.22 to have a particular waste delisted by EPA. In the event delisting is granted, the petitioner shall so notify the Board and the Director and the decision of EPA will be binding upon the Board and the Director unless, within 30 days after such notification, the Board specifically overrules the decision of EPA. In such event, the petitioner may petition the Board directly under this section for the relief sought.

R315-2-17. Petition to Amend Rules.

(a) It is the intent of the Board to insure the compatibility and equivalency of R315-1 through R315-101 with the regulations promulgated by EPA under the Resource Conservation and Recovery Act of 1976.

(b) Any person may petition the Board to modify or revoke any provision in R315-1 through R315-16, R315-50, R315-101, and R315-102. A petition shall be considered under the procedures outlined in 63G-3-601 and R15-2.

R315-2-18. Variances from Classification as a Solid Waste.

The variances from classification as a solid waste of 40 CFR 260.30, 1994 ed., as amended by 59 FR 47982, September 19, 1994, are adopted and incorporated by reference with the following amendment:

Substitute "Board" for "Regional Administrator."

R315-2-19. Standards and Criteria for Variances from Classification as a Solid Waste.

(a) The standards and criteria for variances from classification as a solid waste found in 40 CFR 260.31, 1994 ed., as amended by 59 FR 47982, September 19, 1994, are adopted and incorporated by reference with the following amendment:

(1) Substitute "Board" for "Regional Administrator."

R315-2-20. Variance to be Classified as a Boiler.

The provision for a variance to be classified as a boiler as found in 40 CFR 260.32, 1994 ed., as amended by 59 FR 47982, September 19, 1994, is adopted and incorporated by reference with the following amendment:

Substitute "Board" for "Regional Administrator."

R315-2-21. Procedures for Variances from Classification as a Solid Waste or to be Classified as a Boiler.

The procedures for variances from classification as a solid waste or boiler of 40 CFR 260.33, ed., as amended by 59 FR 47982, September 19, 1994, are adopted and incorporated by reference with the following amendment:

Substitute "Board" for "Regional Administrator."

R315-2-22. Additional Regulation of Certain Hazardous Waste Recycling Activities on a Case-by-Case Basis.

The provision regarding the regulation of certain hazardous waste recycling activities of 40 CFR 260.40, 1990 ed., is adopted and incorporated by reference with the following amendment:

Substitute "Director" for "Regional Administrator."

R315-2-23. Procedures for Case-by-Case Regulation of Hazardous Waste Recycling Activities.

The Director shall use the following procedures when determining whether to regulate hazardous waste recycling activities described in R315-2-6, which incorporates by reference the requirements of 40 CFR 261.6 regarding recyclable materials, under the provisions of 40 CFR 261.6 (b) and (c), rather than under the provisions of 40 CFR 266.70 concerning precious metals recovery.

(a) If a generator is accumulating the waste, the Director will issue a notice setting forth the factual basis for the decision and stating that the person must comply with the applicable requirements of R315-5. The notice will become final within 30 days, unless the person served requests a public hearing before the Board to challenge the decision. Upon receiving such a request, the Board will hold a hearing. The Board will provide notice of the hearing to the public and allow public participation at the hearing. The Board will issue a final order after the hearing stating whether or not compliance with R315-5 is required. The order becomes effective 30 days after service of the decision unless the Board specifies a later date.

(b) If the person is accumulating the recyclable material as a storage facility, the notice will state that the person must obtain a hazardous waste permit in accordance with all applicable provisions of R315-3. The owner or operator of the facility must apply for a permit within no less than 60 days and no more than six months of notice, as specified in the notice. If the owner or operator of the facility wishes to challenge the Board's decision, he may do so in his hazardous waste permit, in a public hearing held on the draft permit, or in comments filed on the draft permit, or on the notice of intent to deny the

permit. The fact sheet accompanying the permit will specify the reasons for the Board's determination. The question of whether the Board's decision was proper will remain open for consideration during the public comment period discussed under R315-4-1.11 and in any subsequent hearing.

R315-2-24. Deletion of Certain Hazardous Waste Codes Following Equipment Cleaning and Replacement.

(a) Wastes from wood preserving processes at plants that do not resume or initiate use of chlorophenolic preservatives will not meet the listing definition of F032 once the generator has met all of the requirements of paragraphs (b) and (c) of this section. These wastes may, however, continue to meet another hazardous waste listing description or may exhibit one or more of the hazardous waste characteristics.

(b) Generators must either clean or replace all process equipment that may have come into contact with chlorophenolic formulations or constituents thereof, including, but not limited to, treatment cylinders, sumps, tanks, piping systems, drip pads, fork lifts, and trams, in a manner that minimizes or eliminates the escape of hazardous waste or constituents, leachate, contaminated drippage, or hazardous waste decomposition products to the ground water, surface water, or atmosphere.

(1) Generators shall do one of the following:

(i) Prepare and follow an equipment cleaning plan and clean equipment in accordance with this section;

(ii) Prepare and follow an equipment replacement plan and replace equipment in accordance with this section; or

(iii) Document cleaning and replacement in accordance with this section, carried out after termination of use of chlorophenolic preservations.

(2) Cleaning Requirements.

(i) Prepare and sign a written equipment cleaning plan that describes:

(A) The equipment to be cleaned;

(B) How the equipment will be cleaned;

(C) The solvent to be used in cleaning;

(D) How solvent rinses will be tested; and

(E) How cleaning residues will be disposed.

(ii) Equipment must be cleaned as follows:

(A) Remove all visible residues from process equipment;

(B) Rinse process equipment with an appropriate solvent until dioxins and dibenzofurans are not detected in the final solvent rinse.

(iii) Analytical requirements.

(A) Rinses must be tested in accordance with SW-846, Method 8290.

(B) "Not detected" means at or below the lower method calibration limit (MCL) in Method 8290, Table 1.

(iv) The generator must manage all residues from the cleaning process as F032 waste.

(3) Replacement requirements.

(i) Prepare and sign a written equipment replacement plan that describes:

(A) The equipment to be replaced;

(B) How the equipment will be replaced; and

(C) How the equipment will be disposed.

(ii) The generator must manage the discarded equipment as F032 waste.

(4) Documentation requirements.

(i) Document that previous equipment cleaning and/or replacement was performed in accordance with this section and occurred after cessation of use of chlorophenolic preservatives.

(c) The generator must maintain the following records documenting the cleaning and replacement as part of the facility's operating record:

(1) The name and address of the facility;

(2) Formulations previously used and the date on which their use ceased in each process at the plant;

- (3) Formulations currently used in each process at the plant;
- (4) The equipment cleaning or replacement plan;
- (5) The name and address of any persons who conducted the cleaning and replacement;
- (6) The dates on which cleaning and replacement were accomplished;
- (7) The dates of sampling and testing;
- (8) A description of the sample handling and preparation techniques, including techniques used for extraction, containerization, preservation, and chain-of-custody of the samples;
- (9) A description of the tests performed, the date the tests were performed, and the results of the tests;
- (10) The name and model numbers of the instrument(s) used in performing the tests;
- (11) QA/QC documentation; and
- (12) The following statement signed by the generator or his authorized representative:

I certify under penalty of law that all process equipment required to be cleaned or replaced under 40 CFR 261.35 was cleaned or replaced as represented in the equipment cleaning and replacement plan and accompanying documentation. I am aware that there are significant penalties for providing false information, including the possibility of fine or imprisonment.

R315-2-25. Requirements for Universal Waste.

The wastes listed in this section are exempt from regulation under R315-3 through R315-14 of these rules except as specified in section R315-16 of these rules and, therefore are not fully regulated as hazardous waste. The wastes listed in this section are subject to regulation under R315-16:

- (a) Batteries as described in R315-16-1.2;
- (b) Pesticides as described in R315-16-1.3;
- (c) Mercury-containing equipment as described in R315-16-1.4; and
- (d) Mercury lamps as described in R315-16-1.5.

R315-2-26. Exclusion of Comparable Fuel and Syngas Fuel.

The requirements of 40 CFR 261.38, 2010 ed., are adopted and incorporated by reference.

R315-2-27. Exclusions/Exemptions.

The requirements as found in 40 CFR subpart E, sections 261.39 through 261.41, 2007 ed., are adopted and incorporated by reference.

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.**R315-3. Application and Permit Procedures for Hazardous Waste Treatment, Storage, and Disposal Facilities.****R315-3-1. General Information.****1.1 PURPOSE AND SCOPE OF THESE REGULATIONS**

(a) No person shall own, construct, modify, or operate any facility for the purpose of treating, storing, or disposing of hazardous waste without first submitting, and receiving the approval of the Director for, a hazardous waste permit for that facility. However, any person owning or operating a facility on or before November 19, 1980, who has given timely notification as required by section 3010 of the Resource Conservation and Recovery Act (RCRA) of 1976, 42 U.S.C., section 6921, et seq., and who has submitted a proposed hazardous waste permit pursuant to this section and section 19-6-108 for that facility, may continue to operate that facility without violating this section until the time as the permit is approved or disapproved pursuant to this section.

(b) The Director shall review each proposed hazardous waste permit application to determine whether the application will be in accord with the provisions of these rules and section 19-6-108 and, on that basis, shall approve or disapprove the application within the applicable time period specified in section 19-6-108. If, after the receipt of plans, specifications, or other information required under this section and section 19-6-108 and within the applicable time period of section 19-6-108, the Director determines that the proposed construction, installation or establishment or any part of it will not be in accord with the requirements of this section or the applicable rules, he shall issue an order prohibiting the construction, installation or establishment of the proposal in whole or in part. The date of submission shall be deemed to be the date of all required information is provided to the Director as required by these rules.

(c) Any permit application which does not meet the requirements of these rules shall be disapproved within the applicable time period specified in section 19-6-108. If within the applicable time period specified in section 19-6-108 the Director fails to approve or disapprove the permit application or to request the submission of any additional information or modification to the application, the application shall not be deemed approved but the applicant may petition the Director for a decision or seek judicial relief requiring a decision of approval or disapproval.

(d) An application for approval of a hazardous waste permit consists of two parts, part A and part B. For an existing facility, the requirement is satisfied by submitting only part A of the application until the date the Director sets for each individual facility for submitting part B of the application, which date shall be in no case less than six months after the Director gives notice to a particular facility that it shall submit part B of the application.

(e) Owners and operators of hazardous waste management units shall have permits during the active life, including the closure period, of the unit. Owners and operators of surface impoundments, landfills, land treatment units, and waste pile units that received waste after July 26, 1982, or that certified closure, according to R315-7-14, which incorporates by reference 40 CFR 265.115, after January 26, 1983, shall have post-closure permits, unless they demonstrate closure by removal or decontamination as provided under R315-3-1.1(e)(5) and (6), or obtain an enforceable document in lieu of a post-closure permit, as provided under R315-3-1.1(e)(7). If a post-closure permit is required, the permit shall address applicable R315-8 groundwater monitoring, unsaturated zone monitoring, corrective action, and post-closure care requirements of R315. The denial of a permit for the active life of a hazardous waste

management facility or unit does not affect the requirement to obtain a post-closure permit under R315-3-1.1.

(1) Specific inclusions. Owners or operators of certain facilities require hazardous waste permits as well as permits under other environmental programs for certain aspects of facility operation. Hazardous waste permits are required for:

(i) Injection wells that dispose of hazardous waste, and associated surface facilities that treat, store, or dispose of hazardous waste. However, the owner or operator with a State or Federal UIC permit will be deemed to have a "permit by rule" if they comply with requirements of R315-3-6.1(a).

(ii) Treatment, storage, and disposal of hazardous waste at facilities requiring an NPDES permit. However, the owner or operator of a publicly owned treatment works receiving hazardous waste will be deemed to have a "permit by rule" if they comply with provisions of R315-3-6.1(b).

(2) Specific exclusions. The following persons are among those who are not required to obtain a permit:

(i) Generators who accumulate hazardous waste on-site for less than the time periods as provided in R315-5-3.34, which incorporates the requirements of 40 CFR 262.34.

(ii) Farmers who dispose of hazardous waste pesticides from their own use as provided in R315-5-7.

(iii) Persons who own or operate facilities solely for the treatment, storage, or disposal of hazardous waste excluded from regulations under R315-2-5, small quantity generator exemption.

(iv) Owners or operators of totally enclosed treatment facilities as defined in 40 CFR 260.10, which is incorporated by reference in R315-1-1.

(v) Owners or operators of elementary neutralization units or wastewater treatment units as defined in 40 CFR 260.10, which is incorporated by reference in R315-1-1.

(vi) Transporters storing manifested shipments of hazardous waste in containers meeting the requirements of R315-5-3.32(b) at a transfer facility for a period of ten days or less.

(vii) Persons adding absorbent material to waste in a container, as defined in 40 CFR 260.10, which is incorporated by reference in R315-1, and persons adding waste to absorbent material in a container, provided that these actions occur at the time waste is first placed in the container, and R315-8-2.8(b), R315-8-9.2, and R315-8-9.3 are complied with.

(viii) Universal waste handlers and universal waste transporters (as defined in R315-16-1.9) managing the wastes listed below. These handlers are subject to regulation under R315-16.

- (A) Batteries as described in R315-16-1.2;
- (B) Pesticides as described in R315-16-1.3;
- (C) Thermostats as described in R315-16-1.4; and
- (D) Mercury lamps as described in R315-16-1.5.

(3) Further exclusions.

(i) A person is not required to obtain a permit for treatment or containment activities taken during immediate response to any of the following situations;

- (A) Discharge of a hazardous waste;
- (B) An imminent and substantial threat of a discharge of hazardous waste.

(C) A discharge of a material which, when discharged, becomes a hazardous waste.

(ii) Any person who continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of this part for those activities.

(iii) In the case of emergency responses involving military munitions, the responding military emergency response specialist's organizational unit shall retain records for three years identifying the dates of the response, the responsible persons responding, the type and description of material

addressed, and its disposition.

(4) Permits for less than an entire facility. The Director may issue or deny a permit for one or more units at a facility without simultaneously issuing or denying a permit to all units at the facility. The interim status of any unit for which a permit has not been issued or denied is not affected by the issuance or denial of a permit to any other unit at the facility.

(5) Closure by removal. Owners or operators of surface impoundments, land treatment units, and waste piles closing by removal or decontamination under R315-7 standards shall obtain a post-closure permit unless they can demonstrate to the Director that the closure met the standards for closure by removal or decontamination in R315-8-11.5, R315-8-13.8, or R315-8-12.6, respectively. The demonstration may be made in the following ways:

(i) If the owner or operator has submitted a part B application for a post-closure permit, the owner or operator may request a determination, based on information contained in the application, that R315-8 closure by removal standards were met. If the Director believes that R315-8 standards were met, he will notify the public of this proposed decision, allow for public comment, and reach a final determination according to the procedures in R315-3-1.1(e)(6);

(ii) If the owner or operator has not submitted a part B permit application for a post-closure permit, the owner or operator may petition the Director for a determination that a post-closure permit is not required because the closure met the applicable R315-8 closure standards;

(A) The petition shall include data demonstrating that closure by the removal or decontamination standards of R315-8 were met.

(B) The Director shall approve or deny the petition according to the procedures outlined in R315-3-1.1(e)(6).

(6) Procedures for Closure Equivalency Determination.

(i) If a facility owner or operator seeks an equivalency demonstration under R315-3-1.1(e)(5), the Director will provide the public, through a newspaper notice, the opportunity to submit written comments on the information submitted by the owner or operator within 30 days from the date of the notice. The Director will also, in response to a request or at his own discretion, hold a public hearing whenever a hearing might clarify one or more issues concerning the equivalence of the R315-7 closure to an R315-8 closure. The Director will give public notice of the hearing at least 30 days before it occurs. Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the two notices may be combined.

(ii) The Director will determine whether the R315-7 closure met R315-8 closure by removal or decontamination requirements within 90 days of its receipt. If the Director finds that the closure did not meet the applicable R315-8 standards, he will provide the owner or operator with a written statement of the reasons why the closure failed to meet R315-8 standards. The owner or operator may submit additional information in support of an equivalency demonstration within 30 days after receiving a written statement. The Director will review any additional information submitted and make a final determination within 60 days.

(iii) If the Director determines that the facility did not close in accordance with R315-8-7, which incorporates by reference 40 CFR 264.110 through 264.116, closure by removal standards, the facility is subject to post-closure permit requirements.

(7) Enforceable documents for post-closure care. At the discretion of the Director, an owner or operator may obtain, in lieu of a post-closure permit, an enforceable document imposing the requirements of R315-7-14, which incorporates by reference 40 CFR 265.121. "Enforceable document" means an order, a permit, or other document issued by the Director that meets the

requirements of 19-6-104, 19-6-112, 19-6-113, and 19-6-115, including a corrective action order issued by EPA under section 3008(h), a CERCLA remedial action, or a closure or post-closure permit.

1.4 EFFECT OF A PERMIT

(a)(1) Compliance with a permit during its term constitutes compliance, for purposes of enforcement, with these rules, except for those requirements not included in the permit which:

(i) Become effective by statute;

(ii) Are promulgated under R315-13, which incorporates by reference 40 CFR 268, restricting the placement of hazardous wastes in or on the land;

(iii) Are promulgated under R315-8 regarding leak detection systems for new and replacement surface impoundment, waste pile, and landfill units, and lateral expansions of surface impoundment, waste pile, and landfill units. The leak detection system requirements include double liners, CQA programs, monitoring, action leakage rates, and response action permits, and will be implemented through the procedures of R315-3-4.3, which incorporates by reference 40 CFR 270.42, Class 1 permit modifications; or

(iv) Are promulgated under R315-7-26, which incorporates by reference 40 CFR 265.1030 through 265.1035, R315-7-27, which incorporates by reference 40 CFR 265.1050 through 265.1064 or R315-7-30, which incorporates by reference 40 CFR 265.1080 through 265.1091.

(2) A permit may be modified, revoked and reissued, or terminated during its term for cause as set forth in R315-3-4.2 and R315-3-4.4, or the permit may be modified upon the request of the permittee as set forth in R315-3-4.3.

(b) The issuance of a permit does not convey any property rights of any sort, or any exclusive privilege.

(c) The issuance of a permit does not authorize any injury to persons or property or invasion of other private rights, or any infringement of State or local law or regulations.

R315-3-2. Permit Application.

2.1 GENERAL APPLICATION REQUIREMENTS

(a) Permit Application. Any person who is required to have a permit, including new applicants and persons with expiring permits, shall complete, sign and submit, an application to the Director as described in R315-3-2.1 and R315-3-7. Persons currently authorized with interim status shall apply for permits when required by the Director. Persons covered by RCRA permits by rule, R315-3-6.1, need not apply. Procedures for applications, issuance and administration of emergency permits are found exclusively in R315-3-6.2. Procedures for application, issuance and administration of research, development, and demonstration permits are found exclusively in R315-3-6.5.

(b) Who Applies?

When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit, except that the owner shall also sign the permit application.

(c) Completeness.

(1) The Director shall not issue a permit before receiving a complete application for a permit except for permit by rule, or emergency permit. An application for a permit is complete when the Director receives an application form and any supplemental information which are completed to his satisfaction. An application for a permit is complete notwithstanding the failure of the owner or operator to submit the exposure information described in R315-3-2.1(i). The Director may deny a permit for the active life of a hazardous waste management facility or unit before receiving a complete application for a permit.

(2) The Director shall review for completeness every permit application. Each permit application submitted by a new

hazardous waste management facility, should be reviewed for completeness by the Director in accordance with the applicable review periods of 19-6-108. Upon completing the review, the Director shall notify the applicant in writing whether the permit application is complete. If the permit application is incomplete, the Director shall list the information necessary to make the permit application complete. When the permit application is for an existing hazardous waste management facility, the Director shall specify in the notice of deficiency a date for submitting the necessary information. The Director shall review information submitted in response to a notice of deficiency within 30 days after receipt. The Director shall notify the applicant that the permit application is complete upon receiving this information. After the permit application is complete, the Director may request additional information from an applicant but only when necessary to clarify, modify, or supplement previously submitted material.

(3) If an applicant fails or refuses to correct deficiencies in the permit application, the permit application may be denied and appropriate enforcement actions may be taken under the applicable provisions of the Utah Solid and Hazardous Waste Act.

(d) Existing Hazardous Waste Management Facilities and Interim Status Qualifications.

(1) Owners and operators of existing hazardous waste management facilities or of hazardous waste management facilities in existence on the effective date of statutory or regulatory amendment under Utah Solid and Hazardous Waste Act or RCRA that render the facility subject to the requirement to have a RCRA permit or State permit shall submit part A of their permit application to the Director no later than:

(i) Six months after the date of publication of rules which first require them to comply with the standards set forth in R315-7 or R315-14, or

(ii) Thirty days after the date they first become subject to the standards set forth in R315-7 or R315-14, whichever first occurs.

(iii) For generators generating greater than 100 kilograms of hazardous waste in a calendar month and treats, stores, or disposes of these wastes on-site, by March 24, 1987

For facilities which had to comply with R315-7 because they handle a waste listed in EPA's May 19, 1980, Part 261 regulations, 45 FR 33006 et seq., the deadline for submitting an application was November 19, 1980. Where other existing facilities shall begin complying with R315-7 or R315-14 at a later date because of revisions to R315-1, R315-2, R315-7, or R315-14, the Director will specify when those facilities shall submit a permit application.

(2) The Director may extend the date by which owners and operators of specified classes of existing hazardous waste management facilities shall submit Part A of their permit application if he finds that there has been substantial confusion as to whether the owners and operators of such facilities were required to file a permit application and such confusion is attributed to ambiguities in R315-1, R315-2, R315-7 or R315-14 of the regulations.

(3) The Director may by compliance order issued under 19-6-112 and 19-6-113 extend the date by which the owner and operator of an existing hazardous waste management facility must submit part A of their permit application.

(4) The owner or operator of an existing hazardous waste management facility may be required to submit part B of the permit application. Any owner or operator shall be allowed at least six months from the date of request to submit part B of the application. Any owner or operator of an existing hazardous waste management facility may voluntarily submit part B of the application at any time. Notwithstanding the above, any owner or operator of an existing hazardous waste management facility shall submit a part B application in accordance with the dates

specified in R315-3-7.4. Any owner or operator of a land disposal facility in existence on the effective date of statutory or regulatory amendments under R315 that render the facility subject to the requirement to have a permit, shall submit a part B application in accordance with the dates specified in R315-3-7.4.

(5) Failure to furnish a requested part B application on time, or to furnish in full the information required by the part B application, is grounds for termination of interim status under R315-3-4.4.

(e) New Hazardous Waste Management Facilities.

(1) Except as provided in R315-3-2.1(e)(3), no person shall begin physical construction of a new hazardous waste management facility without having submitted part A and part B of the application and having received a finally effective permit.

(2) An application for a permit for a new hazardous waste management facility, including both part A and part B, may be filed any time after promulgation of applicable regulations. The application shall be filed with the Regional Administrator if at the time of application the State has not received final authorization for permitting such facility; otherwise it shall be filed with the Director. Except as provided in R315-3-2.1(e)(3), all applications shall be submitted at least 180 days before physical construction is expected to commence.

(3) Notwithstanding R315-3-2.1(e)(1), a person may construct a facility for the incineration of polychlorinated biphenyls pursuant to an approval issued by the U.S. EPA Administrator under section (6)(e) of the Toxic Substances Control Act (TSCA), 15 U.S.C. 2601 et seq., and any person owning or operating such a facility may, at any time after construction or operation of the facility has begun, file an application for a permit to incinerate hazardous waste authorizing the facility to incinerate waste identified or listed in these rules.

(f) Updating permit applications.

(1) If any owner or operator of a hazardous waste management facility has filed part A of a permit application and has not yet filed part B, the owner or operator shall file an amended part A application:

(i) With the Director, within six months after the promulgation of revised regulations under 40 CFR 261 listing or identifying additional hazardous wastes, if the facility is treating, storing or disposing of any of those newly listed or identified wastes.

(ii) With the Director no later than the effective date of regulatory provisions listing or designating wastes as hazardous in the State in addition to those listed or designated under the previously approved State program, if the facility is treating, storing, or disposing of any of those newly listed or designated wastes; or

(iii) As necessary to comply with changes during interim status, R315-3-7.3. Revised part A applications necessary to comply with the provisions of interim status shall be filed with the Director.

(2) The owner or operator of a facility who fails to comply with the updating requirements of R315-3-2.1(f)(1) does not receive interim status as to the wastes not covered by duly filed part A applications.

(g) Reapplications. Any hazardous waste management facility with an effective permit shall submit a new application at least 180 days before the expiration date of the effective permit, unless permission for a later date has been granted by the Director. The Director shall not grant permission for applications to be submitted later than the expiration date of the existing permit.

(h) Recordkeeping.

Applicants shall keep records of all data used to complete permit application and any supplemental information submitted

under R315-3-2.4 through R315-3-2.12, for a period of at least three years from the date the application is signed.

(i) Exposure information.

(1) Any part B permit application submitted by an owner or operator of a facility that stores, treats, or disposes of hazardous waste in a surface impoundment or a landfill shall be accompanied by information, reasonably ascertainable by the owner or operator, on the potential for the public to be exposed to hazardous wastes or hazardous constituents through releases related to the unit. At a minimum, the information shall address:

(i) Reasonably foreseeable potential releases from both normal operations and accidents at the unit, including releases associated with transportation to or from the unit;

(ii) The potential pathways of human exposure to hazardous wastes or constituents resulting from the releases described under R315-3-2.1(i)(1)(i); and

(iii) The potential magnitude and nature of the human exposure resulting from such releases.

(2) Owners and operators of a landfill or a surface impoundment who have already submitted a part B application shall submit the exposure information required in R315-3-2.1(i)(1).

(j) The Director may require a permittee or an applicant to submit information in order to establish permit conditions under R315-3-3.3(b)(2), and R315-3-5.1(d).

(k) If the Director concludes, based on one or more of the factors listed in R315-3-2.1(k)1 that compliance with the standards of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE, alone may not be protective of human health or the environment, the Director shall require the additional information or assessment(s) to determine whether additional controls are necessary to ensure protection of human health and the environment. This includes information necessary to evaluate the potential risk resulting from both direct and indirect exposure pathways.

(1) The Director shall base the evaluation on factors relevant to the potential risk from a hazardous waste combustion unit, including, as appropriate, any of the following factors:

(i) site-specific considerations such as proximity to receptors, such as schools, hospitals, or other potentially sensitive receptors, unique dispersion patterns, etc.;

(ii) identities and quantities of emissions of persistent, bioaccumulative or toxic pollutants considering enforceable controls in place to limit those pollutants;

(iii) identities and quantities of nondioxin products of incomplete combustion most likely to be emitted and to pose significant risk;

(iv) identities and quantities of other off-site sources of pollutants that significantly influence interpretation of a facility-specific risk assessment;

(v) ecological considerations, such as the proximity of a particularly sensitive ecological area;

(vi) volume and types of wastes, for example wastes containing highly toxic constituents;

(vii) other on-site sources of hazardous air pollutants that significantly influence interpretation of the risk posed by operation of the source;

(viii) adequacy of previously conducted risk assessment, given subsequent changes in conditions likely to affect risk; and

(ix) other factors as appropriate.

2.2 SIGNATORIES TO PERMIT APPLICATIONS AND REPORTS

(a) Applications. All permit applications shall be signed as follows:

(1) For a corporation: by a principal executive officer of at least the level of vice-president;

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public

agency; by either a principal executive officer or ranking elected official.

(b) Reports. All reports required by permits and other information requested by the Director shall be signed by a person described in R315-3-2.2(a), or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described in R315-3-2.2(a);

(2) The authorization specified either an individual or a position having responsibility for overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, or position of equivalent responsibility. A duly authorized representative may thus be either a named individual or any individual occupying a named position; and

(3) The written authorization is submitted to the Director.

(c) Changes to authorization. If an authorization under R315-3-2.2(b) is no longer accurate because different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of R315-3-2.2(b) shall be submitted to the Director prior to or together with any reports, information, or applications to be signed by an authorized representative.

(d)(1) Certification. Any person signing a document under R315-3-2.2(a) or (b) shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

(2) For remedial action plans (RAPs) under R315-3-8, which incorporates by reference 40 CFR 270, subpart H, if the operator certifies according to R315-3-2.2(d)(1), then the owner may choose to make the following certification instead of the certification in R315-3-2.2(d)(1):

"Based on my knowledge of the conditions of the property described in the RAP and my inquiry of the person or persons who manage the system referenced in the operator's certification, or those persons directly responsible for gathering the information, the information submitted is, upon information and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

2.4 CONTENTS OF PART A OF THE PERMIT APPLICATION

All applicants shall provide the following information to the Director:

(a) The activities conducted by the applicant which require it to obtain a hazardous waste operation permit.

(b) Name, mailing address, and location of the facility for which the application is submitted.

(c) Up to four SIC codes which best reflect the principal products or services provided by the facility.

(d) The operator's name, address, telephone number, ownership status, and status as Federal, State, private, public, or other entity.

(e) The name, address, and telephone number of the owner of the facility.

(f) Whether the facility is located on Indian lands.

(g) An indication of whether the facility is new or existing and whether it is a first or revised application.

(h) For existing facilities, (1) a scale drawing of the facility showing the location of all past, present, and future treatment, storage, and disposal areas; and (2) photographs of the facility clearly delineating all existing structures; existing treatment, storage, and disposal areas; and sites of future treatment, storage, and disposal areas.

(i) A description of the processes to be used for treating, storing, or disposing of hazardous waste, and the design capacity of these items.

(j) A specification of the hazardous wastes or hazardous waste mixtures listed or designated under R315-2 to be treated, stored, or disposed at the facility, an estimate of the quantity of these wastes to be treated, stored, or disposed annually, and a general description of the processes to be used for these wastes.

(k) A listing of all permits or construction approvals received or applied for under any of the following programs:

(1) Hazardous Waste Management program under the Utah Solid and Hazardous Waste Act or RCRA.

(2) Underground Injection Control (UIC) program under Safe Drinking Water Act (SDWA), 42 U.S.C. 300f et seq.

(3) NPDES program under Clean Water Act (CWA), 33 U.S.C. 1251 et seq.

(4) Prevention of Significant Deterioration (PSD) program under the Clean Air Act, 42 U.S.C. 7401 et seq.

(5) Nonattainment program under the Clean Air Act.

(6) National Emission Standards for Hazardous Pollutants (NESHAPS) preconstruction approval under the Clean Air Act.

(7) Dredge or fill permits under section 404 of the Clean Water Act.

(8) Other relevant environmental permits, including State and Federal permits or permits.

(l) A topographic map, or other map if a topographic map is unavailable, extending one mile beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant within 1/4 mile of the facility property boundary.

(m) A brief description of the nature of the business.

(n) For hazardous debris, a description of the debris category(ies) and contaminant category(ies) to be treated, stored, or disposed of at the facility.

(o) The legal description of the facility with reference to the land survey of the State of Utah.

2.5 GENERAL INFORMATION REQUIREMENTS FOR PART B

(a) Part B information requirements presented below reflect the standards promulgated in R315-8. These information requirements are necessary in order for the Director to determine compliance with the standards of R315-8. If owners and operators of hazardous waste management facilities can demonstrate that the information prescribed in part B cannot be provided to the extent required, the Director may make allowance for submission of the information on a case-by-case basis. Information required in part B shall be submitted to the Director and signed in accordance with requirements in R315-3-2.2. Certain technical data, such as design drawings and specifications, and engineering studies shall be certified by a registered professional engineer. For post-closure permits, only the information specified in R315-3-2.19 is required in part B of the permit application.

(b) General information requirements. The following information is required for all hazardous waste management facilities, except as R315-8-1 provides otherwise:

(1) A general description of the facility,

(2) Chemical and physical analyses of the hazardous wastes and hazardous debris to be handled at the facility. At a

minimum, these analyses shall contain all the information which must be known to treat, store, or dispose of the wastes properly in accordance with R315-8.

(3) A copy of the waste analysis plan required by R315-8-2.4, which incorporates by reference 40 CFR 264.13 (b) and, if applicable 40 CFR 264.13(c).

(4) A description of the security procedures and equipment required by R315-8-2.5, or a justification demonstrating the reasons for requesting a waiver of this requirement.

(5) A copy of the general inspection schedule required by R315-8-2.6(b). Include, where applicable, as part of the inspection schedule, specific requirements in R315-8-9.5, R315-8-10, which incorporates by reference the specific provisions of 40 CFR 264.193(i) and 264.195, R315-8-11.3, R315-8-12.3, R315-8-13.4, R315-8-14.3, and R315-8-16, which incorporates by reference 40 CFR 264.602, R315-8-17, which incorporates by reference 40 CFR 264.1033, R315-8-18, which incorporates by reference 40 CFR 264.1052, 264.1053, and 264.1058, and R315-8-22, which incorporates by reference 40 CFR 264.1084, 264.1085, 264.1086, and 264.1088.

(6) A justification of any request for a waiver(s) of the preparedness and prevention requirements of R315-8-3.

(7) A copy of the contingency plan required by R315-8-4. Include, where applicable, as part of the contingency plan, specific requirements in R315-8-11.8 and R315-8-10, which incorporates by reference 40 CFR 264.200.

(8) A description of procedures, structures, or equipment used at the facility to:

(i) Prevent hazards in unloading operations, for example, ramps, special forklifts;

(ii) Prevent run-off from hazardous waste handling areas to other areas of the facility or environment, or to prevent flooding, for example, berms, dikes, trenches;

(iii) Prevent contamination of water supplies;

(iv) Mitigate effects of equipment failure and power outages;

(v) Prevent undue exposure of personnel to hazardous waste, for example, protective clothing; and

(vi) Prevent releases to the atmosphere.

(9) A description of precautions to prevent accidental ignition or reaction of ignitable, reactive, or incompatible wastes as required to demonstrate compliance with R315-8-2.8 including documentation demonstrating compliance with R315-8-2.8(c).

(10) Traffic pattern, estimated volume, number, types of vehicles and control, for example, show turns across traffic lanes, and stacking lanes, if appropriate; describe access road surfacing and load bearing capacity; show traffic control signals.

(11) Facility location information:

(i) In order to determine the applicability of the seismic standard R315-8-2.9(a), the owner or operator of a new facility shall identify the political jurisdiction, e.g., county, township, or election district, in which the facility is proposed to be located. If the county or election district is not listed in R315-50-11, no further information is required to demonstrate compliance with R315-8-2.9(a).

(ii) If the facility is proposed to be located in an area listed in R315-50-11, the owner or operator shall demonstrate compliance with the seismic standard. This demonstration may be made using either published geologic data or data obtained from field investigations carried out by the applicant. The information provided shall be of a quality to be acceptable to geologists experienced in identifying and evaluating seismic activity. The information submitted shall show that either:

(A) No faults which have had displacement in Holocene time are present, or no lineations which suggest the presence of a fault, which have displacement in Holocene time, within 3,000 feet of a facility are present, based on data from:

(I) Published geologic studies,

(II) Aerial reconnaissance of the area within a five mile radius from the facility,

(III) An analysis of aerial photographs covering a 3,000 foot radius of the facility, and

(IV) If needed to clarify the above data, a reconnaissance based on walking portions of the area within 3,000 feet of the facility, or

(B) If faults, to include lineations, which have had displacement in Holocene time are present within 3,000 feet of a facility, no faults pass within 200 feet of the portions of the facility where treatment, storage, or disposal of hazardous waste will be conducted, based on data from a comprehensive geologic analysis of the site. Unless a site analysis is otherwise conclusive concerning the absence of faults within 200 feet of the portions of the facility, data shall be obtained from a subsurface exploration, trenching, of the area within a distance no less than 200 feet from portions of the facility where treatment, storage, or disposal of hazardous waste will be conducted. The trenching shall be performed in a direction that is perpendicular to known faults, which have had displacement in Holocene time, passing within 3,000 feet of the portions of the facility where treatment, storage, and disposal of hazardous waste will be conducted. The investigation shall document with supporting maps and other analyses, the location of any faults found. The Guidance Manual for the Location Standards provides greater detail on the content of each type of seismic investigation and the appropriate conditions under which each approach or a combination of approaches would be used.

(iii) Owners and operators of all facilities shall provide an identification of whether the facility is located within a 100-year floodplain. This identification shall indicate the source of data for the determination and include a copy of the relevant Federal Insurance Administration (FIA) flood map, if used, or the calculations and maps used where an FIA map is not available. Information shall also be provided identifying the 100-year flood level and any other special flooding factors, e.g., wave action, which shall be considered in designing, constructing, operating, or maintaining the facility to withstand washout from a 100-year flood.

Where maps for the National Flood Insurance Program produced by the Federal Insurance Administration (FIA) of the Federal Emergency Management Agency are available, they will normally be determinative of whether a facility is located within or outside of the 100-year floodplain. However, where the FIA map excludes an area, usually areas of the floodplain less than 200 feet in width, these areas shall be considered and a determination made as to whether they are in the 100-year floodplain. Where FIA maps are not available for a proposed facility location, the owner or operator shall use equivalent mapping techniques to determine whether the facility is within the 100-year floodplain, and if so located, what the 100-year flood elevation would be.

(iv) Owners and operators of facilities located in the 100-year floodplain shall provide the following information:

(A) Engineering analysis to indicate the various hydrodynamic and hydrostatic forces expected to result at the site as a consequence of a 100-year flood.

(B) Structural or other engineering studies showing the design of operational units, e.g., tanks, incinerators, and flood protection devices, e.g., floodwalls, dikes, at the facility and how these will prevent washout.

(C) If applicable, and in lieu of R315-3-2.5(b)(11)(iv)(A) and (B), a detailed description of procedures to be followed to remove hazardous waste to safety before the facility is flooded, including:

(I) Timing of the movement relative to flood levels, including estimated time to move the waste, to show that the movement can be completed before floodwaters reach the facility.

(II) A description of the location(s) to which the waste will be moved and demonstration that those facilities will be eligible to receive hazardous waste in accordance with the rules under R315-3, R315-7, R315-8, and R315-14.

(III) The planned procedures, equipment, and personnel to be used and the means to ensure that the resources will be available in time for use.

(IV) The potential for accidental discharges of the waste during movement.

(v) Existing facilities NOT in compliance with R315-8-2.9(b) shall provide a plan showing how the facility will be brought into compliance and a schedule for compliance.

(12) An outline of both the introductory and continuing training programs by owners or operators to prepare persons to operate or maintain the hazardous waste management facility in a safe manner as required to demonstrate compliance with R315-8-2.7. A brief description of how training will be designed to meet actual job tasks in accordance with requirements in R315-8-2.7(a)(3).

(13) A copy of the closure plan and where applicable, the post-closure plan required by R315-8-7 which incorporates by reference 40 CFR 264.112, and 264.118, and R315-8-10 which incorporates by reference 40 CFR 264.197. Include where applicable as part of the plans specific requirements in R315-8-9.9, R315-8-10, which incorporates by reference 40 CFR 264.197, R315-8-11.5, R315-8-12.6, R315-8-13.8, R315-8-14.5, R315-8-15.8, and R315-8-16, which incorporates by reference 40 CFR 264.601 and 264.603.

(14) For hazardous waste disposal units that have been closed, documentation that notices required under R315-8-7 which incorporates by reference 40 CFR 264.119, have been filed.

(15) The most recent closure cost estimate for the facility prepared in accordance with R315-8-8 which incorporates by reference 40 CFR 264.142, and a copy of the documentation required to demonstrate financial assurance under R315-8-8 which incorporates by reference 40 CFR 264.143. For a new facility, a copy of the required documentation may be submitted 60 days prior to the initial receipt of hazardous wastes, if that is later than the submission of the part B.

(16) Where applicable, the most recent post-closure cost estimate for the facility prepared in accordance with R315-8-8, which incorporates by reference 40 CFR 264.144, plus a copy of the financial assurance mechanism adopted in compliance with R315-8-8.3 documentation required to demonstrate financial assurance under R315-8-8, which incorporates by reference 40 CFR 264.145. For a new facility, a copy of the required documentation may be submitted 60 days prior to the initial receipt of hazardous wastes, if that is later than the submission of the part B.

(17) Where applicable, a copy of the insurance policy or other documentation which comprises compliance with the requirements of R315-8-8, which incorporates by reference 40 CFR 264.147. For a new facility, documentation showing the amount of insurance meeting the specification of R315-8-8, which incorporates by reference 40 CFR 264.147(a), and if applicable 40 CFR 264.147(b), also incorporated by reference in R315-8-8, that the owner or operator plans to have in effect before initial receipt of hazardous waste for treatment, storage, or disposal. A request for a variance in the amount of required coverage, for a new or existing facility, may be submitted as specified in 40 CFR 264.147(c), incorporated by reference in R315-8-8.

(18) Where appropriate, proof of coverage by a financial mechanism as required in R315-8-8, which incorporates by reference 40 CFR 264.149 and 150.

(19) A topographic map showing a distance of 1000 feet around the facility at a scale of 2.5 centimeters, one inch, equal to not more than 61.0 meters, 200 feet. For large hazardous

waste management facilities, the Director will allow the use of other scales on a case-by-case basis. Contours shall be shown on the map. The contour interval shall be sufficient to clearly show the pattern of surface water flow in the vicinity of and from each operational unit of the facility. For example, contours with an interval of 1.5 meters, five feet, if relief is greater than 6.1 meters, 20 feet, or an interval of 0.6 meters, two feet, if relief is less than 6.1 meters, 20 feet. Owners and operators of hazardous waste management facilities located in mountainous areas should use larger contour intervals to adequately show topographic profiles of facilities. The map shall clearly show the following:

- (i) Map scale and date.
- (ii) 100-year floodplain area.
- (iii) Surface waters including intermittent streams.
- (iv) Surrounding land uses, residential, commercial, agricultural, recreational.
- (v) A wind rose, i.e., prevailing windspeed and direction.
- (vi) Orientation of map, north arrow.
- (vii) Legal boundaries of the hazardous waste management facility site.
- (viii) Access control, fences, gates.
- (ix) Injection and withdrawal wells both on-site and off-site.
- (x) Buildings; treatment, storage, or disposal operations; or other structures, recreation areas, run-off control systems, access and internal roads, storm, sanitary, and process sewerage systems, loading and unloading areas, fire control facilities, etc.
- (xi) Barriers for drainage or flood control.
- (xii) Location of operational units within hazardous waste management facility site, where hazardous waste is, or will be, treated, stored, or disposed, include equipment cleanup areas.

(20) Applicants may be required to submit such information as may be necessary to enable the Director to carry out duties under State laws and Federal laws as specified in 40 CFR 270.3.

(21) For land disposal facilities, if a case-by-case extension has been approved under R315-13, which incorporates by reference 40 CFR 268.5, or a petition has been approved under R315-13, which incorporates by reference 40 CFR 268.6, a copy of the notice of approval for the extension is required.

(22) A summary of the pre-application meeting, along with a list of attendees and their addresses, and copies of any written comment or materials submitted at the meeting, as required under R315-4-2.31(c).

(c) Additional information requirements.

The following additional information regarding protection of groundwater is required from owners or operators of hazardous waste facilities containing a regulated unit except as otherwise provided in R315-8-6.1(b).

(1) A summary of the groundwater monitoring data obtained during the interim status period under R315-7-13 where applicable.

(2) Identification of the uppermost aquifer and aquifers hydraulically interconnected beneath the facility property, including groundwater flow direction and rate, and the basis for the identification, i.e., the information obtained from hydrogeologic investigations of the facility area.

(3) On the topographic map required under R315-3-2.5(b)(19), a delineation of the waste management area, the property boundary, the proposed "point of compliance" as defined in R315-8-6.6, the proposed location of groundwater monitoring wells as required by R315-8-6.8 and, to the extent possible, the information required in R315-3-2.5(c)(2);

(4) A description of any plume of contamination that has entered the groundwater from a regulated unit at the time that the application is submitted that:

- (i) Delineates the extent of the plume on the topographic

map required under R315-3-2.5(b)(19);

(ii) Identifies the concentration of each constituent listed in R315-50-14, which incorporates by reference Appendix IX of 40 CFR 264, throughout the plume or identifies the maximum concentrations of each constituent listed in R315-50-14 in the plume.

(5) Detailed plans and an engineering report describing the proposed groundwater monitoring program to be implemented to meet the requirements of R315-8-6.8.

(6) If the presence of hazardous constituents has not been detected in the groundwater at the time of permit application, the owner or operator shall submit sufficient information, supporting data, and analyses to establish a detection monitoring program which meets the requirements of R315-8-6.9. This submission shall address the following items as specified under R315-8-6.9:

(i) A proposed list of indicator parameters, waste constituents, or reaction products that can provide a reliable indication of the presence of hazardous constituents in the groundwater;

(ii) A proposed groundwater monitoring system;

(iii) Background values for each proposed monitoring parameters or constituent, or procedures to calculate the values; and

(iv) A description of proposed sampling, analysis and statistical comparison procedures to be utilized in evaluating groundwater monitoring data.

(7) If the presence of hazardous constituents has been detected in the groundwater at the point of compliance at the time of permit application, the owner or operator shall submit sufficient information, supporting data, and analyses to establish a compliance monitoring program which meets the requirements of R315-8-6.10. Except as provided in R315-8-6.9(g)(5), the owner or operator shall also submit an engineering feasibility plan for a corrective action program necessary to meet the requirements of R315-8-6.11, unless the owner or operator obtains written authorization in advance from the Director to submit a proposed permit schedule for submittal of a plan. To demonstrate compliance with R315-8-6.10, the owner or operator shall address the following items:

(i) A description of the wastes previously handled at the facility;

(ii) A characterization of the contaminated groundwater, including concentrations of hazardous constituents;

(iii) A list of hazardous constituents for which compliance monitoring will be undertaken in accordance with R315-8-6.8 and R315-8-6.10;

(iv) Proposed concentration limits for each hazardous constituent, based on the criteria set forth in R315-8-6.5(a) including a justification for establishing any alternate concentration limits;

(v) Detailed plans and an engineering report describing the proposed groundwater monitoring system, in accordance with the requirements of R315-8-6.8, and

(vi) A description of proposed sampling, analysis and statistical comparison procedures to be utilized in evaluating groundwater monitoring data.

(8) If hazardous constituents have been measured in the groundwater which exceed the concentration limits established under R315-8-6.5 Table 1, or if groundwater monitoring conducted at the time of permit application under R315-8-6.1 through R315-8-6.5 at the waste boundary indicates the presence of hazardous constituents from the facility in groundwater over background concentrations, the owner or operator shall submit sufficient information, supporting data, and analyses to establish a corrective action program which meets the requirements of R315-8-6-11. However, an owner or operator is not required to submit information to establish a corrective action program if he demonstrates to the Director that

alternate concentration limits will protect human health and the environment after considering the criteria listed in R315-8-6.5(b). An owner or operator who is not required to establish a corrective action program for this reason shall instead submit sufficient information to establish a compliance monitoring program which meets the requirements of R315-8-6.10 and R315-3-2.5(c)(6). To demonstrate compliance with R315-8-6.11, the owner or operator shall address, at a minimum, the following items:

- (i) A characterization of the contaminated groundwater, including concentration of hazardous constituents;
- (ii) The concentration limit for each hazardous constituent found in the groundwater as set forth in R315-8-6.5;
- (iii) Detailed plans and engineering report describing the corrective action to be taken; and
- (iv) A description of how the groundwater monitoring program will assess the adequacy of the corrective action.

(v) The permit may contain a schedule for submittal of the information required in R315-3-2.5(c)(8)(iii) and (iv) provided the owner or operator obtains written authorization from the Director prior to submittal of the complete permit application.

(9) An intended schedule of construction shall be submitted with the permit application and will be incorporated into the permit as an approval condition. Facility permits shall be reviewed by the Director no later than 18 months from the date of permit issuance, and periodically thereafter, to determine if a program of continuous construction is proceeding. Failure to maintain a program of continuous construction may result in revocation of the permit.

(d) Information requirements for solid waste management units.

(1) The following information is required for each solid waste management unit at a facility seeking a permit:

- (i) The location of the unit on the topographic map required under R315-3-2.5(b)(19);
- (ii) Designation of type of unit;
- (iii) General dimensions and structural description, supply any available drawings;
- (iv) When the unit was operated; and
- (v) Specification of all wastes that have been managed at the unit, to the extent available.

(2) The owner or operator of any facility containing one or more solid waste management units shall submit all available information pertaining to any release of hazardous wastes or hazardous constituents from the unit or units.

(3) The owner or operator shall conduct and provide the results of sampling and analysis of groundwater, land surface, and subsurface strata, surface water, or air, which may include the installation of wells, where the Director ascertains it is necessary to complete a RCRA Facility Assessment that will determine if a more complete investigation is necessary.

2.6 SPECIFIC PART B INFORMATION REQUIREMENTS FOR CONTAINERS

Facilities that store containers of hazardous waste, except as otherwise provided in R315-8-9.1, shall provide the following additional information:

(a) A description of the containment system to demonstrate compliance with R315-8-9.6. Show at least the following:

- (1) Basic design parameters, dimensions, and materials of construction.
- (2) How the design promotes drainage or how containers are kept from contact with standing liquids in the containment system.
- (3) Capacity of the containment system relative to the number and volume of containers to be stored.
- (4) Provisions for preventing or managing run-on.
- (5) How accumulated liquids can be analyzed and removed to prevent overflow.

(b) For storage areas that store containers holding wastes

that do not contain free liquids, a demonstration of compliance with R315-8-9.6(c) including:

(1) Test procedures and results or other documentation or information to show that the wastes do not contain free liquids; and

(2) A description of how the storage area is designed or operated to drain and remove liquids or how containers are kept from contact with standing liquids.

(c) Sketches, drawings, or data demonstrating compliance with R315-8-9.7, location of buffer zone and containers holding ignitable or reactive wastes, and R315-8-9.8(c), location of incompatible wastes, where applicable.

(d) Where incompatible wastes are stored or otherwise managed in containers, a description of the procedures used to ensure compliance with R315-8-9.8(a) and (b) and R315-8-2.8(b) and (c).

(e) Information on air emission control equipment as required in R315-3-2.18, which incorporates by reference 40 CFR 270.27.

2.7 SPECIFIC PART B INFORMATION REQUIREMENTS FOR TANK SYSTEMS

For facilities that use tanks to store or treat hazardous waste, the requirements of 40 CFR 270.16, 1996 ed., are adopted and incorporated by reference.

2.8 SPECIFIC PART B INFORMATION REQUIREMENTS FOR SURFACE IMPOUNDMENTS

Facilities that store, treat, or dispose of hazardous waste in surface impoundments, except as otherwise provided in R315-8-1.1, shall provide the following additional information:

(a) A list of the hazardous wastes placed or to be placed in each surface impoundment;

(b) Detailed plans and an engineering report describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of R315-8-2.10, R315-8-11.2, R315-8-11.9, R315-8-11.10, addressing the following items:

(1) The liner system, except for an existing portion of a surface impoundment. If an exemption from the requirement for a liner is sought as provided by R315-8-11.2(b), submit detailed plans and engineering and hydrogeologic reports, as appropriate, describing alternate design and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the groundwater or surface water at any future time;

(2) The double liner and leak, leachate, detection, collection, and removal system, if the surface impoundment must meet the requirements of R315-8-11.2(c). If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by R315-8-11.2(d), (e), or (f), submit appropriate information;

(3) If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system;

(4) The construction quality assurance, CQA, plan if required under R315-8-2.10;

(5) Proposed action leakage rate, with rationale, if required under R315-8-11.9, and response action plan, if required under R315-8-11.10;

(6) Prevention of overtopping; and

(7) Structural integrity of dikes.

(c) A description of how each surface impoundment, including the double liner, leak detection system, cover system, and appurtenances for control of overtopping, will be inspected in order to meet the requirements of R315-8-11.3(a), (b), and (d). This information should be included in the inspection plan submitted under R315-3-2.5(b)(5);

(d) A certification by a qualified engineer which attests to

the structural integrity of each dike, as required under R315-8-11.3(c). For new units, the owner or operator shall submit a statement by a qualified engineer that he will provide a certification upon completion of construction in accordance with the plans and specifications;

(e) A description of the procedure to be used for removing a surface impoundment from service, as required under R315-8-11.4(b) and (c). This information should be included in the contingency plan submitted under R315-3-2.5(b)(7);

(f) A description of how hazardous waste residues and contaminated materials will be removed from the unit at closure, as required under R315-8-11.5(a)(1). For any wastes not to be removed from the unit upon closure, the owner or operator shall submit detailed plans and an engineering report describing how R315-8-11.5(a)(2) and (b) will be complied with. This information should be included in the closure plan, and, where applicable, the post-closure plan submitted under R315-3-2.5(b)(13);

(g) If ignitable or reactive wastes are to be placed in a surface impoundment, an explanation of how R315-8-11.6 will be complied with;

(h) If incompatible wastes, or incompatible wastes and materials will be placed in a surface impoundment, an explanation of how R315-8-11.7 will be complied with.

(i) A waste management plan for EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027 describing how the surface impoundment is or will be designed, constructed, operated, and maintained to meet the requirements of R315-8-11.8. This submission shall address the following items as specified in R315-8-11.8:

(1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

(2) The attenuative properties of underlying and surrounding soils or other materials;

(3) The mobilizing properties of other materials co-disposed with these wastes; and

(4) The effectiveness of additional treatment, design, or monitoring techniques.

(j) Information on air emission control equipment as required by R315-3-2.18, which incorporates by reference 40 CFR 270.27.

2.9 SPECIFIC PART B INFORMATION REQUIREMENTS FOR WASTE PILES

Facilities that store or treat hazardous waste in waste piles, except as otherwise provided in R315-8-1, shall provide the following additional information:

(a) A list of hazardous wastes placed or to be placed in each waste pile;

(b) If an exemption is sought to R315-8-12.2 and R315-8-6 as provided by R315-8-12.1(c) or R315-8-6(b)(2), an explanation of how the standards of R315-8-12.1(c) will be complied with or detailed plans and an engineering report describing how the requirements of R315-8-6(b)(2) will be met.

(c) Detailed plans and an engineering report describing how the waste pile is or will be designed, constructed, operated and maintained to meet the requirements of R315-8-2.10, R315-8-12.2, R315-8-12.8, and R315-8-12.9, addressing the following items:

(1)(i) The liner system, except for an existing portion of a waste pile, if the waste pile must meet the requirements of R315-8-12.2(a). If an exemption from the requirement for a liner is sought as provided by R315-8-12.2(b), submit detailed plans, and engineering and hydrogeological reports, as appropriate, describing alternate designs and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the ground water or surface water at any future time;

(ii) The double liner and leak, leachate, detection,

collection, and removal system, if the waste pile must meet the requirements of R315-8-12.2(c). If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by R315-8-12.2(d), (e), or (f), submit appropriate information;

(iii) If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system;

(iv) The construction quality assurance (CQA) plan if required under R315-8-2.10;

(v) Proposed action leakage rate, with rationale, if required under R315-8-12.8, and response action plan, if required under R315-8-12.9;

(2) Control of run-on;

(3) Control of run-off;

(4) Management of collection and holding units associated with run-on and run-off control systems; and

(5) Control of wind dispersal of particulate matter, where applicable;

(d) A description of how each waste pile, including the double liner system, leachate collection and removal system, leak detection system, cover system, and appurtenances for control of run-on and run-off, will be inspected in order to meet the requirements of R315-8-12.3(a), (b), and (c). This information shall be included in the inspection plan submitted under R315-3-2.5(b)(5);

(e) If treatment is carried out on or in the pile, details of the process and equipment used, and the nature and quality of the residuals;

(f) If ignitable or reactive wastes are to be placed in a waste pile, an explanation of how the requirements of R315-8-12.4 will be complied with;

(g) If incompatible wastes, or incompatible wastes and materials will be placed in a waste pile, an explanation of how R315-8-12.5 will be complied with;

(h) A description of how hazardous waste residues and contaminated materials will be removed from the waste pile at closure, as required under R315-8-12.6(a). For any waste not to be removed from the waste pile upon closure, the owner or operator shall submit detailed plans and an engineering report describing how R315-8-14.5(a) and (b) will be complied with. This information should be included in the closure plan, and, where applicable, the post-closure plan submitted under R315-3-2.5(b)(13);

(i) A waste management plan for EPA Hazardous Waste Nos. F020, F021, F022, F023, F026 and F027 describing how a waste pile that is not enclosed, as defined in R315-8-12.1(c) is or will be designed, constructed, operated, and maintained to meet the requirements of R315-8-12.7. This submission shall address the following items as specified in R315-8-12.7:

(1) The volume, physical, and chemical characteristics of the wastes to be disposed in the waste pile, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

(2) The attenuative properties of underlying and surrounding soils or other materials;

(3) The mobilizing properties of other materials co-disposed with these wastes; and

(4) The effectiveness of additional treatment, design, or monitoring techniques.

2.10 SPECIFIC PART B INFORMATION REQUIREMENTS FOR INCINERATORS

For facilities that incinerate hazardous waste, except as R315-8-15.1 and R315-3-2.10(e) provides otherwise, the applicant shall fulfill the requirements of R315-3-2.10(a), (b), or (c).

(a) When seeking exemption under R315-8-15.1(b) or (c) (ignitable, corrosive or reactive wastes only):

(1) Documentation that the waste is listed as a hazardous waste in R315-2-10 solely because it is ignitable, Hazard Code I, corrosive, Hazard Code C, or both; or

(2) Documentation that the waste is listed as a hazardous waste in R315-2-10 solely because it is reactive, Hazard Code R, for characteristics other than those listed in R315-2-9(f)(1)(iv) and (v), and will not be burned when other hazardous wastes are present in the combustion zone; or

(3) Documentation that the waste is a hazardous waste solely because it possesses the characteristic of ignitability, corrosivity, or both, as determined by the tests for characteristics of hazardous wastes under R315-2-9; or

(4) Documentation that the waste is a hazardous waste solely because it possesses the reactivity characteristics listed in R315-2-9(f)(i), (ii), (iii), (vi), (vii), or (viii) and that it will not be burned when other hazardous wastes are present in the combustion zone; or

(b) Submit a trial burn plan or the results of the trial burn, including all required determinations, in accordance with R315-3-6.3; or

(c) In lieu of a trial burn, the applicant may submit the following information:

(1) An analysis of each waste or mixture of wastes to be burned including:

(i) Heat value of the waste in the form and composition in which it will be burned.

(ii) Viscosity, if applicable, or description of physical form of the waste.

(iii) An identification of any hazardous organic constituents listed in R315-50-10, which incorporates by reference 40 CFR part 261 Appendix VIII, which are present in the waste to be burned, except that the applicant need not analyze for constituents listed in R315-50-10, which incorporates by reference 40 CFR 261 Appendix VIII, which would reasonably not be expected to be found in the waste. The constituents excluded from analysis shall be identified and the basis for their exclusion stated. The waste analysis shall rely on analytical techniques specified in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, see R315-1-2, or their equivalent.

(iv) An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by the analytical methods specified in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11, see R315-1-2.

(v) A quantification of those hazardous constituents in the waste which may be designated as POHC's based on data submitted from other trial or operational burns which demonstrate compliance with the performance standard in R315-8-15.4.

(2) A detailed engineering description of the incinerator, including:

(i) Manufacturer's name and model number of incinerator.

(ii) Type of incinerator.

(iii) Linear dimension of incinerator unit including cross sectional area of combustion chamber.

(iv) Description of auxiliary fuel system, type/feed.

(v) Capacity of prime mover.

(vi) Description of automatic waste feed cutoff system(s).

(vii) Stack gas monitoring and pollution control monitoring system.

(viii) Nozzle and burner design.

(ix) Construction materials.

(x) Location and description of temperature, pressure, and flow indicating devices and control devices.

(3) A description and analysis of the waste to be burned compared with the waste for which data from operational or trial

burns are provided to support the contention that a trial burn is not needed. The data should include those items listed in R315-3-2.10(c)(1). This analysis should specify the POHC's which the applicant has identified in the waste for which a permit is sought, and any differences from the POHC's in the waste for which burn data are provided.

(4) The design and operating conditions of the incinerator unit to be used, compared with that for which comparative burn data are available.

(5) A description of the results submitted from any previously conducted trial burn(s) including:

(i) Sampling and analysis techniques used to calculate performance standards in R315-8-15.4.

(ii) Methods and results of monitoring temperatures, waste feed rates, air feed rates, and carbon monoxide, and an appropriate indicator of combustion gas velocity, including a statement concerning the precision and accuracy of this measurement,

(6) The expected incinerator operation information to demonstrate compliance with R315-8-15.4 and R315-8-15.6 including:

(i) Expected carbon monoxide (CO) level in the stack exhaust gas.

(ii) Waste feed rate.

(iii) Combustion zone temperature.

(iv) Indication of combustion gas velocity.

(v) Expected stack gas volume, flow rate, and temperature.

(vi) Computed residence time for waste in the combustion zone.

(vii) Expected hydrochloric acid removal efficiency.

(viii) Expected fugitive emissions and their control procedures.

(ix) Proposed waste feed cut-off limits based on the identified significant operating parameters.

(7) Any supplemental information as the Director finds necessary to achieve the purposes of this paragraph.

(8) Waste analysis data, including that submitted in R315-3-2.10(c)(1), sufficient to allow the Director to specify as permit Principal Organic Hazardous Constituents (POHC's) those constituents for which destruction and removal efficiencies will be required.

(d) The Director shall approve a permit application without a trial burn if he finds that:

(1) The wastes are sufficiently similar; and

(2) The incinerator units are sufficiently similar, and the data from other trial burns are adequate to specify, under R315-8-15.6, operating conditions that will ensure that the performance standards in R315-8-15.4 will be met by the incinerator.

(e) When an owner or operator of a hazardous waste incineration unit becomes subject to RCRA permit requirements or demonstrates compliance with the air emission standards and limitations in R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance under R307-214-2, which incorporates by reference 40 CFR 63.1207(j) and 63.1210(d)), documenting compliance with all applicable requirements of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE), the requirements of R315-3-2.10 do not apply, except those provisions the Director determines are necessary to ensure compliance with R315-8-15.6(a) and R315-8-15.6(c) if the owner or operator elects to comply with R315-3-9.1(a)(1)(i) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the Director may apply the provisions of R315-3-2.10, on a case-by-case basis, for purposes of information collection in accordance with R315-3-2.1(j), R315-3-2.1(k), R315-3-3.3(b)(2), and R315-3-3(b)(3).

2.11 SPECIFIC PART B INFORMATION

REQUIREMENTS FOR LAND TREATMENT FACILITIES

Facilities that use land treatment to dispose of hazardous waste, except as otherwise provided in R315-8-1.1, shall provide the following additional information:

(a) A description of plans to conduct a treatment demonstration as required under R315-8-13.3. The description shall include the following information:

(1) The wastes for which the demonstration will be made and the potential hazardous constituents in the wastes;

(2) The data sources to be used to make the demonstration, e.g., literature, laboratory data, field data, or operating data;

(3) Any specific laboratory or field test that will be conducted, including:

(i) The type of test, e.g., column leaching, degradation;

(ii) Materials and methods, including analytical procedures;

(iii) Expected time for completion;

(iv) Characteristics of the unit that will be simulated in the demonstration, including treatment zone characteristics, climatic conditions, and operating practices;

(b) A description of a land treatment program, as required under R315-8-13.2. This information shall be submitted with the plans for the treatment demonstration, and updated following the treatment demonstration. The land treatment program shall address the following items:

(1) The wastes to be land treated;

(2) Design measures and operating practices necessary to maximize treatment in accordance with R315-8-13.4(a) including:

(i) Waste application method and rate;

(ii) Measures to control soil pH;

(iii) Enhancement of microbial or chemical reactions;

(iv) Control of moisture content.

(3) Provisions for unsaturated zone monitoring including:

(i) Sampling equipment, procedures and frequency;

(ii) Procedures for selecting sampling locations;

(iii) Analytical procedures;

(iv) Chain of custody control;

(v) Procedures for establishing background values;

(vi) Statistical methods for interpreting results;

(vii) The justification for any hazardous constituents recommended for selection as principal hazardous constituents, in accordance with the criteria for the selection in R315-8-13.6(a);

(4) A list of hazardous constituents reasonably expected to be in, or derived from, the wastes to be land treated based on waste analysis performed pursuant to R315-8-2.4, which incorporates by reference 40 CFR 264.13;

(5) The proposed dimensions of the treatment zone;

(c) A description of how the unit is or will be designed, constructed, operated, and maintained in order to meet the requirements of R315-8-13.4. This submission shall address the following items:

(1) Control of run-on;

(2) Collection and control of run-off;

(3) Minimization of run-off of hazardous constituents from the treatment zone;

(4) Management of collection and holding facilities associated with run-on and run-off control systems;

(5) Periodic inspection of the unit. This information should be included in the inspection plan submitted under R315-3-2.5(b)(5).

(6) Control of wind dispersal of particulate matter, if applicable;

(d) If food-chain crops are to be grown in or on the treatment zone of the land treatment unit, a description of how the demonstration required under R315-8-13.5(a) will be conducted including:

(1) Characteristics of the food-chain crop for which the

demonstration will be made;

(2) Characteristics of the waste, treatment zone, and waste application method and rate to be used in the demonstration;

(3) Procedures for crop growth, sample collection, sample analysis, and data evaluation;

(4) Characteristics of the comparison crop including the location and conditions under which it was or will be grown.

(e) If food-chain crops are to be grown, and cadmium is present in the land treated waste, a description of how the requirements of R315-8-13.5(b) will be complied with;

(f) A description of the vegetative cover to be applied to closed portions of the facility, and a plan for maintaining such cover during the post-closure care period, as required under R315-8-13.8(a)(8) and R315-8-13.8(c)(2). This information should be included in the closure plan, and, where applicable, the post-closure care plan submitted under R315-3-2.5(b)(13).

(g) If ignitable or reactive wastes will be placed in or on the treatment zone, an explanation of how the requirements of R315-8-13.9 will be complied with;

(h) If incompatible wastes, or incompatible wastes and materials, will be placed in or on the same treatment zone, an explanation of how R315-8-13.10 will be complied with.

(i) A waste management plan for EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027 describing how a land treatment facility is or will be designed, constructed, operated, and maintained to meet the requirements of R315-8-13.11. This submission shall address the following items as specified in R315-8-13.11:

(1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

(2) The attenuative properties of underlying and surrounding soils or other materials;

(3) The mobilizing properties of other materials co-disposed with these wastes; and

(4) The effectiveness of additional treatment, design, or monitoring techniques.

2.12 SPECIFIC PART B INFORMATION REQUIREMENTS FOR LANDFILLS

Facilities that dispose of hazardous waste in landfills, except as otherwise provided in R315-8-1.1, shall provide the following additional information:

(a) A list of the hazardous wastes placed or to be placed in each landfill or landfill cell;

(b) Detailed plans and an engineering report describing how the landfill is designed and is or will be constructed, operated, and maintained to comply with the requirements of R315-8-2.10, R315-8-14.2., R315-8-14.3, and R315-8-14.12, addressing the following items:

(1)(i) The liner system, except for an existing portion of a landfill, if the landfill must meet the requirements of R315-8-14.2(a). If an exemption from the requirement for a liner is sought as provided by R315-8-14.2(b), submit detailed plans, and engineering and hydrogeological reports, as appropriate, describing alternate designs and operating practices that will, in conjunction with location aspects, prevent the migration of any hazardous constituents into the groundwater or surface water at any future time;

(ii) The double liner and leak (leachate) detection, collection, and removal system, if the landfill must meet the requirements of R315-8-14.2(c). If an exemption from the requirements for double liners and a leak detection, collection, and removal system or alternative design is sought as provided by R315-8-14.2(d), (e), or (f), submit appropriate information;

(iii) If the leak detection system is located in a saturated zone, submit detailed plans and an engineering report explaining the leak detection system design and operation, and the location of the saturated zone in relation to the leak detection system;

(iv) The construction quality assurance, CQA, plan if

required under R315-8-2.10;

(v) Proposed action leakage rate, with rationale, if required under R315-8-14.12, and response action plan, if required under R315-8-14.3;

(2) Control of run-on;

(3) Control of run-off;

(4) Management of collection and holding facilities associated with run-on and run-off control systems; and

(5) Control of wind dispersal of particulate matter, where applicable.

(c) A description of how each landfill, including the double liner system, leachate collection and removal system, leak detection system, cover system, and appurtenances for control of run-on and run-off, will be inspected in order to meet the requirements of R315-8-14.3(a), (b), and (c). This information shall be included in the inspection plan submitted under R315-3-2.5(b)(5);

(d) A description of how each landfill, including the liner and cover systems, will be inspected in order to meet the requirements of R315-8-14.3(a) and (b). This information should be included in the inspection plan submitted under R315-3-2.5(b)(5).

(e) Detailed plans and engineering report describing the final cover which will be applied to each landfill or landfill cell at closure in accordance with R315-8-14.5(a), and a description of how each landfill will be maintained and monitored after closure in accordance with R315-8-14.5(b). This information should be included in the closure and post-closure plans submitted under R315-3-2.5(b)(13).

(f) If ignitable or reactive wastes will be landfilled, an explanation of how the requirements of R315-8-14.6 will be complied with;

(g) If incompatible wastes, or incompatible wastes and materials will be landfilled, an explanation of how R315-8-14.7 will be complied with;

(h) If bulk or non-containerized liquid waste or wastes containing free liquids is to be landfilled prior to May 8, 1985, an explanation of how the requirements of R315-8-14.8(a) will be complied with;

(i) If containers of hazardous waste are to be landfilled, an explanation of how the requirements of R315-8-14.9 or R315-8-14.10 as applicable, will be complied with.

(j) A waste management plan for EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027 describing how a landfill is or will be designed, constructed, operated, and maintained to meet the requirements of R315-8-14.11. This submission shall address the following items as specified in R315-8-14.11:

(1) The volume, physical, and chemical characteristics of the wastes, including their potential to migrate through soil or to volatilize or escape into the atmosphere;

(2) The attenuative properties of underlying and surrounding soils or other materials;

(3) The mobilizing properties of other materials co-disposed with these wastes; and

(4) The effectiveness of additional treatment, design, or monitoring techniques.

2.13 SPECIFIC PART B INFORMATION REQUIREMENTS FOR BOILERS AND INDUSTRIAL FURNACES BURNING HAZARDOUS WASTE

For facilities that burn hazardous wastes in boilers and industrial furnaces which R315-14-7 applies, which incorporates by reference 40 CFR subpart H, 266.100 through 266.112, the requirements of 40 CFR 270.22, 2006 ed., are adopted and incorporated by reference.

2.14 SPECIFIC PART B INFORMATION REQUIREMENTS FOR MISCELLANEOUS UNITS

Facilities that treat, store or dispose of hazardous waste in miscellaneous units except as otherwise provided in R315-8-16,

which incorporates by reference 40 CFR 264.600, shall provide the following additional information:

(a) A detailed description of the unit being used or proposed for use, including the following:

(1) Physical characteristics, materials of construction, and dimensions of the unit;

(2) Detailed plans and engineering reports describing how the unit will be located, designed, constructed, operated, maintained, monitored, inspected, and closed to comply with the requirements of R315-8-16, which incorporates by reference 40 CFR 264.601 and 264.602; and

(3) For disposal units, a detailed description of the plans to comply with the post-closure requirements of R315-8-16, which incorporates by reference 40 CFR 264.603.

(b) Detailed hydrologic, geologic, and meteorologic assessments and land-use maps for the region surrounding the site that address and ensure compliance of the unit with each factor in the environmental performance standards of R315-8-16, which incorporates by reference 40 CFR 264.601. If the applicant can demonstrate that he does not violate the environmental performance standards of R315-8-16, which incorporates by reference 40 CFR 264.601 and the Director agrees with such demonstration, preliminary hydrologic, geologic, and meteorologic assessments will suffice.

(c) Information on the potential pathways of exposure of humans or environmental receptors to hazardous waste or hazardous constituents and on the potential magnitude and nature of these exposures;

(d) For any treatment unit, a report on a demonstration of the effectiveness of the treatment based on laboratory or field data;

(e) Any additional information determined by the Director to be necessary for evaluation of compliance of the unit with the environmental performance standards of R315-8-16, which incorporates by reference 40 CFR 264.601.

2.15 SPECIFIC PART B INFORMATION REQUIREMENTS FOR PROCESS VENTS

For facilities that have process vents to which R315-8-17 applies, which incorporates by reference 40 CFR subpart AA of 264, the requirements of 40 CFR 270.24, 2006 ed., regarding information requirements for process vents are adopted and incorporated by reference with the following exception:

Substitute "Director" for "Regional Administrator."

2.16 SPECIFIC PART B INFORMATION REQUIREMENTS FOR EQUIPMENT

For facilities that have equipment to which R315-8-18 applies, which incorporates by reference 40 CFR subpart BB of 264, the requirements of 40 CFR 270.25, 2006 ed., regarding information requirements for equipment are adopted and incorporated by reference with the following exception:

Substitute "Director" for "Regional Administrator."

2.17 SPECIFIC PART B INFORMATION REQUIREMENTS FOR DRIP PADS

For facilities that have drip pads to which R315-8-19 applies, which incorporates by reference 40 CFR subpart W, 264.570 through 264.575, the requirements of 40 CFR 270.26, 1991 ed., are adopted and incorporated by reference.

2.18 SPECIFIC PART B INFORMATION REQUIREMENTS FOR AIR EMISSION CONTROLS FOR TANKS, SURFACE IMPOUNDMENTS, AND CONTAINERS

The requirements as found in 40 CFR 270.27 1996 ed., as amended by 61 FR 59931, November 25, 1996, are adopted and incorporated by reference.

2.19 PART B INFORMATION REQUIREMENTS FOR POST-CLOSURE PERMITS

For post-closure permits, the owner or operator is required to submit only the information specified in R315-3-2.5(b)(1), (4), (5), (6), (11), (13), (14), (16), (18), (19), and R315-3-2.5(c) and (d), unless the Director determines that additional

information from R315-3-2.5, R315-3-2.7, which incorporates by reference 40 CFR 270.16, R315-3-2.8, R315-3-2.9, R315-3-2.11, or R315-3-2.12 is necessary. The owner or operator is required to submit the same information when an alternative authority is used in lieu of a post-closure permit as provided in R315-3-1.3(e)(7).

2.20 PERMIT DENIAL

The Director may, pursuant to the procedures in R315-4, deny the permit application either in its entirety or as to the active life of a hazardous waste management facility or unit only.

R315-3-3. Permit Conditions.

3.1 CONDITIONS APPLICABLE TO PERMITS

The following conditions apply to all permits. All conditions applicable to permits shall be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation of these rules shall be given in the permit.

(a) Duty to comply. The permittee shall comply with all conditions of this permit, except that the permittee need not comply with the conditions of this permit to the extent and for the duration any noncompliance is authorized in an emergency permit. (See R315-3-6.2). Any plan noncompliance except under the terms of an emergency permit, constitutes a violation of the Utah Solid and Hazardous Waste Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

(b) Duty to reapply. If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee shall apply for and obtain a new permit.

(c) Need to halt or reduce activity not a defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the approved activity in order to maintain compliance with the conditions of this permit.

(d) In the event of noncompliance with the permit, the permittee shall take all reasonable steps to minimize releases to the environment, and shall carry out all measures as are reasonable to prevent significant adverse impact on human health or the environment.

(e) Proper operation and maintenance. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control, and related appurtenances, which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.

(f) Permit actions. This permit may be modified, revoked and reissued, or terminated in accordance with the provisions of R315-3-4.2 or R315-4.4 and the procedures of R315-4-1.5. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

(g) Property rights. This permit does not convey any property rights of any sort, or any exclusive privilege.

(h) Duty to provide information. The permittee shall furnish to the Director within a reasonable time, any relevant information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish to the Director upon

request, copies of records required to be kept by this permit.

(i) Inspection and entry. The permittee shall allow the Director, or an authorized representative, upon the presentation of credentials and other documents as may be required by law, to:

(1) Enter at reasonable times upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

(2) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

(3) Inspect at reasonable times any facilities, equipment, including monitoring and control equipment, practices, or operations regulated or required under this permit; and

(4) Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Utah Solid and Hazardous Waste Act, any substances or parameters at any location.

(j) Monitoring and records.

(1) Sample and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

(2) The permittee shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, the certification required by R315-8-5.3, which incorporates by reference 40 CFR 264.73(b)(9), and records of all data used to complete the application for this permit, for a period of at least three years from the date of the sample, measurement, report, certification, or application. This period may be extended by request of the Director at any time. The permittee shall maintain records from all groundwater monitoring wells and associated groundwater surface elevations, for the active life of the facility, and for disposal facilities for the post-closure care period as well.

(3) Records of monitoring information shall include:

(i) The date, exact place, and time of sampling or measurements;

(ii) The individual(s) who performed the sampling or measurements;

(iii) The date(s) analyses were performed;

(iv) The individual(s) who performed the analyses;

(v) The analytical techniques or methods used; and

(vi) The results of all analyses.

(k) Signatory requirement. All applications, reports, or information submitted to the Director shall be signed and certified, see R315-3-2.2.

(l) Reporting requirements.

(1) Planned changes. The permittee shall give notice to the Director as soon as possible of any planned physical alterations or additions to the approved facility.

(2) Anticipated noncompliance. The permittee shall give advance notice to the Director of any planned changes in the approved facility or activity which may result in noncompliance with permit requirements. For a new facility, the permittee may not treat, store, or dispose of hazardous waste; and for a facility being modified, the permittee may not treat, store, or dispose of hazardous waste in the modified portion of the facility except as provided in R315-3-4.3, which incorporates by reference 40 CFR 270.42, until:

(i) The permittee has submitted to the Director by certified mail or hand delivery a letter signed by the permittee and a registered professional engineer stating that the facility has been constructed or modified in compliance with the permit; and

(ii)(A) The Director has inspected the modified or newly constructed facility and finds it is in compliance with the conditions of the permit; or

(B) Within 15 days of the date of submission of the letter in R315-3-3.1(1)(2)(i), the permittee has not received notice from the Director of the Director's intent to inspect, prior

inspection is waived and the permittee may commence treatment, storage, or disposal of hazardous waste.

(3) Transfers. The permit is not transferable to any person except after notice to the Director. The Director may require modification or revocation and reissuance of the permit to change the name of the permittee and incorporate any other requirements as may be necessary. See R315-3-4.1.

(4) Monitoring reports. Monitoring results shall be reported at the intervals specified elsewhere in this permit.

(5) Compliance schedules. Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date.

(6) Twenty-four hour reporting. See R315-9 for Emergency Controls.

(i) The permittee shall report any noncompliance which may endanger health or the environment orally within 24 hours from the time the permittee becomes aware of the circumstances, including:

(A) Information concerning release of hazardous waste that may cause an endangerment to public drinking water supplies.

(B) Any information of a release of hazardous waste or of a fire or explosion from the hazardous waste management facility, which could threaten the environment or human health outside the facility.

(ii) The description of the occurrence and its cause shall include:

(A) Name, address, and telephone number of the owner or operator;

(B) Name, address, and telephone number of the facility;

(C) Date, time, and type of incident;

(D) Name and quantity of material(s) involved;

(E) The extent of injuries, if any;

(F) An assessment of actual or potential hazards to the environment and human health outside the facility, where this is applicable; and

(G) Estimated quantity and disposition of recovered material that resulted from the incident.

(iii) A written submission shall also be provided within five days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and the steps taken or planned to reduce, eliminate and prevent reoccurrence of the noncompliance. The Director may waive the five-day written notice requirement in favor of a written report within 15 days.

(7) Manifest discrepancy report. If a significant discrepancy in a manifest is discovered, the permittee shall attempt to reconcile the discrepancy. If not resolved within fifteen days, the permittee shall submit a letter report, including a copy of the manifest, to the Director. (See R315-8-5.4)

(8) Unmanifested waste report. This report shall be submitted to the Director within 15 days of receipt of unmanifested wastes.

(9) Biennial report. A biennial report shall be submitted covering facility activities during odd numbered calendar years.

(10) Other noncompliance. The permittee shall report all instances of noncompliance not reported under R315-3-3.1(1)(4), (5), and (6), at the time monitoring reports are submitted. The reports shall contain the information listed in R315-3-3.1(1)(6).

(11) Other information. Where the permittee becomes aware that he failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Director, he shall promptly

submit all facts or information.

(m) Information repository. The Director may require the permittee to establish and maintain an information repository at any time, based on the factors set forth in R315-4-2.33(b). The information repository will be governed by the provisions in R315-4-2.33 (c) through (f).

3.2 REQUIREMENTS FOR RECORDING AND REPORTING OF MONITORING RESULTS

All permits shall specify:

(a) Requirements concerning the proper use, maintenance, and installation, when appropriate, of monitoring equipment or methods, including biological monitoring methods when appropriate;

(b) Required monitoring including type, intervals, and frequency sufficient yield data which are representative of the monitored activity including, when appropriate, continuous monitoring;

(c) Applicable reporting requirements based upon the impact of the regulated activity and as specified in R315-8 and R315-14. Reporting shall be no less frequent than specified in R315-8 and R315-14.

3.3 ESTABLISHING PERMIT CONDITIONS

In addition to the conditions established, each permit shall include:

(a) A list of the wastes or classes of wastes which will be treated, stored, or disposed of at the facility, and a description of the processes to be used for treating, storing, and disposing of these hazardous wastes at the facility including the design capacities of each storage, treatment, and disposal unit. Except in the case of containers, the description shall identify the particular wastes or classes of wastes which will be treated, stored, or disposed of in particular equipment or locations, e.g., "Halogenated organics may be stored in Tank A", and "Metal hydroxide sludges may be disposed of in landfill cells B, C, and D", and

(b)(1) Each permit shall include conditions necessary to achieve compliance with the Utah Solid and Hazardous Waste Act and these rules, including each of the applicable requirements specified in R315-7, R315-8, R315-13, which incorporates by reference 40 CFR 268, and R315-14, which incorporates by reference 40 CFR 266. In satisfying this provision, the Director may incorporate applicable requirements of R315-7, R315-8, R315-13, which incorporates by reference 40 CFR 268, and R315-14, which incorporates by reference 40 CFR 266, directly into the permit or establish other permit conditions that are based on these rules.

(2) Each permit issued under the Utah Solid and Hazardous Waste Act shall contain terms and conditions as the Director determines necessary to protect human health and the environment.

(3) If the Director determines that conditions in addition to those required under R307-214-2 which incorporates by reference, 40 CFR parts 63, subpart EEE, R315-8 or R315-14 are necessary, he shall include those terms and conditions in a RCRA permit for a hazardous waste combustion unit.

(c) New or reissued permits, and to the extent allowed under R315-3-4.2, modified or revoked and reissued permits, shall incorporate each of the applicable requirements referenced in R315-3-3.2 and R315-3-3.3.

(d) Incorporation. All permit conditions shall be incorporated either expressly or by reference. If incorporated by reference, a specific citation to the applicable requirements shall be given in the permit.

3.4 SCHEDULES OF COMPLIANCE

(a) The permit may, when appropriate, specify a schedule of compliance leading to compliance with these rules.

(1) Time for compliance. Any schedules of compliance under this section shall require compliance as soon as possible.

(2) Interim dates. Except as provided in R315-3-

3.4(b)(1)(ii), if a permit establishes a schedule of compliance which exceeds one year from the date of permit issuance, the schedule shall set forth interim requirements and the dates for their achievement.

(i) The time between interim dates shall not exceed one year.

(ii) If the time necessary for completion of any interim requirement is more than one year and is not readily divisible into stages for completion, the permit shall specify interim dates for the submission of reports of progress toward completion of the interim requirements and indicate a projected completion date.

(3) Reporting. The permit shall be written to require that no later than 14 days following each interim date and the final date of compliance, the permittee shall notify the Director in writing, of its compliance or noncompliance with the interim or final requirement, or submit progress reports if R315-3-3.4(a)(2)(ii) is applicable.

(b) Alternative schedules of permit compliance. An applicant or permittee may cease conducting regulated activities, by receiving a terminal volume of hazardous waste, and for treatment and storage facilities, closing pursuant to applicable requirements; and for disposal facilities, closing and conducting post-closure care pursuant to applicable requirement, rather than continue to operate and meet permit requirements as follows:

(1) If the permittee decides to cease conducting regulated activities at a given time within the term of a permit which has already been issued:

(i) The permit may be modified to contain a new or additional schedule leading to timely cessation of activities; or

(ii) The permittee shall cease conducting activities before noncompliance with any interim or final compliance schedule requirement already specified in the permit.

(2) If the decision to cease conducting regulated activities is made before issuance of a permit whose term will include the termination date, the permit shall contain a schedule leading to permit termination which will ensure timely compliance with applicable requirements.

(3) If the permittee is undecided whether to cease conducting regulated activities, the Director may issue or modify a permit to contain two schedules as follows:

(i) Both schedules shall contain an identical interim deadline requiring a final decision on whether to cease conducting regulated activities no later than a date which ensures sufficient time to comply with applicable requirements in a timely manner if the decision is to continue conducting regulated activities;

(ii) One schedule shall lead to timely compliance with applicable requirements.

(iii) The second schedule shall lead to cessation of regulated activities by a date which will ensure timely compliance with applicable requirements;

(iv) Each permit containing two schedules shall include a requirement that after the permittee has made a final decision under R315-3-3.4(b)(3)(i) it shall follow the schedule leading to compliance if the decision is to continue conducting regulated activities, and follow the schedule leading to termination if the decision is to cease conducting regulated activities.

(4) The applicant's or permittee's decision to cease conducting regulated activities shall be evidenced by a firm public commitment satisfactory to the Director, such as resolution of the board of directors of a corporation.

R315-3-4. Changes to Permit.

4.1 TRANSFER OF PERMITS

(a) A permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or revoked and reissued under R315-3-4.1(b) or R315-3-4.2(b)(2) to identify the new permittee and incorporate such other

requirements as may be necessary under the appropriate Act.

(b) Changes in the ownership or operational control of a facility may be made as a Class 1 modification with prior written approval of the Director in accordance with R315-3-4.3, which incorporates by reference 40 CFR 270.42. The new owner or operator shall submit a revised permit application no later than 90 days prior to the scheduled change. A written agreement containing a specific date for transfer of permit responsibility between the current and new permittees shall also be submitted to the Director. When a transfer of ownership or operational control occurs, the old owner or operator shall comply with the requirements of R315-8-8, which incorporates by reference 40 CFR 264, subpart H, until the new owner or operator has demonstrated that he is complying with the requirements of that subpart. The new owner or operator shall demonstrate compliance with R315-8-8, which incorporates by reference 40 CFR 264, subpart H requirements within six months of the date of the change of ownership or operational control of the facility. Upon demonstration to the Director by the new owner or operator of compliance with R315-8-8, which incorporates by reference 40 CFR 264, subpart H, the Director shall notify the old owner or operator that he no longer needs to comply with R315-8-8, which incorporates by reference 40 CFR 264, subpart H as of the date of demonstration.

4.2 MODIFICATION OR REVOCATION AND REISSUANCE OF PERMITS

When the Director receives any information, for example, inspects the facility, receives information submitted by the permittee as required in the permit see R315-3-3.1, receives a request for modification or revocation and reissuance under R315-4-1.5 or conducts review of the permit file, he may determine whether one or more of the causes listed in R315-3-4.2(a) and (b) for modification or revocation and reissuance or both exist. If cause exists, the Director may modify or revoke and reissue the permit accordingly, subject to the limitations of R315-3-4.2(c), and may request an updated application if necessary. When a permit is modified, only the conditions subject to modification are reopened. If a permit is revoked and reissued, the entire permit is reopened and subject to revision and the permit is reissued for a new term. See R315-4-1.5(c)(2). If cause does not exist under this section, the Director shall not modify or revoke and reissue the permit, except on request of the permittee. If a permit modification is requested by the permittee, the Director shall approve or deny the request according to the procedures of R315-3-4.3, which incorporates by reference 40 CFR 270.42. Otherwise, a draft permit shall be prepared and other procedures in R315-4 followed.

(a) Causes for modification. The following are causes for modification but not revocation and reissuance of permits, and the following may be causes for revocation and reissuance as well as modification under any program when the permittee requests or agrees.

(1) Alterations. There are materials and substantial alterations or additions to the approved facility or activity which occurred after permit issuance which justifies the application of permit conditions that are different or absent in the existing permit.

(2) Information. The Director has received information. Permits may be modified during their terms for this cause only if the information was not available at the time of permit issuance, other than revised rules, guidance, or test methods, and would have justified the application of different permit conditions at the time of issuance.

(3) New statutory requirements or rules. The standards or rules on which the permit was based have been changed by statute, through promulgation of new or amended standards or rules or by judicial decision after the permit was issued.

(4) Compliance schedules. The Director determined good cause exists for modification of a compliance schedule, such as

an act of God, strike, flood, or materials shortage or other events over which the permittee has little or no control and for which there is no reasonably available remedy.

(5) Notwithstanding any other provision in this section, when a permit for a land disposal facility is reviewed by the Director under R315-3-5.1(d), the Director shall modify the permit as necessary to assure that the facility continues to comply with the currently applicable requirements in these rules.

(b) Causes for modification or revocation and reissuance. The following are causes to modify, or, alternatively, revoke and reissue a permit;

(1) Cause exists for termination under R315-3-4.4 and the Director determines that modification or revocation and reissuance is appropriate.

(2) The Director has received notification as required in the permit, see R315-3-3.1(l)(3) of a proposed transfer of the permit.

(c) Facility siting. Suitability of the facility location may not be considered at the time of permit modification or revocation and reissuance unless new information or standards indicate that a threat to human health or the environment exists which was unknown at the time of permit issuance.

4.3 PERMIT MODIFICATION AT THE REQUEST OF THE PERMITTEE

The requirements of 40 CFR 270.42, including Appendix I, 2006 ed., are adopted and incorporated by reference with the following exception;

substitute "Director" for all Federal regulation references made to "Administrator";

4.4 TERMINATION OF PERMITS

(a) The following are causes for terminating a permit during its term, or for denying a permit renewal application:

(1) Noncompliance by the permittee with any condition of the permit;

(2) The permittee's failure in the application or during the permit issuance process to disclose fully all relevant facts, or the permittee's misrepresentation of any relevant facts at any time; or

(3) A determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification or termination.

(b) The Director shall follow the applicable procedures in R315-4 in terminating any permit under R315-3-4.4.

R315-3-5. Expiration and Continuation of Permits.

5.1 DURATION OF PERMITS

(a) Hazardous waste operation permits shall be effective for a fixed term not to exceed ten years.

(b) Except as provided in R315-3-5.2, the term of a permit shall not be extended by modification beyond the maximum duration specified in R315-3-5.1.

(c) The Director may issue any permit for a duration that is less than the full allowable term under this section.

(d) Each permit for a land disposal facility shall be reviewed by the Director five years after the date of permit issuance or reissuance and shall be modified as necessary, as provided in R315-3-4.2.

5.2 CONTINUATION OF EXPIRING PERMITS

(a) The conditions of an expired permit continue in force until the effective date of a new permit if:

(1) The permittee has submitted a timely application under R315-3-2.5 and the applicable requirements of R315-3-2.5 and the applicable sections in R315-3-2.6 through R315-3-2.20, which is a complete application for a new permit; and

(2) The Director through no fault of the permittee, does not issue a new permit with an effective date on or before the expiration date of the previous permit, for example, when issuance is impracticable due to time or resource constraints.

(b) Effect. Permits continued under this section remain

fully effective and enforceable.

(c) Enforcement. When the permittee is not in compliance with the conditions of the expiring or expired permit, the Director may choose to do any or all of the following:

(1) Initiate enforcement action based upon the permit which has been continued;

(2) Issue a notice of intent to deny the new permit under R315-4-1.6. If the permit is denied, the owner or operator would then be required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit;

(3) Issue a new permit under R315-4 with appropriate conditions;

(4) Take other actions authorized by these rules.

(d) State Continuation. If the permittee has submitted a timely and complete application, including timely and adequate response to any deficiency notice, for permit under applicable State law and rules, the terms and conditions of an EPA issued RCRA permit shall continue in force until the effective date of the State's issuance or denial of a State permit.

(e) Permits which have been issued under authority of the Federal Resource Conservation and Recovery Act will be administered by the State when hazardous waste program authorization becomes effective.

R315-3-6. Special Forms of Permits.

6.1 PERMITS BY RULE

Notwithstanding any other provision of R315-3 and R315-4, the following shall be deemed to have an approved hazardous waste permit if the conditions listed are met:

(a) Injection wells. The owner or operator of an injection well disposing of hazardous waste, if the owner or operator:

(1) Has a permit for underground injection issued under State or Federal law.

(2) Complies with the conditions of that permit and the requirements in R317-7, Underground Injection Control Program, for managing hazardous waste in a well.

(3) For UIC permits issued after November 8, 1984:

(i) Complies with R315-8-6.12; and

(ii) Where the UIC well is the only unit at a facility which requires a permit, complies with R315-3-2.5(d).

(b) Publicly owned treatment works. The owner or operator of a POTW which accepts hazardous waste, for treatment if the owner or operator:

(1) Has an NPDES permit;

(2) Complied with the conditions of that permit;

(3) Complies with the following rules;

(i) R315-8-2.2, Identification number;

(ii) R315-8-5.2, Use of manifest system;

(iii) R315-8-5.4, Manifest discrepancies;

(iv) R315-8-5.3, which incorporates by reference 40 CFR 264.73(a) and (b)(1), Operating record;

(v) R315-8-5.6, Biennial report;

(vi) R315-8-5.7, Unmanifested waste report; and

(vii) R315-8-6.12, For NPDES permits issued after November 8, 1984.

(4) If the waste meets all Federal, State, and local pretreatment requirements which would be applicable to the waste if it were being discharged into the POTW through a sewer, pipe, or similar conveyance.

6.2 EMERGENCY PERMITS

(a) Notwithstanding any other provision of R315-3 or R315-4, in the event the Director finds an imminent and substantial endangerment to human health or the environment the Director may issue a temporary emergency permit: (1) to a non-permitted facility to allow treatment, storage, or disposal of hazardous waste or (2) to a permitted facility to allow treatment, storage, or disposal of a hazardous waste not covered by an effective permit.

- (b) This emergency permit:
- (1) May be oral or written. If oral, it shall be followed in five days by a written emergency permit;
 - (2) Shall not exceed 90 days in duration;
 - (3) Shall clearly specify the hazardous waste to be received, and the manner and location of their treatment, storage, or disposal;
 - (4) May be terminated by the Director at any time without process if he determines that termination is appropriate to protect human health and the environment;
 - (5) Shall be accompanied by a public notice published under R315-4-1.10(b) including:
 - (i) Name and address of the office granting the emergency authorization;
 - (ii) Name and location of the permitted hazardous waste management facility;
 - (iii) A brief description of the wastes involved;
 - (iv) A brief description of the action authorized and reasons for authorizing it; and
 - (v) Duration of the emergency permit; and
 - (6) Shall incorporate, to the extent possible and not inconsistent with the emergency situation, all applicable requirements of R315-3, R315-8, and R315-14.

6.3 HAZARDOUS WASTE INCINERATOR PERMITS

When an owner or operator of a hazardous waste incineration unit becomes subject to RCRA permit requirements or demonstrates compliance with the air emission standards and limitations in R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance under R307-214-2, which incorporates by reference 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE), the requirements of R315-3-6.3 do not apply, except those provisions the Director determines are necessary to ensure compliance with R315-8-15.6(a) and R315-8-15.6(c) if the owner or operator elects to comply with R315-3-9(a)(1)(i) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the Director may apply the provisions of R315-3-6.3, on a case-by-case basis, for purposes of information collection in accordance with R315-3-2.1(j), R315-3-2.1(k), R315-3-3.3(b)(2), and R315-3-3.3(b)(3).

(a) For the purposes of determining operational readiness following completion of physical construction, the Director shall establish permit conditions, including but not limited to allowable waste feeds and operating conditions, in the permit to a new hazardous waste incinerator. These permit conditions will be effective for the minimum time required to bring the incinerator to a point of operational readiness sufficient to conduct a trial burn, not to exceed 720 hours operating time for treatment of hazardous waste. The Director may extend the duration of this operational period once, for up to 720 additional hours, at the request of the applicant when good cause is shown. The permit may be modified to reflect the extension according to R315-3-4.3, which incorporates by reference 40 CFR 270.42.

(1) Applicants shall submit a statement, with part B of the permit application, which suggests the conditions necessary to operate in compliance with the performance standards of R315-8-15.4 during this period. This statement should include, at a minimum, restrictions on waste constituents, waste feed rates and the operating parameters identified in R315-8-15.6.

(2) The Director will review this statement and any other relevant information submitted with part B of the permit and specify requirements for this period sufficient to meet the performance standards of R315-8-15.4 based on its engineering judgment.

(b) For the purpose of determining feasibility of compliance with the performance standards of R315-8-15.4, and

of determining adequate operating conditions under R315-8-15.6, the Director shall establish conditions in the permit to a new hazardous waste incinerator to be effective during the trial burn.

(1) Applicants shall propose a trial burn plan, prepared under R315-3-6.3(b)(2) with part B of the permit application.

(2) The trial burn plan shall include the following information:

(i) An analysis of each waste or mixture of wastes to be burned which includes:

(A) Heat value of the waste in the form and composition in which it will be burned.

(B) Viscosity, if applicable, or description of physical form of the waste.

(C) An identification of any hazardous organic constituents listed in R315-50-10, which incorporates by reference 40 CFR 261, Appendix VIII, which are present in the waste to be burned, except that the applicant need not analyze for constituents listed in R315-50-10, which incorporates by reference 40 CFR 261, Appendix VIII, which would reasonably not be expected to be found in the waste. The constituents excluded from analysis shall be identified, and the basis for their exclusion stated. The waste analysis shall rely on analytical techniques specified in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11 and 270.6, see R315-1-2, or other equivalent.

(D) An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by the analytical methods specified in "Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, as incorporated by reference in 40 CFR 260.11 and 270.6, see R315-1-2, or, their equivalent.

(ii) A detailed engineering description of the incinerator for which the permit is sought including:

(A) Manufacturer's name and model number of incinerator, if available.

(B) Type of incinerator.

(C) Linear dimensions of the incinerator unit including the cross sectional area of combustion chamber.

(D) Description of the auxiliary fuel system type and feed.

(E) Capacity of prime mover.

(F) Description of automatic waste feed cut-off system(s).

(G) Stack gas monitoring and pollution control equipment.

(H) Nozzle and burner design.

(I) Construction materials.

(J) Location and description of temperature, pressure, and flow indicating and control devices.

(iii) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations of the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis.

(iv) A detailed test schedule for each waste for which the trial burn is planned including date(s), duration, quantity of waste to be burned, and other factors relevant to the Director's decision under R315-3-6.3(b)(5).

(v) A detailed test protocol, including, for each waste identified, the ranges of temperature, waste feed rate, combustion gas velocity, use of auxiliary fuel, and any other relevant parameters that will be varied to affect the destruction and removal efficiency of the incinerator.

(vi) A description of, and planned operating conditions for, any emission control equipment which will be used.

(vii) Procedures for rapidly stopping waste feed, shutting down the incinerator, and controlling emissions in the event of an equipment malfunction.

(viii) All other information as the Director reasonably finds necessary to determine whether to approve the trial burn

plan in light of the purpose of this paragraph and the criteria in R315-3-6.3(b)(5).

(3) The Director, in reviewing the trial burn plan, shall evaluate the sufficiency of the information provided and may require the applicant to supplement this information, if necessary, to achieve the purposes of this paragraph.

(4) Based on the waste analysis data in the trial burn plan, the Director will specify as trial Principal Organic Hazardous Constituents (POHCs), those constituents for which destruction and removal efficiencies shall be calculated during the trial burn. These trial POHCs will be specified by the Director based on his estimate of the difficulty of incineration of the constituents identified in the waste analysis, their concentration or mass in the waste feed, and, for wastes listed in R315-2-10, the hazardous waste organic constituent or constituents identified in R315-50-9 as the basis for listing.

(5) The Director shall approve a trial burn plan if he finds that:

(i) The trial burn is likely to determine whether the incinerator performance standard required by R315-8-15.4 can be met;

(ii) The trial burn itself will not present an imminent hazard to human health or the environment;

(iii) The trial burn will help the Director to determine operating requirements to be specified under R315-8-15.6; and

(iv) The information sought in R315-3-6.3(b)(5)(i) and (ii) cannot reasonably be developed through other means.

(6) The Director shall send a notice to all persons on the facility mailing list as set forth in R315-4-1.10(c)(1)(iv) and to the appropriate units of State and local government as set forth in R315-4-1.10(c)(1)(v) announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the Director has issued such notice.

(i) This notice shall be mailed within a reasonable time period before the scheduled trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the Division.

(ii) This notice shall contain:

(A) The name and telephone number of the applicant's contact person;

(B) The name and telephone number of the Division;

(C) The location where the approved trial burn plan and any supporting documents can be reviewed and copied; and

(D) An expected time period for commencement and completion of the trial burn.

(7) During each approved trial burn, or as soon after the burn as is practicable, the applicant shall make the following determinations:

(i) A quantitative analysis of the trial POHCs in the waste feed to the incinerator.

(ii) A quantitative analysis of the exhaust gas for the concentration and mass emissions of the trial POHC, oxygen (O₂) and hydrogen chloride (HCl).

(iii) A quantitative analysis of the scrubber water, if any, ash residues, and other residues, for the purpose of estimating the fate of the trial POHCs.

(iv) A computation of destruction and removal efficiency (DRE), in accordance with the DRE formula specified in R315-8-15.4(a).

(v) If the HCl emission rate exceeds 1.8 kilograms of HCl per hour (4 pounds per hour), a computation of HCl removal efficiency in accordance with R315-8-15.4(b).

(vi) A computation of particulate emissions in accordance with R315-8-15.4(c).

(vii) An identification of sources of fugitive emissions and their means of control.

(viii) A measurement of average, maximum, and minimum temperatures and combustion gas velocity.

(ix) A continuous measurement of carbon monoxide (CO) in the exhaust gas.

(x) All other information as the Director may specify as necessary to ensure that the trial burn will determine compliance with the performance standards in R315-8-15.4 and to establish the operating conditions required by R315-8-15.6 as necessary to meet that performance standard.

(8) The applicant shall submit to the Director a certification that the trial burn has been carried out in accordance with the approved trial burn plan, and shall submit the results of all the determinations required in R315-3-6.3(b)(7). This submission shall be made within 90 days of completion of the trial burn, or later if approved by the Director.

(9) All data collected during any trial burn shall be submitted to the Director following the completion of the trial burn.

(10) All submissions required by this paragraph shall be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report under R315-3-2.2.

(11) Based on the results of the trial burn, the Director shall set the operating requirements in the final permit according to R315-8-15.6. The permit modification shall proceed according to R315-3-4.3, which incorporates by reference 40 CFR 270.42.

(c) For the purpose of allowing operation of a new hazardous waste incinerator following completion of the trial burn and prior to final modification of the permit conditions to reflect the trial burn results, the Director may establish permit conditions, including but no limited to allowable waste feeds and operating conditions sufficient to meet the requirements of R315-8-15.6, in the permit to a new hazardous waste incinerator. These permit conditions will be effective for the minimum time required to complete sample analysis, data computation and submission of the trial burn results by the applicant, and modification of the facility permit by the Director.

(1) Applicants shall submit a statement, with part B of the permit application, which identifies the conditions necessary to operate in compliance with the performance standards of R315-8-15.4 during this period. This statement should include, at a minimum, restrictions on waste constituents, waste feed rates and the operating parameters identified in R315-8-15.6.

(2) The Director will review this statement and any other relevant information submitted with part B of the permit application and specify those requirements for this period most likely to meet the performance standards of R315-8-15.4 based on its engineering judgment.

(d) For the purposes of determining feasibility of compliance with the performance standards of R315-8-15.4 and of determining adequate operating conditions under R315-8-15.6, the applicant for a permit for an existing hazardous waste incinerator shall prepare and submit a trial burn plan and perform a trial burn in accordance with R315-3-2.10(b) and R315-3-6.3(b)(2) through (b)(5) and (b)(7) through (b)(10) or, instead, submit other information as specified in R315-3-2.10(c). The Director shall announce his or her intention to approve the trial burn plan in accordance with the timing and distribution requirements of R315-3-6.3(b)(6). The contents of the notice shall include: the name and telephone number of a contact person at the facility; the name and telephone number of a contact office at the Division; the location where the trial burn plan and any supporting documents can be reviewed and copied; and a schedule of the activities that are required prior to permit issuance, including the anticipated time schedule for agency approval of the plan and the time period during which the trial burn would be conducted. Applicants submitting information under R315-3-2.10(a) are exempt from compliance with R315-8-15.4 and R315-8-15.6 and, therefore, are exempt from the

requirement to conduct a trial burn. Applicants who submit trial burn plans and receive approval before submission of a permit application shall complete the trial burn and submit the results, specified in R315-3-6.3(b)(7), with part B of the permit application. If completion of this process conflicts with the date set for submission of the part B application, the applicant shall contact the Director to establish a later date for submission of the part B application or the trial burn results. Trial burn results shall be submitted prior to issuance of the permit. When the applicant submits a trial burn plan with part B of the permit application, the Director will specify a time period prior to permit issuance in which the trial burn shall be conducted and the results submitted.

6.4 PERMITS FOR LAND TREATMENT DEMONSTRATIONS USING FIELD TEST OR LABORATORY ANALYSES

(a) For the purpose of allowing an owner or operator to meet the treatment demonstration requirements of R315-8-13.3, the Director may issue a treatment demonstration permit. The permit shall contain only those requirements necessary to meet the standards in R315-8-13.3(c). The permit may be issued either as a treatment or disposal approval covering only the field test or laboratory analyses, or as a two-phase facility approval covering the field tests, or laboratory analyses, and design, construction, operation and maintenance of the land treatment unit.

(1) The Director may issue a two-phase facility permit if they find that, based on information submitted in part B of the application, substantial, although incomplete or inconclusive, information already exists upon which to base the issuance of a facility permit.

(2) If the Director finds that not enough information exists upon which they can establish permit conditions to attempt to provide for compliance with all the requirements of R315-8-13, he shall issue a treatment demonstration permit covering only the field test or laboratory analyses.

(b) If the Director finds that a phased permit may be issued, he will establish, as requirements in the first phases of the facility permit, conditions for conducting the field tests or laboratory analyses. These permit conditions will include design and operating parameters, including the duration of the tests or analyses and, in the case of field tests, the horizontal and vertical dimensions of the treatment zone, monitoring procedures, post-demonstration cleanup activities, and any other conditions which the Director finds may be necessary under R315-8-13.3(c). The Director will include conditions in the second phase of the facility permit to attempt to meet all R315-8-13 requirements pertaining to unit design, construction, operation, and maintenance. The Director will establish these conditions in the second phase of the permit based upon the substantial but incomplete or inconclusive information contained in the part B application.

(1) The first phase of the permit will be effective as provided in R315-4-1.15.

(2) The second phase of the permit will be effective as provided in R315-3-6.4(d).

(c) When the owner or operator who has been issued a two-phase permit has completed the treatment demonstration, he shall submit to the Director certification, signed by a person authorized to sign a permit application or report under R315-3-2.2, that the field tests or laboratory analyses have been carried out in accordance with the conditions specified in phase one of the permit for conducting the tests or analyses. The owner or operator shall also submit all data collected during the field tests or laboratory analyses within 90 days of completion of those tests or analyses unless the Director approves a later date.

(d) If the Director determines that the results of the field tests or laboratory analyses meet the requirements of R315-8-13.3, he will modify the second phase of the permit to

incorporate any requirement necessary for operation of the facility in compliance with R315-8-13, based upon the results of the field tests or laboratory analyses.

(1) This permit modification may proceed under R315-3-4.3, which incorporates by reference 40 CFR 270.42, or otherwise will proceed as a modification under R315-3-4.2(a)(2). If such modifications are necessary, the second phase of the permit will become effective only after those modifications have been made.

(2) If no modification of the second phase of the permit are necessary, the Director will give notice of his final decision to the permit applicant and to each person who submitted written comments on the phased permit or who requested notice of final decision on the second phase of the permit. The second phase of the permit then will become effective as specified in R315-4-1.15(b).

6.5 RESEARCH, DEVELOPMENT, AND DEMONSTRATION PERMITS

(a) The Director may issue a research, development, and demonstration permit for any hazardous waste treatment facility which proposes to utilize an innovative and experimental hazardous waste treatment technology or process for which permit standards for any experimental activity have not been promulgated under R315-8 and R315-14. Any such permits shall include such terms and conditions as will assure protection of human health and the environment. These permits:

(1) Shall provide for the construction of these facilities as necessary, and for operation of the facility for not longer than one year unless renewed as provided in R315-3-6.5(d), and

(2) Shall provide for the receipt and treatment by the facility of only those types and quantities of hazardous waste which the Director deems necessary for purposes of determining the efficiency and performance capabilities of the technology or process and the effects of the technology or process on human health and the environment; and

(3) Shall include all requirements as the Director deems necessary to protect human health and the environment, including, but not limited to requirements regarding monitoring, operation, financial responsibility, closure, and remedial action, and all requirements as the Director deems necessary regarding testing and providing of information to the Director with respect to the operation of the facility.

(b) For the purpose of expediting review and issuance of permit under this section, the Director may, consistent with the protection of human health and the environment, modify or waive permit application and permit issuance requirements in R315-3 and R315-4 except that there may be no modification or waiver of regulations regarding financial responsibility, including insurance, or of procedures regarding public participation.

(c) The Director may order an immediate termination of all operations at the facility at any time they determine that termination is necessary to protect human health and the environment.

(d) Any permit issued under this section may be renewed not more than three times. Each renewal shall be for a period of not more than one year.

6.6 PERMITS FOR BOILERS AND INDUSTRIAL FURNACES BURNING HAZARDOUS WASTE

The requirements of 40 CFR 270.66, 2006 ed., are adopted and incorporated by reference with the following exception:

"Director" means the Director of the Division of Waste Management and Radiation Control.

6.7 REMEDIAL ACTION PLANS

Remedial Action Plans (RAPs) are special forms of permits that are regulated under R315-3-8, which incorporates by reference 40 CFR 270, subpart H.

R315-3-7. Interim Status.

7.1 QUALIFYING FOR INTERIM STATUS

(a) Any person who owns or operates an "existing hazardous waste management facility" or a facility in existence on the effective date of statutory or regulatory amendments under the State or Federal Act that render the facility subject to the requirement to have a RCRA permit or State permit shall have interim status and shall be treated as having been issued a permit to the extent he or she has:

(1) Complied with the Federal requirements of section 3010(a) of RCRA pertaining to notification of hazardous waste activity or the notification requirements of these rules.

Comment: Some existing facilities may not be required to file a notification under section 3010(a) of RCRA. These facilities may qualify for interim status by meeting R315-3-7.1(a)(2).

(2) Complied with the requirements of 40 CFR 270.10 or R315-3-2.1 governing submission of part A applications;

(b) Failure to qualify for interim status. If the Director has reason to believe upon examination of a part A application that it fails to meet the requirements of R315-3-2.4, the Director shall notify the owner or operator in writing of the apparent deficiency. The notice shall specify the grounds for the Director's belief that the application is deficient. The owner or operator shall have 30 days from receipt to respond to the notification and to explain or cure the alleged deficiency in his part A application. If, after the notification and opportunity for response, the Director determines that the application is deficient he may take appropriate enforcement action.

(c) R315-3-7.1(a) shall not apply to any facility which has been previously denied a permit or if authority to operate the facility under State or Federal authority has been previously terminated.

7.2 OPERATION DURING INTERIM STATUS

(a) During the interim status period the facility shall not:

(1) Treat, store, or dispose of hazardous waste not specified in part A of the permit or permit application;

(2) Employ processes not specified in part A of the permit or permit application; or

(3) Exceed the design capacities specified in part A of the permit or permit application.

(b) Interim status standards. During interim status, owners or operators shall comply with the interim status standards in R315-7.

7.3 CHANGES DURING INTERIM STATUS

(a) Except as provided in R315-3-7.3(b), the owner or operator of an interim status facility may make the following changes at the facility:

(1) Treatment, storage, or disposal of new hazardous wastes not previously identified in part A of the permit application and, in the case of newly listed or identified wastes, addition of the units being used to treat, store, or dispose of the hazardous wastes on the effective date of the listing or identification if the owner or operator submits a revised part A permit application prior to treatment, storage, or disposal;

(2) Increases in the design capacity of processes used at the facility if the owner or operator submits a revised part A permit application prior to a change, along with a justification explaining the need for the change, and the Director approves the changes because:

(i) There is a lack of available treatment, storage, or disposal capacity at other hazardous waste management facilities, or

(ii) The change is necessary to comply with a Federal, State, or local requirement.

(3) Changes in the processes for the treatment, storage, or disposal of hazardous waste or addition of processes if the owner or operator submits a revised part A permit application prior to such change, along with a justification explaining the need for the change, and the Director approves the change

because:

(i) The change is necessary to prevent a threat to human health and the environment because of an emergency situation, or

(ii) The change is necessary to comply with a Federal, State, or local requirement.

(4) Changes in the ownership or operational control of a facility if the new owner or operator submits a revised part A permit application no later than 90 days prior to the scheduled change. When a transfer of operational control of a facility occurs, the old owner or operator shall comply with the requirements of R315-7-15, which incorporates by reference 40 CFR 265 subpart H, until the new owner or operator has demonstrated to the Director that he is complying with the requirements of that subpart. The new owner or operator shall demonstrate compliance with R315-7-15, which incorporates by reference 40 CFR 265 subpart H, within six months of the date of the change in ownership or operational control of the facility. Upon demonstration to the Director by the new owner or operator of compliance with R315-7-15, which incorporates by reference 40 CFR 265 subpart H, the Director shall notify the old owner or operator in writing that he no longer needs to comply with R315-7-15, which incorporates by reference 40 CFR 265 subpart H, as of the date of demonstration. All other interim status duties are transferred effective immediately upon the date of the change in ownership or operational control of the facility.

(5) Changes made in accordance with an interim status corrective action order issued, under 19-6-105(d), or by EPA under section 3008(h) RCRA or other Federal authority or by a court in a judicial action brought by EPA or by an authorized State. Changes under this paragraph are limited to the treatment, storage, or disposal of solid waste from releases that originate within the boundary of the facility.

(6) Addition of newly regulated units for the treatment, storage, or disposal of hazardous waste if the owner or operator submits a revised part A permit application on or before the date on which the unit becomes subject to the new requirements.

(b) Except as specifically allowed under this paragraph, changes listed under R315-3-7.3(a) may not be made if they amount to reconstruction of the hazardous waste management facility. Reconstruction occurs when the capital investment in the changes to the facility exceeds 50 percent of the capital cost of a comparable entirely new hazardous waste management facility. If all other requirements are met, the following changes may be made even if they amount to a reconstruction:

(1) Changes made solely for the purposes of complying with the requirements of R315-7-17, which incorporates by reference 40 CFR 265.193, for tanks and ancillary equipment.

(2) If necessary to comply with Federal, State, or local requirements, changes to an existing unit, changes solely involving tanks or containers, or addition of replacement surface impoundments that satisfy the standards of section 3004(o) of RCRA.

(3) Changes that are necessary to allow owners or operators to continue handling newly listed or identified hazardous wastes that have been treated, stored, or disposed of at the facility prior to the effective date of the rule establishing the new listing or identification.

(4) Changes during closure of a facility or of a unit within a facility made in accordance with an approved closure plan.

(5) Changes necessary to comply with an interim status corrective action order issued, under subsection 19-6-105(d), or by EPA under section 3008(h) of RCRA or other Federal authority, or by a court in a judicial proceeding brought by EPA, provided that such changes are limited to the treatment, storage, or disposal of solid waste from releases that originate within the boundary of the facility.

(6) Changes to treat or store, in tanks or containers, or

containment buildings, hazardous wastes subject to land disposal restrictions imposed by R315-13, which incorporates by reference 40 CFR 268, or R315-8, provided that these changes are made solely for the purpose of complying with R315-13, which incorporates by reference 40 CFR 268, or R315-8.

(7) Addition of newly regulated units under R315-3-7.3(a)(6).

(8) Changes necessary to comply with standards under 40 CFR part 63, subpart EEE - National Emission Standards for Hazardous Air Pollutants From Hazardous Waste Combustors.

7.4 TERMINATION OF INTERIM STATUS

Interim status terminates when:

(a) Final administrative disposition of a permit application, except an application for a remedial action plan (RAP) under R315-3-8, which incorporates by reference 40 CFR 270, subpart H, is made.

(b) Interim status is terminated as provided in R315-3-2.1(d)(5).

(c) For owners or operators of each land disposal facility which has been granted interim status prior to November 8, 1984, on November 8, 1985, unless:

(1) The owner or operator submits a part B application for a permit for a facility prior to that date; and

(2) The owner or operator certifies that the facility is in compliance with all applicable groundwater monitoring and financial responsibility requirements.

(d) For owners or operators of each land disposal facility which is in existence on the effective date of statutory or regulatory amendments under the Federal Act that render the facility subject to the requirement to have a RCRA permit and which is granted interim status, twelve months after the date on which the facility first becomes subject to the permit requirement unless the owner or operator of the facility:

(1) Submits a part B application for a permit for the facility before the date 12 months after the date on which the facility first becomes subject to the permit requirement; and

(2) Certifies that the facility is in compliance with all applicable groundwater monitoring and financial responsibility requirements.

(e) For owners or operators of any land disposal unit that is granted authority to operate under R315-3-7.3(a)(1), (2) or (3), on the date 12 months after the effective date of the requirement, unless the owner or operator certifies that this unit is in compliance with all applicable groundwater monitoring and financial responsibility requirements.

(f) For owners or operators of each incinerator facility which has achieved interim status prior to November 8, 1984, interim status terminates on November 8, 1989, unless the owner or operator of the facility submits a part B application for a permit for an incinerator facility by November 8, 1986.

(g) For owners or operators of any facility, other than a land disposal or an incinerator facility, which has achieved interim status prior to November 8, 1984, interim status terminates on November 8, 1992, unless the owner or operator of the facility submits a part B application for a hazardous waste permit for the facility by November 8, 1988.

R315-3-8. Remedial Action Plans (RAPs).

The requirements of 40 CFR 270, subpart H, which includes sections 270.79 through 270.230, 2000 ed., are adopted and incorporated by reference with the following exception:

"Director" means Director of the Division of Waste Management and Radiation Control.

R315-3-9. Integration with Maximum Achievable Control Technology (MACT) Standards.

9.1 OPTIONS FOR INCINERATORS AND CEMENT AND LIGHTWEIGHT AGGREGATE KILNS TO MINIMIZE

EMISSIONS FROM STARTUP, SHUTDOWN, AND MALFUNCTION EVENTS

(a) Facilities with existing permits. (1) Revisions to permit conditions after documenting compliance with MACT. The owner or operator of a hazardous waste-permitted incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace may request that the Director address permit conditions that minimize emissions from startup, shutdown, and malfunction events under any of the following options when requesting removal of permit conditions that are no longer applicable according to R315-8-15.1(b) and R315-14-7, which incorporates by reference 40 CFR 266.100(b):

(i) Retain relevant permit conditions. Under this option, the Director will:

(A) Retain permit conditions that address releases during startup, shutdown, and malfunction events, including releases from emergency safety vents, as these events are defined in the facility's startup, shutdown, and malfunction plan required under R307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2); and

(B) Limit applicability of those permit conditions only to when the facility is operating under its startup, shutdown, and malfunction plan.

(ii) Revise relevant permit conditions.

(A) Under this option, the Director will:

(1) Identify a subset of relevant existing permit requirements, or develop alternative permit requirements, that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history.

(2) Retain or add these permit requirements to the permit to apply only when the facility is operating under its startup, shutdown, and malfunction plan.

(B) Changes that may significantly increase emissions.

(1) You must notify the Director in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. You must notify the Director of such changes within five days of making such changes. You must identify in the notification recommended revisions to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.

(2) The Director may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents either:

(i) Upon permit renewal, or, if warranted;

(ii) By modifying the permit under R315-3-4.2(a) or R315-3-4.3, which incorporates by reference 40 CFR 270.42.

(iii) Remove permit conditions. Under this option:

(A) The owner or operator must document that the startup, shutdown, and malfunction plan required under R307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2), has been approved by the Director under R307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2)(ii)(B); and

(B) The Director will remove permit conditions that are no longer applicable according to R315-8-15.1(b) and R315-14-7, which incorporates by reference 40 CFR 266.100(b).

(2) Addressing permit conditions upon permit reissuance. The owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that has conducted a comprehensive performance test and submitted to the Director a Notification of Compliance documenting compliance with the

standards of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE, may request in the application to reissue the permit for the combustion unit that the Director control emissions from startup, shutdown, and malfunction events under any of the following options:

(i) RCRA option A.

(A) Under this option, the Director will:

(1) Include, in the permit, conditions that ensure compliance with R315-8-15.6(a) and (c) or R315-14-7, which incorporates by reference 40 CFR 266.102(e)(1) and (e)(2)(iii), to minimize emissions of toxic compounds from startup, shutdown, and malfunction events, including releases from emergency safety vents; and

(2) Specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan.; or

(ii) RCRA option B.

(A) Under this option, the Director will:

(1) Include, in the permit conditions, that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history; and

(2) Specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan.

(B) Changes that may significantly increase emissions.

(1) You must notify the Director in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. You must notify the Director of such changes within five days of making such changes. You must identify in the notification recommended revisions to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.

(2) The Director may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents either:

(i) Upon permit renewal, or, if warranted;

(ii) By modifying the permit under R315-3-4.2(a) or R315-3-4.3, which incorporates by reference 40 CFR 270.42; or

(iii) CAA option. Under this option:

(A) The owner or operator must document that the startup, shutdown, and malfunction plan required under R307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2), has been approved by the Director under R307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2)(ii)(B); and

(B) The Director will omit from the permit conditions that are not applicable under R315-8-15.1(b) and R315-14-7, which incorporates by reference 40 CFR 266.100(b).

(b) Interim status facilities.

(1) Interim status operations. In compliance with R315-7-22 and R315-14-7, which incorporates by reference 40 CFR 266.100(b), the owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of R315-7 or R315-14 may control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options after conducting a comprehensive performance test and submitting to the Director a Notification of Compliance documenting compliance with the standards of R307-214-2, which incorporates by reference 40 CFR 63, subpart EEE:

(i) RCRA option. Under this option, the owner or operator continues to comply with the interim status emission standards

and operating requirements of R315-7 or R315-14 relevant to control of emissions from startup, shutdown, and malfunction events. Those standards and requirements apply only during startup, shutdown, and malfunction events; or

(ii) CAA option. Under this option, the owner or operator is exempt from the interim status standards of R315-7 or R315-14 relevant to control of emissions of toxic compounds during startup, shutdown, and malfunction events upon submission of written notification and documentation to the Director that the startup, shutdown, and malfunction plan required under R307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2), has been approved by the Director under R307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2)(ii)(B).

(2) Operations under a subsequent hazardous waste permit. When an owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of R315-7 or R315-14 submits a hazardous waste permit application, the owner or operator may request that the Director control emissions from startup, shutdown, and malfunction events under any of the options provided by R315-3-9(a)(2)(i), (a)(2)(ii), or (a)(2)(iii).

(c) new units that become subject to RCRA permit requirements shall control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options:

(1) comply with the requirements specified in R315-307-214-2, which incorporates by reference 40 CFR 63.1206(c)(2); or

(2) request to include in the RCRA Permit, conditions that ensure emissions are minimized from startup, shutdown, and malfunction events based on review of information including the source's startup, shutdown, and malfunction plan and design. The Director will specify that these permit conditions apply only when the facility is operating under its startup, shutdown, and malfunction plan.

KEY: hazardous waste

April 25, 2013

Notice of Continuation July 13, 2011

19-6-105

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-4. Procedures for Decision making.

R315-4-1. General Program Requirements.

1.3 APPLICATION FOR A PERMIT

(a) If the Director decides that a site visit is necessary for any reason in conjunction with the processing of an application, he shall notify the applicant and a reasonable date shall be scheduled.

(b) The effective date of an application is the date on which the Director notifies the applicant that the application is complete as provided in R315-3-2.1(c).

(c) For each application from a major new hazardous waste management facility, the Director shall no later than the effective date of the application, prepare and mail to the applicant a project decision schedule. The schedule shall specify target dates by which the Director intends to:

- (1) Prepare a draft permit;
- (2) Give public notice;
- (3) Complete the public comment period, including any public hearing; and
- (4) Issue a final permit.

1.5 MODIFICATION, REVOCATION AND REISSUANCE, OR TERMINATION OF PERMITS

(a) Permits may be modified, revoked and reissued, or terminated either at the request of any interested person, including the permittee, or upon the Director's initiative. However, permits may only be modified, revoked and reissued, or terminated for the reasons specified in R315-3-4.2 or R315-3-4.4. All requests shall be in writing and shall contain facts or reasons supporting the request.

(b) If the Director decides the request is not justified, he shall send the requester a brief written response giving a reason for the decision. Denials of requests for modification, revocation and reissuance, or termination are not subject to public notice, comment, or hearings. Denials by the Director may be appealed to the Board under R315-12-3 by filing a Request for Agency Action pursuant to R315-12-3.1.

(c)(1) If the Director tentatively decides to modify or revoke and reissue a permit under R315-3-4.2 or R315-3-4.3, which incorporates by reference 40 CFR 270.42(c), he shall prepare a draft permit under R315-4-1.6 incorporating the proposed changes. The Director may request additional information and, in the case of a modified permit, may require the submission of an updated permit application. In the case of revoked and reissued permits, the Director shall require the submission of a new application.

(2) In a permit modification under this section, only those conditions to be modified shall be reopened when a new draft permit is prepared. All other aspects of the existing permit shall remain in effect for the duration of the unmodified permit. When a permit is revoked and reissued under this section, the entire permit is reopened just as if the permit had expired and was being reissued. During any revocation and reissuance proceeding, the permittee shall comply with all conditions of the existing permit until a new final permit is reissued.

(3) Classes 1 and 2 modifications, as defined in R315-3-4.3, which incorporates by reference 40 CFR 270.42(a) and (b), are not subject to the requirements of this section.

(d) If the Director tentatively decides to terminate a permit under R315-3-4.4, he shall issue a notice of intent to terminate. A notice of intent to terminate is a type of draft permit which follows the same procedures as any draft permit prepared under R315-4-1.6.

1.6 DRAFT PERMIT

(a) Once an application is complete, the Director shall tentatively decide whether to prepare a draft permit or to deny the application.

(b) If the Director tentatively decides to deny the permit,

he shall issue a notice of intent to deny. A notice of intent to deny the permit application is a type of draft permit which follows the same procedures as any draft permit prepared under this section. If the Director's final decision is that the tentative decision to deny the permit application was incorrect, he shall withdraw the notice of intent to deny and proceed to prepare a draft permit under R315-4-1.6(c).

(c) If the Director decides to prepare a draft permit, he shall prepare a draft permit that contains the following information:

- (1) All conditions under R315-3-3.1 and R315-3-3.3;
- (2) All compliance schedules under R315-3-3.4;
- (3) All monitoring requirements under R315-3-3.2; and
- (4) Standards for treatment, storage, or disposal or all and other permit conditions under R315-3-3.1.

(d) All draft permits prepared by the Director under this section shall be publicly noticed and made available for public comment. The Director shall give notice of opportunity for a public hearing, issue a final decision, and respond to comments.

1.8 FACT SHEET REQUIRED

(a) A fact sheet shall be prepared by the Director for every draft permit. The fact sheet shall briefly set forth the principal facts and the significant factual, legal, methodological and policy questions considered in preparing the draft permit. The Director shall send this fact sheet to the applicant and, on request, to any other person.

(b) The fact sheet shall include, when applicable:

(1) A brief description of the type of facility or activity which is the subject of the draft permit.

(2) The type and quantity of wastes, fluids, or pollutants which are proposed to be or are being treated, stored, disposed of, injected, emitted, or discharged.

(3) A brief summary of the basis of the draft permit conditions including references to applicable statutory or regulatory provisions and appropriate supporting references.

(4) Reasons why any requested variance or alternatives to required standards do or do not appear justified.

(5) A description of the procedures for reaching a final decision on the draft permit including:

(i) The beginning and ending dates of the comment period under R315-4-1.10 and the address where comments will be received;

(ii) Procedures for requesting a hearing and the nature of that hearing; and

(iii) Any other procedures by which the public may participate in the final decision.

(6) Name and telephone number of a person to contact for additional information.

1.10 PUBLIC NOTICE OF PERMIT ACTIONS AND PUBLIC COMMENT PERIOD

(a) Scope.

(1) The Director shall give public notice that the following actions have occurred:

(i) The permit application has been tentatively denied under R315-4-1.6(b);

(ii) A draft permit has been prepared under R315-4-1.6(c);

(iii) A hearing has been scheduled under R315-4-1.12; or

(iv) An appeal has been granted.

(2) No public notice is required when a request for a permit modification, revocation and reissuance, or termination is denied under R315-4-1.5(b). Written notice of that denial shall be given to the requestor and to the permittee.

(3) Public notices may describe more than one permit or permit action.

(b) Timing.

(1) Public notice of the preparation of a draft permit, including a notice of intent to deny a permit application, required under R315-4-1.10(a), shall allow at least 45 days for public comment.

(2) Public notice of a public hearing shall be given at least 30 days before the hearing. Public notice of the hearing may be given at the same time as public notice of the draft permit and the two notices may be combined.

(c) Methods.

Public notices of activities described in R315-4-1.10(a)(1) shall be given by the following methods:

(1) By mailing a copy of a notice to the following persons:

(i) The applicant;

(ii) Any other agency which the Director knows has issued or is required to issue a permit, for the same facility or activity including EPA;

(iii) Federal and State agencies with jurisdiction over fish, and wildlife resources, State Historic Preservation Officers, and other appropriate government authorities;

(iv) Persons on a mailing list developed by:

(A) Including those who request in writing to be on the list;

(B) Soliciting persons for area lists from participants in past permit proceedings in the area of the facility; and

(C) Notifying the public of the opportunity to be put on the mailing list through periodic publication in the public press and in regional- and state-funded newsletters, environmental bulletins, or law journals. The Director may update the mailing list by requesting written indication of continued interest from those listed. The Director may delete from the list the name of any person who fails to respond to a request from the Director to remain on the mailing list; and

(v)(A) To any unit of local government having jurisdiction over the area where the facility is proposed to be located;

(B) To each State agency having any authority under State law with respect to the construction or operation of the facility.

(2) Publication of a notice in a daily or weekly newspaper within the area affected by the facility or activity and broadcast over local radio stations;

(3) In a manner constituting legal notice to the public under State law; and

(4) Any other method reasonably calculated to give actual notice of the action in question to the person potentially affected by it, including press releases or any other forum or medium to elicit public participation.

(d)(1) All public notices issued under this section shall contain the following minimum information:

(i) Name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit;

(ii) A brief description of the business conducted at the facility or activity described in the permit application or draft permit;

(iii) Name, address and telephone number of a person from whom interested persons may obtain further information, including copies of the draft permit or fact sheet, and the application;

(iv) A brief description of the comment procedures required by R315-4-1.11 and R315-4-1.12, and the time and place of any hearing that will be held, including a statement of procedures to request a hearing, unless a hearing has already been scheduled and other procedures by which the public may participate in the final permit decision;

(v) Any additional information considered necessary or proper; and

(vi) Name and address of the office processing the permit action for which notice is being given.

(2) Public notices of hearings. In addition to the general public notice described in R315-4-1.10(d)(1), the public notice of a hearing under R315-4-1.12, shall contain the following information:

(i) Reference to the date of previous public notices relating the permit;

(ii) Date, time, and place of the hearing;

(iii) A brief description of the nature and purpose of the hearing, including the applicable rules and procedures; and

(e) In addition to the general public notice described in R315-4-1.10(d)(1), all persons identified in R315-4-1.10(c)(1)(i), (ii), and (iii) shall be mailed a copy of the fact sheet.

1.11 PUBLIC COMMENTS AND REQUESTS FOR PUBLIC HEARINGS

During the public comment period provided under R315-4-1.10, any interested person may submit written comments on the draft permit and may request a public hearing, if no hearing has already been scheduled. A request for a public hearing shall be in writing and shall state the nature of the issues proposed to be raised in the hearing. All comments shall be considered in making the final decision and shall be answered as provided in R315-4-1.17.

1.12 PUBLIC HEARINGS

(a)(1) The Director shall hold a public hearing whenever he finds, on the basis of requests, a significant degree of public interest in a draft permit.

(2) The Director may also hold a public hearing at his discretion, whenever, for instance, a hearing might clarify one or more issues involved in the permit decision.

(3)(i) The Director shall hold a public hearing whenever he receives written notice of opposition to a draft permit and a request for a hearing within 45 days of public notice under R315-4-1.10(b).

(ii) Whenever possible the Director shall schedule a hearing under this section at a location convenient to the nearest population center to the proposed facility.

(4) Public notice of the hearing shall be given as specified in R315-4-1.10.

(b) Any person may submit oral or written statements and data concerning the draft permit. Reasonable limits may be set upon the time allowed for oral statements, and the submission of statements in writing may be required. The public comment period under R315-4-1.10 shall automatically be extended to the close of any public hearing under this section. The hearing officer may also extend the comment period by so stating at the hearing.

(c) A tape recording or written transcript of the hearing shall be made available to the public.

1.15 ISSUANCE AND EFFECTIVE DATE OF PERMIT

(a) After the close of the public comment period under R315-4-1.10 on a draft permit, the Director shall issue a final permit decision (or a decision to deny a permit for the active life of a hazardous waste management facility or unit under R315-3-2.20). The Director shall notify the applicant and each person who has submitted written comments or requested notice of the final permit decision. This notice shall include reference to the procedures for appealing a decision on a hazardous waste permit or a decision to terminate a hazardous waste permit. For the purposes of R315-4-1.15, a final permit decision means a final decision to issue, deny, modify, revoke and reissue, or terminate a permit.

(b) A final permit decision (or a decision to deny a permit for the active life of a hazardous waste management facility or unit under R315-3-2.20) shall become effective upon issuance unless:

(1) A later effective date is specified in the decision; or

(2) The permit decision is challenged under R305-7, Part 2 and a stay of the decision is granted under R315-12-8.

1.17 RESPONSE TO COMMENTS

(a) At the time that any final permit decision is issued, the Director shall issue a response to comments. This response shall:

(1) Specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons

for the change; and

(2) Briefly describe and respond to all significant comments on the draft permit or permit application raised during the public comment period, or during any hearing.

(b) The response to comments shall be available to the public.

R315-4-2. Specific Procedures Applicable to Hazardous Waste Permits.

2.31 PRE-APPLICATION PUBLIC MEETING AND NOTICE

(a) Applicability. The requirements of this section shall apply to all part B applications seeking initial permits for hazardous waste management units. The requirements of this section shall also apply to part B applications seeking renewal of permits for such units, where the renewal application is proposing a significant change in facility operations. For the purposes of this section, a "significant change" is any change that would qualify as a class 3 permit modification under R315-3-4.3, which incorporates by reference 40 CFR 270.42. The requirements of this section do not apply to permit modifications under R315-3-4.3, which incorporates by reference 40 CFR 270.42, or to applications that are submitted for the sole purpose of conducting post-closure activities or post-closure activities and corrective action at a facility.

(b) Prior to the submission of a part B permit for a facility, the applicant shall hold at least one meeting with the public in order to solicit questions from the community and inform the community of proposed hazardous waste management activities. The applicant shall post a sign-in sheet or otherwise provide a voluntary opportunity for attendees to provide their names and addresses.

(c) The applicant shall submit a summary of the meeting, along with the list of attendees and their addresses developed under R315-4-2.31(b), and copies of any written comments or materials submitted at the meeting, to the Director as a part of the part B application in accordance with R315-3-2.5(b).

(d) The applicant shall provide public notice of the pre-application meeting at least 30 days prior to the meeting. The applicant shall maintain, and provide to the Division upon request, documentation of the notice.

(1) The applicant shall provide public notice in all of the following forms:

(i) A newspaper advertisement. The applicant shall publish a notice, fulfilling the requirements in R315-4-2.31(d)(2), in a newspaper of general circulation in the county or equivalent jurisdiction that hosts the proposed location of the facility. In addition, the Director shall instruct the applicant to publish the notice in newspapers of general circulation in adjacent counties or equivalent jurisdictions, where the Director determines that such publication is necessary to inform the affected public. The notice shall be published as a display advertisement.

(ii) A visible and accessible sign. The applicant shall post a notice on a clearly marked sign at or near the facility, fulfilling the requirements in R315-4-2.31(d)(2). If the applicant places the sign on the facility property, then the sign shall be large enough to be readable from the nearest point where the public would pass by the site.

(iii) A broadcast media announcement. The applicant shall broadcast a notice, fulfilling the requirements in R315-4-2.31(d)(2), at least once on at least one local radio station or television station. The applicant may employ another medium with prior approval from the Director.

(iv) A notice to the permitting agency. The applicant shall send a copy of the newspaper notice to the Division and local governments in accordance with R315-4-1.10(c)(1)(v).

(2) The notices required under R315-4-2.31(d)(1) shall include:

(i) The date, time, and location of the meeting;

(ii) A brief description of the purpose of the meeting;

(iii) A brief description of the facility and proposed operations, including the address or a map, e.g., a sketched or copied street map, of the facility location;

(iv) A statement encouraging people to contact the facility at least 72 hours before the meeting if they need special access to participate in the meeting; and

(v) The name, address, and telephone number of a contact person for the applicant.

2.32 PUBLIC NOTICE REQUIREMENTS AT THE APPLICATION STAGE

(a) Applicability. The requirements of this section shall apply to all part B applications seeking initial permits for hazardous waste management units. The requirements of this section shall also apply to part B applications seeking renewal of permits for such units under R315-3-5.2(b) through (d). The requirements of this section do not apply to permit modifications under R315-3-4.3, which incorporates by reference 40 CFR 270.42, or permit applications submitted for the sole purpose of conducting post-closure activities or post-closure activities and corrective action at a facility.

(b) Notification at application submittal.

(1) The Director shall provide public notice as set forth in R315-4-1.10(c)(1)(iv), and notice to appropriate units of State and local government as set forth in R315-4-1.10(c)(1)(v), that a part B permit application has been submitted to the Division and is available for review.

(2) The notice shall be published within a reasonable period of time after the application is received by the Director. The notice shall include:

(i) The name and telephone number of the applicant's contact person;

(ii) The name and telephone number of the Division, and a mailing address to which information, opinions, and inquiries may be directed throughout the permit review process;

(iii) An address to which people can write in order to be put on the facility mailing list;

(iv) The location where copies of the permit application and any supporting documents can be viewed and copied;

(v) A brief description of the facility and proposed operations, including the address or a map, e.g., a sketched or copied street map, of the facility location on the front page of the notice; and

(vi) The date that the application was submitted.

(c) Concurrent with the notice required under R315-4-2.32(b), the Director shall place the permit application and any supporting documents in a location accessible to the public in the vicinity of the facility or at the Division's office.

2.33 INFORMATION REPOSITORY

(a) Applicability. The requirements of this section shall apply to all part B applications seeking initial permits for hazardous waste management units.

(b) The Director may assess the need, on a case-by-case basis, for an information repository. When assessing the need for an information repository, the Director shall consider a variety of factors, including: the level of public interest; the type of facility; the presence of an existing repository; and the proximity of the nearest copy of the administrative record. If the Director determines, at any time after submittal of a permit application, that there is a need for a repository, then the Director shall notify the facility that it shall establish and maintain an information repository. See R315-3-3.1(m) for similar provisions relating to the information repository during the life of a permit.

(c) The information repository shall contain all documents, reports, data, and information deemed necessary by the Director to fulfill the purposes for which the repository is established. The Director shall have the discretion to limit the contents of the

repository.

(d) The information repository shall be located and maintained at a site chosen by the facility. If the Director finds the site unsuitable for the purposes and persons for which it was established, due to problems with the location, hours of availability, access, or other relevant considerations, then the Director shall specify a more appropriate site.

(e) The Director shall specify requirements for informing the public about the information repository. At a minimum, the Director shall require the facility to provide a written notice about the information repository to all individuals on the facility mailing list.

(f) The facility owner/operator shall be responsible for maintaining and updating the repository with appropriate information throughout a time period specified by the Director. The Director may close the repository at his or her discretion, based on the factors in R315-4-2.33(b).

R315-4-10. Public Participation.

In addition to hearings required under the State Administrative Procedures Act and proceedings otherwise outlined or referenced in these rules, the Director will investigate and provide written response to all citizen complaints duly submitted. In addition, the Director shall not oppose intervention in any civil or administrative proceeding by any citizen where permissive intervention may be authorized by statute, rule or regulation. The Director will publish notice of and provide at least 30 days for public comment on any proposed settlement of any enforcement action.

R315-4-11. Commercial Hazardous Waste Facility Siting Criteria.

(a) Applicability.

R315-4-11 applies to all permit applications for commercial facilities that have been submitted and that have not yet been approved, as well as all future applications.

(b) Land Use Compatibility and Location.

(1) Siting of commercial hazardous waste treatment, storage, and disposal facilities, including commercial hazardous waste incinerators, is prohibited within:

(i) national, state, and county parks, monuments, and recreation areas; designated wilderness and wilderness study areas; wild and scenic river areas;

(ii) ecologically and scientifically significant natural areas, including but not limited to, wildlife management areas and habitat for listed or proposed endangered species as designated pursuant to the Endangered Species Act of 1982;

(iii) 100 year floodplains, unless, for non-land based facilities only, the conditions found in subsection R315-8-2.9 are met to the satisfaction of the Director;

(iv) 200 ft. of Holocene faults;

(v) underground mines, salt domes and salt beds;

(vi) dam failure flood areas;

(vii) areas likely to be impacted by landslide, mudflow, or other earth movement;

(viii) farmlands classified or evaluated as "prime," "unique," or of "statewide importance" by the U.S. Department of Agriculture Soil Conservation Service under the Prime Farmland Protection Act;

(ix) areas above aquifers containing ground water which has a total dissolved solids (TDS) content of less than 500 mg/l and which does not exceed applicable ground water quality standards for any contaminant. Land disposal facilities are also prohibited above aquifers containing ground water which has a TDS content of less than 3000 mg/l and which does not exceed applicable ground water quality standards for any contaminant. Non-land-based facilities above aquifers containing ground water which has a TDS content of 500 to 3000 mg/l and all facilities above aquifers containing ground water which has a

TDS content between 3000 and 10,000 mg/l are permitted only where the depth to ground water is greater than 100 ft. The applicant for the proposed facility will make the demonstration of ground water quality necessary to determine the appropriate aquifer classification;

(x) recharge zones of aquifers containing ground water which has a TDS content of less than 3000 mg/l. Land disposal facilities are also prohibited in recharge zones of aquifers containing ground water which has a TDS content of less than 10,000 mg/l;

(xi) designated drinking water source protection areas or, if no source protection area is designated, a distance to existing drinking water wells and watersheds for public water supplies of one year ground water travel time plus 1000 feet for non-land-based facilities and five years ground water travel time plus 1000 feet for land disposal facilities. This requirement does not include on-site facility operation wells. The applicant for the proposed facility will make the demonstration, acceptable to the Director, of hydraulic conductivity and other information necessary to determine the one or five year ground water travel distance as applicable. The facility operator may be required to conduct vadose zone or other near surface monitoring if determined to be necessary and appropriate by the Director;

(xii) five miles of existing permanent dwellings, residential areas, and other incompatible structures including, but not limited to, schools, churches, and historic structures;

(xiii) five miles of surface waters including intermittent streams, perennial streams, rivers, lakes, reservoirs, estuaries, and wetlands; and

(xiv) 1000 ft. of archeological sites to which adverse impacts cannot reasonably be mitigated.

(c) Emergency Response and Transportation Safety.

(1) An assessment of the availability and adequacy of emergency services, including medical and fire response, shall be included in the permit application. The application shall also contain evidence that emergency response plans have been coordinated with local and regional emergency response personnel. The permit may be delayed or denied if these services are deemed inadequate.

(2) Trained emergency response personnel and equipment are to be retained by the facility and be capable of responding to emergencies both at the site and involving wastes being transported to and from the facility within the state. Details of the proposed emergency response capability shall be given in the permit application and will be stipulated in the permit.

(3) Proposed routes of transport within the state shall be specified in the permit application. No hazardous waste shall be transported on roads where weight restrictions for the road or any bridge on the road will be exceeded in the selected route of travel. Prime consideration in the selection of routes shall be given to roads which bypass population centers. Route selection should consider residential and non-residential populations along the route; the width, condition, and types of roads used; roadside development along the route; seasonal and climatic factors; alternate emergency access to the facility site; the type, size, and configuration of vehicles expected to be hauling to the site; transportation restrictions along the proposed routes; and the transportation means and routes available to evacuate the population at risk in the event of a major accident, including spills and fires.

(d) Exemptions.

Exemptions from the criteria of this section may be granted upon application on a case by case basis by the Waste Management and Radiation Control Board after an appropriate public comment period and when the Board determines that there will be no adverse impacts to public health or the environment. The Board cannot grant exemptions which would conflict with applicable regulations and restrictions of other regulatory authorities.

(e) Completeness of Application.

The permit application shall not be considered complete until the applicant demonstrates compliance with the criteria given herein.

(f) Siting Authority.

It is recognized that Titles 10 and 17 of the Utah Code give cities and counties authority for local land use planning and zoning. Nothing in these rules precludes cities and counties from establishing additional requirements as provided by applicable state and federal law.

KEY: hazardous waste

April 25, 2013

Notice of Continuation July 13, 2011

19-6-105

19-6-106

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-5. Hazardous Waste Generator Requirements.

R315-5-1. General.

1.10 PURPOSE, SCOPE, AND APPLICABILITY.

(a) R315-5 establishes standards for generators of hazardous waste.

(b) R315-2-5, which incorporates by reference, 40 CFR 261.5(c) and (d), must be used to determine the applicability of provisions of R315-5 that are dependent on calculations of the quantity of hazardous waste generated per month.

(c) A generator who treats, stores, or disposes of hazardous waste on-site shall only comply with the following sections of this rule with respect to that waste: R315-5-1.11, which incorporates by reference 40 CFR 262.11, for determining whether or not he has a hazardous waste, R315-5-1.12 for obtaining an EPA identification number, R315-5-3.34 for accumulation of hazardous waste, R315-5-4.40(c) and (d) for recordkeeping, R315-5-4.43 for additional reporting, and if applicable, R315-5-7 for farmers.

(d) Any person who exports or imports hazardous waste as identified in R315-5-8, which incorporates by reference 40 CFR 262.80(a), and is subject to the manifesting requirements of R315-5, or subject to the universal waste management standards as found in R315-16, to or from the countries listed in 40 CFR 262.58(a)(1), which R315-5-5 incorporates by reference, for recovery shall comply with R315-5-8, which incorporates by reference 40 CFR 262 subpart H.

(e) Any person who imports hazardous waste into the United States shall comply with the standards applicable to generators established in R315-5.

(f) A farmer who generates waste pesticides which are hazardous wastes and who complies with all the requirements of R315-5-7 is not required to comply with other standards in this rule or R315-3, R315-7, R315-8, or R315-13, which incorporates by reference 40 CFR 268, with respect to these pesticides.

(g) A person who generates a hazardous waste as defined by R315-2 is subject to the compliance requirements and penalties prescribed in The Utah Solid and Hazardous Waste Act if he does not comply with the requirements of this rule.

A generator who treats, stores, or disposes of hazardous waste on-site shall comply with the applicable standards and permit requirements set forth in R315-3, R315-7, and R315-8.

(h) An owner or operator who initiates a shipment of hazardous waste from a treatment, storage, or disposal facility shall comply with the generator standards established in R315-5.

The provisions of R315-5-3.34, which incorporates by reference 40 CFR 262.34, are applicable to the on-site accumulation of hazardous waste by generators. Therefore, the provisions of R315-5-3.34, which incorporates by reference 40 CFR 262.34, only apply to owners or operators who are shipping hazardous waste which they generated at that facility.

A generator who treats, stores, or disposes of hazardous waste on-site shall comply with the applicable standards and permit requirements set forth in R315-3, R315-7, R315-8, R315-13, which incorporates by reference 40 CFR 268, and R315-14.

(i) The laboratories owned by an eligible academic entity that chooses to be subject to the requirements of R315-5-9, which incorporates by reference 40 CFR 262.200 - 262.216, are not subject to (for purposes of this paragraph, the terms "laboratory" and "eligible academic entity" shall have the meaning as defined in 40 CFR 262.200):

(1) The requirements of R315-5-1.11 or R315-5-3.34, which incorporates by reference 40 CFR 262.34(c), for large quantity generators and small quantity generators, except as provided in R315-5-9, which incorporates by reference 40 CFR 262.200 - 216, and

(2) The conditions of R315-2-5, which incorporates by reference 40 CFR 261.5(b), for conditionally exempt small quantity generators, except as provided in R315-5-9, which incorporates by reference 40 CFR 262.200 - 216.

1.11 HAZARDOUS WASTE DETERMINATION

The requirements of 40 CFR 262.11, 1994 ed., as amended by 60 FR 25540, May 11, 1995, are adopted and incorporated by reference with the following exception:

Substitute "Director" for all federal regulation references made to "Administrator".

1.12 EPA IDENTIFICATION NUMBERS

(a) A generator shall not treat, store, dispose of, transport, or offer for transportation, hazardous waste without having received an EPA identification number from the Director.

(b) A generator who has not received an EPA identification number may obtain one by applying to the Director using EPA form 8700-12. Upon receiving the request the Director will assign an EPA identification number to the generator.

(c) A generator shall not offer his hazardous waste to transporters or to treatment, storage, or disposal facilities that do not have an EPA identification number.

R315-5-2. The Manifest.

A sample hazardous waste manifest form containing information required pursuant to these rules is found in the Appendix to 40 CFR 262. All applicable sections of each manifest shall be completely and legibly filled out.

2.20 GENERAL REQUIREMENTS

(a) A generator who transports, or offers for transportation, a hazardous waste for off-site treatment, storage, or disposal or a treatment, storage, or disposal facility who offers for transport a rejected hazardous waste load shall prepare a Manifest OMB control number 2050-0039 on EPA form 8700-22, and, if necessary, EPA form 8700-22A, according to the instructions included in 40 CFR 262, Appendix, 2009 ed. The requirements of 40 CFR 262, Appendix, 2009 ed., are adopted and incorporated by reference with the following exception: substitute "Director of the Division of Waste Management and Radiation Control" for all federal regulation references made to "Regional Administrator."

(b) A generator shall designate on the manifest one facility which is permitted to handle the waste described on the manifest.

(c) A generator may also designate on the manifest one alternate facility which is permitted to handle his waste in the event an emergency prevents delivery of the waste to the primary designated facility.

(d) If the transporter is unable to deliver the hazardous waste to the designated facility or the alternate facility, the generator shall either designate another facility or instruct the transporter to return the waste.

(e) These manifest requirements do not apply to hazardous waste produced by generators of greater than 100 kg but less than 1000 kg in a calendar month where:

(1) The waste is reclaimed under a contractual agreement pursuant to which:

(i) The type of waste and frequency of shipments are specified in the agreement;

(ii) The vehicle used to transport the waste to the recycling facility and to deliver regenerated material back to the generator is owned and operated by the reclaimer of the waste; and

(2) The generator maintains a copy of the reclamation agreement in his files for a period of at least three years after termination or expiration of the agreement.

(f) The requirements of R315-5-2 and R315-5-3.32(b) do not apply to the transport of hazardous wastes on a public or private right-of-way within or along the border of contiguous property under the control of the same person, even if such

contiguous property is divided by a public or private right-of-way. Notwithstanding R315-6-1.10(a), the generator or transporter shall comply with the requirements for transporters set forth in R315-9-1 and R315-9-3 in the event of a discharge of hazardous waste on a public or private right-of-way.

2.21 MANIFEST TRACKING NUMBERS, MANIFEST PRINTING, AND OBTAINING MANIFESTS

The requirements of 40 CFR 262.21, 2005 ed., are adopted and incorporated by reference.

2.22 NUMBER OF COPIES

The manifest shall consist of at least the number of copies which will provide the generator, each transporter, and the owner or operator of the designated facility with one copy each for their records and another copy to be returned to the generator.

2.23 USE OF THE MANIFEST

(a) The generator shall:

- (1) Sign the manifest certification by hand; and
- (2) Obtain the handwritten signature of the initial transporter and date of acceptance on the manifest; and
- (3) Retain one copy, in accordance with R315-5-4.40(a).

(b) The generator shall give the transporter the remaining copies of the manifest.

(c) Hazardous wastes to be shipped within Utah solely by water (bulk shipments only) require that the generator send three copies of the manifest dated and signed in accordance with this section to the owner and operator of the designated facility or the last water (bulk shipment) transporter to handle the waste in the United States if exported by water. Copies of the manifest are not required for each transporter.

(d) For rail shipments of the hazardous wastes within Utah which originate at the site of generation, the generator shall send at least three copies of the manifest dated and signed in accordance with this section to:

- (1) The next non-rail transporter, if any; or
- (2) The designated facility if transported solely by rail; or
- (3) The last rail transporter to handle the waste in the United States if exported by rail.

(e) The generator shall include on the manifest a description of the hazardous waste(s) as set forth in the regulations of the U.S. Department of Transportation in 49 CFR 172.101, 172.202, and 172.203.

(f) For shipments of hazardous waste to a designated facility in an authorized state which has not yet obtained federal authorization to regulate that particular waste as hazardous, the generator must assure that the designated facility agrees to sign and return the manifest to the generator, and that any out-of-state transporter signs and forwards the manifest to the designated facility.

(g) For rejected shipments of hazardous waste or container residues contained in non-empty containers that are returned to the generator by the designated facility, following the procedures of R315-7-12.3(f) or R315-8-5.4(f), the generator shall:

(1) Sign either:

- (i) Item 20 of the new manifest if a new manifest is used for the returned shipment; or
- (ii) Item 18c of the original manifest if the original manifest is used for the returned shipment;
- (2) Provide the transporter a copy of the manifest;
- (3) Within 30 days of delivery of the rejected shipment or container residues contained in non-empty containers, send a copy of the manifest to the designated facility that returned the shipment to the generator; and
- (4) Retain at the generator's site a copy of each manifest for at least three years from the date of delivery.

2.27 WASTE MINIMIZATION CERTIFICATION

A generator who initiates a shipment of hazardous waste must certify to one of the following statements in Item 15 of the

uniform hazardous waste manifest:

(a) "I am a large quantity generator. I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment;" or

(b) "I am a small quantity generator. I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford."

R315-5-3. Pre-Transport Requirements.

3.30 PACKAGING

Prior to transporting or offering hazardous waste for transportation off-site, a generator shall package the waste in accordance with the Department of Transportation regulations on packaging under 49 CFR 173, 178, and 179.

3.31 LABELING

Prior to transporting or offering hazardous waste for transportation off-site, a generator shall label each hazardous waste package in accordance with the applicable Department of Transportation regulations on hazardous materials under 49 CFR 172.

3.32 MARKING

(a) Before transporting or offering hazardous waste for transportation off-site, a generator shall mark each package of hazardous waste in accordance with the Department of Transportation regulations on hazardous materials under 49 CFR 172.

(b) Before transporting hazardous waste or offering hazardous waste for transportation off-site, a generator shall mark each container of 119 gallons or less used in such transportation with the following words and information displayed in accordance with the requirements of 49 CFR 172.304:

HAZARDOUS WASTE - Federal Law Prohibits Improper Disposal. If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.

Generator's Name and Address

Generator's EPA Identification Number

Manifest Tracking Number

3.33 PLACARDING

Prior to transporting hazardous waste or offering hazardous waste for transportation off-site, a generator shall placard or offer the initial transporter the appropriate placards according to the Department of Transportation regulations for the movement of hazardous materials under 49 CFR 172, subpart F.

3.34 ACCUMULATION TIME

(a) These requirements as found in 40 CFR 262.34, 2010 ed., are adopted and incorporated by reference with the following addition.

(b) The notification required by 40 CFR 262.34(d)(5)(iv)(C) shall also be made to the Director or to the 24-hour answering service listed in R315-9-1(b).

R315-5-4. Recordkeeping and Reporting.

4.40 RECORDKEEPING

(a) A generator shall keep a copy of each manifest signed in accordance with R315-5-2.23(a) for three years or until a signed copy is received from the designated facility which received the waste. The signed copy shall be retained as a record for at least three years from the date the waste was accepted by the initial transporter.

(b) A generator shall keep a copy of each Biennial Report and Exception Report for a period of at least three years from the due date of the report.

(c) Records maintained in accordance with this section and any other records which the Director deems necessary to

determine quantities and disposition of hazardous waste or other determinations, test results, or waste analyses made in accordance with R315-5-1.11, which incorporates by reference 40 CFR 262.11, shall be available for inspection by any duly authorized officer, employee or representative of the Department or the Director as provided in R315-2-12 for a period of at least three years from the date the waste was last sent to on-site or off-site treatment, storage, or disposal facilities.

(d) The periods of retention referred to in this section are automatically extended during the course of any unresolved enforcement action regarding the regulated activity or as requested by the Director or the Director's duly appointed representative.

4.41 BIENNIAL REPORTING

(a) A generator who ships any hazardous waste off-site to a treatment, storage, or disposal facility within the United States must prepare and submit a single copy of a biennial report to the Director by March 1 of each even numbered year. The biennial report shall be submitted on EPA Form 8700-13A and must cover generator activities during the previous calendar year, and must include the following information:

(1) The EPA identification number, name, and address of the generator;

(2) The calendar year covered by the report;

(3) The EPA identification number, name, and address for each off-site treatment, storage, or disposal facility in the United States to which waste was shipped during the year;

(4) The name and EPA identification number of each transporter used during the reporting year for shipments to a treatment, storage, or disposal facility within the United States;

(5) A description, EPA hazardous waste number, from R315-2-9, R315-2-10, or R315-2-11, DOT hazard class, and quantity of each hazardous waste shipped off-site for shipments to a treatment, storage, or disposal facility within the United States. This information must be listed by EPA Identification number of each off-site facility to which waste was shipped;

(6) A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated;

(7) A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent the information is available for years prior to 1984;

(8) The certification signed by the generator or authorized representative.

(b) Any generator who treats, stores, or disposes of hazardous waste on-site shall submit a biennial report covering those wastes in accordance with the provisions of R315-3, R315-7, and R315-8. Reporting for exports of hazardous waste is not required on the Biennial Report form. A separate annual report requirement is set forth in R315-5-5, which incorporates by reference 40 CFR 262.56.

4.42 EXCEPTION REPORTING

(a)(1) A generator of greater than 1000 kilograms of hazardous waste in a calendar month who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated treatment, storage or disposal facility within 35 days of the date the waste was accepted by the initial transporter shall contact the transporter or the owner or operator of the designated facility to determine the status of the hazardous waste.

(2) A generator of greater than 1000 kilograms of hazardous waste in a calendar month shall submit an Exception Report to the Director if he has not received a signed copy of the manifest from the owner or operator of the designated facility within 45 days of the date the waste was accepted by the initial transporter. The Exception Report shall consist of a legible copy of the manifest for which the generator does not have confirmation of delivery and a cover letter signed by the generator or his authorized representative explaining the efforts

taken by the generator to locate the hazardous waste, and the results of those efforts.

(b) A generator of greater than 100 kilograms but less than 1000 kilograms of hazardous waste in a calendar month who does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 60 days of the date the waste was accepted by the initial transporter must submit a legible copy of the manifest, with some indication that the generator has not received confirmation of delivery, to the Director. The submission to the Director need only be a hand written or typed note on the manifest itself, or on an attached sheet of paper, stating that the return copy was not received.

(c) For rejected shipments of hazardous waste or container residues contained in non-empty containers that are forwarded to an alternate facility by a designated facility using a new manifest (following the procedures of R315-8-5.4(e)(1) through (6) or R315-7-12.3(e)(1) through (6)), the generator must comply with the requirements of paragraph (a) or (b) of this section, as applicable, for the shipment forwarding the material from the designated facility to the alternate facility instead of for the shipment from the generator to the designated facility. For purposes of paragraph (a) or (b) of this section for a shipment forwarding such waste to an alternate facility by a designated facility:

(1) The copy of the manifest received by the generator must have the hand written signature of the owner or operator of the alternate facility in place of the signature of the owner or operator of the designated facility, and

(2) The 35/45/60-day timeframes begin the date the waste was accepted by the initial transporter forwarding the hazardous waste shipment from the designated facility to the alternate facility.

Note to paragraph (c): The submission to the Director need only be a handwritten or typed note on the manifest itself, or on an attached sheet of paper, stating that the return copy was not received.

4.43 ADDITIONAL REPORTING

The Director may require generators to furnish additional reports concerning the quantities and disposition of hazardous wastes identified or listed in Section R315-2-9, R315-2-10, or R315-2-11.

4.44 SPECIAL REQUIREMENTS FOR GENERATORS OF BETWEEN 100 AND 1000 KG/MO

A generator of greater than 100 kilograms but less than 1000 kilograms of hazardous waste in a calendar month is subject only to the following requirements in R315-5-4:

(a) R315-5-4.40(a), (c), and (d);

(b) R315-5-4.42(b); and

(c) R315-5-4.43.

R315-5-5. Exports of Hazardous Waste.

The provisions of 40 CFR 262 subpart E, 262.50 - 262.58, 2005 ed., are adopted and incorporated by reference within this rule, except for the following changes:

(a) Other than in 40 CFR 262.53 and 262.54(e), substitute "Director of the Division of Waste Management and Radiation Control " for all references to "EPA" or "Regional Administrator".

(b) Paragraph 40 CFR 262.58(a) shall be as follows:

Any person who exports or imports hazardous waste as identified in 40 CFR 262.80(a) and is subject to the manifesting requirements of R315-5-2, or subject to the universal waste management standards as found in R315-16, to or from the countries listed in 40 CFR 262.58(a)(1), which R315-5-5 incorporates by reference, for recovery shall comply with R315-5-8, which incorporates by reference 40 CFR 262 subpart H. The requirements of subparts E and F do not apply.

R315-5-6. Imports of Hazardous Waste.

The requirements of 40 CFR 262.60, 2010 ed., are adopted and incorporated by reference.

R315-5-7. Farmers.

A farmer disposing of waste pesticides from his own use which are hazardous wastes is not required to comply with the standards in this rule or other standards in R315-3, R315-7, R315-8, and R315-13, which incorporates by reference 40 CFR 268, for those wastes provided he triple rinses each emptied pesticide container in accordance with R315-2-7(b)(3) and disposes of the pesticide residues on his own farm in a manner consistent with the disposal instructions on the pesticide label.

R315-5-8. Transfrontier Shipments of Hazardous Waste for Recovery within the OECD.

The requirements of 40 CFR 262 subpart H, 262.80 - 262.89, 1996 ed., are adopted and incorporated by reference.

R315-5-9. Alternative Requirements for Hazardous Waste Determination and Accumulation of Unwanted Material for Laboratories Owned by Eligible Academic Entities.

The requirements of 40 CFR 262 subpart K, 262.200 - 262.216, 2011 ed., are adopted and incorporated by reference with the following exception: substitute "Director of the Division of Waste Management and Radiation Control " for all references made to "Regional Administrator."

KEY: hazardous waste**April 25, 2013****Notice of Continuation July 13, 2011****19-6-105****19-6-106**

R315. Environmental Quality, Waste Management and Radiation Control, Waste Management.

R315-6. Hazardous Waste Transporter Requirements.

R315-6-1. General.

1.10 SCOPE

(a) These hazardous waste transporter requirements establish standards which apply only to persons transporting hazardous waste within the State of Utah if the transportation requires a manifest as specified under R315-5.

(b) These rules do not apply to persons that transport hazardous waste on-site if they are either a hazardous waste generator or are owners or operators of an approved hazardous waste management facility.

(c) A transporter shall also comply with R315-5, if he:

(1) Transports hazardous waste from abroad into the State;

(2) Mixes hazardous wastes of different DOT shipping descriptions by placing them into a single container.

(d) A transporter of hazardous waste subject to the manifesting requirements of R315-5, or subject to the waste management standards of R315-16, that is being imported from or exported to any of the countries listed in 40 CFR 262.58(a)(1), which R315-5-5 incorporates by reference, for purposes of recovery is subject to R315-6-1 and to all other relevant requirements of R315-5-8, which incorporates by reference 40 CFR 262 subpart H, including 40 CFR 262.84 for tracking documents.

1.11 IDENTIFICATION NUMBER

(a) A transporter shall not transport hazardous wastes without having received an EPA identification number from the Director.

(b) A transporter who has not received an EPA identification number may obtain one by applying to the Director using EPA form 8700-12. Upon receiving the request, the Director will assign an EPA identification number to the transporter.

1.12 TRANSFER FACILITY REQUIREMENTS

A transporter who stores manifested shipments of hazardous waste in containers meeting the requirements of R315-5-3.30 at a transfer facility for a period of ten days or less is not subject to regulation under R315-3, R315-7, R315-8, and R315-13, which incorporates by reference 40 CFR 268, with respect to the storage of those wastes.

R315-6-2. Compliance With the Manifest System and Recordkeeping.

2.20 THE MANIFEST SYSTEM

(a)(1) Manifest Requirement. A transporter may not accept hazardous waste from a generator unless the transporter is also provided with a manifest signed in accordance with the requirements of R315-5-2.23.

(2) Exports. In the case of exports other than those subject to R315-5-8, which incorporates by reference 40 CFR 262 subpart H, a transporter may not accept hazardous waste from a primary exporter or other person if he knows the shipment does not conform to the EPA Acknowledgment of Consent; and unless, in addition to a manifest signed by the generator as provided in R315-6-2.20, the transporter shall also be provided with an EPA Acknowledgment of Consent which, except for shipments by rail, is attached to the manifest, or shipping paper for exports by water (bulk shipment). For exports of hazardous waste subject to the requirements of R315-5-8, which incorporates by reference 40 CFR 262 subpart H, a transporter may not accept hazardous waste without a tracking document that includes all information required by 40 CFR 262.84, which R315-5-8 incorporates by reference.

(b) Before transporting the hazardous waste, the transporter shall hand sign and date the manifest acknowledging acceptance of the hazardous waste from the generator. The transporter shall return a signed copy to the generator before

leaving the generator's property.

(c) The transporter shall ensure that the manifest accompanies the hazardous waste. In the case of exports, the transporter shall ensure that a copy of the EPA Acknowledgment of Consent also accompanies the hazardous waste.

(d) A transporter who delivers a hazardous waste to another transporter or to the designated facility shall:

(1) Obtain the date of delivery and the handwritten signature of that transporter or of the owner or operator of the designated facility on the manifest; and

(2) Retain one copy of the manifest in accordance with R315-6-5; and

(3) Give the remaining copies of the manifest to the accepting transporter or designated facility.

(e) The requirements of R315-6-2.10(c), (d), and (f) do not apply to water (bulk shipment) transporters if:

(1) The hazardous waste is delivered by water (bulk shipment) to the designated facility; and

(2) A shipping paper containing all the information required on the manifest (excluding the EPA identification numbers, generators certification, and signatures) and, for exports, an EPA Acknowledgment of Consent accompanies the hazardous waste; and

(3) The delivering transporter obtains the date of delivery and handwritten signature of the owner or operator of the designated facility on either the manifest or the shipping paper; and

(4) The person delivering the hazardous waste to the initial water (bulk shipment) transporter obtains the date of delivery and signature of the water (bulk shipment) transporter on the manifest and forwards it to the manifested facility; and

(5) A copy of the shipping paper or manifest is retained by each water (bulk shipment) transporter in accordance with R315-6-2.22.

(f) For shipments involving rail transportation, the requirements of R315-6-2.20(c), (d) and (e) do not apply and the following requirements do apply:

(1) When accepting hazardous waste from a non-rail transporter, the initial rail transporter shall:

(i) Sign and date the manifest acknowledging acceptance of the hazardous waste;

(ii) Return a signed copy of the manifest to the non-rail transporter;

(iii) Forward at least three copies of the manifest to:

(A) The next non-rail transporter, if any; or

(B) The designated facility, if the shipment is delivered to that facility by rail; or

(C) The last rail transporter designated to handle the waste in the United States.

(iv) Retain one copy of the manifest and rail shipping paper in accordance with R315-6-2.22.

(2) Rail transporters shall ensure that a shipping paper containing all the information required on the manifest (excluding the EPA identification numbers, generator certification, and signatures) and, for exports, an EPA Acknowledgment of Consent accompanies the hazardous waste at all times.

(3) When delivering hazardous waste to the designated facility, a rail transporter shall:

(i) Obtain the date of delivery and handwritten signature of the owner or operator of the designated facility on the manifest or the shipping paper, if the manifest has not been received by the facility; and

(ii) Retain a copy of the manifest or signed shipping paper in accordance with R315-6-2.22.

(4) When delivering hazardous waste to a non-rail transporter a rail transporter shall:

(i) Obtain the date of delivery and the handwritten

signature of the next non-rail transporter on the manifest; and
 (ii) Retain a copy of the manifest in accordance with R315-6-2.22.

(5) Before accepting hazardous waste from a rail transporter, a non-rail transporter shall sign and date the manifest and provide a copy to the rail transporter.

(g) Transporters who transport hazardous waste out of the United States shall:

(1) Sign and date the manifest in the International Shipments block to indicate the date that the shipment left the United States;

(2) Retain one copy as specified in R315-6-2.22(d);

(3) Return a signed copy of the manifest to the generator; and

(4) Give a copy of the manifest to a U.S. Customs official at the point of departure from the United States.

(h) A transporter transporting hazardous waste from a generator who generates greater than 100 kilograms of hazardous waste in a calendar month need not comply with the requirements of R315-6-2.20 or those of R315-6-2.22 provided that:

(1) The waste is being transported pursuant to a reclamation agreement as provided for in R315-5-2.20(e);

(2) The transporter records, on a log or shipping paper, the following information for each shipment:

(i) The name, address, and U.S. EPA Identification Number of the generator of the waste;

(ii) The quantity of waste accepted;

(iii) All DOT-required shipping information;

(iv) The date the waste is accepted; and

(3) The transporter carries this record when transporting waste to the reclamation facility; and

(4) The transporter retains these records for a period of at least three years after termination or expiration of the agreement.

(i) A transporter shall not transport hazardous waste not properly labeled or hazardous waste containers which are leaking or appear to be damaged, since those packages become the transporter's responsibility during transport.

2.21 COMPLIANCE WITH THE MANIFEST

(a) The transporter shall deliver the entire quantity of hazardous waste which he has accepted from a generator or a transporter to:

(1) The designated facility listed on the manifest; or

(2) The alternate designated facility, if the hazardous waste cannot be delivered to the designated facility because an emergency prevents delivery; or

(3) The next designated transporter; or

(4) The place outside the United States designated by the generator.

(b)(1) If the hazardous waste cannot be delivered in accordance with R315-6-2.21(a) because of an emergency condition other than rejection of the waste by the designated facility, then the transporter shall contact the generator for further directions and shall revise the manifest according to the generator's instructions.

(2) If hazardous waste is rejected by the designated facility while the transporter is on the facility's premises, then the transporter shall obtain the following:

(i) For a partial load rejection or for regulated quantities of container residues, a copy of the original manifest that includes the facility's date and signature, and the Manifest Tracking Number of the new manifest that will accompany the shipment, and a description of the partial rejection or container residue in the discrepancy block of the original manifest. The transporter shall retain a copy of this manifest in accordance with R315-6-2.22, and give the remaining copies of the original manifest to the rejecting designated facility. If the transporter is forwarding the rejected part of the shipment or a regulated container residue to an alternate facility or returning it to the generator, the

transporter shall obtain a new manifest to accompany the shipment, and the new manifest shall include all of the information required in R315-8-5.4(e)(1) through (6) or (f)(1) through (6) or R315-7-12.3(e)(1) through (6) or (f)(1) through (6).
